organiser of practical telegraphy. This brought forward a renewed protest from Mr. Cooke, who appealed to the award of 1841 as defining clearly the relative degree of credit due to the two inventors. A volume of documents, in support of this claim, was published in 1868 by Mr. Cooke's brother, the Rev. T. F. Cooke, 'Authorship of the Electric Telegraph of Great Britain.' In 1867 the Society of Arts awarded the Albert Gold Medal to each of the two inventors, on equal terms. Mr. Cooke received the honour of knighthood November 11th, 1869, as had Mr. Wheatstone previously; and both names will go down to posterity in connection with one of the greatest inventions ever known.

COOPER, ABRAHAM, R.A., was born September, 1787, in Red Lion-street, Holborn. At this time his father was a tobaccoist in a small way; he afterwards kept a public-house in Holloway, but being unsuccessful, Abraham was sent out a mere boy to earn his own living. He at first obtained employment at Astley's Amphitheatre, and afterwards, it is said, as groom to Mr. Meux, the brewer. Being very fond of horses, he had long drawn them in a rude way, but he was now ambitious of painting a favourite horse of his master's, and knowing nothing of the mode of procedure, he bought a shilling book on Oil Painting (Laurie's Introduction), and taught himself to paint. The picture pleased Mr. Meux, who advised him to devote himself to art, and procured him many commissions for the portraits of horses. In this line he soon found ample employment, and especially for portraits of celebrated race-horses and hunters, in which he greatly excelled. He did not, however, venture to offer a picture for exhibition till 1812, when he sent a 'Horse and Goats' to the British Institution. From this time he was a pretty regular contributor both to the Royal Academy and British Institution, sending mostly battle pieces and skirmishes, and especially scenes from the wars of the Cavaliers and Roundheads, of whom he came to regard himself as in a special manner the painter. In 1816 he was awarded a premium of 150 guineas by the Directors of the British Institution for his 'Finished Sketch of the Battle of Ligny.' In 1817 he was elected Associate of the Royal Academy, and full member in 1820, the year following his exhibition of 'The Battle of Marston Moor.' The rest of his life was spent in the quiet pursuit of his profession. He was one of the first to avail himself of the new law by which an academian could withdraw from the list of active members and become an Honorary Retired Academician. This he did in the beginning of 1867. He died at his residence, Woodlands, East Greenwich, on the 24th of December, 1868. Mr. Cooper displayed to the last his imperfect technical training, but he was an excellent painter of horses; a diligent and conscientious artist, and a kind-hearted and worthy man. Among his best known pictures are—'The Battle of the Standard'; 'The Battle of Marston Moor'; 'The Battle of Naseby'; 'The Death of Harold'; 'The Battle of Waterloo'; and 'Hawking in the Olden Time'; all of which, with several others, have been engraved. He also painted, but without much success, various Oriental subjects.

COOPER, EDWARD JOSHUA, a distinguished amateur astronomer, while receiving his early education at the endowed school of Armagh, imbibed a taste for astronomy by frequent visits to the observatory of that city. After studying at Eton and at Christchurch, Oxford, he commenced a series of travels which continued through many years. He visited Italy, Egypt, Persia, Turkey, Germany, Scandinavia, and the North Cape, taking with him a telescope, sextant, and chronometer. During these journeys he made a large number of accurate determinations of the latitudes and longitudes of places. On his return to Ireland he built a fine observatory near his mansion at Markree, which he stocked with instruments of high excellence. In 1831 he purchased from Cauchoix of Paris an excellent object-glass of 13½ inches diameter, which Mr. Grubb fitted to an equatorial telescope 25 feet long, this being the first large telescope made of cast-iron. Another instrument of great value was a meridian circle by Ertel. The discoveries made by Mr. Cooper with these instruments were recorded in the Memoirs of the Royal Irish Academy and the Royal Astronomical Society, of which bodies, as well as of the Royal Society, he was a fellow: he was assisted in his researches by Mr. A. Graham. One of the discoveries made by them, or rather by Mr. Graham alone, was that of the asteroid Metis, on the 25th of April, 1848. Mr. Cooper's great work was an examination of the ecliptic stars, with a view to the tabulation of all those down to the 12th magnitude. The results were published by the aid of a government grant to the Royal Society:—"Catalogue of Stars near the Ecliptic, observed during

the years 1848, 1849, and 1850, 8vo, Dublin, 1856, &c. Mr. Cooper, who was awarded the Cunningham medal by the Royal Irish Academy for his star-tables, died on the 23rd of April, 1863.

COQUEREL, ATHANASE LAURENT CHARLES, for above thirty years pastor of the Reformed Church, and president of the Presbyterian Council of Paris, was born at Paris, August 27, 1795. He received his early education from his aunt, Helen Maria Williams, and completed it at the Protestant Institute, Montauban. In 1816 he was ordained minister, and the following year was invited to take charge of the Episcopal Chapel, Jersey, but was unable to sign the Thirty-Nine Articles. He settled in Holland, where for twelve years he preached with great success in the cities of Leyden, Utrecht, and Amsterdam. At the suggestion of Cuvier, he was in 1830 invited to Paris, and in 1833 entered the Consistory. From the first he acquired a high reputation as a preacher, which was greatly increased by his writings and personal character. In the general ferment caused by the Revolution of 1848, the Pasteur Coquerel thought himself called to take part in the settlement of public affairs, and offered himself, "a moderate Republican," as a candidate for the National Assembly. He was elected for the department of the Seine by 100,934 votes, two of his colleagues for the same department being the famous Roman Catholic divines Lacordaire and Lamennais. In the Assembly he distinguished himself by the moderation of his views, but his eloquence proved less successful than in the pulpit; he was, however, nominated a member of the Constitutional Commission. The *coup d'état* of the 2nd of December relegated M. Coquerel to his pastoral duties, and he did not again interfere with politics. In early life M. Coquerel was a Calvinist, but as he advanced in years, and especially after settling in Paris, he receded far from the doctrines of the great doctor of Geneva. Late in life his teaching assumed the character of a "spiritualistic philosophy," and he was even suspected of a tendency to rationalism. He retained, however, his popularity and influence to the end, continuing to be regarded as the greatest master of pulpit oratory in the Reformed Church of France. He died on the 10th of January, 1868. Besides eight volumes of sermons, his principal works are:—*Biographie Sacrée, ou Dictionnaire Historique, critique et moral, de tous les personnages de l'Ancien et du Nouveau Testament*, 8vo, Paris, 1837; *Histoire Sainte et analyse de la Bible, avec une critique et un ordre de lecture*, 12mo, Paris, 1839; *Réponse au livre du Dr. Strauss: la Vie de Jésus*, 8vo, 1841; *Orthodoxie Moderne*, 12mo, 1842; *Le Christianisme expérimental*, 12mo, 1847; *Christologie; ou Essai sur la Personne et l'Œuvre de Jésus-Christ*, 2 vols. 1858. Several of these works have been translated into English, Dutch, or German. He also established and edited the periodicals entitled *Le Protestant*, 1831, which lasted only six months; *Le Libre Examen*, 1834–36; and *Le Lien*, 1841, afterwards edited by his son.

* ATHANASE COQUEREL, born about 1819, who, like his father, acknowledged his obligations for his early training to his aged relation, Helen Maria Williams, and like him became a pasteur of the French Reformed Church. Without attaining celebrity equal to his father as an orator, his sermons have been greatly admired for their vigour, and depth of thought, and beauty of expression. In doctrine he advanced beyond his father as a "liberal Protestant," and the offence his teaching gave to the orthodox culminated on his publishing an examination of Renan's *Life of Jesus*. In May, 1864, he was solemnly suspended from his ministerial functions by the Consistory of Paris, M. Guizot being one of his most earnest opponents. Outside the orthodox communion he has, however, continued his pastoral duties with eminent success. In addition to numerous sermons, pamphlets, and elementary works, he has published *Jean Calas et sa Famille: Étude historique d'après les documents originaux*, 12mo, Paris, 1858; *Précis de l'Église Réformée de Paris, d'après les documents en grande partie inédits*, 8vo, 1862; *Le Catholicisme et le Protestantisme considérés dans leur Origine et leur Développement*, 8vo, 1864, &c. In 1858 he printed a remarkable series of letters in *Le Lien*, on the influence of Catholicism on Italian art, which he afterwards remodelled and published separately, and which were translated into English under the title of *The Fine Arts in Italy in their religious Aspect*, by Edward and Emily Higginson, with an English preface by the author, 8vo, 1859.

COQUES, GONZALES. The recent researches of M. Th. Van Lerius have proved that the real name of this eminent Flemish painter was Coo or Cox; that he was born at Antwerp in December, 1614 (he was baptised December 8); and that the

date 1618, hitherto assigned to his birth on the faith of an inscription on a portrait painted by Coques himself is erroneous.—(*Supplément au Cat. du Musée D'Anvers*, p. 71.) The archives of the confraternity of St. Luke show that Gonzales was in 1627 apprenticed to Peter Breughel, and in 1640 admitted master. At this time he signed his name Cox; three years later, on his marriage with a daughter of David Ryckaert, the painter (whose pupil he is supposed to have been), he wrote it Coques.—(*Van Lerius*.) Gonzales acquired fame chiefly as a portrait painter. Some contemporary Flemish verses compare him with Apelles, say that kings eagerly sought after his works, and that though England may boast of Holbein, and the Netherlands, Vandyck, in great works, in small none can equal Gonzales. His small whole-length portraits are, indeed, of exceeding beauty; full of life and character, excellent in composition and colour, and painted with singular delicacy, brightness, and vigour. He especially excelled in small full-length groups. One of his best, 'the Family of M. Verhelst,' is in the Royal Collection, and the Marquis of Hertford has another, admirably painted, called the 'Music Lesson.' Generally his works are rare both on the Continent and in this country. The National Gallery is without a specimen; the Museum of Antwerp, his native city, has only one. Gonzales died on the 18th of April, 1684, and was buried in the church of St. George, alongside his first wife; his second wife, who only survived him till November, was buried in the Cathedral, Antwerp.

CORDIER, PIERRE LOUIS ANTOINE, French geologist, was born March 31, 1777, at Abbeville. His earlier education was received in his native town, and his later, commencing from 1794, in Paris. In 1795 he entered the École des Mines, and in 1797 he was appointed a supernumerary mining engineer, in which capacity he accompanied his master, Dolomieu, in his Alpine explorations. Dolomieu had so great a liking for young Cordier, that he calls him his adopted son, and states that although a young man, he is one of the best mineralogists of his day. He accompanied the French army in Egypt along with Dolomieu, and when the latter proposed to return to Europe on account of ill health, Cordier again associated himself with him. On their voyage, however, the vessel was driven on to the Neapolitan coast, and both were thrown into prison by the Neapolitan officials. Cordier was liberated at the end of three months, and used his freedom in endeavouring to procure the release of his friend, but without avail. Dolomieu's case was taken up by the scientific world generally, but his imprisonment lasted two years. Cordier returned to France, and devoted himself to his studies. A favourite method of acquiring knowledge was by excursions of greater or less duration which he undertook almost every year; and in executing these he visited almost every spot of geological interest in Europe. These excursions were conducted with extraordinary care and foresight, the object to be pursued, the country to be examined, the persons to be consulted, being all arranged beforehand; and in order to secure liberty of action and the utmost economy of time, he seldom allowed any one to accompany him. He was a strong, active man, and did an immense deal of good work in this way. In 1819 he was appointed professor of geology of the Museum of Natural History at Paris, in succession to Faujas St. Fond; and one of the principal tasks he set himself was to form a useful geological museum. When he first became professor there were only 1500 specimens of very little value, without any arrangement, and without any indication as to what they were, or the circumstances under which they were found. He communicated with scientific men of all countries, with a view to obtaining well characterised objects, and at the time of his death he had brought together about 200,000 specimens, so well arranged, ticketed, catalogued, and described as to constitute the collection one of the finest of its kind in existence. Some of the catalogues, which were drawn up by himself, are valuable works of reference. The method of classification employed was the result of many years of thought, but he never published a full account of it. He has some notice of it in his *Traité des Roches*, but the fullest record will be found in the *Description des Roches composant l'Ecorce Terrestre, et des terrains cristallins constituant le sol primitif*, 1868, which was drawn up by his pupil, Ch. D'Orbigny, partly from Cordier's notes.

In 1822 M. Cordier was elected a member of the Academy of Sciences, in place of Haüy, and he took an active part in all its proceedings, but chiefly in drawing up instructions for geological observations in almost every quarter of the globe. In 1832 he became inspector-general of mines, having already passed

through the subordinate grades. For many years he held several Court offices, amongst others that of State counsellor. In 1859 he was nominated grand officer of the Legion of Honour. Endowed with remarkable vigour of constitution, he retained his activity of mind and body up to the very last; and even shortly before his death he seemed to expect his decease was then far off, since he had scarcely ever known a day's illness, and was still fully equal to his numerous official duties. When approaching his 85th year he was full of an excursion to Scotland, which he was planning for the ensuing autumn, but he was soon after attacked by some stomach complaint, which brought him to his end on March 30, 1861. His scientific writings are very numerous, comprising 130 items, and extend over a wide range of subjects. They are almost entirely made up of papers, reports, and occasional notices; and it has been regretted that he did not write some large work on geology. He has described a great number of minerals, and in one of them, named *Cordierite* by Haüy, but usually known as *dichroite*, he discovered the optical phenomenon known as dichroism. This property consists in the mineral appearing to be of different colours when looked through in different directions. In the examination of rocks and minerals he contrived new methods of analysing, whereby he was able to obtain a precision of description unknown before his time. In determining rocks he was probably unrivalled; and although his classification has its defects, it is regarded by some as the most complete and logical yet proposed. One of his finest memoirs is that entitled '*Essai sur la température de l'intérieur de la terre*,' in '*Annales des Mines*,' vol. ii. pp. 53—138 (1827). But his great work, as we have already said, is the museum which he formed, and it is there only that one can appreciate the immense extent and accuracy of his knowledge.

(*Notices of the Life of P. Cordier have been published by Charles Read, Comte Joubert, and Victor Raulin, the last mentioned being in the Actes Soc. Linn. Bordeaux*, vol. xxii.)

CORDUS, VALERIUS, a German botanist, was born February 18, 1515. His father, who was himself something of a botanist, superintended his early education. He afterwards went to the then recently established University of Marburg, and he was the first person invested by it with the degree of bachelor. He subsequently attended the lectures of Melanchthon at Wittenberg, and became intimately acquainted with Conrad Gesner. He then went to Leipzig, where he conceived the idea of reforming pharmacy, and with that object he spent several years in exploring Europe on foot, and surveying its botanical, zoological, and mineralogical productions. Wherever he went he was admired for his modesty and for the immense scope of his knowledge. While journeying in Italy he was seized with a fever, which terminated his existence at Rome, September 25, 1544. His career promised to be so fruitful that the learned men of the day considered his early death to be a public calamity. His writings include the following works:—'*Dispensatorium pharmacorum omnium quæ in usu potissimum sunt* ; ex optimis auctoribus tam recentibus quam veteribus collectum, ac scholiis utilibus illustratum,' 8vo, Nürnberg, 1535, 8vo, Leyden, 1626, and translated into French, 12mo, Lyon, 1575; '*Annotationes in Pediani Dioscoridis, De Materia Medica*,' 1549; and a few small works in which he described many new plants, and announced that the ferns were reproduced by means of spore cases on the backs of the fronds. An edition of his works was edited by Gesner, folio, Strasburg, 1562.

CORMENIN, LOUIS MARIE DE LA HAIE, VICOMTE DE [E. C. vol. ii. col. 388]. The Vicomte De Cormenin was made a member of the Council of State when that body was reconstituted by Napoleon III., and an ordonnance of the Emperor in 1855 opened to him the doors of the Institute. But he had lost his old influence with the reading public, and his '*Droit de tonnage en Algérie*' attracted little notice. His last years were remarkable for his efforts in promoting various benevolent objects. He died in Paris, May 7, 1868, in the 81st year of his age.

CORNELIS VAN HAARLEM, an eminent Dutch painter, was born at Haarlem in 1562, studied painting under Pieter le Long, and afterwards in the atelier of G. Coignet, at Antwerp. He early made himself known by some portraits and other pictures of large size. He painted many scriptural subjects, but preferred such as admitted the introduction of nude figures, and he treated them in a coarse realistic manner. His '*Bathsheba Bathing*,' in the Dresden Gallery, is a good example of his style. He also painted Venuses, Dianas, and other mythological personages and themes, but with little classical feeling. He died at

Haarlem in 1638. He must not be confused with the subject of the following article.

CORNELISSEN, or CORNELISZ, JACOB, a native of East Zaandam, in North Holland, was born about 1480. Little is known of his life. He lived in Amsterdam, painted religious pieces and occasionally portraits, and practised engraving on wood. C. Van Mander says that he enjoyed a great reputation; was employed to paint several altar pieces; was the second master of Jan Schoorel, and that his son Dirk was also a good painter, especially of portraits. The known works of Jacob Cornelissen, which are in the manner of Lucas Van Leyden, are rare, but some doubtless pass under more familiar names. In the gallery of Cassel is a '*Triumph of Religion*,' dated 1523, formerly attributed to Mabuse; and the Museum at Amsterdam has an '*Herodias*,' dated 1524. Our own National Gallery possesses two small panels by him, (No. 657), '*Portraits of a Dutch Gentleman and Lady*,' who are represented kneeling with their patron saints, Peter and Paul, standing behind them. Bartsch, Brulliot, and Passavant enumerate 127 woodcuts of his engraving. The most noteworthy are a series of 12, representing the '*Passion of Our Lord*,' dated 1511—14. Cornelissen was still painting in 1553. He is believed to have died between that year and 1560.

CORNELIUS, PETER VON [E. C. vol. ii. col. 391]. The most famous of modern German painters lived to see the great school he had formed, and which he had hoped was to regenerate the art of the Fatherland, fast losing its hold on the public sympathy, and the new generation of painters ignoring the principles he held so dear. He died at Berlin on the 7th March, 1867, in the 80th year of his age. His great work, the cartoons for which are described in col. 393 of the memoir above cited, remains, and is likely to remain, unpainted, the Royal Mausoleum which it was intended to adorn not having been built.

* COROT, JEAN BAPTISTE CAMILLE, a leading French landscape painter, was born at Paris in July, 1796, and was brought up to a commercial life, but in 1822, being able to follow his own inclination, entered the atelier of Michallon, and on his death removed to that of Victor Bertin. He afterwards stayed for several years in Italy, where, among the works of the great masters, and still more in solitary converse with Nature, he formed his style, and laid the germs of that peculiar theory of art of which his works are the illustration. Though avowedly a landscape painter, and commencing his career with views in Italy and the like, almost all the pictures of his mature and later years are of a poetical or subjective character, with such titles as '*A Landscape*,' '*A Dance of Nymphs*,' '*Souvenir de Marcoussy*' (a celebrated picture purchased by the Emperor), '*An Idyll*,' '*Sunset*,' '*Sunrise*,' '*L'Incendie de Sodome*,' '*Le Christ au Jardin des Oliviers*,' '*Dante et Virgile*,' '*Macbeth*,' and so forth, the personages in these last being entirely subservient to some effect of light and shadow or atmosphere. M. Corot, wrote a smart French critic, "imitates nothing, not even Nature, and is himself inimitable;" which, in its way, is true. As direct imitations of Nature his landscapes would be absurd, and the colour—sometimes mere misty monochrome—is often detestable; but over all is shed a tender poetic feeling—of which his imitators make sad havoc. M. Corot received a medal of the 2nd class (paysage) in 1833, of the 1st in 1848 and 1855; and the Cross of the Legion of Honour in 1846.

CORT, HENRY, to whom the greatness of the iron manufacture in this country is mainly due, was born at Lancaster in 1740. Little is known of him till 1765, when he was settled in London as a navy agent. He became cognisant of the fact, that on account of the bad quality of English iron, the Government refused to employ it at the dockyards, preferring to give 35*l.* per ton for iron from Sweden and Russia. He commenced experiments on new modes of manufacturing iron; and the success attained induced him to establish a small factory at Fontley, near Fareham, Hants. He entered into partnership with Samuel Jellicoe, son of the Deputy Paymaster of Seamen. In 1783-84 the firm took out two patents, for inventions due to Cort. Numerous minor improvements were specified; but the two processes which chiefly engaged attention were *puddling* and *rolling*. To drive off the carbon from crude iron, Cort devised the puddling furnace, in which the heat of flame is reverberated down on the molten mass, which mass is stirred about until the carbon is driven off, the slag separated, and the iron brought into a pasty state. In the rolling, Cort passed red-hot iron between grooved rollers, instead of hammering it, to make it into bars, plates, &c. Neither process was absolutely new; but they were never of much importance until Cort took up the matter. In

1787 the Government caused experiments to be made on Cort's iron; and finding it both better and cheaper than Swedish, they adopted it. The ironmasters from other districts came to Fontley to see the processes, and agreed to pay 10s. per ton royalty for the use of the patents; Crawshaw of Cyfarthfa, Homfray of Pen-y-darran, and Reynolds of Coalbrookdale, were among those who so acted. New ironworks were established by the partners at Gosport, where profits and royalties brought in large returns. But the whole enterprise suddenly collapsed. Adam Jellicoe, the paymaster, had advanced large sums to the firm; it was not known till his death, in 1789, that he had obtained this money by defrauding the Government. The whole of the property—works, patents, and royalties—was seized by the law officers of the Crown; the affair was, however, so badly managed that Cort was ruined, the Government realised scarcely anything, and the ironmasters all over England used Cort's process without paying any more royalties to any one. Cort failed in all his attempts to obtain a renewal or restitution of the patent, although he would have received 55,000*l.* in royalties alone in 1789–91, had not the break-up occurred. The Government granted him a pension of 200*l.* a-year in 1794, in consideration of his family of twelve children; but he died a broken man in 1800. The equitable claims of his family have since frequently been advocated, but with very slender results. His widow obtained a pension of 125*l.* in 1800; the ironmasters subscribed 900*l.* for the family in 1811; an annuity of 60*l.* was granted to his last surviving son in 1856; and a sum of 200*l.* was given in 1858 (out of the royal bounty) to his three surviving daughters. Meantime, the iron manufacture in Great Britain has risen from 90,000 tons to 5,000,000 tons annually, in great part owing to the introduction of Cort's puddling furnaces and grooved rollers.

* CORTAMBERT, PIERRE FRANÇOIS EUGÈNE, a French geographer, was born at Toulouse, Oct. 12, 1805. He has taught geography at several of the colleges of Paris, especially the Charlemagne Lyceum, and is principally known for his numerous excellent school books on geography, some of which have gone through several editions. Amongst others we may cite 'Cours de Géographie,' 1st ed., 1829; 5th ed., 1864; 'Elements de Cosmographie,' 8vo, 1859; 'Traité élémentaire de géographie physique et politique,' 2 vols. 1852; and a series of small atlases in 8vo and 12mo, published in 1861. Amongst works of a more erudite character may be mentioned his 'Tableau générale de l'Amérique. Rapport sur le progrès de l'ethnographie et de la géographie en Amérique pendant les Années 1858 et 1859,' 8vo, 1860; and a similar work on Cochinchina, 8vo, published in 1862. He is also the author of many of the geographical articles in the 'Annuaire Encyclopédique.' His son, RICHARD CORTAMBERT, born at Paris in 1836, is the secretary of the Geographical Society of Paris, and is connected with the geographical department of the imperial library. He has published several light books on geography.

CORTOT, JEAN PIERRE, an eminent French sculptor, was born at Paris, April 20, 1787. He was a pupil of Bridan, and having carried off the grand prize of the Institute, was sent to complete his studies at Rome, where he stayed several years. He early acquired great celebrity, was decorated in 1824, and in 1825 was elected member of the Académie des Beaux-Arts, and one of the professors in the École Royale. He died on the 12th of August, 1843. M. Cortot produced a vast number of works, which comprised the usual range of classical, mythological, and allegorical subjects, of the kind in his day so much in favour with Frenchmen; religious compositions, monumental pieces, and portrait busts and statues. He was much employed in the execution of public works, his chief productions being Government commissions. Among these may be mentioned, as illustrating his range of subjects, the grand bas-relief in the pediment of the Chamber of Deputies; the figures of Brest and Rouen on the monument in the Place de la Concorde; a Soldier of Marathon in the garden of the Tuileries; a statue of Justice for the Palais de la Bourse; a Daphnis and Chloe in the Museum of the Luxembourg; the large bas-relief of the Resurrection in the church of Calvary; a statue of Corneille at Rouen; one of Marshal Lannes at Lectoure; and many other similar figures, groups, and bas-reliefs.

COSIN, COSINS, COSYNS, or COZENS, JOHN, a learned Bishop of Durham in the 17th century, was born on the 30th of November, 1594, at Norwich, in the Free Grammar School of which city he was educated till the age of fourteen. In 1610 he was entered of Caius College, Cambridge, of which he became successively scholar and fellow; and where he regularly took his degrees in arts. When about 20 years of age he was

appointed first librarian, and afterwards secretary, to Dr. Overall, Bishop of Coventry and Lichfield, who encouraged him to the study of divinity. Being left without a patron by the death of Dr. Overall in May, 1619, who at that time had been not quite a year Bishop of Norwich, Mr. Cosin, who had been admitted to holy orders, was soon after appointed domestic chaplain to Dr. Richard Neile, Bishop of Durham, afterwards Archbishop of York. He was collated to the tenth stall in the cathedral church of Durham, on the 4th of December, 1624; and in September, 1625, to the archdeaconry of the East Riding of the county of York. On the 20th of July, 1626, he was further collated by Bishop Neile to the rich rectory of Brandspeth in the diocese of Durham; and in the same year took the degree of Bachelor, and in 1628 that of Doctor of Divinity. He was employed by Charles I. to draw up a manual of devotion for the maids of honour who attended the Queen Henrietta Maria, a task which he fulfilled by the production of 'A Collection of Private Devotions: in the Practice of the Ancient Church, called the Hours of Prayer. As they were much after this manner published by Authority of Q. Eliz. 1560. Taken out of the Holy Scriptures, the Ancient Fathers, and the Divine Service of our owne Church,' 12mo, London, 1627, ninth edition, 12mo, London, 1693, and since frequently reprinted. This book was very obnoxious to the Puritans, and was severely animadverted upon by Henry Burton in his 'Examination of Private Devotions; or the Hours of Prayer,' &c., 4to, London, 1628; and by William Prynne, in his 'Brief Survey and Censure of Mr. Cozens, his couzening Devotions,' 4to, London, 1628. His intercourse with Laud, then Bishop of Bath and Wells, and with other reputed high churchmen, together with the exactness of ritual upon which he insisted at Durham, also added to the suspicion of Popish tendencies with which Cosin was regarded by the Puritans. In 1628 he was concerned, with other members of the chapter of Durham, in prosecuting Peter Smart, one of the Prebendaries, for preaching a seditious sermon in the cathedral, directed against those bishops and divines who were thought to favour Papacy, from the text, Ps. xxxi. 7, "I hate them that hold of superstitious vanities." Refusing to recant, Smart was degraded, and by sentence at common law deprived of his prebend and livings. On the 8th of February, 1635, Dr. Cosin was admitted to the Mastership of Peter-House, Cambridge; and served as Vice-Chancellor of the University in 1639. On the 31st of October, 1640, he was nominated to the Deanery of Peterborough, and was installed on the 7th of November following. Three days after, Peter Smart, the dispossessed prebendary, who seems erroneously to have regarded Dr. Cosin as his prosecutor-in-chief, retaliated by presenting a petition to the House of Commons, in which he complained of the Doctor's superstition and innovations in the church of Durham, and of his own severe prosecution in the High-Commission Court. A majority of the House of Commons received Smart's petition with favour, and by a vote of the whole House, on the 22nd of January, 1641, sequestered Dr. Cosin from his ecclesiastical benefices. On the 21st of March, they sent up to the House of Lords twenty-one articles of impeachment against him, for the introduction of various supposed Popish observances in Durham Cathedral, which he afterwards either denied to exist, or averred that he did not originate. He was dismissed by the Lords upon his putting in bail for his appearance; but he was not summoned to appear again. Some time after, having exasperated the Puritans by being concerned with others in sending the plate of the University to the king at York, he was ejected from his mastership, by a warrant from the Earl of Manchester, dated March 13th, 1643; and being thus deprived of the last of his preferments, he left the kingdom and proceeded to Paris, where he formed a congregation, and held several discussions with the Jesuits and Romish priests. He officiated as chaplain to the Protestant members of Queen Henrietta Maria's family; and is said to have rendered essential service to Charles II., and to the Church of England, when both were in danger from the machinations of the Papists. At the Restoration, in 1660, Dr. Cosin returned to England, and took possession of all his preferments, the Mastership of Peter-House being restored to him on the 3rd of August; but before the year was out he was raised to the See of Durham, to which he was consecrated on the 2nd of December. As a bishop, Dr. Cosin was remarkable for his munificence, and it is computed that during all the incumbency of his see, he spent 2000*l.* a-year upon ecclesiastical, educational, charitable, and other benevolent objects. He died at his house in Pall-Mall, London, on the 15th of January, 1672, after having, for the last two years of his life, suffered grievously from the stone. For

some time his remains were deposited in a vault in London; but on the 29th of April, 1672, they were finally interred at Bishop's Auckland, Durham, in the chapel belonging to the palace. The particulars of his life have been preserved by Dr. Isaac Basire, Archdeacon of Northumberland, in a small volume entitled 'The Dead Man's Real Speech. A Funeral Sermon preached on Hebr. xi. 4, upon the 29th day of April, 1672. Together with a Brief of the Life, Dignities, Benefactions, Principal Actions, and Sufferings; and of the Death of the late Lord Bishop of Durham,' 12mo, London, 1673, and in Dr. Thomas Smith's 'Vita reverendissimi et eruditissimi viri Joannis Cosini Episcopi Dunelmensis,' which is inserted in that writer's 'Vitæ quorundam eruditissimorum virorum,' 4to, London, 1707. The 'Works of Bishop Cosin,' which are at present chiefly of historical interest, and which are conversant about devotion, theology, church order, and controversy, were for the first time collected and published as part of the 'Library of Anglo-Catholic Theology,' in five volumes, 8vo, Oxford, 1843-1855; of which vol. i. (1843) contained 'Sermons;' vol. ii. (1845), 'Miscellaneous Works;' vol. iii. (1849), 'A Scholastic History of the Canon of Holy Scripture;' vol. iv. (1851), 'Miscellaneous Works;' and vol. v. (1855), 'Notes and Collections on the Book of Common Prayer.' The 'Life of Bishop Cosin,' published in the first volume of this collection, is merely a transcript of that which occurs in the 'Biographia Britannica.'

COSMAS, an Alexandrian monk, who lived in the 6th century of the Christian era. In early life a merchant, he travelled far, and, being of observant habits, acquired so much geographical knowledge during his travels through North Africa and India, as to be commonly known as Indicopleustes (the Indian voyager). He wrote a description of the world as known in his time; but the work has been lost. His contemporaries treated the accounts given in it of the burning sands of Africa as fables, and this led to his writing a second work, 'Τοπογραφία χριστιανική,' which still exists. This latter work is of great interest, on account of the information which it gives us as to the state of geographical knowledge in his day. He contended against the sphericity of the earth, which he maintained was of a long rectangular shape, surrounded by high walls, and that towards the north pole were high mountains, around which the solar and sidereal systems revolved. The chief value of the book lies, however, in his narrative of what he himself saw in his travels. He refers at greater or less length to Abyssinia, Zanguebar, Arabia, India, and Ceylon; and he has a notice of China. His description of the natural productions of these various countries are said to be generally accurate. His account of Abyssinia seems to indicate an intimate acquaintance with that country. The whole work was first published by B. de Montfaucon in vol. ii. (pp. 113-346) of his 'Collectio Nova Patrum et Scriptorum Græcorum,' fol., Paris, 1706; and again by Gallandi, in vol. ix. of the 'Bib. Vet. Patrum,' Venice, 1765.

* COSSON, ERNEST ST. CHARLES, French botanist, born at Paris, July 22, 1819. The persons who had most influence on him during his educational career were the celebrated botanists, Jussieu, Richard and Brongniart. In 1847 he gained his degree of M.D., and in 1851 joined the Algerian scientific commission, and from 1852 to 1858 he was chiefly occupied in exploring Algeria. He has been secretary and vice-president of the Botanical Society of France, and librarian of the Acclimatization Society. His writings chiefly relate to the flora of Algeria, and of the neighbourhood of Paris; and have mostly been drawn up in conjunction with other botanists. Amongst the writings which came from his own pen may be mentioned numerous articles in the 'Bulletins' of the Botanical Society of France; 'Considérations générales sur le Sahara Algérien, et ses cultures,' 8vo, Paris, 1859; and 'Rapport sur un voyage botanique en Algérie, de Philippville à Biskra et dans les Monts Aures, entrepris en 1853,' 1856. In conjunction with M. de St. Pierre, he has drawn up 'Flore descriptive et analytique des environs de Paris,' 12mo, 1845; 2nd ed. 1859, and two or three other works referring to the same subject. In union with M. Durieu de la Maissonneuve he commenced a 'Flore de l'Algérie,' 4to, in 1854, but which is not yet finished.

COSTA, LORENZO, an able Italian painter, was born at Ferrara in 1460; was the scholar of Francesco Cossa, and a fellow student with Benozzo Gozzoli; settled in Bologna and became the assistant of Francia; removed to Mantua, where he was patronised by Francesco Gonzaga, and where he died, March 5, 1535. Costa's style is formed on that of Francia, but is less earnest and animated. He had, however, great technical

skill, and his teaching exerted considerable influence on the schools of Mantua and Bologna. The National Gallery has a large and unusually fine painting by Lorenzo Costa (No. 629), 'The Madonna and Child Enthroned with Angels.' It is in five compartments, and has on the right and left figures of Saints John the Evangelist and Philip, John the Baptist and Peter. It was formerly the altar-piece of the Oratorio delle Grazie, at Faenza.

* COSTA, SIR MICHAEL [E. C. vol. vi. col. 988].

* COSTE, JEAN JACQUES MARIE CYPRIEN VICTOR, was born at Castries, in Hérault, May 10, 1807. Stimulated by the attention which the Germans were giving to the development of the egg and embryo, he devoted himself to the same line of study, and in 1834 produced his 'Recherches sur la Génération des Mammifères et la Formation des Embryons,' which at once established his reputation, and in recognition of the merits of the work the Academy of Sciences awarded him a gold medal. Shortly after he was requested to give lectures on the subject at the Museum of Natural History, and these were so successful that a special chair was created for him in the College of France. These lectures were published under the title of 'Cours d'embryogénie comparée,' 8vo, 1837, accompanied by an atlas in 4to. At a latter date he brought out a more elaborate work, entitled 'Histoire Générale et particulière du développement des corps organisés,' 2 vols. 4to, with an atlas in folio, 1847-60, under the auspices of the Minister of Public Instruction. In addition to these he has written several papers on subjects connected with embryology. From about 1849 his attention began to be directed to the preservation of fishes and other marine animals, with a view to ensuring their rapid multiplication and observing their habits. In company with Milne-Edwards he visited the piscicultural establishments of MM. Gehin and Remy in the Vosges, and induced the French Government to establish something similar at Huningue, but on a much larger scale. The management was entrusted to Coste, and in the course of a short period he introduced upwards of half a million salmon and trout into the Rhône; and restocked some of the lakes and rivers of France with these and other fish. He also took an active part in promoting the rearing of edible crustaceans and oysters. In 1853 he published 'Instructions Pratiques sur la Pisciculture, suivies de Mémoires et de Rapports sur le même sujet,' 12mo, of which more than one edition has since appeared. In 1855 he issued 'Voyage d'Exploration sur le littoral de la France et d'Italie,' 4to, of which a second edition appeared in 1861. It relates mainly to the efforts made to cultivate fish. In 1862 he was appointed inspector-general of fisheries. In 1869 he published 'De l'Observation et de l'Expérience en Physiologie.'

* COTTA, BERNHARD, German geologist, was born at Kleinen Zillbach, Oct. 24, 1808. His father, Henri, belonged to an old Thuringian family, and was well known as an authority and a teacher in all matters connected with forestry. He himself taught his son the natural sciences, more especially mineralogy and geology, and in due course sent him to the School of Mines at Freiberg, and then in 1832 to Heidelberg. On leaving Heidelberg Cotta went to Tharand, near Dresden, where his father was director of an academy, the principal object of which was to teach forestry, and in 1841 became the secretary of the academy. From 1832 to 1842 he was engaged along with Naumann in executing a fine geological map of Saxony; and this finished, he undertook a similar map for Thuringia, which occupied him four years. In 1842 he succeeded Naumann as professor of geognosy at the School of Mines at Freiberg. His writings are numerous, and extend over a wide range of subjects. His earliest scientific paper was 'Beitrag zur Untersuchung über die Entstehung des Kammerbühls bei Eger,' in Oken's 'Isis' for 1827. In 1832 he published a 'Monographie des Dendrolithes,' Dresden, which attracted some attention. Amongst his other works may be mentioned 'Anleitung zum Studium der Geognosie und Geologie,' 1839, of which a third edition appeared in 1849; 'Gangstudien,' 1847; 'Briefe über Alex. v. Humboldt's Kosmos,' Leipzig, 1848-51, of which he wrote the first part only; 'Ueber den innern Bau der Gebirge,' 8vo, Freiberg, 1851; 'Die Gesteinslehre,' 8vo, Freiburg, 1855, which has passed through two or three editions in its German form, and was translated into English by P. H. Lawrence, and published in 1866 under the title of 'Rocks Classified and Described.' He was one of the writers of the 'Gäavon Sachsen,' 1843. He has also contributed numerous papers on rocks, fossils, and geology to the 'Annales des Mines,' Leonhard v. Broun's 'Neue Jahrbuch für Mineralogie,' &c. From 1842 to 1847 he edited the 'Forst-

und Landwirthschaftliches Jahrbuch der Academie zu Tharand.' He wrote a book called 'Gedanken über Phrenologie,' which was published in 1845; and has contributed a great many articles to various periodicals with the object of popularising his views on palaeontology and geology. These views are, in the main, that the earth and its inhabitants have developed progressively according to certain natural laws; the earth has been gradually cooling from an original molten condition, and the creatures have been gradually evolved from a simple to a more and more highly complex structure culminating in man.

COUCH, JONATHAN, a well-known zoologist, was born March 15, 1788, at Polperro, in Cornwall, with which county he was connected all his life. By profession he was a surgeon, but all his leisure time was spent in investigating the natural history of Cornwall. No branch of zoology escaped his attention; but he gave most time to fishes. One of his earliest papers was entitled 'Some Particulars of the Natural History of Fishes found in Cornwall,' in the 'Linnean Transactions,' xiv. pp. 69—92, 1825; and his earliest, or one of his earliest, books was a 'History of the Fishes of Cornwall.' Yarrell repeatedly refers to him as one of his most valued correspondents on fish lore, and much of the information thus obtained was incorporated in Yarrell's 'History of British Fishes,' 1836. For many years he himself collected materials for a similar 'History,' which was at length published in four volumes under the title of 'The History of the Fishes of the British Islands,' 8vo, London, 1862—65. The work contains an immense mass of information on the habits of British fishes, and is illustrated with nearly 250 coloured plates. He wrote a few other works of minor importance, and contributed more than sixty papers to the various scientific periodicals, such as the 'Transactions of the Polytechnic Society of Cornwall,' 'Transactions of the Geological Society of Cornwall' (of both which bodies he was a distinguished member), 'Annals and Magazine of Natural History,' &c. He was a fellow of the Linnean and Zoological Societies of London. He died at Polperro, April 13, 1870.

* COURBET, GUSTAVE, celebrated French landscape painter, was born at Ornans, Department of Doubs, on the 10th of June, 1819. He was educated for the bar, but when at liberty to pursue his own course, commenced the study of painting. He took lessons of MM. Steuben and Hesse, but formed his style and method of painting by close study of the works of the old Venetian and Flemish masters, and working directly from nature. His first picture was sent to the Salon in 1844, but it was only by degrees that M. Courbet evolved the art-theories and practice which have given him so conspicuous a place in the artistic world of Paris. M. Courbet was making his way as a promising painter at the outbreak of the Revolution of 1848. He embraced with ardour the cause which promised to free the minds as well as the bodies of men from the yoke of law and precedent. He proclaimed that new times required new principles. The artist should not adopt the practice of a school or copy the manner of a master, but, apart from system or precedent, follow the promptings of his own individuality. He became the acknowledged leader of the "realistic" school of landscape painting. M. Courbet exhibited a number of large paintings as illustrations of his principles, and for some time those who cared for such things were amused by the fiery assaults of the critics, and the energy with which they were replied to by M. Courbet and his friends. In its way, though pursued with greater ardour, it resembled the strife over Pre-Raphaelism in our own country; and in Paris, as here, the artistic innovators had on their side the majority of the younger journalists. M. Courbet was charged, like the Pre-Raphaelites, with being a worshipper of ugliness, but he insisted that he had no such devotion; his principle was that of representing what he saw, and all that he saw, in the way in which he saw it, and rigorously abstaining from selection. "The basis of realism," he wrote, "is the negation of the ideal, and of all that follows from it." Unhappily, at least in his figures, he was so far unfortunate in his models that in avoiding the conventionally graceful he too often stumbled upon deformity, and laid himself open to the sarcasm of his critics. His real power is best seen in his landscapes. He paints solidly and firmly, but his handling is peculiar and wayward, and the colouring far from agreeable, whilst from his habit of rendering everything with equal emphasis, his paintings are, as has been often said, rather studies than pictures. His landscapes are numerous, frequently of large size, and embrace such subjects as a 'Paysage des Bords de la Loue,' 'Vue et Ruines du Château de Scey,' 'L'Enterrement d'Ornans,' 'Les Communaux de Chassagne,' an effect of

sunset, &c. A large proportion of his works, however, belong to the class of *genre*, such as 'Baigneuses,' one of his most defiant productions; 'Les Cribleuses de Blé,' 'Les Demoiselles de Village,' 'Les Demoiselles des Bords de la Seine,' another wilful departure from Parisian conventional art; 'Combat de Cerfs,' and a wide range besides. He has also painted many portraits, chiefly of notable friends, both male and female, whose countenances he has seldom rendered more amiable.

M. Courbet obtained a medal of the second class (*genre et paysage*) in 1849, in 1859, and in 1861; and in June, 1870, was awarded the Cross of the Legion of Honour. This, however, to the astonishment of the Parisian public, he peremptorily refused to accept, alleging, in a letter he published, that as a republican he could receive no honour from the Government of the Emperor, and that as an artist he looked for his only reward from the public. As a consequence, M. Courbet was for nine days the best abused and most talked-of man in Paris. But, the incident forgotten, he has returned to his pencils, from which he is not likely to be again diverted by a similar offer.

COUSIN, VICTOR [E. C. vol. ii. col. 407]. The principal works published by M. Cousin after the date of the above memoir were 'La Société Française au XVII^e Siècle, d'après le Grand Cyrus de Mlle. de Scudéry,' 2 vols, 8vo, 1858; a recasting of his 'Cours de l'Histoire de la Philosophie,' under the title of 'Histoire Générale de la Philosophie depuis les temps les plus reculés jusqu'au XVIII^e Siècle,' 8vo, 1863; 'La Jeunesse de Madame de Longueville,' 12mo, 1864; and 'La Jeunesse de Mazarin,' 8vo, 1865. For several years the state of M. Cousin's health had caused him to spend his winters at Caen, and it was there he died, on the 14th of January, 1867.

* COUSINS, SAMUEL, R.A., an eminent engraver in mezzotint, was born at Exeter, May 9, 1801. As a boy he attracted notice by the skill with which he copied engravings with the lead pencil, and in 1813 and 1814 the Society of Arts awarded him a silver medal and a silver palette for them. This led to his being apprenticed in the latter year to the celebrated mezzotint engraver, S. W. Reynolds, with whom, upon the expiration of his apprenticeship, he remained four years as an assistant. Working on his own account, he rose steadily to the head of his branch of the profession. In 1835 he was elected A.R.A.; in 1854 he became Associate Engraver, and on the admission of engravers to full membership, he was the first to receive that distinction, being elected Academician Engraver in 1855. Of Mr. Cousins' numerous engravings it will be enough to mention his 'Bolton Abbey in the Olden Time,' 'Saved,' 'The Return from Hawking,' 'A Midsummer Night's Dream,' and 'The Maid and the Magpie,' after Landseer; 'Christ Weeping over Jerusalem,' after Eastlake; 'The Mitherless Bairn,' after Faed; 'The Order of Release,' after Millais; 'The Heroine of Saragossa,' after Wilkie; 'The Infant Samuel,' after Sant; portraits of Pope Pius VII., Metternich, the Duke of Wellington, Sir Robert Peel, Miss Eliza Peel, the Countess Gower and Child, and several others after Sir Thomas Lawrence; Sir Thomas Watson, after Richmond; and the series of royal portraits, the Queen, the Prince Consort, and Royal Family, the Princess Royal, the Sailor Prince, and others, after Winterhalter. All Mr. Cousins' plates are not, of course, of equal excellence, but all are well drawn and carefully and beautifully executed, and the best of them, and notably those after Landseer, Lawrence, and Eastlake, have that combination of painter-like breadth and brilliancy of chiaroscuro, with richness and softness of effect, which mezzotint alone seems capable of producing, and which in that is only seen in the choicest samples.

COX, DAVID [E. C. vol. ii. col. 413]. This admirable artist died on the 7th of June, 1859. In the year of his death an exhibition of his pictures, sketches, and water-colour drawings was held in London, and the 200 works there collected bore out to the fullest extent all that was said in the above memoir of his rare powers.

CRAIK, GEORGE LILLIE [E. C. vol. ii. col. 420]. Whilst lecturing to his class, February 23, 1866, Professor Craik was suddenly seized with paralysis. He recovered partially, but lived only four months, dying at his residence, Belfast, on the 25th of the following June. Shortly after, pensions of £30 a year each were granted from the Civil List to his two daughters, Mary and Georgiana (the authoress of some very pleasing novels), "in consideration of the services of their father as Professor of History and English Literature in the Queen's College, Belfast;" something more might well have been added in consideration of his services to English literature in general.

CRAMER, JOHANN BAPTIST, born at Mannheim, Feb-

ruary 24th, 1771, was the son of Wilhelm, and the grandson of Joachim Cramer, German musicians of note. Wilhelm came to England in 1772, bringing with him his three sons, Johann Baptist, Carl, and Franz. The young Johann studied the pianoforte under Benser, Schöter, and Clementi, and also made himself familiar with the harpsichord compositions of Bach and Handel. At the early age of thirteen he began to play in public, and attracted much notice by his mastery of the pianoforte. In 1785 he went through a course of study in composition under Abel. From 1788 to 1791 he made a musical tour through the chief cities of Europe. From 1791 to 1832 he resided mostly in London, where he arrived at great distinction as a teacher, player, and composer; from thence till 1845 his residence was chiefly at Paris. In the latter year he returned to England, where he remained till his death, which occurred April 16, 1858. As a pianist, Cramer was remarkable for the delicacy of his touch, the production of various qualities of tone by exquisite gradation of pressure in fingering; he had little taste for brilliant difficulties, mere *tours de force*. As a composer he was very prolific. There came from his pen 105 pianoforte sonatas, 7 orchestral concertos, 7 duets for four hands, and a great number of quartettes, quintettes, trios, nocturnos, rondos, marches, waltzes, airs with variations, fantasias, studies, morceaux, &c. His 84 'Études' are among the classics of pianoforte writing; they were the foundation of a school, which has included many distinguished players and composers. His 'Méthode' for the piano was first published in 1846.

CRAWFORD, THOMAS [E. C. vol. vi. col. 398].

CRAWFORD, JOHN, was born in the island of Islay, August 13, 1783, and, after attending the medical curriculum at Edinburgh, proceeded to India in 1803, as an assistant-surgeon in the East India Company's service. He was soon engaged in the warfare against Holkar, and in 1805 was in Rampoor when it was besieged. In or about 1808 he went to Penang, and there occupied himself in learning the Malay language, and studying the Malay people. In 1811 he went to Java, along with Lord Minto, and remained there as the British representative for about six years. In 1817 he returned to England, but in 1821 he was again on his way to India, having been entrusted with a diplomatic mission to Siam and Cochin China. In 1823 he succeeded Sir Stamford Raffles as Governor of Singapore. After holding this post a few years, he returned to England, and occupied himself mostly with political affairs, taking an active part in promoting trade, in endeavouring to destroy the commercial monopoly of the East India Company, and in making efforts to be elected a member of Parliament. In this last object he could not succeed, and this seems to have induced him to devote himself almost entirely to his favourite studies in philosophy, ethnology, geography, and statistics. In 1861 he became President of the Ethnological Society, and till his death was one of its hardest working and most influential members. He was also an active Fellow of the Royal Geographical Society. His principal works are 'History of the Indian Archipelago,' 8vo, Edinburgh, 1820; and 'Descriptive Dictionary of the Indian Islands and the Adjacent Countries,' 8vo, 1856. These two works embody an immense mass of information respecting the districts they treat of. We also have from him, 'Malay Grammar and Dictionary,' the high merits of which were recognised by William von Humboldt. His mission to Ava and Siam resulted in his writing two works, entitled, 'Journal of an Embassy to the Court of Ava, in 1827,' 4to, 1829; and 'Journal of an Embassy to the Courts of Siam and Cochin China, exhibiting a View of the actual state of those Kingdoms,' 2 vols, 8vo, 1830. His connection with the Ethnological Society led to his writing an immense number of papers, embodying the knowledge he had accumulated in his earlier life, and remarkable as indicating his exceedingly active mental powers, even in his last years. From his 78th year, up to his death, he contributed thirty-eight papers to the journal of the Ethnological Society, and he is said to have left sixteen others in manuscript. His contributions to the 'Examiner' and other papers are said to have been very numerous. His death occurred on May 11, 1868, brought on by a sudden attack of inflammation of the lungs.

CRESCIMBENI, GIOVANNI MARIO IGNAZIO GIROLAMO XAVIER GIUSEPPE ANTONIO, an Italian poet, critic, and historian, who dropped the last five of his Christian names as practically worse than redundant, was born on the 9th of October, 1663, at Macerata, near Ancona. After being for some time under the tuition of a French ecclesiastic at Rome, he returned in 1675 to his native place, where he became a pupil of the Jesuits, under whose instruction he made his first literary

effort in a tragedy upon the Fall of Darius; in acknowledgment of which, and of his translation into Italian verse of two books of Lucan's 'Pharsalia,' he was admitted at 15 years of age a member of the Accademia de' Disposti, which was established at the small city of Jesi. On the 3rd of October, 1679, he was admitted doctor of laws, and about a year after repaired again to Rome, where he pursued his studies in jurisprudence and in belles-lettres. As a tribute to his practical talent he was named in 1685 a member of the Accademia degli Infecondi; and in 1690 was the principal founder of the Accademia degli Arcadi, a society instituted for the revival of learning and for the reformation of public taste, over which Crescimbeni presided as *Custode Generale* under the assumed name of Alfesibeo Cario. He subsequently took orders, and through the patronage of Pope Clement XI., who presented him in 1705 to a canonry in the church of Santa Maria in Cosmedin, of which, in 1715, he became arciprete, or senior priest, was enabled to devote himself almost exclusively to science and literature. He died on the 8th of March, 1728. His principal works are a valuable History of Italian Poetry, 'L'Istoria della Volgar Poesia,' 4to, Rome, 1698, and 1714; Commentaries on the above, 'Commentarij di Giov. Mario de Crescimbeni intorno alla sua Istoria della Volgar Poesia,' 5 vols. Rome, 1702—11, both of which, the 'Istoria' and the 'Commentarij,' were published together in 6 vols. 4to, Venice, 1730—31; 'La Bellezza della Volgar Poesia, spiegata in otto Dialoghi, &c., con varie Notizie, e col Catalogo degli Arcadi,' 4to, Rome, 1700, and 1712; 'Notizie Istoriche di diversi Capitani illustri,' 4to, Rome, 1704; a Translation of the Homilies of Pope Clement XI., 'Le Omilie ed Orazioni di Papa Clemente XI. volgarizzate,' folio, Florence, 1704, 8vo, Venice, 1708; 'Storia dell' Accademia degli Arcadi,' Rome, 1712; a biographical work, written by himself and other authors, but edited by Crescimbeni, entitled 'Le Vite Degli Arcadi illustri,' 2 vols. 4to, Rome, 1708 and 1710, which was at length supplemented by 'Notizie degli Arcadi Morti,' 3 vols. 8vo, Rome, 1720—21.

CRESWICK, THOMAS, R.A. [E. C. vol. ii. col. 433.] The last years of this excellent artist were passed under the pressure of almost continuous ill-health, yet he retained his old simplicity, and much of his old cheerfulness of habit, and continued to paint as long as he could hold a pencil. He died at his house, The Limes, Linden Grove, Bayswater, on the 28th of December, 1869, aged 58. The Royal Academy Exhibition of 1870 contained his last and hardly finished works—'Mill near Whitby,' and 'Afternoon.'

CREUZER, GEORG FRIEDRICH, a German philologist and antiquary, was born on the 10th of March, 1771, at Marburg, and was educated successively at that town and at the University of Jena. In 1798 he was engaged as a private tutor at Leipzig; became in 1802 professor at Marburg; and in 1804 was appointed to the chair of philology and ancient history at Heidelberg, where in 1807 he established a flourishing philological seminary. In 1825 he became a foreign member of the Paris Académie des Inscriptions et Belles Lettres; in 1826 was appointed a privy councillor of the Grand Duchy of Baden; and was also made Commander of the Order of the Zähringen Lion. Through a long series of years he devoted himself without intermission to his literary pursuits, and to the discharge of his academical duties until his resignation in 1845. He died at Heidelberg on the 16th of February, 1858. Of his numerous works the most important is that entitled Symbolism and Mythology of the Nations of Antiquity, especially of the Greeks, 'Symbolik und Mythologie der alten Völker, besonders der Griechen,' 6 vols. 8vo, Leipzig and Darmstadt, 1810—23, another edition, of which the fifth and sixth volumes were contributed by F. G. Mone, 6 vols. 8vo, Leipzig, &c., 1819—23, the first volume of a third edition, 8vo, Leipzig, &c., 1837, French translation by J. D. Guignaut, assisted by A. Maury and E. Vinet, 4 vols. 8vo, Paris, 1825—51. In this work the author taught the existence of a very ancient school of Greek poetry and philosophy, in which Homer and Hesiod were but scholars, and which in a far distant antiquity had been derived from the East. His opinions gave rise to some controversy, and were combated by J. G. J. Hermann, the philologist, whose views are stated in Letters on Homer and Hesiod, &c., 'Briefe über Homer und Hesiodus vorzüglich über die Theogonie,' 8vo, Heidelberg, 1818, and by J. H. Voss in his 'Antisymbolik,' 2 parts, 8vo, Stuttgart, 1824—26. Other scholars, of whom K. O. Müller may be mentioned, likewise took part in the discussion. Amongst the numerous other works of Creuzer occur his Origin and Development of the Historic Art of the Greeks, 'Die historische Kunst der Griechen in ihrer Entstehung und Fortbildung,' 8vo,

Leipzig, 1803; 'Historicorum Græcorum antiquissimorum Fragmenta collegit, emendavit, explicuit, ac de cujusque Scriptoris ætate ingenio fide commentatus est,' &c., 8vo, Heidelberg, 1806; 'Dionysus, sive Commentationes academicæ de rerum Bacchicarum Orphicarumque originibus et causis,' 4to, Heidelberg, 1809, of which the first volume only was published; Epitome of Roman Antiquities, &c., 'Abriss der Römischen Antiquitäten zum Gebrauch bei Vorlesungen,' 8vo, Leipzig and Darmstadt, 1824, second edition, 1829; an Essay on the History of Roman Civilisation on the Upper Rhine and the Neckar, 'Zur Geschichte altrömischer Kultur am Oberrhein und Neckar,' 8vo, Darmstadt, 1833; a Treatise on Precious Stones, 'Zur Gemmenkunde,' &c., 8vo, Darmstadt, 1834; and on the History of Classical Philology, 'Zur Geschichte der classischen Philologie,' 8vo, Frankfurt, 1854. Creuzer also distinguished himself by learned editions of Greek authors, and by other works in philological and philosophical criticism, in connection with which his labours in the field of Neo-Platonism ought especially to be mentioned, as exhibited in the 'Plotini omnia Opera,' &c., 3 vols. 4to, Oxford, 1835, of which the 'Plotini Enneades,' &c., underwent publication in 8vo, Paris, 1855, as part of a series entitled 'Scriptorum Græcorum Bibliotheca.' The collected German works of Creuzer, including all of any importance which had been produced up to that date, were published with the title of 'Deutsche Schriften,' 9 vols. 8vo, Leipzig and Darmstadt, 1836—48, the last volume of which contained an Autobiography with the title of 'Aus dem Leben eines alten Professors,' the omissions in which were supplied by a supplementary volume entitled 'Paralipomena der Lebensskizze eines alten Professors,' 8vo, Frankfurt, 1858. Professor Creuzer was a frequent contributor to various serials and periodicals. He supplied the 'Mythologie,' to the 'Real-Encyclopädie der classischen Alterthumswissenschaft,' 8vo, Stuttgart, 1839—52; and for several years subsequent to 1820 edited the Heidelberg Yearbook of Literature, 'Heidelbergsche Jahrbücher der Literatur,' 8vo, 1808, &c.

CRIVELLI, CAVALIERE CARLO, an eminent early Italian painter, was born at Venice about 1420—30, and is said to have been the scholar of Jacobello del Fiore. He settled at Ascoli; painted religious subjects, and a few portraits; and was knighted in 1490 by Ferdinand II. of Naples. The year of his death, as of his birth, is unknown: his dated pictures range between 1468 and 1495. He painted exclusively in tempera. His manner somewhat resembles that of his contemporary, Bartolommeo Vivarini, but is more severe, and the drawing firmer. For his time he was a good colourist. Generally, however, his pictures have an archaic air. Works by him occur at Ascoli; in the Vatican, Rome; the Brera, Milan; and the Berlin Museum. The Louvre is without a specimen. Our own National Gallery is exceptionally rich in his works, and all the examples are signed and some dated. They are—No. 602, 'A Pietà,' two infant angels, seated on the edge of the tomb, supporting the dead body of Christ; No. 668, 'The Beato Ferretti,' a large composition of several figures, with a village street in the background, and, what he was fond of introducing in his works, a festoon of fruit in the upper part of the picture; No. 724, 'The Madonna and Child Enthroned, with St. Jerome and St. Sebastian,' known as 'The Madonna della Rondine,' from the swallow he has introduced somewhat conspicuously: it is in the original frame, and in a predella below are representations of St. Catherine, St. Jerome in the Wilderness surrounded by animals, the Nativity of our Lord, the Martyrdom of St. Sebastian, and St. George and the Dragon; No. 739, 'The Annunciation,' a characteristic and interesting picture, dated 1486, presented to the nation by Lord Taunton in 1864; No. 788, 'The Madonna and Child Enthroned, surrounded by Saints.' This last is the most remarkable of the series. It is of considerable size (16 feet high by 10 feet 6 inches wide), is on wood, and was painted in 1476, when the artist was in the maturity of his powers. It consists of thirteen compartments in three stages, the lower stage containing five pictures (the Madonna with the Infant occupying the centre), the second and third stages each four pictures. The more important parts formed the altar-piece of the old church of San Domenico, Ascoli. It was put together as it now appears, and the costly frame made, when it was set up in 1853 as the altar-piece in the private chapel of Prince Anatole de Demidov at San Donato near Florence. It was purchased for the National Gallery in 1868 at a cost of 3360*l*. In this picture Crivelli's realism, and indeed most of his characteristics, are well shown, though parts have been materially repainted. All the heads are on gold grounds; gems and pearls have adorned the Virgin's crown and the robes of the saints, and some of them are

still in their places; and in some instances extraordinary expedients have been adopted to give an appearance of reality, as in the case of St. Peter, whose keys are so solidly painted as to stand out from the panel like actual keys, and they are suspended from a piece of real cord.

CROKER, THE RIGHT HON. JOHN WILSON [E. C. vol. ii. col. 436]. After long illness, Mr. Croker died at his residence, Molesey Grove, on the 10th of August, 1857, and was interred in the neighbouring churchyard of West Molesey. The edition of Pope's Works mentioned in the above memoir as in preparation by him, was transferred to the Rev. W. Elwin, his coadjutor in the 'Quarterly Review,' and is announced as now (1870) "just ready" for publication.

CROLY, REV. GEORGE, LL.D. [E. C. vol. ii. col. 438]. Dr. Croly died suddenly, whilst walking in Holborn, on the 24th of November, 1860. By special permission of the Home Secretary his remains were interred in his own church of St. Stephen's, Walbrook. A brief expository work by him has since appeared, 'The Book of Job. With a Biographical Sketch of the Author by his Son [Frederic W. Croly],' 8vo, Edinburgh and London, 1863.

CROME, JOHN, known among picture collectors as OLD CROME, to distinguish him from other members of the family who painted in his manner, was the son of an innkeeper at Norwich, in which city he was born on the 21st of December, 1769. He was apprenticed to a coach-painter, when coach-painting was still an artistic occupation. From this occupation, however, he turned, probably because the change of fashion left little employment for the painter of coach-panels, and set up as a drawing master in his native city. He continued to teach, but preferred to paint, and his landscapes soon acquired great local popularity. He contributed many years to the exhibitions of the Royal Academy, but his works never attracted sufficient attention to secure for him academic distinction, or to induce him to establish himself in London. Yet he was in truth in his particular line one of the best landscape-painters we possessed at a time when the English school of landscape-painting was at its highest. His pictures are usually transcripts of the scenery around Norwich; but they are something more and better than mere topographical views. They exhibit almost always a selection of what is essential, and convey a poetical conception of the scene or leading object. In execution they are unequal, some being too evidently painted hurriedly to be sold at insufficient prices. But the best are of rare excellence. Crome died at Norwich in 1821. At the International Exhibition of 1862 two of his pictures were shown, and the greater part of those who saw them learnt for the first time how great an artist we possessed in one who was supposed to be only a provincial celebrity. One of these pictures, 'Mousehold Heath,' was secured for the National Gallery, and is one of the most attractive representations of a broad open heath scene we possess, and rivalled by few for its truth, exquisite atmospheric effect, and beauty of treatment. The other, a close woodland scene, was equally true and equally effective. Several of his pictures have since come into the London market, but the greater part of them are probably still in Norfolk.

CROMPTON, SAMUEL, inventor of the spinning-mule, was born at Firwood, near Bolton-le-Moors, December 3, 1753. After the death of his father, the family removed to Hall-in-the-Wood, about a mile from Bolton, where cotton-spinning, in a domestic way, was carried on as a means of support. Young Crompton went on with his spinning and his schooling at the same time. About 1774 he began a series of attempts to improve the spinning-machine, making experiments and constructing models in the intervals of work, and far into the night; and eking out his scanty means by occasionally playing as a violinist in the Bolton Theatre at eighteen-pence a night. The state of cotton-spinning at that time was such as to make some new contrivance very desirable. Until 1738 all cotton was spun in single threads by hand. In that year Louis Paul patented a method of spinning by passing previously-prepared slivers between pairs of rollers—sound in principle, but failing in detail. Highs, in 1767, obtained the aid of Kay, a clockmaker, in constructing spinning-rollers, somewhat on the method of Paul; in the same year Hargreaves modified the one-handed wheel in such a way as to spin sixteen threads at one time, "by a turn of one hand and a draw of the other;" and in the same year Arkwright commenced the experiments which led to his important water-twist or throtile-yarn spinning. Ten years later, Arkwright's machine supplied hard yarn for warp, while that of Hargreaves supplied soft yarn for weft; but no machine

existed for spinning fine yarn for muslin and other delicate goods. Crompton filled up this gap by the inventions which he perfected between 1774 and 1779. He introduced two pairs of rollers, one rotating faster than the other; but the great feature of the machine was his spindle-carriage. This, with the spindles upon it, could, by the movement of the hand and knee, recede just at the moment when the rollers gave out the elongated thread; the thread being in a soft state, so as to allow of a considerable stretching before it had to encounter the stress of winding on the spindle. His first successful machine had about thirty spindles, and the difference of velocities between the two pairs of rollers was such as to give a stretch of one in three or four. The machine was first called the Hall-i'-the-Wood Wheel, then the Muslin Wheel, but it is now known as the Mule, a cross between, or a combination of, the spindle and the roller. Crompton having married, he and his young wife began to work the machine in 1780. Weavers willingly bought his beautiful yarn; but he was much annoyed by rival spinners, who tried to obtain a sight of his wonderful machine, that they might imitate it. He could not keep his secret; he could not afford to obtain a patent; and, in his poverty, he sold the secret of his machine to certain manufacturers before the year was out for a subscribed remuneration, which barely reached 60*l*. Crompton removed to another house near Bolton, about 1784, where he farmed a small patch of land, and spun beautiful yarn by a mule in which he was frequently making improvements. By the year 1786 one of the mules at Bolton had 108 spindles, and the machine was coming rapidly into use throughout the district. In 1791 he removed to Bolton, where he and his family worked upon two mules, and where he also made many improvements in the machines for preparing cotton for the mule process. In 1801, with 500*l*. subscribed by a friend, he set up a small factory, in which one of the mules had as many as 360 spindles. Generally in difficulties, and always harassed by the prying curiosity and envious malice of rival spinners, he applied about 1807 to the Royal Society and the Society of Arts for some recognition of his services, but without success. In 1811 he caused statistics to be obtained, showing the extent to which mule-spinning had been adopted, to the enrichment of those who had made no invention in the matter. It was found that there were 4,000,000 mule spindles in the United Kingdom, in 360 mills; that two-thirds of all the steam-power used in the cotton manufacture was employed in mule-spinning; that 7000 persons were engaged in spinning with the mule; and that 150,000 were weaving with mule-spun yarn. In 1812 he obtained a grant of 5000*l*. from parliament. There is evidence to show a probability that the grant would have been 20,000*l*. but for the untimely death of Mr. Spencer Percival. Crompton, in his later years, combined cotton-bleaching and muslin-weaving at works which he established at Over Darwin in 1813; but, with all his ingenuity as an inventor, he was not fitted to cope with the rivalries and commercial difficulties of his position. Some of his friends tried without success to obtain another parliamentary grant for him in 1826. He died June 26th, 1827. He was of a gentle, retiring, pious disposition; his taste for music was considerable, and he composed several hymn tunes.

(*Life of Samuel Crompton*, by Gilbert J. French, 8vo, London, second edition, 1860.)

CRONSTEDT, AXEL FRIEDRICH DE, was born in 1722 in Sudermania (Södermanland). His name is attached to the discovery of one of the elementary bodies in chemistry, namely, nickel. The commonest ore of this metal is called "Kupfer-nickel," or "false copper," and this is a compound of arsenic and nickel found abundantly in the mines of Saxony and Germany, and elsewhere. Cronstedt's researches on kupfernickel between 1751 and 1754 led to the discovery of nickel. Science is also indebted to Cronstedt for his 'Essay towards a System of Mineralogy,' published in Swedish in 1758, which had the most marked influence on the science. He rejected the trivial distinctions between earths and stones, vitrescent and nonvitrescent bodies, &c., and classed the earths as calcareous, siliceous, argillaceous, and so on. So also calcareous earth is pure (calcspar), or united with acid of vitriol (gypsum), or with muriatic acid, and so on, which is in fact the general principle of classification of minerals that has been continued to our own day. This essay was translated into several languages. The author also contributed a number of papers to the *Memoirs of the Academy of Stockholm*. He died the 19th of August, 1765.

CROSSE, ANDREW [E. C. vol. vi. col. 989].

CROUSAZ, JEAN PIERRE DE, a Swiss philosopher and divine, was born on the 13th of April, 1663, at Lausanne, and

was educated at Geneva, after which he spent some time at Leyden and Paris. On his return home in 1684, he was called to the pastorate of his native city, in the college of which he became in 1699 professor of Greek and philosophy, and in 1706 professor of divinity. In 1724 he was elected to the chair of mathematics and philosophy in the University of Groningen; and was appointed two years afterwards to superintend the education of Prince Frederick of Hesse-Cassel. He returned in 1737 to the professorship of philosophy at Lausanne, and died on the 22nd of March, 1748. He left a great number of works in science, theology, and philosophy, but not many of them are reckoned to-day as of much more than historical interest. They are nearly all in French, and include 'Logique, ou Systême de Reflexions qui peuvent contribuer à la Netteté et à l'Étendue de nos Connoissances,' 2 vols. 8vo, Amsterdam, 1712, which was several times reprinted, and of which an English translation was published as 'A New Treatise of the Art of Thinking, or a complete System of Reflexions concerning the Conduct and Improvement of the Mind,' 2 vols. 8vo, London, 1724; 'Traité du Beau,' &c., 2 vols. 12mo, Amsterdam, 1715, 2nd edition, 1724; 'Reflexions sur l'Utilité des Mathématiques et sur la Manière de les Étudier,' &c., 12mo, Amsterdam, 1715; 'Géométrie des Lignes et des Surfaces rectilignes et circulaires,' 2 vols. 8vo, Amsterdam, 1718; 'Examen du Traité de la Liberté de Penser,' Brussels, 1715, and 8vo, Amsterdam, 1718, a work directed against Anthony Collins; 'Traité de l'Éducation des Enfants,' 2 vols. 12mo, the Hague, 1722, of which an English translation by G. J. Tacheron was published as 'New Maxims concerning the Education of Youth,' &c., 2 parts, 8vo, London, 1740; 'De Physicæ Utilitate Dissertatio Philosophica,' 8vo, Groningen, 1725; 'De Mente humana, Substantia a Corpore distincta et immortal. Dissertatio philosophico-theologica,' 12mo, Groningen, 1726, which developed into a later work, entitled, 'De l'Esprit humain: Substance différente du Corps, active, libre, immortelle,' 4to, Basel, 1741, which is conceived in opposition to the opinion of Leibnitz, Wolf, Bilfinger, and others on the doctrine of pre-established harmony, on the ground that such a doctrine destroyed the liberty of man, and made God the author of moral evil; a work against the scepticism of Bayle, entitled 'Examen du Pyrrhonisme ancien et moderne,' folio, the Hague, 1733; 'Examen de l'Essay de Monsieur Pope sur l'Homme,' 12mo, Lausanne, 1737, of which English translations, the former by Mrs. Elizabeth Carter, appeared, entitled respectively 'An Examination,' &c., 12mo, London, 1739, and 'A Commentary,' &c., 12mo, London, 1740. The 'Examen,' and a further attack by M. Crousaz on the English poet, in a 'Commentaire sur la Traduction en Vers de M. l'Abbé Du Resnel, de l'Essai de M. Pope sur l'Homme,' 12mo, Geneva, 1738, was followed by a defence, entitled 'A View of the Necessitarian or best Scheme: freed from the objections of M. Crousaz in his Examination of Pope's Essay on Man,' 8vo, London, 1739, and by Bishop Warburton's 'Vindication of Mr. Pope's Essay on Man from the Misrepresentations of Mr. de Crousaz,' 12mo, London, 1740.

CROWLEY, CROLE, or CROLEUS, ROBERT, a poet and divine of the 16th century, was born in Gloucestershire, or, according to Fuller ('Worthies of England'), in Northamptonshire, about the year 1517. He was entered a student of the University of Oxford about 1534, and was soon after made demy of Magdalen College, of which society he became, under the name of Robert Crole, a probationary fellow in 1542, having taken his B.A. degree as Robert Crowley on the 19th of January, 1540. Wood conjectures that he left the university, probably without proceeding to his Master's degree, "when King Henry VIII. began to settle a mongrel religion in the nation." At the beginning of the reign of Edward VI. Crowley was settled as a printer and bookseller in Ely-rents, Holborn, exercising his gift of preaching in London and elsewhere as leisure and opportunity served. He was admitted to deacon's orders on the 29th of September, 1551, by Nicholas Ridley, then Bishop of London, in whose register Strype tells us he is "styled stationer of the parish of St. Andrew, Holborn." When Queen Mary came to the throne Crowley fled to the Continent, and fixed himself at Frankfurt, where he remained until after the accession of Elizabeth in November, 1558. Returning now to England, he resumed the exercise of his profession, in which he received substantial preferment. He was collated on the 24th of March, 1559, to the Archdeaconry of Hereford, which, however, he resigned in 1567; on the 9th of July, 1560, he was collated to the stall of Pratum Majus in the Cathedral Church of Hereford; and on the 1st of September, 1563, to the prebend of Mora, or More extra London, in St. Paul's Cathedral, of which for some

reason at present unknown he was deprived in September, 1565. In or before the year 1566 he was presented to the vicarage of St. Giles, Cripplegate; and on the 5th of May, 1576, received from the Bishop of London, to whom the presentation had lapsed, the vicarage of St. Lawrence, Jewry, which he held for about two years, and resigned in 1578. He died on the 18th of June, 1588, and was buried in the chancel of the church of St. Giles.

Crowley's zeal and activity were uncompromisingly directed against the Church of Rome, and nearly all his works give more or less evidence of his animosity. They comprise—'The Confutation of Thirteen Articles, whereunto Nicholas Shaxton, late Byshop of Salisbury, subscribed and caused to be set forth in Print the Yere of Lord M.D.XLVI., when he recanted in Smith-fielde at London, at the Burning of Mestres Anne Askue,' 8vo, London, 1548; 'The Confutation of the mishapen Aunswer to the misnamed wicked Ballade, called the Abuse of ye blessed Sacrament of the Aultare, wherein thou haste (gentele Reader) the ryghte Understandynge of al the Places of Scripture that Miles Hoggard (wyth his learned Counsaill) hath wrested to make for the Transubstanciacion of the Bread and Wyne,' 8vo, London, 1548; 'An Information and Petition agaynst the Oppressours of the Poor Commons of thys Realme,' 8vo, London, which was rendered by John Heron in Latin, with the title of 'Explicatio Petitoria (ad Parliamentum) adversus expilatores egeue plebecule hujus Regni,' 8vo, 1548; 'The Psalter of David newly translated into Englyshe metre in such sort that it maye the more decently, and wyth more delyte of the mynde, be reade and songe of al men,' &c., 4to, London, 1549, which was printed by the author, and sold by him at Ely-rents; 'A New Yere's Gyfte, wherein is taught the Knowledge of ourself and the Fear of God,' &c., 16mo, London, 1549; 'The Voyce of the laste Trumpet, blown by the Seventh Angel (as is mentioned in the Eleventh of the Apocalips), callynge al the Estates of Men to the ryght Path of theyr Vocation,' &c., 16mo, London, 1549, a metrical work, which contains twelve lessons addressed severally to beggars, servants, yeomen, lewd priests, scholars, learned men, physicians, lawyers, merchants, gentlemen, magistrates, and women; 'The Way to Wealth, wherein is plainly taught a most present Remedy for Sedicion,' 8vo, London, 1550; 'One-and-Thirty Epigrams, wherein are briefly touched so many Abuses that may and ought to be put away,' folio, London, 1550, which, although twice or thrice reprinted, are now unknown, with the exception of fifteen preserved by Strype in his 'Ecclesiastical Memorials,' abounding in local information, and exhibiting a curious picture of the manners and customs of the time; 'The Fable of Philargyria [or Avarice], the great Gigant of Great Britain: what Houses were builded and Lands appointed for his Provisions, and how al the same is wasted to contente his greedy Gut wythall, and yet he rageth for Hunger,' 8vo and 4to, 1551; a kind of metrical sermon, entitled 'Pleasure and Payne, Heaven and Hell: remember these foure, and all shall be well,' 8vo, London, 1551; 'An Apologie or Defence of those Englishe Writers and Preachers, which Cerberus, the three-headed Dog of Hell, chargeth with false Doctrine, under the name of Predestination,' 4to, London, 1566; 'A briefe Discourse against the outward Apparrell and ministring Garmentes of the Popishe Church,' 16mo, 1566 and 1579; 'Dialogue between Lent and Liberty, wherein is declared that Lent is a meer Invention of Man,' 8vo, London, a treatise remarkable for the boldness and novelty of its personification of Lent. Crowley published many other works of a polemical nature, and a sermon or two preached on remarkable occasions. A few other works have been too hastily referred to him, amongst which are 'The School of Virtue and Book of Good Nature,' the authorship of which is with more probability given to Francis Seager; and the 'Supper of the Lord after the true Meaning of the VI. of John,' &c., 8vo, London, 1533, which was most likely written by Tyndale, and attributed incorrectly to Crowley, because the latter had furnished a preface to the edition of 1551. Amongst the circumstances which tend, however, to his most abiding credit will be remembered the fact that Crowley printed and published, with a preface which shows that he brought forth the volume in the interests of controversy rather than of archæology, the first edition of the 'Visions of Pierce Plowman,' 4to, London, 1st and 2nd editions, 1550; new edition, 4to, 1561, and frequently reprinted and re-edited.

CRUDEN, ALEXANDER [E. C. vol. vi. col. 990].

CRUM, WALTER, was born at Glasgow in 1796, and died 5th May, 1867. He was educated in his native city, and attended the chemical course of Dr. Thomas Thomson. He is best known for his successful efforts to place the arts of dyeing and calico

printing on a scientific basis. He showed that a large class of colouring matters are fixed in cotton by the passage of their constituents whilst in the soluble state into the cavity of the fibre, and their subsequent precipitation therein as a solid pigment, as in the case of dyeing with acetate of lead and chromate of potash. Crum also pointed out an isomeric variety of alumina, which is incapable of combining with colouring matter; also a new oxide of copper analogous in composition to peroxide of iron. As early as 1823 his paper on Indigo and on certain substances produced from it by the action of sulphuric acid procured him much credit. He was the first to give the true formula for gun cotton.

Crum was elected a fellow of the Royal Society in 1844. During many years, as president of Anderson's University, he exerted himself to promote the education and general welfare of the people, and to bring scientific knowledge within reach of the artisan.

CRUSENSTOLPE, MAGNUS JAKOB [E. C. vol. ii. col. 449]. This favourite Swedish writer and politician died on the 18th of January, 1865.

* CRUVEILHIER, JEAN, a French physician, was born at Limoges, Feb. 9, 1791, and was educated for the medical profession at Paris. In 1816 he wrote a thesis, entitled 'Essai sur l'Anatomie pathologique' on receiving his degree of doctor in medicine. After stopping for various periods at Limoges, Paris, and Montpellier, engaged partly in teaching, and partly in pursuing his medical practice, he ultimately settled in Paris in 1825, where he succeeded Bérard as professor of anatomy in the university. Here he devoted himself enthusiastically to his favourite study, reviving the old anatomical society, and publishing his professional course of lectures. He was also engaged as physician to several of the medical hospitals. In 1835 he was appointed to the new chair of pathological anatomy founded by M. Dupuytren. On Aug. 14, 1863, he was promoted a commander of the Legion of Honour. His principal works are important memoirs in the 'Bulletins' of the Academy of Medicine; 'Anatomie pathologique du corps humain,' 2 vols. folio, 1829—1842, which is a magnificent work, illustrated by upwards of 200 plates; 'Anatomie du Système Nerveux de l'homme,' folio, 1845; 'Traité d'Anatomie descriptive,' 1851, 4th edition, which commenced in 1863, but is not finished; and 'Traité d'Anatomie pathologique générale,' 5 vols. 8vo, 1849—1864.

* CUBITT, JOSEPH, civil engineer, son of Sir William Cubitt, was born at Horning, in Norfolk, in November, 1811. After studying engineering under his father, he commenced on his own account, taking up railway engineering as the chief object of his attention. The Ashford and Margate Extension of the South-Eastern Railway was planned and carried out by him. The Rhymney Railway in Monmouthshire, and the Great Northern, among those of magnitude, were constructed under his plans and directions; as were likewise the chief works on the London, Chatham, and Dover Railway, including the line from Beckenham to Farringdon-street, and the line from Herne-hill to Victoria, each involving the construction of a bridge over the Thames. Mr. Cubitt constructed the piers at Porth Cawl Harbour and at Weymouth, and lengthened that at Yarmouth. His latest work of importance has been the new Blackfriars Bridge, opened by Queen Victoria in November, 1869. This structure is noteworthy for the difficulties which had to be surmounted in its construction. In clearing away the old bridge (which had been condemned in 1864), the stumps of the decayed foundations of the piers had to be removed before a single stone of the new structure could be placed. The work was done by divers, who dragged them up piecemeal, and who were a whole year thus employed. So loose and soft was the bed of the river near the Middlesex shore, that the caisson for the first pier had to be sunk to a depth of no less than 52 feet below the bed of the river. The arches of the bridge, five in number, are formed each of nine parallel ribs of wrought and rivetted iron, braced together with latticed girders. The junctions of these iron arches on the piers are concealed by immense columns of polished red granite, the largest ever used in bridge building. Mr. Cubitt also constructed the remarkable temporary double timber bridge, having a footway over the carriage-way, used from 1864 to 1869, during the construction of the permanent bridge.

CUBITT, SIR WILLIAM [E. C. vol. ii. col. 454]. This distinguished engineer died on the 13th of October, 1861. He was elected fellow of the Royal Society in 1830.

CULPEPPER, NICHOLAS, born in London in 1616, called himself student in physic and astrology. He practised both arts,

and wrote a great many books on medicine, once greatly in request, but all of them long since forgotten, save that known as 'Culpepper's Herbal,' which was until recently familiar in many a household. The real title of this book was 'The English Physician,' 4to, London, 1653, 1656, 1683, and 1684, &c.; editions in 8vo being published in 1661, 1695, 1698, and more or less imperfect reprints being frequently issued till within the last few years. The book gained its popular title from its being an account of the medicinal qualities of plants—these, according to the author, being determined by the planets under which they blossom or are gathered. Culpepper died in Spitalfields, January 10, 1654.

CUMING, HUGH, a distinguished travelling conchologist, was born, Feb. 14, 1791, at West Alvington, Devonshire. As a child he was passionately fond of flowers and shells; and this led to his being noticed and encouraged by Colonel Montague, the well-known author of 'Testacea Britannica.' He was apprenticed to a sail-maker, and in 1819 he settled at Valparaiso, pursuing business on his own account. While here he indulged his passion for collecting shells, which was stimulated by the encouragements of several scientific English naval officers. In 1826 he relinquished business, built a yacht expressly adapted for collecting, and explored the South Pacific Ocean for more than a year. He returned to Valparaiso, and, after due preparation, undertook an exploring expedition along the western coast of America; and in the prosecution of it he received special privileges and letters of introduction to all the principal authorities, from the Government of Chili. Two years were spent in thoroughly examining the whole shore line from the island of Chiloe in 44° S. lat. to the Gulf of Conchagua in 13° N. lat. Having accumulated an immense collection of shells, he returned to England, and from 1831 until now it has been a storehouse for describers of new species. The value of the collection was much enhanced by his having preserved the soft parts and the particulars relating to the capture of most of the species. In 1835 he made an exploring expedition to the Philippine Islands, his proceedings being facilitated by his knowledge of the Spanish language, and letters of recommendation from the authorities at Madrid. He examined both the sea-shores and a large portion of the interior of most of the islands; and wherever he went he lodged with the priest of the locality, who aided him in every possible way, sometimes by the use of equipages, and sometimes by organising parties of school-children to scour the district for snails and plants. Many of his rarest and finest specimens were obtained by the aid of school-children. In this way he spent four years, and returned home with large collections of plants, the dried specimens of which alone numbered 130,000, birds, reptiles, insects, and quadrupeds. These were distributed to various museums. His principal collection, viz., that of mollusks, he reserved to himself. His collection was now exceedingly large, and he spent most of the rest of his life in arranging it, exchanging duplicates for those which he did not possess, adding to it from time to time by purchases, and arranging with conchologists for the description of new species. His death occurred at his residence in Gower-street, Aug. 10, 1865; and his collection was left to the British Museum, where it is now open to public inspection. His writings were few, and not of much importance.

CUMMING, JAMES, was born 24th October, 1777. He became a scholar of Trinity College, Cambridge, in 1800, and fellow in 1803, having graduated as B.A. in 1801, obtaining honours in mathematics as tenth wrangler, after which he proceeded to M.A. While an undergraduate, he devoted much time to the study of natural philosophy, and afterwards assisted Wollaston, the physical professor in the university, in his lectures and experiments. In 1816, on the death of Smithson Tennant, he succeeded to the chair of chemistry, and in 1819 was presented to the rectory of North Runcton, near Lynn, formerly held by the Astronomer Royal, Maskelyne. He retained both preferments up to the time of his death, frequently residing in Cambridge, and lecturing every year until 1860, when his course was interrupted by illness. He died, 10th November, 1861, at the age of 84. He was F.R.S., and an early promoter of the Cambridge Philosophical Society, of which he was once president. He contributed some papers to the 'Transactions' of this society on his favourite sciences, heat and electricity, his most remarkable paper, published in 1823, being on a new branch of science (started by Professor Seebeck, of Berlin, the year before), in which it was shown that electricity is developed by the unequal heating of all kinds of conductors. In 1827 he published a manual of electro-dynamics. He was among

the first to appreciate the value of Ørsted's famous experiment, and so early as 1820 pointed it out as the basis of the electric telegraph. His professorship not being provided with apparatus, he showed his skill in manipulation by supplying many of his illustrations from his own workshop.

CUMMING, REV. JOSEPH G., geologist, was born Feb. 15, 1812, at Matlock, Derbyshire, was educated at Oakham Grammar School, and at Cambridge, and, having attained high honours, was ordained in 1835. After serving as curate to his uncle, the Rev. James Cumming, rector of North Runcton, Norfolk, for a few years, he became, in 1841, vice-principal of King William's College, Isle of Man, and resided in that island for fifteen years. He was then engaged in teaching at Lichfield and Birmingham up to 1862, when he was presented to the rectory of Mellis Suffolk, which he exchanged for the vicarage of St. John's, Bethnal-green, in 1867. He died, Sept. 21, 1868. He was a fellow of the Geological Society, for whose 'Journal' he wrote several papers, mostly relating to the Isle of Man. He is best known for his work, entitled 'Isle of Man: its History, Physical, Ecclesiastical, Civil, and Legendary,' 8vo, 1848.

CUNÆUS, PETRUS, in the vernacular, VAN DER CUN, a learned lawyer and antiquary, and son of a merchant of Flushing, in Zealand, was born there in the year 1586. After receiving careful instruction at Middleburg and Haarlem, he was sent at 14 years of age to Leyden, where he studied Greek and Hebrew under his relative, Ambrosius Regemorter, with whom in 1603 he paid a visit to England. Returning to Leyden without Regemorter, who remained in London as Pastor of the Reformed Dutch Church, Cunæus applied himself to theology and jurisprudence, in addition to his studies in the Belles-Lettres, and attracted the attention of the curators of the University by the ability of a course of lectures which he delivered on Horace. Wishing to increase the depth and the range of his learning, he repaired to the University of Franeker, in Friesland, where the celebrated Johan Druys, or Drusus, Professor of Hebrew, instructed him in that language, as well as in Chaldee and Syriac, and in Rabbinical learning and Jewish antiquities generally. In the beginning of the year 1612, Cunæus was appointed by the curators of the University of Leyden to be Professor Extraordinary of the Latin language, and not long after was further commissioned to give instructions in political economy. In 1613 he was enrolled as one of the ordinary professors, and two years after, took his degree of Doctor in the Faculty of Law; when he received permission to spend some time at the Hague, for the purpose of becoming acquainted with the practice of the courts of justice. Upon his return to Leyden he was appointed, in 1615, to the Professorship of Jurisprudence, the duties of which he performed till his death, on the 2nd of December, 1638. He was interred in the Church of St. Peter, at Leyden. Towards the end of his career, the States of Holland often consulted him on delicate questions of commercial and maritime law; and he held for some time, in succession to Jacobus Eyndius (Jacob von den Eynde) the office of Historiographer to the State of Zealand. His works include 'Notæ et Animadversiones in Nonni Panopolitæ Dyonysiaca,' 8vo, Leyden, 1610; 'Juliani Imperatoris Cæsares, sive Satyræ in Principes Romanos,' 16mo, Leyden, 1612, with which was incorporated 'Sardi Venales, Satyra Memippea in hujus Sæculi homines plerosque in esse eruditos,' 16mo, Leyden, 1612, in which the author ridicules the savans who play upon the ignorance and credulity of the people, and which was several times reprinted in Dutch, as 'Gekken te hoop,' 12mo, Amsterdam, Rotterdam, &c., and in French, with the title of 'La Réforme dans la République des Lettres.' His most important work is his 'De Republica Hebræorum, Libri III.,' 8vo, Leyden, 1617, which became a text-book in the University of Leyden, and was several times reprinted, amongst others, with various annotations by Johan Nicolai, in 4to, Leyden, 1703. An English translation, by Clement Barksdale, appeared as 'Petrus Cunæus of the Commonwealth of the Hebrews,' 12mo, London, 1653; a Dutch translation, by Willem Goeree, was entitled 'De Republyk der Hebræen, of gemeenebest der Jooden, in drie Boeken door Petrus Cunæus, in 't Latijn beschreven, en nu uit 't Latijn vertaald en met printverbeeldingen en nodige inlaasngen verrijkt,' 4 parts, 12mo, Leyden, 1682—1702; and a French version bore the title of 'République des Hébreux,' 8vo, Amsterdam, 1705. The 'Hebrew Republic' does not present the sequence and completeness of a history, but rather exhibits the epochs of the principal revolutions in the Jewish commonwealth, with detached commentaries on the more important of its laws and ceremonies. Another of the works of Cunæus may be mentioned, 'Exercitationum Oratoriarum In-

auguratio,' 4to, Leyden, 1621; and a further one, of posthumous publication, in which several of his already published works were collected, with the title of 'Orationes Varii Argumenti, &c., editæ cura M. Z. Boxhornii,' 8vo, Leyden, 1640, 8vo, Wittenburg, 1643, 8vo, Leipzig, 1693, and 8vo, Leipzig, 1735. Peter Burman, Professor of Rhetoric at Leyden, collected and edited for the first time various letters which had been written or received by Cunæus, with the title of 'Petri Cunæi, Eloquentiæ et Juris Romani quondam Academia Batava Professoris, et doctorum Virorum ad Eundem Epistolæ,' 8vo, Leyden, 1725.

CUNNINGHAM, PETER [E. C. vol. ii. col. 462]. From the time of his retirement from the Audit Office in 1860, Mr. Cunningham was incapacitated by the state of his health from any continuous literary labour. He resided at St. Albans, where he died, on the 18th of May, 1869, aged 53.

CURETON, WILLIAM, an eminent Orientalist, was born in 1808, at Westbury, in Shropshire, and, after receiving his earlier education at the Free Grammar School of Newport, in that county, proceeded with a Careswell Exhibition to Christ Church, Oxford, which he entered in 1826. He took the degrees of B.A. in 1830, M.A. in 1833, and B.D. and D.D. by accumulation in 1858, at which time he was already an honorary D.D. of the University of Halle. He was made deacon in 1831, and admitted to priest's orders in 1832. Dr. Gaisford, Dean of Christ Church, appointed him chaplain of his college, and in 1834 recommended him to the office of sub-librarian of the Bodleian, the duties of which he fulfilled until his appointment, in 1837, to succeed Sir Frederick Madden as assistant-keeper of the MSS. in the British Museum. Here his knowledge of Arabic, to which he had devoted himself from the time of his first graduation in 1830, found exercise in arranging, cataloguing, and minutely describing in Latin the Arabic books and manuscripts. He was an active promoter, if not the founder, of the Society for the Publication of Oriental Texts, for which he edited, "from the collation of several MSS.," Muhammad al Sharastani's 'Book of Religious and Philosophical Sects,' 2 parts, 8vo, London, 1842—1846, and En-Nesefi's 'Pillar of the Creed of the Sunnites,' 8vo, London, 1843; having previously brought out in the same year Rabbi Tanchum's Commentary on the Book of Lamentations, 'Tanchumi Hierosolymitani Commentarius Arabicus in Lamentationes, e Codice unico Bodleiano,' &c., 8vo, London, 1843. The first fruits, however, of Dr. Cureton's Oriental studies were an Arabic tract, which he appears to have printed just before he left the Bodleian Library at Oxford, and to the text of which Dr. Wright, under whose care the work was finally published, after the editor's death, says that he evidently intended to add an English translation and notes. This little work is part of a larger one by Abū Naṣr Yahyā ibn Ḥarrir, a Jacobite Christian of Tekrit, and is called the 'Thirty-first Chapter of the Book entitled The Lamp that guides to Salvation,' 8vo, London, 1865.

Dr. Cureton's attention was considerably diverted from his Arabic studies by the arrival, in 1841, and again in 1843, of a collection of Syriac MSS., which had been obtained through the agency of Dr. Tattam, from the Monastery of St. Mary Deipara, in the Desert of Nitria or Scete, not far from Cairo; to the study, arrangement, cataloguing, and description of which he proceeded with enthusiastic ardour. The first result of his researches in this new field was the publication of 'The Ancient Syriac Version of the Epistles of St. Ignatius to St. Polycarp, the Ephesians, and the Romans; together with extracts from his Epistles collected from the Writings of Severus of Antioch, Timotheus of Alexandria, and others. Edited, with an English Translation and Notes; also the Greek Text of these three Epistles, corrected according to the authority of the Syriac Version,' 8vo, London, 1845; in reviewing which work in December of that year, the 'Quarterly Review' gave an account of the way in which the manuscripts were procured, and a rough sketch of their contents. The Epistles ascribed to Ignatius had already given rise to more controversy than any other documents connected with the Primitive Church, and the publication of Dr. Cureton's work opened it afresh. He argued that the Epistles presented by him exhibited more accurately than any formerly published what Ignatius had actually written, affirming that we have here the genuine Epistles of St. Ignatius in their original form; that the previously known recensions of these three Epistles are much altered and interpolated; and that all others ascribed to that Father are supposititious. Whilst some accepted the views of Cureton, as the Chevalier Bunsen and Dr. F. C. Baur, of Tübingen, others very strenuously opposed them, as Dr. Wordsworth, in the 'English Review,' July, 1845, Dr. Hilgenfeld, Dr. Denzinger, and Dr. Hefele, in his

third edition of the 'Apostolic Fathers.' Cureton himself took the field against Wordsworth in his 'Vindiciæ Ignatianæ; or, the Genuine Writings of St. Ignatius, as exhibited in the ancient Syriac Version, vindicated from the charge of Heresy,' 8vo, London, 1846, which Dr. Wright characterises as a calm but crushing refutation of his opponent's allegation that the Syriac version was "a miserable epitome by an Eutychian heretic." The next publication affecting this question was Cureton's 'Corpus Ignatianum: a complete Collection of the Ignatian Epistles, genuine, interpolated, and spurious; together with numerous extracts from them, as quoted by Ecclesiastical Writers down to the Tenth Century, in Syriac, Greek, and Latin; an English Translation of the Syriac Text, copious Notes, and Introduction,' 8vo, London, 1849, in which the editor expresses his belief in the prevalence of the views he had put forth. But the controversy was not yet settled, and champions on one side and the other have since appeared. Cureton, however, remained steadfast to the position he had assumed in the 'Corpus Ignatianum,' and intended, but for his premature death, to have once again stepped forward to sum up and conclude the controversy. Whilst this was at its height, he edited the text of a portion of the Syriac version of the long-lost 'Festal Letters of St. Athanasius,' 8vo, London, 1848, of which a German translation appeared in 1852, and an English one, 8vo, Oxford and London, 1854, by Dr. Henry Burgess, formed one of the volumes of the 'Library of Fathers of the Holy Catholic Church.' Other labours of Dr. Cureton in the field of Syriac literature were the editing—for the Trustees of the British Museum—of 'Fragments of the Iliad of Homer; from a Syriac Palimpsest,' 4to, London, 1851; 'The Third Part of the Ecclesiastical History of John, Bishop of Ephesus,' 4to, Oxford, 1853, of which the Rev. R. Payne Smith published a translation in 1860, and a German translation of which appeared in 1862; 'Spicilegium Syriacum: containing remains of Bardesan, Meliton, Ambrose, and Mara Bar Serapion. Now first edited, with an English Translation and Notes,' &c., 8vo, London, 1855; 'Remains of a very Ancient Recension of the Four Gospels in Syriac, hitherto unknown in Europe. Discovered, edited, and translated,' &c., 4to, London, 1858; the 'History of the Martyrs in Palestine,' 4to, London, 1861, by Eusebius of Cæsarea, which was the last of Dr. Cureton's works that he lived to finish.

Resuming the thread of his personal and professional career, it may be recorded that Cureton was in 1840 appointed one of the select preachers of his University; became in 1847 Chaplain in Ordinary to the Queen; and was appointed by the Crown, in December, 1849, to the Rectory of St. Margaret's, Westminster, to which was attached a canonry in the Abbey. Soon after this promotion he resigned his Assistant-Keepership in the British Museum. On the 29th of May, 1863, he received a severe shock from a railway accident, whilst on his return with his family from Eastbourne, from the effects of which he never recovered. He died at his native place of Westbury, on the 17th of June, 1864, leaving the Orientalists of Europe to deplore a loss which seemed irreparable. The honours which his scholarly reputation attracted, both in this country and abroad, were numerous. He was elected a Fellow of the Royal Society in 1838; in 1848, Deputy-Chairman, and in 1863 Chairman of the Committee of the Oriental Translation Fund; in 1855, a Corresponding Member, and in 1860 a Foreign Associate of the Institute of France; in 1859 was appointed a Trustee of the British Museum on the part of the Crown; and received the Membership of the French Asiatic Society, the Honorary Membership of the Historico-Theological Society of Leipzig, and the Corresponding Membership of the German Oriental Society, besides other distinctions. His contributions to popular theology are 'Three Sermons preached at the Chapel Royal, St. James,' 8vo, London and Oxford, 1848; a Sermon preached at the request of the Prince Consort before the Corporation of Trinity House, and printed for private circulation, with the title of 'The Doctrine of the Trinity not Speculative but Practical,' 4to, London, 1858; and a discourse delivered in Westminster Abbey on Sunday evening, April 10, 1859, and published in 'Westminster Abbey Sermons,' with the title of 'God's Promises and Man's Promises contrasted.' Amongst the plans which Dr. Cureton left unfulfilled was the publication of a work which was edited after his death, and entitled 'Ancient Syriac Documents relative to the earliest Establishment of Christianity in Edessa and the neighbouring Countries, from the Year of our Lord's Ascension to the beginning of the Fourth Century; discovered, edited, translated, and annotated by the late W. Cureton, &c., with a Preface by W. Wright, Ph.D., LL.D., Assistant in the

Department of Manuscripts, British Museum, 4to, London and Edinburgh, 1864. Dr. Wright has since carried out another unaccomplished design of Dr. Cureton, by his publication of the 'Homilies of Fārhad, or Aphraates, the Persian Sage,' 4to, London, 1869.

CURLL, EDMUND, was born in the West of England, in the latter part of the 17th century. He appears to have commenced business by keeping a bookseller's stall in Covent Garden. In 1708 he was established as a publisher at Middle Temple Gate; thence he removed to "the Dial and Bible, against St. Dunstan's Church, in Fleet-street;" about 1719—20 to Paternoster Row; in 1723 returned westward, and, though he several times shifted his abode, continued thenceforward in or about the Strand or Covent Garden. He has obtained an unenviable place in the literary history of the 18th century as the publisher of obscene books and the opponent of Pope, who has branded "dauntless Curll," "the miscreant," in some of the coarsest and most offensive lines in the Dunciad. Curll was rapacious, unprincipled, and unscrupulous, and many of his books deserved all the reprobation they received; but all his books were not of a disreputable character. He was the publisher of 'Bishop Bull's Vindication of the Church of England,' 'The Devout Companion,' South's 'Remains,' Aubrey's 'Antiquities of Surrey,' Ashmole's 'Berkshire,' and 'Order of the Garter,' Parker's 'History of his Own Time,' Whitelocke's 'Memorials,' Erdeswicke's 'Survey of Staffordshire,' and other theological, historical, and antiquarian works, as well as Young's 'Last Day,' and Philips' Poems. His quarrel with Pope commenced in 1715, on his publishing the 'Court Poems' (a main cause, also, of Pope's Quarrel with Lady Mary Wortley Montague). Curll met Pope and Lintott at the Swan Tavern, Fleet-street, to discuss the publication. They did not quarrel then, but Curll afterwards charged the poet with having put "an emetic potion" into his wine, and Pope shortly after published 'A Full and True Account of a horrid and barbarous revenge by Poison, on the body of Mr. Edmund Curll, bookseller, with a faithful copy of his last Will and Testament. By an Eye Witness.' This, which is more bestial than even the verses in the Dunciad, was reprinted in Pope and Swift's Miscellanies, and the poet returns to the story both in the text and notes of the Dunciad. The same year, 1716, Curll having offended the Westminster Scholars by printing, without permission, "with false Latin in't," the Oration delivered by the Captain of the King's Scholars on the death of Robert South, was enticed within the school precincts, tossed in a blanket, and beaten: the story, of course, being quickly spread abroad in prose and verse. About this time (May, 1716) Curll was summoned before the House of Lords for breach of privilege in publishing 'An Account of the Trial of the Earl of Winton,' received, on his knees, a reprimand from the Lord Chancellor, and was discharged on payment of the fees. A few years later he was again called before the House of Lords, this time for publishing the will of a peer: wills and testaments of persons recently deceased being a class of goods in which the Dauntless carried on a considerable trade. In November, 1725, Curll was tried before the Court of King's Bench for publishing obscene and immoral books, namely, a translation from the Latin, 'De Usu Flagrorum in re Venereâ,' and, 'Venus in the Cloister, or the Nun in her Smock,' from the French. He was found guilty, and, it is generally added, was sentenced to be set in the pillory, and lose his ears. But this is an error. Curll moved an arrest of judgment, on the ground that the offence was not a libel, and, if punishable at all, was an offence *contra bonos mores*, and only punishable in a spiritual court. The Court ordered the point to be argued, and took time to consider its judgment. Curll, meanwhile, was remanded to the King's Bench Prison, where he was kept in close confinement for five months. There he formed an acquaintance with a fellow prisoner, John Ker, of Kersland, and undertook to publish his 'Memoirs and Secret Negotiations at the Courts of Great Britain, Vienna, Hanover, &c.' Proceedings were at once instituted against Ker and his publisher for a misdemeanour in printing a scandalous and seditious libel. Ker died before the trial, but Curll was found guilty, and he was then (February 12th, 1728,) called up for judgment on the two convictions, the judges having decided against him on the first. He was sentenced, on the indictments for the obscene books, to pay a fine of 25 marks for each, and to enter into recognizances for his good behaviour: and for publishing Ker's Memoirs, to pay a fine of 25 marks, to stand in the pillory for the space of an hour, and to enter into his own recognizance for his good behaviour for another year. He accordingly stood in the pillory on February

28th, but telling the mob that it was for vindicating the memory of Queen Anne, he not only escaped pelting, but at the end of the hour was carried off in triumph to a neighbouring tavern. Nothing is said in the sentence about his ears, and of course they were not cropped, yet Amory, who boasts of his intimate friendship, says, like most who have spoken of him, "he lost his ears for the 'Nun in her Smock,' and another thing." Curll had, in 1727, published Pope's Letters to his friend Cromwell, having bought them of Mrs. Thomas, and this was one of the grounds of Pope's anger. In 1735 he announced an edition of 'Mr. Pope's Literary Correspondence for Thirty Years, from 1704 to 1734.' How he obtained the letters has never been fully explained, though it is now generally believed that Pope caused them to be conveyed to him ready printed. Be that as it may, the poet expressed great indignation, and, as Curll had in his advertisement mentioned the name of certain peers, managed to have attention called to it in the House of Lords as a breach of privilege. The printed sheets were seized, and Curll summoned to the bar, but no such "abuse of Lord Burlington," as was asserted, being found in them, he was dismissed, and the books returned to him. Pope's purpose was served in general attention being directed to the Letters, and he brought out his own edition. But Curll was not disposed to forego his advantage, and he continued to publish Pope's Letters, incorporating in his those first issued in Pope's edition, till, with the help of a great deal of utterly irrelevant matter, his series reached in all six volumes. This filled the measure of Pope's wrath, and Curll's place in the Dunciad was the consequence. Into the details of the strife it is not necessary to go farther, and we advise the reader who is not concerned in the subject to avoid touching the pollution. Curll died in 1747, "as great a penitent," according to Amory, "as ever expired." An interesting account of Curll will be found in Mr. Charles Knight's 'Shadows of the Old Booksellers,' and a great deal of information, some of it original, concerning him is collected in 'Notes and Queries,' S. 2, vols. ii.—x. For the story of the Letters, consult 'Carruther's Life of Pope,' and the 'Athenæum' for 1854; some additional information may be looked for in Elwin's forthcoming edition of Pope's Works.

CURRAN, JOHN PHILPOT [E. C. vol. vi. col. 991].

CURTIS, JOHN, entomologist, was born at Norwich, Dec. 3, 1791. He attended a school at Norwich, where he showed an interest in insects, and became acquainted with Sir James E. Smith and the father of Sir W. J. Hooker. In his 16th year he was articled to a solicitor, but he had not been long engaged in legal matters before he made the acquaintance of Mr. Simon Wilkin, a young man of wealth, who, on attaining his majority, invited Curtis to live with him at his residence, Coney Hall, near Norwich. An entomological society was got up, and several eminent men, such as the Rev. W. Kirby, John Lindley, and others joined its ranks. He formed a resolution to describe and delineate all the genera of insects, and with that view he learned how to etch and engrave, dissected all the specimens he could obtain, and made copies of the published figures of such as were beyond his reach. In 1819 he went to London, and was introduced to Sir Joseph Banks, Dr. Leach, and others, having tastes congenial with his own. In 1825 he made an entomological tour through Scotland, and in 1829 explored a portion of France. In 1843, 1850, and 1851, he made tours in Italy. His death occurred Oct. 6, 1862. His literary works were very extensive. Thus, in addition to numerous scientific papers, he wrote some entomological works of unusual scope. In 1824 he commenced his great work on British entomology, and he issued it in monthly parts until its completion in December, 1839. The work forms 16 volumes, illustrated with 700 plates of admirable figures. From 1841 to 1847 he was the entomological editor of the 'Gardener's Magazine.' Shortly before his death he lost his sight, owing, it is supposed, to having overstrained his eyes, and received for a short period a Government annuity of 150l. He was a member of numerous societies, English and foreign.

* CURTIUS, ERNST, a German antiquary and philologist, was born on the 2nd of September, 1814, at Lübeck, where his father held the office of syndic. He received his earlier education at the Catharine Gymnasium of his native city, after which he prosecuted his classical studies successively at the universities of Bonn, Göttingen, and Berlin. In 1837 he accompanied Professor Brandis to Athens for the purpose of examining the monuments and remains of classical antiquity in Greece. Whilst residing in that country he produced, jointly with his friend Emanuel Geibel, a small work, entitled *Classical Studies*, 'Classischen Studien,' 12mo, Bonn, 1840; and in the same year made an excursion into Peloponnesus in company with Professor Karl

Ottfried Müller. After the death of the latter at Athens, Curtius returned leisurely to Germany, spending some time by the way in Italy, and arriving at Halle in December, 1841, with the manuscript of his 'De Portubus Athenarum Commentatio,' 8vo, Halle, 1842. He now settled as a teacher at Berlin, and in 1844 was appointed professor extraordinary in the university there; and about the same time published his 'Anecdota Delphica,' 4to, Berlin, 1843; 'Inscriptiones Atticæ nuper repertæ duodecim,' 8vo, Berlin, 1843; and 'Die Akropolis von Athen,' 8vo, Berlin, 1844, which on the 10th of February of that year had been delivered as a discourse before the Berlin Scientific Society. In the following October he was appointed tutor to Friedrich Wilhelm, the present Crown Prince of Prussia, whom, in 1849, he accompanied to the university. He returned to Berlin in the spring of 1850, and devoted himself afresh to his academic duties, until in 1856 he removed to Göttingen as professor of classical philology and archæology, and joint director of classical seminaries. Curtius became in 1853 a member of the Academy of Science at Berlin, and of the Scientific Society of Göttingen in 1856. His two principal works are an historico-geographical description of the Peloponnesus, entitled 'Peloponnesos. Eine historisch-geographische Beschreibung der Halbinsel,' 2 vols., 8vo, Gotha, 1851—2; and a history of Greece, 'Griechische Geschichte,' 8vo, Berlin, vol. i., 1857—vol. ii. to the end of the Peloponnesian War, 1861—English translation by A. W. Ward, M.A., 2 vols., 8vo, London, 1868—69. The remaining works of Professor Curtius include one on Greek art, 'Die Kunst der Hellenen,' 8vo, Berlin, 1853; the Ionians before the Ionian Emigration, 'Die Ionier vor der ionischen Wanderung,' 8vo, Berlin, 1855; a treatise upon ancient Greek wells, &c., and their inscriptions, 'Abhandlung über griechische Quell- und Brunnenschriften,' 4to, Göttingen, 1859; Attic studies, 'Attische Studien,' 4to, Göttingen, 1862, &c.; besides contributions to

various classical or antiquarian periodicals, amongst which should be specially named 'Gerrhard's Archæologische Zeitung.'

CZARTORYSKI [E. C. vol. ii. col. 473]. PRINCE ADAM GEORGE CZARTORYSKI died at Montfermeil, near Paris, on the 15th of July, 1861, aged 91. His brother, PRINCE CONSTANTINE ADAM CZARTORYSKI, died at Vienna, on the 23rd of April, 1860, in his 87th year.

CZERNY, CARL, pianist and musical composer, was born at Vienna, February 21st, 1791. He was early taught music by his father, a professor of the pianoforte, but studied composition from the works of Kirnberger and Albrechtsberger. In 1804, at the early age of 13, he began to teach the pianoforte; and was actively engaged in teaching during the remainder of his life. Among his pupils were Liszt, Döhler, and Madame Oury. In 1820 he published his first works, variations and rondos; and during the next 36 years he produced the vast number of 850 compositions for the pianoforte, besides masses, requiems, motetts, concertos, symphonies, &c., and 400 pieces were left by him in manuscript. He died on the 15th of July, 1857. As in other cases of the kind, he did not give himself time to develop the higher characteristics of music. Besides a translation of Reicha's treatise on harmony, a treatise on composition, and a 'Method' for the pianoforte, he wrote 'Umriss der ganzen Musikgeschichte, dargestellt in einem Verzeichniss der bedeutenderen Tonkünstler aller Zeiten, chronologisch geordnet,' 4to, Mainz, 1851, &c.

CZUCZOR, GERGELY, or GREGORY [E. C. vol. ii. col. 474]. This distinguished Hungarian poet and philologist died at Pesth of cholera, on the 9th of September, 1866. He is understood to have nearly completed his great dictionary of the Hungarian language, 'A Magyar Nyelv Szótára,' but the last part we have seen (8vo, Pesth, 1867) only comes down to the end of the letter O.

D

DAHL, JOHANN CHRISTIAN [E. C. vol. ii. col. 447], died at Dresden on the 14th of October, 1857.

* DAHL, VLADIMIR IVANOVICH, a Russian philologist, novelist, and antiquary, was born at St. Petersburg in 1802, and after receiving the education of a naval cadet in his native city, joined the Black Sea fleet in 1819, and for several years took part in the operations in which it was engaged. He performed military service in the army which made the Polish campaign of 1831; and accompanied an expedition directed against Khiva, in Turkestan, in which he distinguished himself for his courage and address, and on which he animadverted in a volume of Observations, &c., published in German as 'Bemerkungen zu Zimmermann's Entwurf des Kriegstheaters Russlands gegen Khiwa,' Orenburg, 1840. As a variety in his career, Dahl went through a course of medical instruction in the University of Dorpat, and practised in the military hospital of St. Petersburg; and also accepted an appointment as a chinovnik, or official in the civil service. Finally his devotion to literary pursuits became exclusive; and he produced a number of stories and romances which have been much commended for the cleverness of their plots, their vivacity, force, and naturalness of style, and singular purity of diction. They were published chiefly under the pseudonym of Kasak Lugansky, or the Cossack Lugansky, and comprise a story entitled 'Chmoei,' or Drunkenness; 'Son u Jaw,' or the Dream and the Awakening; 'Wakeh sidorof tshaikin njebulwalo s bülom,' or What has never been, and what has been; 'Skazka o Mishda, o Stschastii, o Prawda,' or a Tale of Misery, Good Fortune, and of Truth; 'Dwarnik,' or the Servant; 'Dentschschik,' or the Officer's Valet; the Cossack of the Ural, which was published in German as 'Der Kasak vom Ural,' in the second volume of Robert Lippert's 'Nordisches Novellenbuch,' 3 vols. 8vo, Leipzig, 1846—47; and Sailors' Pastimes, 'Matrosskie Dosugi,' 8vo, 1853.

Dahl traversed nearly all the provinces of the Russian Empire for the purpose of making himself acquainted, immediately and at first hand, with the folk-lore of the Russian people. To the exercise of his industry, and his almost intuitive perception of what was distinct and characteristic, are due the

very valuable contributions he has made to the ethnography of the most remote and unknown districts of Russia. He has collected, and reduced to writing, but up to the present time without publication, several thousands of popular legends, *Skazki*, which, being perpetuated by oral tradition, throw light upon the habits, the ideas, the dialectic peculiarities, and the antiquities generally of the various Russian provinces; and has published a large collection containing about 30,000 Proverbs of the Russian Nation, with the title of 'Poslovitsui Russkago Naroda.' A collective edition of Dahl's works appeared in 8 vols. St. Petersburg, 1860—61. His most valuable and important achievement is his Explanatory Dictionary of the living Great-Russian Language, 'Tolkovy Slovar jivago Veliko Russkago yazyuika,' the publication of which, in four huge volumes, was completed in 1868. In this immense work, which, it should be stated, is designed only for Russians or for those who have a knowledge of their language, Dahl has explained the great number of Russian words which do not occur in books; and has also inserted in it, for the sake of their idiomatic and philological value, the 'Proverbs' which he had already published in a separate form.

DAHLGREN, JOHN A., Rear-Admiral in the United States service, was born in Pennsylvania in 1810. Having entered the navy as a midshipman in 1828, he worked his way up slowly in rank, becoming a lieutenant in 1837, and a commander in 1855. He saw little service afloat after 1847, except a cruise in the Plymouth sloop of war, to make certain gunnery experiments, and for a short time in the Civil War. His chief employment was at the Navy Yard, Washington, in the departments of ordnance and hydrography, superintending the construction of new guns. Dahlgren advocated the substitution of shell guns for the solid shot guns previously in use. His 8-inch shell gun did not differ much in length, range, or weight from the old 32-pounder, while it was much more powerful in action. Many of the researches which led to this change are treated in an American blue-book, 'Reports of Experiments on the Strength and other properties of Metals for Cannon, with a Description of the Machines for Testing Guns, of the Classification common in Service. By Officers of the Ordnance Department.'

ment,' 1856. Dahlgren also introduced an improved armament for boats: light bronze 24-pounder and 12-pounder howitzers, adapted alike for ordinary shells, shrapnel shells, and canister shot. He contrived light iron field carriages for similar guns, to be used as field howitzers. What is known as a Dahlgren gun, in the American service, is distinguished by having relatively less metal in front of the trunnions, and more behind, than ordinary guns: a proportion suggested by the long series of experiments which he had conducted. His services in the Civil War, 1861—65, won for him the rank of captain and of rear-admiral. He published many professional works, some separately, but mostly in government blue-books, viz., 'Report of the 32-pounders of 32 cwt.,' 1850; 'System of Boat Armament in the United States Navy,' 1852, second edition, 1856, of which a French translation appeared in 1855; 'Ordnance Memoranda: Naval Percussion Locks and Primers,' 1852; 'Shells and Shell Guns,' 1856. Admiral Dahlgren died at Washington, of heart disease, July 13th, 1870.

DALE, REV. THOMAS, Dean of Rochester, was born at Pentonville, London, Aug. 22, 1797; was educated at Christ's Hospital, and at Corpus Christi College, Cambridge; and having graduated B.A., was ordained, and took priest's orders in 1823. Whilst at college he published 'The Widow of Nain, and other Poems,' which passed through several editions, and made him widely known in religious circles. The 'Outlaw of Taurus,' and other poems which followed were hardly so popular. After some years of successful practice as private tutor, publishing a 'Translation of the Plays of Sophocles into English Verse,' and serving as curate, lecturer, and assistant preacher at St. Michael's, Cornhill, St. Bride's, and other city churches, he was, in 1830, elected to the incumbency of St. Matthew's Chapel, Denmark Hill, and there attained great distinction as a preacher. In theology he belonged to the 'Evangelical' section of the church; but was free from sectarian narrowness. His teaching met with wide acceptance, and in 1835 he was presented by Sir Robert Peel to the vicarage of St. Bride's, Fleet Street, which he held till his nomination in 1847 to that of St. Pancras. During this time his celebrity as a preacher and a writer had been extending, and on the foundation of the London University (now University College), Mr. Dale was elected Professor of the English Language and Literature. He also taught there a class for the study of theology and the Greek Testament, and his Introductory Lectures to both courses were published. He discontinued his connection with the London University in 1830, but in 1836 accepted the professorship of the English language and literature at King's College, which he held till 1840. As vicar of St. Pancras, Mr. Dale, whilst assiduous in parochial work and maintaining his position as an effective and popular preacher, distinguished himself by his efforts for church extension and for the breaking up of the huge parish into several district parishes, in both of which objects he was remarkably successful. Mr. Dale was in 1843 made prebend of St. Paul's, and a few months later canon residentiary. Advancing age led Mr. Dale to desire to exchange St. Pancras for some smaller living, and in 1860 he accepted that of Thefield, Hertfordshire. In the spring of 1870 he was appointed Dean of Rochester, but died within a month of his installation, on the 14th of May, 1870. Besides the works already named, Mr. Dale published a large number of sermons preached on public occasions, pastoral addresses, and various works of a devotional character. He also published a 'Domestic Liturgy,' a 'Companion for the Altar,' and a 'Young Pastor's Guide,' and wrote a Biographical and Critical Introduction to an edition of Cowper's Poetical Works.

DALHOUSIE, JAMES ANDREW BROWN, tenth Earl and first Marquis of [E. C. vol. ii. col. 481], died on the 19th of December, 1860, and was succeeded in the earldom by his cousin, the Right Hon. Fox Maule, Lord Panmure, Secretary of War in Lord Palmerston's Ministry.

DALIBARD, THOMAS FRANÇOIS, was born at Crannes in 1703, and died at Paris in 1779. His studies were directed by Buffon, and he was the first to introduce into France the principles of Linnæus. He published papers on botany and physics which are now forgotten; but his name is associated with the famous experiment, devised by Franklin, for determining the identity between lightning and electricity. Franklin's claim to what was long known as "the Philadelphia experiment" has been disputed, as usual, by the French, and M. Arago, in his *Éloge* of Volta, has assigned the credit of having established the identity in question to the Abbé Nollet and to Dalibard. It is true that in 1748 Nollet pointed out a number of resemblances between lightning and electricity, but Dr. Wall-

referred to the resemblances in 1708, and Grey with more particularity in 1735. Nollet suggested no means for testing the identity, but Franklin in 1749 did, and minutely described two methods of conducting the experiment, and sent his instructions to Europe in order that others, who had better local opportunities than he possessed, might try one of them. Dalibard admits that he followed Franklin's printed directions in erecting his apparatus at Marly-la-Ville, and placed it under the care of an old soldier named Coiffier. The first storm occurred while Dalibard was at Paris. Coiffier presented a piece of metal to the rod and drew a number of sparks. He then ran for the curé, who repeated the experiment, and wrote an account of it to Dalibard. This was on the 10th of May, 1752. In writing an account of it, Dalibard says:—"En suivant la route que M. Franklin nous a tracée, j'ai obtenu une satisfaction complète." Franklin's celebrated kite experiment was performed in June, 1752.

DALLAS, GEORGE MIFFLIN, an American lawyer, statesman, and diplomatist, was born at Philadelphia, July 10th, 1792. His father had been much engaged in the political organisation of the republic. Young Dallas, after graduating at Princeton College in 1810, studied the law under his father, and was admitted to the bar in 1813. When Mr. Gallatin went, in that year, as ambassador to St. Petersburg, Mr. Dallas accompanied him as private secretary, and took a journey to London to aid in the negotiations which brought about a treaty of peace between England and the United States in 1814. After serving for about a year in the Treasury department, he established himself as a lawyer, became solicitor to the United States bank, and deputy attorney-general for Philadelphia County. In 1828 he was elected mayor of Philadelphia city; in 1829 United States district attorney; in 1831 a senator of the United States; and in 1833 attorney-general of Pennsylvania. From 1837 to 1839 he was ambassador from the United States to Russia. Returning to America, he declined the proffered post of United States attorney-general, preferring to resume his professional avocations. During the presidency of Mr. Polk, 1844 to 1848, Mr. Dallas was vice-president, and took an active part in the discussions relating to the annexation of Texas. The adoption of a free-trade policy, by imposing customs duties for revenue only, and not for protection, was settled by the casting vote of Dallas as president of the senate. Once again he returned to private practice, after his term of vice-presidency had expired. In 1856 he succeeded Mr. Buchanan as ambassador to England, and during his five years' occupancy of this post he was engaged in many negotiations and discussions with the government concerning boundary disputes. In 1861 he was succeeded by Mr. C. F. Adams. In the Civil War which broke out in that year he was not an active participator, but gave his sympathies to the Federal or Union party. Mr. Dallas died in January, 1865. His character has been better painted by himself than it could be by any other person, in 'A Series of Letters from London, written during the years 1856—60, by George Mifflin Dallas, then Minister of the United States at the British Court. Edited by his daughter Julia,' Phil. 1869. The letters were written chiefly to Mr. Marcy and Mr. Cass, in succession secretaries of state, or foreign secretaries, of the American government. They speak very unreservedly of the individualities, manners, homes, and society of the distinguished persons whom he as a diplomatist met in England; and, even supposing it right to pen such letters to the members of his government, it is hardly excusable to publish them while so many of the persons named are still living. Mr. Dallas's letters display considerable self-complacency, with an unbounded faith in the grand destiny of the American Republic.

DALLERY, THOMAS CHARLES AUGUSTE, organ builder and mechanician, was born at Amiens, Sept. 4th, 1754. His father, Charles Dallery, an organ-builder in that town, had gained fame by his organs at St. Nicolas aux Bois, the Abbey of Clairmarais, and the Abbey of Anchin; the last of the three (with five keyboards and sixty-four stops) was afterwards transferred to St. Peter's, Douai. The son, after showing his ingenuity in mechanism by constructing a time-piece when twelve years old, learned his father's trade. During his career Dallery introduced many improvements in the construction of musical instruments. Until that time the semi-tones on the harp had been produced by means of pedal mechanism which frayed the strings and injured the quality of the tone; he introduced an arrangement far superior, but not now adopted, simply because Erard has since eclipsed all his predecessors in this line. Dallery invented an instrument called the Clavecin Organisé. At one time he turned his attention to steam navigation and screw propulsion, constructing models to embody his ideas, and trying

them at Bercy on the Seine in 1803. He took out a patent, but meeting with no encouragement from the government, and having exhausted his means, he abandoned this project in disgust. Dallery died on the 1st of June, 1835. Nine years after his death the Académie des Sciences issued a report awarding priority of invention to Dallery in regard to steam navigation and screw propulsion; but the correctness of the report is admitted neither in England nor in America, except in reference to the rival claims of Frenchmen one against another.

The family of the Dallerys have been organ-builders for a hundred and forty years, represented in succession by Charles, Pierre, Thomas Charles Auguste (the subject of this memoir), Pierre François, and Louis Paul.

DALMASIO, LIPPO, an early Bolognese painter, was a pupil of Vitale, and acquired such repute as a painter of Madonnas that, according to Malvasia, a family was not considered to be wealthy in Bologna which did not possess one of his paintings. His pictures have much sweetness and grace, but little power. Out of Bologna they are seldom met with. The National Gallery possesses a good signed example, No. 752, 'Madonna and Child, in a circular glory; angels hovering above, a flowery meadow below.' The dates of his birth and death are unknown; he painted between the years 1376 and 1410.

DAMER, THE HON. ANN SEYMOUR, famous in her day as an amateur sculptor, was the daughter of Marshal Conway, and was born in 1748. She married, in 1767, the Hon. John Damer, brother of the Earl of Dorchester, who became conspicuous among the dissipated young men of fashion, wasted his fortune, and finally shot himself in a tavern in 1776. Mrs. Damer sought diversion in art. Attaching herself strongly to sculpture, she took lessons of Ceracchi, who used to call her the Muse of Sculpture, and afterwards of Bacon, and excited the unbounded admiration of Horace Walpole. Her works are only those of an amateur, and of all the arts sculpture is that in which an amateur is least likely to excel. But they are far above the average of their class, and exhibit considerable sculptural feeling. A bust of Nelson by her is in the Guildhall, London; and the head of the Thames, on the Bridge, Henley-on-Thames, so greatly praised by Walpole, is from her chisel. Walpole, the friend of her father, retained through life his regard for her; her name is of frequent occurrence in his Correspondence, and at his death he bequeathed to her the use for life of Strawberry Hill. She died on the 28th of May, 1828. A statue of her, by Ceracchi, is in the British Museum, where also is the diamond snuff-box (containing his miniature) presented to her in 1815 by the Emperor Napoleon.

* DANA, JAMES DWIGHT, an American geologist and naturalist, was born February 12, 1813, at Utica, New York, and educated at Yale College, Newhaven. On leaving the college he was appointed a professor of mathematics, and as such accompanied a scientific expedition to the Mediterranean. In 1838 he accompanied Wilkes in his voyage round the world, as geologist and naturalist. He married a daughter of his master, B. Silliman, and has since been intimately connected with the Sillimans in many of their literary undertakings. In conjunction first with the elder Silliman, and afterwards with the younger, he has long been one of the editors of the 'American Journal of Science and Arts.' His works have a high character, and are remarkable, some for their numerous broad generalisations, and others for their copiousness of detail. In connection with Wilkes's expedition he wrote reports on geology, zoophytes, and crustacea. In 1837 he published a 'System of Mineralogy,' which has passed through five editions—the last issued in 1868—and has become a standard work of reference. In 1862 appeared his 'Manual of Geology,' of which a second edition was published in 1866. It is expressly adapted for American students. In addition to these and a few other separate works, he has written nearly 150 papers for various scientific journals. He is at present the Silliman professor of geology and mineralogy in Yale College.

DANBY, FRANCIS, A.R.A. [E. C. vol. ii. col. 492.] Mr. Danby continued to paint his poetic landscapes, and to send them to the Academy Exhibitions; but he obtained no higher academic distinction. For several years he had resided at Exmouth, Devonshire, and he died there on the 10th of February, 1861. In the National Gallery, British School, is a small picture by him, No. 437, 'The Fisherman's Home, Sunrise'; the Sheepshanks Collection, South Kensington, possesses a more important specimen, 'Calypso's Island,' painted in 1821.

DANGEAU, LOUIS COURCILLON, ABBÉ DE, younger, brother of the Marquis de Dangeau, the subject of the following

article, was born in Paris in 1643; was designated for the church; in due time ordained, and received many benefices; travelled, and made himself master of several modern languages; was nominated *lecteur du roi*, and mingled much with the gay world; was converted by Bossuet to a course of life more becoming a richly-beneficed ecclesiastic; was elected a member of the Institute, and wrote many books on geography, history, heraldry, grammar, and theology, and died at Paris on the 1st of January, 1723. His 'Dialogues sur l'Immortalité de l'Âme,' 12mo, Paris, 1684, was esteemed his masterpiece, but he most prided himself on his conjugations of the French verbs. The name of the Abbé Dangeau is of frequent occurrence in the literature of the time; but, though he figured largely then, he has dwindled to utter insignificance now.

DANGEAU, PHILIPPE DE COURCILLON, MARQUIS DE, was born on the 21st of September, 1638. He served in Flanders as a captain of cavalry under Turenne, in 1658, and after the Peace of the Pyrenees entered the Spanish service. Returning presently to France, he obtained the command of the King's Regiment, and made with it the campaign of Flanders in 1667, leaving it to act as aide-de-camp to Louis XIV. He was elected, in 1668, to be a member of the Académie Française, a distinction which he owed to his patronage of men of letters; and he was also chosen an honorary member of the Académie des Sciences. In the years 1673 and 1674 he was employed on various diplomatic negotiations, having already been concerned in bringing about the marriage between the Duke of York, afterwards King James II., and the Princess of Modena. He filled a series of offices at the Court of Louis XIV., where he was a favourite, and became at length grand master of the royal and military orders of Notre Dame du Mont Carmel, and of Saint Lazare of Jerusalem. He died at Paris on the 9th of September, 1720.

The Marquis de Dangeau was famous as a linguist, and as a writer of *vers de société*; but the work by which he is chiefly remembered at present is a chronicle, known as the 'Journal de Dangeau,' of the events which occurred day by day at the Court of Louis XIV., and in the royal family, from the year 1684 to 1720. It is valuable for the faithfulness of its portraits and its details, which Voltaire affected to consider so frivolous that he characterised the diary as that, not of the Marquis de Dangeau, but of an imbecile old valet de chambre—a sentence probably delivered by way of retaliation for a passage in it which had transpired, in which the author sneered at "les imprudences et les essais satiriques du petit Arouet." The 'Journal de Dangeau' lay for many years in manuscript, until it was partially edited by Madame de Genlis, with the title of 'Mémoires du Marquis de Dangeau, écrits par lui-même, contenant beaucoup de particularités et d'anecdotes sur Louis XIV., sa Cour, &c.; avec des Notes, et un Abrégé de l'Histoire de la Régence'; 3 vols. 8vo, Paris and London, 1817; 4 vols. 8vo, Paris, 1817; and 2 vols. 8vo, London, 1825. It was for the first time published in its entirety, and in a form which incorporated the annotations of the Duc de Saint Simon, as the 'Journal du Marquis de Dangeau, publié en entier pour la première fois par M.M. Soulié, Dussieux, de Chennevières, Mantz, de Montaiglon; avec les additions inédites du Duc de Saint Simon, publiées par M. Feuillet de Conches,' 19 vols. 8vo, Paris, 1864—60.

DANTAN, JEAN PIERRE [E. C. vol. ii. col. 500], died in September, 1869.

DANTE, ALIGHIERI [E. C. vol. ii. col. 501]. Since the publication of the memoir of Dante, numerous editions and translations of his works, or parts of them, have been published, and festivals have been celebrated in his honour on occasion of his sixth centenary in 1866. Of the Italian editions of the 'Divina Commedia,' the most important, from a critical and bibliographical point of view, is a reprint, *verbatim et literatim*, of the first four editions, of Foligno, folio, 1472; of Jesi, 4to, 1472; of Mantua, folio, 1472; and of Naples, folio, 1475—6. The reprint is a large and elaborate volume, published at the expense of Lord Vernon, well known as an "ardente Dantofilo," and a member of the Accademia della Crusca, to his colleagues in which society he dedicates the work. Sir Antonio, then Mr., Panizzi, who was practically the editor of the volume, supplied a preface of great critical and bibliographical interest. The title of Lord Vernon's edition was 'Prime Quattro Edizioni della Divina Commedia, letteralmente ristampate, per cura di G. G. Warren, Lord Vernon,' 4to, London, 1858. Another critical issue, from a German editor, J. H. C. Witte, was entitled 'La Divina Commedia. Ricorretta sopra quattro dei più autorevoli testi a penna da Carlo Witte,' 4to, Berlin, 1892, whose text was fol-

lowed by the 'Divina Commedia,' &c., which occupied the 41st, 42nd, and 43rd volumes of Daelli's 'Biblioteca Rara,' 8vo, Milan, 1864. Amongst the translations of the 'Divina Commedia' recently issued in various languages, may be mentioned J. A. de Mongis' French version, 'La Divine Comédie, &c.; Enfer, Purgatoire, Paradis; traduite en vers français,' 8vo, Paris, 1857; the English one of Mrs. Ramsay, 'Dante's Divina Commedia. Translated into English in the Metre and triple Rhyme of the Original. With Notes,' 3 vols. 8vo, London, 1862—63; the German one of L. G. Blanc, 'Die göttliche Komödie des Dante Alighieri; Uebersetzt und erläutert,' &c., 8vo, Halle, 1864; the Rev. John Dayman's 'Divine Comedy of Dante Alighieri,' 8vo, London, 1865, a translation in Terza Rima, with which the Italian text was also given, and of which the 'Inferno' had been separately published in 1843; and 'The Divine Comedy of Dante Alighieri, Translated by Henry Wadsworth Longfellow,' 3 vols. 4to, Boston, U.S., 1867, and 3 vols. 8vo, London, 1867. Several versions of the 'Inferno' have also appeared, and amongst others, that of William Michael Rossetti, in blank verse, 8vo, London, 1865, of which the translator says that his aim "may be summed up in one word—literality"; and a few separate ones of the 'Purgatorio,' none of which call for special remark. Translations of the 'Vita Nuova' have also been freely issued; and biographies and memoirs appertaining to the family and personal history of Dante, as well as studies, lectures, and essays upon his genius, language, times, and politics, have appeared in most of the leading languages of Europe. The whole subject of Dantesque bibliography, between the years 1845 and 1865, is treated all but exhaustively in a work of which the full title may advantageously be given: 'Della Letteratura Dantesca degli ultimi venti Anni, dal 1845 a tutto il 1865, pubblicata per Cura del D. C. F. Carpellini. In Continuazione della Bibliografia Dantesca del Sig. Visconte Colomb de Batines. Contenente i Cataloghi delle Edizioni della Divina Commedia e delle Opere Minori.—Delle Traduzioni delle Opere di Dante nelle Lingue d'Europa.—Delle Vite di Dante.—Degli Studi Storici, Filosofici, Polemici, &c., sopra Dante.—E gl' Indici Generali dei Cataloghi,' 8vo, Turin and Florence, 1866. The latest publication in the way of the bibliography of Dante, is a very useful little volume by Signor Alberto Mario, entitled 'Dante e i Codici Danteschi,' Mantua, 1870.

In the year 1860 a commission was formed at Florence with reference to a project for the celebration there of a grand festival in honour of the sixth centenary of the birth of Dante, but its various proposals had small results. To it succeeded a municipal commission; and at a meeting of the Florentine Council in November, 1863, it was unanimously resolved that in May, 1865, the centenary of Dante Alighieri should be solemnly celebrated at Florence. A 'Giornale del Centenario di Dante Alighieri' was started to record the proceedings of the committee until the final consummation of the festival. As the time for its celebration approached, Florence became the centre to which Italian life determined. The excitement grew intense; and whatever was said, or done, or sold, had a reference to Dante. The king arrived on the 12th of May, 1865, and next day at noon inaugurated the *Mostra Dantesca* in the Prætorian Palace, on which occasion he was presented with a magnificent sword of wrought iron, bearing the inscription, "Dante al primo Re d'Italia." On the following day, May 14th, when 100,000 visitors were present in Florence, the inauguration of the national monument to Dante took place in the Piazza of Santa Croce, which was richly adorned with festoons of laurel and flowers interwoven in trophies, with pictorial decorations of 38 subjects from the life of Dante, and with epigraphs relating to them. The festival was intended to be a Pan-Italic one; and on its great day the 69 provinces of the kingdom for the first time met as a unity. A vast cortège, representing all classes of society, civil and military, marched from the Piazza of Santo Spirito to the Piazza of Santa Croce, where the king arrived at 11 o'clock, A.M., in a general's uniform. After an address by the Gonfaloniere, to which the king shortly replied, the majestic figure of Dante was unveiled amid a grand flourish from the orchestra, and shouts of "Onorate l'altissimo Poeta." The statue produced so vivid and profound an emotion, that his Majesty, by a spontaneous act, created the sculptor, Enrico Pazzi of Ravenna, a cavalier. Padre Giuliani addressed the king in an animated strain; and after the latter had made a suitable reply, the vast concourse began to disperse amidst the crash of vocal and instrumental music, to join in more desultory recreations. In the evening the whole city was brilliantly illuminated. The 15th of May was remarkable, amongst amusements of less

cultivated interest, for the opening of the Dante Exhibition in the palace of the Podesta, in which were displayed the portraits of the poet and his friends and heroes, and the Codici, to the number of 180; including 29 fragments of the 'Divina Commedia.' Of these Codici, Florence alone had contributed 108 from her libraries. The Exhibition was also furnished with a very complete collection of printed editions of Dante's great work, as well as with 30 editions of translations, either of the entire poem, or of part of it. Four of these were in Latin; one was in the Milanese dialect; fourteen in French; seven in English, including Longfellow's American translation; three in German, and one in Spanish. On the 17th of May, a grand banquet was given to the strangers who visited Florence on the occasion, at which Count Terenzio Mamiani presided; and on the morning of the 18th, the Gonfaloniere, with a commission of the Priori, presented to the King a commemorative medal of gold, modelled by the sculptor Pazzi, and engraved by Raffaele Sanesi, which bore a head of Dante, and on the reverse, within a laurel wreath, the inscription, "Al Divino Poeta l'Italia, nel Maggio MDCCCLXV. Municipio Fiorentino."

The city of Ravenna celebrated the centenary in June following, in a way which in one particular was more significant than that of Florence. Besides the illuminations, processions, &c., common to both, which extended in Ravenna from June 24th to June 26th inclusive, the citizens and visitors beheld with piety and awe the recently discovered remains of Dante exposed to public view. They had been removed from their sepulchre in the 17th century, and concealed in order to prevent their being burnt as those of a heretic. The place in which they were deposited was forgotten, and their opportune discovery occurred in a somewhat singular manner. On the 27th of May, 1865, some excavations were being made near the poet's tomb preparatory to the festival, when the workmen broke into an old wall behind the chapel of the Braccioforte, and there found a wooden box with inscriptions both outside and in, to the effect that the bones within it were those of Dante, placed there by Fra Antonio Santi in 1677. The original sarcophagus was opened and found empty, and ample evidence of their genuineness being adduced by a Commission appointed by the Italian Government to verify the fact of the discovery the remains, after being exhibited, as just mentioned, within a richly-ornamented glass enclosure, were, on the 26th of June, with great solemnity of circumstance, restored to their original resting-place. Dr. Barlow, who was for several years a promoter of the Dante centenary, has written, under the name of "A Representative," a narrative of 'The Sixth Centenary Festivals of Dante Alighieri in Florence and at Ravenna,' 8vo, London, Edinburgh, Florence, and Turin, 1866. Other memorials of the same event are a work entitled 'Per il Sesto Centenario di Dante (MDCCCLXV). Ricordo al Popolo,' 18mo, Florence, 1865; and a Collection of Essays illustrative of Dante, by various Italian Writers, published on the occasion of his Sixth Centenary, under the editorship of G. Ghirizzani, with the title of 'Dante e il suo Secolo,' 2 vols. 4to, Florence, 1865—66.

DARBY, ABRAHAM, one of the improvers of the iron manufacture, was born in the latter part of the 17th century; he was the son of a farmer, near Dudley. Removing to Bristol in 1700, he set up in business as a malt-kiln manufacturer, in partnership with three other persons, who were (like himself) Quakers. They added brass-founding, and iron-founding to their other trade. Down to that time, hollow-ware (cast-iron vessels, &c.) had been cast in England in clay moulds; but in 1708 Darby took out a patent for a method of casting in sand moulds, with a result so superior as to lead to a very extensive manufacture. Darby, quitting the other partners in 1709, established a large iron-work for himself at Coalbrook Dale. He was among the first to adopt coked coal instead of wood charcoal for his furnaces. He died at Madeley in 1717. His son and grandson, both named Abraham Darby, greatly extended the works at Coalbrook Dale; and the latter constructed the first iron bridge in England (giving name to the present manufacturing village of Ironbridge), over the Severn at Coalbrook Dale, in 1779.

D'ARC, JEAN. [ARC, JOAN OF, E. C. vol. i. col. 286.]

D'ARCHIAC, ÉTIENNE JULES ADOLPHE DESMIER DE ST. SIMON, VICOMTE, geologist, was born at Reims, Sept. 24, 1802. He was educated at the military school of St. Cyr, joined the army in 1821, but quitted it when the revolution of 1830 broke out. In 1835 his first geological memoir appeared, entitled 'Sur une partie des terrains tertiaires inférieurs du département de l'Aisne,' in 'Bull. Soc. Geol.' VI. pp. 240—247.

It was the forerunner of others on the tertiary and cretaceous beds of France, Belgium, and England. One of them, 'Observations sur le groupe moyen de la formation crétacée,' in 'Mém. Soc. Géol. Fr.' III. pp. 281—312 (1838), did much to raise his reputation, and is considered a model of its kind as to the way in which the subject ought to be treated. The conclusions he arrived at were important, and the most noteworthy was that which asserted that the greater the number of stages into which a formation is divisible, the more distinct are the faunas of the different stages, and *vice versa*. Another paper of a similar character is that written by him and M. de Verneuil, 'On the Fossils of the Older Deposits in the Rhenish Provinces,' in 'Trans. Geol. Soc.' VI. pp. 303—410 (1842); in which they arrived, independently, at conclusions similar to those which Prof. Phillips had previously obtained. The most important, stated shortly, was that species of restricted vertical range occupied a limited horizontal area; while those which occur in many and widely-separated localities have great stratigraphical ranges. Numerous other articles have proceeded from his pen, mostly on tertiary and secondary strata and their fossil contents. He also wrote several separate works. The most important is the 'Histoire des progrès de la Géologie de 1834 à 1845,' of which the first volume appeared in 1853, and the 8th, or last published, in 1860. The intention of the author was to treat of all the geological strata, beginning with the newest; and he has worked his way back as far as the Triassic formation. This work manifests extraordinary diligence. It is drawn up with great skill, and contains much original thought. He also wrote a large portion of the 'Description des Animaux fossiles du Groupe Nummulitique de l'Inde, précédée d'un résumé géologique et d'une Monographie des Nummulites, par le Vicomte d'Archiac et Jules Haimé,' 4to, Paris, 1853. In 1861 he succeeded Alcide d'Orbigny as professor of geology in the Museum of Natural History, Paris, and the substance of his lectures was published in 'Cours de Paléontologie stratigraphique,' 2 vols. 8vo, 1862—1864; and 'Géologie et Paléontologie,' 8vo, 1866. In 1868 he published 'Paléontologie de la France,' 8vo, being a report to the Government on the progress of paleontological science. Towards the end of 1868 he suddenly left his home, wrote farewells to all his friends, and has not been heard of since.

DARCY, PATRICK, was born at Galway, 27th Sept., 1725. He studied mathematics at Paris, and in 1746 served in the French army, and became aid-de-camp to Count Fitzjames, commander of some French troops sent to support Charles Edward. He fell into the hands of the English, and narrowly escaped being shot for bearing arms against his country. In 1749 he became an Academician, and distinguished himself by his writings on the celebrated principle of the conservation of areas, in which he shared the honour with Euler and D. Bernoulli, and which led to the principle of the immobility of the plane of maximum areas by La Place. Darcy also wrote some good papers on artillery, on the force of gunpowder, &c. In 1757 he resumed arms, and was present at the battle of Rosbach. When peace was established, in 1763, he returned to his scientific labours, and wrote on the theory of the moon, on the duration of the sensations, &c. He died at Paris, 18 Oct., 1779.

DARGAN, WILLIAM [E. C. vol. ii. col. 508]. Mr. Dargan's splendid services in the construction of roads, railways, and canals, in the erection of the Irish Exhibition buildings, and generally in the cause of Irish improvement, were, as was noticed in the above memoir, recognised by the Queen with the offer of knighthood. His countrymen, when he declined that honour, wishing that there should be some permanent memorial of national gratitude, subscribed for a bronze statue of him, which was erected in front of the National Gallery in Dublin. William Dargan's was now the most honoured and the most popular name in the Irish capital, and he was supposed to be among the very wealthiest of her citizens. The reverse was terrible. First a fall from his horse in the beginning of 1866 shattered his frame, then came the commercial disasters, and the over-sanguine man, with his hands full of all sorts of large, and some extremely speculative undertakings, was unable to meet his engagements and was declared bankrupt, and, broken in health and spirits, sank into the grave, February 7, 1867. A subscription was entered into for his widow, but the amount raised was insignificant, and a small pension has been granted to her from the Civil List.

* DARWIN, CHARLES ROBERT [E. C. vol. ii. col. 511], was educated successively at Shrewsbury, Edinburgh, and Cambridge, at which last place he took his degree of M.A. in 1831. Since 1856 his investigations have been laborious and important. They have related to a subject which had long occupied his mind,

and which he has to a certain extent made his own—viz., the natural causes of the divergence amongst organisms, and of the kind of affinity which appears to prevail amongst them. In 1859 his 'Origin of Species by means of Natural Selection' was published, in which he gives an outline of his views. His theory, stated very briefly, is that organisms multiply at a greater rate than their means of subsistence; that offspring resemble their parents in general points, but vary in minor particulars; that these variations are of different value as regards the welfare of the being; that as all cannot live some must die; that those die which are least adapted to the conditions which surround them; that in this way those characters or variations are selected which are most for the benefit of the species; and that these variations are increased in proportion as the medial conditions vary. Its publication was somewhat hastened in consequence of the same views having been arrived at independently by another eminent naturalist—Mr. A. R. Wallace. The book called forth much opposition, but in course of time a gradually increasing proportion of the scientific world has acceded to the principles enunciated in it, and now his supporters are very numerous. His subsequent works have had for their object the supplying the data upon which he founded his conclusions. They are:—'On the various contrivances by which British and Foreign Orchids are Fertilized,' 8vo, London, 1862; 'The variation of Animals and Plants under Domestication,' 8vo, 2 vols. 1868; and now we have announced 'Descent of Man, and on Selection in relation to Sex,' as his next contribution to the subject of species and their variations. The great features of these works are the charm of their style, the clearness of their language, and the remarkable powers of observation which they display. These features also mark his papers, more especially those of later date on *Primula*, on *Linum*, on climbing plants, and several others. These botanical papers embody accounts of some of the most important discoveries recently made in physiological botany. Thus in his work on orchids he attempts to show that self-fertilization is quite exceptional amongst plants, and that, generally speaking, there are special contrivances to insure crossing; and, to mention another instance out of many which might be cited, in his papers on climbing plants, he threw an entirely new light upon the subject, and elucidated the true structure and functions of the organs employed in climbing.

* DASENT, GEORGE WEBBE, who is favourably known as an accomplished student and translator of old Norse literature, was born in 1818, and educated successively at King's College, London, and Magdalen Hall, Oxford. He graduated as B.A. in 1840; and some years afterwards was admitted to the degree of D.C.L. He became a student of the Middle Temple, and was called to the bar in 1852. He is understood to have been for some years concerned in the management of the 'Times'; and after having been employed as an examiner in English and foreign modern languages for appointments in the Civil Service, was in January, 1870, nominated a Commissioner.

The first literary result of the peculiar direction of Dr. Dasent's studies was the publication of the 'Prose, or Younger Edda, commonly ascribed to Snorri Sturluson. Translated from the Old Norse,' &c., 8vo, Stockholm and London, 1842. His other works include a polyglott rendering and a literary history of the legend of the apostasy and conversion of Theophilus, as circulated, chiefly in the languages of the northern nations, after the original Greek of Eutychianus, in a volume entitled 'Theophilus in Icelandic, Low German, and other Languages, from MSS. in the Royal Library, Stockholm,' 8vo, London, MDCCCXLV.; 'Norsemen in Iceland,' which appeared as one of the 'Oxford Essays, contributed by Members of the University,' 8vo, London, 1858; 'Popular Tales from the Norse: with an Introductory Essay on the Origin and Diffusion of Popular Tales,' 8vo, Edinburgh, 1859; second edition, with thirteen additional Tales, 8vo, Edinburgh, 1859, a series of translations from the 'Norske Folkeeventyr,' collected by Aasbjørnsten and Moe, of which a children's edition was published as 'A Selection from the Norse Tales, for the use of Children,' 8vo, Edinburgh, 1862; 'The Story of Burnt Njal; or, Life in Iceland at the End of the Tenth Century. From the Icelandic of Njals Saga,' 2 vols. 8vo, Edinburgh, 1861; and 'The Story of Gisle the Outlaw. From the Icelandic. With illustrations by C. E. St. John Mildmay,' 4to, Edinburgh, 1866.

DAUBENY, CHARLES GILES BRIDLE [E. C. vol. ii. col. 515]. The memoir in the E. C. published during Dr. Daubeny's life contains a short account of his scientific work.

He was born February 11, 1795, at Stratton, in Gloucestershire, and was the third son of the Rev. James Daubeny. He was entered at Winchester School in 1808, and was elected to a demyship at Magdalen College, Oxford, in 1810. In 1814, at the age of 19, he took the degree of B.A. in the second class. In 1815 he gained the Chancellor's prize for the Latin essay. Between 1815 and 1818 he studied medicine in London and Edinburgh. In the latter place the lectures of Professor Jameson on geology and mineralogy strengthened the desire to cultivate natural science, which had already been awakened by the teaching of Dr. Kidd at Oxford. The intellectual fight between the Plutonists and Neptunists was then raging at Edinburgh, and Daubeny took a lively interest in it. After quitting Edinburgh he proceeded in 1819 on a leisurely tour through France, collecting evidence as to the chemical and geological history of the globe, while his 'Letters on the Volcanoes of Auvergne,' which appeared in 'Jameson's Edinburgh Journal,' 1820—21, contained the earliest notices published in England of that remarkable volcanic region. He subsequently visited various parts of Europe for the purpose of studying volcanic phenomena preparatory to the publication of his work on volcanoes, which appeared in 1826. Although Dr. Daubeny very properly resented the suggestion when put forward in an offensive form by Dr. John Davy that the leading idea of his theory of volcanoes was derived from a cast-off theory by Sir Humphry Davy, it is nevertheless true. Sir Humphry's notion was that vast stores of the metallic bases of the earths and alkalies exist in subterranean regions, to which water must sometimes penetrate, and whenever this happened, gaseous matter would be liberated, the metals would combine with the oxygen of the water with sufficient heat evolved to fuse the surrounding rocks; but when, during an eruption of Vesuvius, Sir Humphry failed to detect the presence of hydrogen, he gave up the idea.

In 1822 Dr. Daubeny succeeded Dr. Kidd as Aldrichian professor of chemistry, and took up his abode in the gloomy apartments below the Ashmolean Museum, in which most of the scientific teaching of Oxford had been carried on from the time of Robert Plot, and was still carried on by gas-light up to 1855.

In 1834 Daubeny became professor of botany, and went to reside in the "Physic Garden," as it had been called from the time of its foundation in the reign of Charles I. With liberal aid from the university, and with the doctor's generous management, the Garden was entirely re-arranged and extended. In this pleasant retreat he passed a third of a century studying various points connected with vegetable chemistry. In the long vacations he visited some part of the continent in company with a scientific or literary friend, or some young Oxonian of promise. During the last few winters of his life he resided at Torquay. He died on December 13, 1867, in his 73rd year. His remains were laid in a vault adjoining the walls of Magdalen College Chapel, in compliance with his own expressed wish.

In addition to separate volumes, Dr. Daubeny published 72 papers on scientific subjects, as appears by the Royal Society's Catalogue. In collecting his papers into two volumes of 'Miscellanies on Scientific and Literary Subjects,' published in 1867, his own modest, but, we think, correct, estimate of his large amount of work was, that "however slight their intrinsic value, considered as contributions to the stock of human knowledge, may be, they will serve at least to show, by their number and variety, what might be accomplished by persons gifted with greater energy and more profound attainments through the aid of foundations in which an exemption from domestic cares, and a liberal provision for all the reasonable wants of a celibate life, afford such facilities for the indulgence of either literary or scientific tastes."

* DAUBIGNY, CHARLES FRANÇOIS, a celebrated French landscape painter, was born at Paris on the 15th of February, 1817. A pupil of Delaroche, and completing his studies in Italy, he acquired a largeness and elevation of style often missed by the mere student of nature. At the same time, whilst his landscapes can never be called untrue, it does happen that they sometimes savour too much of the painting-room. Yet with all his artistic breadth of style he never ventures amidst the grander scenes of nature. There is always something of the homely and the artificial in his views. You are in the country, but you feel that Paris is not far off. He has painted village scenes and views in parks and woodlands, and in the open champagne country, but he is happiest in river scenery, such as a 'Vue des Bords de la Seine' (in the Museum of Nantes), 'Les Bords de l'Oise,' 'L'Etang de Gyllen,' the property of the Emperor, and the

like. M. Daubigny received a medal of the second class (*paysage*) in 1848, of the first in 1853, and again in 1857, and in 1859 the cross of the Legion of Honour. Besides his paintings M. Daubigny has made numerous designs for journals and illustrated books. He is also skilful with the etching needle: among other things, he has produced 'Le Buisson,' and 'Le Coup de Soleil,' after Ruysdael, and several clever original etchings.

* DAUBREE, GABRIEL, AUGUSTE, a French geologist, was born June 25th, 1814, at Metz. He was educated at the École Polytechnique, Paris, and then joined the Corps des Mines. In 1839 he was elected Professor of Mineralogy and Geology, at the Academy of Strasbourg, and appointed a local mining engineer. In 1855, he was promoted Chief Engineer of Mines; in 1861, he succeeded Cordier as Professor of Geology in the Museum of Natural History, Paris; in 1862, he was also appointed Professor of Mineralogy in the School of Mines; and in 1867, Inspector-General of Mines. He is a Member of the Academy of Science, a Commander of the Legion of Honour, and has received many other honours. His scientific papers are numerous, and relate to the mode of occurrence of the ore of tin and other metals in veins, of gold in the Rhine Valley, of arsenic in wells and seawater, and elsewhere; of iron ores in lakes and mountains, &c. He has succeeded in artificially producing many minerals, such as quartz, several silicates, &c., and has contributed largely to our knowledge of the synthesis and metamorphism of rocks. Amongst his principal separate works, we may cite the following:—a 'Carte Géologique du Bas Rhin,' with an explanation, 1852; 'Recherches Expérimentales sur les phénomènes qui ont pu produire le métamorphisme,' 1857—1860; 'La Chaleur intérieure du Globe, son origine, ses effets,' 1860, 1866; 'Expériences synthétiques relatives aux météorites,' 1866 and 1868; 'Rapport sur le progrès de la géologie expérimentale,' 8vo.

DAUSSY, PIERRE, was born at Paris, 8th October, 1792. In 1806 he joined the Corps of Hydrographical Engineers, and after some years became Engineer-in-Chief, and conservator of the charts and plans of the Minister of Marine. He became Commander of the Legion of Honour in 1852, and died in September, 1860. His nautical charts are much esteemed. In union with Mathieu and Largeteau he prepared the 'Report on the Determination of the Arc of the Meridian between the parallels of Dunkirk and Formentara.' He also assisted in the preparation of good Tide Tables, based upon observation and sound theory. During many years in this country, and probably also in other countries, tide-tables were based on certain secret processes, and formed a sort of private property, which was not to be infringed. Lubbock in England, and Dausy in France, worked at the subject with good effect, and broke up a very old tide-table monopoly, by establishing correct formulæ for the inequalities of the tides, leaving the magnitudes to be determined by observation.

DAVID, PIERRE JEAN, known from his birth-place as DAVID D'ANGERS, one of the most famous of modern French sculptors, was born on the 12th of March, 1789. The son of a carver of architectural ornaments, he learnt from his father the use of the chisel, and attended a course on design at the Central School of Angers. His father would have preferred a less uncertain calling, but the youth being bent on becoming an artist, a friendly teacher, who prognosticated his future success, furnished funds for the journey, and young David started for Paris, 1808. There he found employment, at 20 sous a day, in carving the ornaments of the Arch of the Carrousel and at the Louvre. Thus securing a maintenance, he made time for study. His namesake, David the painter, took an interest in him, admitted him to his atelier, taught him to draw with accuracy, and did his best to impress on him the principles of classic art, whilst the sculptor Rolland initiated him in the processes of the sculptor. A willing learner, David made such progress that at the concours d'essai of the Academy, 1809, he was awarded a medal. His native town testified its interest in its young citizen by voting him a subvention of 600 francs; thus aided and stimulated, he carried off in 1810 the prize for the study of a head, and the second prize for sculpture; and in the following year, by his bas-relief of the Death of Epaminondas, the grand prize for sculpture, which entitled him to study at Rome. He returned to Paris in 1816, a finished sculptor; his head of Ulysses (which he refused to sell, having designed it for the Museum of Angers), 'Young Shepherd,' and a 'Nereid carrying the helmet of Achilles,' meeting with general admiration. Before returning to Paris he had visited the chief Italian museums, and he now proceeded to England, in order to examine the sculpture of the Parthenon, then newly purchased by the nation from the Earl of Elgin. He met with a cold reception from Flaxman, and returned to

Paris somewhat disgusted with English art and artists. His first great public work was the statue of Condé, now in the principal court of Versailles. It was a great success, and his position was assured. In 1825 he received the Cross of the Legion of Honour, and in 1826 he was elected a member of the Institute, and professor in the *École des Beaux-Arts*. Henceforth his life was that of one of the leading artists of France, the years marked chiefly by the commencement or completion of one of his great works (he began his chef-d'œuvre, the sculptures of the Pantheon, in 1831), or a foreign tour in pursuit of health or information. In one of his visits to Germany he executed a colossal bust of Goethe for the Library at Weimar; in another, he modelled Rauch, Tieck, and Schelling. Revolutionary movements, however, stirred to its depths the heart of this thorough Frenchman. In 1830 he fought at the barricades; in 1848 he again came to the front. He was returned by the department of Maine-et-Loire, and took his place among the national legislators, but was for the most part a silent voter. However, he gave substantive form to his idea in a colossal model of the Republic, and, altogether, his republicanism was of so marked a kind that he was among the number exiled after the coup d'état of Dec. 2, 1851. He went to Athens, whilst there modelled some pieces, returned when permitted, but broken in health, to Paris, and there died, on the 5th of January, 1856.

David D'Angers was a man of genius, of indomitable energy, and of amazing industry. The number of his works is surprising. Besides such monumental figures and groups as Marshal Suchet, General Foy, Gobert, Saint-Cyr, and others at Père Lachaise; the grand mausoleum of Botzaris, at Missolonghi, and that of Fénelon at Cambrai, he executed a very large number of statues of his most distinguished countrymen, including Cuvier, for the Jardin des Plantes; Racine, for La Ferté-Milon; Corneille, for Rouen; Bernardin de Saint Pierre, for Havre; Güttenberg, for Strasbourg; and, beyond France, Jefferson, for New York. His busts take a still wider range, and several of them are of colossal size. Many of these were not commissions, but executed at his own cost, as a mark of honour for the persons. We have mentioned his sculptures at the Pantheon; he executed others on a grand scale for the Triumphal Arch, Marseille; the Hôtel-de-Ville, Paris; the Custom House, Rouen, &c.; and he modelled with his own hands many hundreds of medallions, many of which were on a large scale. Works produced in such numbers could not all be of great artistic value; some, probably, are of very little. But David D'Angers was a true artist, and if he produced too much and too rapidly, it was rather from the energy and impatience of his temperament than from greed. In all he did there was nobility of purpose, originality, power, and feeling. He left all his models, and such of his works as remained in his possession at his death, to the Museum of Angers, where they are collected in a saloon which bears his name.

* DAVIDSON, SAMUEL, a distinguished theologian, philologist, and biblical critic, was born in 1808 at Ballymena, in the county of Antrim, Ireland. He received his education at the College at Belfast, which he entered in 1825, and where he made himself remarkable for his attainments in philology, philosophy, and divinity; and in due course received ordination from the Presbytery. In 1835 he was appointed to the chair of Biblical Literature in the Belfast Royal Academical Institution, from which he delivered to the theological students that came under his tuition a course of lectures which he published with the title of 'Lectures on Biblical Criticism; exhibiting a Systematic View of that Science,' 8vo, Edinburgh, 1839; a new edition of which, entirely re-written, and "recast both in substance and form," appeared with the modified title of a 'Treatise,' &c., 2 vols. Edinburgh, 1852, with a dedication to Bishop Thirlwall; and as a supplement to which he published an elaborate work wherein he laid down and exemplified the fundamental principles constituting the theory of interpretation, entitled 'Sacred Hermeneutics developed and applied; including a History of Bible Interpretation from the Earliest of the Fathers to the Reformation,' 8vo, Edinburgh, 1843. He had by this time changed his views on ecclesiastical polity, and resigned his connection with Belfast College; and was acting as Professor of Biblical Literature and Ecclesiastical History in the newly-founded Lancashire Independent College at Manchester. In 1838 the Senatus of Marischal College and University, Aberdeen, had conferred upon him the degree of LL.D.; and in 1848, on the recommendation of Professors Hupfeld and Tholuck, he received the honorary title of D.D. from the University of Halle. He fulfilled the duties of his professorship at Manchester for fourteen years, esteemed by the students, and re-

garded by all who knew him as a pious, amiable, and high-minded man, and an industrious and conscientious tutor. He was in fact the pride of his college and his denomination, and was known and admired in all countries in which biblical learning was cultivated. He delivered the 'Congregational Lecture' (thirteenth series) for 1847; and the same was published for the funds of the "Congregational Library," with the title of 'The Ecclesiastical Polity of the New Testament unfolded, and its Points of Coincidence or Disagreement with prevailing Systems indicated,' 8vo, London, 1848; second (new and uniform) edition, 8vo, London, 1854, which, after an estimate of all possible and historical systems of church organisation, concluded with a "review and defence" of Congregationalism. At the time of the delivery of the 'Lecture'—a title which hardly does justice to a work of nearly 500 pages—Dr. Davidson was prosecuting the translation, for 'Clark's Foreign Theological Library,' of the first two volumes of the fourth edition of Dr. J. C. L. Gieseler's 'Lehrbuch der Kirchengeschichte,' or 'Compendium of Ecclesiastical History,' 8vo, Edinburgh, 1846 and 1848, of which the remaining two volumes, published in 1853, were the work of the Rev. J. W. Hull. Dr. Davidson proceeded to issue an important work, which "enters with considerable fulness into objections that have been urged in modern times against the New Testament Books, and especially against the Gospels," with the title of 'An Introduction to the New Testament; containing an Examination of the most important Questions relating to the Authority, Interpretation, and Integrity of the Canonical Books, with reference to the latest Inquiries,' 3 vols. 8vo, London, 1848, 1849, and 1851; and about the same time edited, with Introduction and Notes, Professor Moses Stuart's 'Critical History and Defence of the Old Testament Canon,' 8vo, London, 1849. Up to the year 1856, Dr. Davidson's theological position was unassailed: his works, notwithstanding the free tone of criticism which pervaded them, had never been impeached. In compliance with a request from the proprietors of the Rev. T. H. Horne's 'Introduction to the Critical Study and Knowledge of the Holy Scriptures,' he undertook to produce a volume which should be substituted, in the tenth edition of that work, for the second volume of the preceding editions, on 'The Text of the Old Testament considered: with a Treatise on Sacred Interpretation, and a brief Introduction to the Old Testament Books and the Apocrypha,' 8vo, London, 1856; second edition, revised and improved, and issued as a substantive work, 8vo, London, 1859. In the front of this work the name of Dr. Davidson appears as sole author, whilst the volume, as part of a whole, was ostensibly under the joint editorship of Mr. Horne, Dr. Davidson, and Dr. S. P. Tregelles, who were severally and collectively understood to have the privilege, and to accept the duty, of examining the statements and opinions which each claimed to contribute to the aggregate production. If each had used this privilege, or discharged this duty, before publication, it was said, there would have been no such repudiation afterwards as took place when Dr. Tregelles protested for himself and Mr. Horne, in a letter to the 'Record,' dated October 29th, 1856, against the theories and sentiments with regard to Scripture which were advanced by their co-editor. Hereupon the denunciations of Dr. Davidson began; and he was vaguely characterised as a "German Rationalist," and as "a man who virtually denied the inspiration of the Scripture." On the 24th of November, 1856, the committee of the college appointed a sub-committee to examine into the truth of the allegations which had been made against his orthodoxy; the report of which, brought up and read by Dr. Halley, concluded by recommending concession and conciliation. Dr. Davidson now prepared a pamphlet of 'Facts, Statements, and Explanations,' 8vo, London, 1857; after which, in spite of its recognised spirit of moderation, and the guarantees it gave of general "soundness" of doctrine, the author's opponents became more hostile than ever. Finally, on the 10th of June, 1857, the Committee, having passed a vote of want of confidence in their Professor of Biblical Literature, the latter sent in his resignation, which was accepted at a meeting of the Committee held at Liverpool on the 29th of the same month. Various and valuable expressions of sympathy and regret from students, ministers, and laymen followed him upon his resignation. The Rev. John Kelly, of Liverpool, who was one of his most persistent opponents, published 'An Examination of Facts, &c., of the Rev. Dr. S. Davidson,' 8vo, London and Liverpool, 1857; and the Rev. Thomas Nicholas, Professor of Biblical Literature and Mental and Moral Science in the Presbyterian College, Carmarthen, in a spirit of candour and appreciation, which, by contrast, made him appear an advocate of the accused,

reviewed the question in 'Dr. Davidson's Removal from the Professorship of Biblical Literature in the Lancashire Independent College, Manchester, on account of alleged Error in Doctrine. A Statement of Facts, with Documents; together with Remarks and Criticisms.' 8vo, London, 1860. Dr. Davidson was appointed examiner in the department of Biblical History and Philology in the University of London in 1862; and in the same year produced his 'Introduction to the Old Testament, Critical, Historical, and Theological; containing a Discussion of the most important Questions belonging to the Several Books,' 3 vols. 8vo, London, 1862-63, in which, unfettered by the obligations of co-editorship, he expresses with greater maturity and development, the views which were less clearly advocated in the volume he contributed to Horne's 'Introduction.' Indeed in his researches and his results he appears to recognise no such thing as finality; wherever truth seems to unveil, there he is prepared to worship; to follow wherever truth seems to conduct. Thus, after constantly revolving in his mind the topics embraced in his 'Introduction to the New Testament,' 1848-51, he determined to give to the world the results of twenty years' additional study, in the shape of 'An Introduction to the Study of the New Testament, Critical, Exegetical, and Theological,' 2 vols. 8vo, London, 1868. The following sentences from the Preface sufficiently express the author's latest views upon the question on which all his theory of criticism is founded—that, namely, of the scientific limitation of the inspiration of the writers of the Bible. "True critics," he says, "regret to see that religion is often confounded with a system of theological dogmas. If the two things were clearly distinguished as they ought to be, a cessation of that bitterness which theologians often show to one another might be reasonably expected. Not that a religion can exist apart from *some* theology. Still the amount of theology needed to constitute a religion may be indefinitely small. If men could see that the Spirit of God neither dwelt exclusively in apostles nor rendered them infallible, however highly gifted they may have been, the sacred records would be less distorted, and different values would be assigned to the several parts of the volume according to their nature. When these records are held to be absolutely correct in all matters, whether historical or speculative, scientific or doctrinal, they acquire a supernatural and fictitious pre-eminence similar to that which is conferred on the Pope by the theory of papal infallibility: they are called God's word throughout, which they never claim to be, and thus free inquiry into their credibility is at once checked or suppressed. God's word is in the Scriptures: all Scripture is not the word of God. The writers were inspired in various degrees, and are therefore not all equally trustworthy guides to belief and conduct. In the Bible may be found all things necessary for our salvation: it is an unwarrantable inference that it contains nothing but what is thus needed for all. The Scriptures contain the highest truth; but this fact is undisturbed by the possibility that they may contain some things which are not truth."

Two other productions of Dr. Davidson may be mentioned, of no great bulk, but of great learning and significance—'The Hebrew Text of the Old Testament, revised from critical sources, being an attempt to present a purer and more correct Text than the received one of Van Der Hooght; by the aid of the best existing materials: with the principal various Readings found in MSS., Ancient Versions, Jewish Books and Writers, Parallels, Quotations, &c., &c.' 8vo, London, 1855, an attempt at aiding to do for the Old Testament something like what Griesbach and others did for the New; and a 'Preface written for the English Edition of Fürst's Hebrew and Chaldean Lexicon to the Old Testament,' first published in that work in 1845, and separately issued in 8vo, London, 1867.

* DAVIDSON, THOMAS, a well-known authority on *Brachiopoda*, was born at Edinburgh, May 17, 1817. When only six years of age, he was sent to the Continent with French and Italian tutors, with whom he visited France, Switzerland, and Italy. His education was almost entirely received at Paris, where he followed the lectures of Cordier, Constant Prevost, Elie de Beaumont, Valenciennes, Blainville, Geoffroy de St. Hilaire, Duméril, Brongniart, and other eminent teachers; and was a pupil of the distinguished French painter, Paul Delaroche. But it was the study of the first edition of Sir C. Lyell's 'Principles of Geology' that gave him a predilection for geology and palæontology. In or about 1835 he matriculated at the University of Edinburgh, and became intimate with Professors Jameson and E. Forbes. In the following year he returned to the Continent, most parts of which he explored on foot, and with

hammer in hand. About this time he formed the acquaintanceship of Baron von Buch, who urged him to take up the study of the *Brachiopoda*. He acted upon the suggestion, and since then has worked at it with a single-minded purpose and unflagging zeal. In 1849, Professors E. Forbes and Morris requested him to prepare a 'Monograph of the British Fossil Brachiopoda,' for the Palæontographical Society. The first part appeared in 1850, and the last in 1870. The whole forms three large 4to volumes, illustrated with 170 plates, all of which were drawn by himself. In addition to this, he has written upwards of fifty papers, mostly relating to *Brachiopoda*, but a few to geology. In 1865 the Wollaston Medal was awarded him by the Geological Society, and Sir Roderick Murchison presented him with a Silurian medal, for his contributions to the history of Silurian life. He is Vice-President of the Palæontographical Society, and a Fellow of the Royal Society, as also of many other learned bodies.

DAVIES, or DAVYS, SIR JOHN, a poet, lawyer, and statesman, was born at Chisgrove, in the parish of Tybury, Wiltshire, about the year 1570. His father, a wealthy tanner, who is otherwise spoken of as "late of Gray's-inn," had probably spent some time in the study or the practice of the law. Davies was admitted a commoner of Queen's College, Oxford, in Michaelmas term, 1585. After taking a degree in arts, he became a student of the Middle Temple, and was called to the bar in July, 1595. In 1596 he published 'Orchestra; or, a Poem expressing the Antiquity and Excellence of Dancing, in a Dialogue between Penelope and one of her Wooers,' which was republished in 1622 along with an edition of 'Nosce Teipsum,' &c. To the 'Orchestra' was prefixed a dedicatory sonnet by the author, "to his very friend, Master Richard Martin." The next instance of this "very friendship" is rather peculiar; for Davies being, according to Wood, "a high-spirited young man, did, upon some little provocation or punctilio, bastinado Richard Martin (afterwards Recorder of London) in the common hall of the Middle Temple while he was at dinner. For which act being forthwith (February, 1797-8) expelled, he retired for a time in private, lived in Oxon in the condition of a sojourner, and followed his studies, although he wore a cloak. However, among his serious thoughts, making reflections upon his own condition, which sometimes was an affliction to him, he composed that excellent, philosophical, and divine poem," which he entitled 'Nosce Teipsum: this Oracle expounded in two Elegies—(1) Of Human Knowledge, (2) Of the Soul of Man, and the Immortality thereof,' 4to, London, 1599, with a dedication—dated, probably by some typographical blunder, July 11th, 1592—to Queen Elizabeth, to whom in the same volume he addressed 26 'Hymns of Astræa, in Acrostic Verse,' celebrating the virtues and the glories of "Elizabetha Regina." This poem was reprinted in 4to, London, 1602; in 8vo, 1609; and again in 8vo, 1622, when it appeared in the same volume with the 'Orchestra.' Nahum Tate wrote a judicious preface to an edition of the second part of 'Nosce Teipsum,' which he brought out as 'The Original Nature and Immortality of the Soul: a Poem, with an Introduction concerning Human Knowledge,' 8vo, London, 1697; 2nd edition, 8vo, London, 1714; 3rd, 12mo, London, 1715. The poem on the Immortality of the Soul is conceived in great religiousness of spirit, and is admirable for the easy flow of its language, the clearness of its argument, and the ingenuity, aptness, and grace of its similes and illustrations.

Through the favour of Thomas, Lord Ellesmere, Lord Keeper of the Great Seal, Davies was restored to his chambers in the Temple, in Trinity term, 1601, and became a counsellor and a member of the Parliament held the same year at Westminster. Upon the accession of King James I., he was taken into especial favour by that sovereign, by whom he was made successively his solicitor-general and attorney-general in Ireland. Davies was knighted at Whitehall, February 11, 1607; and in 1612 was appointed one of his Majesty's serjeants-at-law for England, and in that capacity frequently acted as justice of assize in divers circuits. Through the gradations of honour and employment, he came at length to be nominated to the office of lord chief justice, and his robes were already ordered for his settlement or installation therein, when, before they were completed, he died suddenly of apoplexy, on the 7th of December, 1626.

Sir John Davies wrote, besides several minor works, some of which were left in manuscript at the time of his death, an important treatise upon Ireland, which he entitled 'A Discovery of the true Causes why Ireland was never entirely subdued, nor brought under Obedience of the Crown of England, until the beginning of His Majesty's happy Reign,' 4to, London, 1613; 4to, London, 1613; and with the modified title of 'Historical

Relations,' &c., 8vo, Dublin, 1664; 3rd edition, 1666. The 'Discovery' was reprinted as an Appendix to Sir James Ware's 'Antiquities and History of Ireland,' folio, London, 1705; and was lately republished in the first volume, 8vo, 1860, of a collection of Tracts and Treatises illustrative of the political state of Ireland. Sir John Davies's contributions to the literature of his profession may be represented by his 'Le Primer Reports des Cases et Matters en Ley; resoluces et adjudges in les Courts del Roy en Ireland,' folio, Dublin, 1615; folio, London, 1628 and 1674, of which English translations were published, and which supplied a large proportion of the matter of Sir John Pettus' volume, entitled 'England's Independency upon the Papal Power,' &c., 4to, London, 1674. Several of the smaller, chiefly political, productions of Sir John Davies were published after his death. His 'Poetical Works' were collected into a small volume in 12mo, London, 1775; and his 'Historical Tracts' in 8vo, London, 1786.

*DAVIS, JEFFERSON, a distinguished American statesman, and President of the Confederate States in the Civil War of 1861—65, was born in Todd County, Kentucky, June 3, 1808. His father, a planter, removed with his family to Woodville, Mississippi, where young Davis received his early education. Having finished his civil studies at Transylvania College, Kentucky, he entered the United States Military College at West Point in 1824. In 1828 he graduated, and became brevet second lieutenant. In 1831—32 he served as staff officer on the north-west frontier, in the Black Hawk war against the Indians. In 1833, as first lieutenant of dragoons, he was employed against the Comanches and Pawnee Indians. Resigning his military commission in 1835, he settled down as a cotton-planter in the State of Mississippi. About the year 1843 he began to take a prominent part in politics, siding with the Democrats, Southerners, or Slave States party; and he assisted in bringing about the election of Mr. Polk for the Presidency in 1844. When in Congress, as one of the members for Mississippi, he entered eagerly into the debates concerning Oregon, Mexico, the tariff, the militia, &c. In 1846 the 1st Regiment of Mississippi Volunteers having elected him as their colonel, he resigned his seat, headed the regiment, and distinguished himself during the Mexican war by his gallantry at Monterey and Buena Vista. In 1847 President Polk offered him the post of brigadier-general of volunteers. This he declined, on the ground that all volunteer commands ought to be vested in the States, each for itself: a commencement of Mr. Davis's advocacy of State Rights, which in later years became the great principle of his public life. Entering the Senate, he was chosen president of the military committee in 1850; but this office he resigned in the following year, in order that he might compete for the presidency of the State of Mississippi, in which aim, however, he failed. He was secretary of war at Washington from 1853 to 1857, under President Pierce; and then simply a senator until 1860. The election of Abraham Lincoln as President of the United States, in the autumn of the last-named year, gave a definite direction to Mr. Davis's energy of character. The Democrats or Southerners, defeated at the election, resolved to erect the Slave States into a distinct republic, claiming that, by the original constitution of the United States, each State had virtually the right of secession. This claim was not only not admitted, it was resisted to the uttermost by the Northerners; and hence the Civil War. South Carolina seceded from the Union in November, 1860, and at various dates the example was followed by Florida, Alabama, Georgia, Louisiana, Texas, North Carolina, Virginia, Tennessee, Arkansas, half of Kentucky, and half of Missouri. On the 4th of February, 1861, delegates met at Montgomery, Alabama, to constitute the "Confederate States of America;" and in the following May the capital of the new republic was established at Richmond, Virginia, with Mr. Davis as President. The biography of Mr. Davis for the ensuing four years would be virtually a history of the Civil War. Negotiations for a compromise having failed, military and naval operations speedily commenced. The capture of Fort Sumter and the United States Arsenal at Harper's Ferry by the Confederates, together with their success at the battle of Bull's Run, rendered a long and fierce war inevitable. Throughout 1861 the political power and military skill of Mr. Davis enabled him to deal with the numerous difficulties under which the new Confederacy laboured. In 1862 he supplied, by great exertions, the men, ammunition, and stores necessary for the operations conducted by Generals Lee and "Stonewall" Jackson against Generals Scott, McClellan, Banks, Pope, Burnside, and Rosecranz. In 1863 the actual fighting was mostly in favour of the Confederates; but their President

BIOG. DIV.—SUP.

was terribly driven for supplies, being cut off from all communications with other countries by sea. By the month of March, 1864, the Federals had 1,000,000 men in arms, against 250,000 Confederates; and Generals Grant and Sherman threw great energy into their operations. Weakened by incessant fighting, the Confederates were forced to yield in April, 1865; and the war ended. President Lincoln was assassinated in the same month; and the Federals, accusing Mr. Davis of complicity in the crime, offered 100,000 dollars for his capture; he was arrested on the 15th of May, and placed in custody at Fort Monroe, Washington. For nearly two years he lingered in prison, until his health was seriously broken. Opinion in America was greatly divided as to the proper mode of dealing with his case. He was acquitted by the public sentiment of complicity in the murder of Lincoln; but a charge of high treason continued to hang over him. In May, 1867, he was released on bail for six months. A desire gradually spread in the United States to permit him to resume his place as a private citizen; and the prosecution was allowed to die out. Mr. Davis has since taken to commercial pursuits, his own property in the (former) Slave States having been utterly shattered by the events of the war. Apart from differences of opinion as to the line of conduct he followed, his skill, determination, and energy are generally admitted.

DAVY, JOHN, M.D. [E. C. vol. ii. col. 525], was born at Penzance, 24th May, 1790, and died at Ambleside, 24th January, 1868. He was the youngest of five children, of whom Sir Humphry Davy, born twelve years before him, was the eldest. At the age of eighteen he entered the laboratory of the Royal Institution, at a period (1808) when his brother was at the height of his fame as a lecturer and a discoverer. The two or three years, during which John acted as assistant to his brother, were considered by him as the happiest and best employed of his life. After this he studied medicine in Edinburgh, where he graduated in 1814, in which year he became a Fellow of the Royal Society. From 1815 nearly to the end of his life he held various appointments in the army medical department in different parts of the world. During this long period he contributed to the various Transactions and Journals a large number of papers on chemical and biological subjects. The number in the Royal Society's index is 158. He also wrote the history of his brother's life, edited his works, and became the champion of his fame, not only when his memory had been, or appeared to have been, attacked, but also when some of the great chemist's contemporaries and successors extended his discoveries, and made others to which he had no claim. Dr. Davy thus became a partizan of a somewhat unreasoning and unwarrantable kind, and excited the suspicion of men whose good opinion he ought rather to have courted. He could only see one great chemical philosopher in the world, and that was Sir Humphry Davy. He would seem to have acted under the idea that the edifice of chemical science had been reconstructed and completed by his brother, and that any one who presumed to alter the details or add to the building only disfigured it.

In addition to his numerous papers, many of which have been collected into three volumes, entitled 'Researches, Anatomical and Physiological,' two of which were published in 1839, and the third in 1863, Dr. Davy published, partly from personal observations, separate works entitled 'An Account of the Interior of Ceylon,' 4to, 1821; 'Notes on the Ionian Islands and Malta, with some Account of Constantinople,' 2 vols. 8vo, 1842; 'The West Indies, before and since Emancipation,' 1854; 'On the Diseases of the Army, with Contributions to Pathology,' 1862; 'Lectures on the Study of Chemistry,' chiefly with reference to the agriculture of Barbadoes. He also edited his brother's 'Agricultural Chemistry,' and Dr. Blair's volume on 'The Yellow Fever Epidemic of British Guiana.' He shared his brother's taste for angling, and published two colloquial works on that subject, chiefly with reference to the biological bearings of the sport.

Dr. Davy adopted a regular and methodical course of literary and scientific work to the last. His powers as an original observer were not of a high order, and accordingly his works are seldom quoted by better men in his own ample fields of research.

DAWES, REV. WILLIAM RUTTER, an astronomer distinguished for his acuteness as an observer, was born at Christ's Hospital, where his father was mathematical master, March 10th, 1799. He studied partly at the Charter-house, partly under the Rev. Thomas Scott, author of the Commentary on the Bible. Although his father intended him for the church, his own incli-

G G

nation led him to the study of medicine, which he pursued at St. Bartholomew's Hospital, under Abernethy and Lawrence. He settled as a medical practitioner at Haddenham, near Thame; but removed in 1826 to Liverpool. Attracted by the influence of Dr. Raffles, an eminent Independent minister, Mr. Dawes quitted alike churchmanship and the medical profession, and became the minister of an Independent chapel at Ormskirk. It was soon after this that he commenced the forty years' observations which raised him to a high rank as an astronomer. He began with a very small telescope; then procured a 5-feet refractor by Dolland; and, aided by wonderful keenness of vision, made so many and such accurate observations and tabulations of small stars, as secured his admission into the Royal Astronomical Society. In 1839 he resigned his ministerial functions, and from that year till 1844 took charge of Mr. Bishop's observatory in the Regent's Park. He then removed to Cranbrook, in Kent, where he erected an observatory which was described in the 16th volume of the *Astronomical Society's 'Memoirs.'* In 1846 he obtained a splendid 8½-feet equatorial, made by Merz, of Munich, and made with it an immense number of observations remarkable for their accuracy. In 1850 he removed his observatory to Watlington, near Maidstone; and in 1857 to Hopefield, Haddenham. His researches were further aided by an 8-inch (aperture) refractor, by Cooke, of York, and another of 8½-inch, by Alvan Clark. In November, 1850, Mr. Dawes and Mr. Bond, the one in England and the other in America, independently discovered the inner dusky ring of Saturn. In 1851 Mr. Dawes went to Sweden to observe the solar eclipse; and his accurate account of the red protuberances or rose-coloured flames helped to pave the way for the recent discovery of the sun's chromosphere. He invented a solar eyepiece, which has enabled astronomers to discover an interior envelope of the sun's body, not before known. His acuteness of sight enabled him to detect minute features in the so-called "willow-leaves" or "rice-grains" on the solar surface, not observable by others except with much more powerful instruments. Mr. Dawes, whose valuable star observations are printed in the *Memoirs of the Royal Astronomical Society*, died on the 15th of February, 1868.

* **DEAK, FERENCZ**, a statesman of Hungary, and the champion of her nationality, is stated to have been born alternatively on the 13th or the 17th of October, 1803, at Kehida or at Söjtör, which are two out of three estates which formed the patrimony of his family in the comitat, or county, of Szalad. He studied jurisprudence at the College of Raab (Győr, or Nagy-Győr); and was admitted to practise as an advocate, but found himself diverted from his profession by the interest he took in the political fortunes of his native country. He identified himself at the outset with the Liberal party, whose object it was to compel from the court of Vienna the re-assembly of the Hungarian Diet, which had not been convened since the year 1811. His eloquence and position gave him great influence in the provincial parliaments in the county of Szalad, of which he was elected a representative at the general Diet convened at Presburg in September, 1825, and dissolved on the 18th of August, 1827. In the Diet which sat from 1832 to 1836, the happy combination of Deak's diversified gifts raised him to the rank of leader of the opposition; and in the Diet which assembled in 1839 he sustained this position with such effect as to procure, amongst other concessions, the release of Kossuth, who had been arrested in 1837. He saw himself, indeed, in the recognised attitude of a mediator between the crown and the nation; between whom, in 1840, he actually brought about a temporary and formal reconciliation. He was not a member of the Diet which met in 1843, owing to his refusal to secure his return by bribery; and several of his friends accused him of sacrificing the interests of his party to the ambition of being regarded as a man of exceptional electoral honesty. Yet Zsedenyi, his principal adversary in the Diet, did not hesitate to declare that by his absence the Assembly had lost the services of the purest political character of Hungary, and the want of his presence was felt to be a national calamity. Meanwhile he retired to his estate of Kehida; from which, whilst he declared himself the advocate of reform, not of revolution, he continued to advise and direct the Liberal party, as well as to provide against the contingencies of their opposition to the court of Vienna. In 1846 he sought recovery from the prostration of a serious illness by a visit to the baths of his own and of other countries, extending his tour until it had embraced Switzerland, Italy, France, and England. He returned home, however, in too feeble a condition to accept the candidature pressed on him in the elections of 1847; and

emerged from his privacy only to accept, March 17th, 1848, the portfolio of Justice in that first Hungarian administration which Count Louis Batthyányi was commissioned to construct, and which he formed on principles comprehensive enough to include Szechenyi as Finance Minister, and Kossuth as Minister of Public Works. Deak was devoting himself to reforms in the administration of justice, and to the bringing about of a good understanding with Austria, when the accession of Kossuth to the premiership, in September, 1848, destroyed all his hopes of accommodation, and compelled him to resign office in the beginning of October, whilst he retained his seat as representative in the Diet. War was now inevitable; the Austrian troops, under the command of Prince Windischgrätz, marched into Hungary, and arrived, victorious in the encounters of the 28th and 29th of December, before the walls of Buda. The Diet now sent a deputation, of which Deak was a member, in order to negotiate a peace; but Prince Windischgrätz refused to receive it, on the ground that he could not treat with rebels. A continuation of the war was the only alternative, the fortunes of which changed so signally that the Hungarians were able to declare their independence, with Kossuth for President; and were only subdued after Russia had despatched a force of 100,000 men to aid the Austrians, who, so assisted, found themselves in October, 1849, absolute masters of the kingdom of Hungary. Neither in the successes nor the disasters, which he alike, if not equally, deplored, did Deak take part, except that he suffered for his attitude of mediation by a short imprisonment at Pesth. When Austria wished to re-constitute Hungary, she sought to come to an arrangement with Deak, who, having sold his estate of Kehida, was now resident in Pesth, and who was generally regarded as the representative of all Hungary. He refused, however, to be a party to any settlement which did not recognise the Hungarian constitution, apart from which, he told Von Schmerling, the Austrian Minister, he had no political power, or even existence.

Deak continued to maintain his privacy until, by the Imperial concessions of 1860 and 1861, he found it possible to return to political life, when he was elected on the 11th of March, 1861, representative for the city of Pesth. He became now the leader of the moderate party in the Diet, which he headed, in accordance with the principles of legality and right, against absolutism on the one hand, and anarchy on the other. Determined to uphold the rights of his country, and equally determined to leave nothing untried in order to bring about an understanding, Deak clung to his programme of "Hungarian independence and dynastic union with Austria." But the time for its realisation was not yet come; and after a five months' agitation on one side and the other of claims which could not be adjusted, the Emperor, on the 21st of August, 1861, dissolved the Diet, which separated with a protest against the illegality of the measure. But time and the course of events were on the side of Deak, who, after Austria had hardened herself against several checks and reverses, found in the battle of Königgrätz, in 1866, his final and efficient co-adjutor. The humbled Emperor accepted the terms of the Magyar patriot; restored to Hungary her constitution, and in turn received her crown at Pesth on the 8th of June, 1867. From the splendours and festivities of the coronation, Deak, with his characteristic simplicity of taste and habit, kept aloof, modestly withdrawing from a sight of what was in fact his own achievement. Refusing to take office in the Hungarian cabinet, and generally inaccessible to ambition, he received from the Emperor-King the portrait of the latter with the inscription "Francis Joseph to Francis Deak." His loyalty to the regime which he initiated has been since manifested in more than one circumstance of delicacy and difficulty. He has been described as a man who has nothing in him of the dashing, sanguine, ostentatious liveliness and impetuosity of the Magyar type; a man of moderate wants, of retiring habits; for years the tenant of a plainly-furnished upper room in the Queen of England Hotel at Pesth, sitting day after day in the corner of his sofa, the end of a cigar in his mouth, "nursing his right leg on his left knee," accessible to all, an unwearied listener, chary of words, courteous but grave, even to gloominess, with a settled look of care about him almost painful to behold; a passionless, utterly disinterested man, with clear views, sound reasoning, occasional fluency and even brilliancy of talk; ready to give in on trifles, a rock on matters of principle, with something of Cavour's head and Garibaldi's heart—an idol to his countrymen, who have given him Aristides' title, "The Just." His favourite summer retreat is a country-house at Szent-Laszlo, near Söjtör, where he devotes much of his

leisure to carving in wood, an art which he practises with a gratifying amount of success.

* DEBAIN, ALEXANDER FRANÇOIS, French musical instrument maker and mechanic, was born at Paris in 1809. After serving an apprenticeship to the trade of cabinet-making, he studied the mechanism of various kinds of musical instruments, and obtained employment under Sax, Mercier, and other makers, especially in repairing church organs in country districts. In 1834 he established a manufactory of organs and pianofortes at Paris, which gradually rose into note. The great attention which he paid to the construction and action of free-vibrators—i.e., slips of metal oscillating or vibrating in cavities just large enough to freely admit them—enabled Debain to make improvements in many kinds of musical instruments, and to invent certain new varieties. One was the *concertina*, which he improved in many ways; another was the *harmonium*, which almost completely superseded the seraphine previously in use; a third was the *harmonichord*, a kind of mechanical pianoforte; a fourth the *antiphonel*; a fifth the *stenographone*, by which a player on a keyed instrument can print or mark down the notes which his fingers play. Many, if not most, of the instruments constructed by him produce their tones by the vibration of metallic tongues or springs; and he devised a mode of varying greatly the *timbre*, or quality of tone, irrespective alike of differences in pitch and in loudness. In 1850, M. Debain constructed a voting machine for the National Assembly, invented, or at least suggested, by M. de Liancourt. It had a remarkable mode of ensuring that the white ballots (to denote 'pour,' or 'aye,') should not be able to enter the receptacle intended for the blue ballots ('contre,' or 'no'), and *vice versé*; while rigorous precautions were taken, in the form of tell-tale apparatus, to prevent any tampering with the machine. The Assembly voted M. Debain 30,000 francs for its construction.

DECAMPS, GABRIEL ALEXANDRE, an eminent French landscape painter, was born at Paris on the 3rd of March, 1803. After some preparatory instruction from M. Bouhot, he entered the atelier of M. Abel de Pujol, but, dissatisfied with his manner of teaching, left it after a season in disgust, and was thenceforth his own master. Some small landscapes in oil found a purchaser in Baron D'Ivry, who proved a generous and useful patron. M. Decamps appeared for the first time as an exhibitor at the Salon in 1827, with a 'Sujet Turc.' The picture pleased, but he had not yet been to the East, and he was encouraged to make a voyage to Turkey, which had a decisive influence on his artistic career. In 1831 he contributed 'La Patrouille Turque' and 'L'Opital des Galeus,' and year after year continued to send a 'Village Turc,' 'la Défaite des Cimbres,' 'le Bazar Turc,' 'l'École Turque,' 'la Cavalerie Asiatique traversant un gué,' and similar subjects, till he became the recognised painter of the East. These pictures were treated in a manner quite new in French art, singularly picturesque in arrangement, very cleverly and carefully composed, painted with a full, rough, patchy *impasto*, but brilliant in colour, and presenting the most striking effects of light. The impression they produced was very great. Painters, indeed, notwithstanding their undeniable technical merits, were anything but unanimous in their praise; but with the journalists and the public they at once became popular, and they found ready purchasers. M. Decamps followed up his successes by a large number of similar pieces, but among them were some of a more ambitious character, such as 'Joseph vendu par ses Frères,' 'Moïse sauvé des eaux,' 'la Pêche miraculeuse,' &c.; but in these, as in his ordinary genre pictures, the persons introduced were made subordinate and accessory to the landscape. Decamps was also skilful in painting animals, and produced a variety of such pictures as 'Ane et Chiens savants,' 'Chiens, Poules et Canards,' 'Chevaux de Halage,' and the like, but he was especially fond of painting monkeys engaged in some human occupation, or evincing some human passion, as 'les Singes boulangers,' 'les Singes Charcutiers,' 'le Singe au Miroir,' or 'le Singe Savant;' and when the jury of the Academy offended him by their rejection or ill-placing of some pictures he retorted on them by 'les Singes Experts,' in which his practised skill in caricature (displayed of old in 'Le Caricature' journal) enabled him to point his shaft with unerring effect. M. Decamps' success raised a host of imitators, and at length, disgusted with the prominence into which they brought the faults of his style, he sought to fall back upon the more classic mode of Poussin, and failing, declared he would abandon painting altogether. Accordingly he retired, in 1852, to a small property he possessed, and for awhile occupied himself with the cultivation of his fields. Tiring of this he returned to his pencil, taking

up his residence at Fontainebleau, where he died, August 21, 1860, from the effects of a fall from his horse. M. Decamps' paintings continue to realise very large prices when brought into the auction-room, and he is the acknowledged head of a school; but it is gradually becoming recognised, even by his countrymen, that he was at the best a mere mannerist, and that his success was owing rather to the novelty of his subjects and style than to the inherent merits of his works. When, at the Great Exhibition of 1855, some 40 of his pictures were brought together, their monotony and trickiness were painfully conspicuous; the jury, however, awarded him one of the ten medals of honour.

* DECANDOLLE, ALPHONSE LOUIS PIERRE PYRAMUS, the son of the celebrated Augustin P. Decandolle, was born at Paris, October 27, 1806. He was educated at Geneva. After studying the law, and taking the degree of Doctor in 1829, he gave his attention to botany. He succeeded his father as Professor of Botany in the University of Geneva, and also had the care of the Botanic Garden of that city. His principal works are 'Monographie des Campanulées,' 4to, Paris, 1830; 'Introduction à l'Étude de la Botanique, ou Traité élémentaire de cette Science,' 2 tomes 8vo, 1835; 'Hypsométrie des environs du Genève,' 4to, Geneva, 1839; 'Notice sur B. Delessert,' 8vo, 1847, Geneva; 'Géographie botanique raisonnée,' 8vo, 2 vols. Paris, 1855; 'Notice sur la Vie et les Ouvrages de M. de Martius,' 8vo, Geneva, 1856; 'Mémoires et Souvenirs de A. P. Decandolle,' 8vo, 1862. He has also continued the 'Prodromus systematis naturalis regni vegetabilis,' etc., which was begun by his father, as editor and part author. This great work occupied the elder Decandolle during the last 15 or 20 years of his life, and so anxious was he about its completion, that he inserted a clause in his will enjoining his son to undertake the task. Alphonse had already shown his ability by his monograph on the Campanulaceæ, &c.; and although, at the time of his father's death in 1841, he was busily engaged collecting materials for his work on geographical botany, he threw aside this for a time, and prepared for the continuation of the larger systematic work. He secured the services of the most eminent botanists, and the work was pushed steadily forward up to the 13th volume, which appeared partly in 1849 and partly in 1852. From this time delays and difficulties occurred, and progress was slow. The work is now, however, very nearly completed, a portion of the sixteenth volume having been published in 1869. It has had great influence in leading to the adoption of the "natural method" of classification in systematic works, as opposed to the Linnæan system, which formerly prevailed. Alphonse Decandolle has also written upwards of 50 papers for scientific journals. He is a member of the Institute and many other learned bodies, and has been elected into the Legion of Honour. His son,

* CASIMIR DECANDOLLE also promises to be an eminent botanist. He has written a monograph on the *Juglandææ* for the

DECAZES, ÉLIE, DUC, a French statesman, descended from an ancient noble Gascon family, was born at St. Martin de Laye, department of Gironde, September 28th, 1780. In 1790 he entered l'École Militaire, Vendôme; then studied law at Libourne, near the place of his birth, and was admitted to the bar. Removing to Paris, he obtained employment under the Minister of Justice; soon after which a marriage into an influential family opened a path to rapid advancement. In 1805 he was appointed Judge of the Tribunal of the Seine; in 1806, counsellor of the Cour Impériale. He next went to Holland as counsel to King Louis Bonaparte; and in 1811 became counsel and secretary to Madame Letitia, the Emperor's mother. As he declared for the Bourbons in 1814, he lost his offices, and was exiled during the Hundred Days; but after the battle of Waterloo he received from Louis XVIII. the appointment of Préfet of Police at Paris, and afterwards Minister of General Police, in which offices he displayed ability and energy. In 1816 he was made a peer, with the title of Count. In 1818 he succeeded the Duc de Richelieu as Minister of the Interior. Although of aristocratic family and leanings, he sought to curb the intolerance of the nobles of the Restoration, by advocating many reasonable measures respecting freedom of election, of debate, and of the press. In 1820 he became Minister of State, or Prime Minister; but almost immediately afterwards the Duc de Berri was assassinated, and Decazes was accused by the aristocratic party of complicity in the crime. The King, although the charge against Decazes was never substantiated, was obliged to dismiss him, but at the same time raised him to the rank of Duke, and appointed him ambassador to the Court of St. James's; he had already received a similar title (Duke of Glücksberg) from the

King of Denmark, on the occasion of his marriage, 1818, with Mlle. de St. Aulaire, grand-daughter of the last reigning Prince of Nassau-Saarbrück. Returning to Paris in 1821, he resumed his place in the Chamber of Peers, but without office, supporting measures of a temperate kind, in the hope of reconciling extreme parties. He accepted the Revolution of 1830, without directly participating in it. In 1834 he was appointed grand référendaire of the Chamber of Peers, the only office which he appears to have held during the reign of Louis Philippe. Retiring from political life after the *coup d'état* in 1851, he devoted his attention mainly to schemes for the encouragement of agriculture, industry, and the arts generally. He was the founder of one of the principal metallurgic establishments in France, the iron-works at Decazeville, by which he converted a scantily-occupied district into a busy town and commune. He died on the 24th of October, 1860. During his political career he refused to belong to either of the two leading parties in the Legislature, preferring to hold the balance between them; as a consequence, he was in favour with neither. His political conduct has been severely criticised, but it is admitted on all hands that whilst a minister, as afterwards in private life, he was ever one of the most earnest and enlightened promoters of agriculture and the industrial arts in France.

DECKEN, BARON CHARLES CLAUS VON DER, an African traveller, was born at Kotzen, Brandenburg, in 1833. He early showed a desire for travelling by his study of history and geography, and his aptitude for drawing maps. In 1850 he entered the Hanoverian army as lieutenant; and in 1858 he made his first visit to Africa, but it was a short one only, owing to an attack of fever. In 1860 he withdrew from the army, and devoted himself to African exploration. He made two efforts to penetrate into the interior from Zanzibar, but was unsuccessful, owing to want of porters and a mutiny among his followers. In 1861 he succeeded in reaching the white-capped mountains of Kilimandjaro, accompanied by a young English geologist, Richard Thornton. In 1862 he again visited Kilimandjaro, and ascended to a height of 14,000 feet above the sea. On this occasion he was accompanied by Dr. Kersten, and both assured themselves that the summit of the mountain was covered with snow, a fact which had been stated by Krapf and Rebmann, but had been much disputed about. In 1863 he returned to Europe, received the gold medal of the Royal Geographical Society of London, and other honours, and again returned to Africa for purposes of exploration. This time he had two steamers constructed, specially adapted for easy carriage and for river navigation, organised a select party of Germans, and, on reaching Africa he ascended the river Juba. One steamer was lost on the bar, and, when about 350 miles up the stream, the other was brought to a stand by rapids. The steamer was left in charge of the main party, while the Baron and Dr. Link returned to Berdera for assistance. This was on September 28th, 1866. At Berdera he was attacked by the natives, and his small party was compelled to take to the open country. On October 1, Dr. Link and one boy returned to the camp at the rapids, while the Baron, with three attendants, again went to Berdera. According to Abdio, his guide, he was killed by the people of Berdera early in October, and his body thrown into the Juba. An account of the countries visited by the Baron, and of the animals inhabiting them, has been published, under the title of 'Reisen in Ost Afrika in der Jahre 1859—65.' The work is intended to be in four volumes, the first and third were published in 1869, the fourth in 1870, but the second has not appeared yet. The general results are, or will be given in vols. i. and ii., which are by Dr. O. Kersten; the other two contain descriptions of the animals collected, and are by Peters, Cabanis, Hilgendorf, E. von Martens, Semper, Finsch, and Hartlaub. The fourth volume is a thick one, and entirely devoted to the birds.

* DEFRÉMERY, CHARLES, a French philologist and orientalist, was born on the 8th of December, 1822, at Cambrai, and became a student at the Collège de France, where he devoted himself to a diligent cultivation of the Arabic and Persian languages. His first publication, 'Histoire des Sultans du Kharizm, par Mirkhond, texte persan, accompagnée de Notes historiques, géographiques, et philologiques,' 8vo, Paris, 1842, procured his admission to the membership of the Société Asiatique of Paris, in 1843. From that time M. Defrémery has contributed editions and translations of many works of great value for the light they throw upon the history, geography, and literature of the Oriental nations on this side of the Indus. He has for many years been one of the associate editors of the 'Journal Asiatique,' in which several of his works have appeared

before receiving a substantive form of publication. For the 'Collection d'Auteurs Orientaux,' now in course of publication by the Société Asiatique, of which the 'Journal' is the organ, he edited, jointly with Dr. B. R. Sanguinetti, the 'Voyages d'Ibn Batoutah, texte arabe et Traduction,' &c., 4 vols, 8vo, Paris, published severally in 1853, 1854, 1855, and 1858, to which an 'Index Alphabétique pour Ibn Batoutah,' was added in 1859. The other more remarkable of the works of M. Defrémery are his 'Histoire des Seldjoukides et des Ismaéliens, ou Assassins de l'Iran, extraite du Tariki Guzideh ou Histoire choisie d'Hamd-Allah Mustaufi, traduite du persan et accompagnée de Notes historiques et géographiques,' 8vo, Paris, 1849; a subject which he further illustrated in his 'Nouvelles Recherches sur les Ismaéliens ou Bathiniens de Syrie, plus connus sous le nom d'Assassins, et principalement sur leurs Rapports avec les États chrétiens d'Orient,' 1854; 'Fragments de Géographies et d'Histoires arabes et persanes inédites, relatifs aux anciens Peuples du Caucase et de la Russie méridionale, traduits et accompagnés de Notes critiques,' 8vo, Paris, 1849; and a translation of Sâdi's 'Gulistan, ou le Parterre des Roses, traduit du persan sur les meilleurs Textes, et accompagné de Notes,' 12mo, Paris, 1858. His contributions to various journals and periodicals have been published with the title of 'Mémoires d'Histoire Orientale, suivis de Mélange de Critique, de Philologie, et de Géographie,' 2 parts, 8vo, Paris, 1854—62.

* DEGER, ERNST, an eminent German painter, was born April 15, 1809, at Bockenem, in Hanover. He studied under Von Schadow at Berlin, and afterwards at Düsseldorf, and imbibed to the full the views of that master. He first made himself known by 'The Madonna and Child,' painted in 1837, for the St. Andreaskirche, Düsseldorf, and he afterwards painted numerous pictures for the Jesuits' and other churches of that city, several of which came to be widely known by their reproduction in lithography. But his great work was the decoration of the church of St. Apollinaris, at Remagen, on the Rhine, which was erected at the cost of the Graf von Fürstenberg-Stammheim, and intended by him to illustrate the condition of revived German ecclesiastical art in the middle of the 19th century. To make studies and prepare the cartoons for the pictures, which were to be in fresco, Deger and his colleagues made a special visit to Rome. The pictures illustrate the life of the Virgin and the history of Jesus. The direction of the painting was entrusted to Deger, and it was completed in 1851. The successful issue of the undertaking led to Deger's being commissioned by King Frederick William IV. of Prussia to paint in fresco the chapel of his castle at Stolzenfels. This comprises a series of twelve pictures, which are intended to symbolize 'The Redemption of Mankind from the Curse of Sin.' Deger has painted many easel pictures, but all, or nearly all, of a religious character. He ranks as the chief living painter of the Düsseldorf school of sacred art. His works are distinguished by that mystical sentiment—compound of religion, philosophy, and symbolism—which is distinctive of the school, and, to one who regards them principally as works of art have, with all their undoubted excellence, a feeble, faded, second-hand aspect. Herr Deger was nominated professor by the King of Prussia, and he is an honorary member of the academies of Berlin and Munich.

DEGÉRANDO, JOSEPH MARIE, BARON, a French statesman, philanthropist, and philosopher, was born on the 29th of February, 1772, at Lyon, and was educated at the Collège de l'Oratoire of his native city. At first he cherished an inclination for an ecclesiastical career, but was diverted from his purpose by the events and excesses of the Revolution. He assisted in the defence of Lyon against the troops of the Convention in 1793, and was on that account obliged to take refuge, first in Savoy, and afterwards at Naples. An amnesty allowed him to return to France after an absence of two years, and he enlisted in the army as a trooper in a regiment of cavalry. Amidst the distractions of military service he produced a treatise which obtained the prize of the Institute in 1799, and which, under an amplified form, was published with the title of 'Des Signes et de l'Art de penser, considérés dans leurs Rapports mutuels,' 4 vols, 8vo, Paris, An. viii. (1800). He won a like honour from the Academy of Berlin with his essay 'De la Génération des Connaissances humaines,' 8vo, Berlin, 1802, which commenced with a critical review of the various theories upon the subject current both in ancient and modern times, and which grew by a process of natural development and expansion into the elaborate work, of a kind till then unknown in France, entitled 'Histoire comparée des systèmes de Philosophie, considérés relativement aux Principes des Connaissances humaines,' 3 vols, 8vo, Paris, An. xii.

(1804), second edition, revised, corrected and augmented, 4 vols. 8vo, Paris, 1822–23, which was completed by the posthumous publication of four additional volumes, forming a second series, and devoted to a history of modern philosophy, 'Histoire de la Philosophie moderne, à partir de la Renaissance des Lettres jusqu'à la fin du XVIII.^e Siècle,' 8vo, Paris, 1847–48. The 'Histoire' procured for its author the patronage of Lucien Bonaparte, and admission to the membership of the Académie des Inscriptions et Belles-Lettres, in 1804. About the same time he was promoted to the office of secretary-general to the Ministry of the Interior, and in 1806 to the Mastership of Requests. For brilliant administrative services rendered in Italy between 1808 and 1811, he was made in the latter year a Councillor of State, a baron, with a yearly allowance of 25,000 francs, and an officer of the Legion of Honour, being afterwards raised to the rank of commander in 1820 by Louis XVIII. When, on the advice of Degérando, a chair of public and administrative justice was instituted in March, 1819, he was elected to be its first occupant; but in 1821, owing to the expression of sentiments obnoxious to the Government, he was suspended for seven years from his professorship. The accession of Louis Philippe brought to M. Degérando favour and appreciation; and on the 3rd of October, 1837, he was called to the House of Peers, of which he became an active member. Throughout his career M. Degérando was interested, officially or indirectly, in nearly every benevolent corporation in Paris, to the literary and other advocacy of which he largely contributed. He was one of the founders of the Société de la Morale Chrétienne; a member of the Société pour l'Instruction élémentaire, and of the Société des Méthodes; and the founder of the Société d'Encouragement pour l'Industrie nationale. Not very long before his death, which took place at Paris on the 10th of November, 1842, he visited Germany and Switzerland, for the purpose of discovering what portion of the systems pursued in their hospitals and charitable establishments could be profitably adopted by those of France.

Besides the works already mentioned, Baron Degérando published—anonously, in the first edition—a treatise, which was crowned in 1820 by the Académie de Lyon, and in 1821 by the Académie Française, and to which was decreed the Montyon prize, entitled 'Le Visiteur du Pauvre,' 8vo, Paris, 1820, fourth edition, 1837; English translation, 12mo, London and Manchester, 1833; another treatise, to which the Académie Française decreed the Montyon prize in 1825, entitled 'Du Perfectionnement moral; ou, de l'Education de Soi-même,' 2 vols. 8vo, Paris, 1824; third edition, 1833; English translation, entitled 'Self-Education,' &c., third edition, 8vo, Boston and Cambridge, U.S., 1860, the object of which was to enforce the fact that the life of man is one great and constant process of education, of which the two great instruments are the love of virtue and the power of self-government; 'De l'Education des Sourds-Muets de Naisance,' 2 vols. 8vo, Paris, 1827; 'Institutes du Droit administratif Français; ou, Eléments du Code administratif réunis et mis en ordre,' &c., 4 vols. 8vo, Paris, 1829–30; fourth edition, 1845; and 'De la Bienfaisance publique,' 4 vols. 8vo, Paris, 1839, which gives, *inter alia*, a loose and incomplete history of the charitable institutions of the Middle Ages. M. Degérando was likewise a contributor to various serial and periodical works—to the 'Archives littéraires de l'Europe,' the 'Revue Encyclopédique,' 'Encyclopédie des Gens du Monde,' 'Biographie Universelle,' 'Journal Asiatique,' 'Dictionnaire Technologique,' and the 'Journal Grammatical et Philosophique de la Langue Française.'

DELACROIX, FERDINAND VICTOR EUGÈNE [E. C. vol. ii. col. 538]. This very eminent painter, the head of an important school of French art, died on the 13th of August, 1863, aged 64.

* DELAFOSSE, GABRIEL, mineralogist, was born about 1795, and educated at the Ecole Normale. He is the professor of mineralogy at the Museum of Natural History, Paris, and a member of numerous societies. His principal works are 'Nouveau Cours de Minéralogie, contenant la description de toutes les espèces minérales avec leurs applications directes aux Arts,' 8vo, 3 vols, 1858–1862, forming one of the series entitled 'Nouvelles Suites à Buffon,' and several elementary works, such as 'Notions élémentaires d'Histoire Naturelle,' 2nd ed., 3 vols, 1856; 'Précis élémentaire d'Histoire Naturelle,' 12mo, 1st ed., 1831; 2nd ed., 1862; and several others. He has also written a few scientific papers in the 'Comptes Rendus,' on the relation between the structure of crystals and their physical properties. Amongst other things he discovered that the hemihedral facets on quartz and other minerals are connected with, and indicative

of, the direction in which the colours alter in the rotatory polarised light passing through their crystals.

DELANDINE, ANTOINE FRANÇOIS, was born at Lyon, March 6, 1756. The son of an advocate, he was educated for the bar, and was received as advocate at the Parlement de Dijon in 1775, and at that of Paris in 1777, but abandoned law for literature. Among his early works 'L'Enfer des Peuples Anciens,' 1784, attracted notice by its erudition, and 'L'Histoire des Assemblées Nationales de France,' 8vo, 1789, by its subject; the latter securing his election the same year to the States-General. The following year he was appointed librarian to the Academy, Lyon, but his monarchical principles brought him into danger in 1793, and he took refuge at Neronde, in Forez. He was, however, arrested and confined in the prison of the Recluses at Lyon till the death of Robespierre. Under the Directory he was appointed professor of legislation at the Ecole Central du Rhône, and on the suppression of that institution he was restored to his librarianship, which post he retained till his death, May 6, 1820. Delandine published a great number of books, but the most useful, perhaps, was the edition (13 vols, 8vo, 1804) of Dom Chaudon's 'Nouveau Dictionnaire Historique,' his share in which is noticed under CHAUDON [E. C. S. col. 371]. Other works of value are—'Bibliothèque historique et raisonnée des historiens de Lyon et des ouvrages manuscrits et imprimés qui ont quelque rapport à l'histoire ecclésiastique et civile de cette ville et des trois provinces,' 8vo, 1787; 'Catalogue de la Bibliothèque de Lyon, avec des observations littéraires et bibliographiques,' 3 vols, 8vo, 1812; and 'Mémoires bibliographiques et littéraires,' 8vo, 1816.

DELANY, MARY, born May 14, 1700, at Coulton, in Wiltshire. The daughter of Colonel Bernard Granville, a member of the Lansdowne family, she received a careful education, and at the age of 17 was married to Alexander Pendarves, a wealthy Cornish gentleman, but advanced in years, and an habitual drunkard. He died in a fit in 1724, when it was found that he had neglected to sign his will, and the young widow was consequently left in somewhat straitened circumstances. She came to London, and moved much in society; and occasionally visited Dublin, where she was on very intimate terms with Dean Swift, and his clerical circle. In 1743 she married Swift's friend, the Rev. Dr. Delany. The Doctor was a good and able man, held some preferments in the church, and had written books and discourses that were praised by Swift and read by the public, but Mrs. Pendarves' friends were shocked that a Granville should mingle with plebeian blood. However, after the marriage they procured him the deanery of Down, that the lady might have a respectable position. The dean died in 1768, and Mrs. Delany returned to England. She resided for a good part of her time with the Duchess of Portland, on whose death, George III., who was a frequent visitor at Bulstrode, conferred on Mrs. Delany a house at Windsor and a pension of 300*l.* a year. She was a great favourite with the king and his family, and frequently visited by them, and kept up even in her old age a wide epistolary correspondence. She died on the 15th of April, 1788. Mrs. Delany was a clever, accomplished, and amiable woman; her only title, however, to biographical record is 'The Autobiography and Correspondence of Mary Granville, Mrs. Delany: with Interesting Reminiscences of King George the Third and Queen Charlotte. Edited by the Rt. Hon. Lady Llanover,' 6 vols. 8vo, London, 1861. Covering a period of nearly seventy years, the work is a mine of rare value to the student of the social life and manners of the 18th century; to the general reader it would have been of much greater interest if reduced to half its present bulk by judicious omission, and the excision of superfluous annotation.

* DE LA RIVE, AUGUSTE, was born at Geneva, 9th Oct., 1801. He was the son of a distinguished medical man and chemist, who died in 1834. He studied science with such success as to obtain the sanction of Arago and Ampère to a memoir published in the 'Annales de Chimie et de Physique' in 1822. He investigated the subject of heat in conjunction with Marcel, and was nominated to the chair of physics at the Academy of Geneva. After the political troubles of 1830 he visited England and other countries. On his return home he edited the 'Bibliothèque Universelle de Genève' from 1836 to 1841. He applied himself to the study of electricity, and in 1842 obtained the Montyon prize of 3000 francs for his galvanoplastic experiments. In 1830 he was elected a corresponding member of the Institute of France, and in 1864 one of the eight foreign associates of the Academy of Sciences. In 1846 he was elected one of the foreign members of the Royal Society of London. De la Rive's apparatus is known to students in electro-magnetism, as also his 'Traité d'Electricité

théorique appliquée,' in 3 vols. 8vo, Paris, 1854—58. He has also written notices of some of his scientific compatriots 1817—54. His eldest son, William, is the chief editor of the literary portion of the 'Bibliothèque Universelle.'

DELAROCHE, PAUL [E. C. vol. ii. col. 541]. The memoir of this great artist—one of the greatest historical painters France has produced—had been printed but a month or two when he laid down his pencil for ever. After a painful illness, he died on the morning of the 4th of November, 1856, at the age of 59.

* DE LA RUE, WARREN, was born in or about the year 1815. His father, Mr. Thomas De La Rue, a native of Guernsey (born in 1793, died 1866), after serving an apprenticeship to a printer and publisher, established himself in London. Mr. Warren De La Rue, and another son, assisted the father in developing a stationery manufactory in Bunhill Row, which has grown up to a stage of great magnitude and importance, especially in the departments of playing-cards, envelopes, and postage stamps. The combination of colour-printing and embossing, on fine cardboard and fine paper of different kinds, led to the introduction of many beautiful products, which in turn rendered necessary the adoption of large manufacturing arrangements. Mr. Warren De La Rue's knowledge of mechanism enabled him to devise the chief parts of the envelope-making machine, patented by him conjointly with Mr. Edwin Hill, and first publicly shown at the Hyde Park Exhibition of 1851. He acted as juror at the four great International Exhibitions of 1851, 1855, 1862, and 1867. Gradually withdrawing from commercial and manufacturing pursuits, Mr. De La Rue devoted his chief attention to science, in which both physical and chemical researches were comprised. As a Fellow of the Royal, Royal Astronomical, Chemical, and other learned societies, he has contributed above 50 papers to the Memoirs and Proceedings of those bodies. In his observatory at Cranford, near Hounslow, his fine telescope has enabled him to make numerous valuable astronomical observations, and he has indoctrinated many scientific observers in the use of their instruments before setting out on their labours, as M. Lesueur, now in charge of the great telescope at Melbourne, and Major Tennant for the great eclipse party. He has also set up a speculum grinding machine at Cranford, worked by a small steam-engine. Mr. De La Rue's principal scientific work has been in the application of photography to astronomy, especially in relation to solar and lunar phenomena. He was one of the observers who went to Spain in 1860 to make observations during the great solar eclipse of that year. His researches on the sun's spots, the corona, the rose-coloured flames, &c., have helped to pave the way for the grand discovery of the sun's chromosphere by M. Janssen and Mr. Norman Lockyer. The Kew Observatory, belonging to the British Association for the Advancement of Science, has been the scene of many of Mr. De La Rue's labours, relating chiefly to astronomy, meteorology, and the verification of scientific instruments. The French Academy of Sciences awarded the Lalande Prize to Mr. De La Rue, in 1866, for his researches in celestial photography, and in the report accompanying the award it was stated that of the 18 years he had been at Cranford, 15 years had been devoted particularly to celestial photography, chiefly by means of a splendid telescope of 13 inches aperture, made according to his own designs. In 1861 Mr. De La Rue published in the 'Monthly Journal of the Royal Astronomical Society' the first example of heliography, by means of which photographs of the sun's spots were reproduced at the ordinary press without the intervention of the draughtsman or engraver.

* DELAUNAY, CHARLES EUGÈNE, was born at Lusigny, Department of the Aube, April 9, 1816. He entered l'École Polytechnique in 1834, and quitted it with high honours in 1836. He received in succession the appointment to the offices of first-class engineer of mines, professor of mechanics at l'École Polytechnique, and a similar professorship to the Faculté des Sciences. He was elected a member of the Institute in 1855; and in 1862 titular member of the Bureau des Longitudes. Besides 36 papers in the 'Comptes Rendus,' and the 'Journal de l'École Polytechnique,' between 1838 and 1863, on various branches of astronomy, and especially on the Moon, M. Delaunay has published the following works:—(1) 'Cours Élémentaire de Mécanique, théorique et appliquée,' 12mo, Paris, 1851; (2) 'Cours Élémentaire d'Astronomie, concordant avec les articles du programme officiel pour l'enseignement de la Cosmographie dans les Lycées,' 12mo, Paris, 1854; (3) 'Sur une Méthode d'intégration, applicable au calcul des Perturbations des Planètes et de leurs Satellites,' 4to, Paris, 1855 (inserted in the Memoirs of the Academy); (4) 'Traité de Mécanique Rationnelle,' 12mo,

Paris, 1856; (5) 'Sur la Ralentissement du Mouvement de Rotation de la Terre,' 8vo, Paris, 1866. M. Delaunay is president of the Académie des Sciences, and in March, 1870, succeeded M. Leverrier as director of the Imperial Observatory. He was in February, 1870, awarded the gold medal of the Royal Astronomical Society, London, for his 'Théorie Analytique du Mouvement de la Lune,' as developed in a series of papers contained in the Mem. Acad. Sc. for 1860 and following years.

* DELEPIERRE, JOSEPH OCTAVE, LL.D., F.S.A., &c., a Belgian lawyer and man of letters, who has been for many years officially resident in London as Secretary of Legation and Consul-General for Belgium, was born at Bruges in 1804. He studied law at the University of Ghent; and for some time practised as an advocate at Brussels, until he was appointed attaché to the Belgian Embassy in London, and finally, in August, 1849, to the offices which he at present holds. He is a member of several learned societies both in this country and on the Continent, and has devoted himself with much ardour to the illustration of the antiquities, social, historical, scientific, artistic, literary, and topographical, of his native country, and especially of his native city of Bruges. Thus he has published the 'Histoire du Règne de Charles-le-Bon, précédée d'un Résumé de l'Histoire de Flandre, depuis les Temps les plus reculés,' 8vo, Brussels, 1830; 'Vie de Marie de Bourgogne,' folio, Brussels, 1841; 'La Belgique illustrée par les Sciences, les Arts, et les Lettres,' 8vo, Brussels, 1840; 'Les Traditions et Légendes de Flandre,' 8vo, Lille, 1834, translated by the editor into English, with the title of 'Old Flanders; or, Popular Traditions and Legends of Belgium,' 2 vols. 8vo, London, 1845; 'Précis des Annales de Bruges, depuis les Temps les plus reculés jusqu'au commencement du XVII^e Siècle,' &c., 8vo, Bruges, 1835; 'Précis analytique des Documents que renferme le Dépôt des Archives de la Flandre-Occidentale, à Bruges,' 8vo, Bruges, 1840; 'Galerie d'Artistes Brugesois; ou, Biographie concise des Peintres, Sculpteurs, et Graveurs célèbres de Bruges,' 8vo, Bruges, 1840; 'Beaucourt de Noortvelde's 'Troubles de la Flandre,' 8vo, Mons, 1845, edited for the Société des Bibliophiles de Mons, for which he had already translated the 'Vision de Tondalus; Récit mystique du douzième Siècle, mis en français pour la première fois,' 8vo, Mons, 1837, when he was acting as Archiviste de la Flandre-Occidentale; 'Biographie des Hommes remarquables de la Flandre-Occidentale,' 4 vols. 8vo, Bruges, 1843, 1844, 1847, and 1849, edited, jointly with three others, by M. Delepierre, for the Société d'Emulation pour l'Étude de l'Histoire et des Antiquités de la Flandre-Occidentale, of which he was the founder; and 'A Sketch of the History of Flemish Literature, and its celebrated Authors, from the twelfth Century down to the present Time. Compiled from Flemish sources,' 8vo, London, 1860. Amongst M. Delepierre's contributions to more general literature may be mentioned his group of Macaronic volumes, 'Macaroneana; ou, Mélanges de Littérature Macaronique des différents Peuples de l'Europe,' 8vo, Paris, 1852; 'De la Littérature Macaronique, et de quelques Raretés bibliographiques de ce Genre,' 8vo, London, 1856; and 'Nouveaux Mélanges de Littérature Macaronique,' 8vo, London, 1862; together with his 'Histoire littéraire des Fous,' 8vo, London, 1860; and 'Historical Difficulties and Contested Events,' 8vo, London, 1868. M. Delepierre is a Knight Commander of the Spanish Order of Charles III., and also (August, 1870) of the Portuguese Order of Christ.

* DELESSE, ACHILLE, geologist, was born at Metz in 1817. He is an engineer in chief of mines, professor of geology at the École Normale, Paris, vice-president of the Geological Society of Paris, a foreign member of the Geological Society of London, &c. His writings are numerous, and relate chiefly to the composition, mode of formation, and alteration of rocks and minerals. He has given a great deal of attention to the metamorphism of rocks, and his memoirs on this subject are extremely valuable. They are much scattered as regards place and date of publication, but the following will present a full account of his researches. The special metamorphism of rocks is given in 'Études sur le Métamorphisme' in 'Annales des Mines,' xii. pp. 89—288, 417—516, 705—772 (1857); xiii. pp. 321—416 (1858); the general metamorphism is treated in 'Études sur le Métamorphisme des Roches,' 1869; while the general considerations on the origin of rocks is in 'Sur l'Origine des Roches,' in 'Bull. Soc. Géol. Fr.,' xv. pp. 728—781 (1858), which was published in a separate form in 1865. His memoir entitled 'Recherches sur les pseudomorphoses,' 8vo, Paris, 1859, which originally appeared in the 'Annales des Mines' for that year, is an important contribution to our knowledge of the changes which minerals undergo. His papers entitled 'Recherches de l'Azote et des matières organiques

dans l'écorce terrestre' in 'Annales des Mines,' xviii. pp. 151—324 (1860); and 'Recherches sur l'eau dans l'intérieur de la terre,' in 'Bull. Soc. Géol. Fr.,' xix. pp. 64—89 (1861), may be also mentioned for the original views which they contain. His maps of Paris and its neighbourhood are remarkable specimens of their kind, more especially the 'Carte géologique et hydrologique de Paris,' 1861, in which he shows the distribution of the water in the rocks forming the Paris basin. His more recent maps showing the character of the ground on the sea bottom near the shores of France, in the English Channel, and in most of the seas of the Old World, contain an immense amount of information on the orographic contour and recent geology of Europe. His other productions are far too numerous to name here, but we may just mention his 'Matériaux de Construction de l'Exposition Universelle en 1855,' 8vo, Paris, 1856; and the 'Revue de Géologie' for 1861 and subsequent years, which he has drawn up in conjunction first with M. Laugel, and latterly with M. Lapparent. The latter work is an excellent resumé on the progress of geology for the period to which it relates.

* DELITZSCH, FRANZ, a German philologist and biblical commentator, was born at Leipzig, on the 23rd of February, 1813, and studied at the university of his native city, where he devoted himself especially to divinity and oriental learning. In 1846 he was appointed ordinary professor of theology at Rostock, a small university in the Grand Duchy of Mecklenburg-Schwerin, whence he removed in 1850 to occupy a like position at the Bavarian University of Erlangen, which gives its name to a certain school of dogmatic theologians, who count Delitzsch amongst their most prominent advocates. Finally, Dr. Delitzsch was made ordinary professor of the Exegesis of the Old and New Testaments, in his own University of Leipzig; and on the 26th of October, 1867, delivered an inaugural lecture on Physiology and Music in their Relations to Grammar, &c., which he published, in an amplified form, with the title of 'Physiologie und Musik in ihrer Bedeutung für die Grammatik, besonders die Hebräische,' 8vo, Leipzig, 1868. The works of Dr. Delitzsch, which are considerable, both in number and in range of subject, include a treatise on the history of Hebrew poetry, 'Zur Geschichte der Jüdischen Poesie, vom Abschluss der heiligen Schriften alten Bundes bis auf die neueste Zeit,' 12mo, Leipzig, 1836; a descriptive and critical study of the Science and Art of Judaism, 'Wissenschaft, Kunst, Judenthum. Schilderungen und Kritiken,' 12mo, Grimma, 1838; 'Jesurun; sive, Prolegomenon in Concordantias Veteris Testamenti, a J. Fuerstio editas, libri tres,' &c., 8vo, Grimma, 1838; Contributions to a Study of the Scholastic Learning of the Jews and Mohammedans of the Middle Ages, 'Beiträge zur Mittelalterlichen Scholastik unter Juden und Moslemen,' 8vo, Leipzig, 1841; a treatise on Mysticism and the Mystics, entitled, 'Wer sind die Mystiker? Eine gründliche Belehrung über das was Mysticismus ist und nicht ist. Gegen die Sprachverwirrung unserer Zeit,' 8vo, Leipzig, 1842; Studies in Biblical Theology and Apologetic Criticism, 'Biblich-theologische und apologetisch-kritische Studien,' 2 vols, 8vo, first volume, Leipzig, 1845, and second, Berlin, 1848, produced jointly with Carl Paul Caspari; 'On the House of God, or the Church, &c.,' 'Vom Hause Gottes, oder der Kirche. Katechismus in drei Hauptstücken,' 8vo, Dresden, 1849; a System of Biblical Psychology, 'System der biblischen Psychologie,' 8vo, Leipzig, 1855, second edition, 1861, English translation, in 'Clark's Foreign Theological Library,' 8vo, Edinburgh, 1867; Discoveries in Manuscripts, 'Handschriftliche Funde,' &c., 8vo, Leipzig, vol. i., 1861, vol. ii., 1862; For and against Kahnis, &c., 'Für und wider Kahnis. Kritik der Dogmatik von Kahnis mit Bezug auf dessen Vertheidigungsschrift,' 8vo, Leipzig, 1863; and a treatise on the Relation of Government and Labour in the time of Christ, a Contribution to the Contemporary History of the New Testament, being the substance of five Lectures delivered at the Leipzig Young Men's Association, in the winter of 1867—68, and published with the title of 'Handwerkerleben zur Zeit Jesu. Ein Beitrag zur neutestamentlichen Zeitgeschichte,' 8vo, Erlangen, 1868.

But it is as a biblical scholar, critic, and commentator that Dr. Delitzsch is most widely known; and in this department, besides the works to which allusion has already been made, may be mentioned his 'De Habacuci Prophetæ Vita atque Ætate, Commentatio historico-isagogica, cum Diatriba de Pseudodorothei et Pseudepiphani Vitis Prophetarum,' 8vo, Leipzig, 1842; 'Symbolæ ad Psalmos illustrandos isagogicæ, Dissertitur I. de Psalmorum indole partim Jehovica partim Elohimica; II. de Psalmorum Ordine ejusque Causis ac Legibus,' 8vo, Leipzig, 1846; New Researches into the History of the Canonical Gospels,

'Neue Untersuchungen über Entstehung und Anlage der Kanonischen Evangelien,' 8vo, Leipzig, 1853, &c.; Commentaries upon Solomon's Song, 'Das Hohelied untersucht und ausgelegt,' 8vo, Leipzig, 1851; on Genesis, 'Die Genesis ausgelegt,' 8vo, Leipzig, 1852, third edition, 1860; on Hebrews, 'Commentar zum Briefe an die Hebräer,' &c., 8vo, Leipzig, 1857; English translation, in 'Clark's Foreign Theological Library,' 8vo, Edinburgh, vol. i. 1868. In 1861 Dr. Delitzsch joined with Dr. Carl Friedrich Keil, Professor of Exegesis in the University of Dorpat, to publish a voluminous 'Biblicher Commentar über das Alte Testament,' of which the first Part, 'Biblicher Commentar über die Bücher Mose's,' was published in 2 vols, 8vo, Leipzig, 1861—1862, and translated into English, for 'Clark's Foreign Theological Library,' in 3 vols, 8vo, Edinburgh, 1864—65; second Part, 'Biblicher Commentar über die prophetischen Geschichtsbücher, &c.,' in 2 vols, 1863—64; and a third Part, 'Biblicher Commentar über die poetischen Bücher, 1864, &c.; English translation of the last two Parts, for 'Clark's Foreign Theological Library,' 4 vols, 8vo, Edinburgh, 1865—67. Of the foregoing, Dr. Delitzsch is especially responsible for the Commentary on the poetical books; and it may be of interest to remark that he, as a commentator on Genesis, and an associate commentator on the Pentateuch, refers, with slight reservation as to the manifest continuation, the authorship of the Five Books to Moses, upon whose Law was based the whole of the Ecclesiastical polity, of the social and national life, and of the poetical and literary activity of the Jews. The Old Testament is the basis of the New; and the fact that the Pentateuch was the production of Moses, is insisted upon in order to ascertain the identity of the divine government, and the continuity of purpose in the several Covenants.

DEMESTE, JEAN, was born in 1743, and died in 1783. He was a military surgeon in the service of the Prince of Liège. He cultivated chemistry and the kindred sciences, but his notions were as fanciful as those of the alchemists. A work by him, once popular, is entitled 'Lettres du Docteur Bernard sur la Chimie, la Docimasie, la Crystallographie, la Lithologie, la Minéralogie et la Physique en général,' 2 vols, 12mo, Paris, 1779. A German translation appeared in 1784. Mineralogy is indebted to Demeste for first distinctly pointing out the value of the truncation of the angles and edges of crystals in showing the derivation of new forms, and he is said to have introduced the term.

* DEMETZ, FRÉDÉRIC AUGUSTE, originator of the Mettray reformatory system, was born on the 12th of May, 1796; studied law, and was admitted member of the bar of Paris. In 1821 he was nominated juge-suppléant of the tribunal; then juge d'instruction; afterwards vice-president of the Chamber of Correctional Police; and, in 1832, Conseiller à la Cour. In 1836 he went to the United States to study the penitentiary system there adopted. His American inquiries respecting juvenile crime produced a powerful impression, which was deepened by the investigations and experience of the following years. He at length convinced himself that though punishment was inefficacious to deter the juvenile criminal, it might be possible by judicious treatment to reform him, and he resolved to devote himself to the attempt. Aided by a former colleague, M. Bretignières de Courtelles, he founded at Mettray an Agricultural and Penitentiary College, the purpose of which was to reclaim, by special education, young offenders who had not yet become steeped in vice, and who, under the usual system, would have been imprisoned with older and hardened offenders. Demetz believed that the only chance of reclamation lay in a separation of the two classes, thereby removing the vitiating influence of the more desperate criminals. He also organised a society of foremen or managers of trades, to teach the inmates of the reformatory. With the countenance and sanction of the judicial authorities, he gradually brought the system into excellent working order, and the results have been most satisfactory. Other colonies on the same plan were established elsewhere; and there were combined with them correctional schools for children of the higher classes viciously inclined but not actually criminal. Demetz's scheme was described by himself in 'Société Paternelle; fondation d'une Colonie Agricole de jeunes détenues à Mettray: Statutes Constitutifs de la Société,' 8vo, Paris, 1839; and he has drawn up a series of annual Reports on the progress and actual condition of the establishment at Mettray. In England his system has been described in 'A Collection of Papers on Reformatories,' edited by Mr. Jelinger Symons, 8vo, London, 1855, and is noticed in the Reports, &c., of the Rev. Sydney Turner. The system of M. Demetz has been taken as the model for most of the reforma-

tories established in this country; and when he came to England in 1855 to visit these institutions, he was received with a respectful regard which he warmly appreciated. M. Demetz is a corresponding member of the Academy of Moral and Political Sciences.

DE QUINCEY, THOMAS [E. C. vol. ii. col. 567]. Mr. De Quincey died on the 8th of December, 1859.

DERBY, EDWARD GEOFFREY SMITH STANLEY, EARL OF [E. C. vol. ii. col. 568]. In February, 1858, on the resignation of Lord Palmerston, the Earl of Derby found himself for the second time in the position of First Lord of the Treasury, and his cabinet, amongst other difficulties, had to face the question of parliamentary reform, which had been left unsettled by the two preceding administrations. The measure submitted by Mr. Disraeli to the House of Commons did not recommend itself to the adoption of the legislature. Hereupon an appeal was made to the country; and as the results of the general election did not leave the ministry a working majority, in obedience to a vote of want of confidence, Lord Derby resigned office in June, 1859. Some real service, however, was effected during his short-lived administration, which, in the face of considerable resistance, succeeded in carrying the India Bill, by which the government of that vast dependency was transferred from the East India Company to the Sovereign. Whatever the ostensible reason of the defeat of Lord Derby's cabinet, it was felt that the true one lay in the complication of foreign affairs, which seemed to the popular mind to demand the direct presidency of Viscount Palmerston, whose party, under his leadership, and, after his death, under that of Lord Russell, swayed for the next seven years the destinies of the nation.

Freed from the cares of office, the Earl of Derby recurred during this interval to the studies of his youth, in which also he found relief from the attacks of that disease to which he finally succumbed. Whilst at Oxford he had gained, in 1819, the Chancellor's Prize for Latin verse by his poem on 'Syracuse'; and he now caused to be privately circulated—"not published," as the title-page expressly averred—his 'Translations of Poems, Ancient and Modern,' 8vo, London, 1862, a volume in which the poets of Greece, Rome, France, Italy, and Germany, were represented, and which included thirteen English versions of the 'Odes' of Horace, and the translation of the first Book of the 'Iliad'—the first instalment of his greatest work in this department. The volume was so well received that its author, who was sensitively alive to the verdict of friendly criticism, was encouraged to proceed in his translation of Homer, which at length appeared, with a dedication to the Prince of Wales, under the title of 'The Iliad of Homer, rendered into English Blank Verse,' 2 vols. 8vo, London, 1864, fifth edition, 1865, sixth edition, incorporating the 'Translations' already mentioned, 2 vols. sm. 8vo, London, 1867. The 'Iliad,' which, without claiming to supersede all other translations, vindicated the scholarly reputation of the author, called forth a number of imitators, and even attracted the critical attention of foreign students; and, amongst others, that of Dr. Wilhelm Henkel, who published a comparative review of the English translators of the Homeric poems from the time of Chapman, which he entitled 'Ilias und Odyssee und ihre Uebersetzer in England, von Chapman bis auf Lord Derby,' 8vo, Hersfeld, 1867. The profits of the translation of the 'Iliad,' which were considerable, were devoted to founding a scholarship at Wellington College. It was also during the lull of political strife that the cotton famine in Lancashire, consequent upon the Civil War in America, called forth one of the most amiable and admirable manifestations of Lord Derby's character. So long as his activity could be beneficial, he, as the head of Lancashire society, acted as chairman of the Central Relief Fund, for which he worked so strenuously, and to which he contributed so munificently—at once heading the list of contributions with a donation of 10,000*l.*—that to his providence, and delicate and kindly feeling, more than one generation of operatives will have to confess themselves indebted. A single literary souvenir of this disastrous epoch may be mentioned:—'Speech of the Right Honourable the Earl of Derby, K.G., at the County Meeting held in the Town Hall, Manchester, on Tuesday, December 2nd, 1862, in aid of the Relief Fund,' 8vo, Manchester, 1862.

In the summer of 1866 the Earl of Derby, somewhat reluctantly, set himself for the third time to conduct an administration; for the security and permanence of which it was necessary that his party should outbid the Whigs upon the question of parliamentary reform, now more violently agitated than it had been since his advocacy of the first Reform Bill in 1832. He communicated with his colleague, Mr. Disraeli, upon

whom the "education" of the Tories more particularly devolved, his wish for such a settlement of the question as should remove it from the arena of political and party warfare, and advised that a Reform Bill should be introduced, in which the franchise should be given to the working classes "with no niggard hand." In the House of Commons the conduct of the measure of 1867, which resulted in an Act establishing household suffrage, was of course undertaken by Mr. Disraeli; but Lord Derby was unable to further its passage through the House of Lords except by such advice as he could give from his sick chamber whilst prostrate under a more than usually severe and protracted attack of his old enemy, the gout. The responsibilities of office, with his advancing age, pressed upon him with such intensity as to aggravate his disease and to retard his recovery. Accordingly, in February, 1868, he resigned the Premiership, with a recommendation, acted upon by her Majesty, that the office should be conferred on Mr. Disraeli. Yet he did not cease to take an interest in public affairs; and he was frequently in his place in the House of Lords, to speak and to vote for the measures of the Disraeli administration, and afterwards to oppose those of its successors. The last parliamentary speech he delivered was against the second reading of Mr. Gladstone's Bill for the Disestablishment of the Irish Church. Lord Derby died at Knowsley, at 7 o'clock in the morning, on Saturday, the 23rd of October, 1869; and on the 29th of that month his remains were quietly interred in a new family vault in Knowsley Church.

* DERBY, EDWARD HENRY SMITH STANLEY, EARL OF, whose political reputation has been chiefly gained under the title of Lord Stanley, succeeded his father, as fifteenth Earl of Derby, on the 23rd of October, 1869. He was born at Knowsley on the 21st of July, 1826, and was educated at Rugby and at Trinity College, Cambridge, where he graduated in classical honours in 1849. In March of the same year he was an unsuccessful candidate for the representation of Lancaster; whereupon he paid a visit to Canada and the United States of America, making himself acquainted also with the condition of the English West India Islands, upon the claims and resources of which he delivered a remarkable speech in the House of Commons in 1850. In 1849, whilst still prosecuting his Transatlantic tour, he was elected M.P. for King's Lynn, of which borough, after continuously representing it in Parliament for twenty years, he accepted the high stewardship a few months after his call to the House of Peers. Whilst absent on a visit to India he was nominated to the Under-Secretaryship for Foreign Affairs, in his father's first brief administration in 1852. After the fall of the administration in December of that year, he continued out of office until the second accession of his father to power, when he acted under him as Secretary of State for the Colonies from February to May, 1858, and from the latter month to June, 1859, as Secretary of State for India, in the administration of which he had in 1853 projected important reforms. During the Conservative administrations of 1866—68 he held office as Secretary of State for Foreign Affairs, and won great applause for his skilful manipulation of the Luxembourg difficulty between France and Prussia. He has earned the reputation of being amongst the most judicious and progressive members of his party, and his actions and character have been of such a nature as to command the confidence and esteem of all classes. As a Parliamentary committee-man, and as a member of several important Royal Commissions, he has done good service; and his speeches in the House of Commons have from the first commanded respect and consideration for their ability, judgment, and purity of principle. Some of these have been published; amongst others, one, delivered February 21st, 1856, in favour of opening the British Museum and other national institutions on Sunday afternoon, and circulated by the "National Sunday League," 8vo, London, 1856; and another, delivered on the 13th of February, 1859, 'On the Financial Resources of India,' 8vo, London and Bombay, 1859. Lord Stanley was an advocate for the admission of Jews to Parliament; an opponent of Church rates; and an active promoter of popular libraries and institutes, and of technical and general education. It has been mentioned that on the death of his father in October, 1869, he succeeded to the Earldom of Derby. On the 5th of July, 1870, he was married in the Chapel Royal, St. James's, to Mary Catherine, Dowager Marchioness of Salisbury; and two days after accepted the high stewardship of King's Lynn, an appointment which was intended by the corporation as an integral part of their congratulations upon that event. On the 24th of August, 1870, Lord Derby laid the foundation-stone of a hospital for the new

borough of Bootle, near Liverpool, the site of which he had presented to the corporation. In the course of his speech, he advocated the claims of medical charities and sanitary reform, and especially insisted that, by a wider and more minute attention to the latter, the former might be rendered less necessary. "Now you have got your hospital," he said, "the next thing to try for is that it shall have nothing to do."

DERMODY, THOMAS, whose life parallels that of Chatterton in genius and misery, was born on the 17th of January, 1775, at Ennis, county Clare, Ireland. From his father, a schoolmaster of some ability, but of reckless habits, he received so good an education that when eight years old he was able to render efficient service in the school in teaching Greek and Latin. At ten years of age he is said to have written several short poems, made some spirited translations from Horace and Virgil, and familiarised himself with the masterpieces of English literature. In this there is probably some exaggeration, but he no doubt already exhibited remarkable precocity of will as well as of talent. With only 2s. in his pocket he quitted his father's house (1785), and made his way across the country to Dublin. There he led a strange, vagrant life, finding casual employment, but for the most part roving about the streets in extreme indigence. He was, however, taken notice of successively by a number of friendly persons, who tried in vain to render him assistance, the most persistent in these kindly efforts being Mr. Owenson, the father of Lady Morgan, who, among other kind acts, introduced him to Dr. Young, Fellow of Trinity College (and afterwards Bishop of Dromore), who made arrangements for placing him at college, which were frustrated by his boyish petulance. Even then Mr. Owenson would not give him up, but induced a Mr. Austin to receive him into his establishment, and publish some of his poetry, in the hope of raising a fund in his behalf. Here, however, he disgraced himself, and was dismissed, and again took to his wild course of life, subsisting on the bounty of friends and the uncertain profits of literary contributions to the newspapers. He was now brought under the notice of the Marchioness of Moira, who placed him under Mr. Boyd, the translator of Dante, with a view to prepare him for the University. This time it seemed as though their friendly efforts would succeed. The Attorney-General Wolfe (afterwards Lord Kilwarden) engaged rooms for him at Trinity College, undertook to defray his charges there, and to allow him 30*l.* a year for his personal expenses. But Dermody, now in his 18th year, refused to compromise his independence, broke away from all control, and, entering on a course of reckless dissipation, was soon reduced to the most abject poverty. Occasional papers for the journals saved him from starvation, though he was compelled once and again to sell his clothes to purchase a meal; yet during this wretched period he wrote some of his best pieces, both in prose and verse; of the former class being his pamphlet, occasioned by the French revolution, entitled 'The Rights of Justice; or, Rational Liberty,' 8vo, 1793, at the end of which he added a poem, styled 'Reform.' At length, his resources utterly exhausted, he enlisted in the 108th regiment, and embarked with it for England in September, 1794. In this situation his conduct was unexpectedly good. He was made corporal and sergeant, and on the regiment leaving England, he was, through the interest of Lord Moira, promoted to be second-lieutenant. In Flanders he was wounded, and on his return to England was put on half-pay. Settled in London he again gave way to dissipation; all efforts to reclaim him proved fruitless; a trifling pension from the Literary Fund served only to eke out his existence, and at length, overwhelmed with disease and poverty, he died in a miserable lodging at Perry Slough, Sydenham, on the 15th of July, 1802, and was buried in Lewisham Churchyard. Dermody published a small volume of poems in 1800, and a second in 1801. In 1806 appeared 'A Life of Thomas Dermody, with Specimens of his Writings, by J. G. Raymond,' 2 vols. 8vo, with portrait; and in 1807 'The Harp of Erin; or, the Poetical Works of the late Thomas Dermody,' 2 vols. 8vo.

DESAULT, PIERRE JOSEPH, a distinguished French surgeon and anatomist, was born at Magny-Vernais, in the department of Haute Saône, in 1744. His early education was under the Jesuits; his medical training was completed at the military hospital of Belfort, and the great hospitals of Paris. M. Desault was the first to combine surgery and anatomy in the same course of study, insisting on the importance of correct anatomical knowledge to the due performance of surgical operations. A famous operation of his upon a broken clavicle was described by his greatest pupil, Bichat, in the 'Magasin Encyclopédique.' In 1776 Desault was chosen a member of the French College of Sur-

gery; soon afterwards a member of the Academy; in 1782, surgeon-in-chief to La Charité; and in 1788, surgeon-in-chief to the Hôtel Dieu. He was repeatedly inventing new modes of procedure, and new surgical apparatus; and created a great school of clinical surgery. In 1792 he was a member of the Health Committee of the army. Although arrested as a suspected person by the Jacobins in the following year, he was soon liberated; and in 1794 was appointed Professor of Clinical Surgery at the newly-appointed École de Santé. His health rapidly declined after attendance upon the hapless son of Louis XVI. in the Temple, and he died on the 1st of June, 1795. Desault wrote little; the works bearing his name were written from his notes, by his friends or pupils. His glory is to have been the founder of the French school of clinical surgery.

DESCAMPS, JEAN BAPTISTE, French artist, and writer on art, was born at Dunkerque in 1714. He learnt the principles of design from his uncle, Louis Coyvel, and completed his artistic training at Paris, where for a time he practised painting. He then removed to Rouen, where he founded a school of art, which, proving successful, was made a public academy, with Descamps for director. He was a good teacher, but a mediocre painter, and is now remembered only as the author of 'Les Vies des Peintres Flamands, Allemandes, et Hollandais,' 4 vols. with portraits, 8vo, Paris, 1753—83, long a leading authority on the first of these schools, but which recent research has shown to be too inaccurate to be trusted to alone. Descamps wrote a sort of supplement to this work, and which is frequently bound with it as a fifth volume, 'Voyage Pittoresque de la Flandre et du Brabant,' 8vo, 1769; also 'Sur l'utilité des établissements d'écoles gratuites de dessin en faveur des métiers,' 8vo, 1767. He died at Rouen in 1791.

DESFONTAINES, RENÉ LOUCHE, French botanist, was born in 1751 or 1752, at Tremblay, department of Ile et Vilaine, and was educated at the College of Rennes. In 1783 he travelled in North Africa under the auspices of the Academy of Sciences. He spent two years in collecting plants, animals, and everything bearing upon the natural history of the countries he visited. On returning to France in 1785 he was appointed professor of botany at the Jardin des Plantes in succession to Lemonnier. In his old age he lost his sight, but he still continued his botanical studies, and learned to recognise plants by means of his touch. He died November 16, 1833. He wrote a few papers on zoology, but the greater number of his literary productions relate to plants. His botanical papers are largely taken up with descriptions of new forms. One of the most important was a 'Mémoire sur l'organisation des Monocotyledones, ou plantes à une feuille séminale,' in 'Mémoires de l'Institut,' tome i. pp. 478—502 (1797—1798), which contained many original views. His most important separate work is 'Flora Atlantica, sive historia plantarum quæ in Atlantæ agro Tunetano Algerienai crescunt,' 2 vols. 4to, 1798, with 260 plates. He also wrote a work on the trees and shrubs suitable for cultivation near Paris, catalogues of the plants in the Jardin des Plantes, and other Parisian gardens, and a few other books of less importance.

* DESHAYES, GÉRARD PAUL, French naturalist, was born at Nancy, May 13, 1795. He was educated at Strasbourg, and in 1819 he went to Paris. He is a professor in the Museum of Natural History, and has been president of the Geological Society of France. He has given especial attention to mollusca, both living and extinct, and has written several elaborate and costly works illustrative of their form and structure. He is one of the first living authorities on the tertiary shells of Europe, but especially of France. He wrote the portion of G. Cuvier's 'Règne Animale' which relates to molluscs, and continued the great work of Férussac's on the same group of organisms. The great labour of his life has been the account of the fossil shells of the Paris basin, which is embodied in two works, entitled 'Description des coquillages fossiles des environs de Paris,' 3 vols. 4to, 1824—1837, Paris; and 'Description des animaux sans vertèbres découverts dans le bassin de Paris,' 3 vols. 4to, bound in five, 1856—65. The last mentioned deals only with shells, and is illustrated with 196 plates. He has also written a 'Traité élémentaire de Conchologie,' 3 vols. 8vo, with an 8vo atlas of 130 plates, 1834—1858, an unfinished work; 'Conchologie de l'île de la Réunion,' 8vo, 1863, pp. 144, Paris; a few other works; and upwards of 70 papers in scientific journals, amongst which may be mentioned his 'Anatomie et Monographie du genre Dentale,' in the 'Memoirs of the Nat. Hist. Soc. of Paris,' vol. ii. pp. 321—378 (1825).

DESLONGCHAMPS, JACQUES AMAND EUDES, was

born at Caen, Normandy, January 17, 1794. His parents were poor, but they spared no efforts in order to ensure a liberal education for their son. He attended the scholastic institutions of his native town. In 1812 he was compelled to join the navy, and was appointed an assistant-surgeon in the frigate 'La Gloire.' In 1815 he became the surgeon-assistant-major in the military hospital at Caen. Soon after this he left the navy, obtained a degree of surgery at Paris, and returned to Caen in 1822, when he was elected surgeon to the Board of Relief of that town. During his stay at Paris Cuvier was prosecuting his remarkable researches amongst the mammalian bones of the Montmartre gypsum quarries. Deslongchamps was so interested in them that he began to explore the quarries around Caen as soon as he returned to that town. He found abundance of fossil remains, and amongst others a fine specimen of *Teleosaurus Cadornensis*. This led to his devoting much time to comparative anatomy, and to palaeontology. His numerous papers on the crocodile-like forms of the secondary period are evidence of his eminence in both these branches of science. These researches brought him into connection with Cuvier, Geoffroy St. Hilaire, Humboldt, and other eminent men, with whom he became intimate. He studied corals in company with Lamouroux, wrote articles in the 'Encyclopédie Méthodique' and 'Dictionnaire des Sciences Naturelles,' assisted in founding the Natural History Museum of Caen, and the Linnean Society of Normandy, and contributed most of his papers, which are upwards of 100 in number, to the 'Mémoires' of the Society just mentioned. In 1825 he succeeded Lamouroux as professor of zoology at Caen, and in 1847 was appointed Dean of the Faculty of Sciences. He was a member of numerous learned societies. He died January 17, 1867. His most important papers are those on the oolitic Teleosaurians. In 1863 he published 'Mémoires sur les teleosauriens de l'époque Jurassique du département de Calvados: Première Mémoire.' His last days were spent in finishing the work. His other papers relate to the molluscan, crustacean, and mammalian remains found in the strata around Caen, and to numerous monstrous forms observed by him in plants and animals. His son,

* EUGÈNE-EUDES DESLONGCHAMPS, succeeded his father as professor of zoology at Caen, and has written numerous papers on the geology and palaeontology of his native department.

DESNOYERS, AUGUSTE GASPARD LOUIS BOUCHER, BARON. [E. C. vol. ii. col. 576.] The Baron Desnoyers had ceased to use his graver when the above memoir was written; but it should have been mentioned that his latest labour was a literary one, 'Appendice à L'Histoire de la Vie et des Ouvrages de Raphaël, de M. Quatremère de Quincy,' 4to, with plates, Paris, 1852, to which he afterwards added a supplement. M. Desnoyers died at Paris on the 15th of February, 1857, aged 78.

* DESNOYERS, JULES PIERRE FRANÇOIS STANISLAS, historian and geologist, was born at Nogent-le-Rotrou, October 8, 1800. In 1825 he became the secretary of the Société d'Histoire Naturelle de Paris; in 1830 the secretary to the Geological Society of France; in 1833 an assistant palaeontologist in the Museum d'Histoire Naturelle; and in 1834 librarian to the last-mentioned establishment. He has been the secretary of the Historical Society of France from its foundation, and has served on the committee appointed by government to publish the national historical documents. His historical writings include a 'Histoire du décroissement et de la destruction totale du paganisme dans les provinces de l'empire d'Occident,' 1832; a 'Histoire des différentes incursions des Arabes d'Asie et d'Afrique en Italie, et dans les îles qui en dépendent,' 1838; 'Bibliographie historique et archéologique de la France,' 1834; 'Indication des principaux ouvrages propres à faciliter les travaux relatifs à l'histoire de France,' 1837; and several other papers, all of which have appeared in the publications of one or other of the historical associations with which he is connected. His geological papers relate to the secondary, tertiary, and post-tertiary deposits of various parts of France. He has given considerable attention to the phenomena presented by caves and their contents, more especially as they bear upon the antiquity of man. In 1863 he discovered some bones of *Rhinoceros leptorhinus*, *Elephas meridionalis*, and several other mammalia, on which were marks analogous to those which are producible by flint implements. The deposit in which the bones were found is assigned to the pliocene period; and the evidence is considered to demonstrate that man co-existed with the animals mentioned in this period. If the conclusion is correct, this is one of the earliest records we possess of man in Europe. But the conclusion has been contested, on the ground that such markings may have been produced by rodents, some of the living species of

which groove, striate, chip and dent bones so as to impress markings on them very much resembling those observed by Desnoyers.

* DESOR, EDOUARD, geologist, was born at Friedrichsdorf, near Frankfurt-am-Main, in 1811. In 1832 he went to Paris, and had his attention directed to geology and physical geography by the perusal of Ritter's 'Erdkunde,' vol. i., and by the perception of Prévost, Elie de Beaumont, and others. During a visit to a meeting of naturalists at Neuchâtel he became acquainted with Vogt and Agassiz. He lived with the former for some months at Berne; and he assisted the latter in the prosecution of his researches, partly by joining him in his field excursions and partly by aiding him in his literary works. In 1846 he visited Scandinavia for the purpose of examining the phenomena of boulders; and in 1847 he followed Agassiz to the United States, but owing to some estrangement their mutual friendship cooled, and Desor worked independently. He was actively engaged in the Coast Survey, in Foster and Whitney's exploration of the Lake Superior district, and in Rogers's survey of Pennsylvania. In 1852 he returned to Neuchâtel, and became professor of zoology there. In 1863-64 he accompanied Escher von der Linth and Martius on a scientific expedition to Algeria. His subjects of study have embraced the glacial phenomena, more especially those of the Alps; the geology of the Alps, France, and parts of America; echinoderms; and the antiquity of man. He contributed to the 'Système Glaciaire,' 8vo, 1847, by Agassiz and himself; and has written numerous papers more or less relating to glaciers. His principal geological productions are 'Der Gebirgsbau der Alpen,' 8vo, Wiesbaden, 1865; 'De l'orographie des Alpes dans ses rapports avec la Géologie' in the Bulletin of the Natural History Society of Neuchâtel, vol. vi. pp. 147-211 (1861-63); and, in conjunction with M. Gressly, 'Étude géologique sur le Jura Neuchâtelois' in the 'Mémoires' of the same society, vol. iv. (1859). His contributions to the literature of echinoderms comprise, amongst other things, a 'Catalogue raisonné des familles, des genres et des espèces de la classe des Echinodermes,' 1847, in which Agassiz was a collaborator; a 'Synopsis des échinides fossiles,' 8vo, 1858, which is a summary of the published information illustrated with figures of most of the species; and, along with P. Lorient, 'Echinologie helvétique. Description des oursins fossiles de la Suisse,' 1868-1869. He has given accounts of his researches on the early history and condition of man as indicated by the lake dwellings of Switzerland, Italy, and Germany, and by various recent deposits. Lastly, he has written several papers on the development of species of annelids and *Hydrotzoa*.

DESPRETZ, CÉSAR MANSUÈTE, a French physicist, was born at Lessines, Hainaut, May 13, 1789. After studying chemistry and physics at Paris, he was appointed by Thénard to the post of répétiteur of his course of lectures on chemistry at l'École Polytechnique. He rose successively to the offices of professor of physics at l'École Polytechnique, the Collège Henri Quatre, and (in 1837) at the Sorbonne. He obtained in 1822 a prize offered by the Academy of Sciences for the best memoir on animal heat. In 1825 appeared his Elementary Treatise on Physics, which has gone through several editions. In 1830 he published his Elements of Theoretical and Practical Chemistry. The 'Annales de Chimie' and the 'Comptes Rendus,' from 1817 to 1858, contain above 40 papers by Despretz on the specific heat of metals, the conductivity of metals, the propagation of heat in liquids, the transmission of heat, the absorption of heat in fusion, the elastic force of vapour, the density and latent heat of vapour, the compressibility of liquids, the density of gases under pressure, the laws of high and low musical notes, freezing points, combustion, expansion, fusion, volatility, decomposition, &c. Despretz succeeded Savart at the Academy of Sciences in 1841, and was elected a foreign member of the Royal Society in 1862. He died on the 15th of March, 1863. The titles of his separate works are 'Recherches Expérimentales sur les Causes de la Chaleur Animale,' 8vo, Paris, 1822; 'Traité Élémentaire de Physique,' 8vo, Paris, 1825; 'Éléments de Chimie théorique et pratique,' 8vo, Paris, 1828-30; 'Des Collèges, de l'Instruction Professionnelle, des Facultés,' 8vo, Paris, 1847. In the course of his chemical experiments Despretz produced minute diamonds by the slow action of an electric current on pure carbon.

* DEUTSCH, EMANUEL, a Hebrew, and especially a Talmudic, scholar, was born in Germany, about the year 1834. Having attracted the attention and confidence of the eminent bookselling firm of Ascher, of Berlin, he was by them recommended to Sir Antonio, then Mr., Panizzi, principal librarian

of the British Museum, through whom he received an appointment in that institution, in which he holds at present the position of an assistant officer in the library department. For some years his knowledge of Hebrew literature was of great practical value, without, however, resulting in any considerable degree of general reputation; but in 1867 he contributed to the 'Quarterly Review' an article which had the extraordinary effect of sending the number in which it appeared through several editions, and which was separately published as 'The Talmud: a Critical Essay,' &c., 12mo, London, 1868; Danish translation, 'Talmud. Efter den Engelske Originals,' 8vo, Copenhagen, 1868; Swedish translation, 'Talmud. Öfversättning från Engelskan. Ur Tidskriften Quarterly Review,' 12mo, Stockholm, first and second editions, 1868. Amongst other results of the discussion which the article provoked in England, may be mentioned an anonymous pamphlet entitled 'The Talmud: being a Reply to a late Article in the "Quarterly Review,"' 12mo, London, 1868, the writer of which charges Mr. Deutsch with high colouring, exaggeration and distortion, and indifference to the dogmas of Christianity, and challenges many of his statements and theories.

Over and above his purely literary activities, Mr. Deutsch has done good service in the East for the Committee of the Palestine Exploration Fund, at whose instance he not only examined the excavations in progress at Jerusalem, but also investigated various places of archaeological and historical interest throughout Phœnicia and Syria, at which researches had already been instituted, or at which it was desirable that they should be commenced. In the report of May, 1869, which he made after his return to London, to the secretary of the Fund, he states his conclusions (1) that the signs cut or painted on the bottom rows of the wall of the south-east corner of the Haram were on the stones when they were first laid in their present places; (2) that they do not represent any inscription; and (3) that they are Phœnician. The original builders of that side of the Temple are thus ascertained to have been of the age of Solomon, and probably the craftsmen of Hiram, king of Tyre. Mr. Deutsch also succeeded in recovering the lost letters of the Maccabean Hebrew alphabet. In June, 1869, he embodied the more general results of his investigations in a course of three lectures on Semitic Culture, at the Royal Institution; in which he surveyed, in its outlines, the intellectual work achieved by the nations conventionally called Shemites, and the influence exercised by them upon the life and thought of the ancient and modern world.

DICK, THOMAS, LL.D. [E. C. vol. ii. col. 583]. Dr. Dick died on the 29th of July, 1857.

DICKENS, CHARLES [E. C. vol. ii. col. 583]. After the completion of 'Little Dorrit,' there was a somewhat longer interval than usual before the publication of another important work. In the spring of 1858 Mr. Dickens commenced in St. Martin's Hall, a series of public readings of selected portions of his writings. The novelty of an author of Mr. Dickens's rank occupying so remarkable a position naturally drew great numbers of curious listeners, but his skill, tact, and dramatic power, and the rare subtilty with which he brought out latent and often unsuspected shades of meaning, or touches of pathos, added a new brilliancy to a humorous thought, or rendered a ludicrous passage more irresistibly comical, soon caused the readings to be eagerly sought for their own sakes, and placed Mr. Dickens as unmistakeably at the head of the public readers, as he had long been of the novelists, of England. About this time occurred the separation of Mr. and Mrs. Dickens, to which it would be unnecessary to refer except on account of the publicity he himself gave to it in 'Household Words,' and which having led to a dissolution of the proprietary caused the discontinuance of that journal.

Mr. Dickens immediately (1859) started a new weekly periodical 'All the Year Round,' and continued to conduct it till his death. In it was published, in the first instance, his 'Tale of Two Cities,' and 'Great Expectations,' which last appeared in 1860 in the old orthodox form of a three volume novel, except 'Oliver Twist,' the only one of Mr. Dickens's stories issued in that shape. In the first Christmas Number of 'All the Year Round' appeared also 'The Haunted House,' and each succeeding year was issued a Christmas Number till 1867, when with the story of 'No Thoroughfare' he abandoned the field to his multitudinous imitators. 'Our Mutual Friend,' in 1864, was a return to the familiar monthly serial and a renewal of former triumphs, though the story hardly retained to the end the old popularity.

In June, 1865, he was a passenger in the train on the South-Eastern Railway which met with a fearful disaster at Staple-

hurst. The carriage in which he was sitting was one of the few, if not the only one, which did not go over the embankment; and he was apparently unhurt and able to render assistance to his fellow-passengers. It has been said that his nervous system received a serious shock, but in the opinion of his medical adviser it left no lasting effect on his system.

Towards the end of 1867 Mr. Dickens made a second visit to America. In anticipation of it a complimentary farewell dinner on the grandest scale was given to him at the Freemasons' Tavern, November the 3rd, 1867. Lord Lytton presided at the feast, and around the tables sat such an assemblage of distinguished authors, artists, and men of science as has very rarely been brought together. He arrived at Boston November the 19th, and met with a reception as brilliant as had been the farewell. During the five months he remained in America he gave readings in most of the principal cities, and his popularity appeared continually to increase. He quitted New York April the 22nd, 1868. The state of his health would have justified withdrawal for awhile from public exertion, if not from quiet literary labour, but the amazing success of his American readings had stimulated public interest here, and there appeared to be a general desire to prove to him that the feelings of his English admirers were as ardent as those of their brethren in America. He continued his readings from his return, but in consequence of symptoms which showed themselves in the spring of 1869, when Mr. Dickens was at Preston, in the course of a country tour, his medical adviser peremptorily stopped all his remaining country readings, and prescribed complete rest. However, in the following spring, the last series of London readings was undertaken. Of themselves and disconnected from the trying railway work incident to a country series, it was hoped they would not be injurious; but whilst giving them he commenced writing 'Edwin Drood,' and there is no doubt that the strain was too severe. On the 5th of March, 1870, he gave his final reading in St. James's Hall. A fortnight later appeared the first monthly part of his last novel, 'The Mystery of Edwin Drood.' In this he had broken comparatively new ground, and the public were following the story with increasing interest when they were startled by the news of the author's death. Whilst at dinner, June the 8th, 1870, at his residence, Gad's Hill Place, Rochester, Kent, he was seized with sudden illness and rose to leave the room, when he fell heavily. He remained unconscious till his death, a few minutes after 6 o'clock on the following evening—the fifth anniversary of the Staplehurst accident.

In his will, completed only a week before his untimely death, Mr. Dickens left emphatic injunctions that he should "be buried in an inexpensive, unostentatious, and strictly private manner," and that "no public announcement be made of the time or place" of his burial; but the national feeling was stirred to its depths by the intelligence of his decease, and the opinion was universal that Westminster Abbey was his most appropriate resting-place; and there, unostentatiously and without public announcement—the few relatives and private friends who accompanied the body, and Dean Stanley, who read the service, being the only witnesses—he was laid in Poets' Corner, alongside of Macaulay, and beneath the shadow of Addison's monument.

In the memoir above cited we have spoken at sufficient length of Mr. Dickens as a writer. The general and almost unexampled expressions of regret with which the intelligence of his death was received in America as much as in England, and almost as strongly in those countries where he was chiefly known through the inadequate medium of translations, were a sufficient testimony to the hold which his writings had obtained on the public. But along with the feeling arising from admiration of the writer, there was evidenced a warmth of personal sympathy with the man beyond what usually exists between an author, however popular, and his readers. Dickens's thorough honesty of purpose in all that he wrote, strong sense of duty, warm-hearted benevolence, breadth of sympathy, and catholicity of spirit, were as heartily recognised and appreciated as his originality of genius, his humour, and his pathos.

The sixth number, not quite completed, of the 'Mystery of Edwin Drood' was left by its author in MS.,—"its last entire page had not been written two hours" before his death—and no notes or clue as "to its conduct or catastrophe" have been found: it remains therefore in all respects a fragment, but a fragment that will possess an interest akin to that of 'Christabel,' or 'The Story of Cambuscan bold.' His other writings, including the 'Christmas Tales' and the 'Uncommercial Traveller,' have been published in a collected form in the 'Illustrated Library Edition,' 26 vols. post 8vo; the 'People's

Edition, 25 vols. 8vo, and, as the final revision, in the 'Charles Dickens Edition,' 18 vols. royal 16mo.

DIDRON, ADOLPHE-NAPOLÉON [E. C. vol. ii. col. 587]. Subsequent to the date of the above memoir M. Didron published 'Iconographie des Chapiteaux du Palais Ducal de Venise,' 4to, Paris, 1857, and 'Manuel des Objets de Bronze et d'Orfèvrerie du Moyen âge,' 8vo, with engravings, 1859. He died at Paris on the 13th of November, 1867, leaving his great work on Christian Iconography incomplete.

* DIETRICH, DAVID NATHANIEL FRIEDRICH, belongs to a family which has supplied botanists for some generations past, and among the living members of which are several cultivators of botanical science. He himself is a botanist of considerable reputation, and is well known for several works of great labour. He was born in 1800, and early in life was appointed to the inspectorship of the botanical garden of Jena. His published works are 'Flora Media,' 8vo, Jena, 1830; 'Flora Universalis,' of which he is the editor, and which commenced in 1831: in 1852 the number of parts published was 392; 'Encyclopädie des Pflanzen,' 1841, &c., illustrated by upwards of 30,000 figures; 'Deutschland's Flora,' 8vo, 1839, &c.; 'Lichenographie Germanici,' 8vo, Jena, 1834-37; and 'Synopsis plantarum seu enumeratio systematica plantarum plerumque adhuc cognitatum cum differentiis specificis et synonymis selectis,' &c., 8vo, Vimar, 1839-52.

DILKE, CHARLES WENTWORTH [E. C. vol. ii. col. 592]. Mr. Dilke died at Alice Holt, near Farnham, on the 10th of August, 1864, in his 75th year. His son, SIR CHARLES WENTWORTH DILKE, Bart., also noticed as above, was born on the 18th of February, 1800. He was educated at Westminster and Trinity Hall, Cambridge, and studied law, but did not practice. He was an active member of several learned societies, but was chiefly known by his connection with the International Exhibitions of 1861 and 1862, of which he was one of the commissioners, and for his services in that capacity he received in January, 1862, the honour of a baronetcy. In July, 1865, he was elected M.P. for Wallingford, but failed in securing re-election in November, 1868. In the spring of 1869 he visited Russia, partly in the hope that the trip might benefit his failing health. The climate, however, proved too severe, and he died suddenly at St. Petersburg, on the 10th of May, 1869. He was succeeded in his honours by his eldest son, * SIR CHARLES WENTWORTH DILKE, Bart., born 1843, who, like his father, entered Trinity Hall, Cambridge, and studied law. He was first in the law tripos, 1865, took the degree of LL.B., and was called to the bar in 1866. In November, 1867, he was elected member for the newly created borough of Chelsea, and was selected to second the address to the Queen at the opening of the new parliament in February, 1870. Under the strange title of 'Greater Britain,' he published (8vo, 1868), the results of observations made during a visit to America and some of our colonial possessions.

DILLENIUS, JOHANN JAKOB [SHERARD, WILLIAM, E. C. vol. v. col. 477].

* DILLMANN, CHRISTIAN FRIEDRICH AUGUST, an eminent German orientalist, was born on the 25th of April, 1823, at Illingen, a village of Württemberg, near the Baden frontier. He was educated at the Gymnasiums of Stuttgart and Schöthal, and at the University of Tübingen, where from 1840 to 1845 he devoted himself to the study of philosophy, theology, and oriental literature, the last of which he prosecuted under Ewald. Afterwards he acted as a parochial lay assistant for some months of 1845 and 1846; and in the latter year commenced a learned and scientific tour, which embraced Paris, London, and Oxford. At each of these cities he extended his knowledge of the oriental languages; and at the last two gave important assistance in the scientific arrangement and cataloguing of the Æthiopian manuscripts. Indeed it is on his labours to restore the Æthiopian language to its place in comparative philology as the fourth principal language of the Semitic family that his reputation chiefly depends. Upon his return to Tübingen in the summer of 1848, he became repetent in the Theological Seminary there; established himself in 1852 as tutor in the Old Testament Exegesis, and the oriental languages; and in the following year was made extraordinary professor. To this period belongs his publication of the Æthiopian version of the Book of Enoch, 'Liber Henoch. Æthiopice ad quinque Codicum fidem editus,' &c., 8vo, Leipzig, 1851, of which a German translation and exposition were given as 'Das Buch Henoch. Uebersetzt und erklärt,' &c., 8vo, Leipzig, 1853. In the autumn of 1854 Dr. Dillmann accepted an extraordinary professorship in the University of Kiel, where he taught the oriental languages,

and became ordinary professor in 1860. In April, 1864, he removed to Giessen, to fill the ordinary professorship of Old Testament Exegesis. One of the academical lectures delivered soon after his new appointment had for its subject the Origin of the Old Testament Religion, and was published with the title of 'Ueber den Ursprung der Alttestamentlichen Religion. Eine akademische Rede,' &c., 8vo, Giessen, 1865.

His other works comprise 'Liber Jubilæorum qui idem a Græcis H. AETHIOP. GENEXIIS inscribitur versione Græca deparditis nunc nonnisi in Geez Lingua conservatus nuper ex Abyssinia in Europam allatus. Æthiopice ad duorum Librorum manuscriptorum fidem primum edidit,' &c., 4to, Göttingen, Kiel, and London, 1859, the issue of which was limited to 200 copies, and a German translation of which, 'Buch der Jubiläen,' &c., had been contributed by Dr. Dillmann to Ewald's 'Jahrbuch der biblischen Wissenschaft,' vols. 2 and 3, 1849-51, in the 5th volume of which, 1853, appeared Dillmann's 'Das Christliche Adambuch des Morgenlandes. Aus dem Æthiopischen mit Bemerkungen, übersetzt,' &c.; 'Veteris Testamenti Æthiopica,' &c., 4to, Leipzig, 1853, &c.; 'Grammatik der Æthiopischen Sprache,' 8vo, Leipzig, 1857; and 'Lexicon Linguae Æthiopicae cum ex opere Ludoliano tum e permultis Libris Manuscriptis et impressis collectum et digestum,' 4to, Leipzig, 1862, &c.

* DISRAELI, THE RIGHT HONOURABLE BENJAMIN [E. C. vol. ii. col. 608]. The Palmerston cabinet fell before the opposition to the Conspiracy to Murder Bill, which appeared to the national jealousy of the time to be too favourable to the French Government; and Lord Derby, in February, 1858, was again summoned to power, and for the second time conferred the Chancellorship of the Exchequer on Mr. Disraeli, who, with that office, resumed the leadership of the House of Commons. At the suggestion of his chief, who wished to carry a substantial measure of electoral reform whilst still the country was free from popular clamour, Mr. Disraeli, in February, 1859, brought forward his elaborate bill, a principal feature of which was to ensure a lateral extension of the franchise, so that the whole body of the educated classes should be admitted to the suffrage without regard to property qualification. The attempt to carry the bill was unsuccessful; and it was finally defeated in the House of Commons on the 31st of March. An appeal to the country followed; the results of which were so little cheering to the Derby administration that they resigned in June, 1859, and for seven years thereafter their party remained in the cold shade of opposition.

Mr. Disraeli is known as an ardent advocate of "that sacred union between Church and State which has hitherto been the chief means of our civilisation, and is the only security of our religious liberties;" and he signalled his long period of opposition by taking a prominent part, both in parliament and elsewhere, in confronting the ecclesiastical legislation of the Liberal party. Five of his speeches on church matters, delivered between the 4th of December, 1860, and the 25th of November, 1864—and two of which were severally issued as a 'Speech,' &c., 12mo, London, 1862, and 'Church Policy: a Speech,' &c., 12mo, London, 1864—were edited, with a preface, by a "Member of the University of Oxford," with the title of 'Church and Queen,' &c., 12mo, London, 1865. The speeches delivered by Mr. Disraeli in the House of Commons in opposition to Mr. Gladstone's Budgets of February, 1860, and April, 1862, were published as strictures on 'Mr. Gladstone's Finance, from his accession to Office in 1853 to his Budget of 1862,' 8vo, London, 1862. To the same period of official vacation belongs the republication, with a dedication to Lord Stanley (now 15th Earl of Derby), and with "purely literary corrections," of the 'Revolutionary Epick,' 12mo, London, 1864, the first small issue of which, in fifty copies, had taken place thirty years before.

The month of July, 1866, found Lord Derby once more in power, with Mr. Disraeli for the third time as his Chancellor of the Exchequer. They resolved to attempt a settlement of the long-agitated question of Reform, which so many administrations had either failed to solve, or else had agreed to shelve. The franchise was to be given to the working classes, in the words of Lord Derby, "with no niggard hand;" but, though he found in Mr. Disraeli a willing coadjutor, their course was seriously retarded and embarrassed by the hesitations, fears, and disapproval of many members of their own party. It was upon Mr. Disraeli that the conciliation and "education" of the malcontents chiefly devolved; and in this process he was so successful that in 1867 the Tories were induced to accept a policy repugnant to their most cherished traditions, and to pass a measure of Radical Reform which made the Parliamentary

Franchise depend on household suffrage. The professed hope of the promoters of this measure was that of penetrating to a stratum of Conservative feeling which was said to underlie the Liberalism of the lower middle classes. The attitude of Mr. Disraeli with regard to Reform throughout the larger proportion of his political career is exhibited in a volume, edited by Mr. Montague Corry, a barrister of Lincoln's Inn, and entitled 'Parliamentary Reform. A Series of Speeches on that Subject delivered in the House of Commons by the Right Hon. B. Disraeli (1848-1866). Reprinted (by permission) from Hansard's Debates,' 8vo, London, 1867. The memorable Speeches at Edinburgh in which Mr. Disraeli claimed to have "educated" his party to the passing of the Reform Bill, and which gave considerable umbrage to some of his adherents, were published "by authority" with the title of 'The Chancellor of the Exchequer in Scotland. Being two Speeches delivered by him in the City of Edinburgh on the 29th and 30th of October, 1867,' 8vo, Edinburgh and London, 1867.

On the retirement of Lord Derby in February, 1868, Mr. Disraeli succeeded him as First Lord of the Treasury; and his short occupancy of power was signalled by the favour which he showed to the Protestantism, and even the Orangeism, of Ireland, when the question of the disestablishment of the church of that country was agitated by Mr. Gladstone, into whose hands the Premiership fell upon the resignation of Mr. Disraeli in December, 1868. On this occasion the latter accepted for his wife a promotion to the peerage of the United Kingdom, with the title of Viscountess Beaconsfield.

As leader of the opposition in the House of Commons, Mr. Disraeli took action against his rival's Bill for the Abolition of the Irish Church Establishment (1869), to which, whilst virtually accepting the disestablishment and disendowment of that Church, he proposed a series of amendments which he soon ceased to defend, and the effect of which, in Mr. Gladstone's calculation, would have been to add one or two millions to the existing endowment of the Church. With reference to the Irish Land Bill, the passing of which was the great work of the Session of 1870, Mr. Disraeli, and some of his adherents, undertook to demonstrate the inconsistency of the Bill with the rights of property, whilst they explicitly or virtually acknowledged the necessity of buying off agrarian disaffection in Ireland. The final adoption of the Bill in its complete form was furthered by the absence of systematic opposition, and more especially by the forbearance of Mr. Disraeli, who, throughout the Session, avoided unnecessary occasions of conflict.

Mr. Disraeli's latest achievement is, as was his first, of a literary nature, being the production of a novel entitled 'Lothair,' 3 vols. 8vo, London, 1870, which has already gone through several editions, and which has circulated by tens of thousands in the United States of America. It is at this present writing, administering to the comfort of the besieged citizens of Paris, in the *feuilleton* columns of the 'Soir'; a translation into Dutch by A. H. Vester is being issued in parts; and it has been rendered into Russian. Mr. Disraeli holds many honourable appointments: being D.L., J.P., and M.P. for the county of Bucks; an honorary D.C.L. of the University of Oxford, and an honorary LL.D. of the University of Edinburgh; a Governor of Wellington College; a Trustee of the British Museum, and of the National Portrait Gallery. He acted as one of the Royal Commissioners of the International Exhibition, in 1851; and in March, 1852, was named a member of the Privy Council.

DOANE, RIGHT REVEREND GEORGE WASHINGTON, D.D., LL.D., an American poet and divine, second bishop of the Protestant Episcopal Church in the diocese of New Jersey, was born at Trenton, in that State, in the year 1799, and educated at Union College, Schenectady, where he graduated in 1818. He was made deacon by Bishop Hobart in 1821, and in 1823 was admitted to priest's orders. From 1821 to 1824 he officiated at Trinity Church, New York; and in the latter year was appointed the first Professor of Belles Lettres and Oratory in Trinity (at that time called Washington) College, at Hartford, Connecticut. He resigned this office in 1828, and became successively assistant minister and rector of Trinity Church, Boston. On the 3rd of October, 1832, he was elected, and on the 31st of the same month, consecrated, Bishop of New Jersey; and from the summer of 1833 conjoined with the oversight of that diocese the rectorship of St. Mary's Church, Burlington, in which city he had his episcopal residence. Here he died on the 27th of April, 1859, and was succeeded by Dr. W. H. Odenheimer.

Dr. Doane's incumbency of the see of New Jersey was marked by an unexampled increase in the number of the parishes, clergy,

and members of his communion; and he is especially known for his zeal in the cause of education. In 1837 he established St. Mary's Hall, a large female boarding-school, beautifully situated on the shore of the Delaware, in which two hundred girls, from every part of America, as well as from other countries, were supplied with a comprehensive education in accordance with the tenets of the Episcopal Church. In 1846 he likewise founded Burlington College, under a charter from the State Legislature. He was frequently involved in theological and ecclesiastical controversies; and his contributions to polemical literature are not inconsiderable. The number of his several publications is extremely large; and they comprise Sermons, Addresses, Lectures, Charges, Pastorals, Orations, and a few small works of a devotional and biographical nature. A collection of his 'Sermons and Charges' was published in 8vo, London, 1842; and one of his sermons, 'The Child Jesus and the Holy Family,' occurs in the Rev. Alexander Watson's 'Sermons for Sundays, Festivals, and Fasts, and other Liturgical Occasions. Contributed by Bishops and other Clergy of the Church,' three series, in five volumes, 8vo, London, 1845-47. As a poet, Dr. Doane is favourably known for his 'Songs by the Way, chiefly Devotional; with Translations and Imitations,' 8vo, New York, 1824. He has also acted as the American editor of Keble's 'Christian Year.'

DÖDERLEIN, JOHANN LUDWIG CHRISTOPH WILHELM, VON, a distinguished German philologist, son of Professor Johann Christoph Döderlein, a theologian and biblical critic, was born at Jena, on the 19th of December, 1791, and received his early education at Windsheim and Schulpforte. Afterwards he prosecuted his philological studies successively at Munich, at Heidelberg, at Erlangen (where he graduated), and at Berlin. In 1815 he was appointed to the ordinary professorship of philology at the Academy of Berne; and performed the duties of this office until 1819, when he became second professor of philology at the University of Erlangen. In 1827 he was made director of the philological seminary, and died on the 9th of November, 1863.

Döderlein's activity in the department of philology was constant and diversified. He published editions of several of the classical authors, especially of Homer, Horace, and Tacitus; and his other works comprise an important one on Latin Synonyms and Etymologies, 'Lateinische Synonymen und Etymologien,' 6 vols. 8vo, Leipzig, 1826-38; on the Formation of Words in Latin, 'Die lateinische Wortbildung,' 8vo, Leipzig, 1839; Handbook of Latin Synonyms, 'Handbuch der lateinischen Synonymik,' 8vo, Leipzig, 1840, English translation, 8vo, London, 1841; 'Handbuch der lateinischen Etymologie,' 8vo, Leipzig, 1841; Speeches and Essays, &c., 'Reden und Aufsätze. Ein Beitrag zur Gymnasialpädagogik und Philologie,' 2 vols. 8vo, Erlangen, 1843-47; a Glossary of Homer, 'Homerisches Glossarium,' 3 vols. 8vo, Erlangen, 1850-53-58; and Public Lectures, &c., 'Öffentliche Reden, mit einen Anhang pädagogischer und philologischer Beiträge,' 8vo, Frankfurt and Erlangen, 1860.

DOLLFUS. Three members of this family, natives of Mulhouse, or Mülhausen, in Alsace, have risen to distinction. CHARLES ÉMILE DOLLFUS, born on the 10th of April, 1805, was one of four sons of Dollfus-Mieg, a manufacturer who established large cotton and bleaching works at Mulhouse, in 1802. Charles Émile retired early from the business, and entered into political and administrative life. He was one of the founders, and president, of the Industrial Society of Mulhouse, in 1834; mayor of the town in 1843; and elected deputy for the department of Haut Rhin in 1846. He died August 27th, 1858.

* CHARLES DOLLFUS, nephew of Charles Émile, was born 27th of July, 1827. After studying in Switzerland and at Paris, he adopted the profession of the law, and became advocate at Paris and Colmar in 1849-52. He has published the following works: 'Lettres Philosophiques,' 1851; 'Le Calvaire,' 1855; 'Essai sur la Philosophie Sociale,' 1856; 'Révélation et Révélateurs,' 1858; 'Études sur l'Allemagne,' 1864. In conjunction with Neftzer, he established the 'Revue Germanique,' in 1857; and became editor of the 'Revue Moderne,' in 1865; * JEAN DOLLFUS, brother of Charles Émile, and father of Charles, was born on the 25th of September, 1800. In defence of free trade he has published 'Plus de prohibitions sur les fils de Coton: Exposé des Avantages d'une réforme douanière en France pour les Articles de Coton,' 1853; and 'De la levée des prohibitions douanières,' 1860. But he is chiefly known as the founder of the *cités ouvrières*, or workmen's dwellings, in connection with the factory at Mulhouse. When in London in 1861, he took an interest in the model cottages built

by Prince Albert in Hyde Park. On his return home, he obtained plans from M. Muller, a local architect, for dwellings on a new system, and founded the 'Société des Cités Ouvrières,' with a capital of 300,000 francs, of which he himself subscribed to the amount of 175,000 francs. The plan adopted was to build four houses under one roof, separated by substantial walls, and each house lighted at front and side; each house covers 45 square yards, and has about 144 square yards of garden. The arrangement is considered to be advantageous for free ventilation and garden-economy; but it occupies more space than would usually be devoted to workmens' dwellings in England. Each house, with garden, cellar, &c., cost 3,000 francs, or £120. They are not merely rented to the workmen, but actually sold: 250 or 300 francs are paid down, and the remainder, with the interest, is spread over monthly instalments for fourteen years. If the workman or his family, through unavoidable exigencies, is under the necessity of leaving the place, the Society adopt a plan for repurchase at nearly the price that has been paid. The holdings under the company are not unconditional, even when the purchases are completed; for it is found that the comfort and good management of all are better ensured by some kind of central control. The system is understood to work well, returning to the society a fair interest for the capital expended, and ensuring good and wholesome dwellings for working men and their families. Of 700 houses built by the society down to the year 1866, nearly all were disposed of. M. Dollfus has described the system in 'Note sur les Cités Ouvrières,' 1857, and M. Eugène Veron has treated it more fully in 'Les Institutions Ouvrières de Mulhouse et ses Environs.'

* DÖLLINGER, JOHANN JOSEPH IGNAZ, VON, one of the most distinguished of modern Roman Catholic theologians, was born on the 28th of February, 1799, at Bamberg, an archiepiscopal city of Bavaria. His grandfather had been professor of medicine and physician in ordinary to the Prince-Bishop; and his father, Ignaz Döllinger, achieved a considerable reputation by his skill and his writings in anatomy and physiology. He studied theology at Würzburg and Bamberg; and in the year 1822 was admitted to the priesthood, after which he officiated for a short time as chaplain at Ober-Scheinfeld. In 1823 he became a professor at the ecclesiastical seminary of Aschaffenberg; and a few years after published a treatise on the Doctrine of the Eucharist in the first three centuries, 'Die Lehre von der Eucharistie in den drei ersten Jahrhunderten,' 4to, Mainz, 1826. In the same year he was appointed to an ordinary professorship in the faculty of theology in the new University of Munich, the duties of which office, changing only from the chair of ecclesiastical history to that of dogmatic theology, with an interval of a few months' suspension in the troublous times of 1847—48, he has ever since performed. His academical lectures gravitated chiefly towards ecclesiastical history, to which subject he contributed, as an instalment of what he proposed to be a very extensive work, the first volume of his History of the Christian Church, 'Geschichte der Christlichen Kirche,' 2 parts, 8vo, Landshut and Vienna, 1833—35. Four more volumes which had been announced were never written, but the author, being solicited to compile a smaller history, for more general reading, produced a compendium, 'Lehrbuch der Kirchengeschichte,' 2 vols. 8vo, Regensburg and Landshut, 1836—38, second edition, Regensburg, 1843. In this work the history of the first six centuries is given with extreme brevity; but the history of the Middle Ages, though much compressed, displays even more copious erudition than the account of the earlier period in the larger work. Dr. Cox sought to combine the advantages of both these works in a hybrid translation which he entitled 'A History of the Church,' &c., 4 vols. 8vo, London, 1840—42. In 1838 Dr. Döllinger became a member of the Bavarian Academy of Sciences, and published an elaborate treatise on the History, Character, and Influence of Islamism, 'Muhammed's Religion nach ihrer innern Entwicklung,' &c., 4to, Regensburg, 1838. From 1845 to 1847 Dr. Döllinger represented the University of Munich in the Bavarian Chamber, where he was regarded as one of the leaders of the Ultramontanes. Several of his speeches have been published. Having been elected a deputy to the National Parliament in 1848, he exhibited himself, both in his speeches and writings, as the exponent of the highest Catholic views and the champion of ecclesiastical freedom. Regarding the oppression of the Church as the safeguard of absolutism in the State, and the faults and errors of Catholics as a fruitful source of the divisions and disputes among Christians, he sought to disentangle the essential and true from the accidental and superstitious, to reconcile Protestantism with Rome, and religion

with modern society and progress. In 1847 he was appointed provost of the Royal Monastery of St. Cajetan, and director of the Chapel Royal. He is known as an advocate for the separation of Church and State, and the surrender of the temporal power of the Pope, against whose recent assumption of Infallibility he has been one of the most weighty and most prominent protestors.

Amongst the more important of Dr. Döllinger's works there remain for special mention his learned treatise, which so far continues to be a fragment, on the History of German Lutheranism, entitled the Reformation, its internal Development and its Effects, 'Die Reformation, ihre innere Entwicklung und ihre Wirkungen im Umfange des Lutherischen Bekenntnisses,' 3 vols. 8vo, Regensburg, 1846—48; 'Hippolytus und Kallistus; oder die Römische Kirche in der ersten Hälfte des dritten Jahrhunderts,' &c., 8vo, Regensburg, 1853, a polemical work in which he defended the interests of his church against Gieseler, Baur, Bunsen, Wordsworth, and Lenormant; Paganism and Judaism: an Introduction to the History of Christianity, 'Heidenthum und Judenthum. Vorhalle zur Geschichte des Christenthums,' 8vo, Regensburg, 1857, English translation by Mr. N. Darnell, 'The Gentile and the Jew in the Courts of the Temple,' 2 vols. 8vo, London, 1862; Christianity and the Church in the Period of their Foundation, 'Christenthum und Kirche in der Zeit der Grundlegung,' 8vo, Regensburg, 1860, which, regarded as the author's masterpiece, it is understood he intends to continue down to the present time, and which has been translated into English by Mr. Oxenham, as 'The First Age of Christianity and the Church,' 2 vols. 8vo, London, 1866; 'Kirche und Kirchen, Pabstthum und Kirchenstaat. Historische-politische Betrachtungen,' 8vo, Munich, 1861, English translation, by William Bernard MacCabe, 'The Church and the Churches; or, the Papacy and the Temporal Power. An Historical and Political Review,' 8vo, London, 1862. The authorship or supervision is confidently referred to Dr. Döllinger, of the remarkable book by 'Janus' which was published as a remonstrance in advance of the declaration of papal infallibility, under the title of 'Der Pabst und das Concil,' 8vo, Leipzig, 1869, which was the expansion of an article in the 'Augsburger Allgemeinen Zeitung,' entitled 'Das Concil und die Civita,' and of which an authorised English translation appeared as 'The Pope and the Council,' 8vo, London, 1869, third edition, 1870. Dr. Döllinger is a scholar of extensive culture, and he has published Essays and Lectures on a great variety of subjects, as for example, 'On the Religion of Shakespeare,' a 'Commentary on the Paradise of Dante,' and an academical lecture on 'Error, Doubt, and Truth.' He presided for many years over the 'Historische-politische Blätter,' to which, although not a frequent contributor, he supplied articles on 'The Tractarian Movement,' 'John Huss and the Council of Constance,' and 'The Albigenses;' and to a theological encyclopædia he contributed articles on 'Bossuet,' 'Duns Scotus,' and 'Luther,' the last of which was separately published as 'Luther, eine Skizze,' 8vo, Freiburg, 1848, and in English as 'Luther: a Succinct View of his Life and Writings,' 18mo, London, 1853. Finally it may be mentioned that Dr. Döllinger was the editor of a magnificent work, of which two volumes were published, under the direct patronage of Maximilian II., devoted to the illustration of the Political, Ecclesiastical, and Social History of the last Six Centuries, 'Beiträge zur Politischen, Kirchlichen, und Cultur-Geschichte der Sechs letzten Jahrhunderte,' 8vo, Regensburg, 1862—63.

DONALDSON, JOHN WILLIAM, D.D., was born in the year 1812, and educated successively at the Universities of London and Cambridge, at the latter of which he was entered of Trinity College. He took his B.A. degree as a senior optime, and in first class classical honours, his name occupying the second place on the list in 1834, and proceeded M.A. in 1837. He became fellow and classical lecturer of his college; was made deacon in 1839, and admitted to priest's orders in 1840; and took his B.D. and D.D. degrees respectively in 1844 and 1849. Within five years of his bachelor's degree he produced his 'New Cratylus, or Contributions towards a more accurate Knowledge of the Greek Language,' 8vo, Cambridge and London, 1839; second edition, 8vo, London, 1850; third edition, 'revised throughout and considerably enlarged,' 8vo, London, 1859. In this work he endeavoured, on the one hand, to establish a consistent and intelligible theory of inflected language, considered in its most perfect state, that is, as it appears in the oldest languages of the Indo-Germanic family; and, on the other hand, attempted to place the Greek scholarship of this country on a somewhat higher footing, by rendering the resources of a more

comprehensive philology available for the improvement of the grammar and lexicography of the Greek language, and for the criticism and interpretation of the authors who have written in it. In 1841 Mr. Donaldson was appointed to the head mastership of King Edward's School, Bury St. Edmunds, where he devoted himself for several years to the work of direct education. His 'New Cratylus' was followed by a long and successful series of publications elucidating the genius and literature of the two classical languages. Amongst these may be particularised his 'Complete Greek Grammar' and 'Complete Latin Grammar,' which, as well as the 'Exercises,' &c., that were based upon them, went through several editions; and his 'Varronianus: a critical and historical Introduction to the Ethnography of Ancient Italy, and to the philological Study of the Latin Language,' 8vo, London and Cambridge; third edition, 8vo, Cambridge, 1860. He superintended several editions of 'The Theatre of the Greeks,' a work which owed its origin to the Rev. P. W. Buckham, of St. John's College, Cambridge. To the sixth edition of this work, the third with which his name was connected, and of which the slightly modified title was 'The Theatre of the Greeks, a Series of Papers relating to the History and Criticism of the Greek Drama,' 8vo, London, 1849; seventh edition, 8vo, London and Cambridge, 1860, Dr. Donaldson contributed valuable Notes, and an Introduction in the shape of a 'Treatise on the History and Exhibition of the Greek Drama.'

As the result of his study of the oriental languages, which he incorporated with that of the classical, Dr. Donaldson produced a work in which the freedom of speculation on a biblical question provoked the censure of orthodox critics. This was his celebrated 'Jashar. Fragmenta archetypa carminum Hebraicorum in Masorethico Veteris Testamenti Textu passim tessellata, collegit, ordinavit, restituit, in unum Corpus redegit, Latine exhibuit, Commentario instruxit,' &c., 8vo, London and Berlin, 1854; second edition, "aucta atque emendata," 8vo, London and Edinburgh, 1860. Amongst other opposition, 'Jashar' called forth that of the Rev. John J. S. Perowne, who published 'Remarks on Dr. Donaldson's Book, entitled "Jashar,"' 8vo, London and Cambridge, 1855; to which Dr. Donaldson replied with 'A Brief Exposure of the Rev. John J. S. Perowne, by the editor of "Jashar,"' 8vo, London and Bury St. Edmunds, 1855; and further replies and rejoinders followed on either side.

Not long after this controversy Dr. Donaldson gave up his mastership, and resumed his residence at Cambridge. He acted for some time as classical examiner in the University of London; and was appointed to a like office in his own university for 1861. On the 7th of February, however, he was obliged to resign on account of ill health; and three days subsequently, on the 10th of February, 1861, he died at his mother's house in London, after a four weeks' severe illness, which is believed to have been induced or aggravated by overwork.

Dr. Donaldson superintended editions of 'Pindar' and 'Thucydides;' and produced, in addition to the works already mentioned, a letter to Lord John Russell, on 'Protestant Toleration,' 8vo, London, 1850; 'A Comparative Grammar of the Hebrew Language, for the Use of Classical and Philological Students,' 12mo, London and Cambridge, 1853; 'Classical Scholarship and Classical Learning, considered with especial reference to Competitive Tests and University Teaching, a practical Essay on Liberal Education,' 8vo, Cambridge and London, 1856; an essay on 'English Ethnography,' contributed to the 'Cambridge Essays' for 1856; 'Christian Orthodoxy reconciled with the Conclusions of Modern Biblical Learning, a Theological Essay, with Critical and Controversial Supplements,' 8vo, London and Hertford, 1857; 'On some Points connected with the Medo-Persic Dualism, in reply to Mr. Archdeacon Hardwick,' 8vo, Cambridge, 1859; and a translation of Dr. K. O. Müller's 'History of the Literature of Ancient Greece,' the continuation of which, after the author's death, was supplied by the translator, 3 vols. 8vo, London, 1858.

* DONKIN, WILLIAM FISHBURN, Savilian Professor of Astronomy at Oxford University, was born about 1813. He studied at University College, Oxford, and graduated "double first" in 1836; in 1837 was mathematical scholar, and in 1847 Johnson's scholar. This distinguished academical career was succeeded by one hardly less distinguished as mathematical tutor, and in 1842 he was nominated Savilian professor of astronomy in succession to Prof. G. H. Sacheverell Johnson. As a man of science Professor Donkin is chiefly known by a number of valuable papers on probabilities and subjects connected with the higher mathematics, published in various transactions and

journals, of which the following are the more important:—'An Essay on the Theory of the Combination of Observations,' 1850; 'On Certain Theorems in the Calculus of Observations,' 1850; 'On the Motion of a Rigid System about a Fixed Point,' 1850; 'On the Geometrical Representation of Quaternions,' 1850; 'On Arbogast's Method of Derivations,' 1851; 'On the Geometrical Theory of Rotations,' 1851; 'On certain questions relating to the Theory of Probabilities,' 1851; 'Demonstration of a Theorem of Jacobi relating to Functional Determinations,' 1854; 'On a Class of Differential Equations including those which occur in Symmetrical Problems,' 1854; 'On the Equation of Laplace's Functions,' 1856; 'On an Analogy relating to the Theory of Probabilities, and on the principle of the Method of Least Squares,' 1857; 'On the Analytical Theory of the Attraction of Solids bounded by Surfaces of a Class including the Ellipsoid,' 1859; 'On an Application of a Calculus of Operations to the Transformation of Trigonometric Series,' 1860; 'On the Secular Acceleration of the Moon's Mean Motion,' 1861; 'Note on the Limits of the Expression $(1+\frac{1}{n})^n$, when n is a positive Integer,'

1862. In relation to the government or management of the university, he published 'A Defence of Voting against the Proposition to be submitted to Convocation on February 13th, 1845.'

DORBIGNY, A. D., and C. D. [ORBIGNY, D', E. C. S.]

* DORÉ, PAUL GUSTAVE, a celebrated French painter and the most popular of living designers, was born at Strasbourg, in January, 1832. Sent to Paris at the age of 12 in order to complete his education at the Lycée Charlemagne, he in 1848 became a pupil of M. Albert D'Arnoux, better known as Bertal, illustrator of the 'Journal pour rire,' and other popular works. He first exhibited at the Salon drawings of wild forest scenery, which were followed by genre and poetic pictures and battle-pieces, for one of which, the 'Battle of Inkermann,' 1857, he obtained a "mention," while another, the 'Battle of Alma,' was generally considered the most successful of its year. Since then he has exhibited 'Dante et Virgile traversant le Styx,' 'Paolo et Francesca di Rimini aux Enfers,' and other subjects from the 'Divina Commedia;' an 'Episode du Déluge,' and many more. At this present time (1870) a Doré Gallery is open in London, in which are collected his 'Paolo and Francesca,' 'Christian Martyrs,' 'Triumph of Christianity over Paganism,' 'The Neophyte,' 'The Victor Angels,' 'The Flight into Egypt,' 'The Prairie,' 'Spanish Peasants,' 'Mont Blanc,' and other pictures alike important in scale and subject, and amply sufficient to show the reach of his ambition and the diversity of his power.

Had Gustave Doré been a painter only he would have won a high place by his vivid and daring imagination, decision of style, and the mastery he displays over his materials; at the same time he would have been considered as an eccentric, often careless, sometimes reckless, and at the best, incomplete artist. There is usually much in the design to arrest attention; the figures are vigorously, though not always accurately, drawn and well arranged, the effects of light and shadow, however inexplicable, are always cogent and frequently brilliant; but the whole is flung upon the canvas in the roughest manner. The concentration of unnatural light, the masses of gloom, the coloured haze, and the intensity of atmospheric phenomena—which are becoming more and more the distinctive element of the artist's style—are all suggestive of an artificial and theatrical splendour, of scenic effects studied on the stage and with the aid of the lime light, rather than of the simplicity, grandeur and solemnity of Nature.

But Doré's popularity was not won so much by his pictures as by his wood-cut designs. In this line he commenced working while a mere boy on the 'Journal pour rire,' the 'Journal pour tous,' the 'Musée Français-Anglais,' and other serials, and he has continued to work till now, pouring forth designs with such fabulous fertility that if he had never done anything else it would be a marvel how he could have done so much and so well, and yet, as we have seen, he has painted in addition a large number of important pictures, and executed various etchings and engravings. Fifteen years ago his friend About assured us that Doré had published more than ten thousand engravings; how many he has published since it would need a hardy arithmetician to reckon. Doré's earliest decided successes were made by his grotesque and humorous designs, by such as (passing over those made for the journals) the 'Contes Drolatiques' of Balzac, often irresistibly droll, though not seldom coarse and sometimes brutal, faults of his time and country, from which he has happily since worked himself free; 'Rabelais,' the 'Contes de Perrault,'

and 'Le Roi des Montagnes' of Edward About; and even in his later works he has been least theatrical and truest to his native genius in his grotesque and humorous designs—his 'Don Quixote' being as much superior to his 'Juif Errant,' as that is to the strained and artificial 'Elaine.' In designs where the grand borders on the horrible, M. Doré, however, stands alone; into many of the designs for the Inferno the very soul of Dante seems breathed; and though he has often misread Milton, some of the renderings of the Satanic scenes, such, for example, as 'The Uprising of the Fallen Angels,' are hardly less than sublime. Doré's other principal illustrated works include Taine's 'Voyage aux Pyrénées,' 359 cuts; Saintine's 'Chemins des Ecoliers,' 450 cuts, and 'Mythologie du Rhin,' 200 cuts; Segur's 'Nouveaux Contes de Fées,' 46 cuts; the 'Histoire du Capitaine Castagnette,' 46 cuts; the 'Bible Populaire,' and 'La Legend du Croquemitaine.' Of late M. Doré's pencil has been tasked for works on a larger and costlier scale, such as the splendid editions of the Fables of Fontaine (230 cuts) Chateaubriand's 'Attila,' Dante's 'Hell, Purgatory, and Paradise,' 140 engravings; and, finally, Tennyson's 'Paradise Lost,' and the Bible, designed especially for the English market, for which also he is understood to have been for some time past engaged in preparing a series of sketches illustrative of London life.

* DORN, JOHANNES ALBRECHT BERNHARD, a distinguished German orientalist, was born at Scheuerfeld, in the duchy of Coburg, on the 11th of May, 1805. He was educated at the Universities of Halle and Leipzig, where at first he studied theology, but afterwards directed his more particular attention to Eastern learning. He graduated at Leipzig in 1825; and in the same year produced his 'De Psalterio Æthiopico: assumpto Socio Ed. Fr. Ferd. Beer,' 4to, Leipzig, 1825, which he followed with a treatise on the original affinities of the Persian, Germanic, and Græco-Latin languages, 'Ueber die Verwandtschaft des Persischen, Germanischen, und Griechisch-Lateinischen Sprachstammes,' 8vo, Hamburg, 1827. In 1826 he was appointed Professor of Oriental Languages at the University of Charkow, in the Slobodsk-Ukraine, in Russia, although he did not enter upon his duties until 1829, after having devoted a considerable time to a scientific tour in France and England. It was in the latter country that he published his English version of Neamat Ullah's 'History of the Afghans, translated from the Persian,' 2 parts, 4to, London, 1829—36. After spending six years at Charkow, Dr. Dorn was appointed to the professorship of Asiatic History and Geography in the Oriental Institute of the Foreign Office at St. Petersburg; and in 1843 was promoted to be Principal Librarian of the Imperial Public Library. He became also director of the Asiatic Museum; and a member of the Imperial Academy of Sciences, to the 'Mémoires' of which, 4to, St. Petersburg, Sixth Series, 1840, he contributed his Grammatical Observations on the Afghan Language, 'Grammatische Bemerkungen über das Puschtu, oder die Sprache der Afghanen,' a subject to which he returned in his 'Chrestomathy of the Pushtu or Afghan Language; to which is subjoined a Glossary in Afghan and English,' 4to, St. Petersburg, 1847. His other principal works are his contributions from Mohammedan sources towards the History of the Countries of the South Coast of the Caspian Sea, 'Muhammedische Quellen zur Geschichte der Südlichen Küstenländer des Kaspischen Meeres, herausgegeben erläutert und übersetzt,' &c., 4 vols. 8vo, St. Petersburg, 1850—58; Contributions towards a knowledge of the Languages of Iran, 'Beiträge zur Kenntniss der Iranischen Sprache,' 8vo, St. Petersburg, 1860, &c., in which he had the co-operation of Mirsa Muhammed Schafy. Dr. Dorn's more strictly official labours, as Director of the Asiatic Museum, and Imperial Librarian, are represented by his 'Das Asiatische Museum der Kaiserlichen Akademie der Wissenschaften zu St. Petersburg,' 8vo, St. Petersburg, 1846; his 'Catalogue des Manuscrits et Xylographes Orientaux,' St. Petersburg, 1852; and his 'Catalogue des Ouvrages Arabes, Persans, et Turcs, publiés à Constantinople, en Egypte, et en Perse, qui se trouvent au Musée Asiatique de l'Académie,' which occurs in the 'Bulletin' of the Imperial Academy, 8vo, St. Petersburg, vol. x., 1866.

DOUDART DE LAGRÉE, E. M. L. de J. [LAGRÉE, E. C. S.]

DOUGLAS, GENERAL SIR HOWARD, BART. [E. C. vol. ii. col. 639.] General Sir Howard Douglas died on the 8th of November, 1861, at the ripe age of 85.

DOVE, H. W. [E. C. vol. vi. col. 992.]

DOYLE, JOHN, celebrated as a caricaturist under the pseudonym of H. B., was born at Dublin in 1797. In early manhood he paid much attention to art, and obtained some

success in portraiture and in the representation of horses. His celebrity, however, arose from his caricatures of political personages—mostly single figures drawn slightly in lithography, but in which the likeness and attitude were usually caught with the happiest skill, and any peculiarity in either heightened with a refined pungency that hardly ever failed to produce laughter, and to fasten the special phase of aspect or character indelibly on the memory. Cumberland, Wellington, Peel, Morpeth, and Palmerston are photographed by him with far more mental fidelity than the camera is ever likely to reach. Brougham he mercilessly persecuted, exhibiting the back as well as front view of the many-sided man, and making both alike immortal. Old Glory (Sir Francis Burdett), Hume, Disraeli, Eldon, Lyndhurst, Lord John Russell, and Sir James Graham, the future historian may depend on H. B.'s likenesses of, however much he may distrust, and however little he may learn from, those of Lawrence, Richmond, or Grant. Mr. Doyle lived a quiet, retired life, and died at his residence, Clifton Gardens, January 2, 1868. Mr. Doyle was the father of RICHARD DOYLE, so widely known by his quaint, graceful, and humorous designs. [E. C. vol. ii. col. 640.]

* DOZY, REINHART, a learned Dutch orientalist, descended from a French family who took refuge in Holland upon the revocation of the Edict of Nantes (October 24, 1685), was born at Leyden, on the 21st of February, 1820. He was educated at the university of his native city, where he devoted himself with great ardour to the study of oriental languages and the collection of oriental manuscripts. He took his doctor's degree in 1844, and in 1850 and 1857 respectively was appointed extraordinary and ordinary professor of history in his own university. His literary and professional activity has been chiefly, but not exclusively, directed towards oriental subjects in archaeology, philology, literature, theology, and speculation. His works comprise a 'Dictionnaire détaillé des Noms des Vêtements chez les Arabes,' 4to, Amsterdam, 1845, which was "crowned" and published by the Third Class of the Royal Netherlands Institute; 'Historia Abbadidarum, præmissis Scriptorum Arabum de ea Dynastia locis nunc primum editis,' 2 vols. 4to, Leyden, 1846—52; an edition of the Arab text, with introduction, notes, and glossary in French, of the 'Histoire de l'Afrique et de l'Espagne, intitulée Al-Bayān ʿl-Mogrib, par Ibn-Adhārī (de Maroc), et Fragments de la Chronique d'Arib (de Cordouc). Le tout publié pour la première fois, précédé d'une Introduction et accompagné de Notes et d'un Glossaire,' 2 vols. 8vo, Leyden, 1848—51; 'Recherches sur l'Histoire politique et littéraire de l'Espagne pendant le Moyen Âge,' 8vo, Leyden, first volume, 1849; second edition, entirely re-written, 2 vols. 1860; an Academical Lecture, delivered at Leyden on the 9th of March, 1850, on the Favourable Influence produced by the French Revolutions, since 1789, on the Study of the History of the Middle Ages, 'Over den Gunstigen Invloed, dien de Omwentelingen in Frankrijk, sedert 1789, hebben uitgeoefend op de Studie der Middeleeuwsche Geschiedenis. Redenvoering,' &c., 8vo, Leyden, 1850; 'Histoire des Musulmans d'Espagne, jusqu'à la Conquête de l'Andalousie par les Almoravides (711—1110),' 4 vols. 8vo, Leyden, 1861; a treatise on the Religion of Mohammed, 'Het Islamisme,' 8vo, Haarlem, 1863, one of a series or collection of works on the Principal Religions of the World, 'De Voornaamste Godsdiensten'; the Israelites at Mecca, from the time of David to the 5th century of our era, &c., of which a German translation from the original Dutch, appeared as 'Die Israeliten zu Mekka von Davids Zeit bis ins fünfte Jahrhundert unserer Zeitrechnung. Ein Beitrag zur Alttestamentlichen Kritik und zur Erforschung des Ursprungs des Islams,' 8vo, Leipzig and Haarlem, 1864, the object of which was to show that the ancient sanctuary of Mecca was founded about David's reign by a body of emigrating, or rather expatriated Israelites of the tribe of Simeon—that these established the great festival of Mecca, the origin and meaning of which has hitherto lain in obscurity—and lastly, that in the time of the Babylonish captivity a second colony of Israelites, called by the Arabians "the second Gorchum," sojourners, or strangers, arrived at Mecca. Upon this work was founded another, by Dr. H. Oort, pastor of Santpoort, whose book on 'The Worship of Baalim in Israel; based upon the Work of Dr. R. Dozy, "The Israelites at Mecca,"' was "translated from the Dutch, and enlarged with Notes and Appendices, by the Right Rev. John William Colenso, D.D., Bishop of Natal," 8vo, London, 1865. Amongst the latest of Dr. Dozy's works is an Expository List of the Words which have been adopted into Dutch from various oriental languages, 'Oosterlingen. Verklarende Lyst der Nederlandsche Woorden, die

uit het Arabisch, Hebreeuwsch, Chaldeeuswisch, Perzisch, en Turksch, afkomstig zijn,' 8vo, the Hague, Leyden, and Arnheim, 1867.

* DRAPER, JOHN WILLIAM, physiologist and chemist, was born near Liverpool, May 5, 1811. His father was a Wesleyan Methodist minister, and as such was entitled to have his son educated at the school established by the sect at Woodhouse Grove. On leaving this school young Draper was taught by private tutors, and then went to the London University, now called University College. In 1833 he went to the United States, where some of his relations were already settled, and attended at the University of Pennsylvania, from which he received his M.D. degree in 1836. His thesis was especially noticed by the examiners for its excellence. He was immediately appointed to a professorship at Hampden Sidney College, Virginia, but in 1839 he removed to the University of New York, as professor of chemistry and natural history. In 1841 the Medical College connected with the University was formed, and he was transferred to it; in 1850 he was also appointed professor of physiology, and president of the medical faculty. His writings comprise books and papers, but the latter are for the most part incorporated in the former. They abound in original views, and relate largely to some of the most obscure manifestations of natural forces, such as capillary attraction, the properties of the chemical and heat rays of solar light, and catalysis, or as he calls it, the "action of presence." He has written 'A Treatise on the Forces which Produce the Organisation of Plants,' 4to, New York, 1844; 'Human Physiology, Statical and Dynamical,' 8vo, New York, 2nd ed., 1858; 'History of the Intellectual Development of Europe,' 2 vols. 8vo, London, 1864; and text-books on chemistry and natural history.

DREYSE, JOHANN NIKOLAUS VON, inventor of the needle-gun, was born at Sömmerda, in Prussian Saxony, Nov. 22nd, 1787. After learning the trade of a locksmith, under his father, he went to work at Altenberg, Dresden, and other towns. On his way he stopped at Jena (1806), and visited the field where the great battle had been lost by the Prussians. What he there saw and learned impressed him with the fact that the Prussian muskets must have been miserably inefficient; and from that time he resolved on an attempt to improve the infantry weapon. Going to Paris in 1809, he worked for a time as a locksmith, gunsmith, and coachsmith. After a series of experiments, he was empowered by Colonel Paoli to construct a new breech-loader for the French Government, but the attempt was not successful. Returning to Prussia in 1814, he worked for some years as a gunmaker; and in 1821, in partnership with Kronbiegel, established a factory at Sömmerda for making various articles in iron by the aid of machine-tools, then for the first time introduced into Prussia. Having his thoughts frequently directed to the musket, he patented in 1824 a new percussion action; and in 1828, new contrivances connected with the lock and trigger. The Prussian, Austrian, and Danish Governments tried some of his inventions; but he had to contend against many prejudices, which he could not at that time surmount. In 1829, however, Prince William of Prussia (the present King) began to take an interest in the matter, and Dreyse's success was insured. After severe testing between 1830 and 1833, his inventions were recognised by the Prussian Government; and he made his first complete *zündnadelgewehr*, or *needle-gun*, in 1835, with which a rifleman could load and fire 50 shots in 10 minutes. In 1841 a large factory was established at Sömmerda, and a supply of these rifles gradually manufactured for the infantry of Prussia and other German states. Dreyse continued to make improvements in various parts of the arm, by which it became the effective weapon which so greatly aided Prussia against Denmark in 1864, against Austria in 1866, and against France in 1870. In the needle-gun, a steel needle is so placed that, when pressed by a spring acted on by a trigger, it is driven into the heart of the cartridge, where it explodes a small cap of detonating powder. In the Snider-Enfield, used in the British service, a bolt instead of a needle is employed, to give a blow rather than to make a thrust into the cartridge; but a greater point of difference is in the mode in which the rifle is opened and closed, to insert and fire the cartridge. The French Chassepot rifle is somewhat midway in character between the needle-gun and the Snider; it is lighter, and fires a smaller bullet, but with a greater range than the needle-gun. The comparative aggregate military excellencies of these rifles is still a matter of controversy. M. Dreyse received numerous medals and honorary distinctions for his needle-gun, which he continued to improve as long as he lived. He died at Sömmerda,

BIOG. DIV.—SUP.

December 9th, 1867. Ferdinand Pflug describes the gun in detail in his 'N. von Dreyse und die Geschichte des Preussischen Zündnadelgewehr,' 8vo, Berlin, 1866.

* DROUYN DE LHUYS, EDOUARD [E. C. vol. ii, col. 646]. In 1862 M. Drouyn de Lhuys was re-appointed Minister of Foreign Affairs, in succession to M. Thouvenel, who was understood to have shown too warm a sympathy for the newly created Kingdom of Italy. M. Drouyn de Lhuys announced to the diplomatic agents at the various courts that it was the intention of the Government of the Emperor to further by all means the process of conciliation between the Pope and the King of Italy. He gave a peremptory refusal to the demands of Italy for the withdrawal of the French troops from Rome; yet the great work of his ministry may be said to be the Convention of September 15th, 1864, by which he pledged France to withdraw her troops within two years from the proclamation of Florence as the capital of Italy—an agreement, the breach of which has been fruitful of consequences of ill-omen to France. His other principal measures were the treaty of commerce with Italy, January, 1863; the fruitless efforts made for interference in the quarrel between the Northern and Southern States of America, and the proposals for a European Congress; and the ratification, in May, 1865, of a treaty of commerce with Prussia. When the time arrived for carrying out the terms of the September convention, the Emperor was unwilling to comply, and M. Drouyn de Lhuys resigned, ending thereby, probably, his political career. M. Drouyn de Lhuys received the Grand Cross of the Legion of Honour in 1853; the Grand Cross of SS. Maurizio e Lazzero of Italy, 1863; and the Order of the Black Eagle of Prussia, 1865.

* DUBAN, JACQUES FELIX, an eminent French architect, was born at Paris, October 14, 1797, and was a pupil of M. Debret. In 1823 he won the grand prize of the École des Beaux-Arts, which entitled him to study in Italy, where he remained from 1824 to 1829, devoting his attention to the classical works of antiquity and the renaissance. Various restorations of ancient buildings and original designs exhibited by him after his return to Paris were greatly admired by architects and archaeologists; M. Duban was nominated inspector-general of works to the École des Beaux-Arts, and shortly after the government confided to him the task of completing the Palais des Beaux-Arts, commenced by M. Debret, a work which he carried out on a scale of much greater splendour than his predecessor had contemplated. Other important works executed by him were the restoration of the châteaux of Blois, of Dampierre, and of Gaillon. The government of 1848 appointed him architect of the Louvre, and passed a vote of 2,000,000 francs (80,000*l.*) for its embellishment. During the five years in which he retained this post he restored, or almost rebuilt, the façade of the Louvre fronting the water, the Gallery of Apollo, the Salon Carré, and the Salon des Sept Cheminées. In January, 1854, he was removed from the Louvre, but shortly after appointed inspector-general of public buildings. He received the cross of the Legion of Honour in 1836, and was named officer in 1851. In 1854 he succeeded M. Visconti at the Institute. He is also a member of the commissions for the conservation of historical monuments, and of religious edifices.

DUBOIS, PIERRE, a French writer on horology, was born at Châtelleraut, department of Vienne, December 16th, 1802. He was employed as a watchmaker under Lepaute of Paris; and afterwards devoted much attention to the literature of his trade. He wrote on horology and mechanics in the 'Magazin Pittoresque,' and in 'Le Moyen Âge et la Renaissance'; and tried for a time a new periodical under the title 'La Tribune Chronométrique,' but unsuccessfully. His chief work was 'L'Histoire de l'Horlogerie Ancienne et Moderne,' 4to, Paris, 1849—50; this work was illustrated by 400 wood engravings, and comprised biographical notices of the chief watch and clock makers of Europe. A smaller work was 'Des Fabriques d'Horlogerie de la Suisse et de la France,' 18mo, 1853. He also published descriptions, in the 'Patrie' newspaper, of the horological department in the Paris Exhibition of 1855; and 'Collection Archéologique du Prince Pierre Soltykoff,' 4to, 1858. Dubois died at Paris, October 12th, 1860.

* DUBOSCQ, JULES, born in 1817, served an apprenticeship to a relative, M. Soleil, an optical instrument maker, to whom he went in 1830. Under him he studied the planning and construction of apparatus for the diffraction and polarisation of light. In 1849 he succeeded Soleil in his business, and afterwards invented many new kinds of photogenic apparatus. One was an electric lamp, especially adapted for use in mines. He

I I

was among the first to apply the stereoscope successfully to pairs of photographs. His various instruments won for him the Council Medal of the Great Exhibition of 1851, the first-class medals of the New York Exhibition of 1853 and the Paris Exhibition of 1855, and the Gold Medal of the Société d'Encouragement in 1866. After the International Exhibition of 1862, he was decorated with the legion of honour. At the Paris Exhibition in 1867, Duboseq displayed apparatus for the study of optics. He has contributed to the 'Comptes Rendus' a 'Note sur une régulateur électrique,' 1850; 'Note sur le Collodion sec,' 1850; 'Note sur un Nouveau Compensateur pour la Saccharimètre' (with Soleil), 1850.

DUBUFE, CLAUDE MARIE, a celebrated French painter, born at Paris in 1790, was a pupil of David. He at first painted classical and religious pictures in the manner of his master, but afterwards turned to portraiture, in which he obtained great success. King Louis Philippe and many other distinguished men were among his sitters, but he was most famous as a painter of females, few ladies of the fashionable world of Paris having, it is said, failed to have their charms immortalised by his pencil. To the least attractive he imparted a factitious grace, and the fairest thought her loveliness heightened by his studied sentiment. His semi-nude damsels in the manner of Greuze were also much admired. One of these, 'The Surprise,' is in the National Gallery (No. 457, Vernon Collection), and its shallow meretriciousness attracts every season numerous copyists. M. Claude Dubufe died April 21, 1864. His son

* ENOUD DUBUFE (born about 1818) also enjoys a high reputation as a portrait painter. He was the scholar of his father and of Paul Delaroche. Like his father, he is most celebrated for his female portraits, but has more purity and manliness of style, acquired no doubt in the school of Delaroche. The well-known portrait of Rosa Bonheur, of which a duplicate was in the International Exhibition of 1862, is a good example of his manner.

DU CHAILLU, F. B. [CHAILLU, F. B., Du, E. C. S., col. 365.]

DU CHÂTELET, MARQUISE [CHÂTELET, GABRIELLE ÉMILIE LE TONNELIER DE BRETEUIL, MARQUISE DU, E. C. S., col. 370].

DUCHESNE, JEAN, an eminent French archæologist, the son of a well-known writer on natural history, Professor Antoine Nicolas Duchesne, was born at Versailles on the 28th of December, 1779. Sixty years of his life were spent among the works he has described. In his sixteenth year he was made assistant in the print room of the Bibliothèque Nationale, and in 1839 he rose to be keeper of the collection, which office he retained till his death, March 4, 1855. He published a great number of works, but those of importance are the following:—'Notice des Estampes exposées à la Bibliothèque du Roi, contenant des recherches historiques et critiques sur ces estampes et sur leur auteurs,' &c., 8vo, Paris, 1814, of which a fourth edition was issued in 1855; 'Essai sur les Nielles, gravures des Orfèvres Florentins du quinzième siècle,' 8vo, 1826, a work of great research and value, which must serve as the basis of whatever is written on the subject; 'Voyage d'un Iconographe: revue des principaux Cabinets d'Estampes, Bibliothèques et Musées d'Allemagne, de Hollande et d'Angleterre,' 8vo, 1834; 'Jeux de Cartes tarots du quatorzième au dix-huitième siècle, représentés en cent planches d'après les originaux, avec un précis historique et explicatif,' fol., 1844, a valuable book, but of which the use is circumscribed, only 132 copies having been printed for the Société des Bibliophiles Français. He also wrote the text to the 'Musée de Peinture et de Sculpture, ou recueil des principaux Tableaux, Statues et Bas-reliefs des Collections Publiques et Particulières d'Europe, dessiné et gravé à l'eau forte par Réveil,' 16 vols. 8vo, Paris, 1828—34.

DUCK, STEPHEN, was born at Great Charlton, Wiltshire, about the year 1700. His parents were poor farm labourers, and Stephen was removed early from the village school and put to work in the fields, "lest he should become too fine a gentleman for the family that produced him," the schoolmaster having reported that he learned too fast and too eagerly. He soon forgot what he had learned, but opening manhood brought habits of thoughtfulness, and the sight of some books belonging to an acquaintance who had been in service in London gave him the resolution to master their contents. By the help of a dictionary he and his friend read through 'Paradise Lost' twice, the 'Spectator,' and some other works. Stephen became known as a maker of verses, and his wife vowed that he must have dealings with the devil. Fortunately, or otherwise as some have thought, he was heard of by a young Oxonian named Stanley, who

assisted his studies, encouraged him in his passion for poetizing, and suggested themes for his Muse, among others his own occupation. This led him to write 'The Thresher's Labour,' the best of his verses, and, though now probably never read, with due allowance for the circumstances under which it was written, one of the truest and most pleasing poems of its class in the language. Duck was now taken much notice of; his 'Thresher's Labour' was shown to the Queen, Caroline, wife of George I., who was so pleased with the verses and what she heard of the man, that she sent for him to Windsor, bestowed on him a pension of 30*l.* a-year, made him one of her yeomen-guard, and shortly after appointed him keeper of her library at Richmond Park. Swift saw in this a favourable opportunity to wound the Queen through the sides of the Thresher, as he contemptuously designates him in his bitter verses. Duck's 'Poems on Several Occasions' were published by subscription, 4to, 1736, with a preface and memoir by Joseph Spence, the author of 'Polymetia,' a constant friend and judicious adviser of the author. The list of subscriptions was large, and a fair sum was realised. Duck, a simple-hearted, inoffensive, and pious man, was encouraged to study for the Church, and he appears to have done so most conscientiously. In due time he was ordained, and in January, 1752, instituted to the rectory of Byfleet in Surrey, which his kind friend Spence had used his influence with the Duke of Newcastle to procure for him. Duck is said to have proved an exemplary clergyman, and he was much esteemed as a preacher; but he appears to have become doubtful of his own fitness for the charge, fell into a state of despondency, and drowned himself at Reading, May 30th, 1756. Spence's memoir is the chief authority for the life of Duck, but there is a good deal of incidental information respecting him in the literature of the day, and Southey has introduced a pleasing account of him in his 'Essay on the Lives and Works of our Uneducated Poets,' prefixed to the 'Attempts in Verse' of Thomas Jones, 8vo, 1831.

DUDLEY, DUD, born at Dudley in 1599, was a natural son of the Earl of Dudley, one of eleven children, whose mother was Elizabeth Tomlinson. So little concealment was there of this relationship, that the lady was named in pedigrees and herald's visitations as "the concubine of Lord Dudley." At that time there were 20,000 persons employed within ten miles of Dudley Castle in the manufacture of small articles of iron; but the industry gradually declined, owing to the unwillingness of the Government to permit the use of wood fuel in the furnaces. Dud Dudley, as he grew up to manhood, viewed with regret this decadence, and his thoughts recurred to the thick seams of coal in the neighbourhood. To use his own language, it seemed to him that "God decreed the time when and how the smithies should be supplied, and this island also, with iron; and most especially that this cole and ironstone should give the first and just occasion for the invention of smelting iron with pit cole." Brought home by his father from Balliol College in 1619, Dudley was placed in charge of a small ironwork, and took out a patent in 1620 for using coked coal instead of wood charcoal, and for improvements in the blast. The Government tried some of his new iron in 1621, and pronounced it good; while a brother-in-law of his made excellent gun-barrels of it. He struggled manfully against the jealousy of rival ironmasters, and established small works in four different parts of the district. It was regarded as a mighty achievement to have a blast furnace in which he could make seven tons of iron per week. Notwithstanding all this, however, conspiracies of masters to dispute his patent, and riotings by workmen who disliked his new processes, brought on law-suits, debt, and imprisonment. When the Civil War broke out he abandoned manufactures, and joined the Royalists as a soldier. He was engaged in many of the battles; was military engineer to plan fortifications at Worcester and Stafford in 1643; appointed colonel of dragoons; and in 1645 general of artillery. Being taken prisoner near Madeley in 1648, he effected a hair-breadth escape, and then lived in concealment and poverty during the Commonwealth. At the Restoration he tried hard to obtain a renewal of his patent, and some return for his faithful adherence to the Royal cause; but failed in both objects. In 1665 he published 'Mettallum Martis: or, Iron made with Pit Coale, Sea Coale, &c., and with the same Fuell to melt and fine imperfect Mettals, and refine perfect Mettals.' He re-established a small iron work near Dudley, where he continued to smelt iron with coal. The plan, for various reasons, languished after his time, but to him is due the credit of practically introducing it. Dud Dudley died at St. Helen's, Worcestershire, in 1684.

DUFAY, CHARLES FRANÇOIS DE CISTERNAI, was born at Paris, in September, 1698, and died 16th July, 1739. At the age of 14 he was made lieutenant in a regiment of Picardy, but was more attached to science than to the military art. He accompanied the Cardinal de Rohan to Rome, where he acquired a taste for the study of antiquities. In 1733 he became an Academician, and devoted his studies exclusively to science. He made some capital discoveries in electricity, which are described by Priestley ('History of Electricity') with his usual felicity of style. Taking up the researches of Grey, who in 1729 discovered the properties of conductors, Dufay discovered, he says, "a very simple principle, which accounts for a great part of the irregularities, and, if I may use the term, the caprices that seem to accompany most of the experiments in electricity. This principle is, that electric bodies attract all those that are not so, and repel them as soon as they are become electric by the vicinity or contact of the electric body. . . . Upon applying this principle to various experiments of electricity, any one will be surprised at the number of obscure and puzzling facts which it clears up."

Again he says:—"Chance has thrown in my way another principle more universal and remarkable than the preceding one, and which casts a new light upon the subject of electricity. The principle is that there are two kinds of electricity very different from one another; one of which I call *vitreous*, the other *resinous* electricity. The first is that of glass, rock-crystal, precious stones, hair of animals, wool, and many other bodies. The second is that of amber, copal, gum lac, silk, thread, paper, and a vast number of other substances. The characteristics of these two electricities are, that they repel themselves and attract each other."

"The electric spark from a living body, which," says Priestley, "makes a principal part of the diversion of gentlemen and ladies who come to see experiments in electricity, was first observed by Mr. du Fay. . . . The Abbé Nollet says he shall never forget the surprise which the first electrical spark which was ever drawn from the human body excited both in M. du Fay and himself."—(Pp. 46, 47.)

The important influence of Dufay's discoveries in the science belongs to history, although it is worthy of notice that Franklin's one fluid theory continued during many years to be the favourite mode of explaining electrical phenomena, and it is only in quite recent times that the doctrine of two fluids has been generally maintained.

Dufay was during ten years superintendent of the Jardin des Plantes. On his death-bed he recommended Buffon as his successor. Fontenelle wrote his *éloge*.

DUFRENOY, PIERRE ARMAND, was born at Sevran (Seine-et-Oise), Sept. 5, 1792. In 1803 he went to the Lyceum at Rouen, where Valenciennes was one of his schoolmates. He was then transferred, first, to the Imperial Lyceum, next to the École Polytechnique in 1811, and in 1813 to the Corps des Mines. When the School of Mines was established he was elected to teach geology and mineralogy, and to be one of the directors; and his execution of these duties for 40 years had much influence in securing the prosperity of the establishment. During this period he was also actively engaged in various geological and mineralogical inquiries, mostly in conjunction with Elie de Beaumont. Thus in 1823 these two geologists commenced their great work, the geological map of France. Having many views in common they were able to produce harmonious results, whether labouring separately or together. For 13 years they explored France, Dufrenoy taking the western portion, and Elie de Beaumont the eastern. For the next five years they were occupied in digesting the information they had collected. And in 1841 they issued their 'Carte géologique générale de France,' while the 'Explication' thereof, forming three quarto volumes, was published from 1841 to 1848. This map represents not only the distribution of the strata, but also the soils and physical geography of the country. In the course of their explorations they visited England, and one result of the visit was a 'Voyage métallurgique en Angleterre,' 8vo, Paris, 1827, which was enlarged into two volumes in the second edition, published 1837—1839. On a subsequent occasion Dufrenoy visited England alone on a commission to inquire into the advantages the hot blast has over the cold blast in iron-furnaces; and the results of the inquiry were given in a 'Rapport sur l'emploi de l'air chaud dans les usines à fer de l'Ecosse et de l'Angleterre' ('Annales des Mines,' vol. iv. pp. 431—508, 1833). In conjunction with Elie de Beaumont he also wrote 'Mémoires pour servir à une description géologique de France,'

4 vols. 8vo, 1830—1838. His 'Traité de Minéralogie,' 1st edition, 1844; 2nd edition, 5 vols. 8vo, 1856—1860, is a valuable work, on account of the wide scope of its information. In addition, he has written numerous papers, several of high importance; we may mention his researches on the volcanic district of Auvergne, in which he shows how the tertiary strata and lava streams alternate; his accounts of the Neapolitan volcanic region, in which he distinguishes the different ages of the lavas and other volcanic rocks, and broaches a new theory of the formation of volcanoes. His papers were contributed to the 'Comptes Rendus,' the 'Annales des Mines,' and the 'Bulletins' of the Geological Society of France. He also wrote for the 'Dictionnaire Universel des Arts et Metiers' and the 'Dictionnaire Technologique.' He was a member of the Academy of Sciences, a commander of the Legion of Honour, an inspector-general of mines, and also belonged to numerous scientific societies. He died March 20, 1857.

DUGHET, GASPARD [POUSSIN, GASPARD, E. C. vol. iv. col. 955].

DU HALDE, J. B. [HALDE, J. B. DU, E. C. vol. iii. col. 254].

DUHAMEL, JEAN PIERRE FRANÇOIS GUILLOT, was born at Nicorps, near Coutances (Manche), August 31st, 1730. He was educated at the École des Ponts et Chaussées, the director of which so highly appreciated his talents that he sent him along with M. Jars to study the mines of Germany. The latter published 'Voyages Métallurgiques,' 3 vols. 4to, 1774—1781, Paris, to which Duhamel is understood to have largely contributed. In 1764 he became the director of a large foundry, and soon succeeded in so simplifying the process, as to reduce the expense by one-half, at the same time he doubled the produce. He greatly improved the mode of making steel, of liquidating silver, of separating lead from copper in the ores containing both, and various other metallurgical operations. He wrote many papers, but his principal work in literature is his 'Géométrie souterraine élémentaire, théorique et pratique, où l'on traite des filons ou veines minéralogiques et de leur disposition dans le sein de la terre,' 4to, Paris, 1788. It was adopted in many parts of France and Germany as a practical manual in mining. He died February 19th, 1816.

DUHAMEL DU MONCEAU, HENRI LOUIS, was descended from a Dutch gentleman who visited France about 1400 in the suite of the Duke of Burgundy. He was born at Paris in 1700, and was educated in the college of Harcourt. The course was not to his taste, and he quitted college with only one idea, namely, that men, by studying nature, had created a science called *Physics*. Being now free, he devoted himself to science, and cultivated the friendship of such men as Dufoy, Geoffroy, Lemery, Jussieu, and Vaillant. At the age of eighteen he was requested by the government, under the advice of the Academy, to inquire into the cause of a disease which afflicted saffron. He traced it to a parasitical plant which attached itself to the bulb, and extended under the ground from one bulb to another.

Duhamel, ably assisted by his brother, devoted a long life to the cultivation of science and works of utility, especially such as were likely to benefit the poor. He spent much time in endeavouring to promote the cultivation of vegetables, and this led him to study the physiology of trees. His 'Traité des Arbres et Arbustes qui se cultivent en France en pleine terre,' published in 1755, in 2 vols. 4to, with numerous engravings, is a work of considerable value. In 1740 he became an Academician, and from that time until his death in 1781 he published more than sixty memoirs in the Transactions of the French Academy of Sciences, and these embodied a large number of new and important facts, which had considerable influence on the progress of science, although, from our more perfect knowledge, they are no longer associated with his name. He was the first to prove that soda is a different alkali from potash; he also pointed out many new properties in ether, the soluble tartars, and lime; he showed that oil in contact with cloth produces spontaneous combustion; he studied the formation of bone by feeding young animals alternately with food mixed with madder and with ordinary food; he kept a regular table of meteorological observations at Pithiviers, with details relative to the direction of the needle, to agriculture, to the medical constitution of the year, and to the time of nest-building and the passage of birds. His merits as a vegetable physiologist and agriculturist are of a high order. As Inspector-General of Marine he devoted his attention to naval science, the construction of vessels, the weaving of sail-cloths, the structure of ropes and cables, the method of preserving timber, &c. In these

varied labours he never seemed to think of himself. His clear and charming style had but one obscurity for the reader who wished to separate Duhamel's original discoveries and remarks from those of other men. His brother resided upon Duhamel's estate at Denainvilliers, which name he bore, and the two brothers lived unmarried, and passed a laborious life in the pursuit of science for the good of mankind. After leaving the Academy on the 22nd July, 1781, Duhamel was struck with apoplexy, and died after lingering twenty-two days in a state of coma. He was a fellow of the Royal Societies of London and Edinburgh.

DUJARDIN, FELIX, was born at Tours, April 5, 1801. In 1839 he became professor of mineralogy and geology at Toulouse, and afterwards professor of zoology at Rennes. His earlier works relate to geological subjects, his later to zoological. He wrote several papers on the lithology and geology of Touraine, and many on the lower classes of animals, especially the *Infusoria* and *Entozoa*, although he also gave considerable attention to the *Protozoa*, annelids, insects, and to the zoosperms. His principal works are 'Histoire Naturelle des Zoophytes infusoires,' 8vo, Paris, 1841; 'Histoire Naturelle des Helminthes ou vers intestinaux,' 8vo, Paris, 1844; and along with M. Hupe, 'Histoire Naturelle des Zoophytes échinodermes,' 8vo, Paris, 1861. All these form part of the 'Suites à Buffon.' He founded and edited a scientific journal called 'Hermès,' and wrote 'Promenades d'un Naturaliste,' 1837, some small zoological treatises, and a 'Manuel de l'Observateur au Microscope,' 1843. He died April 8, 1860.

DULONG, PIERRE LOUIS, was born at Rouen on the 12th of February, 1785. At the age of sixteen he entered the Polytechnic School, but was compelled to quit it after two years under the pressure of ill health. He then studied medicine, and on the completion of his course practised as a surgeon in one of the poorer quarters of Paris. As he could never witness suffering without feeling a strong desire to relieve it, the number of his patients increased, while his fortune diminished. He kept an account at a pharmacist's, where his patients got their medicines made up at his expense. During some time he studied botany, but being attracted by the brilliant discoveries of Davy he took up chemistry, and rendered his name famous. He was so fortunate as to secure the post of assistant in Berthollet's laboratory. In 1811 he published a paper on the decomposition of insoluble salts by means of carbonate of potash or of soda, and in October of the same year he discovered a compound of chlorine and nitrogen of a dangerously explosive character, so that while examining it in the following year he lost an eye and two fingers from its effects. Napoleon requested that the composition might be kept secret, under the idea that the chloride of nitrogen might prove a formidable engine of war, but it was found to be quite unmanageable. Davy, who heard some vague rumours respecting it, succeeded in forming the compound, and also in wounding himself during one of its explosions. Dulong also investigated some of the compounds of nitrogen and oxygen, the acids formed by the union of phosphorus and oxygen, the composition of carbonic acid, &c. He also performed a large number of experiments on the respiration of animals; but his most perfect work was in conjunction with Petit on the law of cooling—a model of physico-chemical research.

Dulong was Master of Conferences at the Normal School, and occupied the chair of chemistry of the Faculty of Sciences, and that of the School of Alfort. He died at Paris July the 19th, 1838.

* DUMAS, ALEXANDRE [E. C. vol. ii. col. 662]. In the reissue of the E. C. reference was made to the Supplement for a further notice of Alexandre Dumas, but the original memoir is so full that we find little of consequence to add. Of his later personal career the most noticeable circumstances are his far-far-nade of his personal friendship with the Emperor; his travels; his unexpected appearance as the associate of Garibaldi in his expedition to Naples; his nomination of himself as the historiographer of the campaign, and his extraordinary appointment by Garibaldi to be director of the Neapolitan museums and picture galleries. Of his various travels and personal adventures, culminating in the Neapolitan campaign, he published ample reminiscences in 'Le Caucase: Voyage,' 1859; 'Les Mémoires d'Horace,' 1860; 'Mémoires de Garibaldi,' 1861; in the successive volumes of his own 'Mémoires,' and in his 'Causeries' in 'Le Petit Journal,' 1863, and 'Le Grand Journal' which succeeded it. He has also issued many new romances, as 'Les Compagnons de Jéhu,' 'Les Louves de Machecoul,' 'Le San Felice,' mostly

after the old manner, and of little inherent value, as well, of course, as numerous dramas, as 'La Tour St. Jacques la Boucherie,' in 6 acts and 17 tableaux; 'Les Gardes Forestiers,' in 5 acts; 'L'Envers d'une Conspiration'; 'Le Gentilhomme de la Montagne'; 'Le Prisonnier de la Bastille'; 'Les Mohicans de Paris,' the refusal of permission to act which led to his writing the letter to the Emperor which afforded so much amusement to the Parisians.

* ALEXANDRE DUMAS, the younger [E. C. vol. ii. col. 664] has gone on writing almost as abundantly as his father, and of late with at least as great success. His novels and plays, genuine successors of his 'Demi-Monde,' have exactly hit the corrupt and sensualised taste of the Parisian world; but it is hardly worth while to chronicle their titles here, and we may hope that the terrible trial through which the city of their birth has of late had to pass may do something towards calling forth a condition of moral feeling that will render them no longer endurable even there.

DUMÉRIL, ANDRÉ MARIE CONSTANT, was born at Amiens, January 1, 1774. His successes in early life were remarkably rapid. When only 19 he was appointed demonstrator in the Anatomical School at Rouen. In 1794 he went to Paris, in 1795 he became acquainted with G. Cuvier, in 1798 he obtained his M.D. degree from the Paris University, and in 1799 he competed successfully for the directorship of the anatomical works of Paris, Dupuytren being one of his opponents. In 1801 he was appointed professor of anatomy; in 1822 this was exchanged for the chair of physiology; and this again for the chair of internal pathology in 1830. For a short time he was Cuvier's successor as professor of natural history at the École Centrale of the Pantheon; and in 1802 he commenced his lectures on reptiles and fishes at the Jardins des Plantes, first as Lacépède's substitute, and afterwards as his successor: he continued them for upwards of 50 years. In 1816 he was chosen a member of the Academy of Sciences, in 1837 he received the cross of the Legion of Honour, of which he was afterwards a commander, and he was a member of many scientific bodies. He filled several offices simultaneously, and discharged them all with remarkable punctuality. Even when over 80 years of age he was rarely absent from the sittings of the Academy of Sciences. He died August 2, 1860. He was always working hard, and hence his writings are exceedingly voluminous. His first work was a paper on the organs of smell in insects, published in 1797, his last a large quarto on insects, which appeared in 1860. He assisted Cuvier in editing the first two volumes of the 'Leçons d'Anatomie Comparée.' His papers are 75 in number, and relate to all classes of animals, chiefly regarded from the physiological, anatomical, classificatory, and descriptive points of view; but he also added much to the interest of his observations by his numerous references to habits. A list of his papers is given in the 'Catalogue of Scientific Papers,' published by the Royal Society. Here we append a list of his principal books:—'Essai sur les moyens de perfectionner et d'étendre l'art de l'Anatomiste,' 4to, Paris, 1802; 'Traité élémentaire d'Histoire Naturelle,' 1 vol. 8vo, 1803; 4th edition, 2 vols. 8vo, 1846; 'Zoologie Analytique,' 8vo, 1806; 'Mémoires de Zoologie et d'Anatomie Comparée,' 1807; 'Recueil de quatre cent cinquante formules proposées dans les jurys de Médecine des départements,' 1811–1813; 'Considérations Générales sur la classe des insectes,' 8vo, 1823, which is a revised re-issue of the entomological articles contributed by him to the 'Dictionnaire du Sciences Naturelles'; 'Dissertation sur les Poissons qui se rapprochent les plus des Animaux sans vertèbres,' 1812; 'Dissertation sur la Famille des Poissons Cyclostomes pour démontrer leurs rapports avec les Animaux sans vertèbres,' 1812; 'Erpétologie générale,' 9 vols. 8vo, 1834–1854, in conjunction with M. Bibron; 'Ichthyologie analytique,' 1856; and 'Entomologie Analytique,' 1860. The last two are given in the 'Mémoires' of the Academy of Sciences; and the last forms a large volume of itself, comprising 1336 pages.

* DUMÉRIL, AUGUSTE HENRI ANDRÉ, the eldest son of the foregoing, was born at Paris, November 30, 1812. He has been assistant naturalist in the Museum of Natural History, Paris, since 1840; professor of geology at the Chaptal College since 1847; and in 1857 he succeeded to his father's place in the Museum. In 1869 he was chosen to succeed M. Delessert as a member of the Academy of Sciences. He has written numerous papers on reptiles and fishes. His principal works are, 'De la texture intime des glandes et des produits de Sécrétion en générale,' 8vo, Paris, 1845; and 'Histoire Natu-

relle des Poissons ou Ichthyologie Générale,' 8vo, vol. i. 1865; vol. ii. 1870.

DUMONT, ANDRÉ HUBERT, was born at Liège, February 15th, 1809. He early took an interest in geology, and followed the study of it with so much zeal and skill that his first work, 'Sur la constitution géologique de la province de Liège,' which he submitted to the Royal Academy of Belgium in 1820, was crowned with honour by that body, and published in its 'Mémoires,' vol. viii. (1832); and in 1839 it obtained for him the Wollaston Medal of the Geological Society of London. It also led to his being appointed professor of mineralogy and geology at the University of Liège, and to his being ordered by the Belgian Government to prepare a geological map of the kingdom. Honours were showered upon him, and he was selected to be the director of the Academy of Belgium, which office he filled in 1856, but he had scarcely retired from it when he fell ill, and was carried off in his prime, February 28th, 1857. He spent twenty years in preparing his geological map of Belgium, and personally explored almost every part of the country on foot; it is estimated that he walked 15,000 miles in performing the task. The map was published in 9 sheets, in 1853. The stratigraphical divisions have a peculiar nomenclature, to which objections have been made. The map is distinguished for its great accuracy. The divisions adopted will doubtless be retained in geology, though perhaps not under the names he has selected for them. He relied mainly upon lithological characters in determining the divisions. He wrote numerous papers on the geology of Belgium, which abound in information, and which are printed in the 'Bulletins' and 'Mémoires' of the Royal Academy of Belgium.

DUNDONALD, THOMAS COCHRANE, tenth EARL OF [E. C. vol. ii. col. 668]. The last years of Lord Dundonald's life were spent in endeavouring to remove from the minds of his countrymen any suspicions they might yet entertain respecting his conduct in those affairs for which he had been subjected to obloquy and persecution. Towards the end of 1858, "on that day when I shall have completed the 83rd year of a career strangely chequered, yet not undistinguished," he published a 'Narrative of Services in the Liberation of Chili, Peru, and Brazil, from Spanish and Portuguese Domination,' 2 vols. 8vo. These volumes, full of narratives of daring adventures and dashing seamanship, describe the services he rendered to the governments of Brazil and the South American Republics, and the wrongs he suffered at their hands. His sufferings from his own government he related at length in 'The Autobiography of a Seaman,' 2 vols. 8vo, 1859-60. The first volume carries the narrative down to his attack on the French fleet in the Basque Roads, April 11, 1809, which was marred by the inexplicable timidity of Gambier, the admiral in command, and for which, owing to Captain Cochrane's urgency, Admiral Gambier was tried by a court-martial, but acquitted. The second volume is almost wholly occupied with an account of the court-martial on Admiral Gambier and with Lord Cochrane's own trial for complicity with the fraud of De Beranger. A third volume was to have completed the work, but within a few days of the publication of the second volume the author had passed beyond the reach of praise or censure. He died on the 31st of October, 1860. His life was a strange and stormy one, but whatever be the verdict in other matters, there can be no question that he was one of the ablest and bravest naval captains of modern times.

* DUPANLOUP, FÉLIX ANTOINE PHILIBERT, one of the most prominent divines of the Gallican Church, was born at Saint-Félix, in Savoy, on the 3rd of January, 1802, and in 1810 was sent to Paris for education. Here he studied theology, and in 1825 was admitted to the priesthood, and speedily began to give evidence of his remarkable gifts as a preacher and a catechist. In 1827 he was appointed confessor to the Duc de Bordeaux, and instructor in the catechism to the young princes of the Orleans family in 1828. In 1835 he became one of the parochial clergy of the church of St. Roch, in Paris; and in 1841 was made professor of sacred eloquence in the faculty of theology in the Sorbonne. Being, however, suspended from his office, he received from Archbishop Affré a titular grand-vicariate, and the directorship of the seminary of Saint Nicolas, after which, upon resigning his functions as grand-vicar, he was made a titular canon. He attended Prince Talleyrand in his last moments, and has the credit of effecting his conversion. His nomination to the see of Orleans took place on the 6th of April, 1849; and he was consecrated at Paris on the 9th of December following. From that time, and indeed during his whole career, Monseigneur Dupanloup—who became, in 1854,

a member of the Académie Française—has taken part in every social, political, and ecclesiastical question of importance; and his various publications have been largely provocative of discussion and controversy, especially on Church matters, where his principal opponents have been M. Edmond About and M. Grandguillot. He has been a champion for the liberty of the Church, the unity of Christendom, and the temporal power of the Pope, and a particular and ardent advocate for the religious education of all classes, upon the last of which subjects he has written in nearly all its aspects.

Many of the miscellaneous productions of M. Dupanloup which had been published up to that date, were issued as 'Œuvres Choisies,' 4 vols. 8vo, Paris, 1862, of which the first volume contained the 'Œuvres Oratoires,' the second and third volumes the 'Œuvres Pastorales,' and the fourth the 'Études Ecclésiastiques.' His other works comprise an 'Avertissement à la Jeunesse et aux Pères de Famille sur les Attaques dirigées contre la Religion par quelques Écrivains de nos Jours,' 12mo, Paris, 1863, which immediately went through several editions, and which chiefly combated the views of MM. Rénan, Littré, Taine, and Maury; 'Saint Vincent de Paul et ses Œuvres,' 12mo, Paris and Orleans, 1863; 'La Convention du 15 Septembre et l'Encyclical du 8 Décembre,' 8vo, Paris, 1865; 'L'Athéisme et le Péril social,' 8vo, Paris, fifth edition, 1866; 'Femmes Savantes et Femmes Studieuses,' 8vo, Paris, sixth edition, 1868, English translation, by R. M. Phillimore, entitled 'Studious Women,' 8vo, London, 1868; 'La Liberté de l'Enseignement supérieur,' 8vo, Paris, 1868; 'L'Enfant,' 12mo, Paris, 1869; 'Le Mariage Chrétien,' 12mo, Paris, 1869; and 'Lettre sur le Futur Concile (Economique,' of which an "authorised translation, with Papal Brief," was published by Messrs. S. H. Butterfield and E. Robillard, as 'The Future Ecumenical Council. A Letter of the Bishop of Orleans to the Clergy of his Diocese,' 8vo, London, 1869. The papal brief extolled the eloquence and clearness with which the author had stated "the sound doctrine on the rights and prerogatives of the Holy See, and on its supreme authority in these kinds of assemblies;" but it is by this time historically known that M. Dupanloup joined in protesting, May, 1870, energetically against the dogma of papal infallibility, in the promulgation of which the labours of the Council have, so far, culminated. M. Dupanloup, whose works have been translated, almost in the mass, into German, furnished a 'Lettre' in introduction of M. A. de Beauchesne's recent biographical work, entitled 'La Vie de Madame Elisabeth, Sœur de Louis XVI.,' 2 vols. 8vo, Paris, 1869.

DUPERREY, LOUIS ISIDORE [E. C. vol. ii, col. 674]. Since the account of his important scientific voyage was published, M. Duperrey has contributed largely to our knowledge of the phenomena connected with terrestrial magnetism and terrestrial physics generally. He died September 10th, 1865.

DU PETIT THOUARS, L. M. A. [THOUARS, L. M. A. DU PETIT, E. C. vol. vi. col. 26].

DUPIN, ANDRÉ-MARIE-JEAN-JACQUES [E. C. vol. iii. col. 675]. M. Dupin was re-appointed procureur-general to the Court of Cassation in November, 1857, and continued to take part in public affairs both as procureur and senator as long as his health allowed. He died at Paris on the 8th of November, 1865.

DUPIN, LOUIS ELLIES, a celebrated ecclesiastical historian, was born on the 17th of June, 1657, either in Normandy or in Paris, of an ancient Norman family. At ten years of age he became a pupil of the Collège d'Harcourt, and graduated as M.A. in 1672. Devoting himself to the ecclesiastical profession, he went through a course of divinity at the Sorbonne; and after an extensive study of the fathers, councils, and Church writers and historians, took his degrees of B.D. and D.D. respectively in 1680 and 1684. Two years after the latter date he entered upon the publication of his great work, entitled 'Bibliothèque des Auteurs Ecclésiastiques, contenant l'Histoire de leur Vie; le Catalogue, la Critique, et la Chronologie de leurs Ouvrages, le Sommaire de ce qu'ils contiennent, un Jugement sur leur Stile et sur leur Doctrine, et le Dénombrement des différentes Editions de leurs Ouvrages,' 8vo, Paris, 1686-1714, which, with the 'Bibliothèque des Auteurs sèparez de la Communion Romaine,' &c., 4 vols. 8vo, Paris, 1718, five volumes of 'Tables,' three volumes of 'Remarques,' by D. Petit-Didier, and four volumes of 'Critiques,' by Richard Simon, occupies the immense number of 58 volumes. An incomplete edition was published in Holland in 19 vols. 4to, Amsterdam, 1690-1713; and the work has undergone a variety of impressions in France

and England. The Abbé Goujet published a continuation, with the title of 'Bibliothèque des Auteurs Ecclesiastiques du dix-huitième Siècle; pour servir de continuation à celle du M. Du Pin,' 3 vols. 8vo, Paris, 1736. The 'Bibliothèque,' &c., is lively in style, well-planned, and generally impartial; but certain opinions expressed by the author upon the fathers and the authority of the Holy See drew down upon him the most severe criticism and opposition. Bossuet arrayed himself against Dupin, and accused his work to M. de Harlay, Archbishop of Paris, by whom it was condemned. Subsequently Dupin, who held the appointment of professor of philosophy in the Collège de France, having taken the side of the Jansenists against the bull *Unigenitus*, was deprived of his chair and exiled to Châtelerault. Towards the end of his life he conceived the plan of a union between the Gallican and Anglican Churches, and a memorial of his activity in this direction was published a few years ago, with the title 'D'un Projet d'Union entre les Eglises Gallicane et Anglicane. Correspondance entre Wake, Archevêque de Cantorbéri, et Dupin, Docteur de Sorbonne,' 8vo, Oxford, 1864. Having regard to the same object of the restoration of the unity of Christendom, Dupin is said to have drawn up a plan, at the request of Peter the Great, at that time in France, for the return of the Greek Church to the orthodox communion. Exhausted at length by his uninterrupted labours, Dr. Dupin died at Paris, on the 6th of June, 1719.

Besides the 'Bibliothèque,' upon which his fame principally rests, he produced numerous works in history, profane and ecclesiastical, and in practical divinity. They comprise 'Notas in Pentateuchum,' 2 vols. 8vo, Paris, 1701; 'Le Livre des Psaumes traduit selon l'Hébreu avec des courtes Notes,' 12mo, Paris, 1691 and 1710, which is a translation of 'Liber Psalmorum cum Notis, quibus eorum sensus literalis exponitur,' 8vo, Paris, 1691; 'Traité de la Doctrine Chrétienne et Orthodoxe,' 8vo, Paris, 1703; 'L'Histoire d'Apollone de Tyane convaincue de Fausseté et d'Imposture,' 12mo, Paris, 1705, which was published under the pseudonym of M. de Claireval; 'Traité de la Puissance Ecclesiastique et Temporelle,' 8vo, 1707; 'Bibliothèque Universelle des Historiens,' 2 vols. 8vo, Paris, 1707; 2 vols. 4to, Amsterdam, 1708; 'L'Histoire de l'Eglise en abrégé par Demandes et par Réponses, depuis le Commencement du Monde jusqu'à présent,' 4 vols. 12mo, Paris, 1712, second edition, 1714; and 'L'Histoire Profane depuis son Commencement jusqu'à présent,' 6 vols. 12mo, Paris, 1714—16, a faulty edition of which was published in 6 vols. 12mo, Antwerp, 1717.

DUPONT, PIERRE [E. C. vol. ii. col. 678]. Under the Empire Pierre Dupont continued to delight those who were admitted to his intimacy by throwing off his charming songs with their accompanying airs at the same time as by a single inspiration. But it was long before he published anything. In 1855 appeared the 'Légende du Juif Errant,' with illustrations by Gustave Doré; in 1859, his 'Muse Juvenile: Études littéraires, vers et prose,' and in 1860 'Jean Guêtré.' He lived to see the beginning of the reverses of the France he loved so well; dying at Lyons, July 25, 1870.

DUPPA, or DE UPHAUGH, BRIAN, an English prelate of the 17th century, was born in the year 1588, at Lewisham, in Kent, and educated successively at Winchester and Christ Church, Oxford, at the latter of which he was entered a student in May, 1605. He graduated as B.A. on the 6th of May, 1609; was elected a fellow of All Souls' College in 1612; proceeded M.A. on the 28th of May, 1614; and took the degrees of B.D. and D.D. by accumulation on the 1st of May, 1625. In due course he was ordained, after which he travelled on the Continent; and, having returned to his university, was elected one of the proctors in 1619. In 1629 he was made Dean of Christ Church; acted as vice-chancellor of the university for the years 1632 and 1633; and in 1634 was collated to the chancellorship of Salisbury, with which he held the prebend of Brixworth. In 1638 he was appointed tutor to Charles, Prince of Wales, and afterwards to his brother, the Duke of York; and was presented to the rectory of Petworth, in Sussex, on the 19th of May; on the 29th of which month he was elected to the bishopric of Chichester. In 1641 he was translated to the see of Salisbury, but received no benefit from his preferment on account of the suppression of episcopacy under the Commonwealth. He now shared for some time the fortunes of the king, and after his death retired to Richmond, in Surrey, where he concerted with the Bishop of Ely and others for the continuance of the episcopal succession. At the Restoration, Dr. Duppa was elected, September 10th, 1660, to the see of Winchester, in which he was confirmed on the 4th of

October following; and about the same time was made lord-almoner. He died at Richmond on the 26th of March, 1662, and was buried in Westminster Abbey, on the west side of the Confessor's chapel.

Bishop Duppa was not a voluminous author, and he has left little besides a few sermons and books of devotion. These comprise 'The Soule's Soliloquie: and a Conference with Conscience. As it was delivered in a Sermon before the King at Newport, in the Isle of Wight, on the 25th of October, being the monthly Fast, during the late Treaty,' 4to, 1648; 'Angels rejoicing for Sinners repenting; a Sermon on Luke xv. 10,' 4to, London, 1648; and 'Holy Rules and Helps to Devotion, both in Prayer and Practice,' 2 parts, 12mo, London, 1675, which was often reprinted, and of which an edition was published in 12mo, Derby, 1835. A French translation appeared as 'Traité de la Prière,' &c., 12mo, Berlin, 1696.

* DUPUY DE LÔME, STANISLAS CHARLES HENRI LAURENT, Chief Constructor of the French Navy, was born at Plomeur, near L'Orient, October 15, 1816. His father, an officer in the French marine, placed him in 1835 at L'École Polytechnique, where he studied for the profession of naval engineering. Next he came to England, where his study of iron shipbuilding led him to publish a 'Mémoire sur la Construction des Batiments en Fer,' 4to, Paris, 1844, with folio atlas of plates. Entering the service of the French government, he constructed the ship 'Le Caton' at Toulon; and, as Inspector of the Navy at the same place, prepared reports on the basins and factories necessary for building and repairing war steamers. In 1853 he was appointed first-class engineer. Called to Paris in 1857, he received the appointment of Director of Naval Materiel, or Chief Constructor of the Navy, under the Minister of Marine. He had already gained celebrity by his construction of the 'Napoléon' (1848-52), the first French war steamer at once large and swift; it worked well against adverse currents in the Dardanelles in 1853, on the breaking out of the war with Russia, and was adopted as the type of a new class of vessel. He was the first to convert war sailing vessels into steamers, by cutting them in twain amidships, and lengthening them, to make room for the steam machinery; he began this practice with the 'Eglau,' and continued it with many other ships. After having improved the dépôt of the 'Messageries' Steam Navigation Company at Marseilles, and introduced for them a new class of steamer, he began for the government the process of armour-plating ships of war, which, first applied to the wooden ship 'La Gloire,' was afterwards applied to iron ships of great size and strength. Being made a Councillor of State in 1860, he represented the French Admiralty in the Legislature. He wrote papers to the Académie des Sciences, and also a letter to the 'Times' newspaper, on the principles of naval construction as applied to ironclads; and on all such subjects he is regarded throughout Europe as the leading authority.

DUQUESNOY, FRANÇOIS, known as IL FIAMMINGO, a celebrated Belgian sculptor, was born at Brussels in 1594. The son of a sculptor, he learnt the art from his father, and early acquired so much skill as to be employed in the execution of the statue of Justice for the chief entrance to the Chancellerie of Brussels, two angels for the church of the Jesuits in the same city, figures of Truth and Justice for the façade of the Hôtel du Ville, Hal, and other public works. In 1619 he was sent by the Archduke Albert VI. to Rome, where he formed a friendship with Poussin, and under his influence and guidance devoted himself with ardour to the study of the works of classic antiquity. Duquesnoy soon acquired such renown by the grace with which he sculptured Cupids, bacchanals, and the like, as to be named the Modern Polycletus. Many of these were carved in ivory and in bas-relief. His relievi of children at play, Cupidons, and the like, are found in most great collections and are reckoned the most perfect examples of their class: indeed, nothing can well exceed their exquisite grace, playfulness, and charm of execution. But his chisel was employed on Christian as well as pagan themes. He executed several figures of saints which were much admired, and the pope, Urban VII., commissioned him to carve the colossal statue of St. Andrew and to ornament the baldachino of St. Peter's. These and other works were thought to have placed Duquesnoy at the head of the sculptors of his time. He was invited to Paris by Cardinal Richelieu to found there a school of sculpture, accepted the invitation, and after partial recovery from a severe illness, set out on the journey thither, but died on the way at Livorno, 1646. Eight years later, October 24, 1654, his brother Jérôme Duquesnoy (b. 1612), the pupil and imitator of François, was

condemned to be burned alive at Ghent for an abominable crime, when he is said to have confessed before his death to various atrocities, and amongst others to having poisoned his brother François; but considering the circumstances, and that he was probably tortured to extort confession, we may hope that his reason was affected at the time, and that the statement was not true. Dargenville, in his life of François Duquesnoy, gives a list of his chief works. (*Vies des Fameux Sculpteurs*.)

DURAN, DON AUGUSTIN [E. C. vol. ii. col. 682], was born on the 14th of October, 1789, at Madrid, and died in that city on the 1st of December, 1862.

DURHAM, JOSEPH, A.R.A., was born in London in 1821. He was a pupil of Mr. John Francis, and was afterwards for some time in the studio of Mr. E. H. Baily, R.A. Like most young sculptors, his early essays were classical and poetical in character, but he first attracted notice by his portrait-busts. A bust of Jenny Lind, exhibited in 1848, at once became popular, and being reproduced in parian, met with an extensive sale. Mr. Durham has since produced many imaginative statues and a few groups, but his chief employment, or rather, perhaps, his distinctive eminence, has been in portraiture. His exhibited busts include many well-known names, as General Sabine, Lord Romilly, Lord Palmerston, Charles Knight, J. P. Gassiot, &c., and they are almost invariably satisfactory as likenesses, and admirably chiselled. He has also executed statues of the Queen, and several of the Prince Consort, the most important being that for the Memorial of the Exhibition of 1851 in the gardens of the Horticultural Society. The statue of Sir Francis Crossley, placed by the townsmen in the park presented by Sir Francis to the people of Halifax, is one of his more celebrated works. He has also produced memorial statues of Caxton, Harvey (for the façade of the London University), Shelley, and others. Among his poetic works may be named 'The Parting of Paul and Virginia,' the statues of Hermione and Alastor for the Mansion House; Chastity, 1860; Peace, 1861; and 'The Lady of the Lake,' 1865. A series of bronze statuettes of boys cricketing, entitled 'British Sports,' has had great success as reproduced in parian. Mr. Durham was elected associate of the Royal Academy in 1866.

DYCE, REV. ALEXANDER [E. C. vol. ii. col. 691]. Mr.

Dyce published the last volume of his great book, 'The Complete Edition of the Works of Shakespeare' (6 vols. 8vo), in 1858. The text was declared to be produced on "the only true method," that of a strict adherence to the earliest quartos, but in 1864 he began a new edition (8 vols. 8vo, 1864-68), in which the text was, to use his own words, "altered and amended from beginning to end," whilst it "differed from the former edition as much in the notes as in the text." His first edition was conservative, his last conjectural—and neither is likely to be received as authoritative. In 1856, shortly after the poet's death, Mr. Dyce published 'Recollections of the Table Talk of Samuel Rogers,' a work that went through several editions, and occasioned some discussion on account of the personalities and acerbity of many of the anecdotes. In 1868 he completed an edition of the 'Dramatic Works of John Ford.' Mr. Dyce died at his residence, Oxford-terrace, Hyde Park, on the 15th of May, 1869; he was born at Edinburgh on the 30th of June, 1798. He bequeathed his fine library of 13,000 volumes, including the first folio and other rare editions of Shakespeare's plays, to the South Kensington Museum.

DYCE, WILLIAM, R.A. [E. C. vol. ii. col. 691]. Mr. Dyce continued to work at the frescoes in the Houses of Parliament, but only fitfully, and at length the state of his health compelled him to resign the commission, leaving the largest of the series, 'The Court of King Arthur,' unfinished. Mr. Dyce also executed a number of fresco paintings on the walls of All Saints Church, Margaret-street, but they have unfortunately already required extensive reparation or repainting, and those at Westminster do not promise to be much more permanent. To the Royal Academy exhibitions Mr. Dyce contributed few pictures in his last years. Among them were 'Titian preparing to make his first essay in colouring,' 1857; 'Contentment,' and 'The Good Shepherd,' 1859; 'St. John leading home his adopted Mother,' 'The Man of Sorrows,' and 'Pegwell Bay,' 1860; and 'George Herbert of Bemerton,' 1861, after which he ceased to exhibit. Mr. Dyce was an enthusiast in ecclesiastical church music, composed some pieces, took an active part in choral services, and was one of the founders of the Motett Society. He died at his residence, Streatham, Surrey, February 15, 1864. Mr. Dyce was Professor of the Theory of the Fine Arts at King's College, London.

E

EACHARD, JOHN, an Anglican divine of the 17th century, was born in Suffolk, in or about the year 1636, and was educated at Catherine Hall, Cambridge, where he was admitted on the 10th of May, 1653. He graduated as B.A. in 1656; was elected to a fellowship on the 9th of July, 1658; and proceeded M.A. in 1660. In 1675 he was chosen master of Catherine Hall, and in the following year was created D.D. by royal mandate. He filled the office of vice-chancellor of the university in 1679, and for the second time in 1695. He died, at the age of 61, on the 7th of July, 1697, and was buried in the chapel of Catherine Hall.

Dr. Eachard's works include 'The Grounds and Occasions of the Contempt of the Clergy and Religion enquired into in a Letter to R. L.' [signed T. B.], 8vo, London, 1670, which gave rise to some discussion, and especially elicited 'An Answer to a Letter of Enquiry,' &c., 8vo, London, 1671, to which Eachard replied with 'Some Observations upon the Answer to an Enquiry into the Grounds and Occasions of the Contempt of the Clergy, with additions, in a second letter to R. L.,' 8vo, London, 1671; 'Mr. Hobbs's State of Nature considered: in a Dialogue between Philautus and Timothy. To which are added five Letters from the Author of the Grounds and Occasions of the Contempt of the Clergy,' 8vo, London, 1672; and 'Some Opinions of Mr. Hobbs considered in a second Dialogue between Philautus and Timothy,' 8vo, London, 1673. Eachard carried on his polemics with wit and humour, and Dryden was of opinion that by his "raillery and reason he had more baffled the philosopher of Malmesbury, than those who assaulted him with blunt, heavy arguments drawn from orthodox divinity, for Hobbes foresaw where those strokes would fall, and leapt aside before they could descend; but he could not avoid those nimble passes which

were made on him by a wit more active than his own, and which were within his body before he could provide for his defence." The works of Dr. Eachard have gone through many editions, both severally and collectively, of which the most complete is the edition of 'The Works of Dr. John Eachard, &c., with a second Dialogue on the Writings of Mr. Hobbes, not printed in any former edition; and some Account of the Life and Writings of the Author,' by T. D., 3 vols. 12mo, London, 1773-1774.

EASTLAKE, SIR CHARLES LOCK, P.R.A. [E. C. vol. ii. col. 694]. From the appointment of Sir Charles Eastlake as director of the National Gallery in 1855, he gave himself with rare devotion to the duties of the office. At home and abroad he sought out pictures worthy to form part of a national collection. If he erred at all, it was on the side of over-scrupulousness, yet his purchases were attacked in the journals and in Parliament with persevering enmity, but usually in entire ignorance. During the ten years of Eastlake's directorship 155 pictures were added by purchase to the collection, while in the previous 32 years only 96 pictures had been purchased; the details are given in Mr. Wornum's 'Catalogue of the Pictures in the National Gallery: British School,' under Eastlake, pp. 35-36. Sir Charles's purchases included such pictures as the Garvagh Raffaele, 'the Family of Darius,' by P. Veronese, and some most choice works by Fra Angelico, Pietro Perugino, Lippi, Pollajuolo, and other painters of a class previously unrepresented in the gallery. Sir Charles was accustomed to make an annual tour on the Continent for the purpose of acquiring pictures for the National Gallery, and in the course of that undertaken in the autumn of 1865 he was attacked by illness at Milan. Having somewhat recovered, he removed to Pisa, where

he had a relapse. After lying for two months unable to be carried farther, he died on the 24th of December, 1865, aged 72, he having been born on the 17th of November, 1793. His body was brought to England, and interred in Kensal-green cemetery. A brief but valuable 'Memoir of Sir Charles Lock Eastlake,' by Lady Eastlake, is prefixed to a volume of his 'Contributions to the Literature of the Fine Arts,' 8vo, 1870. A second volume of his 'Materials for a History of Oil-Painting,' was published in 1869. A pension of 300*l.* was in 1866 granted from the Civil List Fund to Lady Elizabeth Eastlake, "in consideration of the services rendered by her late husband to the Crown, and of his high attainments in art."

* LADY EASTLAKE (Elizabeth, daughter of Edward Rigby, M.D., of Norwich) is the authoress of the popular 'Letters from the Shores of the Baltic,' 1841; 'Livonian Tales and other Stories'; a translation of Kugler's 'Handbook of Italian Painting'; articles on Dress and Music in the 'Quarterly Review,' and reprinted separately; and a 'Life of John Gibson, R.A., Sculptor,' 1870, as well as of the memoir of her husband mentioned above. She also completed Mrs. Jameson's 'Sacred and Legendary Art.'

* EASTWICK, EDWARD BACKHOUSE, was born at Warfield, in Berkshire, in the year 1814, and was educated at Charterhouse School, London, and at Balliol and Merton Colleges, Oxford. He entered the service of the East India Company, and became so distinguished for his attainments in oriental philology that he passed as interpreter in five different languages, and secured his promotion to various offices of honour and responsibility. Returning to this country, he was appointed in 1845 to the professorship of Urdu in the East India College, at Haileybury, of which, in 1850, he became librarian. Whilst holding office at Haileybury he published 'A Concise Grammar of the Hindustani Language; to which are added Selections for Reading,' 12mo, London, 1847, second edition, enlarged, &c., London, 1858. He compiled for Murray's series of Handbooks 'A Handbook for India; being an Account of the Three Presidencies, and of the Overland Route; intended as a Guide for Travellers, Officers, and Civilians; with Vocabularies and Dialogues of the Spoken Languages of India,' 2 parts, 8vo, London, 1859; previous to which he had edited the 'Autobiography of Lutfullah, a Mohammedan Gentleman,' 8vo, London, first and second editions, 1857. On the 6th of June, 1860, he was called to the bar by the Society of the Middle Temple, and on the 1st of the following month set out to undertake the duties of H. M.'s chargé d'affaires at the court of Tehran; after his return from which, in 1863, he published the 'Journal of a Diplomat's Three Years' Residence in Persia,' 2 vols. 8vo, London, 1864. In June of the latter year he proceeded to Venezuela as Financial Commissioner of the General Credit Company for the Venezuelan loan of 1864; and, returning to this country in the last days of October following, contributed several sketches on Venezuela and its people to 'All the Year Round,' during parts of 1865 and 1866. The more substantial literary result of his mission was, however, his 'Venezuela; or Sketches of Life in a South American Republic; with the History of the Loan of 1864,' 8vo, London, first and second editions, 1868. Besides the foregoing works, Mr. Eastwick has contributed to literature editions and translations of various oriental writers, and especially a translation, partly in verse, of the 'Zartusht-Namah,' or Life of Zoroaster, from the Persian of Zartusht-Behram, which occurs as one of the Appendices to Dr. John Wilson's work on 'The Parsi Religion: as contained in the Zand-Avasta,' &c., 8vo, Bombay, 1843; he has also produced a translation of Franz Bopp's 'Comparative Grammar of the Sanskrit, Zend, Greek, Latin, Lithuanian, Gothic, German, and Sclavonic Languages,' 3 parts, 8vo, London, 1845—50, second edition, 3 vols. 8vo, London, 1856. Mr. Eastwick is C. B., and a member of many learned societies—as the Royal Society, the Society of Antiquaries, the Asiatic Societies of Great Britain and Paris, and of the Oriental Society of Germany. At the general election of 1868 he was sent to the House of Commons as representative, in the Conservative interest, of the associated boroughs of Falmouth and Penryn.

EBERHARD, JOHANN AUGUST, a German philosopher and divine, was born on the 31st of August, 1739, at Halberstadt. From 1756 to 1759 he was a student at the University of Halle, after which, becoming private tutor in the family of the Baron von der Hoorst, whom he accompanied to Berlin, he prosecuted his theological studies in the university of that city. In due course he was ordained, and for some time fulfilled the duties of a pastor at Charlottenburg. Having become an adherent of Semler, who is known as the father of what has been termed the theory of *accommodation* in theology, Eberhard took

the opportunity of propagating his views in a New Apology for Socrates, or the Final Salvation of the Heathen, 'Neue Apologie des Sokrates,' &c., 2 vols. 8vo, Berlin, 1772, third edition, 1788, French translation, by Dumas, 2 vols. Amsterdam, 1773—78. The 'New Apology,' from the publication of which is frequently dated the era of the introduction of German "Neology," went far in the direction of placing Socrates on a level with Christ. The book gave rise to much controversy, and was especially attacked by Ernesti and Lessing; whilst its author saw himself shut out from all chances of professional preferment. He therefore accepted in 1778 a professorship of philosophy at Halle; was named a privy councillor in 1805; and in 1808 took his degree as doctor of theology. He died on the 6th of January, 1809.

The works of Eberhard include a Universal Theory of Thought and Feeling, 'Allgemeine Theorie des Denkens und Empfindens,' 8vo, Berlin, 1776, new edition, 1786; a Preparation for Natural Theology, 'Vorbereitung zur Natürlichen Theologie,' 8vo, Halle, 1781; a History, in the form of Letters, entitled 'Amyntor; eine Geschichte in Briefen,' 8vo, Berlin, 1782; Theory of Literature and the Fine Arts, 'Theorie der Schönen Künste und Wissenschaften,' 8vo, Halle, 1783, third edition, 1790; a Universal History of Philosophy, 'Allgemeine Geschichte der Philosophie,' 8vo, Halle, 1788, second edition, 1796; an Attempt at a Universal Dictionary of German Synonyms, 'Versuch einer allgemeinen Deutschen Synonymik in einem kritisch-philosophischen Wörterbuche,' 6 vols. 8vo, Halle, 1795—1802; a Pocket Dictionary of German Synonyms, 'Synonymisches Handwörterbuch der Deutschen Sprache,' 12mo, Halle, 1802, twelfth edition, Berlin, 1861; a Manual of Aesthetics, 'Handbuch der Ästhetik,' 4 vols. 8vo, Halle, 1803—5, continued and enlarged by Maas, 12 vols. 1818—21, and by Gruber, 6 vols. 1826—30; and the Spirit of Primitive Christianity, 'Geist des Urchristenthums,' &c., 3 vols. 8vo, Halle, 1807—8. Eberhard was a frequent contributor to various periodicals, and especially to the General German Library, 'Allgemeine deutsche Bibliothek,' of Frederick Nicolai, which was the recognised medium of attack upon orthodoxy.

EBERT, FRIEDRICH ADOLF, an eminent German bibliographer, was born at Taucha, near Leipzig, July 9th, 1791. He commenced the study of theology, but directed his attention to general literature and obtained a post in the Leipzig library, and afterwards in that of the university. In 1814 he occupied the office of secretary in the Royal Library, Dresden, where he remained till 1823, when he was appointed librarian at Wolfenbüttel, but was recalled to Dresden in 1825 as librarian to the king, and in 1828 he became chief of the public library. His whole life was spent in libraries, and he died at his post: his death having been caused by a fall from a ladder as he was reaching some books on the library shelves, November 13th, 1834. Ebert had the reputation of being one of the best bibliographers of his day, and the book which will preserve his name fully justifies his fame: 'Allgemeines bibliographisches Lexikon,' 2 vols. 4to, Leipzig, 1821—1830. Of great value also are his accounts of the Dresden Library, and his elaborate work on the knowledge of Manuscripts—'Geschichte und Beschreibung der königlichen öffentlichen Bibliothek zu Dresden,' 8vo, Leipzig, 1822; and 'Zur Handschriftenkunde,' 2 vols. 8vo, Leipzig, 1825—1827. He also wrote several biographical and historical works, of which the most valuable are his life of Taubmann, his essays on intellectual culture in Upper Saxony during the Middle Ages, and his review of past and contemporary art and literature, 'Friedrich Taubmann's Leben und Verdienst,' 1814; 'Culturperioden des obersächsischen Mittelalters,' 8vo, Dresden, 1825; and 'Ueberlieferungen zur Geschichte, Literatur, und Kunst der Vor- und Mitwelt,' 2 vols. Dresden, 1825—1826.

ECK, or ECKIUS, JOHANN, so called from his native village of Eck, in Suabia, but whose patronymic was Mayer, was born on the 13th of November, 1446. He was a student of many universities, repairing to one after another in order to prosecute special subjects under their most eminent professors; and he thus became one of the most distinguished scholars and disputants of the age. He was professor of theology and vice-chancellor of the University of Ingolstadt, in Bavaria; and was for some time on terms of close friendship with Luther, whose 'Theses,' however, he attacked in his 'Obeliake' with a virulence which, being reciprocated, put an end to their intimacy. On the 27th of June, 1519, he commenced at Leipzig a discussion of more than a fortnight on Grace and Free-will, with Carlstadt, a friend and adherent of Luther, who at length, on the 4th of July, became the direct opponent of Dr. Eck on the sub-

jects, mainly of the papal supremacy and the authority of the Councils. A Report of these discussions was published under the title of 'Disputatio Excellentium D. Doctorum Johannis Eccii et Andrea Carolostadii, quæ cepta est Lipsiæ, xxvii Junii, AN. MDXIX. Disputatio secunda D. Doctorum Johannis Eccii et Andrea Carolostadii, quæ cepit xv Julii. Disputatio ejusdem D. Johannis Eccii et D. Martini Lutheri Angustiniani, quæ cepit, iii Julii,' 4to, Leipzig, 1519. Not long after Eck published his work on the primacy, 'Summariorum de Primatu Petri adversus Ludderum Joannis Eckii, Libri tres,' folio, Paris, 1521. In the beginning of 1520 he repaired to Rome, from which he returned, in September following, as the bearer of a bull of Leo X., in condemnation of the doctrines of Luther, which he caused to be fixed up in public places in Miessen, Merseburg, and Brandenburg. For the space of twenty years he confronted, in a long series of combats, generally, but not exclusively, in Germany, the champions of the Reformation. In 1530 he took part in the proceedings of the Diet of Augsburg, and argued against the Protestant Confession; and in 1541 disputed at Worms, and, by adjournment, at Ratisbon, with Melancthon and other divines, on the question of the continuance of sin after baptism. He died at Ingoldstadt, without the recompense of ecclesiastical dignity or emolument, in February, 1543; his last composition being a tract against the articles proposed at the Conference of Accommodation at Ratisbon.

His works, which are numerous, are chiefly controversial, turning on the subjects in dispute between papists and protestants—on the Mass, 'Ad Invictiss. Poloniæ Regem Sigismundum, de Sacrificio Missæ contra Lutheranos. Libri duo,' 8vo, Ingoldstadt, 1526; on the Retention of Images, 'De non tollendis Christi et Sanctorum Imaginibus, contra Hæresim Fælicianam sub Carolo Magno damnatam, et jam sub Carolo V. renascentem Decisio,' 4to, Ingoldstadt, 1522; on Purgatory, 'De Purgatorio contra Lutherum Hostesque Ecclesiæ, Libri quatuor, omnibus verè Christianis utilisimi,' 24mo, Antwerp, 1545. Besides these and other works of a like nature, Dr. Eck published a commentary on the prophet Haggai, and a considerable number of 'Homilies.' But that which obtained for him the greatest praise and performed the best service for his cause, was his Manual of Controversies, entitled 'Enchiridion Locorum communium adversus Lutheranos,' &c., 4to, Landshut, 1525, and Ingoldstadt, 1525; 12mo, Ingoldstadt, 1527; 12mo, Antwerp, 1535; 24mo, Cologne, 1561; and other editions. This was a particular apology for all the disputed tenets and practices of the Church of Rome; and treated the entire series of the subjects contested, from the sacrifice of the mass down to tithes, annates and canonical hours. It formed, in fact, to Eck's party, such an apology as the 'Common-places' of Melancthon was to the Reformers.

ECKERMANN, JOHANN PETER, the friend and secretary of Goethe, was born at Winsen on the Luhe, Hanover, in 1792. He served in the army against Davoust in 1813 and 1814, and obtained a situation in the War Office in 1815. He afterwards studied law, as well as philology and history at Göttingen. In 1822 he made the acquaintance of Goethe, through the medium of his 'Beiträge zur Poesie;' in 1823 became his private secretary in Weimar, and in 1830 accompanied his son to Italy. In 1827 he took his doctor's degree in Jena, and in 1838 was made privy councillor and librarian to the Grand Duchess of Saxe-Weimar. He died in Weimar, on the 3rd of December, 1854. Eckermann is chiefly remembered for his 'Gespräche mit Goethe,' published in three parts, Leipzig and Magdeburg, 1836—48, several times reprinted, and translated into most European languages. By the testamentary desire of Goethe he edited, conjointly with Reimer, an edition of Goethe's works, in 2 vols, large 8vo, Stuttgart, 1837; and another in 40 vols, 8vo, 1839—40.

ECKHART, MEISTER, celebrated as the father of German speculation, and one of the most remarkable mystics of the Middle Ages, was probably born at Strasburg, in the latter half of the 13th century. He became a Dominican; and was successively a student and professor of philosophy in the Dominican College of St. Jacob at Paris. He received his Doctorate in Theology from Rome, at the hands of Pope Boniface VIII., about the year 1300; and in 1304 and 1307 respectively was made provincial of his order for Saxony, and vicar-general in Bohemia, where he distinguished himself by an enforcement of reform and discipline. In 1320, at which time he held the office of prior of Erfurt, he had become obnoxious to the charge of heresy; and in 1327, when he was a resident at Cologne, without ecclesiastical cure or dignity, he found a bitter opponent in the person of Archbishop Heinrich,

BIOG. DIV.—SUP.

who accused him to the Holy See. Eckhart was condemned by a bull of Pope John XII.; and probably died at Cologne in 1329 or the preceding year. He was a bold and profound speculator, an eloquent preacher, and a learned writer. Very few of his writings have been preserved; but he is known to have produced *inter alia* a Commentary on Genesis; on Solomon's Song; on the Book of Wisdom; on the Gospel of St. John, and the Several Gospels for the ecclesiastical year; on the four Books of Sentences; a book of Sermons for the Church Seasons, and another upon the Saints.

His imputed heresy was in the direction of pantheism, and his system foreshadowed, in a very remarkable manner, the system of Hegel, who calls Eckhart the author of "a genuine and profound philosophy." Eckhart's theosophy, in fact, is a striking anticipation of modern German idealism. The "abstract ground of Godhead" of Eckhart answers almost exactly to Hegel's "Logische Idee." The Trinity of process, the incarnation ever renewing itself in men, the resolution of redemption almost to a divine self-development, constitute strong features of family likeness between the Dominican of the 14th century, and both Hegel and Fichte. Several works have lately been devoted to illustrating the life and philosophical position of Eckhart; and amongst these may be mentioned H. Martensen's 'Meister Eckhart. Eine theologische Studie,' 8vo, Hamburg, 1842; and Dr. Joseph Bach's 'Meister Eckhart, der Vater der Deutschen Speculation. Als Beitrag zu einer Geschichte der Deutschen Theologie und Philosophie der Mittleren Zeit,' 8vo, Vienna, 1864.

EDWARDES, MAJOR-GENERAL SIR HERBERT BENJAMIN, K.C.B. [E. C. vol. ii, col. 731]. As Commissioner of the Peshawur Frontier Sir Herbert Edwardes rendered excellent service to the Government of India. By his judicious measures he secured the amity of Afghan, and rendered the district, which was said to be a standing nuisance, one of the strongest places in India; and when the Sepoy insurrection broke out, so far were the warlike hill-men from sympathising with the rebels, that they came in unasked to beg for military employment, and Edwardes was enabled not only to maintain tranquillity in Peshawur, but also to form and despatch a corps of 5,000 hardy warriors to Delhi, besides sending others against a detachment of the mutineers who had advanced towards Peshawur. In 1859 Sir Herbert visited England, was made a Knight Commander of the Bath, and promoted brevet-colonel. He returned to India in 1862, as Agent for the Cis-Sutlej States and Commissioner of Umballah. Failing health compelled him to leave India in 1865, when he received an additional good-service pension of £100; in 1866 was created Knight Commander of the Star of India, and in 1868 was gazetted major-general in the East Indian Army. His constitution was, however, thoroughly shattered, and he died in London, November 23, 1868, at the early age of 49.

EGG, AUGUSTUS, R.A. [E. C. vol. ii, col. 742]. Mr. Egg was elected an academician in 1860. Delicate health interfered much of late with his painting, and led him to spend the winter months in Algeria. On one of these migrations he died at Algiers, March 26, 1863. Though he painted few pictures, some of his best were produced in these last years. The most powerful, though the most painful, was a social tragedy, in three parts, exhibited without a title in 1858, and selected by Mr. Egg as his representative picture for the International Exhibition of 1862. In 1859 he exhibited 'The Night before Naseby;' in 1860, his last picture, 'Katherine and Petruchio.' The National Gallery (British School) possesses his 'Scene from the Diable Boiteux' (No. 444), but it is an unfavourable specimen of his pencil.

EKEBERG, CHARLES GUSTAV, a Swedish traveller, was born in 1716. As a pilot and captain in the service of the East India Company of Sweden he visited many places in the far east. He suffered shipwreck, and many of the other hardships incident to a seafaring life. He was of an active and practical turn of mind, and did great service to his country as the first introducer of the tea plant into Sweden, and by his successful efforts to induce people to adopt vaccination as a means of warding off the attacks of small-pox. His labours procured him numerous honours, such as medals and pensions from many of the sovereigns of Europe. His best known writings are 'Moyen facile d'inoculer la petite variole,' and his account of his travels in 1770 and 1771, written in Swedish, and published in 1773. He also wrote numerous religious tracts. He died April 4, 1784.

ELGIN, JAMES BRUCE, 8TH EARL OF [E. C. vol. ii, col. 752]. In March, 1857, hostilities having been for some time

K K

carried on between England and China in a desultory manner, Lord Elgin was sent to China as ambassador extraordinary, and at the same time invested with large military as well as civil authority. On his arrival at Hong Kong he received intelligence of the Sepoy mutiny, and appreciating the serious nature of the affair, he at once decided to incur the responsibility of diverting the expedition to India. He accordingly sailed on the 2nd of July to Calcutta. He returned to China in September, and active measures were immediately resumed. Yeh, the Chinese Commissioner, resorted to various diplomatic shifts, but at length (December 16) Lord Elgin, in concert with Baron Gros, the French minister, sent in the ultimatum. The bombardment of Canton was commenced on the 28th of December, and on the 5th of January the English and French forces entered the city. Lord Elgin followed up the first success promptly, and having ascended the Peiho and threatened Peking, the Emperor of China expressed his willingness to treat. The commissioners met at Tien-tsin, and there treaties dictated by Lord Elgin, which for the first time placed foreigners on an equal footing with the Chinese, opened new ports for commerce, regulated transit and other duties, and fixed the relations between foreigners and natives, were signed by Lord Elgin and Baron Gros and the two Chinese commissioners, June 26, 1858. From China Lord Elgin proceeded to Japan, where, after some delay, he succeeded in concluding a satisfactory commercial and political treaty, which was signed at Yedo on the 26th of August, 1858.

On his return to England the services of Lord Elgin received honourable recognition. In the beginning of 1859 he joined the ministry of Lord Palmerston, as postmaster-general. In November, 1859, he was elected lord-rector of the University of Glasgow, his opponent being Mr. Disraeli. But Lord Elgin was not allowed to remain long at home. The Chinese had taken an early opportunity to break the terms of the treaty, and it being found necessary again to despatch a strong expedition to China, Lord Elgin and Baron Gros were sent with it to represent their respective governments. The Tartar troops fought bravely, but were everywhere defeated, and after the capture of the Emperor's summer palace, and preparations being made to bombard Peking, the Chinese submitted to the terms Lord Elgin demanded. A treaty was signed on the 26th of March, 1861, and Lord Elgin returned to England. After a brief repose he was appointed, February, 1862, to succeed Lord Canning as governor-general of India. To the duties of this high office he addressed himself with his usual energy, and had already initiated several important measures, when he succumbed to the climate acting on a frame weakened by overstrained exertion. He died at Dhurumsalla in the Punjab, Nov. 20, 1863.

ELIOT, GEORGE [EVANS, MARIAN, E. C. S. col. 508].

ELKINGTON, GEORGE RICHARDS, was born in Birmingham, October 17th, 1801. Being engaged in the metal-working trades of that town, he was one of the first to avail himself of the discoveries relating to the electro-deposition of metals. He patented processes of his own, and purchased the use of processes invented by others; until at length he established the art of electro-plating or electro-metallurgy as one of the regular trades of Birmingham. Commencing with a small number of helpers in 1839 or 1840, he extended his operations until he had a thousand persons in his employ. Table-plate formed the staple of his manufacture, as of others who have followed him in the same line; but he produced high-class works of art in trophies, vases, cups, presentation-plate, &c., some of them in oxidised silver. The Great Exhibitions of 1851, 1855, 1862, and 1867 contained fine specimens of his work, which obtained numerous prize medals. He employed French as well as English artists to produce his designs. Besides two large establishments in Birmingham and London, he was the owner of iron-mines and copper-works in South Wales. Mr. Elkington died at his residence, Pool Park, Denbighshire, September 22nd, 1865. The local journals, in announcing his death, spoke of him as "the inventor of electro-plating." This brought forward protests from Mr. Spencer and from the brother of the late Mr. John Wright of Birmingham, disputing the claim. There is no evidence that Mr. Elkington himself claimed to have invented the art, or discovered any of the principles on which it rests; he made many improvements in it, and succeeded, by the aid of capital, ingenuity, and energy, in founding a great department of manufacture. There was, in fact, no one inventor of electro-plating; the process was experimentally adopted by Spencer, Jacobi, Jordan, Wright, and others, before Elkington took it up; but Daniell had preceded them all, by producing an electro-copper deposit on a plate of platinum.

ELLESMERE, FRANCIS LEVESON GOWER, EARL OF [E. C. vol. ii. col. 765]. The Earl of Ellesmere died on the 18th of February, 1857. He had published in 1856 a volume of graceful poetry, the 'Pilgrimage and Other Poems,' and his Essays contributed to the 'Quarterly Review,' appeared shortly after his decease.

ELLIOTSON, DR. JOHN, [E. C. vol. ii. col. 766,] died on the 29th of July, 1868, at the age of 82.

ELLIS, SIR HENRY [E. C. vol. ii. col. 768]. With his resignation of the office of principal librarian of the British Museum in 1856, and that of director of the Society of Antiquaries in 1858, Sir Henry may be considered to have closed his public life, though he edited for the Rolls Series of the Chronicles of Great Britain the 'Chronica Johanne de Oxenides,' 8vo, 1859. Retaining almost to the last his remarkable health and vigour, he died at his residence, Bedford Square, on the 15th of January, 1868, in his 92nd year.

ELMES, JAMES, [E. C. vol. ii. col. 771,] died on the 2nd of April, 1862, in his 80th year.

EMERIC-DAVID, TOUISSANT BERNARD, a celebrated French archæologist, was born at Aix, in Provence, August 20, 1755. He was educated for the bar, and practised as advocate, but he did not like the profession, and gave it up on the opportunity offering of succeeding to the business of his uncle, printer to the parliament at Aix. In 1791 he was elected mayor of that city; but the Revolution destroyed his business and compelled him to seek safety in flight. When the death of Robespierre permitted him to return to Paris, he resumed the profession of advocate, but devoted his attention more to the study of art, the taste for which had developed itself during a residence in Italy, and which eventually entirely engrossed his attention. He had published some separate papers, when in 1800 he won the prize of the Institute by his essay entitled 'Recherches sur l'art statuaire considéré chez les anciens et les modernes,' but on its publication in 1805 Giraud, the sculptor, claimed to have furnished Emeric-David with the materials, and a lively controversy ensued as to the true authorship. M. Emeric-David's subsequent works sufficiently vindicate his capacity for the production of the treatise, whatever he may have owed to Giraud's suggestions. From 1809 to 1815 he represented the department of Bouches-du-Rhône in the Corps Législatif, and there voted with the majority for the deposition of Napoleon I., but on the restoration of the Bourbons withdrew from public life. In 1816 he was elected a member of the Institute. He was one of the members of the commission elected by the Academy to continue the 'Histoire Littéraire de France,' and he wrote many articles on the Provençal poets in vols. xvii.—xx.; but he knew little of the old Provençal literature, and his papers are of no value. He died on the 2nd of April, 1839. Besides the works cited and a large number of articles in magazines and encyclopædias, M. Emeric-David wrote 'Discours historique sur la gravure en taille-douce et sur la gravure en bois,' 8vo, Paris, 1809; 'Suites d'Études calquées et dessinées d'après Raphaël, accompagnée de gravures de ces tableaux, et des notices historique et critique,' 8vo and fol., 1818—20; 'Jupiter: recherches sur ce dieu, sur son culte et sur les monuments qui le représentent: précédé d'un essai sur l'esprit de la religion grecque,' 2 vols. 8vo, Paris, 1833. M. Emeric-David attached more value to this than to any of his previous works, as in it he set forth in full his theory of the ancient mythology, and he pursued and further illustrated the subject in corresponding essays on Vulcan (1837) and Neptune (1839). But his system found few adherents at the time, and it has long been obsolete; apart from the theory, however, the works have a substantial value. His 'Histoire de la Peinture au Moyen Âge,' 12mo, 1842, and 'Vies des Artistes Anciens et Modernes,' 12mo, 1853, are reprints of papers contributed by him to the 'Annales' and the 'Biographie Universelle.'

ENCKE, JOHANN FRANZ [E. C. vol. ii. col. 779]. This distinguished astronomer was stricken by apoplexy in 1859, and was consequently unable to devote much more attention to scientific research. In 1863 he obtained leave of absence from the Berlin Observatory, fearing that his health would give way; and in 1864 resigned his post altogether, after holding it forty years. These latter years had not, however, been unfruitful; for, out of the large number of 170 scientific papers written by him, and published between 1815 and 1862, nearly 30 appeared subsequently to the year 1856. They related to comets, telegraphic longitudes, star charts, the existence of a resisting medium in space, &c. He died at Spandau, near

Berlin, on the 2nd of September, 1865, three weeks before the completion of his 74th year.

ENDLICHER, STEPHEN LADISLAS, botanist, was born at Presburg, in Hungary, June 24, 1804. His earlier education was received in his native town, his later in Pesth and Vienna. He then entered the Church, but in the course of a few years he abandoned it, and in 1827 commenced his botanical and linguistic studies. In the following year he was charged with the care of the Imperial Library at Vienna. In 1836 he was elected to be the keeper of the Museum of Natural History at Vienna, and in 1840 was nominated the professor of botany in the university, as also director of the botanic gardens. Endlicher was deeply moved by the political troubles of 1848. The turn taken by them disturbed his mind, he fell into a state of gloom and died March 28, 1849. Endlicher's writings are mostly botanical, but a few relate to ecclesiastical literature. In botany his most important labours have been in connection with the systematic arrangement of plants. One of his earliest works was '*Flora Posoniensis*,' 8vo, 1830, in which he noticed the plants growing about Posen arranged according to the natural system. But this system is more elaborately followed out in his great work, '*Genera Plantarum secundum ordines naturales deposita*,' 4to, Vienna, 1836-1840. At the time of its publication it was the most important work on systematic botany; it has had much influence on more recent systems, and even now it is one of the most complete works on the subject. The arrangement and groupings were formed independently of De Candolle's and Jussieu's works. As a sort of companion work to his '*Genera Plantarum*,' he published a series of figures under the title of '*Ataxya Boravica*,' 4to, Vienna, 1837-40. The figures were drawn by Ferdinand Bauer, who died in 1826, and left numerous drawings rivaling in excellence those of his brother Francis Bauer. In conjunction with Unger, Endlicher wrote '*Grundzüge der Botanik*,' 8vo, 1843, in which he gives an outline of those views of plant structure upon which his classifications were mainly based. Amongst his other works we may notice his '*Prodromus Floræ Norfolkicæ*,' 8vo, 1833, an account of the plants of Norfolk Island, the figures in which were also drawn by Ferdinand Bauer; and his contributions to Von Martius's '*Flora Brasiliensis*.'

ENFANTIN, BARTHÉLEMY (more usually known as Le PÈRE ENFANTIN), the chief disciple of St. Simon, was born at Paris, February 8th, 1796. His father, a banker at Dauphiné, had him educated first at a Lycée, and then (in 1813) at the École Polytechnique. The youth joined with other students in defending Montmartre and St. Chaumont against the enemy during the investment of Paris in 1814. Incurring thereby the displeasure of the Bourbons, he had to turn to a new course of life; he became commercial traveller to a wine merchant, and visited Russia, Germany, and Belgium. In 1821 he became a banker's clerk at St. Petersburg. Returning to Paris in 1823, he accepted the post of cashier of the Caisse hypothécaire. So far his career had been analogous to that of many other young Frenchmen; but in 1825 his thoughts took a new bent. He formed a friendship with Olinde Rodrigues, and the two studied under St. Simon, adopted his ethical and socialistic views, and resolved to carry out his death-bed instructions. They founded a Société en Commandite, or Limited Liability Company, for the maintenance of a journal called '*Le Producteur*,' in which Enfantin wrote largely. He gradually formed a circle of adherents, and was at first supported by the French Liberals generally; but Benjamin Constant and others opposed him when they found to what an excess he carried his favourite doctrines. By the year 1828 he had organised St. Simonian public meetings and lectures, not only at Paris, but at Montpellier, Lyons, Metz, Dijon, and other towns. When the Revolution of 1830 took place he tried to give it a socialistic turn, and obtained the aid of many young men of remarkable ability, who brought the doctrines of their chief before the public in many forms through the agency of the '*Globe*.' Enfantin and Bazard were constituted '*Pères Suprêmes*' by their followers, but soon after began to diverge in their views; and Enfantin pushed the doctrines of St. Simonianism farther even than its founder would have done. Dividing mankind into two classes, the philosophical or calm, and the sensitive or mobile, he declared that the laws imposed by society are unjust towards the latter, especially in relation to the marriage tie. He preached new doctrines, and became the '*Living Law*,' a kind of Messiah, to his adherents, who comprised many women, but also some men who rose afterwards into note. At a model establishment founded at Ménilmontant, community

of goods was declared; a uniform dress was worn; manual labour, religious conferences, and symbolic ceremonies, occupied their attention; and Enfantin, as '*Le Père*,' was supreme over all. The authorities, in 1832, deemed it right to prosecute him on moral and social grounds; he asked to be defended as counsel by two female members of his community—Cécile Fournel and Aglaé St. Hilaire, on the ground that St. Simonianism is essentially a woman's question; but this was of course refused. He was sentenced to one year's imprisonment, and a fine of 100 francs. On his liberation from prison, Enfantin found his followers dispersed, and he made no effort to rally them, but with about a dozen followers withdrew to Egypt, where he stayed a couple of years. Returning to France, he resumed his ordinary place in society; became postmaster at Lyons; and in 1841 was appointed a member of the Scientific Commission to Algeria. He was a director of the Paris and Lyons Railway from 1845 to 1848; co-editor, with M. Duveyrier, of the journal '*Crédit*' in 1848-50; and afterwards director of the Lyons and Mediterranean Railway Company. He died May 31st, 1864.

Enfantin's published writings mostly related to the strange doctrines in which he was a believer. The chief were the following:—'*Economie politique*,' 8vo, 1831; '*Morale*,' 8vo, 1832, a work which was condemned the same year as immoral by the assize court; '*Le Livre Nouveau*,' 8vo, 1832; '*Correspondance philosophique et religieuse*,' 8vo, 1847; '*Correspondance politique*,' 1849; '*Colonisation de l'Algérie*,' 8vo, 1848; and '*La Vie éternelle passée, présente, future*,' 8vo, 1861. He also wrote some controversial pamphlets, and extensively in the journals.

ENGELBERTSZ, or ENGELBRECHTSEN, KORNELIS, an eminent Dutch painter, was the son of an engraver on wood at Leyden, where he was born in 1468. He was one of the first who introduced oil-painting into Leyden. He drew well and finished carefully, and in his designs showed more freedom from ecclesiastical precedent than his predecessors. Very few authentic works by him are known, many having been destroyed by the iconoclasts of the 16th century. The most important is a triptych with its predella, the centre-piece representing the Crucifixion, in the Hôtel-de-Ville, Leyden. The Museum, Vienna, has one, the Museum, Antwerp, two pieces, which are probably authentic: our National Gallery possesses a '*Virgin and Child*' (No. 714), of small size, by him. Engelbertsz died at Leyden in 1533. Lucas Van Leyden was his pupil.

ENTRECASTEAUX, JOSEPH ANTOINE BRUIN, D', was born at Aix in 1734, studied with the Jesuits of that town, and in his 15th year entered the navy. He took an active part in the war then going on, and soon after it was ended he served as commander of a vessel in the Levant, India, China, and other places. In 1791 he was appointed to the command of an expedition sent out by the French Government for the purpose of searching for La Pérouse. He left Brest on September 28. He was accompanied by several geographers and naturalists, amongst others, Beautemps-Beaupré, Willaumez, and Labillardière. The expedition passed by the Cape of Good Hope, and proceeded to the Australian seas. On July 20, 1793, Entrecasteaux died of dysentery and scurvy while making for the island of Waigiou. The command passed into other hands. In August, 1794, De Rossel, who then commanded, was taken by the English; and the natural history specimens and other fruits of the voyage were retained, but ultimately restored to the French at the intercession of Banks. This voyage added largely to our knowledge of the geography and natural history of the area between New Zealand and New Guinea. In addition to discovering new islands, reefs, &c., which were named after the ships or officers, New Caledonia, New Holland, the Louisiade Archipelago, numerous other places were more thoroughly surveyed than they had previously been. Accounts of this voyage have been given by Rossel, Labillardière, and Fréminville.

ERARD, SEBASTIEN, a fertile improver of the pianoforte and harp, was born at Strasburg, April 5th, 1752, and learned his father's trade of cabinet-making. When a lad of only thirteen he showed his daring by climbing the spire of Strasburg Cathedral, and bestriding the cross at the top. Left to his own resources at the age of sixteen, he went to Paris, where he gradually bent his attention to the mechanism of the clavecin—one of the forerunners of the pianoforte. He acquired so much skill that a manufacturer employed him to make a very superior clavecin throughout, with a proviso that the credit of the work should go with the employer and not with the workman. But the truth became known, and Erard's fame established. In 1777, after inventing a '*clavecin mécanique*,' he was patronised

by the Duchesse de Villeroi, who allowed him to fit up a workshop in her mansion. Here he made, for his patroness, the first pianoforte produced in France, with various improvements on others made in Germany and in England. Being joined by his brother Jean Baptiste, he established a factory in the Rue de Bourbon. His double-stringed, five-octave pianoforte came into great favour; his 'piano organisé' (piano and organ combined) displayed great ingenuity; while his transposing key-board, enabling a player to shift the whole range of notes one, two, or three semitones higher or lower, won for him the patronage of Queen Marie Antoinette. Another invention of his was the 'orgue expressif,' in which delicate effects were produced by varying the pressure of the finger. The Revolution caused him to remove to London, where he established a large manufactory of pianofortes and harps. After many improvements of a minor kind, he made the admirable combination known as the "double-action," which enables the harp to be played in all keys; the success was so great that he sold harps to the value of 25,000*l.* in the first year. He took out his first patent for pianos in 1794, returned to France in 1796, where he remained twelve years; returned again to London in 1808; patented his great harp invention in 1811; patented his chief improvement in pianofortes in 1823; and made a fine organ for the Chapel Royal at the Tuileries in 1827. Erard died at Passy, near Paris, August 5, 1831. The two large establishments at Paris and London were left by him to his nephew, Pierre Erard.

* ERCKMANN-CHATRIAN, the conjoint name under which the romances of two popular French writers, Émile Erckmann and Alexandre Chatrian, have been published.

* ÉMILE ERCKMANN was born at Phalsbourg, department of Meurthe, on the 20th of May, 1822. The son of a bookseller, he was educated in the college of his native city, and afterwards studied law at Paris, but having formed a close literary partnership with Chatrian, he in 1857 definitely withdrew from the bar.

* ALEXANDRE CHATRIAN was born at Soldatenthal, in Meurthe, December the 18th, 1826. He was for awhile at the college of Phalsbourg, but his friends having suffered from reverses in trade, he was sent, while still very young, to some glass works in Belgium. There he appeared likely to succeed, but he had set his mind on a literary profession, and, in opposition to the wishes of his friends, he returned to Phalsbourg, and became a tutor in the college. Here it was that in 1847 he and M. Erckmann formed so close a friendship. Of the circumstances which led MM. Erckmann and Chatrian to commence their literary partnership we are not informed; but as early as 1848 they began to write some feuilletons together in a local journal, and together made more than one dramatic effort. These, however, met with little success, and while M. Erckmann returned to the law, M. Chatrian took a situation in the office of the Chemin de Fer de l'Est.

They continued, however, to write in conjunction, and their fraternal perseverance met before long with ample recompence. The 'Illustre Docteur Mathéus, par Erckmann-Chatrian, 18mo, 1859, speedily became popular, and each succeeding volume of Alsatian story deepened the impression made by its predecessor. Still it was not till the publication of the 'Conscrit de 1813' that it was recognised that a new form of the romance of the people had arisen, and that it was the work of a master-hand. Its reputation soon spread beyond France, and now a new story by Erckmann-Chatrian is welcomed throughout the civilised world. The life of the French peasant and labourer, and especially those of Alsace and Lorraine, was never so truly and vividly depicted, and the truth and beauty of the narrative would have alone insured its success. But there was felt to be something beyond that. Although all the characters were persons in humble life, and the scene was laid for the most part in a distant province, the sentiment was one in which all would sympathise. Much as had been written on the horrors of war, the sufferings it caused to the poor and the mischiefs of the conscription were never so distinctly realised in all their extent and bearings; and then, amidst all the licence of the contemporary French romance, the tone of these was invariably pure, and they were at the same time outspoken in their evident truthfulness, and kind and catholic in spirit. The "romans nationaux" of Erckmann-Chatrian comprise the 'Histoire d'un Paysan' (the story of the French Revolution as related by a peasant); 'Madame Thérèse'; 'L'Ami Fritz'; 'Le Conscrit de 1813,' and its continuation, 'Waterloo'; 'La Guerre'; 'L'Invasion'; 'L'Homme du Peuple,' and 'Le Blocus.' They have also published 'Contes Fantastiques'; 'Contes de la Montagne'; 'Maître

Daniel Rock'; 'Contes des Bords du Rhins'; 'Le Fou Yégo,' and some others collected in the volume entitled 'Contes et Romans Populaires.' It is observable that native critics express themselves unable by any difference of style to distinguish between the parts of the stories written by the two authors.

ERCOLE DA FERRARA [GRANDI, ERCOLE, E.C.S.].

ERDMANN, JOHANN EDUARD, was born 13th June, 1805, in Wolmar, Livonia. He received his early education at home and in the Military Academy, in 1819 attended the gymnasium, and in 1823 studied theology at the university in Dorpat. He afterwards, for two years, went through a course of philosophy under Schleiermacher and Hegel in Berlin. In 1828 he returned to Wolmar, and the following year was elected pastor there. He returned to Berlin in 1832, took his degree in 1834, and in 1836 was made professor of philosophy in Halle. His principal work is an historical review of recent philosophy, 'Versuch einer wissenschaftlichen Darstellung der Geschichte der neuern Philosophie,' 3 vols, Leipzig, 1834—53. His other works include a dissertation on belief and knowledge, 'Ueber Glauben und Wissen,' Berlin, 1837; Nature and Creation, 'Natur und Schöpfung,' Leipzig, 1840; Body and Soul, 'Leib und Seele,' Halle, 1837; Elements of Psychology, 'Grundriss der Psychologie,' Leipzig, 1862; Elements of Logic and Metaphysics, 'Grundriss der Logik und Metaphysik,' Halle, 1864; Lectures on the State, and on Academic Life and Studies, 'Vorlesungen über den Staat,' Halle, 1861; 'Vorlesungen über akademisches Leben und Studium,' Leipzig, 1858; Psychological Letters, 'Psychol. Briefen,' Leipzig, 1863; Essays on various subjects, under the title of 'Ernstes Spiele,' Berlin, 1855: a treatise on dreams, 'Das Träumen,' Berlin, 1861, &c.

ERICSSON, JOHN [E. C. vol. ii. col. 800]. The statement of Mr. Ericsson's death in the above memoir was premature. He continued to be employed in designing vessels for the United States navy, and among others the celebrated *Monitor*; made various improvements in his own system, and engrafted on it some of the main features of that of Capt. Coles. He died in 1869.

ERICSSON, NILS, the most distinguished of Swedish engineers, was born in 1802. He was the son of Olaf Ericsson, an ironmaster at Langbanahyttan, Wernland, or Vermeland. Having adopted the profession of civil engineering, he was employed by the government in most of the public works relating to railways, canals, docks, &c. The State railways were planned by him on a principle too much neglected in England, i.e., that of proportioning the cost of the works to the probable amount of traffic. He constructed the docks at Stockholm and the canal from Saimen to the Gulf of Finland, and reconstructed the celebrated Trollhätten Canal. The Swedish newspapers announced the death of Nils Ericsson at the beginning of September, 1870.

* ERMANN, GEORG ADOLF, was born in 1806 at Berlin, and there studied those physical and natural sciences which he afterwards cultivated with so much success. At Königsberg he studied under Bessel, who formed so high an opinion of his abilities that he induced him to make a scientific expedition round the globe, and defrayed all the expenses. The principal object Erman was desired to pursue was the collection of facts relating to terrestrial magnetism. About this time (1828) Hansteen was travelling with the same object; and the two journeyed together as far as Irkutsk, in Siberia. Erman then proceeded onwards alone, traversing the eastern part of Siberia as far as Kamtchatka, then along the west coast of America, round Cape Horn, and along the east side to Rio de Janeiro; and, finally, from St. Petersburg to Berlin, which he reached in 1832. The materials thus collected were published in 'Reise um die Erde durch Nord Asien und die beiden Océane,' 7 vols, 1833—42, of which five were devoted to the descriptive, and two to the scientific details. In addition to this he has written largely upon numerous subjects in physical geography, more especially in connection with the Russian empire. Amongst others we may notice his contributions on the specific gravity of oceanic waters, the temperature of Siberia, the meteorology of Russia, terrestrial magnetism in France and Spain, &c. Many of his papers on Russia are given in the 'Archiv für wissenschaftliche Kunde von Russland,' of which he has been the editor since its commencement in 1841; and some occur in Poggenдорfs 'Annalen.' He wrote some papers on shooting stars and eclipses of the sun for 'Astronomische Nachrichten,' and has contributed to several other journals. At present he is professor of physics at the University of Berlin.

ERRARD, CHARLES, celebrated French painter, was born at Nantes in 1606. He was the son and pupil of Charles Errard (painter in ordinary to Louis XIII.), but in 1624 went to com-

plete his studies at Rome, where he remained several years, acquired a considerable reputation, and formed a friendship with Poussin. On his return to Paris he was much employed in painting religious pictures for altars, and in decorating the halls and staircases of various châteaux. Among his larger works of this kind were the great hall of the goldsmiths at Paris; the Palais Royal; the apartments of Cardinal Mazarin, and those of Anne of Austria at the Louvre; the theatre of the Tuilleries; and the châteaux of Fontainebleau, Versailles, and Saint-Germain-en-Laye. Errard was one of the twelve original members (*anciens*) of the Academy of Painting, but he is best remembered as the founder of the Academy of Rome. The plan of this institution—one which has had more influence than perhaps anything else on subsequent French art,—was devised by him and accepted by Colbert, who, in March, 1666, sent Errard to Rome, with twelve pupils, to organise and direct it. Though he formally resigned the presidency in 1683 on account of his age, Errard continued to direct the academy till his death, May 15, 1689. In conjunction with Chambray, Errard wrote a *Parallèle d'Architecture antique avec le moderne*, 8vo, Paris, 1666; and translated Palladio's *Architecture*, and Leonardo da Vinci's *Treatise on Painting*. Errard paid a good deal of attention to architecture, and the church of the Religieuses de l'Assomption in the Rue St. Honoré, Paris, was built from his designs, which were, however, modified by Cheret.

ERRINGTON, JOHN EDWARD, civil engineer, was born at Hull, December 29th, 1806. He first studied under an officer of Royal Engineers engaged on public works in Ireland; then under a railway surveyor, and then under Mr. Rastrick, the civil engineer. As assistant to Mr. Joseph Locke, he was actively engaged in the planning and execution of the Grand Junction Railway (Birmingham to Newton), the Glasgow and Greenock Railway, and Glasgow Harbour. The formation of an economical railway through a mountainous country from Lancaster to Carlisle proved to be an important work in connecting the English and Scottish lines, and brought high repute to Messrs. Locke and Errington. The Caledonian, the Clydesdale Junction, the Scottish Central, the Scottish Midland, and the Aberdeen railways all in turn engaged the attention of the firm. Mr. Errington, as engineer-in-chief, planned and executed the Yeovil and Exeter line. The railway bridges over the Thames at Kew, Richmond, and Kingston were from his designs. Mr. Errington, who joined the Institution of Civil Engineers in 1837, died July 4th, 1862.

ERWIN VON STEINBACH, a famous German mediæval architect, was probably a native of Steinbach, near Bühl, in Baden, though he is claimed by other towns of the same name. While yet young he was of sufficient eminence to be entrusted by Konrad von Lichtenberg, Bishop of Strasburg, with the completion of Strasburg Cathedral. The task assigned to Erwin appears to have been the completion of the nave, the erection of the tower and west front, and the ornamentation of the interior. The foundations were commenced by him in February 1276; the corner stone was laid with due ceremony May 25, 1277. Earthquakes, lightning, and other misfortunes are said to have hindered the progress of the undertaking, but Erwin laboured steadily on for seven-and-thirty years, and though he left the work far from finished, he lived to see it in so forward a state that its completion would be merely a labour of time and patience. How far he had carried forward the grand front is uncertain, but the design is no doubt in the main his. The upper part of the tower was added long after his death, and evidently differs considerably from what he intended. The parts which are understood to be by him, though objections may be taken to the details, place him among the greatest of the architects of the Middle Ages. Whether he built anything else is not known. He is said to have been a sculptor as well as an architect, and to have executed a tribune and other carvings, which were the most admired of any in the cathedral. He died at Strasburg, on the 17th of January, 1318. There is a contemporary statue of him in the cathedral, but he was buried in the cemetery of the chapel of St. John. A memorial was erected in his honour by Steinbach, in Baden, in 1845. Erwin's son, JOHANN, succeeded his father as overseer or architect of Strasburg Cathedral, and superintended the works till his death, March 18th, 1339. He was succeeded by Helz of Cologne. SABINA, the daughter of Erwin von Steinbach, attained celebrity as a sculptor. She executed many of the carvings of Strasburg Cathedral, especially those of the south porch. WENNING, a younger son of Erwin, built the collegiate church of Hasselbach in Baden, where his gravestone bears the date of 1330.

ESCHENBACH, WOLFRAM VON [WOLFRAM VON ESCHENBACH, E. C. vol. vi., col. 792].

ESCHRICHT, DANIEL FREDRIK, an eminent Danish zoologist, was born at Copenhagen, March 18, 1798. In 1825 he took his degree of Doctor of Medicine, and went to Nexø, in the island of Bornholm, in order to follow his practice. This seems to have been somewhat interrupted, owing to his being engaged by the State in making scientific journeys to various countries. In 1830 he became extraordinary, and in 1836 ordinary professor of medicine in the University of Copenhagen. His contributions to science consist of some elaborate and highly valuable investigations on whales, of some elucidations of human physiology, and more or less detailed accounts of entozoa and polyzoa. Amongst the more important may be particularised, *'Description de l'œil humain'*, 1843; *'Recherches Zoologiques, Anatomiques, et Physiologiques sur les Cétacés des Mers Septentrionales'*, 1849; *'Anatomisch-physiologische Untersuchungen über die Bothryocephalen'* in *'Nova Acta Acad. Cæs. Leop.'* xix, pp. 1—152 (1841); *'Undersøgelsen over Hvaldyrene'* (Researches on the Cetacea), in *'Det Kongelige Danske Videnskabskabernes Selskabs naturvidenskabelige og matematiske Afhandlinger'*, xi, pp. 1—378 (1845); xii, pp. 225—396 (1846); i, pp. 85—138 (1849); and his paper written in association with Reinhardt, *'Om Nordhvalen'* (*Balaena mysticetus* L.), in *'Det. Kong. Dans. Vid. Sels. Skrifter'*, v. pp. 433—589 (1861). He died on the 22nd of February, 1863. Just before his death he was preparing a new work on cetaceans, but he had not got beyond a fragment of the introduction, in which he deals, almost exhaustively, with the geographical distribution of these creatures. It appeared in the *'Ann. de Sciences Naturelles'* for 1864, pp. 201—224. His collection of crania of the races of men of Northern Europe was one of the best in existence.

ESENBECK, C. G. NEES VON [NEES VON ESENBECK, E. C. S.].

ESPY, JAMES P., an American meteorologist, was born about 1795. In early life he was occupied in teaching, but owing to his perusal of the works of Daniell and Dalton, he resolved to devote himself to the study of meteorology. He experimented and studied, and the results were given in lectures on meteorology, on which lectures he mainly relied for an income. He took an active part in organising the system of meteorological observation adopted in Pennsylvania. He worked out a theory of storms, which received considerable attention. It is developed in a series of papers contributed to the *'Journal of the Franklin Institute'* for 1831 and following years. He died at Cincinnati, Ohio, January 24, 1860.

* ESQUIROS, HENRI ALPHONSE, a French author who is favourably known in this country for the singular intelligence of English character which his works have displayed, was born at Paris in the year 1814. He made his first literary venture as the author of a volume of poems, entitled *'Les Hirondelles'*, 8vo, Paris, 1834, which he followed with two romances, *'Le Magicien'*, 2 vols. 8vo, Paris, 1837, and *'Charlotte Corday'*, 2 vols. 8vo, Paris, 1840, an illustrated edition, 4to, 1848, and in *'Les Veillées Littéraires Illustrées'*, folio, Paris, 1850. His next work was an anonymous one, *'L'Evangile du Peuple'*, 12mo, Paris, 1840, and as part of *'Les Veillées Littéraires Illustrées'*, folio, Paris, 1850, which, nineteen days after its first publication, was seized and destroyed as being a revolutionary and socialistic adaptation of the life of Christ, whilst its author was condemned, January 30th, 1841, to a fine of 500 francs, and to eight months' imprisonment. Upon this he wrote an apology for the work, which he called *'L'Evangile du Peuple défendu'*, 12mo, Paris, 1841; and as the literary results of his captivity, published *'Les Chants d'un Prisonnier'*, 16mo, Paris, 1841, and *'Souvenirs Politiques de Sainte Pélagie'*, 32mo, Paris, 1841. To these followed a series of small socialistic works on women, *'Les Vierges Folles'*, 32mo, Paris, first three editions, 1841; *'Les Vierges Martyres'*, 32mo, Paris, 1842; and *'Les Vierges Sages'*, 32mo, Paris, 1842. Some years afterwards he produced his *'Histoire des Montagnards'*, 2 vols. 8vo, Paris, 1847, and in *'Les Veillées Littéraires Illustrées'*, folio, Paris, 1850, Spanish translation, 8vo, Bogota, 1855; *'Paris, ou les Sciences, les Institutions, et les Mœurs au XIX^e Siècle'*, 2 vols. 8vo, Paris, 1847; a poem entitled *'Fleur du Peuple'*, 12mo, Paris, 1848; and *'Histoire des Amants célèbres de l'Antiquité'*, 8vo, Paris, vols. i. and ii. 1848, a work which was designed to extend to 6 volumes, and which was undertaken jointly by M. and Madame Esquiros, who were likewise associated in the production of *'L'Accusateur Public'*, folio, Paris, 1848, and *'Le Peuple'*, folio, Paris, 1848, of which four numbers and one number respectively were published. M. Esquiros now

became the editor of a journal at Marseille, and was elected to the Assemblée Nationale as representative for the department of Saône-et-Loire, in 1850, in which year he produced his treatise 'De la Vie future au point de Vue Socialiste,' 8vo, Marseille, 1850; which he followed with 'Histoire des Martyres de la Liberté,' folio, Paris, 1851, and 'Les Fastes Populaires, ou Histoire des Actes héroïques du Peuple et de son Influence sur les Sciences, les Arts, l'Industrie, et l'Agriculture,' 4 vols. 8vo, Paris, 1851—52. After the coup d'état of the 2nd of December, 1851, M. Esquiros was forced into exile, and resided successively in Belgium, Holland, and England. He devoted much time and sympathetic intelligence to a study of English life and the English people, the results of which he communicated from time to time to the 'Revue des Deux Mondes,' and afterwards gave them a substantive publication with the title of 'L'Angleterre et la Vie anglaise,' 4 vols. 12mo, Paris, 1859—64, English translation by Sir L. Wrexall, as 'The English at Home,' 2 vols. 8vo, London, 1861, second series, 1862, and third, 1863. The general elections for the Corps Législatif in 1869 recalled M. Esquiros to France, and he was chosen as the representative of the 4th Circumscription of the Bouches-du-Rhône. Upon the proclamation of the Republic on the 5th of September, 1870, he was appointed to be prefect of Marseille, where he was enthusiastically received, and where he applied himself at once to the task of raising volunteer reinforcements for the defence of the country.

The other works of M. Esquiros include 'La Néerlande et la Vie Hollandaise,' 2 vols. 12mo, Paris, 1859; 'Une Vie à Deux,' 4to, Paris, 1859; 'Les Moralistes Anglais. Pensées, Maximes, Sentences, et Proverbes, tirés des meilleurs Ecrivains de l'Angleterre,' &c., 12mo, Brussels, 1859; 'Cornwall and its Coasts,' 8vo, London, 1865; 'Religious Life in England,' 8vo, London, 1867; and 'English Seamen and Divers,' 8vo, London, 1868.

ESSEX, WILLIAM, an eminent painter in enamel, was the son of an enameller of watch-dials at Clerkenwell, where he was born August 1, 1785. Some early attempts at painting in enamel obtained him the favourable notice of Flaxman and other artists, and an introduction to Messrs. Rundell and Bridge, who employed him in executing enamel miniatures for jewellery. Some which he painted for them of George IV. procured him the appointment of painter in enamel to the king; an appointment he held successively under William IV. and her present Majesty, by whom he was largely patronised. Essex executed a great number of miniature portraits of distinguished personages with exceeding delicacy and refinement; but he perhaps acquired more celebrity by his copies in enamel of paintings after the old masters, and Reynolds, Lawrence, Wilkie, and other eminent English painters. Some of these are of considerable size, and admirably drawn, whilst the handling, as well as the colour, of the respective painters, is imitated with singular fidelity. His variety of imitative power, rare amongst enamel painters, is well shown in the 'Ecce Homo,' after Correggio, the so-called Gevarthus, of Vandyck, Reynolds's 'Strawberry Girl,' Wilkie's 'Cottage Toilet,' and Lawrence's, 'Master Lambton.' Mr. Essex, who retained his skill of hand till an advanced age, died at Brighton, on the 29th of December, 1869.

EUSTACE, JOHN CHETWODE, born about 1765, was educated at the Jesuit College, Stoneyhurst; entered the order; and, about 1795, was appointed professor of literature at the Roman Catholic College, Maynooth. Mr. Eustace wrote an elegy on the death of Burke, and some controversial pamphlets, but he is now only remembered by his 'Classical Tour through Italy, An. MDCCCII,' 2 vols. 4to, London, 1813. This was the first book of its kind in the language, and though it met with some censure, it was very successful, and secured for the author a high reputation. A second edition, 4to, was published in 1814, after which it was several times reprinted in 8vo, the 6th edition in 4 vols. appearing in 1821, and the 8th in 3 vols. in 1841. Eustace obtained his acquaintance with Italy and its antiquities during several visits and occasional residence as private tutor and guardian to some young members of Roman Catholic families. The book was valuable at the time of its publication, and may be referred to with advantage even now, but it has been in the main superseded by later works. Eustace was engaged in collecting materials for a Supplement when he was attacked with fever at Naples, and died there in 1816. The Supplement was completed by Sir R. Colt Hoare. Mr. Eustace wrote an account of a visit to Paris with one of his pupils, 'Letters from Paris to George Petre, Esq.,' 8vo, 1814.

EVANS, GENERAL SIR DE LACY, G.C.B. [E. C. vol. ii. col. 845]. Sir De Lacy Evans was gazetted general in 1861; he

had already received the distinction of Grand Cross of the Order of the Bath and Grand Cross of the Legion of Honour. He continued to represent Westminster and to take his place in the House of Commons until 1865, when increasing years warned him that it was time to retire from public life. He died on the 9th of January, 1870, aged 82.

*EVANS, MARIAN, distinguished as a novelist and poetess under the pseudonym of George Eliot. Miss Evans's first important literary venture was in a field far apart from that which later she cultivated with such eminent success, the translation, namely, of the much-canvassed 'Leben Jesu,' 'The Life of Jesus Critically Examined.' By D. F. Strauss. Translated from the fourth German edition, 3 vols. 8vo, London, 1846. This was followed by a translation of another remarkable German work, 'Das Wesen der Christenthums,' 'The Essence of Christianity.' By L. Feuerbach. Translated from the German by Marian Evans, 12mo, London, 1853. About this time Miss Evans is also said to have been engaged on the editorial staff of the 'Westminster Review,' and to have contributed critical accounts of books of the class indicated by the works above cited.

The earliest stories from her pen, so far as we know, were 'Scenes from Clerical Life,' 8vo, Edinburgh and London, 1858, which had previously appeared in 'Blackwood's Magazine.' The Scenes attracted considerable attention, and the firm yet delicate drawing of the principal characters was recognised by judicious critics, but the work can hardly be said to have made a very deep impression. 'Adam Bede' (3 vols. 8vo, 1859), however, was instantaneously successful. Speculation was rife as to the real author, and half-a-dozen claimants contended, personally or by their champions, for the honour. But while readers were in doubt and darkness as to the name and even sex of the writer, there was no doubt that in George Eliot England possessed a novelist of original genius. Adam Bede and his mother 'Lisbeth, the gentle semi-quakeress Dinah Morris, and above all, Mrs. Poyser, with her ready proverbs and quaint sententious sayings, were universally recognised as veritable creations, beings possessed of life, breath, and personality. It was felt that it was long since a novel had appeared of such assured simplicity of construction, quiet strength of diction, dramatic power, and sweetness of unobtrusive description, combined with purity of feeling, breadth of sympathy, imagination, pathos, and kindly humour. 'The Mill on the Floss,' 1860, had a severe ordeal to bear as the successor of 'Adam Bede,' but on the whole it sustained the trial bravely. 'Silas Marner,' 1861, was a vigorous and spirited, but less ambitious story, in a single volume. The authoress had seemingly reserved her strength for 'Romola,' 1863, a story of great and original power, but in quite a different line from its predecessors, the scene being Florence in the time of Savonarola—a story concerning itself with art and poetry, and which might have been a poem. But eloquent and beautiful as it is, it is not the kind of story to suit the ordinary novel reader, and it was far less popular than its predecessors, and is likely to remain so, whatever critics may say. In 'Felix Holt, the Radical,' 1866, the authoress returned to the scenes and personages of her first success, but here the peasants and working men moved in more stirring times, and were in a sterner mood, and altogether the story was of a more elevated tone of thought and feeling.

From these two the transition was easy to the narrative and dramatic poem. The 'Gipsy Queen,' which appeared in 1868, is poetry of a very high order of excellence, and contains many passages of great beauty, depth, and power, and much noble and subtle thought; but readers generally, remembering Adam Bede, pronounced it deficient in interest. Her latest production is 'Agatha: a Poem,' 8vo, London, 1869. 'Adam Bede' and the 'Mill on the Floss' have been translated into German by J. Freese, the former, 2 vols. Berlin, 1860, the latter, 2 vols. Berlin, 1861.

EVEREST, SIR GEORGE, a distinguished geodesical surveyor, was born at Gwerndale, Brecknockshire, July 4th, 1790. He entered the Military Academy at Woolwich, where he was much noticed by Dr. Hutton, the mathematical master; and in 1806 he went out to India as cadet in the Bengal Artillery. Whilst serving in Java, from 1813 to 1816, he was employed by Sir Stamford Raffles to survey that island. He was next engaged in establishing a system of semaphore signals or telegraphs, from Calcutta to the north-west of British India. The experience acquired in these services led to his being selected as assistant to Colonel Lambton, Superintendent of the Trigonometrical Survey of India. After this, for a time, he went to the Cape of Good Hope, where he detected an error in La Caille's measurement of an arc of the meridian; his papers on this subject, in the

Memoirs of the Royal Astronomical Society, led to a more accurate measurement of an arc by Sir Thomas Maclean. On the death of Colonel Lambton, in 1823, Everest was appointed his successor on the great ordnance survey of India. He completed an arc of the meridian to lat. $24^{\circ} 7' N.$; and the East India Company supplied him with the means for publishing the result of his labours, in 'An Account of the Measurement of the Arc of the Meridian between the parallels of $18^{\circ} 3'$ and $24^{\circ} 7'$; being a continuation of the grand Meridional Arc of India, as detailed by Lieutenant-Colonel Lambton in the volumes of the Asiatic Society of Calcutta,' 4to, London, 1830. After visiting England, Everest returned to India, with some fine surveying instruments made by Troughton; and in 1832 he commenced the prolongation of the arc to the Himalaya. This great work was finished in 1841, and was described in 'An Account of the Measurement of two sections of the Meridional Arc of India, bounded by the parallels of $18^{\circ} 3' 15''$, $24^{\circ} 7' 11''$, and $20^{\circ} 30' 48''$,' 4to, London, 1847. He gradually rose to the rank and title of Colonel Sir George Everest, and was elected member of several scientific societies. He died December 1st, 1866. Colonel Everest was the inventor of an instrument for taking angles in the field with great accuracy.

EVERETT, EDWARD, D.C.L. [E. C. vol. ii. col. 847]. In 1860 Mr. Everett was nominated by the Unionist party a candidate for the vice-presidency of the United States, but was not elected, and thenceforward confined his energy mainly to the furtherance of the moral and intellectual progress of his native State. He was the leader in the movement for the purchase of Washington's estate, Mount Vernon, and its preservation as national property. He died at Boston, January the 15th, 1865.

* EWALD, GEORG HEINRICH AUGUST, VON, one of the foremost biblical scholars in Europe, was born at Göttingen on the 16th of November, 1803, and was educated successively at the gymnasium and the university of his native city. In 1823 he became a professor at the Gymnasium of Wolfenbüttel; and in the same year produced the first fruits of his oriental learning, in the shape of a Critical Enquiry into the Composition of the Book of Genesis, 'Die Composition der Genesis. Kritisch untersucht,' 8vo, Brunswick, 1823. Having, through the recommendation of Eichhorn, his former teacher, received in 1824 a licence to lecture as repetent in the faculty of theology in his own university, he returned to Göttingen, where he was appointed, in 1827 and 1831 respectively, extraordinary and ordinary professor in the philosophical faculty, and in 1835 professor of oriental languages. After Eichhorn's death in 1827 he lectured on Old Testament Exegesis. In the years 1826, 1829, and 1836, he travelled, for the purpose of consulting various oriental manuscripts, to Berlin, Paris, and Italy; and during the same period published several works in oriental philology, 'De Metris Carminum Arabicorum Libri duo, cum Appendice,' &c., 8vo, Brunswick, 1825; 'Liber Wakedi de Mesopotamiæ expugnata Historia e codice Arabico,' &c., 4to, Göttingen, 1827; on some old Sanscrit Metres, 'Ueber einige ältere Sanskrit-Metra,' 8vo, Göttingen, 1827; 'Grammatica critica Linguae Arabicæ cum brevi Metrorum Doctrina,' 2 vols. 8vo, Leipzig, 1831—33; Lectures on Biblical and Oriental Literature, 'Abhandlungen zur biblischen und orientalischen Literatur,' 8vo, Göttingen, 1832; a Critical Hebrew Grammar, 'Kritische Grammatik der Hebräischen Sprache ausführlich bearbeitet,' 8vo, Leipzig, 1827; a Grammar of the Hebrew Language of the Old Testament, 'Grammatik der Hebräischen Sprache des Alten Testaments,' 8vo, Leipzig, 1828, second edition, essentially a new work, 1835, third edition, 1838, and greatly enlarged in successive editions up to the seventh, entitled 'Ausführliches Lehrbuch der Hebräischen Sprache des alten Bundes,' 8vo, Göttingen, 1863, English translation, by Nicholson, from the second German edition, 8vo, London, 1836; and a smaller Grammar for Schools, 'Grammatik der Hebräischen Sprache in vollständiger Kürze,' 8vo, Leipzig, 1828, the later editions of which, in 8vo, Leipzig, 1842 and 1855, and 8vo, Göttingen, 1862, are known as 'Hebräische Sprachlehre für Anfänger.'

The first act of the Duke of Cumberland, on his accession to the throne of Hanover in 1737, was the arbitrary repeal of the Hanoverian 'Staatsgrundgesetz,' or Constitution, against which measure seven professors—Dahlmann, Ewald, Albrecht, Gervinus, Weber, and the brothers Grimm—entered a solemn protest, which, being unavailing, they followed up by resignation. This step, which involved for the time being the destruction of the university, and its numerical weakness permanently, was honoured by the publication of a series of biographies, with portraits, of

the patriotic professors, 'Die Sieben Göttinger Professoren nach ihrem Leben und Wirken,' 8vo, Brunswick, 1838. Of the whole seven, none returned to his duties at Göttingen except Ewald, when the king, in the revolutionary year 1848, invited them back on honourable conditions. Leaving Göttingen on the 12th of December, 1837, he repaired to England, the libraries of which he frequented for the same purposes as those for which he had previously visited the libraries of the Continent; and in 1838 accepted a call to be ordinary professor of theology in the university of Tübingen. Whilst filling this office he published his translation of the Prophets, 'Die Propheten des Alten Bundes, erklärt,' &c., 2 vols. 8vo, Stuttgart, 1840—41, English translation, in part, comprising 'The Prophet Isaiah, chapters i.—xxxiii.,' 8vo, Cambridge and London, 1860; and commenced the issue of his History of the Jewish People, 'Geschichte des Volkes Israel,' 7 vols. 8vo, Göttingen, 1843—59, third edition, 1864, of which a partial translation by Professor Martineau was published as 'The History of Israel,' 2 vols. 8vo, London, 1867—69, second edition, 1869, which brought the history down to the Book of Judges, whilst another portion, the fifth volume, entitled 'Geschichte Christus und seiner Zeit,' was published in English as 'The Life of Jesus Christ,' 8vo, Cambridge and London, 1865, by the Rev. Octavius Glover.

In 1848, as we have seen already, Dr. Ewald resumed his intermitted functions at Göttingen, and published a pamphlet on his Departure from the University of Tübingen, &c., 'Ueber meinen Weggang von der Universität Tübingen, mit andern Zeitbetrachtungen,' 8vo, Stuttgart, 1848; since which time he has prosecuted his researches into special subjects of Biblical History and Criticism, having produced, as the result of his New Testament studies, a Translation and Exposition of the first three Gospels, 'Die drei ersten Evangelien übersetzt und erklärt,' 8vo, Göttingen, 1850; a Translation and Exposition of St. Paul's Epistles, 'Die Sendschreiben des Apostels Paulus übersetzt und erklärt,' 8vo, Göttingen, 1857; a Translation and Exposition of the Gospel, the Epistles, and the Apocalypse of St. John, 'Die Johanneischen Schriften übersetzt und erklärt,' 2 vols. 8vo, Göttingen, 1861—62. Dr. Ewald's other works include a Translation and an Introduction to the Song of Solomon, &c., 'Das Hohelied und der Prediger,' &c., 8vo, Göttingen, 1826; 'Commentarius in Apocalypsin Johannis exegeticus et criticus,' 8vo, Leipzig, 1828; the Poetical Books of the Old Testament, 'Die Poetischen Bücher des Alten Bundes, erklärt,' 4 vols. 8vo, Göttingen, 1835—37, second edition, with the modified title of 'Die Dichter,' &c., 1840—67, being a translation of the Books of the Psalms, Lamentations, Proverbs, Ecclesiastes, the Song of Solomon, and Job. In addition to the foregoing, Dr. Ewald has produced several works of a local, controversial, and political nature; and his contributions to oriental learning in various journals have been of great range and frequency. In 1837 he co-operated with other scholars in founding a valuable periodical entitled 'Zeitschrift für die Kunde des Morgenlandes,' which resulted in 1845 in the formation of the German Oriental Society. In 1849 he established the 'Jahrbücher der Biblischen Wissenschaft,' to which he was the chief, and sometimes the only contributor, and which he continued till 1865; and he has furnished learned disquisitions on Phœnician Inscriptions, on the Æthiopian Book of Enoch, and on the Sibylline Books, to the 'Göttinger gelehrte Anzeigen,' and especially to the Transactions of the Royal Scientific Society of Göttingen.

EWART, WILLIAM [E. C. vol. ii. col. 849]. Mr. Ewart continued to represent the Dumfries District of Burghs down to the Dissolution of 1868. He died at his seat, Broadless, near Devizes, Wiltshire, on the 23rd of January, 1869.

* EYRE, EDWARD JOHN, was born about 1817, in Yorkshire. When about 16 years of age he went to Sydney, commenced sheep-farming, and soon rose to opulence. He settled upon an estate which he had bought on the Lower Murray. He was appointed Protector of the Aborigines, and as such was engaged in settling the numerous disputes which arose between the natives and the colonists, a task which he executed with much tact. In 1839 he made an expedition into the interior of South Australia, but did not penetrate far. In 1840, he again tried to work his way north from Port Lincoln, but not succeeding, he made a journey of 1500 miles along the south coast of Australia, and ascertained the general absence of water-courses. After a visit to England in 1845, he was appointed lieutenant-governor of New Zealand, his brother, Sir George Grey, being governor. In 1854 he became lieutenant-governor of St. Vincent; in 1859-60, he was governor of Antigua. His health being impaired he returned to England, but in 1862 he

was called out again as governor at Jamaica. While at this post a rebellion broke out among the negroes in October, 1865, which he repressed by declaring martial law and executing or punishing the ringleaders. His measures were considered too severe and arbitrary by some persons; an inquiry was instituted, and Eyre himself was superseded. The committee of investi-

gation fully acquitted him of the charges brought against him, but as there was a great deal of ill-feeling prevalent, he was not reinstated in his post. On his return to England he was prosecuted on a charge of murder, and public subscriptions were raised on both sides in order to defray the legal expenses. This trial also resulted in his acquittal.

F

FABER, or **FABRI**, **JOHANN**, a prelate of the Romish Church, known, from the title of his principal work, as *Malleus Hæreticorum*, was born at Leuckirchen, in Suabia, in the year 1478. He became a member of the Dominican order, and distinguished himself in several of the universities of Germany. In 1519 he received the appointment of vicar-general to the Bishop of Constance; and in 1526 that of confessor to Ferdinand, King of the Romans, and afterwards Emperor, who entrusted him with a mission to King Henry VIII. of England. He was much engaged in controversy against the leaders of the Reformation, especially against Luther, Zwingle, and Ecolampadius. His manner in argument was impatient and intemperate; and, amongst other indiscreet expressions, he is reported to have exclaimed, when hard pressed in a discussion with Zwingle, "that the world might very well live in peace without the Gospel." In 1531 he was preferred to the bishopric of Vienna, which gave occasion to Erasmus to say that, "though Luther was poor himself, he made his enemies rich." His death is alternatively stated to have taken place on the 21st of May, or the 12th of June 1541. The works of Dr. Faber include his '*Moscovitarum juxta Mare glaciale Religio*,' 4to, Basel, 1526, 8vo, Basel, 1541; '*Adversus Doctorem, Balthasarum Pacimontanum, Anabaptistarum nostri Sæculi primum Authorem, orthodoxæ Fidei Catholicæ Defensio*,' 4to, Leipzig, 1528; and '*Malleus Hæreticorum*,' folio, 1524, which was reprinted at Rome in 1569. He was engaged in a collective publication of a large portion of his works at the time of his death; and they were issued as '*Opera*,' &c., 3 vols., folio, Cologne, 1537-41. The first and second volumes were devoted to his sermons, containing especially a series of seven Discourses on Baptism; to a treatise entitled '*De Fide et bonis Operibus*;' and to a '*Confutatio gravissimi Erroris asserentis in Sacramento Altaris, post Consecrationem non esse totum et integrum Christum*,' which was also published separately in 4to, Leipzig, 1537. The third volume, issued in 1541, contained his Homilies, and a Treatise on the Miseries of Human Life, '*Homiliarum de Tempore et Sanctis, Centuria Prima*,' and '*Declamationes divinæ de humanæ Vitæ Miseria*,' the latter of which had been first published in folio, Augsburg, 1520.

* **FAED**, **THOMAS**, **R.A.**, was born in 1826 at Burley Mill, Kirkcudbrightshire. Following in the footsteps of an elder brother, he went to Edinburgh; became a student in the Trustees Academy; made himself favourably known by some drawings in water colours, and afterwards by oil paintings of Highland shepherds and other rustic homely subjects, and was elected Associate of the Royal Scottish Academy. Mr. Faed's great Scottish success, however, was made with his '*Sir Walter Scott and his friends at Abbotsford*,' 1849, which was engraved. Soon after this he settled in London, and in 1853 succeeded in catching the public eye by a picture in the exhibition of the Royal Academy, '*The Mitherless Bairn*.' Thenceforward he continued to furnish a continuous supply of pictures—some years one, in others many—in the same strain, setting forth in a manner that every one could understand and appreciate illustrations, painted in a broad, bright, clever, conventional way, of humble Scotch domestic life, Scotch piety, thrift, poverty, humour, sentiment; and every year he found his popularity increase. His pictures, among a hundred others, include such subjects as—'*The first break in the family*,' 1857; '*A Listener never hears gude o' himsel*,' 1858; '*My ain fire-side*,' and '*Sunday in the Backwoods*' (a Scotch emigrant family in their settlement), 1859; '*His only pair*,' 1850; '*From Dawn to Sunset*,' 1861; '*The Silken Gown*,' 1863; '*Baith Faithier and Mither*,' 1864; '*The Last of the Clan*,' 1865; '*Ere care begins*,' 1866; '*Homeless*,' 1869; '*When the day is gone*,' 1870. Mr. Faed was elected A.R.A. in 1861; R.A. in

1865. His elder brother, * **JOHN FAED** (born 1820) is also a painter of merit, but more appreciated in Scotland than in England.

FALCONER, **HUGH**, palæontologist and botanist, was born at Forres, in Elginshire, February 29, 1808, and belonged to the old Scotch family of the Falconers of Lethen and Halkerton. He studied first at the grammar-school of Forres, and afterwards at King's College, Aberdeen. In 1826 he took his degree of M.A. at Aberdeen, and then went to Edinburgh to pursue a course in medicine. Here Professor Graham stimulated his love for botany, and Professor Jameson for that of geology and zoology. In 1829 he took his degree of M.D.; and in the same year he was appointed an assistant-surgeon in the Bengal army; but being below the age of admission to duty he spent the few months which were thrown on his hands in assisting Dr. Wallich in the arrangement of his Indian herbarium; and in examining the collections of fossils in London, and some mammalian remains which were obtained from the banks of the Irawaddy river, by Mr. John Crawford. In 1830 Falconer proceeded to Calcutta, and at the first opportunity he examined the fossil bones from Ava in the museum of the Asiatic Society at that place, and the results were given in his first paper, entitled '*Note on certain specimens of animal remains from Ava*,' in '*Gleanings in Science*,' vol. iii. pp. 167-170 (1831). In the following year he was ordered to Meerut, near Delhi, and was charged with the care of some invalids who were about to proceed to the sanatorium of Landour, in the Himalaya Mountains. In his journey he passed through Suharunpore, where Dr. Royle had the superintendence of a botanic garden; and a strong friendship sprang up between them, which had an influence on Falconer's career. When Dr. Royle had leave of absence Falconer was appointed to officiate in his stead, and in 1832, when Dr. Royle left for Europe, the entire management was placed in Falconer's hands as superintendent. Suharunpore is situated in the country between the head waters of the Jumna and Ganges, and a little to the south of a low range of hills, which run in front of, and form a sort of step to, the great Himalaya range. This low range is formed of tertiary deposits, and was called the Sewalik Hills by our subject, a name which had been previously applied rather vaguely, and sometimes to the outer ridges of the true Himalayas. His earliest field explorations had for object the examination of these hills, and partly from some plant remains discovered by Lieutenant (now Sir Proby) Cautley, partly from the character and arrangement of the strata, he determined them to be tertiary. Soon after this conclusion had been arrived at he heard of some obscure fossils which led him to suspect that these strata contained osseous remains. In April, 1834, he found the carapace of a fossil tortoise, and this led to active and extensive operations being undertaken by himself and Captain Cautley, which resulted in the collection of a tropical fossil mammalian fauna of unrivalled richness and variety. It embraced several kinds of creatures related to the elephant, rhinoceros, hippopotamus, horse, camel, giraffe, and many others. Amongst the most striking forms were a four-horned ruminant, *Sivatherium*, and a gigantic tortoise, *Colossochelys Atlas*. There were also numerous birds, reptiles, and fishes. But Falconer and Cautley were sufficiently well versed in palæontology to determine the affinities of the remains found by them, and they lived far beyond the pale of scientific authorities and books. They wrote to Europe for the works of Cuvier and others, but the volumes never reached them. But these obstacles were overcome by dint of enthusiasm and perseverance. They collected specimens of all the animals of the district, and mounted their skeletons so as to facilitate the determination of the nature of the fossils. This work was carried on steadily

for years. Other things, however, also occupied Dr. Falconer's attention. In 1834 he recommended the culture of the tea-plant in India, and he spent some time in traversing the Sewalik hills and their neighbourhood in search of suitable sites. As superintendent he himself explored large areas for species of plants, and employed trained collectors for the same purpose; in which way he added largely to Indian botany. In 1837 he accompanied Burnes's second expedition to Cabul, but when they reached Peshawur he quitted the party, and went to Cashmere, where he lived for many months, busily occupied in making extensive natural history collections. In 1838 he explored the valley of Skuardo and the great glaciers descending from the Muztagh range; and returned to Cashmere by the valley of Astore, where he discovered *Narthex assafetida*, and determined it to be the true source of the assafetida of commerce. He worked his way back to Saharunpore through the Punjab, between which tract and Cashmere he discovered fresh evidence of the Sewalik group of beds. The collections formed in this journey filled nine carts, and comprised many new species of plants and mammalia, and hundreds of species of seeds and birds' skins. His incessant activity at all seasons subjected him to numerous attacks of illness, and his constitution was so weakened that he was obliged to return to Europe on sick leave in 1842. The collections he brought home comprised seventy large chests of dried plants, and forty-five cases (weighing in the aggregate five tons) of fossil bones. From 1843 to 1847 he lived in England. In 1840 Captain Cautley gave to the British Museum his collection of fossils, which had cost him ten years' labour, and filled 214 large chests, the carriage of which from India cost upwards of 600*l*. The whole series, or the great bulk of it, was in a chaotic state, and the leaders of the scientific world urged upon government the desirability of arranging and displaying it. Dr. Falconer was commissioned to do this, and to draw up a work illustrative of the specimens. This work was the 'Fauna Antiqua Sivalensis.' As fast as the specimens could be cleaned and fitted for exhibition, they were figured by Mr. Ford, and in the course of three years 9 parts of the work were issued, each containing twelve folio lithographic plates. The labour of preparing, comparing, and identifying the specimens was so great that little time was available for writing the letterpress; and in December, 1847, the further progress of the work was practically stopped, for Dr. Falconer was then compelled to return to India. On his return to India, he succeeded Dr. Wallich as superintendent of the Botanic Garden at Calcutta, and as such was the adviser to the government on all matters pertaining to Indian plants. He reported on the best means of preserving the teak forests; he recommended and did much towards promoting the cultivation of Cinchona plants in India; wrote reports on the shawls of Cashmere for the Official Catalogue of the Great Exhibition of 1851; on the cochineal insect of the Punjab, and on other subjects. In 1854 he undertook to arrange and catalogue the specimens in the Calcutta Museum, a work of unusual difficulty, owing to their being for the most part without date, place, or reference of any kind. His familiarity with Indian fossils greatly assisted him in reducing them to order. In 1855 he retired from the service, and returned to England, visiting the Crimea, the Holy Land, and other oriental places on his way home. He now renewed his palæontological researches; but his health compelled him to spend a large portion of his time in the south of Europe. In 1857 he communicated to the Geological Society an important paper 'On the Species of Mastodon and Elephant occurring in the fossil state in England.' The first part was published in the 'Quarterly Journal' of the Society for 1857; but the second was postponed pending the result of some investigations he was engaged in, and was not published until August, 1865. His attention was also largely given to other mammalian genera, such as *Rhinoceros*, *Plagiolax*, *Cervus*, *Spermophilus*, and others; to caves and their fossil contents; and to the antiquity of man. He took an active part in connection with the exploration of Brixham cave, the caves of Dordogne, and the caves of Gibraltar. It was on his return from this last locality in the beginning of 1865 that the diligence in which he was travelling through Spain broke down, and caused his exposure to severe wintry weather, for which his constitution was quite unfitted; the result was that he was attacked with rheumatism, which developed into disease of the heart and lungs, and brought him to his end on January 31, 1865. At the time of his death he was engaged in writing a work 'On Primeval Man,' for which he had special advantages. He was a member of numerous societies. He took great interest in the foundation of scholarships in the University of Edinburgh for deserving students in natural science, and since his death a

BIOG. DIV.—SUP.

'Falconer Memorial' has been provided, consisting of two busts—one placed in the rooms of the Royal Society, the other in the Museum of the Asiatic Society of Bengal at Calcutta,—and of a 'Falconer Fellowship' in the Edinburgh University. Dr. Falconer had a reputation for a depth and range of knowledge, which his published works scarcely seemed to justify. If, however, he published comparatively little, it was owing to his reluctance to commit himself to statements without having thoroughly satisfied himself of their accuracy. His palæontological writings, a large proportion posthumously published, have been brought together under the title of 'Palæontological Memoirs and Notes of the late Hugh Falconer, M.D., etc.,' 2 vols. 8vo, London, 1868, to which is prefixed a biographical sketch by the editor, Dr. Murchison; from which the preceding details have been derived. His voluminous botanical notes have been placed in the library connected with the Herbarium at Kew.

FARADAY, MICHAEL [E. C. vol. ii. col. 871], "Born September 22nd, 1791, Died August 25th, 1867," is the only inscription on a plain slab that marks the grave of this great man in Highgate Cemetery. The year before his death he wrote, "I have told several what may be my own desire; to have a plain simple funeral, attended by none but my own relatives, followed by a gravestone of the most ordinary kind, in the simplest earthly place." In addition to the notice in the E. C., a few personal particulars may be interesting here. They are derived from the outline contributed by Dr. Bence Jones, F.R.S., Secretary to the Royal Institution, to the obituary notices of deceased Fellows of the Royal Society, and it has the rare merit of making the subject of the notice speak for himself, the writer doing scarcely more than connect Faraday's language into a consistent whole. The notice is divided into a series of headings, giving the age of Faraday, with the date, the first being, "Æt. 1 to 12 (1791 to 1804)," the second "Æt. 13 to 19 (1805 to 1811)," the third "Æt. 20 (1812)," after which there are Notices, Extracts from Journals, Letters, &c., for every year down to "Æt. 75 (1867)." Dr. Bence Jones has also published the 'Life and Letters of Faraday,' in 2 vols. 8vo, 1869, and Dr. Tyndall, in a single volume, has given an account of 'Faraday as a Discoverer.'

Faraday belonged to a religious family of nonconformists, known as Glasites, or Sandemanians, their leading doctrine being that the revealed will of Christ should be the supreme and only law, not only in church questions, but in every thought, word, and deed. Faraday held this doctrine throughout his life, as though it had been a special revelation to himself.

Faraday was born at Newington, in Surrey, but his father, obtaining work as a blacksmith in Welbeck-street, went to live in Gilbert-street, but shortly after removed to rooms over a coach-house in Jacob's Well Mews, Charles-street, Manchester-square, where Michael lived for nearly ten years. He has pointed out where he played at marbles in Spanish-place, and where he took care of his little sister in Manchester-square. His education consisted of little more than the rudiments of reading, writing, and arithmetic. At the age of thirteen he was placed in a bookseller's shop, No. 2, Blandford-street; in October, 1805, he was apprenticed to the master of the shop, Riebau, as a bookbinder and stationer, no premium being given. Among the books which Faraday had to bind was Mrs. Marcet's 'Conversations on Chemistry,' his first instructor, while the electrical treatises in the 'Encyclopædia Britannica,' which he was also employed to bind, taught him the rudiments of the science in which he made so many important discoveries. In his scanty leisure he contrived experiments in chemistry and electricity, and in 1810—11 he attended lectures on physics given by Mr. Tatum in Dorset-street, Fleet-street, paying one shilling for each lecture. He also studied perspective, from Taylor's work on that subject. In Tatum's lecture-room he became acquainted with several persons who lent him books, and took interest in his experiments.

He now felt an intense desire for scientific occupation, even though of the lowest kind, and this, he says, "induced me whilst an apprentice to write, in my ignorance of the world and simplicity of my mind, to Sir Joseph Banks, then President of the Royal Society. Naturally enough, 'No answer,' was the reply left with the porter." The very different behaviour of Sir Humphry Davy is described in the original memoir. On the 1st of March, 1813, Faraday was engaged as assistant in the laboratory of the Royal Institution at a salary of 25*s*. a week, with two rooms at the top of the house. Faraday continued his connection with the City Philosophical Society, founded in 1808 at Mr. Tatum's house, consisting of thirty or forty persons, who met every Wednesday evening for mutual instruction. This

L L

society was very useful to the members, some of whom adopted, with Faraday, a mutual improvement plan. "It consisted, perhaps, of half-a-dozen persons, who met of an evening to read together, and to criticise, correct, and improve each other's pronunciation and construction of language. The discipline was very sturdy, the remarks very plain and open, and the results most valuable. This continued for several years."

In October, 1813, Faraday accompanied Sir Humphry Davy through France, Italy, Switzerland, the Tyrol, Geneva, &c., and returned in April, 1815. His letters and journal contain some remarkable passages and some interesting particulars respecting Sir Humphry and Lady Davy. Soon after his return his salary was raised to 30*s.* a week. In January, 1816, he began a course of seventeen lectures on chemistry at the City Philosophical Society, and his first scientific paper was published in 'The Quarterly Journal of Science.' Later in life, when collecting his 'Experimental Researches on Chemistry and Physics,' he reprinted this paper, which was an account of an analysis of native caustic lime, he says: "I reprint this paper at full length; it was the beginning of my communications to the public, and in its results very important to me. Sir Humphry Davy gave me the analysis to make as a first attempt in chemistry, at a time when my fear was greater than my confidence, and both far greater than my knowledge; at a time, also, when I had no thought of ever writing an original paper on science. The addition of his own comments, and the publication of the paper, encouraged me to go on making, from time to time, other slight communications, some of which appear in this volume. Their transference from the 'Quarterly' into other journals increased my boldness, and now that forty years have elapsed, and I can look back on what successive communications have led to, I still hope, much as their character has changed, that I have not, either now or forty years ago, been too bold."

About this time Faraday was incessantly employed, as appears by a letter written in February, 1816, in which he says:—"It is now 9 o'clock p.m., and I have just left the laboratory and the preparation for to-morrow's two lectures. Our double course makes me work enough; and to them add the attendance required by Sir H. in his researches, and then if you compare my time with what is to be done in it, you will excuse the slow progress of our correspondence on my side." In consideration of the additional labour caused by Mr. Brande's lectures in the laboratory, his salary was increased to 100*l.* per annum. In the following August, when Mr. Brande left London, he gave the 'Quarterly Journal' in charge to Faraday. In 1818 he had six papers in this journal, but the year 1820 was one of the most important of his life, for in this year his first paper was read to the Royal Society, on two new compounds of chlorine and carbon, and on a new compound of iodine, carbon, and hydrogen. In this year, too, he proposed to the sister of his friend, Mr. Edward Barnard, of Paternoster-row, and having obtained permission to bring his wife to the institution, was married on the 12th of June, 1821. Faraday desired that the day should be considered just like any other day, and some of his relations felt hurt at not being asked to the wedding. As previously arranged by himself, "there will be no bustle, no noise, no hurry occasioned even in one day's proceeding. In externals, that day will pass like all others, for it is in the heart that we expect and look for pleasure."

In this year he published an account of some experiments on electro-magnetism, which now belong to science, but at the time they were supposed by some to have interfered with an inquiry on which Dr. Wollaston was engaged, so that when Faraday became a candidate for admission into the Royal Society, there was some opposition to his election, and Davy even requested him to take down his certificate. Faraday replied, that "he had not put it up; that he could not take it down, as it was put up by his proposers." At length, however, the opposition was withdrawn, and Faraday was elected January 8, 1824. He was also the original secretary of the Athenæum Club; but finding the occupation to interfere with his pursuits, he resigned in May, 1824. About this time he was associated with Mr. Brande in the delivery of the morning course of chemical lectures at the Institution, and in 1826 he was relieved from the duty of chemical assistant at the lectures.

Faraday's position as an original inquirer and lecturer was now fully established, but he preserved the freshness and simplicity of his character, as appears by a letter from Mrs. Faraday's brother, who frequently dined at the Royal Institution. He says, "After dinner we nearly always had our games, just like boys—sometimes at ball, or with horse chesnuts instead of

marbles, Faraday appearing to enjoy them as much as I did, and generally excelling us all." In 1831, the first series of 'Experimental Researches in Electricity' was read before the Royal Society, a work which was continued to 1856, and afterwards published separately in four volumes octavo. In order to find time for this investigation, Faraday declined a large amount of highly remunerative work, as an analytical chemist and scientific adviser, which was offered to him. Some idea of the amount of self-denial thus required will be gained from the report of a committee of the Royal Institution on the salaries of its officers in December, 1832. "The committee are certainly of opinion that no reduction can be made in Mr. Faraday's salary, 100*l.* per annum, house, coals, and candles, and beg to express their regret that the circumstances of the Institution are not such as to justify their proposing such an increase of it as the variety of duties which Mr. Faraday has to perform, and the zeal and ability with which he performs them, appear to merit." In 1835 Faraday's scientific services attracted the attention of government, and it was proposed to give him a pension. In an interview with Lord Melbourne, his lordship is said to have expressed his opinion that the system of giving pensions to literary and scientific persons was a piece of gross humbug, whereupon Faraday retired, and wrote to Lord Melbourne a letter in which he says:—"I could not, with satisfaction to myself, accept at your lordship's hands that which, though it has the form of approbation, is of the character which your lordship so pithily applied to it." Lord Melbourne had the good sense to write to Faraday a letter of explanation which amounted to an apology, and the pension was granted on the 24th of December, 1835. In 1836 Faraday was appointed adviser to the Trinity House, on the condition that the appointment should not involve anything like periodical routine attendances, but only occasional consultation. He held this post during thirty years.

We get a further glimpse of Faraday's domestic life from Miss Reid, a niece of Mrs. Faraday's, who resided during some years at the Institution. She says, "He was fond of all ingenious games and he always excelled in them. For a time he took up the Chinese puzzle, and after making all the figures in the book, he set to work and produced a new set of figures of his own." He also amused himself with papyro-plastics and made a chest-of-drawers, pigeon-house, &c. When dull and dispirited, his wife used to take him to Brighton or somewhere out of town. "Once they had very wet weather in some out-of-the-way place and there was a want of amusement, so he ruled a sheet of paper and made a neat draught-board, on which they played games with pink and white lozenges for draughts." He was also fond of bagatelle, "he never missed seeing the wonderful sights of the day—acrobats and tumblers—giants and dwarfs;" he was also fond of the theatre.

Faraday often complained, after he had reached fifty years of age, of giddiness and want of memory, but he was greatly relieved by rest and travel and change of air; nevertheless he continued to perform first-rate scientific work. In 1858, Prince Albert offered him a house on Hampton Court green, but as it required repair, he expressed some doubt as to whether he could afford the expense, when the Queen undertook everything that was necessary, and Faraday took up his abode there. In 1860, he gave his last course of Juvenile Lectures 'on the chemical history of a candle,' and on the 20th of June, 1862, he gave his last Friday evening discourse on 'gas-furnaces.' This year he paid particular attention to the magneto-electric light, proposed for light-houses. He was also examined at great length by the public school commissioners, and strongly recommended the study of natural science as a part of education. When asked at what age physical science should be introduced, he said, "I have never found a child too young to understand intelligently what I told him." In 1865 he resigned his office at the Trinity House, and also his position at the Royal Institution, as director of the laboratory. In 1866, Faraday's favourite assistant, Anderson, died, and at length, in 1867, at the age of 75, died "this blacksmith's son from Jacob's Well Mews, full of religion and gentleness, genius and energy, who searched for and trusted to facts in his experimental researches, and thus left to science a monument of himself that may be compared even to that of Newton."

At the request of the Chemical Society, M. Dumas, the personal friend of Faraday, delivered in the theatre of the Royal Institution, an eloquent *éloge* in the French language, and the council of the Chemical Society founded a Faraday Lectureship. The members of the Chemical Society met at dinner on the

occasion of the inaugural Faraday lecture by M. Dumas, and there was also a meeting at the Royal Institution, under the presidency of H.R.H. the Prince of Wales, for the purpose of considering what measures should be taken for the promotion of a memorial, when it was resolved that a subscription not exceeding five guineas in amount from any one person, be made for the provision of a public memorial to Faraday. A large sum of money was collected, which it is proposed to spend in the production of a statue to be erected in St. Paul's Cathedral or in the British Museum. An appeal was made to the Government, but as Faraday was only a civilian, there was no precedent for contributing anything from the public purse. It was felt, and is still felt, that a more appropriate memorial would be a Faraday College, in which poor boys in poor schools who display an unusual amount of talent might be collected together and trained up in science.

FAREL, GUILLAUME, known as the pioneer of the Reformation in Switzerland, was the son of a gentleman of Dauphiny, and was born at Farel, or Fareau, near Gap, in the year 1489. He was educated at home as a strict adherent of the Romish Church; and, contrary to the wish of his father, who intended him for a military career, he elected to devote himself to a life of study, and about the year 1510 repaired to the University of Paris. After long and severe mental disquietude, he accepted the doctrine of salvation by grace, then propounded by Lefèvre, the Doctor of Étapes, by whose recommendation he became a teacher in the College of Cardinal Lemoine, one of the four principal houses of the theological faculty of Paris, and equal in rank to the Sorbonne. In 1521 he received an invitation from Briçonet, Bishop of Meaux, who was favourably inclined to the Reformation, to preach in that city, where he boldly propagated the new opinions. In 1523, in consequence of the persecution which was commenced at Meaux by the Franciscans, Farel retired to Strasburg, where he was received by Bucer and Capito, as he was afterwards by Zwingle at Zurich, by Haller at Berne, and by Eccolampadius at Basel, where in 1524 he publicly defended theses in opposition to the doctrines and usages of the Papists. Being obliged to quit the city, he undertook the evangelisation of Montbéliard, under the protection of the Duke of Württemberg, the lord of that place. In 1528 he was commissioned by the Council of Berne to expound the Scriptures to the people of Aigle and its neighbourhood, and extended his labours to Lausanne and Neuchâtel, and afterwards to Geneva, where he openly attacked the tenets of the Papacy. He was obliged to retire from Geneva, however, in consequence of ecclesiastical opposition; but was recalled in 1534, when the inhabitants were inclined to look with greater favour upon the Reformation. Being banished once more from Geneva, in 1538, on account of his contumacy against the decrees of the Synod of Berne, he retired to Neuchâtel, where, with inconsiderable intervals, he exercised his ministry for the rest of his life, and where he died on the 13th of September, 1565. His works, which are not voluminous, include 'Theses,' published at Basel, in German and Latin; 'Disputatio Bernæ habita,' 1528; 'Epistre envoyée au Duc de Lorraine,' 12mo, Geneva, 1543; a book against libertines, entitled 'The Sword of the Spirit,' 1550; 'Substance and brief Declaration necessary for all Christians,' 1552; and a 'Treatise of the Blessed Sacrament of the Lord, and of His Testament,' 1553. The life and labours of Farel have been the subject of several works of recent issue in Germany; and amongst the French and English works conversant about him may be mentioned 'Farel. Notice par Henri Monod,' 8vo, Paris, 1866; a 'Life of William Farel; or, Life in Action,' &c., 12mo, London, 1848, by "Philos;" and the Rev. W. M. Blackburn's 'William Farel; the Story of the Swiss Reform,' 8vo, Edinburgh, 1867.

FARINELLI, whose real name was CARLO BROSCHI, one of the most celebrated singers that ever lived, was born at Naples, January 24th, 1705. Evincing at an early age a taste for music, he was subjected by his father to an outrage against nature, as a means of obtaining or preserving for him that peculiar kind of soprano or feminine voice which was at that time so much admired in Italy. Having studied music under Porpora and Pistocchi, young Farinelli made his début at the Teatro Alberti, where he at once produced a great sensation by playing female characters—women at that time being forbidden to appear on the stage in the Roman theatres. He warbled a flute composition in competition with the greatest flautist of the age, and won the contest by his marvellous beauty of tone and rapidity of execution. For twelve years he was quite the rage in Italy, meeting with extraordinary success at all the principal theatres and opera houses. In 1734

there was a remarkable rivalry in London: Farinelli at the Lincoln's Inn Theatre, under Porpora; against Caffarelli at the Haymarket, under Handel. A story is told that Caffarelli himself admitted that the perfection of singing could be heard only from his great rival. After earning 15,000*l.* in three years in England, Farinelli went for a time to Paris, where he was in immense favour with the court of Louis XV. Philip V. of Spain being affected with melancholy, his Queen invited Farinelli, in 1737, to come to Madrid, where his singing was more beneficial to the monarch than any medical aid. This led to the bestowal of more honours and influence than were ever before or since enjoyed by a singer. During more than twenty years—first under Philip V., and then under Ferdinand VI.—Farinelli lived at the Spanish Court, receiving a munificent allowance, singing to the King and Queen whenever required, managing an Italian company at the Palace, and possessing great influence in the distribution of Court favours. Dismissed by Charles III. in 1762, he retired to Bologna, built a beautiful mansion, and resided peacefully there. He encouraged Martini to write his History of Music, and collected the best library of music known to that day. He died July 15, 1782. Dr. Burney described Farinelli as being the most exquisite and perfect singer ever known; while the singer was credited by other writers with many kindly and estimable qualities.

FARINI, LUIGI CARLO, an Italian physician, statesman, and historian, was born at Russi, in the province of Ravenna, on the 22nd of October, 1812. He was educated at the University of Bologna, where in 1831 he carried off the highest honours of the year. He now became secretary to his uncle, Domenico Farini, then newly appointed as director of police for the province of Forlì, under the provisional government of the Romagna, but left the quiet of this employment to take part as a volunteer in the expedition directed against Rome. The Austrian invasion arrested the revolution, and young Farini returned to prosecute his medical studies at Bologna. Having completed these, he practised successively in the village of Montessudolo, at Ravenna, and at his native place of Russi; and gave many proofs of his professional and scientific attainments. His liberal opinions rendered him obnoxious to the government of Gregory XVI.; and, being expelled from the Roman States in 1843, he first took refuge in Tuscany, and afterwards proceeded to France, everywhere extending his medical experience. The political amnesty granted on the 16th of July, 1846, by Pius IX., who in the previous month had succeeded to the Papal throne, permitted him to return to Italy; and he accepted, under the new Pope, an honourable professional appointment at Osimo. On the 10th of March, 1848, five days before the proclamation of the Constitution, he became Under-Secretary of State for the Interior, or Home Department; but resigned with his colleagues after the Allocation of the 29th of April, in which the Pope declared for a policy which favoured Austria at the expense of the hopes of the liberals of Italy. In October of the same year he was made Director of the Board of Health, but was ejected in February, 1849, by the Triumvirs of the Republic. He resumed his post on the entry of the French into Rome in July following; but was again dismissed by the Triumvirate of Cardinals. He now took refuge at Turin, where he became a contributor to several journals, but especially to 'Il Risorgimento,' the organ established by Counts Cavour and Cesare Balbo, for the advocacy of Italian unity; and published the most important of his works, 'Lo Stato Romano dell' Anno 1815 all' Anno 1850,' 2 vols. 8vo, Turin, 1850; second edition, "corretta ed accresciuta," 4 vols. 12mo, Florence, 1850—53, English translation, of which the first three volumes were the work of the Right Hon. W. E. Gladstone, and the last the work of a lady under his direction, 4 vols. 8vo, London, 1851—54; French translation, by Jules Amigues, 'L'Etat Romain,' &c., 8vo, Paris, 1862. Having occupied several important offices, the provisional government of the Duchy of Modena, on the flight of the Duke in June, 1859, was entrusted to Farini; who was sent to Naples in 1860, as Extraordinary Commissioner from the Government of Victor Emmanuel, to carry out the measures necessary for the incorporation of Southern Italy with the rest of the Peninsula. He resigned this office in January, 1861, and became, soon after, Minister of Commerce and Public Works. In the beginning of 1862 his health failed, and he refused, in March, to take part in the Ratazzi administration. He was summoned, however, by a decree of the 8th of December, to undertake the presidency of the Cabinet; and when he was compelled to resign, on the 24th of March, 1863, a liberal pension expressed the national gratitude for his signal services. He died on the 1st of August, 1866.

Farini addressed letters to Mr. Gladstone on 'La Diplomazia e la Quistione Italiana,' 8vo, Turin, 1856; and in 1858 and 1859 to Lord John Russell, on 'La Quistione Italiana,' and 'Il Conte Buol ed il Piemonte,' which were reprinted as an Appendix to a French 'Mémoire sur les Affaires d'Italie,' 8vo, Brussels, Leipzig, and Paris, 1859. A French collection of Farini's political correspondence was published with the title of 'Lettres sur les Affaires d'Italie,' 8vo, Paris, 1860. One of his earliest works, in which he combined the views of the statesman and the man of science, was conversant about the cultivation of rice in Italy, 'Sulle Quistioni Sanitarie ed Economiche agitate in Italia intorno alle Risaie Studi e Ricerche,' &c., 8vo, Florence, 1845.

FARR, WILLIAM, M.D. [E. C. vol. vi. col. 993].

FARRAGUT, DAVID GLASCOE, an American naval officer of distinction, was born near Knoxville, State of Tennessee, in 1801. In 1811 he entered the United States navy as a midshipman on board the 'Essex,' and afterwards served in the line-of-battle ship 'Independence.' Obtaining his commission of lieutenant in 1822, he went a cruise to the East Indies, and was then appointed to a post in the Norfolk Navy Yard. As commander, he went to Brazil in the 'Decatur' in 1831; then made a cruise in the 'Natchez' to Brazil in 1833, and another to the West Indies in 1838. As captain, he was engaged with the 'Saratoga,' 20 guns, in the Mexican war of 1847. In 1851 he was assistant-inspector of ordnance; in 1854 he planned a navy yard for California; and in 1855 commanded the steam frigate 'Brooklyn' on the home station. When the Civil War broke out, he was appointed to act with General Butler in the reduction of New Orleans; he set off in January, 1862, passed the forts at the mouth of the Mississippi, and captured New Orleans on the 28th of the same month. In the following month he took Natchez, higher up the Mississippi. Failing to capture Vicksburg by bombardment (partly owing to the shallowness of the water), he returned to the Gulf of Mexico, and operated against the Confederates on the coast of Texas. Bearing the rank of vice-admiral, he ascended the Mississippi again in March, 1863, steamed boldly past the batteries at Port Hudson, and co-operated with General Grant in the military and naval attack which led to the capture of Vicksburg on the 4th of July. While engaged in operations against forts and vessels at Mobile, in August, 1864, his iron-clad monitor or turret-ship, 'Tumseleh,' was blown up by a Confederate torpedo, with the loss of all on board. He was defeated in an attack on Wilmington in December, but succeeded in capturing the place in January, 1865. At the close of the war, the rank of admiral, not till then known in the United States Navy, was created, and bestowed upon Farragut. He commanded an American squadron in the Mediterranean in 1867; and died on the 13th of August, 1870.

FAUJAS DE ST. FOND, BARTHELEMY, a French geologist, was born at Montélimar, May 17, 1741. He received his education from the Jesuits of Lyon, and qualified himself for legal practice at Grenoble; but his taste for natural history induced him to forsake the law, and associate himself with Buffon at Paris. He obtained a situation in the Museum of Natural History, and an appointment as mining commissioner. He occupied himself mainly in exploring Europe for the purpose of discovering the structure of the rocks, their mineral riches, and volcanic phenomena. He opened a mine for puzozolan in the Velay, which was largely used for public works, made very extensive geological collections for the Museum, and in many cases was the first to describe fully and accurately extensive areas of country. His writings are very voluminous. The most noteworthy are his 'Recherches sur le volcan éteints du Vivarrais et du Velay,' fol. 1778, Grenoble, in which he endeavoured to prove that volcanic action was the result of the percolation of water to the heated interior of the earth; 'Voyage en Angleterre, en Ecosse, et aux îles Hébrides,' &c., 2 vols. 8vo, and 4to, 1797, of which German and English translations have been published; 'Histoire Naturelle de la montagne de St. Pierre en Maëstricht,' 8vo, Paris, 1779; and 'Essai de Géologie,' 2 vols. 8vo, Paris, 1803-1809. In 1793 he was made a professor in the Jardin des Plantes, which office he retained till 1818; and on July 18, 1819, he died at St. Fond, in Dauphiné.

* FAVRE, JULES GABRIEL CLAUDE, a French lawyer, orator, and statesman, long recognised as a chief of the democratic party, was born at Lyon, on the 21st of March, 1809, of a mercantile family of Savoyard extraction. He was early destined for the bar, and about the year 1826 proceeded to study law at Paris, where, just before being admitted as an advocate, he took part in the revolution of July, 1830. From this revolution he trusted that a republic would result; but, being disappointed in

this hope, he gave vent to his chagrin in the composition of a petition for the abolition of royalty, which he addressed to the 'National.' He served in the Garde Nationale during the bloody strife between the *ouvriers* and the garrison in 1831; and, returning to Lyon, became a member of the bar of that city. Here he achieved considerable popularity in consequence of his gratuitous avowal of an article in 'Le Précurseur,' by which he drew upon himself the prosecution hanging over the head of the conductor of that journal. The trial resulted, however, in his acquittal; and some record of it exists in the 'Sixième Procès du "Précurseur,"' &c., 8vo, Lyon, 1833, in which year also appeared a brochure, 'De la Coalition des Chefs d'Atelier de Lyon,' 8vo, Lyon, 1833, and 'Anathème,' 8vo, Lyon, 1833, which is a lamentation over the general adherence of France to the July monarchy. In 1834 he defended the "Mutuellistes," a kind of trade-unionists, who were prosecuted as being members of an illegal institution. The trial involved an insurrection; and it was adjourned in 1835 to Paris, where, before the Cour des Pairs, the young advocate commenced his pleading with the remarkable avowal, "Je suis Republicain." He settled in Paris in 1836; and for a few months, jointly with Anselme Pétetin, undertook the political direction of 'Le Mouvement,' which had been quitted by Lamennais. After the revolution of February, 1848, he took office as secretary-general to the Minister of the Interior, M. Ledru-Rollin, whose measures he is believed to have inspired, and in whose name he produced the famous circular which called upon the provincial commissioners of the Provisional Government to take energetic action in favour of the new order of things. He resigned office upon the announcement of his election as representative of the department of the Loire in the Assemblée Nationale, and issued a renunciation of public employment, in spite of which, a short time after, he became secretary-general to the Ministry for Foreign Affairs, under M. Bastide. As a member of the Assemblée, he commanded more constant admiration for his talent than sympathy for his conduct, especially in the bitterness which he displayed as a leading member of the commission appointed to investigate the proceedings of MM. Louis Blanc and Caussidière. In his various speeches he maintained an independent position, and voted with the Right or the Left, according to his sense of the propriety of individual measures. He defended the law which re-established the *cautionnement* of the public journals, and combated successfully the propositions of M. Proudhon.

After the Presidential election, M. Favre passed over to the Opposition; advocated the liberty of the press, on which he delivered a discourse, 'La Liberté de la Presse,' folio, Paris, 1849; attacked the law of deportation, and the foreign policy of the Government, particularly the expedition to Rome, December, 1848. After the *coup d'état* of the 2nd of December, 1851, he was elected a member of the Council-General in the departments of the Loire and the Rhone; but, in consequence of his refusal to take the required oath, was obliged to confine his activity to his professional avocations. Various records of his skill and eloquence as an advocate are extant in volumes and tracts bearing upon the cases in which he was concerned. He displayed great boldness and power of rhetoric in his defence of Orsini in 1858; and in the same year became a member of the Corps Législatif, where he spoke frequently, and was regarded as the chief of the Opposition called "Les Cinq," which protested firmly against the Imperial Government, and was naturally in a constant minority. In August, 1860, he was chosen bâtonnier of the order of advocates in Paris, to which post he was re-elected in 1861. In 1863 he was returned as Opposition deputy for the fifth circumscription of Paris, but chose to represent the department of the Rhone, to which he was also elected. He was a relentless opponent of the Mexican expedition in all its phases; and, interesting himself much in German affairs, professed and sustained, after the convention of Gastein, August 14th, 1856, a protest against the violation of treaties which had been guaranteed by the European powers. In 1868 he became a member of the Académie Française, and his candidature for this honour—against which an objection lay that he was an orator and a politician, rather than a man of letters—was furthered by M. E. Saint-Hilaire, who, under the pseudonym of "Evariste Dillot," published 'Jules Favre et l'Académie Française,' 8vo, Paris, 1867. M. Favre was elected one of the Forty in succession to Victor Cousin; and his discourse upon admission took, according to custom, the shape of a panegyric on his predecessor. It was published as the 'Discours de M. Jules Favre, prononcé à la Reception à l'Académie Française, le 23 Avril, 1868; to

which was appended the 'Réponse de M. de Rémusat, Directeur de l'Académie Française,' 8vo, Paris, 1868. The election was followed by the presentation of the new Academician at the court of the Tuileries, where, at a short interview, the Emperor received from the author's hand, a "splendidly bound" copy of his oration. M. Favre took a prominent part in a general discussion of the laws affecting the Press; and his speech, along with the speeches of eight others, including Berryer, Jules Simon, and Garnier Pagès, was reprinted, by permission, from the columns of the 'Moniteur Universel,' as 'La Loi de la Presse,' 8vo, Paris, 1868. On the 10th of January, 1869, M. Favre took advantage of the newly acquired right of public meetings, to deliver a lecture on the 'Influence of Manners upon Literature,' in which, giving a summary history of the latter from Pericles downwards, he affirmed its intimate connection with political liberty; and concluded by expressing his conviction that the sphere of woman would in the future be so enlarged that she would not be merely the mother of citizens, but a citizen herself, emancipated from all fetters but those of duty and morality. In the general election of 1869 he was beaten in the department of the Rhone by M. Raspail, and by M. Rochefort in that of the Seine; but acquired a seat in the Corps Législatif.

M. Favre strenuously opposed the war which was proclaimed against Prussia on the 15th of July, 1870; and when its misfortunes began to press heavily on France, urged the formation of a strong Defence Committee, and charged the Imperial ministers with having traitorously ruined their country by exposing her unarmed to the overwhelming resources of Prussia. On the 4th of September, two days after the surrender of Napoleon III. at Sedan, he brought forward a motion declaring the Emperor and his dynasty to have forfeited all rights conferred by the constitution. On the day following took place the proclamation of the Republic; and a Provisional Government of National Defence was formed, of which M. Favre was constituted Vice-President, with the office of Minister of Foreign Affairs. On the 6th of September he addressed a circular to the French diplomatic agents abroad, in which, whilst expressing a desire for an honourable peace, he declared the intention of France, not to "cede either an inch of our territory, or a stone of our fortresses;" and in which he sought to separate the action of France from that of the Imperial policy. In a second circular, dated September 17th, M. Favre announced the immediate summons of a freely-elected Assemblée, which might confer upon the administration the prestige of formal and legal validity; accepted the responsibility of France in having tolerated a government which led her to ruin; and admitted the obligation to repair by a measure of justice the ill it had done to Germany. The moderation and candour of this circular procured from Count Bismarck an expression of his willingness to negotiate an armistice with M. Favre; and accordingly the latter proceeded on the 19th of September to a conference with the Chancellor of the North German Confederation, with whom he had interviews near and at Ferrières, the head-quarters of the King of Prussia. The conditions insisted on by one side and the other were found to be impossible of adjustment; and M. Favre reported, in an address to his colleagues, dated September 21st, which was received by them with enthusiastic and unanimous approval, that he took leave of the Count in the following words:—"I made a mistake, M. le Comte, in coming here; but I do not regret it. I have suffered sufficiently to excuse myself in my own eyes, but in any case I only yielded to a feeling of duty. I will report to my government all that you have said, and should they consider it fit to send me again to you, however cruel the task for me, I shall have the honour of returning. I am grateful for the kindness you have shown me, but I fear that all that can be done is to let events take their course. As long as there can be found one element of resistance amongst us, we shall fight you. This becomes an interminable struggle between two nations who should extend their hands to each other. I had hoped for a different solution. I leave, most unhappy, but nevertheless full of hope."

FAWKNER, JOHN PASCOE, one of the pioneers of Australian civilisation, was born in London in 1792. In 1803 he accompanied his father, one of the soldiers sent out to guard convicts at a new penal settlement to be formed on the shores of Port Phillip. Captain Collins, of the 'Calcutta' (appointed governor), finding the country barren and ill-supplied with water, abandoned the settlement after a few months, sailed to Van Diemen's Land, and there founded the penal colony which afterwards expanded into Hobart Town. Young Fawknor led a singularly varied life, by turns a shepherd, a farmer's

labourer, a sawyer at Sydney in Australia, a storekeeper at Launceston in Van Diemen's Land, a bush lawyer, a tavern-keeper, a newspaper proprietor and editor. In 1835 he joined a party in forming a settlement at Port Phillip, the place which he had visited thirty-two years earlier; he succeeded, but only after many struggles and difficulties, during which Fawknor's occupations were as diversified as in previous years—land speculator, sheep grower, and wine-grower being added to those enumerated above. He built the first brick house in what is now Melbourne, and saw the town grow up into a great city. He became, in his old age, a member of the Legislative Council of Victoria; and when he died (September, 1869) the colonists gave him a public funeral, as their most noteworthy representative man.

* FAYE, HERVÉ AUGUSTE ÉTIENNE ALBANS, a French astronomer, was born at Saint Benoît du Sault, department of the Indre, on the 5th of October, 1814. After studying at the École Polytechnique, he went for a time to Holland, and on his return to France received an appointment at the Paris Observatory. In 1841 he succeeded Damoiseau as member of the astronomical section of the Académie des Sciences. On November 22nd, 1843, he discovered, at the Paris Observatory, the comet since known by his name—one of the comets of short period (7.44 years); it was seen again at the subsequent epochs of 1851, 1858, and 1865; this discovery obtained for Faye the Lalande Medal from the Academy of Sciences. In 1846 he wrote a paper on the parallax of one of the stars in Ursa Major; in the following year one on 'Un Nouveau Collimateur Zénithal, et sur une limite Zénithale Nouvelle;' and in 1848 one on Saturn's ring. These were followed by a paper 'Sur les déclinaisons Absolues,' 1850; and 'Des Leçons Cosmographiques,' 1852. In conjunction with C. Galinski, he translated Humboldt's 'Cosmos,' and published it under the title 'Cosmos; Essai d'une Description Physique du Monde,' 4 vols. 8vo, 1847. From 1848 to 1854 he was professor of geodesy at l'École Polytechnique. In the last-named year he received the appointment of rector of the Académie Universitaire at Nancy, and astronomer to the Faculty of Sciences at the same place. His next appointment was that of inspector-general of sciences at the Secondary Schools. He was chosen member of the Bureau des Longitudes in 1862; in 1864 a member of the Imperial Council of Public Instruction; and he has been promoted officer of the Legion of Honour. Many astronomical papers by him have appeared in the 'Comptes Rendus,' and other scientific journals.

FEATHERSTONHAUGH, GEORGE WILLIAM, geologist and traveller, was born in London in 1780. Soon after attaining his majority he travelled through various European countries, then visited the United States, where he married and settled. In 1826 he visited England, formed the acquaintanceship of most of the eminent geologists, attended the lectures of Dr. Buckland, and wrote a short article on the chalk near Norwich. In 1829 he returned to the United States, and drew up an excellent review of 'Geology and its Progress.' In 1831 he commenced the conducting of the 'Monthly American Journal of Geology and Natural Science,' and wrote several articles in it on the progress of science. In 1834 and following years he made extensive explorations in the westernmost wilds of the United States, as a government geologist, and the results were embodied in two reports, published in 1835 and 1836, which gave a general account of the country comprised between the Red River on the south and Lake Superior on the north. From 1839 to 1843 he was engaged in determining the boundary between the United States and British North America. In 1844 he was appointed the British Consul at Havre and continued to be so till his death on September 27, 1866. In 1844 appeared his 'Excursion to the Slave States,' in two volumes, which contained a large fund of information on the scenery, geology, and inhabitants of the countries he had explored. It was so successful that in 1846 two other volumes were issued, entitled 'A Canoe Voyage up the Minnay Sotor, with an account of the Lead and Copper Deposits in Wisconsin, and of the Gold Region in the Cherokee Country,' which, in addition to its mineralogical details, contained very free criticisms on the defects of some of the Anglo-Americans and settlers. As Consul at Havre Mr. Featherstonhaugh was instrumental in facilitating the escape of Louis Philippe to England in 1848. He was a Fellow of the Royal, Geological, and other Societies.

* FÉE, ANTOINE LAURENT APOLLINAIRE, botanist, was born at Ardenes, department of Indre, November 7, 1789. He served in a medical capacity in the army during the Penin-

sular war, and when the French Empire fell he became a civilian, establishing himself as a druggist in Paris. He spent a large portion of his time in endeavouring to raise the status of his profession, and in 1819 founded a Society of Pharmacutists for the Seine department, many of the objects of which were of a purely charitable nature. Soon after this he again entered the army, and filled several offices in the military hospital at Lille, from whence he moved to that at Strasbourg in 1832. Here he became the principal professor and pharmacist, and was also appointed director of the botanical garden, as well as professor of natural history to the Faculty of Medicine of that place. His writings are numerous and varied. Some of earlier date were literary rather than scientific, consisting of poetry, a tragedy, and an identification of the plants noticed by Virgil. In medical literature his principal production is 'Cours d'Histoire Naturelle Pharmaceutique,' 2 vols. 8vo, Paris. In botany he is best known for his 'Essai sur les cryptogames des écorces exotiques officielles,' 4to, 1824—37; 'Méthode lichénographique,' 4to, 1824; 'Mémoires sur la famille des Fougères,' folio, 1844—45, Strasbourg; 'Genera Filicum,' 4to, 1850—52; and, in conjunction with Graziou, 'Cryptogames vasculaires du Brésil,' 1870. Besides these, he has written several other books, a number of articles, comprising several monographs relating to botany, and others relating to zoology, biography, and travels.

FELL, JOHN, a learned prelate of the 17th century, was born at Longworth, in Berkshire, on the 23rd of June, 1625. His father was Dr. Samuel Fell, who was first a canon (1619), and afterwards dean (1638—49) of Christ Church, Oxford, where the younger Fell was admitted a student in 1636. He took his B.A. and M.A. degrees successively in 1640 and 1643; about which time, as a member of the garrison of Oxford, he shared the vicissitudes of the Royalist scholars of the period. He was ordained in due course; and having, in 1648, been deprived by the Parliamentary visitors of his University privileges, he lived, during the continuance of the Commonwealth, in a "retired and studious condition," at Oxford (says Wood), where "he and others kept up the devotions and orders of the Church of England." But the Restoration brought him back to the line of professional promotion. On the 27th of July, 1660, he was made a canon of Christ Church, in the deanery of which he was installed on the 30th of November following, having been created D.D. on the 3rd of October, and placed on the list of the King's chaplains in ordinary. He was appointed Vice-Chancellor of the University on the 3rd of August, 1666; and continued in that office until the 25th of September, 1669, during his incumbency of which he devoted himself with great zeal to the discipline, privileges, prosperity and magnificence of the University. On the 6th of February, 1676, Dr. Fell was consecrated, in the chapel at Winchester House, Chelsea, to the Bishopric of Oxford, with which he was allowed to retain his deanery *in commendam*, in order that he might be as closely connected as before with his college and the University. He died on the 10th of July, 1686, "leaving then behind him the general character of a learned and pious divine, and of an excellent Grecian, Latinist, and philologist, of a great asserter of the Church of England, of another founder of his own college, and of a patron of the whole University." He was buried in the Divinity Chapel, or north aisle, adjoining to the choir of Christ Church Cathedral.

Dr. Fell brought out several editions of ancient authors, and especially of patristic or early ecclesiastical writers; amongst which may be mentioned the 'Phenomena' of Aratus of Soli, 8vo, Oxford, 1672; 'St. Clement's Two Epistles to the Corinthians, in Greek and Latin, with Notes at the end,' 12mo, Oxford, 1677; a translation of St. Cyprian's treatise, 'Of the Unity of the Church,' 4to, Oxford, 1681; and an annotated edition of 'Sancti Cæcili Cypriani Opera recognita et illustrata,' &c., folio, Oxford, 1682. His other works include several 'Sermons'; 'The Life of the most learned, reverend, and pious Dr. Henry Hammond,' 8vo, London, 1680, &c.; 'Grammatica Rationis, sive Institutiones Logicæ,' 8vo, Oxford, 1673; second edition, 1675. Bishop Fell also published, with a preface containing a biography of the author, 'Forty Sermons, &c., by Richard Allestree, D.D., folio, Oxford, 1684.

FELLENBERG, PHILIP EMANUEL VON, founder of the remarkable establishment at Hofwyl, was born at Berne, in Switzerland, June 27th, 1771. His father was a member of the government, and his mother a descendant from the Dutch Admiral, Van Tromp. Receiving his first education at Colmar, he went to Tübingen in 1789 to study the law. He next spent a few years in travelling through Switzerland, France, and

Germany, paying particular attention to the economical and moral position of the artisans and peasants of the places at which he stopped. Visiting Paris soon after the fall of Robespierre, he was much impressed with the evidence there afforded that liberty and right cannot really be appreciated except when education is generally spread among the people. In 1798 he filled a political office in the Canton of Berne, but soon resigned it to carry out the project on which he had set his heart. Purchasing an estate at Hofwyl, near Berne, in 1799, he began in 1801 to organise an educational and industrial establishment. Combining his own ideas with those of his friend Pestalozzi, he formed a scheme for the simultaneous development of the mental and bodily powers of young persons; industrial pursuits, athletic exercises, games, were added to the usual mental and moral training. Normal schools, agricultural schools, a scientific school, a school of art, an infant school, and an agricultural implement factory, formed part of the Hofwyl establishment. It acquired great fame. Pupils came to it from various countries, while princes and statesmen studied the details of the system. After Fellenberg's death, which occurred on the 21st of November, 1844, the institution was conducted for some years by his son Wilhelm, and then abandoned, but not without sowing the seeds of good in many parts of the Continent. The system pursued at Hofwyl has been described very fully by several writers. Fellenberg himself treated of it in the 'Papers on Rural Economy' ('Landwirtschaftliche Blätter'), 1809 and following years, and in other works. Among notices by various hands are the following: 'Coup d'œil de M. Gautheron sur l'influence morale qu'exercera l'établissement d'Hofwyl sur la Masse du Peuple'; 'Lettre de M. Villevielle sur le parti que le midi de la France peut tirer des Moyens et Méthodes Agricoles d'Hofwyl'; 'Vues sur l'Agriculture de la Suisse et les Moyens de la perfectionner'; 'Rapport sur l'établissement d'Hofwyl à la Nation Helvétique'; 'What Fellenberg has done for Education,' 8vo, London, 1839. Hoffmann and Thäer visited and described Hofwyl by order of the King of Prussia. Other reports and accounts have been written by Capo D'Istria, Reugger, Röchholz, Schmertz, Vérécour, Pictet, &c. Further details will be found in Hamm's 'Fellenberg's Leben und Wirken,' Berne, 1845.

FELLOWS, SIR CHARLES [E. C. vol. ii. col. 885—887]. During the latter years of his life Sir Charles Fellows lived in the Isle of Wight, mainly occupied in agricultural pursuits. He died November the 8th, 1861.

* FELSING, JAKOB, an eminent German engraver, was born at Darmstadt, in 1802, and learnt the rudiments of the art from his father, J. K. Felsing, an engraver of some note. About 1822 he went to Italy, and at Milan engraved Carlo Dolci's 'Christ on the Mount,' for which he was awarded the grand prize of the Milan Academy. He afterwards visited the chief cities of Italy, staying a considerable time at Rome, Naples, and Parma, and at the latter place forming an acquaintance with Toschi, whose example had much influence on his manner of engraving. He returned to Darmstadt in 1832, and there executed several excellent plates, chiefly from his Italian studies; among the most popular was Raffaele's 'Violin Player.' After visiting Munich he went on to Paris, and there became intimate with Desnoyers. Returning to Darmstadt in 1839, he executed a good plate of a Holy Family after Cornelius, and later others of Steinbrück's 'Genoviva,' 'St. Katharine' after Mücke, and many more, he having come to be recognised as the representative engraver of the Düsseldorf school. Felsing is one of the most learned as well as able of living engravers, but his later works have hardly borne out, in firmness of line and richness and brilliancy of colour, the promise of his early plates. Felsing is court-engraver and professor at Darmstadt, and a member of the Academies of Milan, Berlin, and St. Petersburg, and associate-engraver of the French Institute.

FERRIER, JAMES FREDERICK, was born at Edinburgh in November, 1808, and was educated at the Universities of Edinburgh and Oxford, at the latter of which he was a member of Magdalen College. Having taken his B.A. degree in 1832, he spent some months at the University of Heidelberg, for the purpose of studying the philosophy and literature of Germany, with the language of which he proved his intimacy by correcting several important errors in all the English translations of 'Faust.' In 1833 he was called to the Scottish bar, but his philosophical predilections interfered with an exclusive devotion to his professional avocations. He became a contributor to 'Blackwood's Magazine' in 1832; and amongst the papers which he furnished may be mentioned those on the 'Philosophy of Consciousness,' April, 1838, on the 'Initial Movements of the Cartesian Philo-

sophy,' and on 'Berkeley's Idealism,' June, 1842, which De Quincey praised as being the most effectual exposition of that system. In 1842 Mr. Ferrier was elected to the chair of history in the University of Edinburgh; and during the illness of Sir William Hamilton in the session of 1844—45, supplied his place in the class of logic and metaphysics. He was elected in 1845 to the professorship of moral philosophy and political economy at St. Andrew's, in which position he continued till his death on the 11th of June, 1864. He went through two unsuccessful candidatures for chairs in the Metropolitan University—once in 1852, when he wished to succeed Professor Wilson, his uncle and father-in-law, in the chair of moral philosophy, and again in 1856, when he sought to occupy the chair of logic and metaphysics left vacant by the death of Sir W. Hamilton. The latter contest was an animated one, and his claims were opposed, among others, by Dr. Cairns, in 'An Examination of Professor Ferrier's "Theory of Knowing and Being,"' 8vo, Edinburgh, 1856, to which Ferrier replied with great vigour in his brochure entitled 'Scottish Philosophy: the Old and the New,' &c., 8vo, Edinburgh and London, 1856; and, with a still vivid remembrance of the contest, wrote 'A Letter to the Right Honourable the Lord Advocate of Scotland, on the Necessity of a Change in the Patronage of the University of Edinburgh,' 8vo, Edinburgh, 1858. The work upon which Dr. Cairns had based his objections to Professor Ferrier was the latter's 'Institutes of Metaphysic: the Theory of Knowing and Being,' 8vo, Edinburgh and London, 1854, in which he sought to demonstrate the truth of a series of propositions in the three divisions of philosophy—first, the Epistemology, or theory of knowledge; secondly, the Agnology, or theory of ignorance; and, thirdly, the Ontology, or theory of being. He thus undertook the solution of problems hitherto unattempted in the humbler speculation of this country; and though opinions may differ in regard to the result, the eminent ability with which the difficulties of the question are encountered is unanimously conceded. Professor Ferrier was accustomed to diversify his ethical course with lectures on the history of philosophical opinion; and these were published after his death under the editorial care of Sir Alexander Grant, the author's son-in-law, and Professor Lushington, with the title of 'Lectures on Greek Philosophy, and other Philosophical Remains of James Frederick Ferrier, B.A., LL.D.,' &c., 2 vols. 8vo, Edinburgh and London, 1866. It remains to be said that Ferrier superintended the publication of the 'Works of Professor Wilson,' &c., 12 vols. 8vo, Edinburgh, 1855, &c.

*FÉTIS, FRANÇOIS JOSEPH, a Belgian writer on musical criticism, biography, and bibliography, was born at Mons, March 25th, 1784. He studied the compositions of Haydn, Mozart, and other great masters, under his father, who was an organist. After producing some trifling compositions as a boy, he was placed in 1800 at the Conservatoire de Music at Paris, under Boieldieu and Roy. In 1803 he commenced a lengthened tour in Italy and Germany, where he paid great attention to the study of mediæval and classical music. In 1818 he became professor at the Conservatoire, and soon afterwards published his 'Traité de Contrepoint et de la Fugue.' Between 1827 and 1835 he conducted the 'Revue Musicale,' and wrote musical articles in many other journals. In 1833 the King of the Belgians gave him the appointment of Chapel Master and Director of the Choir at Brussels. In 1845 he became a member of the Belgian Academy. In 1864, in accordance with a testamentary wish expressed by Meyerbeer, he superintended the production of the opera 'L'Africaine.' Fétis composed very little music, except two comic operettas, 'L'Amant et le Mari,' and 'La Vieille,' but he has written largely on musical subjects. Among his works are 'Coup d'œil sur les qualités de la Musique des Pays Bas,' 'Méthode des Méthodes de Piano,' 'Solfèges Progressifs,' 'Musique mise à la portée de tout le Monde,' afterwards published in English and Italian; 'Traité Complet de la Théorie et de la Pratique d'Harmonie,' 'Curiosités Historiques de la Musique.' Reprinted from his Magazine articles are biographical notices of Stradivari and Paganini, with remarks on the construction and playing of bow and string instruments. But the most important work by Fétis is the 'Biographie Universelle des Musiciens et Bibliographie Générale de la Musique,' 8 vols. 8vo, Brussels and Paris, 1835—44, second edition, 1860—65. Although disfigured by many inaccuracies, this is the best work of the kind extant, Fétis having embodied his own researches with previous biographies written by French, German, English, and Italian authors. In 1864 M. Fétis was made officer of the Legion of Honour, and in 1869, grand officer of the Order of Leopold.

FIAMMINGO, IL, Flemish painter. [CALVERT, DENIS, E. C. vol. ii., col. 40.]

FIAMMINGO, IL, Flemish sculptor. [DUQUESNOY, FRANÇOIS, E. C. S., col. 492.]

*FIELD, CYRUS WEST, one of the chief American promoters of the Atlantic Telegraph, was born at Stockbridge, Massachusetts, November 30th, 1819. Having learned commercial routine in a counting-house, he established himself as a merchant in New York. Retiring from business in 1853, he made a tour in South America, and on his return advocated with great energy the establishment of telegraphic communication between America and Europe. He procured a charter or concession from the Colonial Government of Newfoundland, conferring exclusive privileges for laying down submarine cables from that island to the mainland of America and to Europe, and wires across the island itself. He visited England in 1854 and 1856 to obtain the aid of capitalists in constructing and laying down an Atlantic telegraph; and he personally accompanied the two cable-laying expeditions of 1857 and 1858. After the failure of those cables he was equally zealous in prosecuting the measures which led to the final success of the great enterprise in 1865 and 1866. When the Earl of Derby conferred baronetcies on Mr. Gooch and Mr. Lampson, and knighthood on Mr. Glass, Mr. Canning, Professor Thomson, and Captain Anderson, towards the close of 1866, for their services in relation to this subject, Mr. Field could not participate in the honour, on grounds of nationality; but he was awarded a gold medal by the Liverpool Chamber of Commerce. At a grand banquet given to him by the New York Chamber of Commerce, on the 15th of November in the same year, he gave an interesting narrative of the eventful history of the Atlantic Telegraph, from the first inception of the scheme to its final completion.

FIELD, JOSHUA, civil and mechanical engineer, was born at Hackney, near London, in 1786. Having evinced a great taste for mechanical pursuits while a school-boy, and shown his aptitude by repairing the school clock, he began in 1802 to visit all the factories and workshops into which he could obtain admission. He was engaged for a time at the Government machine-works in Portsmouth Dockyard, under Sir Samuel Bentham; and then went, in 1804, as assistant to Mr. Maudsley in constructing Brunel's block-making machinery. In 1810, when Maudsley established the engineering works still maintained in the Westminster Road, Field was intimately associated with the operations connected with the construction of steam engines, saw mills, block machinery, mint machinery, &c.; and became a partner in the firm in 1822. He aided in constructing the remarkable shield with which Brunel excavated the Thames Tunnel. When transatlantic steaming commenced, he devoted special attention to the construction of the engines for the 'Great Western.' He was concerned in the manufacture of the electric time balls for Greenwich, Liverpool, Edinburgh, and the South Foreland. Mr. Field (who was the first Chairman of the Institution of Civil Engineers, and a Fellow of the Royal Society) died August 11th, 1863.

FIELD, RICHARD, a learned Anglican divine, was born on the 15th of October, 1561, at Hemel Hempstead, in Hertfordshire, and was educated as a commoner of Magdalen Hall, Oxford, where he took his degrees in arts. After he had proceeded M.A., he was for seven years daily reader in logic and philosophy; and won the reputation of being the best disputant of his time in the University. He acted for some time as reader of divinity in the cathedral church of Winchester; and in 1594, by which time he had graduated as B.D., was chosen reader in that faculty at Lincoln's Inn, which office he filled with so great approbation that he was presented by Mr. Kingsmill, one of the benchers, to the living of Boroughclere. In 1598, being then D.D., he was named one of the chaplains in ordinary to Queen Elizabeth, from whom, on the 20th of March, 1602, he obtained a grant by patent of the next vacant prebend at Windsor, in which he was at length installed on the 3rd of August, 1604. He was continued on the list of royal chaplains by King James I.; and was summoned to the conference at Hampton Court in January, 1604. In the year following, when the king was entertained at Oxford, Dr. Field was sent for to assist in the divinity act before his majesty; and the disputation between him and Dr. Aglionby is said to have been the best ever heard in the schools. He was promoted to the deanery of Gloucester in 1609,—where, however, he habitually resided for only four or five weeks in the course of the year—and was appointed to a fellowship in the college proposed to be incorporated at Chelsea. There was every prospect of his speedy elevation to the episcopal bench, when he died of

apoplexy on the 21st of November, 1616, and was buried in the nave of St. George's Chapel, Windsor. He published 'a Sermon preached before the King at Whitehall, on Jude, ver. 3,' 4to, London, 1604; and at the time of his death was engaged upon a work which he proposed to entitle 'A View of the Controversies in Religion, which in these last times have caused the lamentable Divisions in the Christian World.' But of this nothing is extant beyond a portion of the preface. His great work is that 'Of the Church: Five Books,' only four of which were originally published, in 4to, London, 1606, which treated (1) of the Church, its constituent Elements, and the Discipline by which, as a visible Society, it is preserved; (2) of the distinctive Notes or Marks of the Church; (3) the Demonstration of the true Church by those Notes; (4) of the Privileges of the Church, as applicable to Articles of Faith, to Discipline, &c. A Fifth Book followed, 'Concerning the Several Degrees, Orders, &c., of Persons to whom the Government of the Church is Committed,' 4to, London, 1610, to which was added an "Appendix, containing a Defence of such passages of the former Books that have been excepted against, or wrested to the maintenance of the Romish Errors." The complete edition, "very much augmented in the Third Book, and the Appendix to the Same," was published after the author's death, by his son, Nathaniel Field, in 4to, London, 1628.

In this work, which has gone through numerous editions, the last of which, in 8vo, London, 1843, proceeded no further than the first volume, the aim of the author is to vindicate the antiquity and catholicity of Protestantism, in contradistinction from the spurious claims of Popery. It is contended that the Western, or Latin Church was, and continued throughout, a true Protestant Church; and that the adherents of Romish errors were no more than a faction in that Church, at the time of the appearance of Luther.

* FIGUIER, GUILLAUME LOUIS, was born at Montpellier, February 15, 1819, educated at Montpellier and Paris, and in 1846 became a professor in the School of Pharmacy in his native town. He has been engaged as the scientific editor of 'La Presse' and other newspapers, has contributed several papers on organic chemistry and the glycogenic function of the liver to the scientific journals, and has written a large number of works, having for object the popular dissemination of information on the natural sciences. These popular compilations are profusely illustrated with well-executed cuts, and have had an extensive sale. He has also published 'L'Année scientifique et industrielle,' the first volume is for 1856, and the fourteenth, for 1870, appeared towards the end of 1869.

* FILLMORE, MILLARD, thirteenth President of the United States of America, was born at Summer Hill, Cayuga County, in the State of New York, January 7th, 1800. He owed little of his eventual rank to family connexions or to early education. His father, Nathaniel Fillmore, was a New England farmer, who removed to New York State in 1819; at which time young Millard is said never to have seen a book on grammar or geography. The son had learned the trade of a wool-comber, at the same time striving to supply the deficiencies in his early education; but after the removal to Cayuga, he entered a lawyer's office there, and also earned a small income by keeping a school. In 1821 he removed to Buffalo, where he pursued his legal studies. He began to practise at Aurora, Erie County, about 1826. In 1829 commenced his political career, he being elected a member of the State Legislature; this was followed in 1832 by his election to Congress, as one of the Whig party. Rising to distinction as a speaker and a party politician, he was re-elected in 1836 and 1840, and was appointed on many important committees. In 1841 he filled the post next in rank to the Speaker or Chairman of the House of Representatives, that of Chairman of Committee of Ways and Means; and it was under his auspices and direction that the tariff of 1842—a very exciting subject at that time—was prepared and carried through the House. Then ensued a temporary secession from parliament, during which he rose to great practice as a lawyer at Buffalo; he made an unsuccessful attempt to obtain election to the Governorship of New York State in 1844; but was chosen Comptroller of the State in 1847. When General Taylor was elected President of the United States in 1848, Mr. Fillmore was chosen Vice-President by the influence of the Whig party. On the death of Taylor in July, 1850, Mr. Fillmore, in accordance with one of the Constitutional laws of the United States, became President without any further election. Although his party was in a minority in both Houses of Congress, he conducted the business of the country with dignity and impartiality, was suc-

cessful in his policy, and obtained the respect of the nation generally. It was under his presidency that Commodore Perry was sent out on an embassy to obtain the opening of the Japanese ports to American ships and commerce. Mr. Fillmore's term of office expired on the 4th of July, 1853. He tried for re-election to the Presidency in 1856; but was defeated by Mr. Buchanan, who came in on the Democratic interest. Since that date Mr. Fillmore has lived in comparative retirement at Buffalo.

FILMER, SIR ROBERT, a political writer and a defender of absolute government, was the son of Sir Edward Filmer, of East Sutton, in Kent, and was born there about the year 1588. He was educated at the University of Cambridge, where he was matriculated of Trinity College, on the 5th of July, 1604. He married the daughter and co-heir of Martin Heton, Bishop of Ely, and was knighted by Charles I., as a recognition of his enthusiastic loyalty. In the course of the civil wars he suffered much on the King's account; and it is said that during this period his manor house of East Sutton was ten times plundered by the Parliamentary soldiers, and himself imprisoned in Leeds Castle for his attachment to monarchy. Hasted, in his 'History of Kent,' says that Sir Richard Filmer died at East Sutton, and was buried in the church there, in 1653, a date which seems preferable to that of 1647, adopted by Wood and others. To assign 1688, as some have done, as the year of Filmer's death, is as absurd as it is incorrect. Filmer wrote a number of political treatises in favour of arbitrary power, and in an age which teemed and laboured with projects of government, upheld the divine right of kings. His works include 'The Anarchy of a limited and mixed Monarchy,' 4to, London, 1648 and 1652, 8vo, 1679, which was produced as an answer to Philip Hunton's 'Treatise of Monarchy,' &c., 4to, London, 1643; 'The Necessity of the Absolute Power of all Kings; and in particular of the King of England,' 4to, London, 1648, second edition, "with a Preface of a Friend," &c., folio, London, 1680; 'The Freeholder's Grand Inquest, touching our Sovereign Lord the King, and his Parliament,' 4to, London, 1648, reprinted in 'Political Discourses, &c.,' 8vo, London, 1680; 'Observations concerning the Original of Government, against Hobbes, Milton, and Grocius,' 4to, London, 1648, new edition, incorporating the 'Anarchy,' &c., written against Hunton, 4to, London, 1652, 1679, &c.; 'Observations on Aristotle's Politics, touching Forms of Government,' 4to, London, 1652; 'Advertisement to the Jury Men of England touching Witches, with the Difference between an English and an Hebrew Witch,' 1653; 'Quæstio Quodlibetica; or, a Discourse whether it may be lawful to take Use for Money,' 8vo, London, 1653, new edition, 12mo, London, 1678, a work which had been in MS. from about the year 1630; 'Of the Blasphemy against the Holy Ghost,' 1656; and 'Patriarcha; or, the Natural Power of Kings asserted,' 8vo, London, 1680, second edition, by Edmund Bohun, with a "Preface in Vindication of Filmer, and a Conclusion, or Postscript," 8vo, London, 1685. This work, which had passed from hand to hand in MS. for nearly forty years from the date of its production (about 1642), was devoted to the demonstration, in as many chapters, of three propositions:—"(1) That the first Kings were Fathers of Families; (2) It is unnatural for the People to govern, or choose Governors; (3) Positive Laws do not infringe the Natural and Fatherly Power of Kings." The 'Patriarcha' attracted much discussion and opposition. Sir James Tyrrell, the grandson of Archbishop Usher, attacked it with his 'Patriarcha non Monarcha: or, the Patriarch unmonarched; being Observations on a late Treatise, and divers other Miscellanies, published under the name of Sir Robert Filmer, in which the Falseness of those Opinions that would make Monarchy *jure divino* are laid open, and the true Principles of Government and Property (especially in our Kingdom) asserted,' 8vo, London, 1681. But it was Locke who, conferring immortality by his opposition, was the most formidable antagonist of the principles advocated by Filmer, against which he wrote 'Two Treatises of Government: In the former, the False Principles and Foundation of Sir Robert Filmer and his Followers are detected and overthrown. The latter is an Essay concerning the true Original Extent and End of Civil Government,' 8vo, London, 1689, second edition, 1694. Against another opponent Filmer found an advocate in Edmund Bohun, who published 'A defence of Sir Robert Filmer against the Mistakes and Representations of Algernon Sidney, Esq.; in a Paper delivered by him to the Sheriffs, upon the Scaffold in Tower Hill, on Friday, December 7th, 1683, before his Execution there,' folio, London, 1684.

FINIGUERRA, MASO, or TOMMASO, a distinguished Florentine goldsmith, to whom is attributed the invention of

printing from engraved plates, was the son of a goldsmith named Antonio di Tommaso di Finiguerra, and was born at Florence, in January, 1426. He is said to have been a pupil of Lorenzo Ghiberti, and to have assisted him in the execution of the famous bronze gates of the Baptistery at Florence, which were completed about 1450. Baldinucci states that he was the pupil of Masaccio. At this time *nielli*, that is, silver plates engraved with religious subjects, the incised lines being filled with a black composition (*niello*), to produce the full effect of the designs, were much in vogue for ecclesiastical purposes, and Finiguerra abandoning sculpture for engraving upon metal, became the most eminent of the Florentine *niellatori*. About 1450 he was commissioned to make for the baptistery of San Giovanni in Florence a splendid silver pax, partly gilt, and engraved with a representation in *niello* of the coronation of the Virgin. In order to ascertain the progress of their work, it was usual for the engravers occasionally to take sulphur casts, and from these obtain proofs with *niello* on moistened paper. Whilst engaged on his pax, it occurred to Maso to try whether the proof might not be taken direct from the plate, the incised lines being filled with *niello* and the damp paper pressed on it. Vasari says he discovered the process from having let the silver plate, when filled with *niello*, fall on a piece of moistened paper; but this is evidently a fable, as proofs exist which were taken from the work, whilst still unfinished. In any case, the process was successful, and first proofs, and afterwards prints, continued to be thus taken.

This famous pax, still preserved in the Gallery of Florence, is the finest of its kind in existence. It is about eight inches high by three and a half wide. Rumohr has arbitrarily assigned it to Matteo di Giovanni Dei; but he stands alone in the opinion. Passavant, however, seeks to deprive Finiguerra of a greater distinction than his pax. He labours to prove that the method of taking proofs from plates on paper was known in Germany as early as 1446, and he suggests the probability that Finiguerra was shown the process by the Flemish painter Roger van der Weyden, who was in Florence in 1450, the precise time when Maso was engaged in engraving the Coronation. ('*Peintre-Graveur*,' vol. i. pp. 191–198.) Be that as it may—and it can hardly be affirmed that Passavant has proved either of his points—it is certain that Maso was the first to employ the process in Italy, where he has always been regarded as its inventor, and that it led directly to the engraving of plates for printing designs. It does not appear, however, that plates were actually produced for this purpose in Italy till about 1460 or 1465, at least ten years after Maso took his earliest proofs. [ENGRAVING, IN ARTS AND SCIENCES DIVISION, vol. iii. col. 884–5.] One of Finiguerra's proofs from the Coronation Pax is in the British Museum, another in the French National collection, and one or two more exist elsewhere. Duchesne has given a full list of Finiguerra's *nielli*, and the known impressions from them. Finiguerra's death is placed about 1475.

FITTON, WILLIAM HENRY, geologist, was born in Dublin, January, 1780. He attended the school and university there, and acquired his degree of B.A. in 1799. In 1808 he entered the University of Edinburgh, where he formed the acquaintanceship of John Fleming, Sydney Smith, Jeffrey, Lord Brougham, and others. In 1809 he removed to London. In 1811 he began to write geological articles, the first being on the geological structure of the vicinity of Dublin. In 1812 he went to Northampton, and settled as a medical practitioner. He contributed numerous articles to the '*Edinburgh Review*,' in which he did much to diffuse geological information respecting the discoveries of Smith, Buckland, Murchison, and others. As an original observer he worked hard from 1824 to 1836 at developing the true order of the secondary strata of England and France; and the main outcome of his labour was his series of papers on the green-sand beds. First of all a secretary of the Geological Society, he afterwards became its president, in which last capacity he established the Quarterly Journal of the Society, and was influential in promoting the custom of delivering annual addresses. In 1852 the Wollaston medal of the society was awarded him. He was a fellow of the Royal and other scientific societies. He died in London, May 13, 1861.

FITZ-ROY, ADMIRAL ROBERT [E. C. vol. ii. col. 921], was born at Ampton Hall, Suffolk, 5th July, 1805. He was the youngest son of General Lord Charles Fitz-Roy, by his second wife, Frances Anne, eldest daughter of the first Marquis of Londonderry. He entered the Royal Naval College at Portsmouth in 1818, and from 1819 to 1828 served in the Mediterranean and on the coasts of South America, and became flag lieutenant at Rio Janeiro. In 1828 he was appointed to the command of the

'Beagle,' one of the two vessels employed in surveying the shores of Patagonia and Tierra del Fuego. At the end of 1830 the two vessels returned to England, and late in 1831, the 'Beagle,' having been refitted, was again commissioned to renew the survey. During five years a large amount of valuable work was done, not only in correcting the errors of existing maps, but in filling in new details. Every mile of the coast, from the right or northern bank of the river Plata to Cape Horn, was closely surveyed. Every harbour and anchorage was planned; 30 miles of the river Negro and 200 of the Santa Cruz were examined and laid down, and a chart was made of the Falkland Islands. Between 47° and the river Guayaquil the coasts of Chili and Peru were surveyed, every port and roadstead being entered. Many of the discoveries thus made are recorded in the Journal of the Royal Geographical Society, whose gold medal for 1836 was awarded to Fitz-Roy, the Society at the same time acknowledging the importance of the mass of information he had brought home—"perhaps not exceeded by any expedition since the time of Cook and Flinders." An account of the voyage was published in 1839 in 3 volumes. Mr. Charles Darwin was on board the 'Beagle' during the whole of her voyage, and collected the materials for his '*Journal and Remarks*,' and for geological and other works of permanent value.

During the survey in 1834 Fitz-Roy was promoted to the rank of captain. Anxious to fill up some details in the survey, Fitz-Roy, after the return of the 'Beagle' in 1836, hired two vessels, and purchased a third at his own expense, the effect of which was to embarrass him during many years. In 1839 he was elected an Elder Brother of the Trinity House; in 1841 he sat in the House of Commons as member for North Durham; in 1842 he was appointed acting conservator of the Mersey; and in the following year he went out to New Zealand as governor, and continued to be such during three years. He became F.R.S. in 1851; in 1854 he was placed at the head of the Meteorological Department of the Board of Trade. In 1857 he became rear admiral; in 1862, vice admiral; and in 1864, corresponding member of the Academy of Sciences of the Institute of Paris (geography and navigation section).

In carrying out the duties of his appointment at the Board of Trade, Admiral Fitz-Roy displayed a large amount of conscientious zeal. One of his first duties was to supply merchant seamen and others with instruments and instructions for carrying on meteorological observations in various parts of the world. This led to the collection of a large mass of valuable observations, the reduction of which by a competent staff, under a competent leader, would have been of the greatest service to meteorological science; but the admiral not having such a staff at hand, and apparently dreading the accumulation of the observations, interrupted the system of supplying instruments to merchant captains, &c., and employed the strength of his department in originating storm signals, which became very popular, and in publishing weather reports, &c. The intense anxiety of the admiral to do his duty brought on a nervous attack, which led to his death, under very painful circumstances, on the 30th of April, 1866. Every one who came in contact with the admiral felt that he was in the presence of a courteous gentleman, of a kindly nature, who was most anxious to do his duty in a post for which he was scarcely qualified by previous education or mental power.

FLAHAUT DE LA BILLARDERIE, AUGUSTE CHARLES JOSEPH, COMTE DE, a distinguished general and diplomatist, was born at Paris, April 20, 1786. His father, Comte de Flahaut, of an old family of Picardy, was guillotined at Arras in 1793, by order of the revolutionary tribunal. His mother fled to England, and supported herself and her son by writing French novels. She afterwards went to Germany, in 1798 returned to Paris, and in 1802 married the Portuguese diplomatist, De Souza Botelho. At the age of fifteen young Flahaut entered the army of Napoleon; in the Portuguese campaign attracted the notice of Murat, who made him his aide-de-camp; fought at Austerlitz and Friedland; was wounded at Ems; received the Cross of the Legion of Honour, and was promoted to the rank of colonel. Continuing his career of active service, and gaining everywhere credit for courage and conduct, he was made aide-de-camp to Napoleon, accompanied him throughout the Russian campaign, and returned with him to Paris. He had now acquired the personal favour of the Emperor, who selected him to meet the King of Saxony, and conduct him to the capital, March 10, 1813. For his conduct at the battles of Dresden and Leipzig he was created general of division, and received the title of Count. Flahaut adhered to his master to the last, and refusing service under the Bourbons, was one of the first to welcome him on his return from

Elba. In anticipation of the ensuing conflict, he was employed in reorganizing the army, and he was alongside the Emperor throughout the brief campaign which closed at Waterloo. He then returned to Paris, took command of a corps, and was one of the last to lay down his arms.

Flahaut's name was rescued from the list of the proscribed by the intervention of Talleyrand, who had conceived a high opinion of his ability; but he found it necessary to leave France and withdraw to England. Here he won the hand of the daughter and heiress of Lord Keith, and her wealth smoothed his future course. When Louis Philippe became king, Count de Flahaut returned to France. He was appointed Ambassador to Berlin in 1831, and from 1841 to the fall of the monarchy he was minister at Vienna. The change of dynasty offered no impediment to his prosperous career. He was received into great favour at the Court of Napoleon III.; in 1853 was made a senator, and in the following year was appointed one of the committee for editing the Despatches, Letters, &c., of Napoleon I. In 1860 he was appointed ambassador to London, and acquired great popularity in the higher circles by the splendour of his entertainments and the munificence of his hospitality. He was named Grand Chancellor of the Legion of Honour in 1864, and died at the palace of the order on the 31st of August, 1870—living just long enough to know of the terrific disasters to the French arms, but saved from witnessing the downfall of the dynasty which he had so long and so faithfully served.

* FLANDIN, EUGÈNE NAPOLEON, French artist and archæologist, was born at Naples, August 15, 1809, the son of a Frenchman in the service of Murat. Fond of travel and of art, he produced, with little aid from masters, his earliest pictures, views of places he had visited in travelling about Italy; in 1836 sent two views in Venice to the Salon, and, after a couple of journeys to Algiers, painted the 'Assaut de Constantine,' which was purchased by Louis Philippe, for Neuilly. He was nominated in 1839, in conjunction with M. P. Coste the architect, to accompany M. de Sercey on his embassy to Persia. He remained there two years, and on his return to Paris in 1842, his drawings were ordered to be published, after having been favourably reported upon by the commission appointed to examine them. He applied himself with zeal to the work, but was soon called from it, the Academy having named him to the Government as the most suitable person to proceed with M. Botta to Nineveh, to examine and draw the vestiges of buildings and antiquities, the discovery of which was then attracting so much attention. He brought back with him a prodigious quantity of sketches, plans, and drawings. A special credit was granted by the Chamber of Deputies, and the publication of the two series was prosecuted forthwith. The first appeared under the title 'Voyage en Perse,' 1843—54, and consisted of four large folio volumes of plates, illustrating the architecture, sculpture, inscriptions, and topography of Ancient and Modern Persia, executed in conjunction with M. Coste, and two octavo volumes of text by M. Flandin. The reproductions of his Nineveh drawings occupy four of the superb folio volumes of M. Botta's 'Monuments de Ninive,' 1844—54. M. Flandin also wrote many valuable papers on Nineveh and its remains in the 'Revue des Deux-Mondes.' In 1854—56 he published a series of fac-similes, executed in lithography by himself, of 150 of his sketches made upon the Bosphorus, in Constantinople, the Dardanelles, Smyrna, &c., under the title 'L'Orient.' He has since returned to painting, and has exhibited a large number of pictures, chiefly views in the East, but some from Italy.

FLANDRIN, JEAN HIPPOLYTE, one of the most distinguished recent French painters, was born at Lyon in 1809, and, having learnt painting under the best masters in that city, went to Paris in 1829 and entered the atelier of Ingres. In 1832 he obtained the grand prize of Rome, and continued in that city his studies under M. Ingres, who had been appointed head of the French Academy there. From his return to Paris in 1838 he each year exhibited religious pictures, or historical or poetical subjects of a religious order, such as 'Christ blessing Children;' a 'Mater Dolorosa;' 'St. Louis taking the Cross;' 'Dante in the Circle of the Envious;' and came to be looked upon not only as the ablest of Ingres's pupils, but his probable successor as the head of French historico-religious art. The deep religious feeling which pervaded his pictures, and their largeness of conception and style pointed him out as especially qualified for the execution of some great mural works which had been proposed. First among these was the chapel of St. John in the church of Saint-Séverin at Paris. This was followed by the vast frieze of St. Vincent-de-Paul, a work of exceeding loveliness

and pathos, intended to shadow forth the constant presence of Christ; the entire wall paintings of the church of St. Germain des Prés, which he unhappily did not live to finish; and the whole of the decorations of St. Paul de Nîmes. Besides these mural paintings and many easel pictures, M. Flandrin executed numerous portraits, in a broad, manly, vigorous style that left him with few living rivals in that walk of art: two characteristic specimens by him were in the International Exhibition of 1862—the very remarkable portrait of Napoleon III. and the charming one of Mlle. M., exhibited under the title of 'Jeune Fille à l'Œillet.' M. Flandrin received the first medal on three occasions; was decorated in 1841, and promoted to be Officer of the Legion of Honour in 1853, and in the same year elected a member of the Institute. He died at Rome, March 21st, 1864. The 'Lettres et Pensées de Hippolyte Flandrin' were collected and published, with a biographical notice, by M. Laborde, Paris, 1865. A younger brother, * JEAN PAUL FLANDRIN, born at Lyon in 1811, is one of the best landscape painters in France.

FLAVEL, JOHN, a Nonconformist divine, was born about the year 1627, at Bromsgrove, in Worcestershire, where his father, the Rev. Richard Flavel, was at that time minister. He was educated at University College, Oxford, which he entered about 1646; and having taken his B.A. degree, was settled as a probationer at Diptford, by the Standing Committee for the county of Devon, April 27th, 1650, and received Presbyterian ordination at Salisbury, on the 17th of October following. He succeeded Mr. Walplate, to whom he had been assistant, in the rectory of Diptford; but resigned that living in order to proceed to Dartmouth, where he was settled by the Commissioners for the Appropriation of Public Preachers, by an order from Whitehall, dated December 10, 1656. Being ejected by the Act of Uniformity, St. Bartholomew's Day, August 24, 1662, he exercised his ministry under difficulties; and was constrained for some years to seclude himself at Slapton, about five miles from Dartmouth. He fulfilled the duties of his office more openly upon King James's Declaration of Liberty of Conscience, April 4th, 1687; whilst the fuller toleration of William III. completed his freedom and fortified his courage. He died suddenly, on the 26th of June, 1691, at Exeter, whither he had gone in order to be present at a meeting—of which he was elected moderator—of the Nonconformist ministers of Devonshire, held at Topsham, within four miles of the city, for the purpose of considering the propriety of forming a union between the Presbyterians and the Independents—an object which he had much at heart. He was buried in St. Saviour's Church, Dartmouth; but a monument which was placed there to his memory was removed by the order of the magistrates in 1709, after which it was erected in the dissenting meeting-house.

Flavel wrote much, and his several works have been frequently reprinted, both in this country and America. The principal of them are: 'Husbandry Spiritualized; or, the Heavenly use of Earthly Things,' 4to, London, 1669; 'Navigation Spiritualized. With spiritual Poems,' 8vo, London, 1671; 'The Fountain of Life opened; or, a Display of Christ in His essential and Mediatorial Glory,' &c., 4to, London, 1672, which is a series of forty-two sermons; 'A Token for Mourners; or, Boundaries for Sorrow on Death of Friends,' 8vo, London, 1674; 'Divine Conduct; or, the Mystery of Providence, its Being and Efficacy asserted and vindicated,' &c., 8vo, London, 1678; 'The Method of Grace,' &c., 4to, London, 1680, a series of thirty-five sermons; 'Sacramental Meditations,' &c., 8vo, London, 1680; 'Pneumatologia; a Treatise on the Soul of Man,' 4to, London, 1680; 'Preparations for Sufferings; or, the Best Work in the Worst Times,' &c., 8vo, London, 1682; a series of Eleven Sermons, collectively entitled, 'England's Duty,' London, 1689; and the 'Reasonableness of Personal Reformation, and the necessity of Conversion,' &c., 12mo, London, 1691. Flavel's 'Remains' were collected after his death, and published in 8vo, 1691; whilst his 'Works,' in 2 vols. folio, as well as in 6 vols. 8vo, have been several times reprinted, as, for instance, at Edinburgh, Newcastle, and London.

FLOOD, HENRY, an Irish politician and orator, son of the Chief Justice of the Court of King's Bench in Ireland, was born in 1732. After studying at Trinity College, Dublin, he went in 1749 to Oxford. At first he relied for distinction on social position and personal qualities; but under the guidance of Dr. Markham and Mr. Tyrwhitt, he obtained a classical training. In 1759 he became a member of the Irish House of Commons, and was soon recognised as an eloquent and zealous, though not always judicious, advocate of popular rights: urging among other measures, the shortening of parliaments and the

repeal of obnoxious statutes. In 1769 he fought a duel with Mr. Agar on occasion of an election quarrel. Agar was wounded, but challenged Flood a second time, when Agar was killed: Flood was tried for murder, but acquitted. The affair in no way interfered with his prospects or popularity. In 1775 he became a Privy Councillor, and received an appointment under the Irish government; but he resigned this appointment in 1783, because he disapproved of some parts of the ministerial policy; and his Privy Councilship was at the same time taken away from him. His own party complained that they could not rely upon his steadiness; and on one occasion he had a fierce quarrel with Grattan in the House. Almost immediately afterwards he came to England, and was elected member for Winchester in the English House of Commons, and in 1785 for Seaford. Rich and sarcastic in oratory, bitter and formidable in reply, Flood was always eagerly listened to; but he did not obtain commanding influence as a politician. He made his last speech in 1790, in advocacy of a plan of parliamentary reform, which won the approval of Fox. He died December 2nd, 1791, leaving munificent bequests to Trinity College, Dublin. Besides translations of orations by Demosthenes, Cicero, and Æschines (still in MS.), he wrote a 'Poem on the Death of Frederick Prince of Wales,' 1751; 'Translation of the First Pyrrhic Ode of Pindar,' and an 'Ode to Fame,' 1785; and a 'Speech on the Treaty of Commerce with France,' 1787. (*Life and Correspondence of the Rt. Hon. H. Flood*, by W. Flood. 8vo. 1838).

FLORIO, GIOVANNI, a philologist, self-styled the *Resolute*, was born in London, in the year 1552 or 1553, an alternative date which is certified by the inscription round the portrait prefixed to 'Queen Anne's New World of Words,' representing him as being "Æt. 58, A. D. 1611." His parents were Waldenses, who had fled from the Valtelline to this country for the freer enjoyment of liberty of conscience. During the reign of Mary they sought a refuge abroad, but returned to England after her death. About 1576 Florio became French and Italian tutor to Emanuel Burnes, son of the Bishop of Durham, and at that time a commoner of Magdalen College, of which society Florio himself was admitted a member in 1581, and became a teacher of languages in the University. After the accession of James I. he was appointed tutor in French and Italian to Henry Prince of Wales, and to his mother, Queen Anne, to the latter of whom he also became a gentleman of the privy chamber, and clerk of the closet. In the year 1625 Florio retired to Fulham, in order to avoid the plague then raging in London; but he was overtaken by it in his retreat, where he died in August or September of the year just mentioned, and was probably buried in the parish church.

Florio is characterised by Wood as "a very useful man in his profession, zealous in the religion he professed, and much devoted to the English nation." His works comprise—'Florio his firste Fruits; which yeelde familiar Speech, merie Prouerbes, wittie Sentences, and golden Sayings. Also a perfect Induction to the Italian and English Tongues,' 4to, London, 1578; 'Florio's Second Frutes, to be gathered of Twelve Trees, of diuers but delightsome Taste to the Tongues of Italians and Englishmen,' 4to, London, 1591; 'Garden of Recreation, yeelding six thousand Italian Prouerbs,' alternatively entitled in Italian, 'Giardino di Recreatione nel quale crescono fronde, fiori, e frutti,' &c., 4to, London, 1591; 'A Worlde of Wordes; or, most copious and exact Dictionarie in Italian and English,' folio, London, 1598, a "much augmented" edition, dedicated to the wife of James I., and entitled 'Queen Anna's New World of Words,' &c., folio, London, 1611. At present, Florio is remembered better than by his works in grammar and philology, as being the possible original of the character of Holofernes, the schoolmaster in 'Love's Labour's Lost'; and Shakspeare is said to have retaliated in this manner for a passage reflecting upon the English drama and dramatists in 'Florio's Second Frutes':—"The plaies that they do plaie in England are neither right comedies nor right tragedies, but representations of histories without any decorum." But he is known best of all by his English translation of Montaigne's Essays, 'The Essayes, or Morall, Politike, and Millitarie Discourses of Lo: Michaell de Montaigne, Knight of the noble Order of St. Michael, and one of the Gentlemen in Ordinary of the French King, Henry the Third his Chamber,' folio, London, 1603, 1613, 1632, &c. There are several copies of the first edition of this translation in the Library of the British Museum, and two of them are enriched respectively with the autographs of William Shakspeare and Ben Jonson.

FLÖRKE, HEINRICH GUSTAV, botanist, was born De-

cember 24, 1764, at Alten Kalden, in Mecklenburg. In 1775 he went to the University of Butzow, stayed there three years, and then engaged himself as a tutor in a family living at Kittendorf. After a time his pupil, a young nobleman, went to the Göttingen University, and Flörke went with him. While here he became acquainted with Blumenbach, Hoffman, and Persoon. In 1794 his pupil's family procured him the curacy of Kittendorf, but not being able to make his religious convictions harmonise with the dogmas he was required to teach, he resigned his cure, and went to study medicine at Jena. Too poor to hire conveyance, he travelled there on foot, and collected the plants, especially lichens, which he found. The herbarium thus formed is still preserved at Berlin, to which place he went after completing his studies at Jena. His object in going to Berlin was to assist his brother in publishing an encyclopædia of philosophy and technology. His brother died a few months after his arrival; he married his brother's widow, and undertook the sole editorship of the encyclopædia. To his deep regret he was compelled to sell his herbarium, which was bought by a society of naturalists at Berlin. While at Berlin he had established his reputation as a lichenographer, and the lichens collected by Tilesius, Bory St. Vincent, and other travellers were entrusted to him for determination. At this time Acharius was at the height of his fame, and the two were rivals throughout their lives. In 1816 Flörke was appointed to the professorship of natural history at Rostock, which he retained for 15 years. He gave especial attention to the genus *Cladonia*, which formed the subject of his most important work, 'Commentatio nova de Cladoniis,' 8vo, Rostock, 1828. In 1829 he commenced illustrating this work by natural specimens, under the title of 'Cladoniarum exemplaria exsiccata,' of which three parts appeared. In preparing the remaining fasciculi he was struck with apoplexy, and in 1833 and 1834 he did his professorial work, being carried to his class in a chair. In 1835 a fresh attack of apoplexy quite disabled him, and on November 6 of that year he died. His second and principal herbarium is chiefly composed of cryptogams, and is remarkably rich in authentic specimens from Von Martius, Acharius, Agardh, Fée, and many other eminent botanists. The genus *Cladonia* is illustrated by nearly 50,000 specimens. This herbarium is in the Museum at Rostock.

* FLOTOW, FRIEDRICH FERDINAND ADOLF, VON, a musical composer, was born at Teutendorf, Mecklenburg-Schwerin, April 26th, 1812. His taste for music having determined him in the choice of a profession, he went to Paris, and studied under Reicha. In 1830 the Revolution drove him back to Germany, where he composed three drawing-room operettas, 'Pierre et Colombine,' 'Rob Roy,' and 'La Duchesse de Guise,' which afterwards came into some favour in France. Returning to Paris, he took with him the MSS. of some operas of greater pretensions, but did not attract much notice till 1838, when his 'Naufrage de la Méduse' was favourably received at the Théâtre de la Renaissance. This opera was afterwards altered, and brought out in Germany under the name of 'Die Matrosen.' It was followed by 'Le Forestier,' 1840, afterwards, in German, 'Der Förster'; 'L'Esclave de Camoëns,' 1843; the 'Lady Henriette,' a ballet, which afterwards formed the basis for his 'Martha'; 'Alessandro Stradella,' 1844; 'L'Ame en Peine,' 1846. Others were 'Indra,' 'Die Grossfürstin,' 'Rübezahl,' 'Marie Katerina,' and music to the 'Winter's Tale.' The opera of 'Martha,' 1847, was received very favourably, especially when brought out on the Italian stage in England, in 1858. In 1854 Flotow returned to Schwerin, where he became intendant of the Court Theatre. In 1856 appeared his opera 'Albin.' Removing once again to Paris in 1863, he became a corresponding member of the Institute in 1864, and produced his opera of 'Zilda' in 1866. His music, never great or original, is often graceful in melody and instrumentation: it partakes somewhat of the styles of Auber and Adam.

FLOURENS, MARIE JEAN PIERRE, physiologist, was born at Maureilhan, near Béziers, in Hérault, April 14, 1794. In 1814 he went to Paris, and soon became intimate with Chaptal, the Cuviers, and other eminent scientific men. In 1828 he succeeded to Bosc's place in the Academy of Science, and after giving lectures on natural history and anatomy in the Collège de France and Jardin du Roi, he was appointed a full professor in the former institution in 1835. A few years before this he had been elected the perpetual or permanent secretary of the Academy of Science. These two posts he retained up to his death. He sat in the French Chamber of Deputies, and took part in the municipal government of Paris. He was made Commander of the Legion of Honour in 1845, and grand officer in 1859; he was also member of numerous scientific bodies. He

died at Montgeron, near Paris, December 6, 1867. His writings are numerous and important: they are remarkable for the clearness of their expression, ease of diction, and skilful arrangement, and have won for him a high place in the rank of physiological students. His principal forte was neurology, and his most important discovery was the demonstration that each set of movements and sensations depends upon particular nerves and nervous centres for their execution. He singled out a minute point in the medulla oblongata which he considered to be the essential seat of life, the vital nucleus of the whole nervous system. These views were published in 1824 and the few following years; and his subsequent researches were in the main amplifications and confirmations of his earlier views. A large proportion of these papers were collected together in his most important work, under the title of *Recherches expérimentales sur les propriétés et les formations des systèmes nerveux dans les animaux vertébrés*, 2nd ed., 8vo, Paris, 1842. His book, entitled *De la Longévité humaine, et de la quantité de vie sur le globe*, 12mo, 1854, which rapidly passed through three editions, attracted considerable attention. He announced as a law that the full term of life of an animal is five times the period of growth. His other writings, which are partly scientific partly popular in tone, deal with the development of the osseous system, including the teeth; with the skin of man, which he states demonstrates the physical unity of man; the laws of symmetry in animals; instinct and intelligence; Darwin's theory of the origin of species; accounts of the works of Cuvier, Buffon, and Fontanelle; and *Éloges historiques* on the principal naturalists who had died during his perpetual secretaryship. These *éloges* were collected in two volumes in 1856 and 1857.

FOLKEMA, JAKOB, Dutch engraver, was born in 1692 at Dokkum, in Friesland. He engraved many of the designs of Picart, and these, and the series of seven plates of the *History of Meleager*, engraved for the famous Amsterdam edition of Ovid (fol. 1732), are considered his best subject pieces; but he was perhaps most successful with his portraits, among which are those of many eminent contemporaries. Dean Prideaux, after Seeman; Cervantes, after Kort; Johann Ens, after Colla, are well-known examples. Some of his portraits are from miniatures by his sister Anna. Jakob Folkema died at Amsterdam in 1767.

FORBES, JAMES DAVID, geologist and physical geographer, was born in Edinburgh, April 28, 1809. In early life his constitution was so delicate that severe study was forbidden him. Jameson taught him geology, and encouraged the general bias of his mind. One of his earliest geological papers was an account of a boulder, in a letter written to Professor Jameson, which is marked by broad generalisations. He was then not more than 20, and in 1833 he was appointed professor of natural philosophy in the Edinburgh University, which post he held till 1859, when he became principal of St. Salvador and St. Leonard's Colleges at St. Andrews. During his professorship he was in the habit of making frequent visits to the glaciers of Switzerland. He was the first to determine by accurate measurements the varying rate of flow of those bodies of ice, which he regarded as viscous-like masses forced down slopes by pressure, and he added much to our knowledge of glaciers. He confirmed Agassiz's announcement of the former presence of glaciers in the Highlands of Scotland. In 1851 he visited Norway, and drew up an excellent sketch of the glaciers and physical geography of that country. His attention was also given to many other subjects. He wrote largely on volcanoes, his first paper, published in 1828, being a long account of Mount Vesuvius, which was followed by seven others on volcanic phenomena, under the title of *Physical Notices of the Bay of Naples*, and published in the *Edinburgh Journal of Science* for 1828, 1829, 1830, and 1831; on atmospheric pressure; meteorology; on heat, which he made the subject of long research; on steam, in which he discovered many curious optical properties, and showed how they illustrated the phenomena of clouds; on terrestrial magnetism and temperature, &c. He also took great interest in mineralogy. His principal separate works are, *Travels through the Alps of Savoy and other parts of the Pennine Chain*, 8vo, Edinburgh, 1843; *Norway and its Glaciers visited in 1851*, 8vo, 1853; and *Occasional Papers on the Theory of Glaciers*, 8vo, 1859. He died December 31, 1868.

FORBES, SIR JOHN, M.D. [E. C. vol. ii. col. 951]. In 1857 Sir John Forbes published *Nature and Art in the Cure of Disease*, "a legacy," as he wrote, "to his younger brethren,"

intended to guard them against confiding in the curative agency of drugs. He died at the residence of his son, Mr. A. C. Forbes, on the 13th of November, 1861.

FORCADE, EUGÈNE, a distinguished French journalist, was born in 1820 at Marseille, where he founded in 1837 a journal called the *'Sémaphore'*, of which, in spite of his engagement in a banking-house, he held the management until his departure for Paris in 1840. About three years after his arrival in the capital he attracted attention by an article which he contributed to the *'Revue Indépendante'*, upon *'le Droit de Visite'*, and became connected with the *'Revue des Deux Mondes'*, to which he contributed with great regularity, particularly distinguishing himself through a series of years for the calm, intelligent, and philosophical method of his fortnightly summary of affairs, entitled *'Chronique de la Quinzaine'*. In 1845 he founded *'La Revue Nouvelle'*, 8vo, Paris, which extended to sixteen volumes, and to the end of the year 1847. To this review he supplied articles on Political Education, &c., *'De l'Éducation Politique'*, *'La Dotation du Séminaire Catholique de Maynooth'*, *'De l'Esprit Littéraire'*, and many others in literary and artistic criticism, and in general and party politics in England and in France. His next venture was the institution in 1851 of the *'Messager de l'Assemblée'*, which for its plain speaking on the contemplated coup d'état was suppressed on the 2nd of December, and its editor sentenced to three months' imprisonment. Besides the above and other journalistic activity, M. Forcade wrote and published in a separate form *'Études historiques'*, 12mo, Paris, 1853; and *'Histoire des Causes de la Guerre d'Orient d'après des Documents français et anglais'*, 12mo, Paris, 1854, which forms one of the volumes of the second series of the *'Bibliothèque Contemporaine'*. Under the strain of excessive work and continued political excitement, his brain at length gave way; and, after some months of restraint, he died, November 6, 1869.

FORCELLINI, EGIDIO, an Italian scholar and lexicographer, was born on the 26th of August, 1688, at a small village of Treviso, in the Venetian territory; and studied at Padua, under Faccioliati. In due course he was ordained to the priesthood, and in 1724 became director of the seminary at Ceneda, where also he filled the chair of rhetoric. In 1731 he returned to Padua, and remained there till 1765, when he retired to his native place. He died at Padua on the 4th of April, 1768.

Having exhibited rare scholarship and intelligence in some minor philological labours, Forcellini was encouraged by Cardinal Cornaro, Bishop of Padua, to undertake a lexicon which had been projected by his tutor Faccioliati. According to memoranda in the handwriting of Forcellini, it appears that he commenced his work about the end of the year 1718, and finished it on the 21st of February, 1753. From the 4th of June, 1753, to the 9th of April, 1755, he was engaged in revision; and the transcription, which was done by Luigi Violato, was commenced on the 3rd of December, 1753, and completed on the 13th of November, 1761. For ten years the huge MS. lay unpublished, until, three years after the death of Forcellini, the first edition was brought out through the munificence of Cardinal Prioli, to whom it was dedicated. It bore the title of *'Totius Latinitatis Lexicon, Consilio et Cura Jacobi Faccioliati, opera et studio Egidio Forcellini, Seminarii Patavini Alumnii lucubratum'*, 4 vols. 4to, Padua, 1771, second edition, 1805; *'Appendix ad "Totius Latinitatis Lexicon," folio, Padua, 1816; third edition of the entire work, "auctum et emendatum a Josepho Furlanetto," 4 vols. folio, Padua, 1827—31; another edition, "correctum et auctum," 4 vols. folio, Schneeburg, 1831—35, &c.* An edition adapted to English readers appeared under the care of James Bailey, 2 vols. 4to, London, 1826, in which English was substituted for Italian, which incorporated the Paduan Supplement, and exhibited upwards of 20,000 words which had been introduced by the learned editor. In the Appendices occurred the treatise by Horatius Tursellinus, entitled *'De Particulis Romanæ Orationis'*; Gerrard's *'Siglarium Romanum'*; and J. M. Gesner's *'Latinitatis Index Etymologicus'*.

FORCHHAMMER, JOHANN GEORG, chemist and geologist, was born July 26, 1794, at Husum, in Schleswig. He studied at Kiel and Copenhagen. In 1818 he accompanied Professor Oersted on a mineralogical expedition to Bornholm; in the following year he was employed by the State to travel through France, Great Britain, and Denmark; in 1823 he was appointed lecturer on mineralogy in Copenhagen University; and in 1850, professor. He was also employed in teaching at several other educational establishments. He was a member of the Academy of Science at Copenhagen from 1825 onwards, and in 1851 suc-

ceeded Oersted as the secretary to the academy. He also belonged to many other societies. His writings are numerous, and take a high place in scientific literature. They are written chiefly in Danish, partly in German, and partly in English. They are for the most part devoted to the mineralogy and rocks of Denmark. His most important observations are on metamorphism, on the relation between the contour of Denmark and its former geological history and changes of level; and on seawater. Amongst his separate works we may cite 'Danemarks geognostiske Forhold,' 4to, 1835; 'Skandinaviens geognostiske Natur,' 8vo, 1843; and 'Laerobog i Stoffernes almindelige chemie,' 1834-5. He died December 14, 1865.

* FORCHHAMMER, PAUL WILHELM, younger brother of Johann Georg, is an eminent archaeologist. He was born in Husum in 1803, attended the gymnasium in Lübeck, and later studied philology and archaeology in the University of Kiel, where in 1828 he took the degree of doctor of philosophy, and in 1837 was made a professor of archaeology. In 1830 he undertook a journey through Italy and Greece, and again in 1838 travelled in Greece and Asia Minor, Egypt and Rome, for the purpose of investigating the archaeological remains and tracing the history of classic art. Evidence of his laborious researches will be found in most of his works, which have been of especial value in elucidating the topography of ancient Greece, and showing how the art, literature, history, and antiquities mutually illustrate each other. His works include 'Hellenika,' Berlin, 1837; 'Die Athener und Sokrates, oder die Gesetzlichen und der Revolutionär,' Berlin, 1837; 'Apollo's Ankunft in Delphi,' Kiel, 1841; 'Die Geburt der Athene,' Kiel, 1841; 'Topographie von Athen,' Kiel, 1841; 'De ratione quam Aristoteles in dispendiis libris de animalibus secutus sit,' Kiel, 1846; 'De Aristotelis Arte Poetica, ex Platone illustranda,' Kiel, 1847; 'Die cyklopischen Mauern,' Kiel, 1847; 'Achill,' Kiel, 1853; 'Topographia Thebarum heptapylarum,' Kiel, 1854; 'Ueber die Reinheit der Baukunst,' Hamburg, 1856; 'Halkyonia,' Berlin, 1857; 'Ueber den Ursprung der Mythen,' printed in 'Philologus,' Göttingen, 1860. Conjointly with Jahn he founded the Archaeological Museum at Kiel.

FORD, RICHARD [E. C. vol. ii. col. 953]. After an illness of some continuance, Mr. Ford died on the 1st of September, 1858.

FORMAN, SIMON, physician and astrologer, was born near Wilton, Wiltshire, in 1552. After being a short time at the Grammar-School of Salisbury, he was apprenticed to a druggist in that city, and there obtained a little knowledge of medicinal plants and pharmacy, at the same time extending his acquaintance with other subjects. He opened a school in 1570, and then went to Magdalen College, Oxford, as a poor scholar. Here his favourite studies were medicine and astrology, and after pursuing similar studies for a time in Holland, he came to London, and practised medicine in Philpot Lane; but not having a licence or a degree, he was four times prosecuted for practising illegally. He thereupon went to Cambridge, obtained a degree, and settled at Lambeth as a physician and astrologer. In 1601 he was charged before the Archbishop of Canterbury as an empiric or cheat; but nevertheless persons of rank and position, among others the notorious Countess of Essex, consulted him, apparently more for his astrology and alchemy than for his medical knowledge. He died suddenly while crossing the Thames in a boat, September 12th, 1611, having, according to Lilly, prognosticated the exact time of his death on the Sunday before, being then in full health ('Life and Times,' p. 42). His MS. works, relating to the philosopher's stone, magic, astronomy, astrology, natural history, the plague, and other subjects, are partly in the British Museum, partly in the Plymouth Library, but chiefly in the Bodleian Library, Oxford. 'Forman's Autobiography from 1552 to 1602,' has been published, under the editorship of Mr. Halliwell. There has also appeared 'Brief Description of the Forman MSS. in the Public Library, Plymouth,' 1853.

* FORSTER, FRANÇOIS, an eminent French engraver, was born at Locle, in Neuchâtel, then a Prussian province, August 22nd, 1790; entered the atelier of Langlois at Paris in 1805; and at the Ecole des Beaux-Arts carried off the second prize in 1809, and the grand prize in 1814. The King of Prussia, then in Paris with the allies, presented him with a gold medal and an allowance of 60*l.* a year for two years, that he might complete his studies at Rome. There he worked hard at the pictures of Raffaele, but on returning to Paris in 1816, he was compelled for a time to engrave for the booksellers. Gradually he emancipated himself from task-work, and produced some of the best plates of the modern French school of line engraving. Among the first are two portraits of Raffaele, that painter's 'Graces'

(a plate of exquisite delicacy and precision of line and refinement of expression), Titian's 'Mistress,' and the Virgin in bas-relief of Lionardo da Vinci. The 'Marie Antoinette,' and 'St. Cecilia,' after Paul Delaroche, and some others from contemporary French painters, are equally excellent in their way. Among his portraits may be mentioned the Duke of Wellington, after Gerard, one of his earliest prints, and Queen Victoria, after Winterhalter, perhaps his latest. Forster was awarded a medal of the first class in 1855, and was promoted to be officer of the Legion of Honour in 1863. He was elected a member of the Institute (Académie des Beaux-Arts) in 1844.

* FORSTER, RIGHT HON. WILLIAM EDWARD, M.P., the only son of William Forster, Esq., a leading member of the Society of Friends, and for upwards of fifty years a minister in their community, was born at Bradpole, Dorsetshire, on the 11th of July, 1818. He was educated at the Friends' School at Tottenham. His mother was the sister of Sir Thomas Fowell Buxton, and his wife, whom he married in 1850, is the eldest daughter of the late Dr. Arnold, of Rugby. He contested Leeds in the Liberal interest in April, 1859, unsuccessfully; and was first elected to the House of Commons in February, 1861, as one of the members for Bradford, where he carried on business as a worsted manufacturer, which constituency again returned him in July, 1865, and which he continues to represent. He served as Under-Secretary for the Colonies from November, 1865, to July, 1866; and in December, 1868, was appointed to be Vice-President of the Committee of Council on Education, and also at the same time a fourth Charity Commissioner. He is J.P. and D.L. for the West Riding of Yorkshire, a Fellow of the Royal Geographical Society, and a captain in the 23rd West Riding Volunteers. Mr. Forster took part in the furtherance of the measures of the Gladstone administration in 1869; and in particular conducted through the House of Commons a Bill for the Reform of Endowed Schools, for the success of which he professed his gratitude for the co-operation of Earl de Grey and Bishop Temple. Addressing his constituents at Bradford on the evening of January 17, 1870, he announced the chief work of his party to be for the future of a constructive character. They must make, he said, such laws for the punishment of criminals as would tend to prevent crime; must so administer public money as to best promote education; so administer the Poor-laws as in the best way to check pauperism; and to some extent remodel the licensing laws so as in the best way to check drunkenness. All these questions were to be considered, and all these problems to be solved, with the utmost regard to the individual liberties of the subjects and the rights of the citizens, as scientific laws which dictate and regulate the business of society; and with the view of so shaping the necessary action of the government as not to take away the stimulus from the individual to do his duty. Mr. Forster's chief distinction in the session of 1870 lay in his admirable conduct of the Education Bill, the main principle of which was to lay down as a legal enactment that there should be sufficient schools throughout the country; and that wherever there was proved to be educational destitution, the local authorities should be called upon to supply it. It involved also the abolition of denominational inspectors. After the death of Lord Clarendon, Mr. Forster was promoted to a seat in the cabinet.

* FORTUNE, ROBERT, was born about 1813. He was first employed in the Botanical Garden at Edinburgh and at Chiswick, at the same time studying botany under Graham and Lindley; and then went to China as collector of plants on behalf of the Horticultural Society of London. In this capacity he forwarded numerous new and interesting plants to this country, and met with many adventures. His experience was published in 1847, in 'Three Years' Wanderings in the Northern Provinces of China,' which attracted much attention. In 1848 the East India Company sent him out to obtain information respecting tea, and as the result of his investigations he introduced into India many choice varieties of the plant, and improved implements and modes of culture. In 1857 the United States Government employed him to introduce the tea plant into America, and he succeeded in carrying to Washington 50,000 growing plants. He also introduced to Europe a large number of new and valuable flowers and fruits, and formed a rich entomological collection. His frequent visits to the Celestials led to the production of his 'Journey to the Tea Countries of China,' 8vo, 1852; and 'Residence among the Chinese; Inland, on the Coast, and at Sea; being the third visit, from 1853 to 1856.' His long experience constitutes him one of the highest authorities on all matters relating to Chinese tea and Chinese life. He has written

several papers on Chinese plants in the Journal of the Horticultural Society.

* FOSTER, BIRKET, landscape painter and designer, was born at North Shields, February 4, 1825. At the age of 16 he was apprenticed to Mr. Landell, the wood-engraver, by whose advice he, after a time, abandoned engraving for designing on wood. This branch of art he pursued for several years with great success, and many of the best landscape illustrations, both to books and periodicals, were from his pencil. Gradually, however, he gave more and more attention to painting in water-colours, and when, in 1859, he was elected an Associate of the Society of Painters in Water Colours, he gave up his practice on wood. At the exhibitions of the Society his pictures were from the first extremely popular, and their popularity has never abated. But of late he has turned by preference to oil as a vehicle, continuing to represent the simple heath and woodland scenery of Surrey and the home-counties, but adopting a broader manner, and dropping the minute detail of his water-colour drawings.

FOUCAULT, JEAN BERNARD LÉON, was born at Paris, September 18th, 1819. His father, a publisher, had him taught medicine; but evincing a preference for observational and experimental science, the young man devoted himself to those studies. When Daguerre's discovery relating to sun-pictures was published in 1839, Foucault eagerly entered on the matter, studying the optical principles concerned in the phenomena. He next assisted M. Donné in preparing a course of lectures on microscopic anatomy. In conjunction with M. Hippolyte Fizeau he made photometric comparisons of the solar, electric, and lime lights; and with M. Regnault, he experimented on binocular vision. In 1844 he made such improvements in the electric light as to render it available as a substitute for solar light for photographic and optical purposes; and afterwards invented a self-acting regulator for the same light, whereby the carbon points are always kept at the proper distance apart. He experimented on the production of interference-bands, by means of monochrome light and multiple prisms; on the laws of chromatic polarisation; on incandescent foci; on the interference of calorific rays (by the use of very minute thermometers); on the reverse action of the extreme red rays on a daguerreotype picture, in destroying the effect produced by the other rays; on the relation between frictional and voltaic electricity; on the use of the conical pendulum as a time-keeper; on luminous vibrations; and on many other subjects. Some of his researches were made for the Bureau des Longitudes, on the suggestion of F. Arago. Many of his experiments were important for their scientific results. It had been deduced from physical and dynamic laws, that if light travels more rapidly through air than through water, great support would be furnished to the undulatory theory of light; whereas the corpuscular or molecular theory would be strengthened by an opposite result. In 1850, Foucault undertook to examine the question experimentally. It was difficult, and required apparatus of a refined and highly sensitive kind; but he succeeded, and his results were accepted as favouring the undulatory theory. In 1851 he made his celebrated pendulum discovery. Reasoning from dynamic laws, he believed that a pendulum, oscillating freely for a long time, would gradually turn round an axis like the hands of a clock; that the pendulum would oscillate in an invariable plane if the earth were still; but that the diurnal rotation of the earth on its axis would give an apparent revolution to this plane. An experiment on a large scale proved that such is really the case; and it was a brilliant *séance* when he showed the result to the members of the Institute. The gyroscope, invented by him in 1852, not only confirmed this discovery, but demonstrated that the cardinal points of the horizon can be indicated without any observations of the heavenly bodies, and without any appeal to the compass or magnet. These researches obtained for Foucault the office of physical assistant at the Paris Observatory, and the award of the Copley Medal by the Royal Society of London. Another important discovery made by him was, that if a metallic disc be rotated between the poles of a horse-shoe magnet, the disc becomes heated, and the force required to rotate it increased; a result accepted as a valuable confirmation of the mechanical theory of heat. In 1857 he invented the polariser known by his name. In the same year he devised a mode of superseding metallic specula for reflecting telescopes, by precipitating silver from a chemical solution upon a concave glass mirror: (he was not aware at the time that Steinheil had done nearly the same thing in 1856). The Paris Observatory was afterwards supplied with two reflecting telescopes on this principle—one 16 inches

aperture by 8½ feet focal length, and the other 31 inches by 15 feet; and the plan has come largely into use, especially in conjunction with a method, invented by Foucault in 1859, for giving a paraboloidal form to the concave surface of his glass. In 1862 he made some refined experiments to determine the absolute velocity of light in air, in miles per second. Taking Wheatstone's apparatus for measuring the velocity of electricity, and adding exquisitely delicate mechanism to it, he found that the real velocity of light is less than had usually been estimated; a result that confirmed the opinion which had been for some time gaining ground, that the distance from the sun to the earth has been over-estimated. In this year he was elected a member of the Bureau des Longitudes, and decorated with the order of the Legion of Honour. In 1863 he invented a new isochronous governor, to equalise rotary motions. In 1864 he was elected foreign member of the Royal Society; and in 1865 succeeded Clapeyron as member of the Académie des Sciences. In 1866 he devised a new mode of applying an extremely thin film of silver to the surface of the object-glass of a telescope, so as to lessen the painful intensity of light when looking at the sun, and yet admit a sufficient number of rays to pass through. His indefatigable labours were brought to a close by a paralytic stroke in 1867; he died on the 13th of February, 1868. Most of his scientific papers (more than thirty in number) have been published in the 'Comptes Rendus,' the 'Annales de Chimie et de Physique,' and the 'Bulletin de la Société d'Encouragement.' Two were written in conjunction with Belfield-Lefevre, five with Fizeau, and one with Regnault. He contributed a few treatises to the 'Bibliothèque d'Instruction Publique.' During many years, beginning with 1845, he wrote the scientific department of the 'Journal des Débats.'

FOULD, ACHILLE, French statesman and financier, was born at Paris, November 17, 1800. His father, a rich Jewish banker (who died in 1855) initiated him into commercial life; and at one time he carried on, in conjunction with his brother Benoît, the banking firm known as Fould-Oppenheim. After travelling in France, Italy, and the East, he was in 1842 elected a member of the Conseil Général of the Hautes Pyrénées. When elected to the Chamber of Deputies for Tarbes, he joined the moderate party; but, without taking much part in general politics, he discussed the various questions of finance and political economy which arose, such as taxes, budgets, customs' duties, and the like; and became an authority on those subjects. The subvention of railways, the establishment of savings' banks, and the consolidation of government stocks, were measures which he assisted to carry. In 1844 he was reporter of the Commission on Newspaper Stamps. Accepting the Revolution of 1848 as an accomplished fact, he was chosen to represent the department of the Seine in the Constituent Assembly. In refutation of certain prevalent doctrines concerning the currency, he wrote two pamphlets, 'Pas d'Assignats' and 'Opinions de M. A. Fould sur les Assignats.' Having been a valuable member of many commissions, he was appointed Minister of Finance under the Prince-President, Louis Napoleon. A loan being required, he departed from the usual practice of obtaining it from the great bankers, and received deposits in small sums from the people generally, a plan which met with great success. He brought forward numerous measures relating to the income tax, hypothecated credits, octroi duties, register duty, post office, taxes on letters, circulation of bank notes, the Bank of Algeria, the civil pension list, a penitentiary colony at Cayenne, a consolidation of the customs' duties with the indirect taxes, the establishment of reversionary annuities, &c. M. Fould retained his office after the coup d'état in 1851, but resigned in 1852 because he could not assent to the Emperor's resolution to confiscate the Orleans property. Chosen as a senator, he was soon afterwards appointed to the high offices of Minister of State and Minister of the Emperor's Household. He took a leading part in bringing about the Great Exposition of 1855, and in effecting the vast enlargements and improvements of the Louvre. Recalled to the Ministry of Finance in 1861, he addressed a memoir to the Emperor, recommending a more open statement of the financial position of the legislature than had been customary, and a less lavish use of the system of supplementary credits. Many important fiscal reforms were effected under his ministry. In 1865 he published pamphlets on credits and sinking funds. He resigned office in 1867. M. Fould died suddenly of angina pectoris at his villa, Tarbes, on the 5th of October, 1867. The Emperor, who lost in him one of the few judicious ministers he has called to his councils, honoured his memory with a pompous funeral.

FOURNET, VICTOR, was born at Paris, May 15, 1801. He was educated at the École des Mines, and on leaving it became director of the metallurgical works at Katzenthal (Bas Rhin). In 1828 he was put in charge of the mines at Pontgibaud, and in 1834 he was appointed professor of mineralogy and geology at Lyon. He was a member of the Academy of Sciences, and of numerous other scientific bodies, as also an officer of the Legion of Honour. He died Jan. 8, 1869. His life was a very active one, and he made important contributions to several branches of knowledge, more especially metallurgy, mineralogy, geology, meteorology, and physical geography. He was one of the first to show that the coal formations of Western Europe are continued over large areas beneath newer strata in France, Belgium, and Great Britain. He enunciated new and ingenious views on the formation of mineral veins and plutonic rocks. He accounted for many of the phenomena presented by quartz in these places by his theory of *surfusion*. He found by experiment that silica in unison with certain other substances, melted at a temperature lower than silica alone, and that when cooled down slowly it retained its viscosity at a temperature far below that required to soften it in the first instance. This state of viscosity below the fusing point he called *surfusion*. He distinguished two kinds, the igneous and the gelatinous. He applied this fact, or principle as he called it, together with that of the varying mineralogical composition of rocks, according to the rate of cooling, to explain the association of quartz with chlorite, garnet, and felspar. He discovered a large sheet of water beneath Lyon, which is now used as the chief source of supply. When the Geological Society of Paris had an extraordinary session at Lyon, he contributed largely to its success, by acting as the guide to the excursion parties, furnishing subjects for discussion, and facilitating the arrangements. He drew up a report of the meeting, under the title '*Géologie Lyonnaise*,' 8vo, Lyon, 1862. He also wrote '*Études sur les Dépôts Métallifères*,' and contributed 172 papers to scientific journals, of which the majority were published in the '*Annales*,' issued by the Agricultural Society of Lyon; some in the '*Mémoires*' of the Academy of Sciences of that place; some in the '*Comptes Rendus*,' and a few elsewhere. A full list is given in the '*Catalogue of Scientific Papers*,' published by the Royal Society.

FOURNIER, PIERRE SIMON, an eminent typefounder, was born in Paris, September 15th, 1712. He became conversant with typography under his father, who was manager of the printing office of Guillaume Lebé. After studying design under Colson, young Fournier practised for a time as a wood-engraver, but soon turned his attention definitely to the designing and engraving of matrices for printing types. In 1737 he published '*Tables des Proportions qu'il faut observer entre les Caractères*,' with a view to a more symmetrical determination of the sizes of types for printing. In 1742 appeared his '*Modèle des Caractères de l'Imprimerie*, avec un abrégé historique des principaux graveurs Français,' giving examples of many new and beautiful forms of type. This was followed by '*Epreuves de deux petits Caractères nouvellement gravés et exécutés dans toutes les parties typographiques*.' Fournier engaged in a controversy on an interesting point in the history of printing. He disputed the right of Gutenberg to the honour usually paid to him as the inventor of printing, on the ground that Schöffer was the first to use moveable metal types, Gutenberg having only used moveable wooden types, which were but a slight advance on the engraved wood blocks for block books, until then in use. Fournier maintained his opinions in a '*Dissertation sur l'origine et le progrès de l'art de graver en bois*,' 1758; followed by '*De l'origine et des productions de l'imprimerie primitive en taille de bois*,' 1759. Schöpfliin having published a pamphlet, '*Vindictia Typografica*,' in 1760, to support the claims of Gutenberg at Strasbourg against those of Schöffer at Mainz, Fournier replied to him in '*Observations*,' &c., 1760. Another antagonist, M. Baer, published '*Lettre sur l'Origine de l'Imprimerie*,' 1761; to which Fournier soon afterwards responded in '*Remarques*,' &c. and he pursued the subject in '*Lettre à Fréron*,' 1763. These were afterwards printed together in one volume, under the title, '*Traité historique et critiques sur l'origine de l'Imprimerie*.' Another work by Fournier was '*Traité historique et critique sur l'origine et les progrès des caractères de fonte pour l'impression des caractères de la musique*, avec des épreuves de nouveaux caractères de musique,' 1765. His chief work, however, was '*Manuel typographique*,' 2 vols. 4to, 1764—66. The first volume relates to the engraving and founding of types; the second to an engraved collection of alphabets, 101 in number, ancient and modern, oriental and European. There

were to have been two more volumes—one on the art of printing, and the other containing notices of celebrated printers, but he did not live to finish them. He died October 8th, 1768.

FOWKE, CAPTAIN FRANCIS, R. E., was born, in 1823, at Belfast, and after studying at the Military College, Woolwich, obtained a commission in the Royal Engineers, in 1842, and was ordered to Bermuda. Here he gave much attention to constructive science, and obtaining the confidence of his superiors was entrusted to design and erect several works. On his return to England he built the Raglan Barrack, Devonport, which was believed to be a great advance on previous barracks in its sanitary arrangements, convenience, and economy of construction. In 1853 he was appointed Inspector of the Science and Art Department, South Kensington. Like most government appointments of this order it was made without much regard to the special attainments of the person nominated. Captain Fowke knew little of any science except construction, and less of art, but he possessed great energy and powers of application, and these stood him in good stead. He was soon called away from his inspection of science and art, whatever that meant, to take charge (1854—1855) of the machinery department of the Paris International Exhibition, and shortly after became secretary to the English Commissioners, and drew up one or two reports. On the completion of this service he was shifted to the more congenial post of engineer of the South Kensington Museum. In this capacity he made many alterations in the old and temporary buildings, and in 1858 designed the Vernon and Sheepshanks Galleries. In 1860—61 he designed and erected the Industrial Museum, Edinburgh, and later remodelled the Dublin National Gallery. About the same time he erected the great conservatory in the grounds of the Royal Horticultural Society, South Kensington, and soon after was called upon to produce the designs for the International Exhibition building of 1862. In this vast edifice, which covered an area of 25 acres, Captain Fowke had many difficulties to overcome, and was, it must be confessed, not wholly successful in the result; but it is due to him to remember that many alterations were made in the designs from time to time in opposition to his opinions and wishes. This was the last undertaking of importance he lived to complete, but he was busily employed not only in superintending the works at South Kensington and elsewhere, but in preparing some extensive new designs for the government. One of these was for the scheme of National Museums with which it was proposed to cover the ground occupied by the Great Exhibition of 1862. For this a competition was opened in 1864, at which Captain Fowke obtained the first premium of 400*l.* by a very grandiose Italian design—but which it is needless to add has passed to the well-peopled limbo of unaccomplished government schemes. His next great work of this kind was a complete and very elaborate series of designs for an entirely new South Kensington Museum in place of the iron and other temporary sheds that had hitherto borne that name. Particulars and engravings of the new museum were published in government blue-books, and the first section of the work was commenced under Captain Fowke's superintendence. It had not, however, proceeded far, when he died at the Museum suddenly, from the bursting of a blood-vessel, on the 3rd of December, 1865. The new buildings of the South Kensington Museum have since been carried steadily forward, but are still very far from being completed or displaying anything like the magnitude of their proportions, though their architectural character may now be understood. The design of the Royal Albert Hall of Science, which is in course of erection a little north of the Horticultural Gardens, is stated to be "based on ideas originated by the late Captain Fowke, R.E.," but we are not aware that he made any drawings for it. Captain Fowke, though hardly an architect, and certainly not an artist, was a good engineer, an accomplished gentleman, and an eminent and laborious public servant. Besides his engineering and architectural works, he gave great attention to mechanics, made improvements in the fire-engine and in travelling scaffolds, and invented collapsing pontoons and other useful and ingenious contrivances.

FOWLER, CHARLES [E. C. vol. ii. col. 979]. Mr. Fowler died at his residence, Western House, Great Marlow, Bucks, September 2, 1867.

FOWLER, JOHN, inventor of the steam-plough, was born at Melksham, in Wiltshire, July 11th, 1826. In 1847 he was engaged at an engineering factory at Middlesborough-on-Tees. Being in Ireland in 1849, he was struck with the great expanse of waste undrained land, and with the benefit which would accrue from any improved method of sub-soil drainage. In 1850

he joined Mr. Alfred Fry, of Bristol, in a series of experiments on a new draining or drain-tile laying machine, with such a successful result that he was able to bring into use his draining-plough, worked at first by horses, but very soon afterwards by steam-power. The efficacy of this machine in laying down draining-tiles at any depth in the soil brought him large contracts in the south of England. In 1852 he began to attend to the subject of steam-cultivation, especially the application of his steam-plough to arable land. He exhibited some striking results at Ipswich in 1856; read a paper on the subject before the Institution of Mechanical Engineers in 1857; and received the Royal Agricultural Society's prize of 500*l.* at the Chester meeting in 1858. In 1861 he joined with Messrs. Hewitson and Kitson in establishing a steam-plough factory at Leeds. Mr. Fowler died December 4th, 1864.

*FOWLER, JOHN, civil engineer, the eldest son of Mr. John Fowler, of Wadsley Hall, near Sheffield, was born at that place in 1817. He became a pupil of Mr. Leather, of Leeds, at the time when a great reservoir for Sheffield was under construction; and soon afterwards surveyed a line of railway from Birmingham through Dudley and Wolverhampton to Stourbridge. He next acted for a few years as assistant to Mr. Rastrick. In 1844 he became engineer of the Manchester, Sheffield, and Lincolnshire Railway. Settling in London, he was successively engaged on extensive works abroad and at home, chiefly railways and docks. For some years he was consulting engineer to the Department of Woods and Forests, and also to the Great Western Railway Company. As engineer to the Metropolitan and Metropolitan District Railway Companies, he has had very formidable difficulties to contend with in the construction of underground railways in the Metropolis. In encountering the middle and low level sewers of the great main-drainage system, the smaller sewers and drains, the pneumatic tube at the junction of the Euston and Hampstead Roads, the water-pipes and mains, the gas-pipes and mains, and the underground springs, the work has been a struggle against obstacles from beginning to end. In 1870, Mr. Fowler, convinced of the impracticability of a railway bridge twenty miles long over the English Channel, or a railway tunnel of equal length under the Channel, prepared complete plans for a floating ferry or railway ship, to receive a railway train in a specially constructed dock near Dover, to steam with it across the Channel in an hour, to land it in a new harbour to be built between Calais and Boulogne, and there to transfer it to the French railways. Mr. Fowler wrote a paper on the Improvements in the River Tyne, to form part of the 'Industrial Resources of the Tyne, Wear, and Tees,' in 1864. He has also written other scientific and professional papers.

FOX, WILLIAM JOHNSON [E. C. vol. ii. col. 986]. Mr. Fox died on the 3rd of June, 1864, in his 80th year.

FRAGONARD, ALEXANDRE ÉVARISTE, French painter and sculptor, was born at Grasse, in Provence, in 1780, studied under David, and painted such works as 'Maria Theresa presenting her Son to the Hungarian Deputies'; 'Tasso reading his Jerusalem Delivered to the Duke of Ferrara'; 'Female Christian Martyrs thrown to wild beasts in the Amphitheatre,' which were greatly admired. He was, however, even more admired as a sculptor, in which capacity he executed a colossal statue of Pichégu, the Fountain of the Place Maubert at Paris, and the pediment of the Legislative Chamber. He died in November, 1850.

FRAGONARD, JEAN HONORÉ, an eminent French painter, was born at Grasse, in 1732. A pupil of Chardin and Vanloo, he won the grand prize in 1752, and went to Rome, where he modelled his style on that of Pietro da Cortona. Returning to Paris, he painted historical subjects, and acquired distinction. His 'Cérésus et Callirhoé' was honoured with an elaborate descriptive criticism by Diderot, and secured his election into the Academy. His later works were, however, mostly small, brilliantly coloured, and somewhat meretricious amatory pieces, such as 'Le Baiser à la derobée,' 'Le Serment d'Amour,' 'Le Fontaine d'Amour,' and the like, which exactly hit the voluptuous taste of the fashionable society of Paris, and were multiplied by the burins of the best French engravers. But the Revolution of 1789 extinguished the demand for works of this class. Fragonard was appointed by the Assemblée Nationale one of the keepers of the Museum, and had the credit of introducing the arrangement of the pictures by schools. He did not resume his pencils, and died poor, August 22nd, 1806.

FRÄHN, CHRISTIAN MARTIN. German orientalist, was born in Rostock, June 4th, 1782. He studied from 1800 the oriental languages, at his native town and at Göttingen, and he afterwards passed several years in Switzerland as professor of

Latin in the Pestalozzian Institute. In 1806 he returned to Rostock, and in 1807, on the recommendation of Tytchen, was made professor of the oriental languages in Kasan. In 1815 he was named member of the Imperial Academy for Oriental Antiquities, head librarian, director of the Asiatic Museum, and state councillor at St. Petersburg. Frähn was an excellent scholar, and he did much to promote the study of the oriental languages and literature in Russia. He also paid great attention to numismatics, and was commissioned to classify the medals in the Imperial Academy. His numerous papers on oriental coins are among the most valued of his writings. He died in St. Petersburg, August 16th, 1851. His principal works include 'Ibn-Fossilan's und anderer Araber Berichte über die Russen älterer Zeit,' St. Petersburg, 1823; 'De Musei Sprewitziani mosque Numis cuficis nonnullis,' 4to, St. Petersburg, 1825; 'Abu' Yhazi Bahadur Chani Historia Mongolorum et Tatarorum,' fol., 1825; 'Recensio Numorum Muhammedanorum Academiæ Imperialis Scientiarum Petropolitane,' 4to, St. Petersburg, 1826, to which a supplement was added, edited by B. Dorn, 8vo, St. Petersburg, 1855. He also contributed above a hundred and fifty papers to the 'Mémoires de l'Académie des Sciences de Saint-Petersbourg,' 1819-26; 'Mines de l'Orient,' fol., 1816; 'Das Asiatische Museum,' by Dorn, St. Petersburg, 1846; 'Le Bulletin Scientifique, publié par l'Académie des Sciences de Saint-Petersbourg,' 1836-48; 'Journal Asiatique de Paris,' 1823-28; and 'Journal de Saint-Petersbourg,' 1829-39.

*FRAIKIN, CHARLES AUGUSTE, a popular Belgian sculptor, was born in 1816, at Herenthalt, near Antwerp. A pupil in the Antwerp Academy, he exhibited for the first time at the Salon, Brussels, in 1846; in the following year acquired celebrity by his statue of 'Cupid Captive,' and ever since has continued to produce works of a similar character. He has, however, executed many official and other commissions of a more pretentious kind, including the tomb of the Queen of the Belgians; but his nude female statues of Venus, Psyche, Innocence, and such like, have given him his chief celebrity. The softness and delicacy of his finish, and a somewhat extreme sensuousness of style, are doubtless important elements of his popularity. M. Fraikin is a Knight of the Order of Leopold, and a member of the Antwerp Academy.

* FRANCIS JOSEPH CHARLES, Emperor of Austria. [E. C. vol. ii. col. 995.] The events which led to the remarkable changes which have occurred in the Austrian empire, and in the position of the emperor, since 1858, have been related in considerable detail in the GEOGRAPHICAL SUPPLEMENT of the E.C. under the headings of AUSTRIA, ITALY, DENMARK, SCHLESWIG-HOLSTEIN, and PRUSSIA. Here, therefore, a succinct narrative will be sufficient to carry forward the personal history of the emperor. The first great foreign trouble of the Emperor Francis Joseph occurred at a time of grave domestic trial, arising from the dissatisfaction of large sections of his subjects, and especially the Hungarians, at the heavy imposition of new taxes and the refusal of a satisfactory system of representation. It was probably a knowledge of the straitened financial condition of Austria, and the extent of internal dissatisfaction, that emboldened Cavour to force matters to a crisis. In the latter part of 1858 it became known that a treaty had been concluded between France and Sardinia, by which the former bound herself to support Sardinia in case of an invasion of Piedmont by Austria; and this invasion Cavour made it his business to bring on. Affairs had become so threatening by the spring of 1859 that Russia proposed a congress for the settlement of the Italian question, to which the other powers assented with real or seeming readiness. The preliminary negotiations, however, disclosed incompatible claims, and Austria placed herself in the wrong by insisting on Sardinia disarming before the congress met, and requiring her, by a formal and imperious summons, to do so. Against this England, Russia, and Prussia protested, whilst France prepared to march troops to the assistance of Sardinia. The news created a ferment throughout Italy. In Tuscany the people rose in arms; the Grand Dukes of Florence and Modena and the Duchess of Parma were forced to fly, and the King of Sardinia was declared Dictator of Tuscany.

The Austrian army crossed the Ticino in force, April 29, 1859, but a delay of a fortnight followed, and was fatal. Bad weather set in, the rivers were swollen, the fields converted into swamps, the roads became difficult for the movement of infantry, and almost impassable for cavalry. Meanwhile the Piedmontese troops were concentrating, and the French were rapidly pouring soldiers and artillery into Genoa by sea, and to Alessandria by railway, and sending an army across the Alps to Turin. It was

not till the 20th of May that the first serious encounter took place, at Montebello, between the Austrian and combined French and Sardinian armies. The Austrians fought courageously, but were defeated with great loss. Various skirmishes followed with equal ill-success for the Austrians, who were forced back step by step, till, on the 4th of June, they were brought to a stand at Magenta, on the east of the Ticino, and on the direct road from Novara to Milan. Here, after a desperate conflict, which lasted the greater part of the day, the Austrians were repulsed at all points, with a loss of over 8,000 killed and wounded, and 5,000 prisoners. The inhabitants of Milan rose in insurrection, and drove out the garrison; the Austrians were compelled to evacuate successively all their strong positions in Lombardy, and to continue their retreat, though constantly facing their foes, until, on the 22nd of June, they were obliged to cross to the eastern side of the Mincio. Every exertion had been made on each side to bring up their men. The Emperor of Austria joined his army and assumed the command in chief, making Villafranca his head-quarters. At the head of the French and Italian armies were the Emperor of the French and the King of Sardinia, assisted by Marshals Baraguay D'Hilliers, Canrobert, MacMahon, the Duke of Magenta, and General Niel. Each side had over 150,000 men, the Austrians being the stronger in men but weaker in artillery. The Austrians recrossed the Mincio on the night of the 23rd of June, and occupied a line of about twelve miles, extending from Pozzolengo and Solferino to Castel Goffredo, their artillery crowning the heights of Volta. The battle of Solferino lasted from ten o'clock in the morning till nearly eight in the evening of the 24th, but the Austrian army had commenced to retreat as early as four in the afternoon. The allies lost over 18,000 men in killed and wounded; the Austrian loss was estimated at 30,000 in killed and wounded, but in addition 7,000 prisoners and 30 guns fell into the hands of the allies. The Italians were burning for the expulsion of the Austrians from Venice as well as from Lombardy, and appearances boded ill for the fortunes of Austria; but Napoleon III., satisfied with having proved the superiority of his arms, was equally averse to carrying further the humiliation of Austria or the elevation of Sardinia. He accorded, July 7th, an armistice; on the 11th visited the Emperor Francis Joseph at Villafranca, and there agreed to the preliminaries of a peace, the terms of which were comparatively easy, and which the Emperor of Austria, recognizing his defeat, willingly accepted. By the treaty, signed at Zurich, October 17th, 1859, Austria ceded Lombardy, but was to retain Venice and her other Italian possessions. These, however, were to form parts of the Italian Confederation, which, according to the treaty, was to be formed under the presidency of the pope. This portion of the treaty was, however, repudiated by the Italians; provincial governments were established, Tuscany, Modena, and the Roman Legations declared themselves annexed to Sardinia, and the Emperor of Austria, warned by Napoleon III. that he must not interfere with the internal affairs of Italy, could only protest.

He now turned his attention to home affairs; announced his desire to remove the political or social grievances under which any section of his people might be suffering, and appointed a commission to examine and report upon the condition of the finances of the empire, which were in a state of extreme disorder. One of the first important measures which followed was the reconstitution of the Reichsrath, which, by successive enlargements and revision, was at length (July and October, 1860, and February, 1861), changed from a merely consultative body into a deliberative assembly of 343 members assimilating to the English model, the imperial ministers being for the first time declared responsible to the Reichsrath for the maintenance of the constitution and the exact fulfilment of the laws. It was an immense advance, but the division into electoral districts gave a great preponderance to the German element, and Hungary, Transylvania, and Venice, and subsequently Bohemia, refused to send delegates, and neither persuasion nor threats of coercion would induce them to yield. The emperor persisted in a conciliatory course. The dissatisfied provinces maintained a position of passive resistance, till the attention of all was directed to the Germano-Danish quarrel respecting Schleswig-Holstein. Unfortunately for Austria, the emperor felt it to be necessary, in order to maintain his equality with Prussia as a leading German power, to join with Prussia in enforcing the decree of the Frankfurt Diet for the separation of Holstein from Denmark. Against this little power the combined forces of Austria and Prussia were, as was to be expected, successful; and by a treaty signed

BIOG. DIV.—SUP.

at Vienna, October 30th, 1864, Denmark surrendered Schleswig-Holstein and Lauenburg to the conquerors. Holstein was assigned to Austria, but Prussia was bent on obtaining possession of both the duchies, and when Austria refused to make over her share for a pecuniary compensation, Prussia found matter for complaint in the manner in which Holstein was governed; the armaments of Austria, moreover, were declared to be menacing, and various pretexts were found for increasing the strength of the Prussian troops in Schleswig out of all proportion to those of Austria, and for the mobilisation of her military forces. The time had come for Bismarck to take another step forwards in his great scheme for the aggrandisement of Prussia. In the war with Denmark the measure of Austria's military strength and weakness had been accurately taken. Her inferiority in soldiers, armaments, tactics, and discipline was evident, and Bismarck resolved to strike before these could be amended. He was probably not very careful as to the speciousness of the grounds for declaring war, but those he put forward were marked by even more than his usual audacity. He had, however, carefully prepared the means for giving effect to the blow, and among other things in anticipation of the war he had in the previous April entered into a treaty with Italy by which the two bound themselves to act jointly in the event of a war with Austria, and not to conclude a peace without the cession by Austria of Venice to Italy and the Elbe Duchies to Prussia. Hostilities commenced on the 14th of June, 1865, and the Prussian army at once took the field in a state of complete organisation, every man supplied with a needle-gun of the most improved pattern, the artillery numerous and excellent, and the commissariat perfect. The scheme of the campaign had been studiously worked out by Von Moltke, and everything thoroughly arranged. Austria, on the other hand, was wholly unprepared; her forces were widely scattered, the arms imperfect, and neither plan nor provision made for such a contingency. The Prussians took possession of Cassel, Giessen, and Leipzig on the 15th of June; seized the city of Hanover on the 17th, and Dresden on the 18th; on the 22nd the First Army Corps, under Prince Charles, entered Bohemia; and on the 25th the Second Army, under the Crown Prince, crossed the mountains from Silesia to Nachod and Trantenau. In a series of desperately-contested fights, extending from the 27th of June to the 2nd of July, the Austrians were beaten again and again, but were able to concentrate their forces between the fortresses of Königgrätz and Josephstadt. Here, July the 3rd, took place the battle, variously called Königgrätz and Sadowa, which decided the campaign. Nearly half a million combatants were engaged; the fight lasted from dawn till nearly sunset of that long summer's day, but the superior numbers, better arms, and more masterly strategy of the Prussians prevailed. The Austrians lost 32,000 in killed and wounded, and 18,000 in prisoners, and Marshal Benedik requested a truce, which, after some negotiation, was granted. In Italy, meanwhile, affairs had worn a somewhat different aspect. The King of Italy, assisted by Generals Marmora and Cialdini, took the field at the head of an army of 120,000 men. The Austrian forces were stronger, but large numbers of men were required to garrison the fortresses of the Quadrilateral. The first, and only general, encounter between the two armies was at Custoza on the 24th of June. The battle lasted from seven in the morning till five in the afternoon, when the Italians, who fought with great bravery and held their positions against repeated charges with admirable tenacity, retreated in good order, the Austrians being too much exhausted to pursue them. At sea the Austrian and Italian fleets came into collision off Lissa on the 20th of July, when, after a smart engagement of four hours, both fleets drew off, the Italians having lost a large iron-clad frigate, the *Re d'Italia*, and a gun-boat, both of which were sunk during the fight; whilst the Austrian line-of-battle ship, the *Kaiser*, was so much damaged that she had to be run ashore. After the battle of Sadowa, the Emperor of Austria, having obtained a few days' truce, applied to the Emperor of the French to mediate for an armistice, as preliminary to a treaty of peace, placing at the same time the Venetian territory at the disposal of Napoleon with the understanding that it should be eventually transferred to Italy.

The armistice was obtained; and on the 26th of July a treaty of peace between the belligerents was signed at Prague. By it Austria agreed to transfer the Venetian territory, with the fortresses of the Quadrilateral, to Italy; recognised the dissolution of the late German Bund, and a new formation of Germany in which she should have no part; transferred all her rights in Schleswig and Holstein to Prussia; and undertook to pay an

N N

indemnity of 40,000,000 Prussian dollars on account of the war, besides abandoning her German allies to the tender mercies of the conqueror. It was a terrible price to pay, but Austria was hopelessly beaten, and Prussia had made the war for a purpose which she was little likely to forego in the hour of victory. Austria would have fared worse but for French intervention. The King of Prussia was not prepared for a war with France in conjunction with Austria. He preferred to deal with each separately. The time for France was not yet.

Rendered by these disasters a sadder but a wiser man, Francis Joseph addressed himself resolutely to the settlement of the internal difficulties of the empire. Taking as chief adviser Count Beust, late minister of Saxony, he announced his determination to adopt to the full the position of a constitutional monarch and to concede as far as practicable self-government to the several provinces, and to carry out such reforms as might appear necessary for the satisfaction of his subjects, the strengthening of the empire, and the consolidation of the several races united under it. The grand difficulty of "Hungarian independence and dynastic union with Austria," on which Hungary, under the leadership of Deak, had persistently insisted, was, after mature deliberation and discussion, now fully conceded, and the dualism of the empire firmly established. Francis Joseph was crowned King of Hungary at Pesth on the 18th of June, 1867, amidst the utmost enthusiasm of the whole Hungarian people, and to the satisfaction of the great bulk of the remainder of the empire, though dualism was, and perhaps still is, far from being universally popular. Francis Joseph has since honestly laboured to fulfil his promises. The finances have been improved, though necessarily they are still in an unsatisfactory condition; economy has been studiously enforced; trade and commerce have been encouraged; education promoted, and released to a great extent from the absolute control of the Roman Catholic clergy; the Concordat was formally abrogated July, 1870, in consequence of the definition of the dogma of papal infallibility; and peace has been firmly maintained. There have been troubles, an insurrection in Dalmatia, and local differences from the perhaps excessive claims of other provinces, but they have been successfully got over; "the empire," as the Reichsrath were told in the speech from the throne at their last meeting, December 13th, 1869, "the empire has undeniably undergone in all directions a progressive development on the basis of constitutional institutions." The emperor, under trying circumstances, has maintained his position as a constitutional monarch, and retains unimpaired his personal popularity.

FRANKLAND, EDWARD, Ph.D., D.C.L., F.R.S., was born at Churchtown, near Lancaster, on the 18th of January, 1825. He studied chemistry under Dr. Playfair, under Liebig, and at Marburg under R. W. Bunsen. On April 19, 1847, Mr. Frankland and Dr. Kolbe, then assistants to Dr. Lyon Playfair, in the Museum of Practical Geology, read a paper at the Chemical Society of London 'On the Chemical Constitution of Metacetic Acid and some other Bodies related to it.' In this they showed that the nitriles obtained from organic acids are the cyanides of the alcohol radicals of the series next below that to which the acid belongs. Thus they considered the benzonitrile of Fehling to be the cyanide of phenyl, and pointed out that by boiling the nitriles with alcoholic potash potassium salts of acids richer in carbon were formed; and they showed that cyanide of ethyl thus treated gave the salt of metacetic acid (or propionic acid, as it is now called), and ammonia. A more complete memoir was subsequently published in the 'Annalen der Chemie und Pharmacie,' in which this reaction was proved to be general, and to take place equally in the methyl and amyl series. At the same meeting Dr. Kolbe read his paper on the decomposition of valeric acid by the voltaic current by which the radical butyl of the then unknown butyl series was produced. The importance of these two communications was very great, for the former described the first instance of the synthesis of organic acids, which has since been so much developed; while the second announced the discovery of the means of separating from these acids the positive radicals which they contain.

Shortly after the publication of these researches, Frankland and Kolbe proceeded to the laboratory of Professor Bunsen, in Marburg, and in the following year, 1848, they published another joint paper on the action of potassium on cyanide of ethyl, by which they obtained a basic substance, cyanethine, of the same composition as the cyanide, and a gas which they then considered to be methyl, but which was afterwards found to be hydride of ethyl. By the action of chlorine on this gas a body isomeric with chloride of ethyl was produced.

Mr. Frankland was the first Englishman who took the degree of Ph.D. at the University of Marburg, for which he was admitted to examination in 1849, on the production of his dissertation on one of his most important works, viz., the Isolation of the Alcohol Radicals. He found that by heating the iodide of ethyl with zinc to a temperature of 150° C. the radical ethyl was liberated. This is the basis of the series of which ordinary alcohol is a member. At the same time two other gases were formed by the destruction of a portion of the ethyl; one was olefiant gas, and the other was found to be identical with that obtained by Frankland and Kolbe in the previous year from the cyanide of ethyl. This gas, hydride of ethyl, was prepared in the pure state by digesting water, zinc, and iodide of ethyl.

In the same year Dr. Frankland published in the 'Journal of the Chemical Society' and in the 'Annalen' an account of some experiments on the action of zinc on iodide of methyl. This also produced gaseous products, and the residue by the action of water generated pure marsh gas. If, instead of adding water, the contents of the digestion tube were distilled, a volatile spontaneously inflammable liquid, zinc methyl, consisting of the radical methyl united with zinc, passed over. He also found that a corresponding ethyl compound might be obtained in a similar manner. These experiments were continued, and in 1850 he published in the same periodicals his further results, and his reasons for considering that the gas, which he first took to be methyl, was in reality the hydride of ethyl. In the same paper he describes the amyl derivatives, and in a subsequent communication the action of light on iodide of ethyl, which in the presence of mercury yields ethyl gas and its products of decomposition.

In 1851 he communicated to the Literary and Philosophical Society of Manchester the results of some experiments on gas-lighting, during which he examined White's process, which consists of making water gas by passing steam over heated coke, and transmitting the products thus obtained through a gas retort, in which coal or resin is being distilled. This was found to diminish the amount of tarry matters produced, and to increase the quantity of illuminating hydrocarbons, thus generating a larger quantity of a richer gas. This paper was printed in the 'Transactions of the Literary and Philosophical Society of Manchester,' and in the 'Annalen,' and an abstract appeared in the 'Journal of the Chemical Society.'

The 'Philosophical Transactions' for 1852 contain a long memoir by Dr. Frankland, entitled, 'On a New Series of Organic Bodies containing Metals.' In this are described some of the compounds containing tin, which were obtained from the product of the action of iodide of ethyl on tin in sunlight at ordinary temperatures, or by digestion at 180° C. in sealed tubes. An iodide of stannethyl was thus formed (together with ethyl and olefiant gas) which by treatment with reagents gave a corresponding oxide, sulphide, and chloride. The radical itself was liberated by subjecting the iodide to the action of zinc. In this memoir further experiments on zinc methyl are detailed, and also the behaviour of iodide of methyl with mercury under the influence of sunlight, which yielded results differing from those obtained with the ethyl compound, the iodide of mercury methyl being generated. This important communication concludes with some theoretical considerations, in which the analogy of these organo-metallic bodies with cacodyl is pointed out, and in which that character of elements which has since been termed "atomicity" was first described.

In conjunction with Mr. W. J. Ward, Dr. Frankland published in 1853 a description of an improved form of apparatus for the analyses of gases, by the use of which these processes were very much facilitated, and the time required for their performance diminished to a very considerable extent.

In 1855 another paper on the organometallic bodies was published in the 'Proceedings of the Royal Society' and in the 'Annales de Chimie et de Physique,' describing the method of preparing zinc ethyl in considerable quantities; its properties and compounds were also carefully studied, and an account given of an apparatus for performing digestions at a high temperature and under pressure. The sealed tubes containing the bodies to be heated were enclosed in a strong wrought-iron steam-boiler, in which they might be heated to temperatures as high as 250° C., the pressure of the steam on the exterior of the tubes counterbalancing the internal pressure, and thus preventing the destruction of the glass vessels. This apparatus is now extensively employed by chemists.

The action of nitric oxide on the zinc compounds of ethyl and methyl was studied in 1856, and resulted in the discovery of two

new acids, the dinitromethylic and dinitroethyl acids. These results appear in the 'Transactions of the Royal Soc.' and in the 'Annalen der Chemie und Pharmacie'; and in 1857 the investigation of the compounds produced by the union of zinc ethyl with ammonia, aniline, diethylamine, oxamide, and acetamide was published.

In 1858 Dr. Frankland was engaged in determining the rate of combustion of candles at different altitudes from the level of the sea; the first observations were published in the commencement of 1859, and the subject has since been continued with very interesting results. It was found that candles burnt at Chamouni and on the summit of Mont Blanc consumed the same quantity of material in equal times, though the amount of light produced at the greater altitude was very much less. These experiments were subsequently continued at St. Bartholomew's Hospital, and extended to the rate of combustion of time fuses used in artillery. They led to the establishment of the law:—"The increments in time are proportional to the decrements in pressure," and to the following practical rule: "Each diminution of atmospheric pressure to the extent of one mercurial inch increases the time of burning by one-thirtieth." From the researches upon the effect of atmospheric pressure on the light of combustion, Dr. Frankland deduced the following law: "The diminution in the illuminating power of candle and gas flames is directly proportional to the diminution in atmospheric pressure." In the same year (1859) additional experiments were made on the organo-tin compounds, and another compound containing twice as much ethyl as the original stannethyl was prepared, as well as a body in which both methyl and ethyl were in combination with the metal. Some experiments on the mercury compounds and on the preparation of zinc methyl were also described. At the commencement of 1860 Dr. Frankland published the numbers obtained in the analysis of air which he collected at Chamouni, at the Grands Mulets, and on the summit of Mont Blanc. On June 7 of the same year he delivered a lecture to the Chemical Society on organometallic bodies, and which is printed in the *Journal*. This contains all that was then known of this class of compounds. In conjunction with Mr. Duppa, he published another paper on boric ethide, which was prepared by the action of zinc ethyl on boric ether. This was printed in the 'Proceedings of the Royal Society.'

In 1861, Dr. Frankland sent to the 'Philosophical Magazine' a note on the blue line in the spectrum of lithium which is observed when the temperature of the flame containing the lithium compound is very high. In 1862, another paper on boron compounds was read at the Chemical Society, in which boric methide was described; and some experiments were made on the temperature necessary to inflame hydrogen, carbonic oxide, marsh-gas, and bisulphide of carbon, and mixtures of these bodies.

Dr. Frankland published, in the 'Proceedings of the Royal Society' for 1863, a paper on the synthesis of leucic ether by acting on zinc ethyl with oxalic ether, and treating the product with water; and, in conjunction with Mr. Duppa, a paper was read at the Chemical Society on the formation of mercuric ethyl by the action of sodium amalgam on iodide of ethyl in the presence of acetic ether. The methyl and amyl compounds were obtained in the same way. In another communication they describe the formation of the zinc compounds by digesting the corresponding bodies containing mercury with zinc.

In 1864, Dr. Frankland delivered a Friday evening lecture, and communicated a paper to the 'Philosophical Magazine' on the physical cause of the glacial epoch. A curious accident is described in the *Journal of the Chemical Society* for 1864. While compressing oxygen by Natterer's pump, the connecting piece of the receiver burst, and filled the laboratory with a shower of brilliant sparks; this was found to be due to the ignition of the oil of the piston in the compressed gas, and this had set fire to the interior of the metal receiver.

Dr. Frankland and Mr. Duppa described in the proceedings of the Royal Society for 1864, another mode of preparing leucic ether by digesting iodide of ethyl, oxalic ether, and zinc amalgam together, and treating the product with water. By substituting iodide of methyl for the ethyl compound, the analogous compound of dimethoxalic acid was generated. In the following year these investigations were continued, and resulted in the discovery of ethomethoxalic, amyldioxalic, ethylamyldioxalic, and diamyloxalic acids. In 1865, Dr. Frankland and Mr. Duppa published two more papers in the Proceedings of the Royal Society, on the action of sodium on acetic ether, and the subsequent treatment of the product by the iodides of ethyl, methyl, and amyl; they thus obtained several new ketones, as

diethylacetone, ethylacetone, methylacetone, and dimethylacetone, and some acids, viz., ethacetic, identical with butyric acid; diethacetic acid, isomeric with caproic acid; dimethylacetic acid, isomeric with butyric acid; and amylic acid, identical with cenanthylic acid. In this paper (which is also printed in the 'Annalen') an improved method for preparing acetic ether was given. The other paper, on the action of perchloride of phosphorus on leucic ether, was read before the Chemical Society. By this process they obtained ethylcrotonic acid, isomeric with pyrotrebic acid; and from ethomethoxalic ether, methylcrotonic acid was prepared; while dimethoxalic ether gave methacrylic ether; and lactic ether yielded chloropropionic ether.

Dr. Frankland published, in the *Journal of the Chemical Society* for 1866, his system of notation, by which the formulae of bodies are made to represent the mode in which the atoms composing them are arranged in accordance with their atomicity. This system has already proved of great service in elucidating the causes of isomerism in organic compounds. This volume of the 'Journal' contains another of Dr. Frankland's contributions on the determination of organic matter in water by the addition of carbonate of soda to the water before evaporation and the ignition of the solid residue. The use of a solution of permanganate of potash for the same purpose is also described.

Dr. Frankland delivered a lecture at the Royal Institution in this year on the origin of muscular force, which he attributes to the combustion within the body of the food, and not the decomposition of the muscular fibre, as previously believed. This opinion was supported by numerous determinations of the heat evolved on the combustion of muscle, urea, and various articles of food.

In 1867, a continuation of the previous experiments on the synthesis of the ethers was communicated to the Chemical Society. In this paper, isopropacetone and isopropacetic acid, one of the isomers of valeric acid, are described. In 1868, Dr. Frankland published, in conjunction with Mr. Armstrong, a paper in the 'Journal of the Chemical Society,' on the analysis of potable waters, in which they describe a method of determining the carbon and nitrogen of the organic matter present, by a modification of the process of combustion, as used in the analysis of organic compounds, and also other processes for the estimation of the constituents of water. This paper is followed by one by Dr. Frankland, on a simple form of apparatus for gas analysis, which was used in the examination of the gaseous products obtained in the combustion of the water residues.

In 1868 and 1869 Dr. Frankland was occupied in a series of investigations into the cause of luminosity of flames, in continuation of his earlier work on this subject. He attributes the production of light to the density of the gaseous substances undergoing combustion, and not to the presence of solid matter in the flame. Thus hydrogen and carbonic oxide, burnt in oxygen under the pressure of twelve atmospheres produced luminous flames, though in the absence of all solid matter. In 1869 and 1870, Dr. Frankland, in conjunction with Mr. Lockyer, published several notes on the spectra of gases under different pressures, and on the density of the hydrogen of the solar atmosphere.

The whole of the chemical articles in the Arts and Sciences division of the English Cyclopædia were written by Dr. Frankland, or under his immediate supervision.

Dr. Frankland is a member of many learned societies, and has received numerous honorary distinctions. He was elected Fellow of the Royal Society in 1853, and in 1857 was awarded the Society's royal medal, for his 'Researches on Organic Radicals and Organometallic Bodies.' In 1866 he was elected corresponding member of the Institute of France; in 1868 an honorary member of the Literary and Philosophical Society of Manchester; in 1869 an honorary member of the Royal Academy of Munich; at the installation of the Chancellor of Oxford, in 1870, he received the honorary degree of D.C.L.; he is also an honorary member of the Pharmaceutical Society of Great Britain; and was for some years foreign secretary of the Chemical Society. Dr. Frankland was elected professor of chemistry at the College of Civil Engineers, Putney, in 1850; professor at Owens College, Manchester, in 1851; professor of chemistry at St. Bartholomew's Hospital in 1857; professor of chemistry at the Royal Institution in 1864.

In 1865 he succeeded Dr. Hofman as professor of chemistry to the Royal School of Mines, which important post he still holds. In 1863 Dr. Frankland was appointed one of her Majesty's commissioners to inquire into the means to be adopted for the prevention of the pollution of rivers.

FRANKLIN, SIR JOHN [E. C. vol. ii. col. 1002.] Franklin's
N N 2

last expedition left the English shores in May, 1851. His prolonged absence and silence led to a series of searches for him by Sir James Ross, Dr. Rae, Sir Robert M'Clure, Sir F. Leopold M'Clintock, Dr. E. Kent Kane, and Captain Hall. M'Clintock's expedition was fitted out at the expense of Lady Franklin. In M'Clintock's search a cairn was found containing a record of Franklin's expedition. It is dated May 28, 1847, lat. 70° 5' N.; long. 98° 23' W.; and states that the Erebus and Terror ascended the Wellington Channel in 1845 as far N. as 77°, returned southward round Cornwallis Island, and wintered in Beechy Island in 1846—1847, according to a facsimile of the papers, but 1845—1846 seems to be meant. On the 12th September, 1846, the ships were beset by ice near King William Island. Another record was found under a cairn at Gore Point, a little farther south, similar to the foregoing, which, however, had marginal additions to the effect that Franklin died June 11, 1847, and that the ships were abandoned April 22, 1848, by 105 survivors, commanded by Captain Crozier. The Esquimaux unanimously reported that all the crew had died. The remains of three bodies and a number of relics were found near Cape Crozier, and other relics have been obtained by Captain Hall. A statue was erected as a memorial of Franklin near the Duke of York's column, London, at the national expense, in 1866.

FREDERICK WILLIAM IV., King of Prussia [E. C. vol. ii. col. 1031]. Before the close of 1856 it had become known that the health of the King of Prussia was in an unsatisfactory state, and it was rumoured that his mind was failing. One of his latest public acts of importance was to affix his signature, May 26, 1857, to the treaty by which, for an indemnity, he formally abandoned his claim to Neufchâtel. In October of the same year a royal decree, in consideration of the King's health, nominated his brother Regent of the Kingdom for the term of three months. The term was renewed again and again, but the King never rallied. He spent the winter of 1858—59 at Rome, without benefit to either his mental or physical condition. He died at Sanssouci on the 2nd of January, 1861, and was succeeded by the Regent, who assumed the title of WILLIAM I.

* FREEMAN, EDWARD AUGUSTUS, English historian, was born in 1823, at Harborne-by-Birmingham, and completed his education at Trinity College, Oxford, of which he was elected scholar in 1841 and fellow in 1845, in which last year he graduated, taking second class in *litoris humanioribus*. Whilst resident in Oxford Mr. Freeman shared in the prevalent enthusiasm for the study of Gothic ecclesiastical architecture; was an active member, and for some years secretary, of the Oxford Architectural Society, and read before it several papers which were afterwards published, sometimes in an expanded or modified shape. His first independent publication was a 'History of Architecture,' 8vo, London, 1849, of which the best portion is that devoted to Gothic architecture. His next work was a minute treatise 'On the Tracery of Windows in Gothic Architecture,' 8vo, 1850, the substance of several papers read before the Oxford Architectural Society. Mr. Freeman has continued to write and lecture on architectural subjects down to the present time, but, whilst his later writings show, as might be expected, a constantly widening acquaintance with the subject, they have become less detailed and technical, and are illustrated with riper thought and richer historical knowledge. Among other essays and papers of this class published separately are—'The Architecture of Llandaff Cathedral,' 1851; 'St. David's Cathedral,' 1860; 'Church and Priory of Leominster,' 1863; and 'Wells Cathedral,' 1870. Mr. Freeman also wrote many papers for the 'Archæological Journal,' 'The Gentleman's Magazine,' and other antiquarian organs, and among them were some on Waltham Abbey Church, which led to a lively controversy with Mr. Parker respecting the date of that building.

His earliest work in general history was the 'History and Conquests of the Saracens,' 8vo, London and Oxford, 1856, which consists of a course of six lectures delivered at the Edinburgh Philosophical Institution, and is interesting and occasionally brilliant, but adds little to what was already known on the subject. His 'History of Federal Government from the foundation of the Achaian League,' vol. i., 8vo, 1863, is a work of wider research and more independent criticism, and will when completed be a valuable addition to our historical literature; but Mr. Freeman's claim to permanent remembrance is as a writer on early English history. His 'History of the Norman Conquest of England, its causes and its results,' 8vo, London and Oxford: vol. i. to the Election of Edward the

Confessor, 8vo, 1867; vol. ii. the Reign of Edward, 1868; vol. iii. to the death of Harold, 1869, is beyond question the most thorough, the most original, and the most masterly investigation of English history prior to the reign of William which we possess: the fault of the work is its diffuseness and tendency to repetition and dissertation. Mr. Freeman has since published a sort of summary of his great work under the title of 'Old English History for Children,' 12mo, 1869, which, though perhaps beyond the grasp of ordinary children, especially in its later chapters, is an invaluable book for youths and persons who do not make a special study of early English history. He is stated to be now occupied in writing a series of histories for young people, which is to be regretted if it diverts him from the completion of his great work. Mr. Freeman is understood to have been a frequent contributor to the 'Saturday Review,' and he has made some unsuccessful attempts to engage in political life, having been a candidate in the Liberal interest for the representation of Wallingford in 1859, and for Mid Somersetshire in 1868.

* FRÈRE, PIERRE ÉDOUARD, an eminent French painter, was born at Paris on the 10th of January, 1819; became in 1836 a pupil of Paul Delaroche, and afterwards entered the École des Beaux-Arts. From his début at the Salon in 1843, Édouard Frère has pursued steadily the same branch of art, that, namely, of representing incidents in the daily life of children of humble and ordinarily of rustic parentage. Painting such subjects as 'The Little Gourmand,' 'The Cut Finger,' 'The Lesson,' 'The Sunday Toilet,' 'Going to School,' 'Grandmother,' 'A Snowy Morning,' and the like, for over a quarter of a century, might be expected to lead to monotony and mannerism; but though M. Frère has an unmistakeable manner, his pictures are always fresh and always attractive. In the atelier of Delaroche he acquired a breadth and solidity of style which has preserved his works from any approach to insipidity or feebleness, whilst constant study of unsophisticated rural life far away from the capital has enabled him to retain truth and character, and his own genius and sympathy have imparted to his pictures a refinement, grace, and sincerity of purpose which probably no other painter has attained in the representations of the same class of subjects. His pictures are usually small, subdued in colour, and singularly free from all attempts to attract by minute or deceptive imitation. In England his pictures are at least as popular as in France, and it is a noteworthy proof of the general favour in which he is held that a special order has been issued to the Prussian soldiers to spare his villa at Ecouen as well as that of Rosa Bonheur.

* FREYTAG, GUSTAV, a celebrated German writer, was born July 13th, 1816, in Kreuzburg, Silesia. He studied at the gymnasium at Oels and afterwards at the Universities of Breslau and Berlin, at which latter he graduated doctor in philosophy in 1838. He then returned to Breslau as tutor (privat docent) of the German language and literature. He afterwards resided for some years in Dresden, and then removed to Leipzig, where from 1848 to 1861 he conducted the 'Grenzboten' (Border Messenger) journal, in conjunction with Julian Schmidt. Freytag has written in many styles, but his great success has been as a novelist and describer of German social life and customs. Besides the early thesis, 'De Hroswitha poetria,' and 'De initiis poeseos scenicae apud Germanos,' he has written 'In Breslau,' 1845; 'Die Brautfahrt, oder Kunz von Rosen,' a historical comedy, Breslau, 1844; two dramas, 'Valentine,' Leipzig, 1847; and 'Graf Waldemar,' Leipzig, 1850; 'Die Journalisten,' a comedy, 1854; 'Soll und Haben,' a romance, 3 vols. Leipzig, 1855, which met with remarkable success, the eleventh edition having been issued in 1865, and of which, under the title of 'Debit and Credit,' two English versions were published in 1857—one by L. C. C., with a preface by Baron Bunsen; the other by Mrs. Malcolm; 'Der Fabier,' a semi-classical tragedy, 1859; 'Bilder aus der deutschen Vergangenheit,' 2 vols. Leipzig, 1859, 4th edition, 1863, English translation, 'Pictures from Past Ages in Germany,' 1860; and 'Neu Bilder aus dem Leben des deutschen Volks,' 1862; on dramatic composition, 'Die Technik des Dramas,' 1863; and 'Die verlorene Handschrift,' a romance in 3 vols., Leipzig, translated into English as 'The Lost Manuscript,' 1865. His dramatic works were published in 3 vols. 8vo., Leipzig, 1848—50.

* FRIES, ELIAS MAGNUS, Swedish botanist, was born Aug. 15, 1794, at Femsjo, in the province of Wexio. Educated at Lund University, he became a teacher in the same, and ultimately professor of botany in 1828. In 1834 he also held the

chair of practical economy ; in 1851 that of botany ; and in 1853 the rectorship in the University of Upsala. He is a member of the Academy of Science at Stockholm, and of other learned bodies. He has written nearly a hundred papers, and numerous books, mostly upon botanical subjects. His reputation is mainly based on his works on fungi, of which the most noteworthy are 'Systema Mycologicum,' 3 vols. Griefswald, 1821—1830 ; 'Monographia Hymenomycetum Suecicae ;' and 'Icones selectae Hymenomycetum nondum delineatorum,' 1868, 1869. He followed up Persoon's researches on fungi, and did much towards reducing the heterogeneous masses and establishing the true affinity of doubtful forms in Persoon's arrangement. In his earlier studies he could derive but little assistance from microscopic observation, but his extraordinary tact enabled him to arrive at the truth where materials for fair logical deduction were but scanty. He abolished a whole host of genera founded on immature or abnormal forms, detected the relationship of numerous genera which from their appearance were usually considered to be widely separated, and discovered that fungi have more than one form of fructification. In many respects he was a master thinker of the day, and in advance of his time ; but owing to popular theological prejudices he often contented himself with purposely expressing his views obscurely. Hence his facts and opinions demonstrating the reproduction and sexuality of these plants were neglected, but have again acquired prominence owing to the more complete elucidation of the subject by Pringsheim, the Tulasnes, and others. His 'Systema Mycologicum' has been the foundation of all subsequent works of the same kind. Another work should be mentioned here, viz., the 'Summa Vegetabilium Scandinavia,' 2 vols. 1846—48, as it was the first Swedish work in which the natural system of classification was adopted.

FRIES, JAKOB FRIEDRICH, a distinguished German metaphysician, was born August 23rd, 1773, at Barby in Prussian Saxony, studied theology in the seminary of that town, and completed his education at Leipzig and Jena. In 1797 he went to Zofingen as private teacher, but returned in 1800 to Jena, and the next year was permitted to give lectures at the university. In 1803—4 he travelled through Germany, Switzerland, Italy, and France, and on his return was nominated professor of philosophy at Heidelberg, where he remained till 1816, when he accepted the chair of theoretical philosophy at Jena. From this he was removed in 1824 on account of his advocacy of democratical principles, but some time after was appointed professor of mathematics, which post he retained till his death, August 10th, 1843.

Fries was during his life looked up to as the head of the Jena school of philosophy, an offset from that of Kant, from which it differed chiefly in holding as its basis the doctrine of a pure subjective certainty, and in the adoption of what he called an anthropological system of psychology, an approximate union or connection of physiology with metaphysical reasoning. His terminology is peculiar and unattractive, and his system is now perhaps little studied even in Germany, but it defines a line of thought which is now being successfully prosecuted. It is set forth at length, and its divergence from the Critic of Kant explained, in his New or Anthropological Examen of the Understanding, 'Neuen oder anthropologischen Kritik der Vernunft,' 3 vols. Heidelberg, 1807, 2nd edition, 1828—31. The different stages and various bearings of his philosophy are more fully shown in his Philosophical Jurisprudence or examen of all positive legislation, 'Philosophische Rechtslehre, oder Kritik aller positiven Gesetzgebung,' Jena, 1803 ; System of Philosophy as a certain science, 'System der Philosophie als evidente Wissenschaft,' Leipzig, 1804 ; 'System der Logik,' Heidelberg, 1811 ; Manual of Practical Philosophy, 'Handbuch der praktischen Philosophie,' 2 vols. Leipzig, 1817—32 ; Manual of Psychical Anthropology, 'Handbuch der psychischen Anthropologie,' 2 vols. Jena, 1820—21 ; 'Mathematischen Naturphilosophie,' Heidelberg, 1822 ; 'System der Metaphysik,' Heidelberg, 1824 ; History of Philosophy, 'Geschichte der Philosophie, dargestellt nach den Fortschritten ihrer Entwicklung,' 2 vols. Halle, 1837—40. Fries also wrote on the German Bund, 'Vom Deutschen Bund und deutscher Staatsverfassung ; allgemeine staatsrechtliche Ansichten,' Heidelberg, 1816 ; an attempt to define the principles of the theory of probabilities, 'Versuch einer Kritik der Principien der Wahrscheinlichkeitsrechnung,' Brunswick, 1842, and a theological romance, 'Julius und Evagoras,' 2 vols. Heidelberg, 1822.

FRITH, or FRYTH, JOHN, a martyr and divine of the Anglican church, was born in the year 1503 at Westerham, in

Kent, where his father, who subsequently removed to Sevenoaks kept an inn. He was educated at King's College, Cambridge, and graduated as B.D. in 1525 ; immediately after which, on the invitation of Wolsey, he migrated to Oxford, in order to become one of the junior canons of Cardinal College, now Christ Church, in that university. He imbibed from Tindal the principles of the Reformation ; and on making a public profession of the same, was imprisoned in Cardinal College on the charge of heresy. At his enlargement he retired from the university, and at length, in September, 1528, took refuge in Holland, where he married and continued for several years. Returning to England, he found his opinions in so evil an odour that he was reduced to a state of destitution ; and on one occasion, on his attempting to pass through Reading, he was put into the stocks as a vagabond, but released through the intervention of Leonard Cox, the famous schoolmaster of that town. From Reading he proceeded to London, where he was engaged in controversy with Sir Thomas More. At length his zeal in the expression of his opinions led to his apprehension. After an imprisonment of some duration in the Tower, he was examined before Archbishop Cranmer ; Lord Chancellor Audley ; Brandon, Duke of Suffolk ; Boleyn, Earl of Wiltshire ; Stokesley, Bishop of London ; and Gardiner, Bishop of Winchester. At his adjourned and final examination before an episcopal commission at St. Paul's Cathedral, on the 20th of June, 1533, he persisted in his denial of the doctrines of Purgatory and Transubstantiation, and was condemned to be burnt as an obstinate heretic. This sentence, which was carried out at Smithfield on the 4th of July, was endured with heroic fortitude.

Frith was an able disputant and an eminent scholar. His works comprise, 'A Disputacyon of Purgatorye devided in to three Bokes ; the fyrst is an Answer unto Rastell ; the seconde unto St. T. More ; the thyrd unto my Lorde of Rochestre,' 8vo ; 'An other Boke against Rastell, named the Subsedye or Bulwarke to his fyrst Boke,' 8vo ; 'The Testament of Master Wylliam Tracie esquier, expounded both by William Tindal and John Frith. Wherein thou shalt perceyve with what charitie y^e Chaunceler of Worcester burned whan he toke up the deyd carkas and made ashes of hit after hit was buried,' 8vo, Antwerp (?), 1535 ; 'A Boke made by Johan Fryth, prysoner in the Tower of London, answering unto M. More's Letter, which he wrote against the fyrst litle Treatyse that Johan Fryth made concerning the Sacrament of the Body and Bloude of Christ. Unto which Boke are added in the ende the Artycles of his Examination before the Byshoppes of London, Winchester, and Lincolne, in Paules Church at London, for which John Fryth was condempned and after brente in Smytfeelde without Newgate the forth day of July, Anno 1533,' 16mo, 1533, 8vo, London, 1546, 1548, &c. ; 'Letter unto the faithful Followers of Christ's Gospel,' written in the Tower in 1532 ; 'A Mirror, or Glass to know thyself,' likewise written in the Tower in 1532, and published in 12mo, London, 1627 ; 'A Mirrour or Lokyng Glasse wherein you may beholde the Sacramente of Baptisme described,' 8vo, London ; 'A Pistle to the Christen Reader, wherein are compared togeder Christes Actes and oure holie Father the Popes,' 8vo, Malborow in the Lande of Hesse, 1529, written under the pseudonym of Richard Brightwell ; and various translations. Most of the foregoing treatises were collected by John Fox, and published, along with those of Tindal and Barnes, in folio, London, 1573. Amongst the modern investigations into Frith's history and times may be mentioned his 'Life, with a Selection from his Writings,' which occurs in the first volume of the 'Fathers of the English Church,' &c., 8 vols. 8vo. London, 1807—12 ; and 'The Life and Martyrdom of the Rev. John Frith,' 8vo, Bristol, 1827, published by the 'Church of England Tract Society,' instituted at Bristol, 1811.

* FROUDE, JAMES ANTHONY, an English historian, youngest son of the late Venerable R. H. Froude, Archdeacon of Totness and rector of Dartington, Devonshire, was born on the 23rd of April, 1818. He was educated at Westminster and at Oriel College, Oxford, and took his B.A. degree in second class classical honours in 1840, proceeding M.A. in due course. In 1842 he carried off the Chancellor's Prize for an English essay on 'The Influence of the Science of Political Economy upon the Moral and Social Welfare of a Nation ;' and in the same year became fellow of Exeter College. He was ordained deacon in 1844 ; and a few years afterwards, under the pseudonym of "Zeta," published a volume entitled 'Shadows of the Clouds,' 12mo, London, 1847, which comprised two stories, 'The Spirit's Trials,' and 'The Lieutenant's Daughter.' To this succeeded 'The Nemesis of Faith,' 8vo, London, 1848, second edition,

1849, which being professedly "a Tragedy," was supposed to have been written as a "Confession of Faith," an autobiographic view of the work which the author, in the Preface to the second edition, repudiated. Yet the "Nemesis" marked his defection from the teaching of the Church, against whose reverence for what he called the "Hebrew mythology," it is, *inter alia*, a protest. Naturally Mr. Froude did not proceed to priest's orders; and when he subsequently returned, after his estrangement, to the Anglican communion, it was not as a cleric, but as a layman.

Mr. Froude's great work is his 'History of England from the Fall of Wolsey to the Death of Elizabeth,' 10 vols. 8vo, 1856-69, second edition, vols. I. and II. 1858, fourth edition, 1870, &c., of which the last four volumes were devoted to the reign of Elizabeth. Since the year 1850 he has been a frequent contributor to the 'Westminster Review,' and to 'Frazer's Magazine,' of which he is now the editor. From these he has reproduced an article on 'The Book of Job,' 8vo, London, 1854; and 'Short Studies on Great Subjects,' 2 vols. 8vo, London, 1867. He has likewise published an 'Inaugural Address delivered to the University of St. Andrew's, March 19, 1869,' 8vo, London, 1869, which was given in his capacity of Rector of the University; and has "edited, with notes from the archives at Paris and Brussels," a work by William Thomas, Clerk of the Council to Edward VI., entitled 'The Pilgrim: a Dialogue on the Life and Actions of King Henry the Eighth,' 8vo, London, 1861. Besides this, he has, along with Dr. W. Maziere Brady, been involved in some little controversy about an Irish church question, upon which his views, as propounded in his History, were attacked by the Rev. Dr. Alfred T. Lee, in a brochure entitled 'The Irish Episcopal Succession. The Recent Statements of Mr. Froude and Dr. Brady, respecting the Irish Bishops in the Reign of Elizabeth, examined,' &c., 8vo, London, Oxford, Cambridge, and Dublin, 1867; to which Mr. Froude replied in a 'Letter' contained in the fifth edition of Dr. Brady's 'Irish Reformation, or the alleged Conversion of the Irish Bishops at the Accession of Queen Elizabeth,' &c., 8vo, London, 1867.

FROUDE, RICHARD HURRELL, eldest brother of the foregoing, was born on the 25th of March, 1803, and was educated at Eton and at Oriel College, Oxford, which he entered in 1821. He took his B.A. degree in 1824, and proceeded M.A. in 1827; was elected fellow in 1826, and acted as tutor from 1827 to 1830. He was ordained deacon and priest respectively in 1828 and 1829. Symptoms of consumption began to show themselves in the summer of 1831; and he passed the winter of 1832 and the following spring in the south of Europe. The two next winters and the year between them, 1834, were spent in the West Indies. He died at his father's rectory of Dartington, Devonshire, on the 28th of February, 1836. He was a prominent member of the Oxford movement; and wrote two numbers, 9 and 63, of the 'Tracts for the Times, by Members of the University of Oxford,' 8vo, London and Oxford, 1833-34, &c., and contributed various poems, with the signature of *B.* to 'Lyra Apostolica,' 12mo, 1836, and often reprinted. His 'Remains,' 4 vols. 8vo, London, 1838-39, which were published after his death, include his Journal; Occasional Thoughts; an Essay on Fiction; Sermons, and Letters. From this work a tract on Church and State was reprinted with the title of 'State Interference in Matters Spiritual; with a Preface by William J. E. Bennett, Vicar of Frome-Selwood,' 8vo, London, 1869.

FUAD MEHMED PASHA, Turkish statesman and minister, was born at Constantinople in 1814. The son of a poet, Izzet Effendi Kischedji Zadeh (better known as Izzet Mollah), and the nephew of a poetess, Leila Hanym, he imbibed in early life a taste for refined studies; but he received in addition an education unusually good among his countrymen. His father having fallen under the disfavour of the Sultan, and his estates being forfeited, the young Fuad was thrown on his own resources for a living. Between 1828 and 1832 he studied medicine at Galata Serai; and in 1834, as physician to the Admiralty under Tahir Pasha, he accompanied the Grand Admiral in an expedition to Tripoli. On his return to Constantinople, Fuad quitted the medical profession and entered the bureau or department of interpreters, qualifying himself for future diplomatic employment by studying history, languages, international law, and political economy. In 1840 he was appointed first secretary to Gheikib Effendi, on an embassy to London to negotiate important political arrangements. In 1843 he was raised to the post of second interpreter to the Porte, to which was added that of director of the bureau of translation. When sent to Spain to congratulate Queen Isabella, and to

Portugal to congratulate Donna Maria, on their respective accessions to the throne, Fuad's polished manners and familiarity with the languages and usages of western nations attracted much attention. He was decorated with the Order of Isabella, and that of the Tower and Sword. Among the results of these missions were several well-written diplomatic reports to the Sultan, and a poem on the subject of the Alhambra. In 1845 he became chief interpreter to the Porte. In 1848, as grand referendary of the imperial divan, he was named commissioner-general to the Principalities of Wallachia and Moldavia, to reorganise matters after the turbulent proceedings at Bucharest and Jassy. In 1850 he went on a mission to St. Petersburg to settle a disputed question relating to political refugees; and in the following year became minister of the interior under the grand vizier. After a mission to Egypt in 1853, he became minister of foreign affairs, and adopted a resolute attitude towards Russia on the question of the Holy Places, concerning which he wrote a pamphlet, 'La Vérité sur la Question des Lieux Saints.' Feeling insulted by the overbearing conduct of Prince Menchikoff, the Russian ambassador, and not well supported by the Sultan, he resigned. In 1854 he went as commissary with Omar Pasha to quell an insurrection in Epirus; and on his return was appointed member of the Council of the Tanzimat, then first instituted. Restored to the post of minister of foreign affairs in 1855, with the grade of *mukhi* and the title of *pasha*, he engaged actively in the preparation of the Hatti Scheriff or constitution of 1856, the improvement of the diplomatic relations of Turkey with foreign governments, and the encouragement of railways and telegraphs. In 1857 he became president of the Council of the Tanzimat. In 1860 he took part in an expedition with the French to suppress the violent proceedings of Mohammedan fanatics against the Christians in Syria. Between that year and 1866 he filled in succession many important offices—president of the council of justice, grand vizier, minister of finance, and seraskier or minister of war. He accompanied the Sultan to France and England in 1867. He died at Nice, February 11th, 1869, and was buried with much state ceremonial. Besides the works noticed above, he published in 1852 a 'Grammaire Ottomane.' In 1851 he was elected member of the Imperial Academy of Sciences and Belles-Lettres.

FUCHS, JOHANN NEPOMUK, VON, chemist and mineralogist, was born at Mattenzell, Bavaria, May 15, 1774. He studied, and graduated in medicine, at Heidelberg. He then studied at Vienna, where Jaquin taught him chemistry; next moved to Freiberg, where he heard the prelections of Lampadius and Werner; to Berlin, where he studied under Karsten, Klapproth, and Valentine Rose; and lastly stayed in Paris for a short time, and established a friendship with Haüy. In 1805 he began teaching others. For a few months he was at Landsbut in a subordinate capacity, but in 1807 he became professor of chemistry and mineralogy at that place. In 1823 he went to Munich, and in 1826 was made professor of mineralogy. To this post several state appointments were added, which left him little leisure for investigations, and in acknowledgment of this and his unusual abilities he was pensioned as chief mining counsellor, which allowed him time for his scientific pursuits. He died March 5, 1856. One of his earliest researches was on some zeolites, in conjunction with Gehlen, which led him into a controversy with Haüy. This ended by the confirmation of his own results, and the consequent establishment of his reputation. In his paper on arragonite and strontianite he very nearly discovered the principle of isomorphism which was subsequently announced by Mitscherlich. His researches on lasionite and wavellite, published in 1817, indicated his powers as an analyst. From the composition and characters of lasionite he inferred that wavellite must closely resemble it, although the testimony of previous chemists was opposed to the idea, and he himself had never seen wavellite. His inquiry proved that the two were identical. In 1825 appeared his first paper on water-glass, or soluble silicate of potash, which he recommended as suitable for rendering buildings and fabrics waterproof, for preparing artificial stone, and for cementing broken china, &c. He subsequently advocated its use for a kind of fresco-painting which he invented, and called stereochromy. Kaulbach, Echter, Machie, Herbert, and other artists have adopted it. In 1829 he published a paper on lime and mortar, and in 1832 a prize essay on hydraulic cements, in which he threw much light on their properties, and pointed out the conditions required for making good hydraulic mortar; the hardening of the cement he showed to be due to the formation of a hydrated silicate of lime. In 1834 he published a paper on opal, in which he fully discussed

the amorphous condition of silica, sulphur, carbon, and other substances; he endeavoured to show that all crystalline minerals require to be amorphous or gelatinous before they can be serviceable in the nutrition of plants and animals. In his paper on theories of the earth, published in 1837, he enunciated views which are antagonistic to the plutonic doctrine, and very boldly imaginative. Many of his positions find little favour now. He was a member of numerous societies, and many honours were conferred upon him by the Bavarian state.

FUGA, FERDINANDO, a distinguished Italian architect, born at Florence in 1699, was a pupil of Foggini, but owed more to a diligent study of the great architectural remains at Rome and Naples. Having designed some buildings at Naples, and a bridge over the Mincio at Palermo, he was appointed by Clement XII., in 1730, pontifical architect, an office he retained under Benedict XIV. His chief works in Rome were the completion of the Quirinal, the erection of the palaces of the Petronij, the Corsini, and the Consulta on Monte Cavallo, now a barrack; the churches of S. Apollinare; della Morte, in the Via Giulia, in the form of an ellipse; the little church of Gesù Bambino, commenced by Carlo Buratti, and a new façade to Santa Maria Maggiore. Returning to Naples about 1750, he was appointed principal architect to the king, who in 1751 created him a knight. Here he built the Caramica palace, and commenced the vast Granili and the Albergo reale dei Povero, the largest hospital in Europe, both of which, however, remained unfinished at his death, which occurred in 1780. Fuga was one of the ablest architects of the eighteenth century, and though his works exhibit the faults of the age, they are marked by invention, originality, dignity, and propriety.

* FÜRST, JULIUS, an eminent German orientalist, was born May 12, 1805, at Zerkowo, in Posen. Of a good Jewish family, he was educated for the priestly office, and had already studied the Hebrew Bible, and much of the Mishna, the Talmud, and rabbinic comment, when, in his 15th year, he entered the Berlin Gymnasium, where he remained till 1825, when he for a short time followed the courses of philosophy and languages at the Berlin University. He then went to the

Rabbinical school at Posen, but here his studies eventuated in his adoption of views adverse to rabbinical orthodoxy, and the consequent abandonment of his intended profession. He now (1827) proceeded to the University of Breslau, where he devoted himself to theology, the oriental languages, and archaeology, and in 1831 went to Halle. Having graduated doctor in philosophy, and acted for a time as private teacher at Leipzig, he was appointed lecturer at the university in 1839, an office he retained till 1864, when on occasion of the celebration of his 25th year there he was nominated professor. Fürst's writings on the Aramaic and Hebrew languages and literature are numerous and of great value, their distinctive feature as contrasted with the writings of Gesenius and Ewald being their greater fullness of Jewish lore and tradition. The following are his principal works:—*Principles of Aramaic Idioms*, 'Lehrgebäude der aramäischen Idiome,' Leipzig, 1835; *The String of Pearls*, a selection of fairy tales and poems, 'Perlenschnüre aramäischer Gnomon und Lieder,' Leipzig, 1836; *Concordantiæ librorum sacrorum Veteris Testamenti hebraicæ et chaldaicæ*, Leipzig, 1837—40; *'Pesach-Haggada*,' Leipzig, 1838; *Sentences from the Fathers*, 'Sprüche der Väter,' Leipzig, 1838; on the authenticity of Sohar, 'Ari Nohem oder Streitschrift über die Echtheit des Sohar,' Leipzig, 1840; *the Religious Philosophy of the Jews in the Middle Ages*, 'Die jüdischen Religionsphilosophen des Mittelalters,' Leipzig, 1845; *'Bibliotheca judaica*,' 3 vols. Leipzig, 1849—63; *'Das Buch Jozerot*,' Leipzig, 1852; *Hebrew and Chaldean Lexicon*, 'Hebräisches und Chaldäisches Wörterbuch,' Leipzig, 1851, &c., and a school dictionary, 'Hebräisches und Chaldäisches Schulwörterbuch,' Leipzig, 1857—61, translated into English by Davidson, 1864; *History of the Learning and Literature of the Jews in Asia*, 'Cultur und Literaturgeschichte der Juden in Asien,' first volume, Leipzig, 1849; *'Geschichte des Kariethums*,' vols. i. and ii. Leipzig, 1862—65. Fürst also brought out a new edition of Winer's *Chaldean reading-book*, Leipzig, 1864, and contributed a great many papers to 'Der Orient,' a journal devoted to the language, literature, history, and antiquities of the Jews, which he edited from 1840 to 1851.

BIOGRAPHY.

SUPPLEMENT: PART II.

The abbreviations E.C. and E.C.S. signify the English Cyclopædia and the English Cyclopædia Supplement.

The asterisk * prefixed to the name indicates that the subject of the memoir is still living.

561

GABBIANI, ANTON DOMENICO.

GAERTNER, JOSEPH.

562

G

GABBIANI, ANTON DOMENICO, a distinguished Italian painter, was born in 1652, at Florence; studied painting there under Vincenzo Dandini and the Flemish painter, Just Sustermans; then entered the school of Ciro Ferri at Rome, and completed his education at Venice. On his return to Florence he opened an academy, which he conducted with much success till his death, which occurred in 1726, through a fall from a scaffold at the Incontri palace. Gabbiani was one of the most distinguished artists of his age. He painted much both in oil and fresco, and several of his pupils rose to eminence. He designed cleverly, but without much vigour, and his colouring is pale and feeble. Several of his easel pictures are in the Public Gallery and the Pitti Palace, Florence. His chief frescoes are the cupola of Cestello and in the Corsini palace; he also executed various altar-pieces for churches in Florence and Pisa.

(Lanzi, *Storia Pittorica*; J. E. Hugford, *Vita di A. D. Gabbiani*, Florence, 1762, in which are several etchings by him and engravings from his designs.)

GABLER, JOHANN PHILIPP, a German critic and theologian, was born at Frankfurt-am-Main, on the 4th of June, 1753. In 1772 he repaired to the University of Jena, where he became the pupil of Griesbach and Eichhorn, who admitted him to their friendship. In 1780 he was appointed a repetent, or tutor, in theology at the University of Göttingen; became professor of philosophy at Dortmund in 1783, and in 1785 entered upon the same function at Altdorf, with which he combined the office of deacon of the church of that town. He took his degree of D.D. in 1787, and in 1793 was admitted archdeacon, and appointed to the second chair of theology. In 1804 he was called to fill the same office at Jena, succeeding to the position of first professor of theology on the death of Griesbach in 1812. He was honoured with several marks of confidence and distinction from the state, and died on the 17th of February, 1827. His works, which are remarkable for the freedom of their criticism and speculation, include 'Dissertatio critica de capitibus IX.—XIII. Epistolæ Pauli ad Corinthios ab eadem haud separandis,' 8vo, Göttingen, 1782; Review of Campe's Proof of the Immortality of the Soul, 'Revision des Campischen neuen Beweises für die Unsterblichkeit der Seele,' 2 parts, 4to, Dortmund, 1785; 'Dissertatio de Jacobo Epistolæ eidem adscriptæ Auctore,' 4to, Altdorf, 1789; Historical and Critical Introduction to the Study of the New Testament, 'Entwurf,' &c., 4to, Nürnberg, 1789; New Essay on the Mosaic History of Creation, designed as a supplement to Eichhorn's 'Urgeschichte,' of which Gabler published an edition in 1790, and entitled 'Neuer Versuch über die Mosaische Schöpfungsgeschichte aus der

höhern Kritik. Ein Nachtrag zum erster Theil seiner Ausgabe der Eichhorn'scher "Urgeschichte," 8vo, Altdorf and Nürnberg, 1795. Dr. Gabler conducted, at first jointly with Ammon and Paulus, and afterwards alone, the New Theological Journal, 'Neustes Theologisches Journal,' 8vo, Leipzig, 1796—1811; and also edited Griesbach's 'Opuscula Academica,' 8vo, 1824, &c. His own minor theological works were edited by his sons, with the title of 'Kleinere Theologische Schriften,' 2 vols. 8vo, Ulm, 1831.

***GADE, NIELS WILHELM**, a Danish musical composer, was born at Copenhagen, October 22, 1817. The son of a musical-instrument maker, he displayed a strong taste for music in early years; learned the violin, pianoforte, and guitar, and took lessons in harmony under Weyse. For a time he was first violinist at the Royal Chapel. In 1841 he won the prize in a competition among amateurs at Copenhagen for the best overture, the judges being Spohr and Schneider. This composition, entitled 'Ossian,' has been much played in Germany and Denmark. His next work, a symphony for full orchestra, was sent to Leipzig, where Mendelssohn conducted it at the Gewandhaus Concerts. It was so much admired as to obtain for Gade the patronage of the King of Denmark, who provided the means for a foreign tour. He stayed in Italy till the end of 1843, and after a short sojourn in his native country, accepted an invitation to Leipzig, to succeed Mendelssohn as conductor of the Gewandhaus Concerts. During the four or five years in which he occupied this post he composed and produced two symphonies; two overtures; a festival cantata; a lyrical drama, 'Comolo,' a sonata for pianoforte and violin; quintettes and ottetts for stringed instruments; piano pieces; vocal pieces, &c. Returning to Copenhagen in 1848, he became court organist and orchestral director to the Concert Society. Amongst numerous compositions of his, in which the influence of Mendelssohn's style is very evident, are a Scotch overture, 'Im Hochlande;' the music to a dramatic poem by Andersen, 'Sange af Agnete og Havemanden;' a song and chorus, 'Erlkönigs Tochter;' two series of 'Danske Sange;' pianoforte accompaniments to 'Skandinaviske Folkesange;' and an opera, 'Die Niebelungen.'

GAERTNER, JOSEPH, a German botanist, was born March 22, 1739, at Calw, in the Black Forest. After receiving his earliest tuition from his uncle, he proceeded to Tübingen and Göttingen, and took his degree in medicine. He then travelled for a while through Italy, France, and England, and returned to Tübingen as professor of anatomy. In 1768 he went to St. Petersburg as professor of botany and director of the botanic gardens and of the natural history museum; but finding the climate prejudicial to his health, he again returned to Germany,

and revisited England. Here he saw Sir Joseph Banks, and at Amsterdam Thunberg, both of whom gave him large collections of exotic seeds and fruits. While at St. Petersburg he first conceived the idea of his most important work, 'De fructibus et seminibus Plantarum,' 2 vols. 4to, Stuttgart and Tübingen, to which a supplementary volume was added by his son, Karl Friedrich. The complete work is illustrated by 225 copperplate engravings illustrating the structure of the fruits of 1200 genera of plants. Each genera has numerous figures, most of which were from his own drawings. The first volume appeared in 1788, the second in 1791, and the two parts of the supplement in 1805 and 1807. While Cæsalpinus was one of the earliest botanists to classify fruits, and Linnæus helped the study forward by his admirably methodical mind, Gaertner may claim to have laid the foundations of carpology as developed by Mirbel, Decandolle, Lindley, and other modern students of the same branch of study. He demonstrated that the spores of cryptogams are essentially distinct from the seed of flowering plants. Gaertner died July 13, 1791.

GAETANO, CESARE, CONTE DELLA TORRE, a learned Sicilian archæologist, was born at Syracuse in 1718. On the completion of his studies under the Jesuits at Naples, he devoted his attention to investigating the antiquities of his native city. As the result of numerous carefully conducted excavations, he discovered the remains of the ancient arsenal, theatre, baths, and other buildings, and exhumed a vast number of vases and coins, and several statuettes, diptychs, and inscriptions. These served as the basis of a museum of Sicilian antiquities which he founded, and of an important work in two folio volumes, 'Vestigi di Siracusi illustrati.' For several years he published a volume annually of 'Collezione di Opuscoli di Autori Siciliani,' to which he contributed memoirs on the theatre, the aqueducts, and other remains of the ancient city. His researches on the municipality he embodied in a work entitled 'Privilegi di Siracusa, tratti da antiche pergamene,' which remains in MS. in the public library. He also wrote a valuable treatise on the antiquities of the cathedral, 'Dissertazione Istoric-apologetico-critico intorno all' origine e fondazione della chiesa di Siracusa,' 8vo, Rome, 1748; a poem, 'I Doveri dell Uomo,' 8vo, 1787, and various tracts and translations. He was appointed keeper of the Museum of Antiquities, and professor of moral philosophy in the University of Syracuse. He died in 1808.

GAGE, THOMAS, a clergyman and traveller of the 17th century, was born at Hayling, in Hampshire, about the year 1597. For the purpose of receiving his education amongst the Jesuits, he was sent to Spain, where he became a member of the Dominican order, and was selected to proceed as a missionary to the Philippine Islands. He settled, however, in Mexico, where he continued for many years. His stay, indeed, was so protracted, and his isolation so complete, that on his return to England in 1637, after an absence of twenty-four years, he had forgotten his native language, and had been forgotten by his relatives. For the purpose of resolving doubts which had for some time been agitating his mind with reference to the claims of the papacy, he proceeded to Italy, to "try what better satisfaction he could find for his conscience at Rome in that religion." His conversion to Protestantism was assured by his detection of the fallacy of the miracles attributed to the picture of our Lady at Loretto; and, returning to England, he made a public recantation at Paul's Cross, in a sermon on Luke xxii. 31, 32, which he published under the title of 'The Tyranny of Satan,' &c., 8vo, London, 1642. After a short time he joined the Parliamentary party, from whom he received the benefice of Deal, in Kent. His death took place in some unascertained year just anterior to the restoration of Charles II.

His principal work, and one which had a great effect in stirring up a spirit of adventure on the part of his countrymen, was entitled 'The English-American his Travail by Sea and Land; or, a New Survey of the West Indies, with a Grammar or some few Rudiments of the Indian Tongue called Poconchi or Pocoman,' folio, London, 1648, second edition, enlarged by the Author, and beautified with Maps, folio, London, 1655, another edition, 8vo, London, 1677, &c., French translation, made by Beaulieu, by order of Colbert, 8vo, Paris, 1676, and 2 vols. 12mo, Amsterdam, 1695, German translation, 4to, Leipzig, 1693. He also published 'A Duel between a Jesuit and a Dominican; begun at Paris, fought at Madrid, and ended at London,' 4to, 1641; and 'A full Survey of Sion and Babylon, and a Vindication of the Churches and Ministers of England from the injurious nickname of Babylonish,' 4to, London, 1654.

GAGNIER, JEAN, a French orientalist, was born in Paris about 1670, and was educated at the Collège de Navarre, where he devoted himself to the study of the classical and oriental languages. He received ordination, and became a canon-regular of the Abbey of Sainte-Geneviève, but left that society from unsettlement of religious and ecclesiastical opinion, which induced him to visit England, where he became a professed member of the Anglican Church, and received the honorary degree of M.A. from both universities. He established himself at Oxford, where he acted for many years as a professor of the oriental languages. He died on the 2nd of March, 1740. His principal works are, 'L'Eglise Romaine convaincue de Depravation, d'Idolatrie, et d'Antichristianisme,' 8vo, The Hague, 1706; 'Vindiciæ Kircherianæ: sive Animadversiones in novas Abr. Trommii Concordantias Græcas Versionis vulgo dictæ LXX Interpretum,' 8vo, Oxford, 1718; 'Carolina: Ecloga in diem natalem Willielmæ Carolinæ, Principis Walliæ,' 8vo, London, 1719; 'Liber Petra Scandali de Principio et Causa Schismatis duarum Ecclesiarum Orientalis et Occidentalis, ex Græco Arabice redditus,' 8vo, Oxford, 1721; an edition of the Arabic text, with a Latin translation, preface, and notes, of 'Ismâil Abû l-feda de Vita et Rebus gestis Mohammedis,' &c., folio, Oxford, 1723; and 'La Vie de Mahomet: traduite et compilée de l'Alcoran, des Traductions authentiques de la Sonna, et les meilleurs Auteurs Arabes,' 2 vols. 8vo, Amsterdam, 1732, German translation, by C. F. R. Vetterlein, entitled 'Leben Mohammeds des Propheten,' &c., 2 vols. 8vo, Köthen, 1802—4.

GAIMARD, GEOFFREY, an Anglo-Norman poet, of whom nothing is known beyond what he relates incidentally in his poem or chronicle, 'The History of the English,' from which it appears that he composed it in Yorkshire or Lincolnshire near the middle of the 12th century, probably between 1140 and 1147, at the instance of a Lady Constance, wife of Raoul Fitz Gilbert, to whose household he seems to have been attached. He is supposed to have died about 1151. 'Lestorie des Engles' consists of 6532 lines, of which 1088 lines relate to the British kings, 5346 to Anglo-Saxon history from the arrival of Cerdic, and the last 98 to the Norman Conquest. The early portion is mainly founded on Geoffrey of Monmouth and the Anglo-Saxon Chronicle, the later on Florence of Worcester and various monastic writings. Its historic value is small, and it has little independent poetic merit, but it preserves several local legends and traditions, and is of considerable philological value. 'L'Estorie des Engles solum la Translation maistre Geoffrei Gaimar' was first published by Mr. Petrie in the 'Monumenta Historica Britannica,' pp. 764—829, and again by Mr. T. Wright for the Caxton Society, 1850, Mr. Wright's edition containing all that is extant of the poem, whilst Mr. Petrie's is confined to the Anglo-Saxon and Norman periods.

(T. Duffus Hardy, *Descriptive Cat. of Materials relating to the Hist. of Great Britain*, vol. ii. pp. 85, 245; Wright, *Biog. Brit. Lit.* vol. ii. pp. 151—4; Frère, *Manuel du Bibl. Normand*, vol. ii. p. 5).

GAIMARD, JOSEPH PAUL, French geologist and explorer, was born about 1790. In association with M. Quoy, he was attached to Freycinet's exploring expedition round the world as surgeon-naturalist. On returning home, the two observers recorded their discoveries in the 'Annales des Sciences Naturelles' for 1824 and following years, and in a special volume forming the zoological portion of Freycinet's 'Voyage autour du Monde,' tome iv. 4to, Paris, 1824, with an atlas. In 1826 M.M. Gaimard and Quoy joined Dumont d'Urville's expedition as naturalists on board the *Astrolabe*, and in the course of that and the three following years large portions of the Pacific area were explored. The new results were given in the 'Annales des Sciences Naturelles,' and in the volumes descriptive of the voyage, entitled 'Zoologie de Voyage de la Corvette l'*Astrolabe*,' tome i. (1830), ii. (1832), iii. (1834), iv. (1833), 8vo, and an atlas of numerous plates in large folio. These zoological reports are valuable on account of the numerous new species described and figured. The drawings were made either by themselves or under their superintendence from the living animals wherever possible. The specimens belong to nearly all classes, but a large proportion belong to the molluscs; the species appertaining to this last class are illustrated by descriptions and drawings of the soft parts, and in some instances by a more or less detailed account of their anatomy. About the end of 1834 Gaimard was appointed president of the scientific commission for investigating the northern regions of Europe. In this capacity he visited Iceland and Greenland in 1835—36, and Lapland, Spitzbergen, and the Faroe Islands in 1838—40. His attention was chiefly

occupied with the natural history branches of the investigation, and with drawing up the official reports. The volumes are entitled 'Voyages de la Commission Scientifique du Nord, en Scandinavie, en Laponie, en Spitzberg, et aux Féroë Îles pendant les années 1838, 1839, 1840, &c.,' 8vo, Paris, 1842, &c., and folio atlas; and 'Voyage en Islande et au Greenland, &c.,' 5 vols. 8vo, Paris, 1838—40, and folio atlas, of which the first volume only, comprising the history of the voyage, is by Gaimard. The remainder of his life was occupied in zoological pursuits at Paris, where he died in December, 1858.

GALE, THEOPHILUS, a nonconformist scholar and divine, son of Dr. Theophilus Gale, vicar of Teington Regis, Devonshire, was born at that place in the year 1628. He was entered a commoner of Magdalen College, Oxford, in 1647; took his B.A. degree on the 17th of December, 1649, and proceeded M.A. on the 18th of June, 1652, having been elected to a fellowship in his college in 1650. He attained considerable reputation for his success as a tutor, and for his zeal and eloquence as a preacher, in which latter capacity he removed in 1657 to Winchester. Being unable to comply with the terms prescribed by law after the Restoration of King Charles II., he was excluded from the public exercise of his function, and deprived of his fellowship. In September, 1662, he went abroad as tutor to the two sons of Philip, Lord Wharton, whom he attended during their studies at the University of Caen, and with whom he returned to England in 1665. He now became assistant to Mr. John Rowe, at that time pastor of a private congregation in Holborn. Upon Mr. Rowe's death he succeeded on the 12th of October, 1677, to the joint pastorate of his congregation. He died late in February or early in March, 1678, and was buried in Bunhill Fields Cemetery, leaving all his real and personal property in trust for the encouragement and assistance of necessitous and deserving students. His principal works are 'The Court of the Gentiles: or, a Discourse touching the Original of human Literature, both of Philology and Philosophy, from the Scriptures and Jewish Church, in order to a Demonstration of (I.) the Perfection of God's Word and Church Light; (II.) the Imperfection of Nature's Light, and Mischief of vain Philosophy; and (III.) the right Use of human Learning and especially of sound Philosophy,' in four Parts:—(I.) 'Of Philology,' 4to, Oxford, 1669 and 1672; (II.) 'Of Philosophy,' 4to, Oxford, 1670, and London, 1676; (III.) 'Of the Vanity of Pagan Philosophy,' 4to, London, 1677; and (IV.) 'Of Reformed Philosophy,' 4to, London, 1677, in which he deduces all the heathen mythology, philology, and philosophy from the Scriptures, and maintains that true philosophy was contained originally in the Word of God addressed to his people, and since then revealed to other nations at different epochs and in various ways; 'The true Idea of Jansenism, both historic and dogmatic,' 8vo, London, 1669, to which John Owen contributed a lengthy Preface; 'Theophilie: or, a Discourse of the Saints' Amity with God in Christ,' 8vo, London, 1671; 'The Life and Death of Thomas Tregosse, &c.,' 8vo, London, 1671; 'The Anatomy of Infidelity: or, an Explication of the Nature, Causes, Aggravations, and Punishment of Unbelief,' 8vo, London, 1672; 'Discourse of Christ's Coming,' &c., 8vo, London, 1673; 'Idea Theologiæ tam Contemplatiivæ quam Activæ, ad formam S. Scripturæ delineatæ,' 12mo, London, 1673; 'Philosophia Generalis in duas partes determinata,' &c., 8vo, London, 1676; and a few Sermons. Mr. Gale also left several works in MS. which he designed for the press, the chief of which was a Greek Lexicon of the New Testament, 'Lexicon Græci Testamenti etymologicum Synonymum, sive Glossarium Homonymum,' for the publication of which he had issued proposals just before his death, and which he had finished down to the letter *Iota*, and arranged the most considerable words under the remaining letters. The work was intended to be at once a Lexicon and a Concordance.

GALIANO, ANTONIO ALCALA [E. C. vol. iii. col. 12]. In September, 1864, Galiano entered the cabinet of Narvaez as minister of public works, but his position was little more than nominal. His health was failing, and he died in April, 1865.

*GALLAIT, LOUIS, an eminent Belgian painter, was born at Tournay on the 10th of May, 1810. Having acquired the rudiments of art in his native city, he studied at Antwerp, and afterwards at Paris, where he resided several years, and took a high position among the artists of that city. His picture of 'Christ giving Sight to the Blind,' exhibited at Brussels in 1833, was greatly admired, and the impression was renewed and deepened by the works which he exhibited in the following years, all, like that, important in subject, grave and elevated in

conception and treatment, and exhibiting unusual manipulative skill. His works are for the most part historical, and by preference he paints events or incidents connected with the great struggles for Flemish independence: many of his works have, however, been commissions from royal and noble personages who have imposed the themes. Some of his pictures have found a place in the palace of Versailles, and these of course have been battle-pieces; others are at the Luxembourg; the late King of the Belgians commissioned a 'Temptation of St. Anthony,' and 'Montaigne Visiting Tasso;' the municipalities of Tournay and Brussels would only have patriotic subjects. To the International Exhibition of 1862 nine paintings by M. Gallait were sent, which admirably illustrated the range and character of his art. They were—'Crazy Jane,' the property of the Queen of Holland; 'The Last Moments of Count Egmont,' belonging to the Royal Museum, Berlin; 'The Abdication of Charles V.,' from the Musée Royal, Brussels; 'The Last Honours paid to Counts Egmont and Horn,' lent by the town of Tournay; 'The Taking of Antioch;' 'Montaigne Visiting Tasso;' 'The Prisoner;' 'Portrait of Pius IX.;' and 'Dililah.' Among these the Egmont pictures held the chief place; it may indeed be doubted whether they did not produce a deeper impression than any other historical paintings in the exhibition. There was generally recognised in them a breadth and grandeur of style, depth of feeling, and power of expression rare in modern art. Generally his pictures are large in manner and handling, dealing with colour, light, and shadow in broad masses; are painted with a full sweeping pencil; and have the fewest possible figures, but these are of the size of life, and upon them the interest is concentrated: a manner formed apparently on the study of Rubens and one or two of the great Italian masters, but modified by French culture. M. Gallait is a member of the Antwerp Academy, but is generally regarded as the head of the school of Brussels (where he resides) in contradistinction to that of Antwerp.

GALLATIN, ABRAHAM ALBERT ALPHONSE, financier, was born at Geneva, Jan. 29, 1761. His parents died while he was young, but some relative secured him a good education at the University of Geneva, where he graduated in 1779. Fired with republican sentiments, he joined the Americans in their war for independence, and embarked for Boston early in 1780. He offered his services to Captain John Allen at Machian, and was soon appointed by him commandant of the fort of Passamaquoddy, in which post he displayed much enthusiasm. On the restoration of peace in 1782 he engaged himself as teacher of French in Harvard College, but retained the position for a short time only, as he received his patrimonial property in 1784. He purchased a large tract of land in Virginia, and occupied himself in surveying it. While so engaged he met with Washington, who was so struck with his readiness of perception in reference to a road which he was planning, that he asked Gallatin to become his land agent, but the offer was declined. A few years were spent quietly in agricultural pursuits; but in 1789 he entered the political arena by being elected a member of the convention to revise the constitution of the State of Pennsylvania. In 1793 he was elected member of the Senate of the United States, but decided to be ineligible on account of his not having been a naturalised subject for the period required by law. Soon after this he played a prominent part in suppressing a local but serious uprising known as the "whiskey insurrection." In 1795 he entered Congress, and was soon recognised as the leader of the republican or democratic party, as well as a valuable adviser on all financial matters. In May, 1801, he was appointed the secretary of the treasury, which post he held till 1813. During his term of office the treasury affairs were very successfully managed, and he won for himself a high reputation as a financier. He was one of the negotiators and signatories of the peace of Ghent in 1814. From 1815 to 1823 he was the United States minister in France. In 1826 he represented his government at London. The latter years of his life were devoted to historical and ethnological researches. From 1831 to 1839 he was president of the National Bank in New York. From 1843 to his death, Aug. 12, 1849, he was president of the New York Historical Society. In 1843 he aided in founding and was appointed president of the Ethnological Society of America. He wrote numerous financial papers and reports; some political pamphlets, such as 'The Oregon Question,' 8vo, New York, 1845; and a few lengthy ethnological papers. The most important of the last-mentioned are 'Notes on the semi-civilised Nations of Mexico, Yucatan, and Central America,' in 'Trans. Amer. Ethno. Soc.,' i. pp. 1—352 (1845); and 'Hale's Indians of

North-West America and Vocabularies of North America, with an Introduction,' in vol. ii. (1848) of the same 'Transactions,' pp. i.—xxiii. and 1—130.

GALLEGOS, FERDINANDO, an eminent Spanish painter, was born at Salamanca towards the close of the 15th century. From his manner he has been called a pupil of Albert Durer or Van der Weyden: it is probable from the close connection of Spain with the Netherlands that his master was a Fleming. His chief works are a Virgin and Child with St. John and other saints, the altarpiece in the chapel of San Clemente in the old cathedral of Salamanca, and St. John Beheaded, in the same cathedral, but as Ford notices, "though among the earliest of Spanish pictures, they have been scandalously neglected." In a chapel of the cathedral of Granada is a Descent from the Cross attributed to Gallegos, but it has been "mutilated by barbarians, who have driven nails in it to support a crucifix." Gallegos died at Salamanca in or about 1550.

GAMBA, JACQUES FRANÇOIS, French traveller, was born at Dunkerque, Dec. 26, 1763. He was educated at Paris and Leipzig, and on the death of his father he succeeded to the management of his business. The revolution, however, entailed such losses on him that he relinquished it, and took to travelling. On returning to Paris he occupied himself in making French translations of numerous works written in other European languages. He also advocated the desirability of extending the commerce of France in the East. His views coinciding with those of Richelieu, he was induced to make a tour of investigation through Southern Russia. In 1818 he returned to Paris; and in 1819 he visited Georgia, which country he thoroughly examined. He procured from the Russian government some privileges for the foreigners settling in Georgia, and was appointed French consul at Tiflis. In 1824 he was recalled to Paris for a short period, and there published his '*Voyage dans la Russie méridionale et particulièrement dans les provinces au delà du Caucase fait depuis 1820 jusqu'en 1824*,' 2 vols. 8vo, 1826. He returned to Tiflis, and died in Georgia, May 27, 1833. His book is a valuable authority on Georgia.

GARDAR, SVAFARSON, the rediscoverer of Iceland in the 9th century. His discovery happened accidentally, he having been driven on the shores of Iceland by a tempest while making for the Hebrides. He built a small residence and lived there for several months.

* **GARIBALDI, GIUSEPPE**, an Italian general and patriot, was born at Nice, on the 22nd of July, 1807, and, early embracing his ancestral calling of a sailor, was for several years engaged in the coasting trade in various parts of the Mediterranean. In 1833, having made the acquaintance of Mazzini at Marseille, he became a member of the Society of "Young Italy," and entered himself on board the Sardinian frigate *Eurydice*, for the purpose of making proselytes for the Revolution then planned by the republicans. The hopes of the latter being frustrated, Garibaldi deserted his ship at Genoa, which he left for the sake of his personal safety on the 5th of February, 1834. He escaped to France, and landed at Marseille about the 25th of February; and, having been condemned to death in his absence, changed his name for that of Pane, under which he made several voyages from the port, and at length volunteered as a hospital assistant during an alarming outbreak of cholera. This service lasted for a fortnight, at the end of which he shipped as mate in a brig bound for Rio Janiero, and presently after his arrival engaged in the privateer service of the revolted Republic of Rio Grande against Brazil, and experienced the various vicissitudes of victory, defeat, imprisonment, shipwreck, and escape, in the revolutionary war. Amidst his troubles and dangers by land and sea, he found comfort in his marriage with a Brazilian lady named Anita, to whom he was devotedly attached, and who fully reciprocated his affection. From his bravery and conduct the name of Garibaldi became a terror to the enemy; and his military fame extended even to Europe, especially for the battle he fought at Salto Sant' Antonio, on the 8th of February, 1846.

When the news reached South America of the election of Pío Nono to the chair of St. Peter, and of the liberal sentiments of the new pope, Garibaldi wrote to him, October 12th, 1847, making an offer of his services; but having vainly waited for a reply to his letter until the 27th of March, 1848, he embarked for Italy, with eighty-five of the Italian legionaries under his command, on board a French brig bound for Nice, off which they arrived on the 24th of June. Finding Charles Albert, King of Sardinia, in the field, Garibaldi offered his sword to that monarch, by whom, however, it was declined. He there-

upon repaired to Milan, where he was gladly commissioned by the provisional government to organise battalions of Lombard volunteers, with which to oppose the forces of Austria. After the flight of the pope to Gaeta, November 24th, 1848, Garibaldi resolved to visit Rome, where he found the people rejoicing over the proclamation of a Republic, under which he was elected to the Constituent Assembly, for Macerata, and took his seat at the opening of the assembly, on the 9th of February, 1849. He received orders to watch with his troops the movements of the King of Naples, who from the south threatened the Republic; but was called from this duty in order to resist the French army, which was then proceeding to invest the Roman territory. A battle took place on the 30th of April, in which Garibaldi, after a hard struggle against the discipline of the French soldiers, drove them from the field; and he followed up this victory by another, over the Neapolitan army, on the 9th of May. Rome, however, after an attack which raged without intermission from the 23rd to the 28th of June, fell into the hands of the French, who had been reinforced; and Garibaldi, and 5,000 of his volunteers took their departure on the 2nd of July, to carry on war against the Austrians, the King of Naples, and the Pope, turning his steps towards Venice, where Manin still held out for the freedom of Italy. But misfortunes overpowered him: many of his troops surrendered to the enemy, and his faithful wife, the too sanguine sharer of his disasters, yielded up her life a victim to anxiety and fatigue.

In despair of being able to make head against his adverse circumstances, Garibaldi passed over, in the first instance, to Algeria, whence in a few months he made his way to America, landing at New York in the summer of 1850. Here he declined the public reception which was offered to him; and in the pride of his independence, engaged in business as a soap and candle manufacturer, on Staten Island, which after some time he left to open a sugar store at Cincinnati. Here he stayed several months, and then determined to push for California, the "land of gold." Disappointed in finding suitable employment on shore, he reverted to his sailor life, and became captain of a Peruvian vessel, first in a voyage to China, and afterwards as a trader to the Atlantic ports.

In 1854 he returned to Genoa, and became the commander of a small merchant steamer, which plied between Nice and Marseille, until, having amassed sufficient capital for the purpose, he purchased the little island of Caprera, off the coast of Sardinia, where he settled down in the combined character of an agriculturalist, and of a patriot on the watch for opportunity. This arrived in April, 1859, when he had learned to perceive that a united Italy was possible only under a constitutional monarchy, and he obeyed the summons of Victor Emmanuel which called him to Turin to concert the plan he was to play against the Austrians, then menacing Sardinia. He received a commission as lieutenant-general, and found himself at the head of a choice band of 3,000 volunteers, with whom he left Turin on the 20th of May, and with whom he carried on a guerilla warfare which harassed the Austrians in every possible direction. His followers, who, by rapid increase, soon numbered 17,000 men, took Varese, Camerlata, and Como; and were successful at Bergamo, Brescia, and Rezzato. A month after the hasty conclusion of the war by the treaty of Villafranca, July 11th, which, to the confusion of Italy left Venice in the hands of the Austrians, he retired from his command, and was gazetted to the rank of general in the army of Central Italy. This promotion also he resigned—retaining his honorary rank—in order that he might be free for his meditated expedition for the deliverance of the two Sicilies from the mis-rule of Francis II. Being assisted with money, muskets, and men from Sardinia, France, Great Britain, and America, he embarked at Genoa for Sicily on the 5th of May, 1860; landed on the 10th at Marsala, where he proclaimed himself dictator of Sicily in the name of Victor Emmanuel, King of Italy; and proceeded to take Palermo and Messina. This done, he crossed the straits, landed in Calabria, and possessed himself of Naples, which he entered on the 9th of September, and proclaimed Victor Emmanuel, amidst general enthusiasm. The Neapolitan army made a stand on the right bank of the Volturno, which was carried by Garibaldi on the 1st of October; on the 21st the people of Naples voted in favour of the annexation of their country to the Sardinian States; on the 7th of November Victor Emmanuel entered Naples; and on the 27th the army of Garibaldi was disbanded.

The General now retired to his estate at Caprera, where, however, his stay was not of long continuance. On the 9th of

March, 1862, a meeting of 300 delegates assembled at Genoa under his presidency; and on the 27th the Government issued an order for the amalgamation of his volunteers with the regular army. On the 2nd of August he put forth a proclamation calling upon the people to resist "arrogant foreign oppressors," which was met by a counter proclamation from the king. Garibaldi nevertheless followed up his address by proceeding to Melito, a small port on the coast of Calabria, and took possession of Catania, where he raised the war-cry "Rome or Death." It was his object to avoid collision with the royal troops which had been sent to arrest his progress; and for this purpose he led his small band of 2,000 men up the goat-paths of Aspromonte. Through the activity of Pellavicini it was impossible to avoid a meeting, and on the 29th of August, whilst exhorting his men not to fire upon their brethren, subjects of the same sovereign, Garibaldi was shot down by a bullet in the foot, and, being carried to the sea-coast, was conveyed on board a royal frigate to Spezzia. Here the ball was extracted, and after he had undergone an imprisonment for four or five weeks, an amnesty was granted to his followers and himself, on account of his former services in the cause of Italian unity.

With shattered health, and with spirits dashed, though unbroken, he retired to Caprera. On the 7th of January, 1864, he resigned his seat in the Chamber of Deputies, and in the spring of the same year paid a visit to England, where he landed on the 3rd of April, at Southampton, and became the guest of Mr. C. Seely, M.P., at Brook House, Isle of Wight. His reception everywhere was to the last degree enthusiastic, and his public entry into London, on the 11th of April, was all but overwhelming in the vastness of the popular demonstrations of delight and admiration. Whilst in London, he was the guest of the Duke of Sutherland, at Stafford House; and he paid and received visits from numerous persons of the highest distinction in London. He was admitted to the freedom of the city, and a banquet was given in his honour by the Lord Mayor. In the midst of attentions and marks of affection of every kind, and in spite of several unfulfilled engagements to visit the provinces, he suddenly announced his determination to return to Italy, which he did in the Duke of Sutherland's yacht—the duke and duchess accompanying him—having first dictated at Penquite, Par, Cornwall, April 26, 1864, a farewell address to the people of England, exhibiting deep earnestness and emotion.

He emerged from Caprera to take part in the campaign of 1866, which at length gave Venice to Italy; but, still uneasy at the continued exclusion of Rome from regenerated Italy, commenced in 1867 an agitation for the recovery of the Papal States to the United kingdom. Towards the end of September he was arrested by order of the Rattazzi ministry, at Asinalunga, and conveyed to Caprera, where he was guarded by a ship of war. He eluded the watch set over him, and repaired successively to Florence and to the Pontifical States. From Foligno, in Umbria, he issued, October 20th, a proclamation against France, which had deeply wounded him by the annexation of Nice and Savoy, and the continued protection of the temporal power of the Pope. He gained at first some advantage over the Papal troops at Monte Rotondo; but on the 4th of November was conquered by the combined French and Pontifical forces at Mentana, and the same evening was arrested, and conducted to the fort of Varignano, in the neighbourhood of Spezzia. An attack of sickness, which rendered it expedient to transport him to Caprera in the end of November, relieved the Menabrea ministry from the unwilling odium of a Government prosecution. The island-home of Garibaldi has been elevated into a place of pilgrimage; and many persons have, in the shape of articles contributed to newspapers and other periodical literature, or in that of substantive volumes, given descriptions of the General's life at Caprera; whilst his entire career, exploits, and adventures, have been discussed in an immense number of 'Biographies,' 'Lives,' 'Notices,' 'Studies,' &c., in every European language. His own compositions, addresses, speeches, letters, and proclamations, are monuments of his simplicity, fervour, and earnestness. He has lately published a work, of which the English translation bears the title of 'The Rule of the Monk; or, Rome in the nineteenth Century,' 2 vols, 8vo, London and New York, 1870, the Italian manuscript of which was mainly produced during his imprisonment at Varignano. It is just to believe that General Garibaldi has favoured the Italian monarchy chiefly as offering a unique solution of the problem of Italian unity; and that his ultimate aspirations are not only for a united, but for a republican, Italy. In this spirit, in spite of advancing age and frailty of bodily health, he has responded to the call of the provisional Government of

France to give her cause against Germany the prestige of his countenance and assistance. He arrived at Marseille on the 7th of October, 1870, and on the morning of the 9th at Tours, where he was forthwith invested with the command of the irregular forces in the Vosges, having also under him one brigade of the Garde Mobile.

GARNIERIN, ANDRÉ JAKUES, a celebrated aéronaut, was born at Paris, January 31, 1769. In 1790 he ascended in a Montgolfier balloon from the garden of Ruggieri. In 1793, during the war with the German princes, he proposed to the Revolutionary Government the employment of a captive balloon filled with hydrogen, instead of the fire balloons inflated with heated air, for reconnoitring the enemy's position. The plan was not adopted at the time, but it led to the establishment of an Aéronautic School of Instruction at Meudon, after a successful trial in the Luxembourg Gardens. Garnerin was sent as a Civil Commissioner to the army of the North; but being taken prisoner by the English, he was handed over to the Austrians, who subjected him to a harsh imprisonment at Buda for eighteen months. Released on an exchange of prisoners, he returned to France. He and his elder brother, Jean Baptiste Olivier (who was also an aéronaut, and who had assisted him in his early experiments on the Montgolfier balloon), commenced a regular system of public ascents, which he spared no means of rendering attractive. He made upwards of sixty ascents, one of which involved a night's voyage in the air. He made the first parachute descent at the park of Monceaux, on the 22nd of October, 1799, after narrowly escaping violent usage from a mob enraged by the failure of a proposed ascent in June. In 1800, after some successful ascents at St. Petersburg, he assumed the title of "Premier Aéronaut du Nord." On September 21st, 1802, he descended safely in a parachute from a balloon near London. In 1804, to celebrate the coronation of Napoleon, he sent up a gigantic balloon, from which was suspended a crown, illuminated with 3,000 coloured lamps. Some mishap on this occasion having offended the emperor, Garnerin was superseded by M^{de}. Blanchard as "Court balloonist." In 1815 he wrote a pamphlet against his brother, with whom he had quarrelled. Garnerin, who died August 18th, 1823, was a bold and skilful aéronaut, but he added little to our knowledge of aéronautics.

* GARNIER, MARIE JOSEPH FRANÇOIS, a French naval officer and traveller, was born at St. Etienne, Loire department, July 25, 1839. He received his education at Montpellier, and in 1857 he joined the navy. In 1860 he was attached to Admiral Charner's staff, and was engaged in the campaign in China and Cochin China. In 1863 he was entrusted with the management of Cholen, and while so engaged he advocated a general exploration of Cochin China and adjoining provinces, with a view to opening up commercial relations with China. In 1866 M. de Chasseloup de Laubat appointed a scientific exploring expedition, which was placed under the commandship of M. Doudart de Lagrée, with M. Garnier for second officer. The party left Saigon June 5, 1866, and proceeded up the Meh Kong, or Cambodia river, nearly as far as its entrance into the Chinese province of Yunnan. It then proceeded eastward and northward, through Esmok and Yuen Kiang to Lin-gan-fu, Yunnanfu, and Tung-chuan, which last place was reached January 18, 1868. For some time previous M. Lagrée had been seriously ill, and the doctors urged him not to journey any farther. The conduct of the expedition was accordingly transferred to M. Garnier. The task that lay before him was one of considerable difficulty and risk. The object was to reach Tali, but the intervening country was in a state of great disturbance, owing to the existence of war between the Chinese authorities and the Mohammedan rebels, who had declared their independence under their leader, Sultan Suleiman. There was also much hostile religious feeling against the Roman Catholics. M. Garnier conducted his party by a roundabout route through the gorges of the upper Yang-tse river, and succeeded in entering Tali from the north. The party only stopped there a single day, as danger threatened them from several quarters, and it was only by keeping a bold front, and by insisting upon having his movements uncontrolled by the native rulers, that M. Garnier succeeded in getting his followers safely back to Tung-chuan. During his absence M. Lagrée had died. M. Garnier proceeded down the Yang-tse river as far as Suchen, where the navigable portion of the stream commences. He there embarked, and reached Shanghai June 12, 1868. This journey is one of the most important performed in the present century. A large portion of it was through a country scarcely, or not at all, known to European geographers. The highest point up the Cambodia river, the position of which

had previously been fixed by the French, was Cratieh, in 12° 28' N. A Dutch party, under Wusthof had explored the river as far as the cataract about 125 miles above Cratieh, in 1641. Macleod had touched at one point in 1837, viz., Kiang-Hung, the latitude of which he correctly determined. The lower portion of the river had been explored by Henry Mouhot, but his latitudes were mostly a degree out. And the Roman Catholics probably knew something of the country, but their knowledge has not been communicated to the public. With these exceptions, the whole route from Cratieh to Shanghai on the Yang-tse was entirely new ground. The distance travelled over from Cratieh to Shanghai was 5,392 miles, of which 3,625 miles were carefully surveyed, and the position of places fixed by astronomical observations. Upwards of 2,000 miles were performed on foot. Hundreds of sketches were made, and much knowledge was collected respecting the language, plants, animals, and geology of the districts passed through. In 1869 the gold medal of the French Geographical Society was awarded to him and M. Lagrèe, and in 1870 the Patron gold medal of the Royal Geographical Society of London was given to M. Garnier. Besides two or three pamphlets on Cochin China, he has written 'Episode de voyage d'exploration dans l'Indo-China,' in 'Bull. Soc. Géogr.,' 5th series, xvii. pp. 360-383 (1869). This was a preliminary account only, to a much larger and important work, which he was to bring out under the auspices of the French Government. Probably the recent war will interfere with its publication.

* GARNIER-PAGÈS, LOUIS ANTOINE, younger brother of Garnier-Pagès, the distinguished French orator, was born at Marseille, July 18th, 1803. His mother had married in succession M. Garnier and M. Pagès; hence the two surnames assumed by the sons. The family having been much impoverished by political events, he was brought up to commercial life as a means of reviving their fortunes; but his inclination led him to engage in political affairs. He took part in the street fighting during the Revolution of 1830, having organised a band of workmen in the Quartier St. Avoys. After the death of his brother in 1841, he sold his share of the business (that of a commission-agent or commercial broker), and thenceforward devoted almost his whole attention to political life. In 1842 he was elected a Member of the Chamber of Deputies for Verneuil, and took an active share in the discussion of commercial and financial subjects—such as the equalisation of the sugar duties, converting or consolidating the Government rentes, &c.; in more political questions he allied himself with the extreme left, or ultra-radical party. A visit to Spain in 1844 enabled him, on his return, to render good service in the debates on Spanish affairs. He next went to Algiers to study the Colonial system. He took an active part in developing the construction of railways, and succeeded in lessening the long term of years proposed for concessions to the companies. In 1847 he joined the democratic meetings held in Paris; raised the cry of "Rien pour soi, tout pour la patrie"; and attended the banquets which led to the unsuccessful attempt at repression by the Government. The Revolution of 1848 followed, and Louis Philippe escaped to England. Garnier-Pagès was appointed Mayor of Paris, and member of the Provisional Government. Soon afterwards he succeeded M. Goudchaux as Minister of Finance. The chief bankers having advised that the State should be declared bankrupt, or at least that there should be a temporary suspension of payments, Garnier-Pagès resolutely opposed the idea; and the fiscal arrangements which he made to avert the evil were a fertile subject of controversy for many years afterwards. He rearranged the systems of taxes, bank notes, discount banks, salt duties, octroi duties, &c. One proposal of his, to alienate the Crown diamonds, and the pensions on the old Civil List, for the use of the nation, was not adopted; but a national loan was contracted on his suggestion, with great success. He was elected Professor of Economy, Statistics, Finance, and Commerce in a new School of Administration founded at the College of France; but this school was suppressed in the course of a few months. When the Constituent Assembly was formed, he was elected to it by the two departments of the Seine and the Eure; he selected the former, where he had defeated thirty-three other candidates. As a member, he drew up reports on the financial and economical position of France. He was afterwards elected to the Executive Commission of Government; but on the fall of this short-lived body, he quitted public life for a time, and resumed his mercantile pursuits. Some time afterwards he published 'Episode de la Revolution de 1848,' relating to his financial policy. In 1857 he was defeated by Emile Ollivier as a candidate for the 1st Circum-

scription of Paris; his finance plans went against him, and this led him to publish another pamphlet on the subject. In 1864 he was elected member of the Corps Législatif for the 5th Circumscription of the city; but was soon afterwards tried and fined as one of thirteen persons who had organised a Democratic Electoral Committee. This prosecution became known as the "Procès des Treize"—the trial of the thirteen; among the number were Carnot, Héroult, Hérisson, and Ferry. At the election in 1869, he was defeated by Raspail, the Socialist Republican, on a first scrutiny, but regained his position as one of the members for Paris on a second. In this year he brought to a conclusion a large work on which he had been engaged, 'Histoire de la Revolution de 1848,' 8 vols. 8vo, 1860-69; and a Supplement to it, 'Histoire de la Commission Executive,' 8vo, 1869.

During the extraordinary events at Paris on Sunday, September 4th, 1870, consequent on the surrender of the Emperor and a large French army to the Germans at Sedan, several members of the extreme left, in the Corps Législatif, announced to an assembled crowd that the Emperor was deposed. They then went to the Hôtel de Ville, and formed themselves into a Provisional Government under the designation of the Government of National Defence. M. Garnier-Pagès was one of the number; and he remained in Paris in the exercise of ministerial functions during the investment of the city from September in that year.

* GARRISON, WILLIAM LLOYD, one of the most prominent members of the Abolitionist or Anti-Slavery party in the United States, was born at Newburyport, Massachusetts, December 10th, 1805. His early years were marked by some privation. First he learned shoemaking as a boy; then he went to school at Newburyport, paying for his board and schooling by domestic service; and then he tried cabinetmaking for a time. His apprenticeship to the printer of the 'Newburyport Herald,' in 1818, gave a definite turn to his career; he wrote a short article, which was inserted; and he became gradually acquainted with newspaper editors and writers. In 1824 he became editor of the 'Newburyport Herald'; in 1826 proprietor and editor of the 'Free Press,' in which he was accustomed, as compositor, to set up his own editorial articles without writing them out—composing in his mind and composing with his types at the same time. In 1827 he engaged with others at Boston in advocacy of peace, temperance, and anti-slavery; and in three successive years was concerned in the 'National Philanthropist,' the 'Genius of Universal Emancipation,' and the 'Journal of the Times.' At length, in 1831, he began a newspaper which he conducted uninterruptedly for 35 years, and which he only brought to a close when the object for which it was established had been attained—the emancipation of all negro slaves in the United States. This newspaper was the 'Liberator.' He was the proprietor, editor, printer, and publisher; and the fierceness of his articles as the chief writer brought him sometimes into peril. On one occasion he was fined and imprisoned for slander on a Boston owner of slave ships; in 1835 he was stripped, and nearly tarred and feathered, by a Boston mob; while on another occasion the Governor of Georgia offered 500 dollars to any one who would "bring into Georgia the person of William Lloyd Garrison, to answer to the laws of Georgia for the conduct of an incendiary sheet, the 'Liberator.'" He organised an 'American Anti-Slavery Society,' and a 'New England Non-Resistance Society,' in the interests of peace. When Mr. Garrison visited England, in 1866, after the cessation alike of slavery and of the 'Liberator' newspaper, he was entertained at a public breakfast at St. James's Hall, on which occasion the Duke of Argyll and Mr. Bright complimented him on his public services. A small volume of 'Sonnets and other Poems' by him was published in 1847; and a selection from his writings and speeches in 1852.

GASKELL, ELIZABETH CLEGHORN. [E. C. vol. iii. col. 36]. The memoir of Charlotte Brontë referred to in the above notice appeared in two volumes 8vo, in 1857; some remarks in it led to a controversy not wholly free from acrimony, and to the modification of subsequent editions. Under the title 'Round the Sofa,' 2 vols. 8vo, 1859, Mrs. Gaskell collected various papers which she had contributed to periodicals, and in the following year published another volume called, 'Right at Last.' Of a higher order was 'Sylvia's Lovers,' 3 vols. 8vo, 1863, the best and most touching of all her later stories. She died at Alton, Hampshire, on the 12th of November, 1863; she was born in 1811. A novel, called 'Wives and Daughters,' which was in course of publication in the 'Cornhill Magazine,' was left unfinished at her death.

GASPARIN, ADRIEN ÉTIENNE PIERRE, COMTE DE, was born at Orange, June 29, 1783. By his father's side he was connected with the Corsican family of Gaspari; and by his mother's side he was related to Olivier de Serres, the founder of French agriculture. He was educated first at Metz, then at the college of Juilly, and finally at the Lemoine institution at Paris. In 1801 he entered the army as a sub-lieutenant of Dragoons, and served in the German and Polish campaigns of 1805. In 1806 he left the service, owing to ill health, and devoted himself to agricultural pursuits, and more particularly to the improvement of farm animals and plants. In 1817 appeared his 'Mémoire sur la culture du blé dans le département de Vaucluse.' In it he showed that by the method of cultivation in use wheat cost more than the price obtained for it, and indicated the course which would remedy this state of things. His advice was adopted, with the best results. He drew up similar reports on the cultivation of the other principal plant growths of the district, such as the madder, the olive, and the mulberry-tree. In 1828 appeared his 'Guide du propriétaire de biens ruraux'; and in 1857 the first part of his 'Guide du propriétaire de biens soumis au metayage,' in the 'Bibliothèque Universelle de Geneva,' which was subsequently republished in a complete form in 1832. These works attracted attention, and added much to his influence. In 1830 he entered upon a political career, by being elected to represent his native place; and in 1831 he was appointed Prefect of the Rhône department. He was active in suppressing an insurrection amongst the workmen of Lyons, in April, 1834, which involved a severe struggle. For this service the Government raised him to the peerage. In 1835 he gave up his Prefecture and became Under-Secretary of State to the Minister of the Interior. In 1836 he was himself appointed Minister of the Interior, which post he exchanged for that of Minister of Agriculture and Public Works in 1839; but he held it for a short period only. He then gave his attention to writing his principal work, 'Cours d'Agriculture,' 6 vols. 8vo, 1843—1860. After the Revolution of 1848, he was occupied in organising the 'Institut Agronomique' at Versailles, but after a few years' existence the Government suppressed it. He served on the jury for agriculture at the Exposition of 1855. He died at Orange, September 7, 1862. In addition to his above works he wrote on several other subjects, such as the multiplication of races, the contagious diseases of sheep, and the raising of merino sheep. He made long researches on the distribution of rain, and on solar radiation. His great merit is that he saw, and endeavoured to impress upon others, the importance of regulating agricultural affairs by constant attention to the laws established in the sciences which bear upon them. His meteorological investigations, and his experiments on soils were undertaken with this end. In his contribution to the 'Comptes Rendus,' xi. p. 1089 (1855), on the 'Influence de la chaleur sur la Végétation,' he pointed out that the rate of growth and development of plants do not depend upon any single element of climate, such as mean temperature, but that it is necessary to take each element into account separately.

* GASSIES, JEAN BAPTISTE, malacologist, was born at Agen, January 11, 1816. In his earlier years he drew up a catalogue of the *Lepidoptera* of his native district; but in his maturer years his attention has been almost exclusively given to molluscs. His occupation is that of a merchant tailor at Bordeaux, but his spare time is devoted to scientific pursuits. His first paper, an 'Essai sur le Bulime tronqué,' in 'Actes Soc. Linn. Bordeaux,' xv. 5—22 (1847), has been followed by several papers in the publications of the same Society, of which the most important are—a 'Monographie du genre Testacelle,' in the 'Actes,' i. pp. 195—248 (1866), written in conjunction with P. Fischer; and a 'Catalogue raisonné des mollusques terrestres et de l'eau douce de la Gironde,' in the 'Actes,' ii. pp. 233—306 (1858). He has also been a constant contributor to the 'Journal de Conchyliologie' since 1852, and amongst other things has described a large number of shells from New Caledonia. In vol. xvi. (for 1868) he gives details relative to the gradual introduction of *Dreissena polymorpha* into the fresh waters of the south-west of France. Amongst his separate works, which are few in number, may be mentioned the 'Tableau méthodique et descriptif des mollusques terrestres et d'eau douce de l'Agenais,' 8vo, Paris, 1849, which was published under the auspices of the Minister of Public Instruction; and 'Faits biologiques de l'Aquarium d'eau douce de l'Exposition Universelle de 1867,' Paris, 1868. He is said to be preparing a work on the palæontology of the Agen district.

* GASSIOT, JOHN PETER, vice-president of the Royal

Society, was born April 2nd, 1797. In connection with a commercial firm in which he is partner, he has been engaged in trade with Spain and Portugal; but his taste has led him to experimental research in natural philosophy; and he has embodied the results of his investigations in numerous memoirs, published between the years 1837 and 1870. They have appeared chiefly in the 'Philosophical Transactions,' the 'Proceedings of the Royal Society,' the 'Electrical Society's Transactions,' the 'Electrical Magazine,' and the 'Reports of the British Association for the Advancement of Science.' The greater number relate to electricity and the allied sciences, which subjects Mr. Gassiot has enriched with papers on experiments on voltmeters having electrodes exposing different surfaces; on the possibility of obtaining the electric spark before the circuit of the voltaic arc is completed; on Nobili's plate of colours; on large voltmeters of a new construction; on the polarity of the voltaic battery; on the means of producing electrical tension without metallic contact; on a water battery for voltaic purposes; on the relations between the electrical and chemical actions before and after the completion of the circuit; on measuring the resistance of wires interposed in the circuit; on the electro-magnetic properties of different batteries; on the electricity of tension in the voltaic battery; on the diamond under the influence of the voltaic arc; on the decomposition of water under pressure by the galvanic battery; on the heating effects of secondary currents; on Ruhmkorff's induction coil; on induced electrical discharges in aqueous vapour; on the phosphorescence, dark bands, and stratification of electrical discharges; on the interruption of the discharge in vacuo by the magnetic force; on relative tests for vacua; on the electric light produced from the induction coil; on the heat of the voltaic poles during luminous discharges; on metallic depositions from the negative terminal of the induction coil; on a similar deposition in vacuum tubes; on the varying forms and colours of the stratified voltaic discharges, &c. His papers on other scientific subjects are relatively few in number. Among them are those on tidal observations; on the use of bisulphide of carbon prisms and telescopes of long focal distance in examining solar spectra; on the mode of producing carbonic acid vacua; on the meteorological and physical observations made during three balloon ascents in 1865 and 1866, &c. Mr. Gassiot was elected Fellow of the Royal Society in 1840, and delivered the Bakerian Lecture in 1858. The gold medal of the society was awarded to him in 1863 for his 'Researches on the Voltaic Battery and Circuit,' and on the 'Discharge of Electricity through Attenuated Media,' researches conducted on an unusual scale of power and magnitude. The president on this occasion said, "Mr. Gassiot has had executed a grand spectroscope, furnished with no less than nine faultless prisms: a design in which he has been ably seconded by the skill of the optician, Mr. Browning, to whom the construction was entrusted. This magnificent instrument he has placed at the disposal of any fellow of the society who may happen to be engaged in researches requiring the use of such powerful apparatus."

GATTEAUX, NICOLAS MARIE, a celebrated French medallist, was born at Paris on the 2nd of August, 1751. He was educated as a gem engraver, but having obtained an appointment in the royal medal office, devoted himself entirely to medal engraving. The first medal which he engraved on his own account, a portrait of Louis XIV., executed for the series of royal medals, 1773, secured his position. From that time he was called to engrave a medal on the occasion of almost every important dynastic incident or public event, and also when it was thought necessary or becoming to do honour to a distinguished personage or celebrate any passing circumstance. On resigning the graver at the age of 68, he had produced 289 medals, seals, and dies, besides various other works. Gatteaux was perhaps the neatest and most ingenious medallist of his time. His strength was in portraiture and execution. His symbolical designs are neither very apt nor profound, but they are praised by his countrymen as brilliant. Many of the processes of medal engraving were improved by him; he invented means of registering bank notes, and increasing the difficulties of forgery; and also produced an improved copying machine for the use of sculptors. Nicolas Gatteaux died of cholera, June 24th, 1832. His son

* JACQUES EDOUARD GATTEAUX, born November 4th, 1788, is equally celebrated as a medallist and a sculptor. His medals comprise portraits of a very large number of the most eminent of his contemporaries, and several of the more distinguished Frenchmen of earlier date executed for the Galerie Numismatique des Grands Hommes Français, of which he was one of the founders,

His sculpture includes many busts and portrait statues, some of colossal size, executed for different cities and public buildings. With M. V. Baltard he has published 'La Galerie de la Reine, dite de Diane, à Fontainebleau,' folio, 1858. M. Gatteaux was elected member of the Académie des Beaux-Arts in 1845, and in 1861 was promoted to be officer of the Legion of Honour.

GAU, FRANÇOIS CHRÉTIEN, architect and archaeologist, was born at Cologne, June 14th, 1790. At the age of 18, being permitted to follow his bent for art, he went to Paris; studied under Debret and Lebas, and entered the École des Beaux-Arts. In 1815 he went to Italy, and studied with care the works of classical antiquity. In 1817 he proceeded to Egypt, and examined, measured, and drew the more remarkable monuments, making his way up the Nile through Nubia as far as the second cataract. On his return to Paris in 1823, he set about preparing his drawings for publication, and they appeared, with descriptions by Niebuhr and Letronne, under the title 'Antiquités de la Nubie, ou monuments inédits des bords du Nil, situés entre la première et la seconde cataracte, dessinés et mesurés en 1819,' with 78 plates, large folio, Paris, 1822—28. An edition with the text in German was published simultaneously at Stuttgart. The admirable manner in which he executed this splendid work led to his being invited to complete Mazois's 'Ruines des Pompéi,' the last two volumes of which are by him. Upon the completion of this task Gau commenced the practice of architecture, and executed some important works, among them being the restoration of St. Julian-le-pauvre, and the erection of the prison of Roquette and the presbytery of Saint-Séverin. The work on which he based his anticipations of eminence as an architect was the church of Sainte Clotilde, by which, as the first Gothic church erected in Paris since the middle ages, Gau hoped to effect a revolution in Parisian ideas of ecclesiastical architecture. The church was commenced about the end of 1846, but before it was carried far, Gau fell ill, its continuance was confided to M. Ballu, and the design was mutilated. Gau died at Paris, December 31st, 1853.

GAUDICHAUD-BEAUPRÉ, CHARLES, botanist, was born at Angoulême, Sept. 4, 1780, and educated at Paris. In 1810 he entered the navy as a druggist, and was ordered to serve at Antwerp. While here he got engaged in a duel, and was severely wounded in the lungs by a sword thrust. In 1816 he was allowed to join Freycinet's ship, 'Uranie,' in a voyage round the world as botanical druggist. He made large collections of plants, and wrote the report on botany in Freycinet's 'Voyage autour du Monde.' In 1830 he took part in Villeneuve Bargemont's expedition to South America, and some years subsequently he went round the world in the 'Bonite.' He died January 16, 1854. He wrote numerous papers, chiefly on the organography and physiology of plants, the potato disease and on the movements of the sap in trees. He was much engaged in controversy with M. Mirbel on the subject of a theory which he proposed. He maintained that a plant is a compound mass, of which the leaves are the individual portions; each leaf he called a *phyton*, which consists of the primary ascending vessels forming the medullary canal; of tubular vessels, or wood; and of fibrous vessels, or bark; the last two portions are formed from above to below; the first is formed from below upwards. The leaves are connected to the stem by radicular processes, which form the annual layers. These ideas are somewhat similar to those which had been previously enunciated by Dupetit-Thouars, and Agardh. His notions as to the root-like prolongation of the leaves have been disproved by the recent investigations of Trecul.

* GAUDIN, MARC ANTOINE AUGUSTIN, chemist, was born at Saintes (Charente Inférieure), April 5, 1804. In 1827 he invented an air-pump in which the air could be rarefied or compressed as desired by means of an arrangement in the valves. He gave considerable attention to the probable molecular structure of minerals and other chemical compounds, to the production of artificial gems, to improvements of the microscope as regards portability and cheapness, and to photography. He has written several books and papers; amongst the former may be noticed his works on photography and epidemics; and amongst the latter those on the preparation of artificial corundum, quartz, sapphire, and ruby; on the molecular phenomena regulating the forms of crystals; on the properties of silica; and on feldspar. Nearly all his papers occur in the 'Comptes Rendus.' His views on the grouping of molecules in crystals are purely hypothetical, and have not received much support. He was one of the first to produce minerals artificially, and most of his efforts in this line were made before Ebelmen's successes. He

was the first to make artificial rubies. His process was to expose ammonia alum to the oxyhydrogen flame, thereby volatilising all the constituents but alumina. This was melted; a little yellow chromate of potash added to it, and the whole allowed to cool and crystallise. He thus obtained small crystals, which Malaguti analysed and found to have the same composition as the natural rubies. Since then he has succeeded in producing them by another method. Gaudin usually resorted to high temperatures, while Ebelmen obtained most of his results at moderate degrees of heat. In 1869 the Academy of Sciences awarded him the Trémont prize.

* GAUDRY, ALBERT, palæontologist, was born at St. Germain-en-Laye in 1827. His first important contribution to science was 'Mémoire sur les pièces solides chez les Stellérides' in 'Annales des Sciences Naturelles' for 1851, vol. xvi. pp. 339—379. In 1853 he began his investigations in the East of Europe, and soon drew up some short papers on the geology of Cyprus, and of various parts of Greece. These were followed by others on the extinct animals found in a rich deposit at Pikermi, mostly in the 'Comptes Rendus' for 1856 and subsequent years. His principal separate works relate to the same subjects as his papers, and are entitled 'Géologie de l'île de Chypre,' 4to, Paris, 1862, and 'Animaux fossiles et Géologie de l'Attique d'après les recherches faites en 1855—6 et en 1860,' 4to, 1862—67, with an atlas of 75 plates and a map. The diggings at Pikermi were made under his personal superintendence, he himself living in a tent while they were going on. He thus collected a series of mammalian remains, probably of upper miocene age which surpasses in completeness and in interest any other collection from a single spot, not even excepting those of the Sewalik hills. The mammalian fauna comprises 43 species; as a group they are remarkable for their large size, for their relationship with the African fauna, and for many of the genera being extinct, and intermediate in character between different living genera, and for connecting the faunas of anterior periods with those which existed in postmiocene times.

GAUERMANN, FRIEDRICH, an eminent Austrian animal painter, the son of Jakob Gauermann, was born at Miesenbach September 20, 1807; and studied under his father at the art-academy and the Imperial Library, Vienna, but learned most from a laborious series of sketching tours in Styria, the Tyrol, and Salzburg. From the appearance of his 'Ploughman' at the Vienna Exhibition in 1834, Friedrich Gauermann took a foremost place among Austrian painters, and his reputation extended with the gathering years. His best works are his rocky mountains with animals. His wild animals fighting or hunted were very popular. Many of his pictures have been lithographed, and he executed some good etchings. In his later years he was court landscape and animal painter, a member of the Vienna Academy, and a Knight of the Royal Netherland Order of the Oak Crown. His residence was at Vienna, but his summers were spent among the mountains, or at Miesenbach, where he died July 7, 1865. In the Sheepshanks Collection, South Kensington, are two of Gauermann's pictures, No. 77, 'Wolves and Deer,' and No. 78, 'Wild Boar and Wolf.'

GAUERMANN, JAKOB, landscape painter and engraver, was born in 1773, at Oeffingen, near Stuttgart, and brought up as a carver in stone. He was, however, able to study in the Stuttgart art-academy, and as soon as possible released himself from his manual calling. In 1802 he made a tour in the Tyrol, and from this time obtained recognition as a landscape painter. His water-colour drawings of the scenery of Salzburg and the Tyrol were exceedingly popular. His oil-paintings are less numerous and less successful. As an engraver, his chief work is a series of 36 landscapes with figures. Jakob Gauermann was court landscape painter to the Archduke John, who formed a collection of his pictures. He died March 27, 1843.

GAVARNI. [SULPICE PAUL CHEVALIER, E. C. vol. iii. col. 42]. The last few years of the life of Paul Chevalier were unproductive for art. He lived at Paris a recluse, occupied, it was said, in aeronautic experiments. In reality his health was failing; a cough became increasingly troublesome; he removed to Auteuil for purer air, and there, at his villa, La Réunion, he died on the 23rd of November, 1866.

* GAY, CLAUDE, traveller and naturalist, was born at Draguignan, March 18, 1800. He was educated at Paris, where Desfontaines and Jussieu recommended him to study the flora of Chile. In order the better to carry out his object, he worked hard at geology, zoology, and meteorology, and in 1829 reached Chile. He showed such aptitude for his task in his early explorations of Chile, that the government of that country resolved to

supply him with every facility for carrying out his plans. This encouragement induced him to return to France in 1832 for the purpose of organising a party of scientific men to help him, and procuring the best observing instruments. Thus equipped, he returned to Chile, and spent ten years in thoroughly exploring the country. Having collected an immense mass of materials, he returned to Europe in 1842. For the next ten or twelve years he was engaged in drawing up and superintending the publication of his report. It is entitled 'Historia Física y Política de Chile, según Documentos adquiridos en esta República durante doce Años de Residencia en ella; y publicada bajo los auspicios del Supremo Gobierno,' 23 vols. 8vo, and a quarto atlas of 3 vols. Paris, 1844-54. The separate portions consist of 'Historia,' 5 vols. 1844-49; 'Documentos sobre la Historia, la Estadística y la Geografía,' 2 vols. 1846-52; 'Botánica,' 8 vols. 1845-52; 'Zoología,' 8 vols. 1847-54; and the Atlas of 315 plates, 4to, 1854. Much of the natural history was written by MM. Blanchard, Richard, Hupé, Nicolet, and other naturalists; and a large proportion of the drawings were made by A. Riocreux and others. Gay himself drew many of the original sketches, including a large number of maps, plants, and fishes, and superintended the execution of the others. The scientific portion is almost entirely confined to natural history, and is mainly descriptive, but there is one general chapter on botanical geography. Some of his observations on terrestrial magnetism and on the meteorology of Chile are given in the 'Comptes Rendus,' and in a local journal entitled 'Araucano.' Since his return to Europe he has spent much time in exploring various portions of it, such as Russia, Poland, Greece, and some of the neighbouring portions of Asia and Africa. In 1856 he was elected a member of the Academy of Science in succession to Mirbel.

GAY, JACQUES ÉTIENNE, botanist, was born in Switzerland, about 1785, and was a pupil of Gaudin, who bequeathed to him his herbarium. He took an office in the French chamber of peers in 1814, and after awhile was appointed the secretary to the committee of petitions, which he retained till 1848. He died Jan. 17, 1864. He wrote a large number of botanical papers, chiefly of a monographic character. Amongst the more important may be mentioned the following:—'Monographie des cinq genres de plantes (*Seringia*, *Lasiopetalum*, *Guichenotia*, *Thomasia*, *Keraudrenia*) que comprend la tribu des Lasiopetalées dans la famille des Bättneriacées' in 'Mém. Mus. d'Histoire Naturelle,' vii. pp. 431-468 (1821); 'Histoire de l'*Arenaria tetraquetra*' in 'Ann. des Sci. Nat.' iii. pp. 27-46 (1824), iv. pp. 88-90 (1825); 'Monographie des genres *Xeranthemum* et *Chardinia*' in 'Mém. Mus. d'Histoire Naturelle,' iii. pp. 325-371 (1827); 'Corona Endresiana pyrenaica' in 'Ann. des Sci. Nat.' xxvi. pp. 209-254 (1832); 'Duria iter Asturicum botanicum' in 'Ann. des Sci. Nat.' vi. pp. 113-137, 213-225, 340-355 (1836); 'De Caricibus quibusdam minus cognitis vel novis, &c.' in 'Ann. des Sci. Nat.' x. pp. 279-307, 355-365, (1838), xi. pp. 177-179; 'Eryngiorum novorum vel minus cognitorum heptas, &c.' in 'Ann. des Sci. Nat.' ix. pp. 148-185 (1848); 'Notice sur une nouvelle espèce de chêne Française, sur les caractères qui la distinguent, et sur la classification des chênes en général' in 'Ann. des Sci. Nat.' vi. pp. 223-246 (1856); 'Recherches sur la famille des Amaryllidacées' in 'Ann. des Sci. Nat.' x. pp. 75-109 (1858); 'Le *Chamaerops excelsa*, Thunberg, &c.' in 'Bull. Soc. Bot. Fr.' viii. pp. 410-430 (1861); 'Voyage botanique au Caernarvonshire, &c.' in 'Bull. Soc. Bot. Fr.' x. pp. 270-278, 319-329, 382-392, 409-414, 420-431, 462-468, 485-492 (1863). The object of the journey to Wales was in the main to study the species of *Isotles* there found, and to compare them with those he had previously met with on the central plateau of France.

*GAYANGOS, PASCUEL DE [E. C. vol. vi. col. 994].

GED, WILLIAM, the inventor, or one of the inventors, of stereotyping, was born at Edinburgh about 1690. While carrying on the trade of a jeweller, circumstances drew his attention to the state of printing; he was struck with the loss of time and money involved in the re-composing of a book whenever a new edition was required. The best type was at that period obtained from Holland, while the coarser varieties were cast in London: it was important, therefore, for printers in Scotland to economise their type-work as much as possible. In 1725 a printer asked his opinion about the feasibility of establishing a type foundry at Edinburgh; they agreed that if a cast could be taken from a made-up page, the invention would make their fortunes. Ged pondered long on the kind of metal best suited for the purpose, and at length decided on using the same alloy as is

selected for type. He succeeded in taking a fair cast of a page of type, and thus producing a stereotype plate, but did not succeed in getting the Edinburgh printers to enter into the matter with him. Coming to London, he made an arrangement with William Fenner, a stationer: this speedily came to a close. Ged then accepted a challenge from a typesetter as to which of them should produce the best stereotype or block page in eight days from a page of Bible type; Ged gained the victory, but at the same time set all the typesetters against him, they viewing the new comer with distrust. The Earl of Macclesfield, obtaining a sight of his plate, procured for him a contract for printing Bibles and Prayerbooks for the University of Cambridge. Ged, however, with a partner who cheated him, a conspiracy in the trade to defeat him, and unbusinesslike habits, entirely failed, and went back to Scotland impoverished. Struggling to establish his invention, he produced in 1736 a stereotyped edition of Sallust in Latin. As the compositors purposely introduced errors in their work to spoil his plates, his edition fell into disrepute, and he died poor in 1749. The chief particulars of his career are given in 'Biographical Memoir of William Ged,' by John Nichols, 1781; and 'Supplementary Narrative of Ged,' written by his daughter, 1819.

GEEFS, GUILLAUME [E. C. vol. iii. col. 47] died on the 10th of May, 1860.

GEER, KARL DE, Baron of Leutsta, a Swedish naturalist, was born at Finspang in 1720. From his fourth to his eighteenth year he resided in Holland, to which country his family originally belonged. His intimacy with Muschenbroek gave him a taste for natural history. He studied first at Utrecht, and afterwards at Upsala, at which latter place he had Linnæus for a master. On the death of his uncle he inherited a large fortune, including the iron mines of Dannemora. In 1752 appeared the first volume of his most important work, 'Mémoires pour servir à l'Histoire Naturelle des Insectes,' 4to, Stockholm. As little attention was given to the subject at that time, the book did not excite the attention which Baron de Geer expected, and he accordingly burnt a large proportion of the impression. However, he resumed his labours with his usual zeal, and six more volumes were issued, the last in 1778, soon after his death, which occurred on March 8, 1778. The work contains descriptions of 1500 species of insects, illustrated by 238 plates. His collection of natural history objects was left to the Academy of Science at Stockholm, of which he was a member. The 'Genera et Species Insectorum,' by Retzius, 8vo, Leipzig, 1783, is to a certain extent supplementary to De Geer's work.

*GEIGER, ABRAHAM, a distinguished German Hebraist, and a leader of modern Jewish literature, was born on the 24th of May, 1810, at Frankfurt-am-Main; and after receiving his early education under the care of his father, became in 1829 a student at the University of Heidelberg, and afterwards at that of Bonn, where he devoted himself chiefly to philosophy and oriental languages. In November, 1832, he became a rabbi at Wiesbaden, and next year published a Prize Essay on the Jewish Sources of the Koran, 'Was hat Mohammed aus dem Judenthum aufgenommen?' 8vo, Bonn, 1833. He took a prominent place amongst the revivers and reformers of Jewish science and theology, and commenced, jointly with other Israelites of distinction, the publication of the Journal of Jewish Theology, 'Zeitschrift für jüdische Theologie,' 1835-47, which, running counter to the prejudices of the Jewish Conservative party, was provocative of much discussion and partizanship. In 1838 he was appointed rabbi at Breslau; and, for the wider dissemination of his principles, instituted an Assembly of the Rabbis, which, since 1844, has met respectively at Brunswick, Frankfurt, and Breslau,—at the last place under Geiger's presidency. As a reformer, Geiger endeavours to avoid the impolicy of extreme action; and in 1846, and again in 1860, he declined the office of Preacher to the Reformed Association at Berlin. In 1863 he became rabbi at Frankfurt, where he has since continued. His works comprise an Essay on the direction of a Hebrew Theological Faculty, 'Ueber die Einrichtung einer Jüdisch-theologische Facultät,' 12mo, Wiesbaden, 1838; Manual and Reading Book of the Language of the Mishna, 'Lehr- und Lesebuch zur Sprache der Mischna,' 8vo, Breslau, 1845; The Third Assembly of the German Rabbis: a Preliminary Word of Explanation, 'Die Dritte Versammlung deutscher Rabbiner: Ein vorläufiges Wort zur Verständigung,' 8vo, Breslau, 1846; Preliminary Advice on the Action of the Third Assembly, &c., 'Vorläufiger Bericht, über die Thätigkeit der dritten Versammlung deutscher Rabbiner,' 8vo, Breslau, 1846; Text and Trans-

lations of the Bible in their Dependence on the Inner Development of Judaism, 'Urschrift und Uebersetzungen der Bibel in ihrer Abhängigkeit von der innern Entwicklung des Judenthums,' 8vo, Breslau, 1857; Judaism and its History, 'Das Judenthum und seine Geschichte,' 2 vols. 8vo, Breslau, 1864—65, a historical work remarkable for the liberality of its spirit; 'Sadducäer und Phariseer,' 8vo, Breslau, 1863; a Treatise on the Divine Service of the Jews, entitled 'Unser Gottesdienst. Eine Frage, die dringend Lösung verlangt,' 8vo, Leipzig and Breslau, 1868. Geiger is also the author of Sermons, occasional Essays, and contributions to periodicals, all calculated directly or indirectly for the advancement of his views; and in 1862 he became the editor of the Jewish Journal of Science and Life, 'Jüdische Zeitschrift für Wissenschaft und Leben,' published at Breslau.

* GEIKIE, ARCHIBALD, geologist, was born in Edinburgh in 1835. He was educated in the High School and the University of that city, and in 1855 joined the Geological Survey, of which he is now director for Scotland. One of his earliest books was 'The Story of a Boulder,' 8vo, Edinburgh, 1858. He assisted in the preparation of 'A Descriptive Catalogue of the Rock Specimens in the Museum of Practical Geology,' 8vo, London, 1859. In conjunction with Dr. G. Wilson, he wrote a 'Memoir of E. Forbes,' 8vo, 1861; and, in conjunction with Sir R. I. Murchison, prepared a new Geological Map of Scotland, published in the same year. He and Howell wrote the Geological Survey memoir on the 'Geology of the Neighbourhood of Edinburgh,' 8vo, 1861; and in 1863 was published his Survey memoir on the 'Geology of Eastern Berwickshire.' He has contributed some papers to the publications of the Geological Societies of London and Glasgow; one of these is 'On the Phenomena of the Glacial Drift of Scotland,' in the 'Transactions of the Geological Society of Glasgow,' vol. ii. pp. 1—190. In 1865 appeared his work on 'The Scenery of Scotland viewed in connection with its Physical Geology,' 8vo, London and Cambridge. In 1867, as President of the Geological Section of the British Association, he delivered an address on the proofs of volcanic activity in Scotland during past geological times as far back as the lower Silurian period. He is now, 1870, President of the Geological Society of Edinburgh. Mr. Geikie has contributed numerous papers on denudation, volcanoes, and other subjects in physical geography, past and present, to the 'North British Review,' the 'Geological Magazine,' 'Nature,' and other periodicals. He also contributed to the third edition of Kitto's 'Cyclopædia of Biblical Literature.'

* GEINITZ, HANS BRUNO, palæontologist, was born at Altenburg, October 16, 1814. He was educated at that town, at Berlin, and at Jena, at which last place he received his doctorate of philosophy. In 1837 he was appointed assistant professor of chemistry and physics at the Polytechnic School at Dresden, and in 1850 he was transferred to the chair of mineralogy and geology. Since 1846 he has had the charge of the Royal Mineralogical Museum. He has written a great number of works and papers, chiefly illustrative of the palæontology and geology of Saxony. He is one of the editors of the 'Neues Jahrbuch für Mineralogie, etc.' His principal works are: 'Charakteristik der Schichten und Petrefacten des Sächsischen Kreidegebirgs,' fol. Dresden, 1839—1843; 'Grundriss der Versteinerungskunde,' 8vo, Dresden and Leipzig, 1846; 'Das Quadersandsteingebirge oder die Kreidegebirge in Deutschland,' 8vo, Freiberg, 1849—50; 'Die Versteinerungen der Grauwacken Formation in Sachsen und der angrenzenden Länder,' fol. 1852—1853; 'Die Leitpflanzen des Rothliegenden und des Zechsteingebirges oder der Permischen Formation in Sachsen,' 8vo, Leipzig, 1858. He is a joint author in various works, such as 'Gaa von Sachsen,' 8vo, 1843; 'Dyas oder die Zechstein-formation und das Rothliegende,' 4to, Leipzig, 1861—62; with Fleck and Hartig in 'Die Steinkohlen Deutschlands und anderer Ländes Europas, etc.,' 3 vols. 4to, 1865; and with Sorge in 'Uebersicht der im Königreiche Sachsen zur Chausseeunterhaltung verwendeten Steinarten,' 4to, Dresden, 1870. He has also contributed upwards of fifty papers, which have appeared in Leonhard and Bronn's 'Neues Jahrbuch für Mineralogie,' 'Mittheilungen aus dem Osterlande,' 'Allgemeine Deutsche naturhistorische Zeitung,' 'Zeitschrift der Deutschen Geologischen Gesellschaft,' 'Sitzungsberichte naturwissenschaftlichen Gesellschaft Isis zu Dresden,' and a few other scientific journals.

GELLIBRAND, HENRY, an eminent mathematician, was born in Aldgate, London, November 17th, 1597; completed his education at Trinity College, Oxford, and graduated B.A. in

1619, and M.A. in 1623. Having taken holy orders, he became curate of Chiddingstone, in Kent, an office he filled with great credit, but having on his father's death succeeded to a moderate patrimony, he resigned his cure in order to devote himself wholly to mathematical studies. His attainments becoming known, his acquaintance was cultivated by the most eminent professors of the science, and in January, 1627, he was elected to succeed Gunter as professor of astronomy at Gresham College, mainly through the recommendation of Henry Briggs, then Savilian professor of geometry at Oxford. Briggs died in 1630, having only written the first part of his 'Trigonometria Britannica,' and he left an earnest request that Gellibrand would complete the work. Gellibrand readily undertook the task; wrote the second book and edited the whole, proceeding to Holland to superintend its passage through the press; it appeared under the title 'De Trigonometria Britannica, sive de doctrina triangulorum libri duo,' folio, Gouda, 1633; English translation, folio, London, 1658. Whilst preparing this work Gellibrand got into a curious difficulty. His servant, William Beale, published with his assistance an almanac for the year 1631, in which, being puritanically disposed, in place of 'Ann. B. V. M.' and the names of Roman Catholic saints, he substituted the saints and martyrs recorded by Foxe. For this offence both master and man were cited by Laud, then Bishop of London, before the High Commission Court, but being able to show that the same thing had been done in other almanacs, they were acquitted to the great annoyance of Laud, who pressed hard for a conviction, and whose conduct on this occasion formed the subject of one of the articles of accusation against him at his trial. Gellibrand gave great attention to the variation of the magnet and the improvement of navigation, in which he was followed with so much success by Halley. In 1633 he wrote an 'Appendix concerning Longitude' for Captain Thomas James's account of his voyage in the South Sea; and the following year appeared his 'Institution Trigonometrical; explaining the dimensions of plane and spherical triangles by sines, tangents, secants, and logarithms. With an appendix concerning the use of the forestaff, quadrant, and nocturnal in navigation,' 8vo, London, 1634; reprinted, with additions, by W. Leybourn, 1652. Soon after this he made the prime discovery of the secular variations of the magnetic declination, of which he published an account in 'A Discourse Mathematical of the Variation of the Magnetic Needle; together with the admirable Diminution lately discovered,' 4to, London, 1635. Much more in this line was anticipated from Gellibrand, but he died prematurely from an attack of fever in his 40th year, February 9th, 1637.

GENTILESCHI. ORAZIO LOMI, called Gentileschi after an uncle, was born at Pisa, July 9, 1563. He learned painting under his half-brother, Aurelio Lomi, and his uncle, but went to Rome, where he formed his style on the study of the works of the great masters, under the guidance of Agostino Tassi. Gentileschi's pencil was in much request for mural decoration. Among other Roman palaces, he painted the saloon of the Quirinal and the Loggia Rospigliosi. He also executed many easel pictures and portraits, among which the finest are in the royal palace at Turin and the Borghese palace. Like many other painters of the time, he travelled widely in the practice of his profession, visiting, besides various Italian cities, Savoy and France. In 1632 he settled in England at the instance, as is said, of Charles I. Here he was much patronised by the king and chief nobility, painting for the former the ceilings of Greenwich Palace and various easel pictures; York House for Villiers, Duke of Buckingham; and for Sheffield, Duke of Buckingham, the ceiling of his house in St. James's Park. He lived on terms of intimacy with Vandyck, who painted his portrait. Gentileschi died in London in 1646, and was buried in the Queen's Chapel, Somerset House. Gentileschi's style partook of that of the so-called Tenebrosi, combining, however, their strong effects of light and shadow with greater richness of colour. Some of the pictures he painted for Greenwich Palace are now in Marlborough House, and a good many are in private collections. One of the best of his pictures in England is in the King's Drawing Room at Hampton Court, No. 176, 'Joseph and Potiphar's Wife.' His daughter,

ARTEMISA GENTILESCHI, born at Pisa in 1593, learned painting from her father, but under the advice of Guido formed her style on that of Domenichino. She became very celebrated, especially for her portraits, which greatly excelled those of her father. Lanzi, however, praises her religious and historical pieces, particularly a 'Judith Slaying Holofernes,' in the Ducal

Palace, and a 'Susannah and the Elders,' also at Florence. She resided in splendour in Naples, where she married one P. Schiattesi, but soon separated from him, and never assumed his name. Graham in his 'Short Account of the Most Eminent Painters,' appended to Dryden's Translation of Du Fresnoy, says that she "was as famous all over Europe for her gallantry and love intrigues as for her talent in painting," and the statement has been copied by Walpole and all subsequent English writers. But Graham appears to be the only authority for the scandal, which is not referred to by the early Italian biographers, and may fairly be doubted. Artemisia visited England during her father's lifetime, and by some writers is said to have died here in 1646. She appears, however, to have been living in Naples in 1652. There is a 'Sibyl' (No. 226) of her painting at Hampton Court, but her own portrait appears to have been removed.

GENTILIS, ALBERICUS, a renowned Italian civilian, was born in 1551 at Castello di San Genesio, in the Marca d'Ancona, and was educated chiefly at the University of Perugia, where, in 1572, he took the degree of Doctor of the Civil Law. For the safer exercise of their religious freedom, several members of his family left their native country; and whilst his father and brother settled in Germany, Gentilis himself came over to England, where he obtained the patronage of the Earl of Leicester, at that time Chancellor of the University of Oxford. He became a member of New Inn; on the 6th of March, 1581, was incorporated in his degree of D.C.L.; and on the 8th of June, 1587, received from the Queen the appointment of Regius Professor of Civil Law, which he held until his death in the latter end of March or the beginning of April, 1611. It is probable that he was buried in Christ Church. His works, which were all produced during his residence at Oxford, comprise, 'De Juris Interpretibus Dialogi sex,' 4to, London, 1582; 'Lectionum et Epistolarum quæ ad Jus Civile pertinent, Libri duo,' 8vo, London, 1583; 'Legalium Comitiorum Oxoniensium Actio,' 8vo, London, 1585; 'De Legationibus Libri tres,' 4to, London, 1585; 8vo, Hanover, 1607; 'De Nascendi Tempore Disputatio,' 8vo, Wittenberg, 1586; 'De diversis Temporum Appellationibus Liber,' 8vo, Wittenberg, 1586 and 1646; 'Condicionum Liber Primus,' 8vo, Wittenberg, 1586, and 8vo, London, 1587; 'De Jure Belli Commentatio Prima,' 4to, Leyden, 1588; 'Commentatio Secunda,' 4to, London, 1588; 'Tertia,' 4to, London, 1589, issued collectively in 4to, Leyden, 1589, 8vo, Hanover, 1598 and 1612, a work to which Grotius acknowledges his obligations; 'Disputationes duæ: De Actoribus et Spectatoribus Fabularum non notandis et de Abusu Mendacii,' 8vo, Hanover, 1599; 'De Armis Romanis Libri duo,' &c., 8vo, Hanover, 1599 and 1612; 'Disputationum de Nuptiis Libri septem,' 8vo, Hanover, 1601 and 1614; 'Lectionis Virgilianæ variæ Liber,' 8vo, Hanover, 1603; 'Laudes Academiæ Perusinæ et Oxoniensis,' 8vo, Hanover, 1605; 'Disputationes tres: (1) De Libris Juris canonici; (2) De Libris Juris civilis; (3) De Latinitate veteris Bibliorum Versionis male accusata,' 8vo, Hanover, 1605; 'Disputationes tres: (1) De Potestate Regis absoluta; (2) De Unione Regnorum Britannicæ; (3) De Vi Civium in Regem semper injusta,' 4to, London, 1605; 'Disputationes decem in Titulos Codicis, Si quis Imperatori maledixerit, ad Legem Juliam Majestatis,' 8vo, Hanover, 1607; 'Hispanicæ Advocacionis Libri duo in quibus illustres Quæstiones Maritimæ, secundum Jus Gentium et hodiernam Praxim nitide perlustrantur,' 4to, Hanover, 1613, and 8vo, Amsterdam, 1661; 'In Titulum Digestorum de Verborum Significatione Commentarius,' 4to, Hanover, 1614; and a 'Discourse of Marriages by Proxy.'

GENTILIS, JOANNES VALENTINUS, was a native of Cosenza, in Calabria, where he was born about the beginning of the 16th century. Having made himself obnoxious to the Neapolitan Government by the freedom of his theological speculations, he took refuge at Geneva, where he and other Italian exiles, who had renounced the Catholic doctrine of the Trinity, formed themselves into a separate church. When their opinions became known to the public authorities of the city, they were cited to appear before the Senators, Ministers, and Elders, and required to subscribe to the orthodox faith. Gentilis, amongst others, refused; and, as he still continued to disseminate his sentiments, he was thrown into prison in July, 1558, on a charge of heresy, which was preferred or instigated by John Calvin. A fear of the fate of Servetus compelled Gentilis to a recantation, dated August 29th, 1558, which is still extant, and in which he makes confession of the orthodox faith. The sentence pronounced against him contained an article to the effect that he should publicly throw into the flames his "lying and blasphemous

writings," and another that he should not leave the city without permission. The last stipulation he not unnaturally evaded; and for some time he led a wandering life in Savoy, France, and Germany, actively employed in making converts to his opinions, and undergoing arrest and imprisonment on more occasions than one. At length about the year 1561 he went to Poland, where he joined his friends Blandrata and Alciati, and where he acquired so much influence that the Genevese clergy thought it necessary to write a letter to Prince Nicholas Radzivil, accompanied by the signed and sworn Recantation of Gentilis, by which, it was said, "he became reconciled, for a time, to the Church of Geneva, in all things, but especially in the article concerning the Mystery of the Most Holy Trinity." An edict was issued which had the effect of driving Gentilis from Poland; and having withdrawn successively into Moravia and Austria, he went, in 1566, to Gex, a prefecture of the Canton of Berne, where he was again taken. Upon requisition to that effect, he was delivered up to the authorities of the city of Berne, by whom, after various ineffectual attempts, made between the 5th of August and the 9th of September, 1566, to wring from him another recantation, he was condemned to be beheaded. As he was led out to execution, and just before he laid his head upon the block, he said, "Many have suffered for the glory of the Son; but none, so far as I know, have died for the glory and superiority of the Father." Benedict Aretius, a divine of the Protestant Reformed Church of Berne, professed to extract from the writings of Gentilis the following propositions:—(1) The Trinity is a mere human invention, unknown to the Catholic Creeds, and diametrically opposed to evangelical truth. (2) The Father alone is that God, who in Scripture is called the One, and the Only God. (3) The Son is not of himself, but of the Father, to whom, as deriving his essence from Him, he is subordinate. (4) The Father, Son, and Holy Spirit are distinct, not only as regards their persons, but their essence. (5) The Son was begotten of the Father, according to his essence, as a subordinate Spirit, different from the Father. (6) There are three Eternal Spirits, each of whom is a God of himself. (7) These three Spirits are distinct in order, degree, and essential properties.

The year after the death of Gentilis, Beza published a short account of him, entitled 'Valentini Gentilis, teterrimi Hæretici Impietatum ac triplicis Perfidie et Perjurii brevis Explicatio, ex Actis Publicis Senatus Genevensis, optima Fide descripta. Earundem Refutationes a doctissimis Ætatis nostræ Theologis,' &c., 2 parts, 4to, Geneva, 1567. Benedict Aretius also published 'Valentini Gentilis justo Capitis Supplicio Bernæ adfecti brevis Historia, et contra ejusdem Blasphemias orthodoxa Defensio Articuli de S. Trinitate,' &c., Geneva, 1567, of which an English translation, attributed to South, was published in the year 1606, with the title of 'A Short History of Valentinus Gentilis the Tritheist, tried, condemned, and put to Death by the Protestant Reformed City and Church of Berne, in Switzerland, for asserting the Three Divine Persons of the Trinity to be [Three Distinct, Eternal Spirits, &c.], translated into English for the use of Dr. Sherlock,' &c., 12mo, London, 1696.

Besides the Confessions which he wrote during his imprisonment at Geneva, and some manuscript verses on the Trinity, Sandius attributes to Gentilis 'A Book dedicated to the King of Poland; 'Antidotes to the Reply of the Genevese Clergy; 'A Refutation of the 13th Chapter of the First Book of 'Calvin's Institutions,' in which he wholly condemns the doctrine of the Trinity, as received by all Christian Churches down to his own time; 'Protheses from Augustine's Fifteen Books on the Trinity; 'Extracts from the Scriptures, the Fathers, and the Koran,' in defence of his own opinion; 'Annotations on Athanasius.' A manuscript treatise, in Italian and Latin, 'On the Incarnation of Christ,' was also found amongst the papers of Gentilis, but without sufficient evidence of its authenticity to justify its unqualified reference to him.

GENTZ, FRIEDRICH VON, a German statesman and political writer, was born on the 2nd of May, or, as alternatively stated, on the 8th of September, 1764, at Breslau, and studied jurisprudence at the Universities of Frankfurt and Königsberg. In 1786 he was appointed private secretary to the Directory-general of Finances at Berlin, and in 1793 to the Ministry of War. He opposed himself heartily to the doctrines of the French revolution, and published an annotated translation of Burke's 'Reflections on the Revolution in France,' with the title of 'Betrachtungen über die französische Revolution, nach dem

Englischen des Herrn Burke,' &c., 2 vols. 8vo, Berlin, 1793, continuing his attacks in the 'Historisches Journal,' 8vo, Berlin, 1799, &c. When Prussia showed signs of favouring a French alliance, Gentz repaired to Vienna, from which he was commissioned to England in order to accomplish an alliance between Austria and this country. He distinguished himself by the warmth with which he wrote against Napoleon and the French domination in Germany, and drew up the Austrian manifesto of 1805. After the Treaty of Presburg, December 26th, 1805, he returned to Berlin, and drew up the Prussian manifesto against France, October, 1806, returning, after the battle of Jena, on the 14th of that month, to Austria, whose manifestoes against France in 1809 and 1813 were from his pen. In 1814 and 1815 he took part in the Congress of Vienna, as well as those of Aix-la-Chapelle, in 1818; of Laybach, in 1821; and of Verona, in 1822, where he prepared the protocols of the diplomatic conferences. He died on the 9th of June, 1832. Gentz wrote on the Principles of the actual French Constitution, &c., 'Ueber die Grundprincipien der jetzigen französischen Verfassung nach Robespierres und Saint-Just's Darstellung derselben,' 1794; Mounier's Development of the Causes which have hindered the French from achieving Liberty, &c., 'Mounier's Entwicklung der Ursachen welche Frankreich gehindert haben zur Freiheit zu gelangen, mit Anmerkungen und Zusätzen,' 1st part, Berlin, 1795; Letter to Frederick William III., on his Accession, 'Sendschreiben an Friedrich Wilhelm III., bei seiner Thronbesteigung überreicht,' 8vo, Berlin, 1798; On the last French Constitution, 'Ueber die neuste französische Constitution,' 1800, published in the 'Historisches Journal'; On the Origin and Character of the War against the French Revolution, 'Ueber den Ursprung und Charakter des Krieges gegen die französische Revolution,' 8vo, Berlin, 1801; 'Essai sur l'Etat actuel de l'Administration des Finances et de la Richesse nationale de la Grande Bretagne,' 8vo, Hamburg, 1801; 'De l'Etat de l'Europe avant et après la Révolution Française,' 8vo, Hamburg, 1802, English translation, second edition, 8vo, London, 1803, fifth edition, 8vo, London, 1804; 'Fragments aus der Geschichte des politischen Gleichgewichts in Europa,' 8vo, Leipzig, 1804, second edition, 1806, English translation, 'Fragments upon the Balance of Power in Europe,' 8vo, London, 1806, &c.; and 'Reflections on the Liberty of the Press in Great Britain,' which, translated from the German, appeared in vol. xv. of the 'Pamphleteer.' Most of the works of Gentz find a place in the collective edition of his writings, 'Schriften: herausgegeben von Gustav Schlesier,' 5 parts, 8vo, Mannheim, 1838—40. The same editor likewise published 'Mémoires et Lettres inédits du Chevalier de Gentz,' 8vo, Stuttgart, 1841.

GEOFFROY SAINT-HILAIRE [SAINT-HILAIRE, GEOFFROY, E. C. vol. v. col. 242].

GERARD, surnamed THOM, TENQUE, or TUNG, the founder and first Grand-Master of the order of St. John of Jerusalem, was born about the year 1040, either in the Isle of Martigues, on the coast of Provence, or, according to other authorities, at Amalfi, in the kingdom of Naples. The merchants of Amalfi, having in 1050 obtained permission to that effect from the Sultan of Egypt and Syria, in whose hands the city of Jerusalem at that time was, founded a Benedictine—or, as is variously said, an Augustinian—monastery near the Holy Sepulchre, for the convenience of the numerous pilgrims who resorted thither. The monastery was dedicated to the Virgin, by the name of *Sainte Marie la Latine*, because the offices were celebrated in Latin, and in order to distinguish it from the Greek Church; whilst another religious house, dedicated to St. Mary Magdalene, was built for the accommodation of the female pilgrims. The increasing revenues of his monastery made it possible for the abbot in 1080 to erect a hospital for the reception of the poorer pilgrims, and for the care of the sick, of which the management was entrusted to Gerard. The chapel of this hospital was consecrated to St. John the Baptist, on account of a tradition that on its site had stood the house of his father, Zacharias. Gerard suffered imprisonment at the hands of the Saracens on account of the assistance he rendered to the Christian soldiers; but was rescued, on the taking of Jerusalem, by Godefroy de Bouillon, in 1099. In the following year, Gerard projected the institution of a new religious order, in which the ecclesiastical and military characters should be blended. This was the order of St. John of Jerusalem, the members of which were bound by a particular rule, in addition to the three vows of chastity, poverty, and obedience, which pledged them to devote themselves to the relief of all Christians in distress. The order was approved and confirmed in 1113 by Pope Paschal II., who in a

bull dated the 15th of February, and addressed to Gerard as Grand-Master, conferred several important privileges, which were renewed in May, 1120, by Calixtus II., and confirmed in 1154 by Anastasius IV., who divided the members of the order into the three classes of knights companions, clerks, and serving brothers. After successfully administering the affairs of the order—whose members became so celebrated in succeeding times as Knights of Rhodes and Knights of Malta—for about twenty years, Gerard died probably in the year 1121, and was succeeded by Raimond du Puy. The Ritter Johanniter, or Knight of St. John, of the present day is the creature of the philanthropic Congress of Geneva, in 1867, and is to be found pursuing his beneficent mission on the battle-fields, and in the ambulances of the French and German armies. The Abbé Vertot wrote a History of the order founded by Gerard, whose life, 'Vie de Gerard,' 12mo, Aix, 1730, was written by Dr. Haitze.

GERBER, ERNST LUDWIG, a German musical writer, was born at Sondershausen, September 29, 1746. He was the son of an organist, who wished to bring him up to the church; but, the youth evincing no tendency in that direction, the profession of the bar was selected instead. While studying at the University of Leipzig, Gerber indulged a natural taste for music; learned the pianoforte and violoncello, and played for a time as violoncellist at the theatre and at concerts. Finding the practice of the law irksome, he resolved to adopt music as his means of living. He taught music to the sons of Prince Schwartzburg; and in 1775 succeeded his father as Court organist. He composed and published many pieces of music; but finding the executive means in a small town too limited for their due performance, he turned his attention to musical literature. He began additions to the biographical part of Walther's Musical Lexicon; but at the suggestion of Breitkopf, the Leipzig publisher, he resolved to write an original work which should include the lives of celebrated musical instrument makers, as well as composers and performers. This appeared under the title 'Historisch-Biographisches Lexicon der Tonkünstler, welches Nachrichten von dem Leben und Werken musikalischer Schriftsteller, berühmter Componisten, Sänger, Meister auf Instrumenten, Dilettanten, Orgel und Instrumenten Macher,' 2 vols. 8vo, Leipzig, 1790—92. Forkel about that time published his 'Allgemeine Geschichte der Musik;' and on comparing them, Gerber became conscious of many errors and imperfections in his own work. He therefore devoted many years of close study to Forkel, Burney, Hawkins, Martini, and other writers, and produced a much larger work, 'Neues Historisch-Biographisches Lexicon,' &c., 4 vols. large 8vo, 1810—14, in some respects superseding his former work, in others supplementary to it. This work is of exceeding value as an authority on German musicians, but not to be relied on when treating on those of other countries. Gerber also wrote largely in the Leipzig Musical Gazette. A fine library of music and musical portraits which he had collected was published by a Musical Society, and presented to the Vienna Conservatorium in 1815. He died at Sondershausen, July 30th, 1819.

GERHARD, EDUARD, a distinguished German archaeologist, was born November 29, 1795, at Posen, and studied at Breslau and Berlin. In 1816 he was attached as professor to the former university; but, owing to failure of sight, he resigned his appointment and proceeded to Italy. At Rome he joined the circle of Niebuhr, Bunsen, and other eminent fellow countrymen, then zealously occupied in investigating the antiquities of ancient Rome; and from that time devoted himself with untiring diligence to the study of Greek and Roman archaeology. His primary object was to bring together and render generally available the archaeological knowledge scattered widely over books and among living archaeologists. With this view he founded, or induced Frederic William of Prussia to found, the *Istituto di Correspondenza Archaeologica*, of which he was the director as long as he remained in Rome; contributed much to the annals of the Archaeological Society of Rome; and after his return to Germany in 1837, established and edited the 'Archäologische Zeitung' (1843—48), after 1850 continued by him with a change of title. Herr Gerhard's earlier writings were his contributions on the antiquities of Rome to the great work of Bunsen and Plattner, 'Beschreibung der Stadt Rom,' and its continuation by Ulrichs; and one or two separate publications and contributions to the journals on the same subject. The other works which have proceeded from his prolific pen may be arranged under three or four heads—those on Greek art and mythology generally, including his 'Antike Bildwerke,' with 140 copperplate engravings, fol. Stuttgart, 1827—44; his valuable 'Griechische Mythologie,' 2 vols. 8vo,

Berlin, 1855; and 'Griechische Mysterienbilder,' fol. Stuttg., 1839—an attempt to illustrate the subject of the Greek mysteries by the paintings on Greek vases; on particular personages of the ancient mythology, to which he has devoted numerous monographs, including one on the Olympian deities, and others on the Etruscan deities, on the Agathodemon and Bona Dea, and a long list on Athene, Eros, the deities of the sun, Poseidon, &c.; besides such cognate subjects as the art-forms of the Phoenix, the oracle of Themis, &c., most of which have appeared as distinct publications. Another valuable class of works consists of descriptive notices of the antiquities (especially the vases) in the Museums of Naples and Berlin—that on the vases in the Berlin Museum, with its supplements, being a very elaborate and costly work, with numerous plates printed in colours. But perhaps the works which most fully exhibit Gerhard's extensive archaeological knowledge, are those in which he has investigated at length the subject of the painted vases and metal mirrors of Greece and Etruria. Of these works the chief are—the 'Auserlesene Griechische und Etruskische Vasenbilder,' with 330 engravings, 4 vols. 4to, Berlin, 1839—58; 'Vasenbilde Griechischen Alltagslebens,' 4to, Berlin, 1852—56; and 'Etruskische Spiegel,' 4 vols., and atlas, 4to, 1839—65, in which the things described are represented in many hundreds of coloured engravings, thus affording an almost inexhaustible store-house for the art-student. He is director of the archaeological department of the Berlin Museum, honorary professor in the University and member of the Academy of Berlin, and foreign associate of the French Institute.

GERHARDT, CHARLES FRÉDÉRIC, born at Strasbourg, 21st August, 1816; died 19th August, 1856. In this brief life of 40 years, Gerhard probably did more for chemistry than any man since the time of Davy. He was the son of a manufacturing chemist, and was educated at the Protestant Gymnasium at Strasbourg. Being destined to follow his father's business, he studied chemistry under Walkner at Carlsruhe, when he conceived a strong passion for the science. In 1832 he prosecuted his studies at Leipzig under Erdmann. On his return home he soon became disgusted with the details of business: this so offended his father that a quarrel arose, and Gerhard left home and enlisted in the chasseurs. Three months of this service sufficed to disgust the young chemist. He succeeded in raising sufficient money to purchase his discharge, and then entered the laboratory at Giessen, where he served under Liebig during 18 months: some accounts place this erroneously in 1840. In 1838 he went to Paris, and worked under Thénard and Chevreul, at the same time giving private lessons in chemistry as a means of support. He passed all the university grades with success, and in 1840 took his doctor's degree. He also joined Cahours in some researches on the essential oils. In 1844 he was appointed to succeed Balard as professor of chemistry in the Faculty of Science at Montpellier. He occupied this chair until 1848, and published some new and striking views on chemical theory in his 'Précis de Chimie organique,' and also introduced them into his lectures. In 1845 he joined Laurent in starting the 'Comptes Rendus des Travaux de Chimie publiés en France et à l'Étranger,' in which he not only gave abstracts of chemical work, but discussed it by the light of his own original views. In 1848 he resigned his professorship, and went to Paris, where he established a laboratory of his own. Here he gradually developed his views on Series, the theory of types, anhydrous acids, the amides, &c. He simplified many chemical theories by comparing, examining, and correcting the old ones. He referred all oxide and oxy-acids to the type of water; made classification easy for the mind to commit to memory; treated the composition of bodies not as absolute values, but as equivalents of composition; and introduced the idea of series into chemistry.

In 1855 Gerhard was appointed to the chair of chemistry at the Faculty of Sciences, and at the Upper School of Pharmacy of Strasbourg. A few months before his death in 1856 he was named corresponding member of the Academy of Sciences at Paris.

In addition to papers in journals, Gerhard published his 'Précis de Chimie Organique,' 2 vols. 8vo, 1844—45; 'Traité de Chimie Organique,' 4 vols. 8vo, 1863—56; and also in conjunction with Chevreul, 'Précis d'Analyse Chimique Qualitative,' 1855. Three years after his death appeared, under the names of the same authors, 'Précis d'Analyse Chimique Quantitative,' 1859.

Laurent on his death-bed arranged his papers and MS. notes for his posthumous work on chemical method. This represents the

views of Gerhard and himself. It was published under the care of a friend, with a preface by Biot dated 11th June, 1854. In 1855 a translation by Dr. Odling appeared under the auspices of the Cavendish Society.

GÉRICAUT, JEAN LOUIS THÉODORE ANDRÉ, a celebrated French painter, was the son of an advocate at Rouen, where he was born on the 26th of September, 1791. On the completion of his ordinary education at the Lycée Impérial, Paris, he entered the atelier of Charles Vernet, but soon left it for that of Guérin, who, disturbed by his daring modes of procedure, advised him to relinquish art. Géricault, instead, gave himself to hard study in the Louvre, then filled with the masterpieces of modern painting. In 1812 he sent to the Salon an equestrian portrait of M. Dieudonné of the Imperial Guard, in the act of leading a charge, which attracted much attention; and in the following year 'Le Chasseur à cheval' and 'Le Cuirassier blessé.' These pictures, now in the Louvre, were supposed to typify the French army in its success and in its reverses, and produced a powerful impression. On the fall of the empire, Géricault went to Italy, and remained there for nearly three years, mainly occupied in studying the works of the great masters. On his return he produced his chief work, 'The Wreck of the Medusa,' one of the most powerful works of recent French art, and now a leading attraction of the French section of the Louvre. Géricault painted a few other pictures, but none of equal grandeur. He was of a moody temper (when in London at the time his Medusa was being exhibited there he attempted to commit suicide), lived an irregular life, and though he made many sketches and studies, especially of horses, for which he had a passion, hesitated long before setting about a picture. He might, however, have done great things, but for his premature death. He was thrown from a spirited horse he was riding, and after ten months of suffering, died on the 18th of January, 1824, at the early age of 33. Besides the pictures named above, the Louvre possesses several brilliant studies of horses by him. His 'Wreck of the Medusa' has been very well engraved in mezzotint by S. W. Reynolds.

* GÉRÔME, JEAN LÉON, a distinguished French painter, was born at Vesoul (Haute-Saône) May the 11th, 1824. In 1841 he entered the atelier of Paul Delaroche, and the École des Beaux-Arts. He studied under Delaroche till 1844, when he accompanied him to Italy. His first picture, 'Young Greeks making Cocks Fight,' was exhibited at the Salon in 1847. In the following years he sent religious and classical subjects, without producing any marked impression. He made a journey to Turkey and the Danubian Principalities in 1853, and the next year travelled in Egypt and Nubia, supplying his sketch-book with many studies, and imparting a local colour to his style. A large painting, of a class much affected in France, 'Le Siècle d'Auguste et la Naissance de Jésus-Christ,' when exhibited in 1855, was greatly praised by the critics, purchased by the State, and procured for the painter the Cross of the Legion of Honour. It was, however, the 'Duel after a Bal-Masqué,' exhibited in 1857, which made him one of the most popular painters of the day. It has been exhibited everywhere; copied by him again and again for English as well as native purchasers; and reproduced by means of lithography and photography in almost every conceivable form. 'Ave, Cæsar Imperator, morituri te salutant,' exhibited at the Salon in 1859, and at the International Exhibition, London, in 1862, though a painful picture, is perhaps the most marvellous representation of the Roman amphitheatre which has been produced. 'Phryné devant le tribunal' (1860), almost equally well known in London as in Paris, showed the growth of a tendency to meretriciousness, which there was but too much in Parisian society to encourage, but which was only too palpable evidence of belonging to a corrupted and declining school of art. Other works have followed in the same style, but his latest pictures indicate the return to a healthier and manlier manner. Besides his easel pictures, M. Gérôme has decorated the walls of a chapel in Saint-Séverin and the refectory of Saint-Martin-des-Champs with various mural paintings illustrating the legends of the church. On the reorganisation of the École des Beaux-Arts in 1863, M. Gérôme was nominated professor of painting. M. Gérôme was one of the first foreign artists elected by the Royal Academy, 1869, honorary foreign academician, and he contributed to the exhibition of 1870 two remarkable pictures, 'The Death of Marshal Ney' and 'Jerusalem'—the shadow of the Crucifixion.

* GERVAIS, PAUL, zoologist, was born at Paris, Sept. 26, 1816. Having completed his school education he entered the Museum of Natural History as assistant naturalist; but in 1841

he went to Montpellier as professor of zoology and comparative anatomy. In 1865 he returned to the museum as successor to Gratiolet. He has been a voluminous writer, but his most noteworthy books are the undermentioned:—*'Zoologie et paléontologie Française, ou nouvelle recherches sur les Animaux vivants et fossiles de la France,'* 3 vols. folio, Paris, 1848—52; *'Théorie du squelette humain fondée sur la comparaison ostéologique de l'homme et des animaux vertébrés,'* 8vo, Montpellier, 1856; *'De la métamorphose des organes et des générations alternantes dans la série animale et dans la série végétale,'* 8vo, Montpellier, 1860; *'Recherches sur l'ancienneté de l'Homme et la Période Quaternaire,'* 4to, Paris, 1867; *'Éléments de Zoologie,'* 8vo, Paris, 1868, 1869. With Eydoux, he wrote the *'Zoologie'* in Laplace's *'Voyage autour du Monde,'* 1833, &c.; with Walckenaer, the *'Histoire Naturelle des Insectes aptères,'* &c., 8vo, 1837, in the *'Suites à Buffon,'* and with Van Beneden, *'Zoologie Médicale,'* 2 vols. 8vo, 1859; as also *'Ostéographie des Cétacés vivants et fossiles,'* 4to and folio, Paris, 1868, &c. His papers in the scientific journals are upwards of 130 in number.

*GERVINUS, GEORG GOTTFRIED, an eminent German historian, was born at Darmstadt on the 20th of May, 1805, and entered upon a commercial career in a house of business in his native town. He applied himself to languages and history; and finally, yielding to his inclination for literature, became in 1826 a student at the University of Heidelberg, where he had the advantage of the tuition of Schlosser. After taking his degree he was admitted a teacher and lecturer (*Privat-docent*); and in 1831 paid a visit to Italy, where he remained a considerable time occupied with literary and historical researches. He was called to be extraordinary professor at Heidelberg in 1835; and became in 1836 professor of history and literature at the University of Göttingen. One of the earliest acts of Ernest Augustus, Duke of Cumberland, on his accession to the throne of Hanover, in 1837, was the abolition of the constitution, and the demand from the professors of Göttingen of an oath of allegiance to his absolute sovereignty. Seven of the professors, including Ewald, the brothers Grimm, and Gervinus, protested against the illegal usurpation of authority, and were in consequence deprived of their academic preferments. [EWALD, G. H. A. VON, E. C. S. col. 509.] After several years of retirement, in the course of which he paid a second visit to Italy, Gervinus was invited in 1844 to become honorary professor of history at Heidelberg, where his lectures on the political state of Europe excited general interest. In the revolution of 1848 he was reckoned amongst the leaders of the constitutional party, and continued its champion for some time after his election to the German Parliament, at Frankfurt-am-Main. His opinions, however, underwent modification in the direction of republicanism; so that when his *'Introduction to the History of the Nineteenth Century'* was published in 1853, it was condemned as treasonable by the government of the Grand Duchy of Baden, and most of the other governments of Germany. On the 24th of February, 1853, he was brought to trial at Mannheim upon an indictment charging him with having published a work directed against constitutional monarchy, with the intention of deposing the lawful head of the State, and of changing and endangering the Constitution, thereby rendering himself amenable to the charge of disturbing public tranquillity and order, and incurring the guilt of high treason. Professor Gervinus, in his defence, said that the charge, apparently directed against himself, was in fact an accusation against history and against Providence, seeing that he was a narrator of facts rather than a propagator of subjective opinions, theories, and speculations. On the 2nd of March he was sentenced to four months' imprisonment, and his work was ordered to be publicly destroyed.

The works of Gervinus include a Survey of the History of the Anglo-Saxons, *'Geschichte der Angelsachsen im Ueberblick,'* 8vo, Frankfurt-am-Main, 1830; On the Correspondence of Goethe, *'Ueber den Goethe'schen Briefwechsel,'* 8vo, Leipzig, 1836; Outlines of History, *'Grundzüge der Historik,'* 8vo, Leipzig, 1837; Historical Writings, *'Historische Schriften,'* 6 vols, 8vo, of which the first volume, published at Frankfurt, 1833, was chiefly remarkable for its article on Machiavelli, and of which the next five volumes, Leipzig, 1835—42, were devoted to a History of German Poetry, *'Geschichte der poetischen Nationalliteratur der Deutschen,'* which has gone through several editions; *'Die Mission der Deutschkatholiken,'* third edition, 8vo, Heidelberg, 1846, of which an English translation, *'The Mission of the German Catholics,'* appeared in the *'Catholic Series,'* 8vo, 1844, &c.; the Protestant Clergy and the German Catholics, *'Die Protestantische Geistlichkeit und die*

Deutschkatholiken,' 8vo, Freiburg, 1846; *Historical Manual of German Poetry, 'Handbuch der Geschichte der poetischen Nationalliteratur der Deutschen,'* 8vo, Leipzig, second edition, 1842, fourth edition, 1849; the Prussian Constitution and the Patent, &c., *'Die Preussische Verfassung und das Patent vom 3 Februar, 1847,'* 8vo, Mannheim, 1847; *'Shakespeare,'* 4 vols. 8vo, Leipzig, 1849—50, third edition, 2 vols. 8vo, Leipzig, 1862, one of the most comprehensive contributions which Germany has supplied to the analytical criticism and intelligence of Shakespeare, which appeared in an English version by F. E. Bunnnett, as *'Shakespeare. Commentaries, &c.,'* 2 vols. 8vo, London and Leipzig, 1863; *'Händel und Shakespeare. Eine Parallele,'* 8vo, Leipzig, 1868; *'Einleitung in die Geschichte des neunzehnten Jahrhunderts,'* 8vo, Leipzig, 1853, which has been already alluded to as having caused the prosecution of the author, and which appeared in English as an *'Introduction to the History of the Nineteenth Century,'* 8vo, London, 1853. The *'Einleitung,'* &c., was professedly intended as "a portion and the commencement of a great work," which was published with the title of *'Geschichte des neunzehnten Jahrhunderts seit den Wiener Verträgen,'* 4 vols. 8vo, Leipzig, 1855—60, French translation, *'Histoire du Dix-Neuvième Siècle depuis les Traités de Vienne,'* by J. F. Minssen, and forming part of the *'Collection d'Historiens Contemporains,'* 8vo, Paris, 1864, &c.

GIB, ADAM, a Scottish divine, and one of the founders of the Secession Church, was born in Perthshire in the year 1713, and educated at the University of Edinburgh. He was strongly opposed to the exercise of private patronage in the church; and on the 2nd of April, 1741, was ordained a minister of the Associated Presbytery, then recently instituted by Mr. Ebenezer Erskine, and settled as pastor over a congregation in the suburbs of Edinburgh. The validity of this step was challenged in an anonymous *'Protestation and Declaration against the Calling, Ordination, and Settlement of Mr. Adam Gib, pretended Preacher, and now installed Incumbent in the Bounds near Edinburgh,'* 12mo, London, 1741. During the rebellion of 1745, Mr. Gib and his followers were conspicuous for their loyalty to the reigning house. The affairs of the Secession Church were in a flourishing condition, and Gib's own congregation had greatly increased, when, in 1747, a schism took place respecting the swearing of the oaths of burgesses. The body was divided upon this question into two parties, called respectively *Burghers* and *Anti-Burghers*; of the latter of which, the more rigid of the two, Gib was henceforth for the rest of his life considered the ablest advocate and leader. A new meeting-house was opened by him on the 4th of November, 1753, in Nicholson Street, where regularly for many years he continued his ministrations to about 2000 persons. His influence with his sect was so great that he was commonly known as *Pope Gib*, a sobriquet by which he was long remembered. When, in 1765, the General Assembly of the Church of Scotland took the subject of the Secession into consideration as a thing that "threatened the peace of the country," Mr. Gib wrote a spirited remonstrance against so injurious an imputation; and in proof of the loyalty of the Secession, drew attention to the known acts of its members in 1745. He died on the 18th of June, 1788, and was buried in the churchyard of Grey Friars, Edinburgh.

His works comprise *'The Present Truth: a Display of the Secession-Testimony in the three Periods of the Rise, State, and Maintenance of that Testimony,'* 2 vols. 8vo, Edinburgh, 1774; *'An Antidote against a new Heresy, concerning the True Sonship of Jesus Christ: a Sermon from John ix. 35, with some Enlargements and explanatory Notes. As also an Appendix: Concerning the wonderful Theory of Animalcular Generation, as lately brought in by a Clergyman of the Church of Scotland, for the proper Ground of the Fundamental Article of the Christian Religion,'* 8vo, Edinburgh, second edition, corrected, 1777, which was an attack upon a work by Dr. William Dalgleish, of Peebles, entitled *'The True Sonship of Christ investigated, and His Person, Dignity, and Offices explained and confirmed from the Sacred Scriptures. By a Clergyman,'* 8vo, London, 1776; and *'Kaina kai Palaia. Sacred Contemplations: In three Parts. (1) A View of the Covenant of Works, &c.; (2) A View of the Covenant of Grace, &c.; (3) A View of the Absolute and Immediate Dependence of all things in God, in a Discourse concerning Liberty and Necessity,'* 8vo, Edinburgh, 1786. The *'Discourse'* was an answer to Lord Kames's Essay on the same subject.

GIBSON, JOHN [E. C. vol. iii. col. 97]. In the above memoir Gibson is said to have been born at Conway in 1790, and this is what Gibson himself states in his Autobiography; but

his birthplace was Gyffin, a few miles distant from Conway, to which town his parents did not remove till some time afterwards. Gibson did little original work after the date to which our memoir was brought down. As late as 1862, however, he modelled a bas-relief of 'Christ blessing Children.' In that year he was enabled to gratify a cherished desire to bring fairly before his countrymen his system of applying colour to marble in sculpture. At the International Exhibition space was assigned to him for the erection of a light quadrangular temple in which, in three of the faces, the most important of his statues treated in this manner, the Venus, the Pandora, and the Cupid, were displayed to the best advantage, the fourth division being occupied by the uncoloured statue of Zenobia by his favourite pupil, Miss Hoeman. The result was not favourable, few converts being made probably from any class of cultivated art-students: but Gibson himself never doubted his success. Of his Venus he wrote, "When all my labour was complete, I often sat down quietly and alone before my work, meditating upon it and consulting my own simple feelings. I endeavoured to keep myself free from self-delusion as to the effect of the colouring. I said to myself, 'Here is a little nearer approach to life—it is therefore more impressive—yes, yes, indeed, she seems an ethereal being, with her blue eyes fixed upon me!' At moments I forgot that I was gazing at my own production; there I sat before her long and often." (Life, p. 211.) Rome continued to be Gibson's ordinary abode, but for some years before his death his summers were spent in Switzerland. Early in January, 1866, he was seized with paralysis. He died on the 27th of that month, and was interred in the English cemetery at Rome. By his will he bequeathed his works in marble not sold at the time of his death, and the models of his other works, to the Royal Academy on condition that space be provided so that they may be seen by the public on exhibition days.

(*Life of John Gibson, R.A.* Edited by Lady Eastlake, 8vo, London, 1870.)

* GIEBEL, CHRISTOPH GOTTFRIED, zoologist, was born at Quedlinburg, in Prussian Saxony, Sept. 13, 1820. He studied at Halle, and there became acquainted with Burmeister and Germar. In 1845 he acquired his doctorate, and then commenced delivering lectures in the Halle University, which were attended by large numbers of students. His lectures embraced a wide range of subjects. First they were on palæontology, geognosy, and mineralogy; next on zoology, and later still on comparative anatomy and general natural history. In 1868 he was appointed extraordinary, and in 1861, ordinary professor of zoology, to which last was added the directorship of the University Museum. His contributions to literature have been numerous and important, and are partly popular, partly scientific in their character. Amongst his separate works may be noticed his 'Palæozoologie,' 8vo, Merseburg, 1846; 'Gaea excursoria germanica,' 8vo, Leipzig, 1848; 'Deutschlands Petrefacten,' 8vo, Leipzig, 1852; 'Odontographie,' 4to, Leipzig, 1855; 'Die Säugethiere in zoologischen, anatomischen und paläontologischen Beziehung,' 8vo, Leipzig, 1855; 'Tagesfragen aus der Naturgeschichte,' 8vo, Berlin, 1857; 'Lehrbuch der Zoologie,' 8vo, Darmstadt, 1857, second edition, 1866; 'Die drei Reiche der Natur,' 4to, Leipzig, 1859; 'Die nützlichen Vögel unserer Aecker, Wiesen, Gärten und Wälder,' 8vo, Berlin, 1868; and 'Der Mensch,' 8vo, Leipzig, 1868. His papers are upwards of 120 in number, and have been contributed chiefly to Leonhard and Bronn's 'Neues Jahrbuch für Mineralogie, &c.,' and to the 'Zeitschrift für die gesammten Naturwissenschaften,' of which last periodical he is one of the editors. These papers are for the most part anatomical or palæontological, and relate to most of the classes of animals. The most important are those which deal with the osteology of the vertebrates.

GIESELER, JOHANN KARL LUDWIG, a divine and church historian, was born at Petershagen, near Minden, on the 3rd of March, 1792. He studied theology at the University of Halle; and in 1813 bore arms in the service of his country. He resumed his peaceful avocations in 1815, and in 1817 became conrector of the gymnasium at Minden, a position which he exchanged in the following year for that of Director of the newly established gymnasium of Cleves. In 1819 he took his degree of D.D., and was appointed professor of theology at Bonn, where he lectured on biblical exegesis, archaeology, and church history. In 1831 he became ordinary professor of theology at Göttingen, where he died on the 8th of July, 1854. Dr. Gieseler was known for his benevolent sympathy with the struggling poor, and as a prominent member of the Society of Freemasons. In 1837 he was appointed a consistorial counsellor,

and was afterwards admitted a Knight of the Guelphic Order. His works comprise a Critical and Historical Essay upon the Origin and Earliest Fortunes of the Written Gospels, 'Historisch-kritischer Versuch über die Entstehung und die frühern Schicksale der schriftlichen Evangelien,' 8vo, Leipzig, 1818; Observations on the Diet of Augsburg, in 1530, 'Etwas über den Reichstag zu Augsburg,' &c., 8vo, Hamm, 1821; Two Lectures on Ecclesiastical Subjects, &c., 'Zwei Abhandlungen über kirkliche Gegenstände,' 8vo, Bonn, 1824; and 'Lehrbuch der Kirchengeschichte,' 6 vols. 8vo, of which the first part was published at Darmstadt, and the rest of the work, in its various editions, at Bonn, between the years 1824 and 1857, the later ones, which were of posthumous issue, being edited by E. R. Redepenning. An English version by F. Cunningham of this very learned and impartial work was published in America with the title of a 'Text Book of Ecclesiastical History.' Translated from the third German Edition, 3 vols. 8vo, Philadelphia, 1836; and another, from the fourth German edition, "revised and amended," forms part of 'Clark's Foreign Theological Library,' and is entitled 'A Compendium of Ecclesiastical History,' &c., 5 vols. 8vo, Edinburgh, 1846—1855, of which the first two volumes were translated by Dr. Samuel Davidson, and the other three by the Rev. John Winstanley Hull.

GILBERT, SIR HUMPHREY, a distinguished soldier and navigator, was born at Dartmouth in 1539. He belonged to an ancient Devonshire family; his mother, when a widow, married Mr. Walter Raleigh, and became the mother of the famous Sir Walter Raleigh. After studying at Eton and Oxford, Gilbert was introduced at court by his aunt, Mrs. Catherine Ashley, one of Queen Elizabeth's ladies. This led to his entering the military service. In 1563 he went to Ireland to aid in suppressing a rebellion incited by Fitzmorris; for his services he was knighted, and made governor of Munster. In 1572 he sailed with nine ships to take part in Colonel Morgan's expedition for the recapture of Flushing. Much attention was drawn to a pamphlet published by him in 1576, under the title 'Discourse to prove a Passage by the North-West to Cathaia and the East Indies.' The favour into which he was brought by this work (a well-written production, evincing a considerable amount of geographical knowledge) procured for him in 1578 a patent from the queen for the discovery and ownership of any lands in the New World up to that time undiscovered. In his first voyage he was accompanied by his half-brother, Sir Walter Raleigh, who contributed largely towards the expenses. It was, however, unsuccessful; but he again set out with a better-appointed expedition in 1583, landed at Newfoundland, took possession of St. John's Harbour, and virtually established the first English settlement on American soil. His career was, however, lamentably cut short. On the 20th of August, the largest of his three ships having been lost off Cape Breton, he put to sea again in a small sloop or frigate, the Squirrel, to explore the coast, and then steered homeward in very tempestuous weather. On the 9th of September he was seen by the crew of the Golden Hind, the companion vessel, in the stern of the sloop, with a book in his hand, and called to them, "Courage, my lads! we are as near heaven at sea as at land." At midnight a raging sea swallowed up the Squirrel and all on board.

GIOLFINO, NICCOLO, called URSINO by Vasari, one of the best painters of the Veronese school, was born at Verona about 1465. His pictures range in date from 1486 to 1518; the year of his death is uncertain. Several of the churches of Verona were adorned with frescoes by him; the finest which remain are those in Santa Maria in Organo. He also decorated the fronts of several houses in Verona with frescoes. He painted the lower part of his own house by the Porta de' Borsari in this manner, his friend Mantegna painting the upper part. Giolfino's oil paintings are rarer than his frescoes. One of the best, a 'Virgin Enthroned,' is in the Berlin Museum. Our National Gallery possesses a series of portraits of the Giusti family (No. 749), formerly the predella of an altar. With more of archaism than some of his contemporaries, Giolfino's figures display much nobleness of character with tenderness of expression, and he was a good colourist. Paolo Farinato was his pupil.

GIOVANELLI, RUGGIERO, Italian composer, was born at Velletri, about the year 1560. He was Maestro di Cappella in the French chapel of St. Louis, at Rome, and afterwards in the church of the German college. In 1595 he succeeded Palestrina in a similar post at St. Peter's; and in 1599 was member of the College of Choristers at the Sistine chapel. Giovanelli was one of the best composers of the Roman school in that age, both in ecclesiastical and secular music. He devoted seven years to correcting and improving the *Gradual* (the

portion of the mass which intervenes between the Epistle and Gospel, used in the Pontifical chapel; the work was published in two large folio volumes, 1614 and 1615; the first volume comprising the 'Graduale de tempore,' and the second the 'Graduale de sanctis.' He published a considerable number of well harmonized madrigals and canzonets for all combinations of voices, from one to eight. The archives of the Vatican and the Sistine Chapel contain numerous MS. masses, motetts, and psalms of his, which have not been published. The year of his death is uncertain: he was living in 1615.

*GIRARD, CHARLES, zoologist, was born at Mülhausen in 1822. He received his education at Neufchâtel from Agassiz, whose assistant he subsequently became, and as such he contributed largely to the 'Nomenclator Zoologicus,' and the 'Bibliographia Zoologica et Palæontologica.' When Agassiz went to America, Girard was his companion, and he continued to help him until 1850, when he went to Washington. He has contributed accounts of the reptiles and fishes to a large proportion of the reports of exploring expeditions sent out by the United States government, amongst others to those of Stansbury to the Great Salt Lake of Utah, of Sitgreave to the Colorado River, of Marcy to the Red River of Louisiana, of Gillies to Chile, of the commission for determining the boundary between the United States and Mexico, of the commission for surveying the line of the Pacific railroad, and of Wilkes round the world. He has also written numerous scientific papers. One group relates to the *Planaria*, another to the fishes and reptiles of the United States, and a third to miscellaneous subjects. Most of these are published in the 'Proceedings of the Academy of Natural Science at Philadelphia' for the years from 1852 onwards. In the 'Smithsonian Contributions' for 1852 he has 'Contributions to the Natural History of the Freshwater Fishes of North America,' and in the 'Smithsonian Miscellaneous Collections' for 1862 he and F. S. Baird contributed a 'Catalogue of the North American Reptiles in the Museum of the Smithsonian Institution.'

*GIRARDIN, JEAN PIERRE LOUIS, chemist, was born at Paris, Nov. 16, 1803. In 1825 he entered the College de France, and joined Thenard's laboratory class. At Thenard's recommendation he was made professor of applied chemistry at Rouen in 1828, and subsequently filled temporarily various other professorial posts in the same town. He was very active in promoting the knowledge of agricultural chemistry, for which purpose he gave lectures to the farm labourers, and induced the authorities to found an agricultural school. In 1858 he went to Lille, where he was made Dean of the Faculty, and afterwards rector of the academy at Clermont. He is a member of numerous societies, and an officer of the Legion of Honour. He has been a busy writer. His lectures to workmen were issued under the title of 'Leçons de chimie élémentaire,' and went through many editions, the fourth being published at Paris in 2 vols. 8vo, 1860. It was translated into Russian, and owing to the immense stimulus it had given to chemical industry in that kingdom, the Czar honoured him with a gold medal and a casket of diamonds. He also wrote 'Mémoires de chimie appliquée,' 8vo, 1839; 'Des fumiers considérés comme engrais,' 18mo, 1847; 'Traité élémentaire d'agriculture,' 2 vols. 18mo; and numerous others, chiefly intended for general circulation. He has contributed numerous papers to the scientific journals, on volcanoes, artesian wells and water, springs, madder, various pathological products, analyses of ancient works of art, guano and manures, on fossilised bones, and on various substances employed in the arts.

GIRTIN, THOMAS, one of the greatest of our early landscape painters in water colours, was born in February, 1775. He was apprenticed to Edward Dayes, but, according to a book of questionable authority (Thornbury's 'Life of Turner,' vol. i. p. 103), quarrelling with him, and refusing to complete his term of servitude, he was prosecuted, and committed to the City Bridewell. There he was visited by the Earl of Essex, who was so struck by his talent that "he bought up the indentures, and burning them before Girtin's eyes, obtained his release, and took him down to the almost regal luxury of Cashiobury, where Girtin, free and happy, produced some of his greatest works." The last part of the story, at least, is apocryphal: Girtin had to wait and work much longer before he produced his greatest works. His greatness dates from his association with Turner, which certainly occurred later. The young men seem to have been for a time almost inseparable. They studied together; copied the earlier painters together of an evening at Dr. Monro's; sketched together the picturesque old buildings and scenery around London, and helped to form each other's style. Girtin's

progress was wonderfully rapid, and being fond of trying experiments in colour and modes of working, he struck out for himself a bolder and more powerful style than had yet been seen in water-colour painting, Turner readily adopting and working out his processes. To their combined efforts are to be ascribed the origin of the practice of painting directly in local colours instead of working with local colours over a gray or neutral basis. This practice so entirely changed the character and extended the range of the art that its inventors are fairly entitled to be ranked as the founders of the modern or English school of painting in water colours. Turner, who always spoke of him with respect, is said to have declared that Girtin's pictures were superior to his own. This could, however, have applied only to their very early works. In the 'Rivers of England,' now lying before us, and in the drawings made during the later years of Girtin's life, there can be no question as to the wider range, brilliancy, and artistic power of Turner's works. Girtin's drawings display much grandeur of effect, fine feeling, depth, richness, and sweetness of colour, but the neglect of detail is pushed too far; they are often inaccurate in drawing, and as a whole monotonous in character. Like Turner, he made many drawings for engraving. They were associated in the 'Rivers of England,' just referred to, and Girtin drew and etched the outlines of a series of 20 'Views in Paris,' as well as several for Miller's 'Picturesque Views of English Scenery.' His name appears among the exhibitors at the Royal Academy nearly every year from 1794 to 1801, inclusive. He is also said to have painted a panoramic view of London. But much as he accomplished, his genius had not fair play. He led a careless and reckless life, "trifled away a vigorous constitution," and "died, November the 9th, 1802, after a long illness, in the 28th year of his age."—(Dayes, 'Sketches of Modern Artists,' 4to, 1805, p. 329.) The British Museum possesses several of Girtin's drawings, and in the Ellison Collection at South Kensington are two, No. 380, 'A View on the Wharfe,' and No. 499, 'Rievaulx Abbey, Yorkshire.'

GISBORNE, LIONEL, civil and telegraphic engineer, was born at St. Petersburg, in 1823, his father being at the time British Consul-General in that city. His education was partly obtained at St. Petersburg, and partly in Derbyshire; but he afterwards went to Geneva to study foreign languages, and subsequently acquired a considerable knowledge of mathematics and physical science at Durham University. Selecting the profession of civil engineer, he obtained employment in 1842, in the Government service in Ireland, as engineer under the Works Department. He was much employed in deepening the river Shannon, and in constructing bridges, weirs, locks, wharves, &c. Later he conducted extensive drainage operations in various parts of Ireland, and took an active part in the relief measures during the famine of 1847. In 1852, under instructions from Sir Charles Fox, he went out to Panama, to survey the Isthmus of Darien for a ship canal, which had been pronounced practicable by Dr. Cullen. His investigations on this occasion, and again in 1854, when he was entrusted with powers by the Governments of England, France, the United States, and Granada, led him to a conviction that a ship canal in that region would be too arduous and uncertain an enterprise to be recommended. He contributed a 'Summary of the Report on the Survey of the Isthmus of Darien' to the Journal of the Geographical Society for 1857. In 1855 he organised for the East India Company a staff of civil engineers for executing public works, which became the nucleus of the present Public Works Department of India. Mr. Gisborne was one of the engineers who brought forward schemes for the embankment of the Thames; and he afterwards reported to the Swiss, Swedish, Russian, and Italian governments, concerning systems of railways for those countries. The operations, however, with which his name is chiefly associated are those relating to submarine telegraphy. He obtained a concession from the Turkish Government for an electric Cable from the Dardanelles to Alexandria; and subsequently a concession for a land telegraph through Egypt, from Alexandria to Suez. Under contract with the governments of England and India, he, or a company formed by him, submerged a cable from Suez, down the Red Sea to Aden, and another along the northern part of the Indian Ocean to Kurrachee: these two cables, 3,000 miles together, were laid down in 1859–60. His next undertakings were a telegraphic cable from Malta to Alexandria, for the English government, and one from France to Algiers, for the French government. He also prepared plans for cables from Rangoon and Singapore to Batavia and Australia; but he was cut off before the schemes were accepted. Mr. Gisborne's cables have mostly failed in steady working, and have entailed much

loss on the respective governments, owing to defects which experience had not at that time made manifest; but he nevertheless rendered great service, in affording other engineers data from which they could introduce improvements. He died at the early age of 38, on the 8th of January, 1861.

GIUSTI, GIUSEPPE, an Italian poet and satirist, whose verses contributed to the realisation of the unity of his country, was born on the 13th of May, 1809, at Monsummano, a small town of the Val di Nievole, in the Apennines, and, after receiving a preparatory education of a somewhat desultory kind, entered, in 1826, the University of Pisa, for the study of jurisprudence. In spite of an almost systematic neglect of this subject, and of a three years' intermission of his university residence, he succeeded in passing his examination in June, 1834, after which he repaired to Florence in order to commence his professional career; but gave himself up, as ever throughout his life, chiefly to literary associations. He now composed a series of minor poems, which, though laid aside by himself, were published after his death amongst his youthful productions. The death of the Emperor Francis of Austria, in 1835, called forth the first of Giusti's satires, the 'Dies Iræ,' which attracted public notice; and from this time he continued to produce various satirical poems, which, although unpublished, passed from hand to hand, and from mouth to mouth, even amongst the people of remote villages, who appreciated the sternness and vigour of the denunciations of political and ecclesiastical tyranny on the part of an author, who, without attaching himself to any political party, was a republican by sentiment and conviction. Amongst the more remarkable of his poems may be mentioned *The Boot*, 'Lo Stivale,' a description of Italy, in which the 'Boot' gives a sketch of its own history; 'San Giovanni,' or an Address to the Coin of Florence; the Apology for the Lottery, 'Apologia del Lotto;' and the 'Incoronazione,' written on the occasion of the coronation of the Emperor Ferdinand as King of Lombardy, September 6th, 1838. In February, 1844, he undertook a journey, for the sake of his health, to Rome and Naples, on his return from which, with but slight improvement, he visited Leghorn for the benefit of the sea air; and having heard that an inaccurate edition of his verses had been piratically published, he issued a collection of his more serious compositions, with the title of 'Versi,' 8vo, Leghorn, 1844, which was followed by 'Nuovi Versi,' 12mo, Florence, 1847; 16mo, Venice, 1848. He shortly afterwards broke the enforced silence of two years, by the production of his most celebrated poem, called *The Busybody*, 'Il Gingillino,' which he dedicated to the poet Alessandro Poerio, and which was intended, as the author informed the Marchesa Luisa d'Azeglio, to "express all the baseness, all the contumely, of those who seek to rise to offices in the state by dirty and mean conduct." Frassi, one of the biographers of Giusti, characterises this poem as "one of those which will be read, perhaps, when Italian, like Latin, will no longer be a spoken language." For the remainder of his life Giusti was a valetudinarian, and during the visits which he paid to various places for the restoration of his health, he occupied himself with making a collection of proverbs, which was published after his death, with the title of 'Raccolta di Proverbi Toscani,' &c., 12mo, Florence, 1853. A notice of the life of Parini, upon which Giusti was engaged between 1846 and 1850, and which he left incomplete, was afterwards published amongst his inedited works. He died on the 31st of March, 1850, at the palace of his friend, the Marchese Gino Capponi, at Florence. His works, whether in part or collectively, have appeared as 'Poesie Diverse,' &c., 12mo, London, 1833; 'Galleria Poetica,' 8vo, London, 1836; 'Il Congresso de' Birri, Ditirambo,' 8vo, Florence, 1847; 'Poesie,' &c., 12mo, Lugano, 1847; 'Congiuria delle Spie,' folio, Genoa, 1848; 'I Carlierari fallii,' folio, Genoa, 1848; 'Poesie, Edizione Completa,' 16mo, Venice, 1848; ultima edizione, ampliata, 12mo, Bastia, 1850; 'Versi editi ed inediti. Edizione postuma,' &c., 8vo, Florence, 1852; 'Epistolario di Giuseppe Giusti: ordinato da G. Frassi e preceduto dalla Vita dell' Autore,' 2 vols. 8vo, Florence, 1859; 'Scritti vari in prosa e in verso. Pubblicati per cura di A. Gotti,' 12mo, Florence, 1863; 'Le Lettere scelte di Giuseppe Giusti, postillate per uso de' non Toscani da G. Rigutini,' 12mo, Florence, 1864; and 'Nuova Raccolta di Scritti inediti di Giuseppe Giusti, pubblicati per cura di P. Papini,' 8vo, Florence, 1867. Giusti has been the subject of several biographies, amongst the most complete of which may be mentioned an English one, entitled 'The Tuscan Poet Giuseppe Giusti and his Times,' by Susan Horner, 8vo, London and Cambridge, 1864.

GIUSTINIANI, AGOSTINO (Justiniani Augustin); an
BIOG. DIV.—SUP.

Italian prelate, orientalist, and historian, was born in 1470, at Genoa, and at the age of fourteen entered a convent of Dominicans in his native city, and became a member of the order, at Padua, in 1488, when he substituted the name of Agostino for his secular name of Pantaleon. He devoted himself with much ardour to the study of oriental languages, which he taught in various seminaries of his order. In 1514, he was made bishop of Nebbio, in Corsica; and two or three years afterwards repaired to France, on the invitation of Francis I., who awarded him a pension, and appointed him the first professor of Hebrew in the University of Paris. After a five years' absence, during which he visited England and the Low Countries, Giustiniani returned, in 1522, to his diocese, to the administration of which he confined himself until 1531, when affairs of moment caused him to repair successively to Genoa and to Rome. He died in 1536, perishing in the wreck of a vessel on board of which he had embarked to make the passage from Genoa to Corsica. The most considerable of his works are his 'Psalterium Hebræum, Græcum, Arabicum, et Chaldæum, cum tribus Latinis Interpretationibus et Glossis,' folio, Genoa, 1516, which was the first Polyglot Psalter that had appeared in print, and which was intended to be a prelude to a similar edition of the whole Bible; 'Castigatissimi Annali, con la loro copiosa Tavola della Repubblica di Genoa, da fedeli ed approvati Scrittori accuratamente raccolti,' &c., folio, Genoa, 1537, a work of posthumous publication, of which an edition "corretti ed illustrati," was issued in 2 vols., 8vo, Genoa, 1834—35; 'Liber Job nuper Hebraicæ Veritatis restitutus,' 4to, Paris, 1516 or 1520; an edition of 'Victoria Porcheti adversus impios Hebræos, in qua tum ex sacris Literis, tum ex dictis Talmud, ac Caballistarum, et aliorum omnium Authorum quos Hebræi recipiunt, monstratur Veritas catholica Fidei,' &c., folio, Paris, 1520; and various translations.

* GLADSTONE, RIGHT HON. WILLIAM EWART, M.P., P.C., D.C.L., LL.D., &c. [E. C., vol. iii. col. 116.] The second administration of the late Lord Derby, which was formed on the 25th of February, 1858, included his son, the present earl, as Secretary of State for the Colonies; but Lord Stanley's office, upon his appointment to the secretaryship of state for India, was conferred upon Sir Edward Bulwer Lytton (now Lord Lytton), after having been declined by Mr. Gladstone, who, however, shortly afterwards accepted the office of "Her Majesty's High Commissioner Extraordinary to the United States of the Ionian Islands," to which he was gazetted on the 9th of November, 1858. It was greatly owing to his representations that these islands were ceded to Greece, a few months after the election of Prince George of Denmark to the throne left vacant by the abdication of King Otho, the treaty by which the Queen renounced her protectorate being executed in London on the 14th of November, 1863.

The Reform Bill of the Conservative administration was rejected on the 31st of March, 1859; and, an appeal being made to the country, the new Parliament, to which Mr. Gladstone was re-elected, not without agitation, as member for the University of Oxford, assembled on the 31st of May. When, on the 11th of June, a vote of want of confidence was adopted by the House of Commons, Lord Derby and his colleagues at once resigned, and were succeeded by the cabinet of Lord Palmerston, in which Mr. Gladstone resumed his former position as Chancellor of the Exchequer. The annual expositions of his financial policy during a period of seven years, were constantly looked for with interest, and generally admired for their eloquent lucidity. They have for the most part been separately published, and were issued collectively as 'The Financial Statements of 1853, 60—63. To which are added, a Speech on Tax Bills, 1861, and on Charities, 1863,' 8vo, London, 1863. The 'Financial Statements,' 8vo, London, of 1864 and 1865, followed in the respective years of their delivery. Of all the budgets introduced by Mr. Gladstone, the most memorable is perhaps that of the 10th of February, 1860, on account of its intimate associations with the French Commercial Treaty, which had just been contracted by Mr. Cobden, and the daring abolition of upwards of three hundred customs duties. Mr. Gladstone's address on this occasion was published as the 'Speech of the Chancellor of the Exchequer on the Finance of the year, and the Treaty of Commerce with France, delivered in the House of Commons, on Friday, February 10th, 1860,' 8vo, London, 1860. The Budget of 1861 was chiefly remarkable for the success with which, against a strong opposition, it incorporated the repeal of the Paper Duty, a measure which had been included in the budget of the previous year, and then lost through the antagonism of the Lords. The Financial Statement of 1862 was modified,

and almost formed, by the outbreak of the civil war in America, and left taxation nearly undisturbed. Amongst the minor measures of some importance, however, it contained the substitution of a fixed tax of threepence on each barrel of beer, for the precarious and irritating hop duty. In the course of this session there arose an animated discussion on the condition of the new kingdom of Italy, in which Sir George Bowyer, by the highly laudatory terms in which he spoke of the temporal government of the Pope, provoked from Mr. Gladstone a powerful and uncompromising reply, denouncing at once the impolicy and injustice of its continuance. In 1863 there was a considerable surplus, and Mr. Gladstone was in consequence enabled to satisfy the general expectation of a reduction in the tea duty and the income tax. The reception of the Budget was extremely favourable, and the financial measures of the Chancellor came to be recognised as a chief element of strength and stability of the Palmerston administration.

But the cares of office did not exhaust Mr. Gladstone's activity. In November, 1859, he was elected Lord Rector of the University of Edinburgh; and at the close of the session paid a visit to that city for the purpose of meeting his academic constituents, before whom he pronounced an address, which was immediately published, with the title of an 'Inaugural Address delivered before the University of Edinburgh, April 16, 1860,' 8vo, London, 1860. He was re-elected to the rectorship in 1862, and at the end of his second term of office, delivered, on the 3rd of November, 1865, an address on 'The Place of Ancient Greece in the Providential Order of the World,' 8vo, London and Edinburgh, 1865. In 1862 he delivered addresses, which were afterwards published, respectively to the Mechanics' Institute at Leeds, to the Association of the Lancashire and Cheshire Mechanics' Institutes, at Manchester, and to the Manchester Chamber of Commerce; and in November, 1863, delivered at Burslem, in Staffordshire, an address on 'Wedgwood,' 8vo, London, 1863. He also assisted in the production of a volume entitled 'Translations by Lord Lyttelton and the Right Hon. W. E. Gladstone,' 8vo, London, 1861, second edition, 4to, London, 1863, in which Lord Lyttelton turned various passages from English poets into Greek and Latin verse, whilst Mr. Gladstone gave English translations from the Greek, Latin, Italian and German, and Latin ones from the English of Milton, Toplady, and Heber. His 'Studies on Homer and the Homeric Age,' 3 vols. 8vo, Oxford, 1858, published just before his mission to the Ionian Islands, were rendered into German by Dr. Albert Schuster, Conrector of the Claustral Gymnasium as 'W. E. Gladstone's Homerische Studien frei bearbeitet, &c. Mit zwei Karten,' 8vo, Leipzig, 1863. In 1865, Mr. Gladstone was named a member of the Institute of France.

Before the general election of the last-named year, he had exhibited certain signs of willingness to take into consideration the alleged abuses of the Irish Church Establishment, and the University of Oxford refused to re-elect him. At the close of a five days' poll, Mr. Gathorne Hardy, who had been put up to oppose him, was returned by a majority of 180. Mr. Gladstone, who thus experienced the severance of a connection which had lasted for eighteen years, was thereupon returned for South Lancashire, a constituency for which he had already been nominated on the 17th of July, before the result of his Oxford candidature was ascertained. The literary result of the canvass of his new constituency was a volume of 'Speeches and Addresses delivered [July 18th to 22nd] at the election of 1865,' 8vo, London, 1865, at Manchester, Liverpool, and Newton, which were characterised at the time as being incomparably the most wonderful body of oratory ever composed and delivered by a statesman within so short a period.

Lord Palmerston died on the 18th October, 1865, and was succeeded in the Premiership by Lord Russell; but Mr. Gladstone, who now for the first time assumed the leadership of the House of Commons, was the real inspiring mind of the reconstituted cabinet. On the 12th of March, 1866, he introduced his "Franchise Bill," and the existence of the Government was staked upon the issue. "We have crossed the Rubicon," said Mr. Gladstone, "and burned our boats." The ministers were beaten, however, and, in fulfilment of their pledge, resigned in June, 1866; retaining, to quote again the words of Mr. Gladstone, "in the hour of defeat the presentiment of victory." His 'Speeches on Parliamentary Reform in 1866. With an Appendix,' 8vo, London, 1866, freely expressed his sense of the rights and the claims of the working people of England to be admitted within the precincts of the constitution.

Lord Derby resumed office on the 6th of July, 1866; and on

the 5th of February, 1867, Mr. Gladstone spoke in support of the address in answer to the Royal Speech, which recommended a "free extension of the elective franchise." During the debates that ensued on the Reform Bill of Mr. Disraeli, Mr. Gladstone endeavoured, by moving a series of amendments—in the course of which he experienced the defection of several of his party, of which he was for a time on the point of vacating the formal leadership—and by other action, to impart thoroughness to the measure; and when it at length became law, his beneficial influence upon its ultimate form was gratefully recognised.

His opposition during the session of 1868 was characterised mainly by the resolutions which he moved, March 23rd, for the disestablishment of the Irish Church; for the prevention of the creation of new personal interests by the exercise of any public patronage; and for the presentation of an address to the Queen praying Her Majesty to place at the disposal of Parliament her interest in the temporalities of the ecclesiastical dignities and benefices of Ireland. In May, the Queen gave her assent to the prayer of this petition; and Mr. Gladstone forthwith brought in a bill incorporating the resolutions. This was met by Lord Stanley's introduction of an amendment, the purport of which was to leave the whole matter open to the consideration of a new Parliament. An appeal was accordingly made to the country, and Mr. Gladstone, having been defeated in his candidature for South Lancashire, formally accepted, November 25th, the representation of Greenwich, which had been kept open for his conditional occupancy. Two days before the date of his letter to his new constituents, he had published 'A Chapter of Autobiography,' 8vo, London, 1868, in which, as the former author of 'The State in its Relations with the Church,' he apologised for the position he had assumed as the antagonist of the Irish Establishment. He professed (1) "that the great and glaring change in his course of action with respect to the established Church of Ireland was not the mere eccentricity, or even perversion, of an individual mind, but connected itself with silent changes, which were advancing in the very bed and basis of modern society; and (2) that the progress of a great cause, signal as it had been and was, appeared liable nevertheless to suffer in point of credit, if not of energy and rapidity, for the real or supposed delinquencies of a person, with whose name for the moment it happened to be specially associated." The 'Chapter of Autobiography' produced some discussion in the shape of 'Commentaries,' 'Thoughts,' &c., and 'Replies.' The critical situation of the cabinet of Mr. Disraeli, who had succeeded to the Premiership on the retirement of Lord Derby, in February, 1868, culminated in its resignation on the 1st of December, when Mr. Disraeli recommended to the Queen the appointment of Mr. Gladstone as his successor, who, a few days afterwards, undertook the formation of a new administration. The great measure of the session of 1869 was the passing of the Bill for the disestablishment and disendowment of the Irish Church, the debate on which was opened with an elaborate speech by Mr. Gladstone, on the 1st of March, and which, having successfully passed the third reading in the House of Commons, was finally carried, in spite of the opposition of the Peers. On the 15th of February, 1870, Mr. Gladstone proceeded to address himself to the conduct of the Irish Land Bill, which provided for the compensation of tenants for improvements and for disturbance of occupancy, extending to the whole of Ireland the customary tenant right of the province of Ulster. Another popular measure, for regulating admission to every department of the Civil Service, and for throwing open Government appointments to "unlimited competition," was affirmed, June 4th, by an Order in Council.

Since the breaking out of the war between France and Germany, it is understood that Mr. Gladstone has been watching for opportunities of successful mediation in the interests of peace; but when pressed upon the point by a deputation of working men, September 27th, he declined to recognise formally, whilst negotiating with it provisionally, the Republican Government of France. He could not, he said, anticipate the action of France herself in this matter; it would be time enough to recognise the Republic in that country when it had been legally constituted.

It may be mentioned that Mr. Gladstone has lately published 'Ecce Homo,' 8vo, London and Edinburgh, 1869, a series of articles on the celebrated book of the same title, which had their first appearance in 'Good Words'; 'The Irish Church: a Speech delivered in the House of Commons, March 1st, 1869,' 8vo, London, third edition, 1869; and 'Juventus Mundi. The Gods and Men of the Heroic Age,' 8vo, London and Oxford, 1869.

GLEIM, JOHANN WILHELM LUDWIG, a German song writer, was born April 2nd, 1719, at Ermsleben, in Halberstadt. On the completion of his education at Halle he served for a while as private tutor, and afterwards as secretary, first to Prince Wilhelm of Brandenburg, and, on his death, in 1744, to Marshal Dessauer. Finding Dessauer's rough temper unbearable, Gleim went to Berlin, and supported himself by literature, but was called in 1747 to Halberstadt to act as secretary to the chapter of the cathedral, an office he retained till his death, which occurred on the 18th of February, 1803. Whilst with Prince Wilhelm, Gleim had formed a close friendship with Kleist, who powerfully stimulated his taste for poetry. The first fruits of his muse appeared in a series of playful ballads, 'Versuch in scherzhaften Liedern,' Berlin, 1744—45, which became at once exceedingly popular, and secured for him the title of the German Anacreon. Serious songs, 'Lieder ernster Art;' romances, 'Romanzen;' and fables, 'Fabeln,' followed and strengthened his popularity. He was now brought into connection with all the leading literary men of Germany, and his house at Halberstadt became the centre of a circle of worshippers, over whom Father Gleim, as he was generally called, reigned supreme arbiter of taste. Gleim's permanent fame rests, however, on his war songs, 'Kriegslieder,' Berlin, 1778, the intense nationality and bitter anti-Gallican spirit of which have given them a new spring of popularity since the outbreak of the present war with France. Gleim was an ardent apostle of German unity, and his songs for the people, 'Lieder für das Volk,' and poems for the time, 'Zeitgedichte,' Berlin, 1789—1803, as well as his war songs, did much to extend and deepen the feeling among his countrymen. His 'Halladat, oder das rothe Buch,' Halberstadt, 1774, is a religious poem which has found comparatively few readers. His Songs and Fables for Children was a posthumous publication, 'Fabeln und Erzählungen, goldene Sprüche und Lieder für Kinder,' Halberstadt, 1810. His collected works were published at Halberstadt in 7 vols. 1811—13, and have been since several times reprinted in various places. A memoir of him, by W. Körte appeared about the same time, 'Gleim's Leben aus seinen Briefen und Schriften,' Halberstadt, 1811.

GLIDDON, GEORGE ROBERTS, a well-known writer on subjects connected with Egypt, was born in Devonshire in 1809. His father was a merchant in Alexandria, and thither he went to join him when still very young. He himself subsequently became a vice-consul at Cairo. After having resided about twenty-three years in Egypt, he went to the United States, and lectured on Egyptian subjects. During the latter part of his life he was agent for the Honduras Inter-Oceanic Railway Company. He died at Panama, November 16, 1857. With Nott and other writers he wrote 'Types of Mankind,' 4to, Philadelphia, 1854; and 'Indigenous Races of the Earth,' 8vo, Philadelphia, 1857. We also have from him 'Discourses on Egyptian Archaeology,' 8vo, London, 1841; 'Otia Egyptiaca,' 8vo, London, 1849; and 'Ancient Egypt,' 4to, London, 1850; 2nd edit., 1853.

GLINKA, SERGY NIKOLAEVICH [E. C. vol. iii. col. 123] died at Moscow, in 1847. Of the death of his brother, THEODOR NIKOLAEVICH GLINKA, we find no definite account, though he is referred to as deceased.

*GLOCKER, ERNST FRIEDRICH, mineralogist, was born May 1, 1793, at Stuttgart. During his earlier career he studied theology at Tübingen, and entered the Church, practising as the clergyman at Aalen for several months. Owing, however, to his desire for natural history pursuits, he relinquished his ecclesiastical appointments, and attended at Halle, Berlin, and Breslau for the purpose of studying botany and mineralogy. At the last-mentioned place he was appointed professor of mineralogy in the University, and keeper of the collection of minerals. One principal feature of his writings is, that they illustrate the geology and mineralogy of Silesia and Moravia. Amongst the more noteworthy are 'Grundriss der Mineralogie,' 8vo, Breslau, 1821; 'Geognostische Beschreibung der preussischen Oberlausitz theilweise mit Berücksichtigung der Sächsischen Antheile,' 8vo, 1857; 'Beiträge zur mineralogischen Kenntniss der Sudetenländer insbesondere Schlesiens,' 8vo, 1827; 'Mineralogische Jahreshefte,' 8vo, 2 vols., 1835—1843; 'Handbuch der Mineralogie,' 8vo, Nürnberg, 1831; 'Versuch einer Charakteristik der Schlesisch-mineralogischen Literatur,' 2 vols. 4to, Breslau, 1827—1832; 'Generum et Specierum Mineralium, etc.,' 8vo, Halle, 1847. His scientific papers in the Royal Society's 'Catalogue of Scientific Papers' number sixty.

GLYNN, JOSEPH, civil and mechanical engineer, was born at Newcastle-on-Tyne, February 6, 1799; his father was an iron-

founder, and also a shipowner. Making many voyages to sea in early life, young Glynn obtained a knowledge of ships which was afterwards useful to him. When just of age, in 1820, he commenced business as a mechanical engineer, constructing steam engines; and a new gas-work, which became a model work, followed afterwards. He next became engineer to the Butterley Iron Works, Derbyshire, where for twenty-five years he had the chief management in the construction of the numerous steam-engines, locomotives, marine engines, mining engines and machinery, steam dredges, iron roofs, mills, &c., for which that company has so high a repute. He executed large works at Sheerness dockyard, made the iron dam used during the building of New London Bridge, sent out a completely-fitted iron-work to Spain, and drained many thousand acres of fen land by steam power, using a scoop-wheel invented by himself, and largely employed since by other engineers. As a member of the Institution of Civil Engineers, he prepared papers on the Panama and Suez Canals, which gained for him the Telford Medal. In 1836 the Society of Arts awarded him their Gold Isis Medal, for his paper on 'The Application of Steam Power to Draining Fens,' which was afterwards translated into French, German, and Dutch. His 'Treatise on Cranes,' in 'Weale's Series,' had a large sale, and became at once a work of authority. In 1838 Mr. Glynn was elected Fellow of the Royal Society. Among the papers communicated by him to the Institution of Civil Engineers were the following:—'On a Sawing Machine for Cutting off Railway Bars;' 'On the Use of Mica as a Substitute for Glass in Workshop Windows;' and 'On the Causes of the Fracture of Railway Axles.' He also wrote papers on Turbines and on Water-Pressure Engines for the British Association. He was much consulted on arbitrations and by Parliamentary Committees on matters relating to civil engineers. After the Hudson exposures, Mr. Glynn was for two years chairman of the Eastern Counties (Great Eastern) Railway Company. He died on the 6th of February, 1863.

GMELIN, LEOPOLD [E. C. vol. vi. col. 995].

GNEISENAU, AUGUST WILHELM ANTON NEITHARDT, GRAF VON, a distinguished Prussian soldier and field-marshal, was born on the 27th of October, 1760, at Schilda, and in 1777 became a student of the University of Erfurt. In 1780 he entered the Austrian service, and, joining the army of the Margrave Alexander of Anspach-Baireuth, fought under the English colours in America. Here his career had scarcely opened when peace was concluded, and he returned with little more than the rudimentary idea of a popular army, which he afterwards elaborated in the interest of Prussia, into whose service he passed upon his arrival in Europe. In 1790 he was promoted to a staff captaincy, and took part in the Polish campaign in 1793 and 1794. The originality of his professional views, and the innovations which he advocated, barred his advancement, until the reverses of the Prussian arms in 1806, which Gneisenau had predicted, induced a greater tolerance of novelty on the part of the Prussian commanders. He was promoted to a majority in 1807, and was sent to Colberg, the command of which he took from the incapable hands of General Lucardon, and the defence of which he successfully conducted until the peace of Tilsit, July 8, 1807. During the siege he had been promoted to the rank of colonel, and in September following was made chief of the corps of engineers.

In 1809 Gneisenau was employed on a secret diplomatic mission to England, which occupied him for four years, at the end of which he returned to Prussia with promises of assistance from the British cabinet. He was now anxious for military employment; and, having received the rank of major-general, occupied himself, in concert with Blücher, in the organisation of the Landwehr, or militia of reserve, and the "Tugendbund," which was instituted to neutralise French influence in Germany. In the campaign of Blücher, it was Gneisenau who, although his subordinate, took the initiative in strategy, especially at the battles of Katzbach and Mookeren. He was made lieutenant-general after the battle of Leipzig, and after the peace of 1814 attained the grade of a general and the rank of a count. On the return of the Emperor Napoleon from Elba, Gneisenau became head of the staff to Blücher, and was mainly instrumental in accomplishing the opportune juncture of the Prussian troops with the British at Waterloo. It was he also who conducted the pursuit of the French when they fled from the field as beaten fugitives. He was now appointed a minister of State, and in that capacity took part in the conclusion of peace; and after having held for a few months the command of the army of the Rhine, retired to his estates. In 1825 he acquired his

ultimate promotion as field-marshal, and in 1831, during the time of the Polish insurrection, was commander-in-chief of the army of the East. He died of cholera on the 24th of August, 1831, whilst professionally employed in the Grand Duchy of Posen.

* GODRON, DOMINIQUE ALEXANDRE, a French botanist, born in the early part of the present century, was principally educated at Montpellier. He is dean of the faculty of science and professor of natural history at Nancy. His principal works are—'Flores de Lorraine,' 3 vols. 12mo, Nancy, 1843—4; 2nd edition, 1853; 'Flores de France,' 6 vols. 8vo, 1848—1856, in which he was assisted by M. Grenier; 'De l'espèce et des races dans les êtres organisés, et spécialement de l'unité de l'espèce humaine,' 2 vols. 8vo, Paris, 1859. He has also written numerous articles for the 'Mémoires' of the Royal Society of Sciences at Nancy. Of these may be mentioned his papers on '*Rubus*,' in the volumes for 1842 and 1849; his account of the plants at Port Juvenal, which have established themselves, although of foreign origin, in the volume for 1853; his experiments on *Aegilops* in the volumes for 1854, 1855, and 1858; his paper on the botanical geography of Lorraine, in the volume for 1862. His later papers relate to hybridity, the buds of plants, and ethnological remarks on the Prussians.

GOEPPERT, HEINRICH ROBERT, palaeophytologist, was born July 25, 1800, at Sprottau, Silesia. He received his education partly at Breslau, and partly at Berlin. In 1831 he was appointed an assistant professor in Breslau university, and was shortly afterwards full professor. His writings relate chiefly to fossil plants and to coal formations. A large proportion of them are contributions to scientific periodicals, and the few which have not appeared in that form are for the most part descriptions of the museum and garden at Breslau, and some small botanical papers. His scientific papers are upwards of 200 in number, and many of them are very long. Of these the following may be specified:—'Beobachtungen über die Blüthenzeit der Gewächse im Königl. botanischen Garten zu Breslau,' in the 'Nova Acta Acad. Cæs. Leop. Car.' xv. pp. 385—421 (1831); 'Die fossilen Farrenkräuter,' xvii. (1836), with 44 plates; 'Ueber die fossile Flora der Quadersandstein-Formation in Schlesien,' xix. pp. 97—134 (1842); xxii. pp. 353—368 (1847); 'Fossile Pflanzenreste des Eisensandes von Aachen,' xix. pp. 135—160; 'Ueber die fossile Flora der Gypsformation zu Deichsel in Oberschlesien,' xix. pp. 367—378; 'Ein Beitrag zu Flora des Uebergangsgebirges,' xix. pp. 379—382. He contributed two prize memoirs to the 'Naturkundige Verhandlung' of the Holland Academy of Science at Haarlem—one is 'Ueber die Entstehung der Steinkohlenlager aus Pflanzen,' in vol. iv. p. 1—298 (1848); the other is a 'Monographie der fossilen Coniferen,' in vol. vi. (1850). Amongst his papers in the 'Zeitschrift der deutschen Geologischen Gesellschaft' are 'Ueber die Stigmaria ficoides,' iii. pp. 278—302 (1851); 'Ueber die Braunkohlenflora des nordöstlichen Deutschlands,' iv. pp. 483—507 (1852). In 'Palaeontographica' he has papers entitled 'Beiträge zur Tertiärfloreschlesiens,' vol. ii. p. 259—282 (1852); 'Die fossile Flora der Permischen Formation,' xii. (1864—5). In 1869 he discovered what he considered to be traces of plants enclosed within certain diamonds, indicating the aqueous origin of these precious stones.

GOGOL, NIKOLAY IVANOVICH [E. C. vol. vi. col. 996].

GOLDFUSS, GEORGE AUGUST, palaeontologist, was born at Thurnau, near Baireuth, April 18, 1782. His studies were prosecuted at Berlin and Erlangen. In 1818 he proceeded to Bonn, where he became curator of the geological and palaeontological museum, and professor of zoology at the university. His literary productions relate to zoology and palaeontology, but the more important are those which deal with the fossils of Germany. One of his earliest works was 'Enumeratio insectorum eleutheriorum Capitis Bonæ Spei, totiusque Africae, etc.,' 8vo, Erlangæ, 1805. He also wrote some good accounts of the bones in Gailenreuth cave; and of the caves of Muggendorf, with the bears and other mammalian remains yielded by them. In the 'Nova Acta Acad. Cæs. Leop.,' x. pp. 455, 474—502 (1821); xi. pp. 449—490 (1823) he gives numerous details respecting fossil mammals, and in the volume for 1831 is a similar paper on fossil reptiles. In 1847 he was the first to describe some of the earlier reptiles found in the German coal measures in his 'Beiträge zur vorweltlichen Fauna des Steinkohlengebirges,' 4to, Bonn, 1847. It was for these he founded the genus *Archegosaurus*. He is, however, best known for his 'Petrefactæ Germaniæ,' fol. 'Düsseldorf, 1826—1844. In conjunction with Gustav Bischof, he wrote 'Physikalische-statistische Beschrei-

bung des Fichtelgebirge,' 2 vols. 8vo, Nürnberg, 1817. He died, October 2, 1848.

GOLDSCHMIDT, HERMANN, who combined in a remarkable way the abilities of a painter and an astronomer, was born at Frankfurt, June 17th, 1804. Brought up to a commercial life, he spent his leisure hours in the study of languages and painting; and at length acquired so strong a taste for the latter as to give up the counting-house for the studio. After a sojourn at Munich, where he studied under Cornelius and Schnorr, he went to Paris, and became gradually known as an exhibitor of poetical subjects, and occasionally of landscapes, at the Salons. Being naturally of weak frame and health, he was affected in middle life with a kind of melancholy; and, to divert his thoughts into some new channel, he went to hear Leverrier lecture at the Sorbonne on the lunar eclipse of 1847. This incident gave a new turn to his life. Excited by the novelty and beauty of the subject, he set about studying astronomy; and, obtaining a telescope of very moderate power, he began to watch the heavens at night from the window of his painting room, which was at the top of a house in the Quartier Latin. His acuteness of vision and accuracy of observation must have been great, for he discovered the planetoidal or asteroidal character of minute specks of light which are usually detected only by the aid of much larger telescopes. His assiduity was rewarded, on the 15th of November, 1852, by the discovery of the asteroid *Lutetia*; and during the next nine years he added thirteen more to the group. As no other observer has discovered so large a number of asteroids as this, it may be well to give a list of them:—

Lutetia, Nov. 15th, 1852.
Pomona, Oct. 26th, 1854.
Atalanta, Oct. 5th, 1855.
Harmonia, March 31, 1856.
Daphne, May 22, 1856.
Nysa, May 27, 1857.
Eugenia, June 27, 1857.
Melete, Sep. 9, 1857.
Doris, Sep. 19, 1857.
Pales,
Europa, Feb. 6, 1858.
Alexandra, Sep. 10, 1858.
Danaë, Sep. 19, 1860.
Panopea, May 6, 1861.

He was the only astronomer who discovered two asteroids in one day. Another series of observations undertaken by Goldschmidt related to the smaller stars contained in the great Berlin star maps. His indefatigable examination of the zone to which those stars belong enabled him to fill up many deficiencies, by defining the places of numerous small stars of the ninth and tenth magnitude, not previously included in the maps. The scarcely-discernible body known as the companion to Sirius, which revolves with that star round a common centre of gravity, was the subject of a paper by M. Goldschmidt in the 'Comptes Rendus' for 1863, 'Nouveaux Compagnon de Sirius.' This active astronomer, whose later years were almost wholly engaged in making observations and writing records of them, died September 11th, 1866.

GOMPERTZ, BENJAMIN, was born March 5th, 1779, of a Dutch Jewish family, named Cohen. His father was a diamond merchant. Benjamin had an early turn for mathematics, and at the age of eighteen became a member of the Old Mathematical Society of Spitalfields, of which he was president when it merged in the Astronomical Society. He became a member of the Stock Exchange, and in 1810 married the sister of Sir Moses Montefiore. In 1823 he lost his only son, which produced such a depression that he gave up business; and his friends, seeing that retirement acted injuriously on him, persuaded him to become actuary of the Alliance Office, which, it is said, his friends founded for the purpose of procuring him employment. After his retirement in 1848 he fell into a state of bodily debility, but continued to work at mathematics, of the old English school of which he was called the last member. He was a genuine disciple of the 'Ladies' Diary' and the 'Mathematical Companion.' He was also the last of the fluxionists, and used Newton's notation to the day of his death. He never used the abbreviations $\log. x$, $\sin. x$, &c. It was always logarithm of x in full, sine of x , &c. He had a paper in the 'Transactions of the Royal Society' containing his discovery of the function which so nearly gives the law of human life, a law which stands alone as capable of physiological enunciation; it is, "the power to oppose decay loses equal proportions in equal times;" add that the constants undergo nearly sudden changes, and a mathematician is able to re-establish the whole theory.

Mr. Gompertz became a fellow of the Royal Society in 1819 and died 14th July, 1866.

GOODALL, EDWARD [E. C. vol. iii. col. 144]. This excellent engraver died at his residence in the Hampstead Road, April 11, 1870, in his 75th year.

GOODSIR, JOHN, zoologist, was born March 20, 1844, at Anstruther, Fifeshire. He studied at Edinburgh under Knox and Monro, and formed one of a band of students, many of whom afterwards rose to distinction, such as E. Forbes, Dr. George Wilson, and others. Some of his earlier papers on the dentition of the ruminants and man, and on the secretions of various glands, attracted sufficient notice to procure his appointment (1841) as curator of the Museum of the Royal College of Surgeons of Edinburgh, and subsequently, 1844, as demonstrator of anatomy in the University of Edinburgh. In 1846 he succeeded Monro as professor of anatomy. For the last ten or twelve years of his life he was afflicted with a paralysis which deprived him of much of his former activity, both mental and bodily. He died November 6, 1867. As a lecturer he acquired considerable fame, his class being attended by students from all parts of the British islands, and from many of the colonies; while numbers who had already attended the classes of Meyer of Zurich, Hyrtl of Vienna, Kölliker of Würzburg, and Henle of Berlin, were amongst his audience. His career has been sketched and his papers collected in 'The Anatomical Memoirs of John Goodsir; edited by W. Turner,' 2 vols. 8vo, Edinburgh, 1868.

GOOGE, BARNABY, celebrated as a poet and translator, was born about 1540, at Alvingham, in Lincolnshire, and was educated at Christ's College, Cambridge, and at New College, Oxford. Leaving the University, he travelled through France to Spain, and, returning to England about 1562, became a retainer of his relative, Sir William Cecil. In 1563 he was one of the gentlemen-pensioners of Queen Elizabeth; and, in 1570 and 1577 respectively, was resident at Staple Inn and at Kingston. He died in some unascertained year later than 1588. His works comprise, 'The Zodiacke of Life,' written by the godly and zealous poet, Marcellus Palingenius Stellatus, wherein are conteyned twelve Bookes disclosing the heynous crimes and wicked vices of our corrupt Nature, and plainly declaring the pleasant and perfit pathway unto eternal Lyfe, besides a number of digressions both pleasaunt and profitable, newly translated into English verse, 4to and 8vo, London, 1565; revised editions, 4to, 1576 and 1588, of which 'The First Thre Bokes' and 'The First Syxe Bokes,' had been separately published in 8vo, London, 1560, and 8vo, London, 1561; 'Eglogs, Epytaphes, and Sonnetes,' 12mo, London, 1563, 4to, 1570; 'The Popish Kingdome, or Reigne of Antichrist; written in Latin Verse by Thomas Naogeorgus (Kirchmayer), and Englyshed by Barnabe Googe,' 4to, London, 1570, with which was printed 'The Spiritual Husbandrie of Thomas Naogeorgus,' in an English version, and with a Dedication to Queen Elizabeth; 'Foure Bookes of Husbandrie, collected by M. Conradus Herestadius, counsellor to the high and mighty Prince, the Duke of Cleve: containing the whole Art and Trade of Husbandrie, Gardening, Graffing, and Planting, with the Antiquities and Commendations thereof. Newly Englyshed and increased by Barnabe Googe, Esquire,' 4to, London, 1577, 1578, 1586, 1594, &c.; 'The Proverbes of the noble and worthy souldier Sir James Lopez de Mendoza, Marquis of Santillana, with the Paraphrase of D. Peter Diaz, of Toledo, wherein is contained whatsoever is necessarie to the leading of an honest and virtuous Life; translated out of Spanishe,' 8vo, London, 1579; 'A New Yeares Gift, dedicated to the Pope's Holinesse, and all Catholikes addicted to the See of Rome,' 4to, London, 1579. Googe likewise translated into English the Georgics of Virgil, and Aristotle's Table of the Ten Categories.

GORDON, GEORGE, LORD, the third son of Cosmo George, third duke of Gordon, was born in London, most probably in January, 1752, on the 27th of which month he was baptized. He entered the Royal Navy, in which he served some years; and, after his retirement, was elected, in 1774, to the House of Commons as member for Ludgershall, in Wiltshire, and spoke so often, that it was said "there were three parties in Parliament,—the Ministry, the Opposition, and Lord George Gordon." He took the lead of an association formed in Scotland to oppose the relaxation of the penal statutes against the adherents of the Church of Rome, the more vulgar and violent members of which, in February, 1780, broke out into tumultuous and riotous proceedings at Edinburgh and Glasgow. Mainly through his exertions, a spirit was excited in London as hostile to the repeal of those laws as that which had appeared in Scotland. On the 4th of January a deputation from the "Protestant Association," of which Lord

George was the patron or president, waited on Lord North, to request him to present a petition to Parliament against the law which had passed in favour of the English catholics; but to this request his lordship replied by an absolute refusal. During the ensuing session, Lord George frequently interrupted the business of the house by vexatious divisions, and the violent and irrelevant introduction of topics relative to religion, and the danger from popery. On the 2nd of June, the members of the Protestant Association assembled to the number of several thousands in St. George's Fields, and proceeded to the House of Commons for the purpose of delivering their petition, whilst Lord George Gordon vehemently pressed a motion in furtherance of their demands, which was, however, defeated by a majority of 192 votes against 6. The mob dispersed on the expostulation of a magistrate who arrived at the head of a body of soldiers; but proceeded to the demolition of Romish chapels in Lincoln's Inn Fields and Golden Square, and on several successive days resumed their work of plunder and demolition. Newgate and other places of confinement were burnt, the prisoners having been first released; and, amidst the scandalous scenes of riot and conflagration, 30 fires were observed blazing at one time, 210 persons were shot, and 75 died of their wounds, besides other casualties arising from the fall of houses, and excesses incidental to the general disorder. Amongst other dwellings, the house of Lord Mansfield, the Chief Justice, was destroyed. After tranquillity had been restored, Lord George was apprehended, and committed to the Tower on the 19th of June, on a charge of high treason. He was brought to trial on the 5th of February, 1781, when he was defended by Erskine with great ability, and at a quarter past five on the following morning, the jury returned a verdict of "not guilty." A special commission was issued for the trial of a great number of the rioters who had been apprehended, many of whom underwent the last rigour of the law.

In May, 1786, Lord George was excommunicated by the Archbishop of Canterbury, for contempt, on account of his refusal to appear in court as a witness in a trial, and in 1787 he was convicted of libelling the Queen of France and the French Ambassador. He sought refuge in Holland at the beginning of 1789, but was arrested there, and brought back to this country, to become for the rest of his life a prisoner in Newgate, where he died on the 1st of November, 1793, having in his latter years embraced the Jewish religion, with the members of which it was his last regret that he could not be interred.

GORDON, SIR JOHN WATSON, R.A. [E. C. vol. iii. col. 146]. This distinguished artist died on the 1st of June, 1864, aged 74.

GORE, MRS. CATHERINE GRACE, daughter of Mr. Moody, a wine merchant of East Retford, Nottinghamshire, was born in that town in 1799. In 1823 she was married to Captain Charles Arthur Gore; and from that time was actively engaged in writing and publishing novels and tales for at least thirty-six years, her 'Theresa Marchmont, or the Maid of Honour,' appearing in 1823, and her 'Sir Roger de Coverley's Picture Gallery' in 1859. Works produced with such facility were not likely to be of much value, but they were considered to be faithful pictures of aristocratic life; among fashionable people they had their day of popularity, and the authoress holds a certain place in the history of current literature. Here it will be enough to give the titles of her novels:—'Mrs. Armytage,' 'Men of Capital,' 'The Cabinet Minister,' 'Cecil,' 'Richelieu,' 'Hungarian Tales,' 'The Balsam Seller of Thurotzer,' 'The Hungarian Maiden,' 'The Fair of May Fair,' 'Mothers and Daughters,' 'The Opera,' 'The Courtier,' 'Pin Money,' 'The Heir of Selwood,' 'The Soldier of Lyons,' 'The Hamiltons,' 'Women as They Are,' 'The Ambassador's Wife,' 'The Banker's Wife,' 'The Birthright,' 'Castles in the Air,' 'The Dean's Daughter,' 'The Débutante,' 'The Diamond and the Pearl,' 'The Dowager,' 'Fascination,' 'Female Domestics,' 'Greville,' 'Heckington,' 'The Lost Son,' 'A Life's Lesson,' 'The Lover and the Husband,' 'Mamma,' 'The Man of Fortune,' 'Mary Raymond,' 'New Year's Day,' 'Peers and Parvenues,' 'Polish Tales,' 'The Popular Member,' 'Preferment,' 'Pique and Prejudice,' 'The Royal Favourite,' 'Self,' 'The Snow Storm,' 'The Two Aristocracies.' Her works were increased to nearly seventy in number by the addition of 'The School for Coquettes,' a comedy; 'Lord Dacre of the South,' a tragedy; a translation of 'Picciola,' 'A Good Night's Rest,' a farce; 'The Maid of Croissy,' a drama; 'King O'Neil,' a comedy; 'Historical Travels,' 'Modern Female Life,' 'The Tuileries,' 'Sketches of English Character,' the editing of 'Heath's Picturesque Annual' in 1832 and following

years, &c. Mrs. Gore died at Lynwood, Hants, on January the 27th, 1861.

GORI, ANTONIO FRANCESCO, an eminent Italian archaeologist, was born at Florence, December 9th, 1691; studied for the church, and was ordained priest in 1717. Several of his relatives were artists, and Gori, without neglecting his clerical duties, was led to pay particular attention to the arts and antiquities of Florence, in which he was encouraged and assisted by Fontanini, Archbishop of Florence, the Emperor Francis, Scipio Maffei, and other distinguished persons. His erudition was remarkable, and his industry unbounded; he was resorted to as the chief authority in his class of studies by learned men from all parts of Europe, and was a member of the principal academies and learned societies. He not only studied antiquities and transcribed inscriptions, but formed a considerable collection of objects of antiquity. In 1735 he founded the Columbarian Academy for the study of art, science, and literature. He was professor of history at the University of Florence, and in 1746 was appointed prior of the Baptistery of San Giovanni. He died at Florence on the 21st of January, 1751. Gori's works, which are very numerous, display extraordinary learning and diligence, and as collections of materials are invaluable; but he was deficient in critical acumen, wanting in precision, and negligent in style. The following are his more important works, but many of his monographs and dissertations are valuable: '*Inscriptiones antiquæ Græcæ et Romanæ, quæ exstant in Hetruriæ urbibus, cum notis Salvani*,' 3 vols. fol. Florence, 1726—44, more nearly superseded by later publications than perhaps any other of Gori's larger works; '*Museum Florentinum, exhibens insignia vetustatis monumenta, quæ Florentiæ sunt in Thesaurio Mediceo*,' with a large number of excellent engravings, 12 vols. large fol. Florence, 1731—66, a magnificent work, of which, however, Gori completed only the first six volumes: it comprises—1. Engraved Gems, 2 vols.; 2. Coins and medals, 3 vols.; 3. Statues, 1 vol.; 4. Portraits of painters, 4 vols., with a supplement to the portraits, by Ant. Pazzi, 2 vols.; '*Museum Etruscum, exhibens insignia veterum Etruscorum monumenta*,' 3 vols. fol. with about 300 engravings, Florence, 1737—43, by far the most important work which had up to that time appeared on the subject; '*Vita di Michel-Angelo Buonarroti da Arcanico Condivi*,' fol. Florence, 1746; '*Memorie di varia erudizione della Società Columbaria*,' 2 vols. 4to, Florence, 1747—52; '*Symbolæ litterariæ; opuscula varia, philologica, scientifica, antiquaria complectentes, ex auctoribus diversis*,' 10 vols. 8vo, 1748—53; '*Thesaurus Gemmarum antiquarum astriferarum*,' 3 vols. fol., with 200 engravings, Florence, 1750. His '*Columna Trajana*,' large fol. 18 plates, Amsterdam, 1752; '*Thesaurus veterum Diptychorum consularium et ecclesiasticorum*,' edited by J. B. Passeri, 3 vols. fol., with many engravings, Florence, 1759, the basis of all subsequent investigations on this very curious and suggestive subject; and '*Historia Glyptographica*,' 2 vols. fol. Florence, 1767, were posthumous publications. Besides his other dissertations already referred to, and some theological writings, Gori completed the catalogue of the MSS. in the Medicean Library commenced by Asseman, fol. Florence, 1744.

GORTSCHAKOFF [E. C. vol. iii. col. 150]. PRINCE PETER GORTSCHAKOFF, died at Moscow on the 18th of March, 1868. PRINCE MICHAEL GORTSCHAKOFF, who from the termination of the Crimean war held the office of Governor of Poland, died at Warsaw on the 30th of May, 1861. By his express desire his remains were carried to Sebastopol and interred in the place he had so bravely defended.

* GÖSCHEN, GEORGE JOACHIM, RIGHT HON., an English statesman of German extraction, eldest son of the late William Henry Göschén, a merchant of London, was born on the 15th of August, 1831; and was educated successively at Rugby and at Oriel College, Oxford, where he was first-class in classics in 1853. He was for some time a partner in the firm of Fröhling & Göschén, of Austinfriars; but quitted his commercial avocations in order to devote himself unreservedly to political, and especially to official, life. He was first returned to Parliament as one of the Liberal members for the City of London, in May, 1863, for which he was re-elected in 1865 and 1866. His financial reputation was established by the publication of his '*Theory of the Foreign Exchanges*,' 8vo, London, 1864, which went through five editions in the first year of its issue, and of which a French translation, by M. L. Say, appeared with the title of '*Théorie des Changes Étrangers*,' 8vo, Paris, 1866. He took office on the 20th of November, 1865, as Vice-President of the Board of Trade; and in January, 1866, became Chancellor

of the Duchy of Lancaster, which he vacated on the retirement of Earl Russell's ministry in July of the latter year. His financial ability was signalled by the acuteness with which he canvassed, as a member of the Select Committee which sat in July, 1868, the details of Mr. Ward Hunt's Bill "to enable Her Majesty's Postmaster-General to acquire, work, and maintain Electric Telegraphs." In December, 1868, he joined the Gladstone administration as President of the Poor Law Board, in which capacity he has displayed great vigour and accuracy in the collection of statistics and the adoption of measures for the diminution of pauperism. Mr. Göschén is a deputy-lieutenant for the city of London, and was formerly a governor of the Bank of England. He was sworn a member of the Privy Council in 1866. A few of his more important speeches have been published; as for instance, his '*Speech on the Oxford University Tests Abolition Bill*, June 14, 1865,' 8vo, London, 1865; and his '*Speech on Bankruptcy Legislation and other Commercial Subjects*,' &c., 8vo, London, 1868.

GOTTSCHED, JOHANN CHRISTOPH, a celebrated German author, was born at Judithenkirch, near Königsberg, Prussia, February 2nd, 1700. After receiving elementary education under his father, a Protestant pastor, he was sent at the age of 14 to Königsberg University, to complete his studies. When grown up to manhood, he fled from Königsberg to Saxony, in order to escape from the Prussian military system, and settled at Leipzig, where he passed the rest of his life. He educated the sons of Mencke. He was appointed extraordinary professor of philosophy at Leipzig University in 1730, ordinary professor of logic and philosophy in 1734, and later in life he was made decemvir of the University and dean of the Faculty of Philosophy. He was at different times a member of several literary societies at Leipzig; such as the '*Poetische Gesellschaft*,' the '*Deutsche Gesellschaft*,' and the '*Gesellschaft der freien Künste*.' As a critic of the German language, Gottsched came by degrees to assume a tone of dogmatism and assumption that raised much opposition outside his own circle, where he held supreme and undisputed sway. The literature of Germany at the time was at a low ebb; the language and style had become vitiated, and had lost their distinctive German character. He sought, by his lectures and writings, to effect a reform; and this he did by setting up Racine, Boileau, and other French writers, as models for the imitation of his countrymen. His opponents, and especially Bodmer and his associates, laughed at his theories, mocked his pedantic style, and burlesqued his poetry; and he consequently within his lifetime lost much of his influence, and for long his name was used as a synonym for a pompous, mechanical pedant. But it is now acknowledged that, unimaginative and unpoetical as was his mind and shallow as was his philosophy, he yet did good service to the literature of Germany by enforcing the necessity of purity, correctness, and refinement of style. Lessing, who was one of those who laughed at Gottsched, did much to introduce a richer and more vigorous way of writing; but Gottsched cleared the way for writers like Lessing, Schiller, and Göthe. The attacks on Gottsched as critic, philosopher, and poet, in no way injured his position at the University, which, indeed, was never better than during the last months of his life. He died September 12, 1766. His voluminous works on philosophy, poetry, and general literature, comprise, among others, the following:—'*Die vernünftigen Tadlerinnen*,' 2 vols. 8vo, Leipzig, 1725; '*Ausführliche Redekunst*,' 1728; '*Versuch einer kritischen Dichtkunst*,' 1730; '*Beiträge zur kritischen Historie der deutschen Sprache, Poesie, und Beredsamkeit*,' 8 vols., 1732—44; '*Die deutsche Schaubühne nach den Regeln und Exempeln der Alten*,' 6 vols. 1741—45; '*Neuer Büchersaal der schönen Wissenschaften und freien Künste*,' 10 vols., 1745—54; '*Deutsche Sprachkunst*,' 1748; '*Das Neuste aus der anmuthigen Gelehrsamkeit*,' 12 vols., 1751—62; '*Nöthige Vorrath zur Geschichte der deutschen dramatischen Dichtkunst von 1450*,' 2 vols., 1757—65; '*Der Sterbende Cato*,' a tragedy. His philosophy and poetry are alike poor when tested by later German standards; but they were of some importance in his day.

GOUGH, HUGH, VISCOUNT [E. C. vol. iii. col. 155.] Lord Gough was one of the first to be created Knight Commander of the Order of the Star of India on the institution of that order in 1861, and in 1866 was made Grand Cross. In 1862 he was nominated Field Marshal. He died at his residence, St. Helena, near Dublin, on the 2nd of March, 1869, in his 90th year.

GOULD, AUGUSTUS ADDISON, a zoologist, was born at New Ipswich, in the State of New Hampshire, North America, April 22nd, 1805. He graduated at Harvard College, in

1825; and, in 1830, commenced his medical practice, which he continued to follow until his death at Boston, September 15th, 1866. Most of his papers are in the 'Proceedings of the Natural History Society of Boston,' and are chiefly of a diagnostic character. He was a conditor with Agassiz in 'Outlines of Comparative Physiology,' 8vo, 1847; and 'Principles of Zoology,' 12mo, 1851; and with Kidder in 'The History of New Ipswich,' 8vo, 1852. He edited Binney's 'Terrestrial Molluscs of the United States,' 3 vols. 8vo, 1851, 1859; and, for many years, the Registration Reports of Massachusetts. He contributed notices of the shells to several of the reports of the exploration expeditions, such as those by Wilkes and Blake; and he also wrote several independent works: amongst others, 'Otia Conchologica,' 8vo, 1862; and, what may be considered his principal work, a 'Report on the Invertebrates of Massachusetts,' 8vo, 1841, 2nd ed. (comprising the Mollusca only), 1870. In the last-mentioned work, every species is figured, and every diagnosis was drawn up from specimens examined by himself. He was a contributor to several medical journals, an active member of numerous scientific, educational, and reformatory societies, and held many offices of trust.

* GOUNOD, CHARLES FRANÇOIS, a French musical composer, was born at Paris, June 17th, 1818. When a young man, studying at the Seminary at Rome, he had some thoughts of taking holy orders; but, on his return to Paris, he determined on a musical life. He studied harmony under Reicha, counterpoint under Halévy, and lyrical composition under Lesueur and Paër. In 1839, he obtained a prize at the Institute for musical composition. In 1841 he was made honorary maître de chapelle of the Chapel of St. Louis; and, two years afterwards, a similar post was given to him at the Church of the Missions Étrangères. In 1852 he became director of the normal course of singing in Paris, known as the "Orphéon," in which he endeavoured to adapt Wilhelm's method to ordinary notation. Gounod is a great admirer of Glück and the classical writers, to whose style his compositions bear more resemblance than those of most French composers. His ambition has been to take some classical subject, and combine modern forms with the system of musical declamation employed by Glück. His chief ecclesiastical compositions are a 'Messe Solennelle,' performed at St. Eustace at the beginning of his musical career; another mass, performed at Rome in 1841; a 'Messe Vocale pour le Carême,' in 1843; and an 'Ave Verum.' But opera is the chief direction which he has taken. In 1851 appeared his 'Sappho,' a grand opera to words by Augier. In 1852, choruses to Ponsard's drama of 'Ulysse,' at the Théâtre Français; 1854, 'La Nonne Sanglante,' a grand opera in five acts; 1855, a symphony; 1856, another symphony; also a cantata on the visit of Queen Victoria to Paris; 1858, music to 'Le Médecin malgré lui'; 1859, the opera on which his reputation chiefly rests, 'Faust'; 1860, 'Colombe'; 1861, 'Philemon et Baucis'; 1862, 'Mireille,' and the 'Reine de Saba'; 1867, 'Romeo et Juliette'; and, in 1869, a recasting of 'Faust' for the grand opera at Paris, with many additions. A chorus for voices and orchestra, 'Dance de l'épée et le vin des Gaulois,' is also among his compositions. His works are marked by skilful harmony, musical erudition, and respect for the true principles of his art. In England his 'Faust' met with an exceptional degree of success, and retains its popularity. In 1866 M. Gounod succeeded M. Clapißon as member of the Académie des Beaux Arts, in the Institute.

GRAHAM, GEORGE, inventor of the pendulum and the escapement known by his name, was born at Horagill, Cumberland, in 1675. At the age of thirteen he came to London, and was placed under Tompion, the celebrated watch and chronometer maker, by whom he was so much valued and esteemed as to be assisted in every way in developing a future position in life, and whom he eventually succeeded in business. He set himself the problem of constructing a compensation pendulum, of which the oscillations should be synchronous in all states of the weather. He experimented on various metals, studied their varying degrees of expansibility under the influence of heat, and speculated how to adopt such a mode of construction as to establish a balance or compensation, leaving the vibrating length of the pendulum always equal. The highly scientific mercurial pendulum was the result of these experiments. A cylindrical glass jar of mercury is connected with a steel pendulum; any increase of heat expands the mercury; it causes it to rise higher in the jar; but at the same time the heat expands the steel, and makes the whole jar take a somewhat lower position; a delicate adjustment causes the rise in the one case to compensate the fall in the other, and the effective vibrating length of the pendulum remains practically uniform. Graham was aware of certain inconveniences

which attend the use of a liquid metal such as mercury; he suggested the compensating action of bars of two kinds of metal; but it was left for Harrison to work out the idea in the gridiron pendulum. Another important invention of Graham's related to escapements for clocks and watches. Clement, in the 17th century, had invented the anchor escapement, as an improvement on the crown wheel and pallets previously in use; but Graham, knowing that Clement's apparatus produced a considerable recoil at every vibration, effectually removed this by a new contrivance, the dead-beat escapement, which has ever since remained in favour. The clock of the Bourse at Paris is regulated by a Graham escapement. Graham was also the most celebrated astronomical instrument maker of his day. He made the great mural quadrant at Greenwich Observatory, also a fine transit instrument, and the zenith sector which Bradley employed in discovering and measuring the aberration of the fixed stars and the velocity of light. He supplied instruments for the French astronomers engaged in the geodesical survey connected with the determination of the figure of the earth. In 1715 he constructed the most complete planetarium known at that time, in which the motions of the heavenly bodies were imitated with great accuracy. Many anecdotes are recorded of the great pride which he took in the excellence of the watches, clocks, chronometers, and instruments made by him. Graham, who was a member of the Society of Friends, and a Fellow of the Royal Society, died November 20th, 1751, and was buried in Westminster Abbey, in the same grave with his former master and friend, Tompion.

GRAHAM, RIGHT HON. SIR JAMES ROBERT GEORGE, BART. [E. C. vol. iii. col. 163]. Sir James Graham continued his political activity, though with some abatement of energy, the consequence of increasing years and failing health. His unpopularity slowly wore away, but he was not again included in any ministerial arrangements, and, indeed, appears to have desired to avoid the labour and responsibilities of office. He continued to represent Carlisle in Parliament till his death, which occurred at his seat, Netherby Hall, Cumberland, on the 25th of October, 1861; he was born on the 1st of June, 1792. Two memoirs of him have appeared: 'The Life and Times of the Right Hon. Sir James R. G. Graham, Bart.,' by Torrens McCullagh Torrens (now M.P. for Finsbury), 2 vols. 8vo, 1863; and 'Life of Sir James R. G. Graham, Bart.,' by Henry Lonsdale, M.D., 8vo, 1868.

GRAHAM, THOMAS [E. C. vol. vi. col. 996], was born in Glasgow, 21st December, 1805. His father was a merchant of that city. He began his education at the primary school, and at nine years of age went to the grammar school, and lastly to the University. In 1826 he took his degree of M.A. His father destined him for the church; but he was so much attached to science, that he opposed his father's wish, and the struggle between two strong wills caused much misery on both sides. The harsh treatment to which Graham was subjected, was mitigated by the tenderness of his mother; and when he became a student in Edinburgh, he satisfied his love of sympathy by communicating in writing to her his thoughts and feelings, and this habit of writing afterwards took the form of a journal, which it is hoped will one day be published. After two years in Edinburgh, he returned to Glasgow, and set up as a teacher of mathematics. He also opened a chemical laboratory, in which he gave lectures. In the winter of 1829—30, he became lecturer in the Mechanics' Institute, from which he was transferred to the Andersonian Institution, as successor to Dr. Ure. Here he continued till 1837, when he succeeded Dr. Turner as Professor of Chemistry at University College (then the London University). He held this appointment until 1855, when he succeeded Sir John Herschel as Master of the Mint. He died at his residence in Gordon Square, on the 15th September, 1869.

Graham was not a fluent speaker. When he first became a lecturer, it is said that he looked like a boy beginning to teach. He was hesitating in his manner, as if it were difficult to find the right word, and was so quiet in his bearing, that few persons would suppose he had that strong enthusiasm which carried him through forty years of original scientific work. But, amidst this want of fluency, and with a weak voice, he was clear and perspicuous, and his instruction was well grounded and thorough. His constitution was so feeble, that in later years he was afraid to visit Scotland except in June or July. His chest was tender, and the accidental exposure to an open window on a warm August day, brought on his final attack.

We must refer to the Arts and Sciences Division for an account of Graham's scientific labours. At the commencement of his career, he seems to have had an intense desire to know the inner structure of matter. His earliest paper, in 1826, is on the

Absorption of Gases by Liquids. In his latest work, he found the metal palladium to absorb 935 volumes of hydrogen gas, and he illustrates the passage of hydrogen through palladium, by comparing it to liquid diffusion through a colloid. His division of solids into colloids and crystalloids, and his process of dialysis, were the result of his numerous experiments on liquid diffusion, and these naturally arose out of many years of study on the diffusion of gases, their transpiration, &c.

In addition to the papers and memoirs written by Graham, he was also the author of a 'System of Chemistry,' which was published in parts; but it was written so slowly, and he parted with his copy so reluctantly that, as the publisher said, to get it was like drawing his blood. His painful anxiety to be correct gives a calmness to his writing, but diminishes the force of his exposition.

As Master of the Mint, he is said to have displayed a vigilance, a knowledge of the work, an amount of industry and energy, and even severity when called for, which astonished all, and especially some of the officials, who had never known such control. He brought about various reforms and economies in the working of the establishment, and introduced the new bronze coinage, which was not only more convenient than that before in use, but produced a large pecuniary profit to the state. After some years of struggle, Graham became Master of the Mint in the sense intended by himself, and he was then able to resume his favourite studies. Some of his finest results, we are told, were obtained by his assistant from carefully prepared and minute written directions, the master apparently seeing the results in his mind's eye, and not often taking the trouble to go upstairs to witness experiments which afterwards delighted the whole scientific world.

Graham became a fellow of the Royal Society in 1836, and received the Copley medal in 1862. He was a Doctor of Civil Law of Oxford, hon. member of the Royal Society of Edinburgh, corresponding member of the French Institute, and of the Academies of Berlin and Munich, and of the National Institute of Washington.

Notwithstanding Graham's brilliant success, he led a retired, quiet life, which to some appeared deeply melancholy; but we would rather say he appeared to us to be uniformly cheerful in his tone and expression, with a quiet and self-possessed manner peculiar to himself. He was seldom seen among the social gatherings of scientific life, and he had few friends out of the family circle of brothers and sisters, for Graham was never married.

GRAHAME, JAMES, a Scottish poet, advocate, and divine, was born on the 22nd of April, 1765; and was educated at the grammar school and the university of his native city, where he much distinguished himself, especially in English and Latin verse. In 1784 he removed to Edinburgh, in order to enter upon the study of law, and was admitted as a Writer to the Signet in 1791. The death of his father, in the latter year, set him free to follow the bent of his own inclination, which had always determined him to the Church; but, owing to the representations of friends, he effected a compromise which seemed to allow him the literary leisure he coveted, by becoming, in 1795, a member of the Faculty of Advocates. In 1797 he contributed, by instalments, to the 'Kelso Mail,' his 'Rural Calendar,' which seems to have been an amended form of various sketches which he had printed and privately circulated whilst at the university, and which, enlarged and improved, were afterwards published in an edition of his collective 'Poems,' 2 vols, 8vo, London, 1807. He next produced his 'Mary Stewart, Queen of Scots; an Historical Drama,' 8vo, Edinburgh, 1801, which is chiefly remarkable for the beauty of some of its descriptive passages. The work by which he is principally remembered at present is 'The Sabbath; a Poem,' 12mo, Edinburgh, 1804, second edition, corrected, and enlarged, by the addition of 'Sabbath Walks,' in Spring, Summer, Autumn, and Winter, 1805, fourth edition, 1806, &c. The first edition was published anonymously. Mr. Grahame at length received ordination at the hands of Bishop Bathurst, of Norwich, on Trinity Sunday, May 10, 1809, and for some time afterwards resided at Chester, which he quitted to undertake the curacy of Shepton, in Gloucestershire. Family affairs summoned him to Scotland in the following year; and, after an unsuccessful candidature for St. George's episcopal chapel, Edinburgh, he was appointed to the chapelry of St. Margaret, Durham, in August, 1810, and a few months subsequently became curate of Sedgfield, in the same diocese. Returning to Glasgow for the benefit of his native air, he died at Whitehill, the residence of his eldest brother, on the 14th of September, 1811. Mr. Grahame's other works include 'The Birds of Scotland;

with other Poems,' 8vo, and 12mo, Edinburgh, 1806; a pamphlet entitled 'Thoughts on Trial by Jury;' 'British Georgics,' 4to, London, 1809, second edition, 16mo, Edinburgh, 1812, a series of poems in which he follows the agricultural phases of the several months of the year, and advocates the claims of the husbandmen themselves to cultivation; and 'Poems on the Abolition of the Slave Trade,' 4to, London, 1810, which was embellished with engravings from paintings by Smirke.

GRAINGER, RICHARD [E. C. vol. iii. col. 165], died on the 4th of July, 1861.

GRANDI, ERCOLE, called **ERCOLE DA FERRARA**, a celebrated Italian painter, was born about 1491, at Ferrara. He was a pupil of Lorenzo Costa, at Bologna, where he continued to reside after Costa removed to Mantua. Ercole Grandi was an able and accomplished, but fastidious artist. He died at Ferrara, in 1531. His chief works were the frescoes in the Garganelli chapel of S. Pietro Martire, Bologna, on which he spent seven years. When the chapel was taken down, many years ago, portions of the frescoes were removed to the Tanara Palace, but have since been brought to England. Genuine works by Grandi are rare. The Dresden Gallery possesses two; and one, No. 73, 'The Conversion of St. Paul,' from the Aldobrandini collection, is in the National Gallery.

* **GRANT, ROBERT, M.A., F.R.S.** [E. C. vol. vi. col. 997.]

* **GRANT, ULYSSES SIMPSON**, a distinguished American general, and the eighteenth president of the United States, was born at Point Pleasant, Clermont County, Ohio, April 27th, 1822. So little promise did he give of ability when a boy, that his mother, who was in humble circumstances, punned upon one of his names by calling him 'Useless.' At the age of seventeen, however, he succeeded in obtaining admission to the Military Academy at West Point, where he grounded himself in those military studies which afterwards proved of such great value to him. He obtained a commission in 1843, and served as second lieutenant on the western frontier, near St. Louis. In 1845 he went to Texas, and served with distinction—first under General Taylor, and then under General Scott—in the Mexican war, being promoted to first lieutenant for gallantry at Molino del Rey, and captain at Chapultapac. In 1852 he served in Oregon. In the following year, having no taste for an idle soldier's life, and believing that there would be a long peace, and consequently little chance of further promotion, he gave up his commission, quitted the army, and established himself as a small farmer and debt collector at St. Louis, Missouri. We hear of him next as a farmer at Galena, in Illinois, in 1859; and here he was when the Civil War broke out, in 1861. On hearing of the surrender of Fort Sumter, he offered his services to the Federal government. He served as aide-de-camp to an officer of volunteers in the neighbourhood, and was then placed in command of the 21st Illinois volunteers; was promoted to the rank of colonel of volunteers in Iowa, and brigadier-general in August. He rendered good service near the Mississippi. With Cairo as a base, he secured Paducah, and with it Kentucky generally; and in November fought the battle of Belmont. Moving to the regular army in 1862, he made an important reconnaissance in the rear of Columbus, captured Fort Henry and Fort Donelson, and compelled the Confederates to evacuate Columbus and Bowling Green. With the rank of major-general, he was engaged at the battle of Pittsburg Landing, or Shiloh, and at the siege of Corinth, being second in command under General Halleck, he led in person the final charge which secured the victory at Pittsburg Landing. In December of the same year he was appointed to supersede General Halleck, who had failed before Vicksburg. By this time he had shown a capacity for strategical combinations which pointed him out as a fitting commander for large armies. In the summer of 1863, he fought a series of five great battles near Vicksburg, which he finally captured on the 14th of July, thereby ensuring the fall of Fort Hudson, and the re-opening of the Mississippi. After defeating General Bragg at Chickamauga, he was appointed (October, 1863) to supersede General Rosecranz, who had been baffled at that place, as commander of all the armies of the West. At length, in March, 1864, he reached the highest point of military distinction, being made commander-in-chief of all the armies of the United States. During this year he fought the terrible campaign against Lee in Virginia, the two generals obstinately contesting every inch of ground near the rivers James, Potomac, and Rappahannock, and on the various roads leading to Richmond. This was followed by the crowning scene, the surrender of Lee, his army, and the city of Richmond, April 9th, 1865,—the virtual termination of the war. When

General Grant visited New York, soon afterwards, he was received with the utmost enthusiasm. During the next two years he did not take a prominent part in politics, being averse to the extreme measures advocated by some of the Northern leaders in relation to the re-organisation of the South, of which Congress had made him military governor. He became, however, Minister of War in 1867, after the dismissal of Mr. Stanton. In the following year, without solicitation on his part, he was nominated Republican candidate for the presidency. His candidature was well received, and he was elected by a large majority in November, 1868; Mr. Colfax being chosen Speaker or Chairman of the Senate, and, as such, Vice-President of the United States. At his installation, in July, 1869, President Grant disclaimed party government; and, in relation to various proposed reforms, observed, "I know no more effective mode of ensuring the repeal of obnoxious laws than their strict execution." During the first year of his Presidency, his government announced their determination to pay the national debt in specie; he rapidly reduced the debt; sent a fleet of observation to Cuba; bestowed some civil appointments under government upon negroes; facilitated the gradual re-admission of the Southern States into the Union; and witnessed the opening of a direct railway, more than 3,000 miles long, from the Atlantic to the Pacific, across the entire breadth of North America, and every inch of it within the territory of the United States. When the war broke out between France and Germany, in July, 1870, President Grant announced his friendly relations towards both belligerents, and his determination to observe neutrality between them. Generally, indeed, his policy appears to be characterised by reserve, narrowness, and the resort to expedients, rather than by breadth and clearness of view and largeness and firmness of purpose. As a civil governor or statesman President Grant is not likely to reach the high rank he has secured as a military commander. His popular influence appears to have been for some time on the wane. Few living men have had so many memoirs of them published as President Grant. The names of Abbott, Badeau, Brisban, Brockett, Cannon, Coppee, Crafts, Dye, Denning, Dana, Havland, Headley, Mansfield, Penniman, Phelps, Lossing, Richardson, Willett, Wilson, fail to exhaust the list of the authors of these memoirs, nearly the whole of which, however, relate to the military achievements of the general.

* GRANVILLE, GRANVILLE GEORGE LEVESON GOWER, EARL [E. C. vol. iii. col. 170]. Lord Granville, who in 1857 obtained the distinction of K.G., continued in his office of Lord President of the Council until February, 1858, and was re-appointed to the same in June, 1859, retiring from it on the downfall of the administration of Earl Russell in June, 1866. He acted as chairman of the commission for the Great Exhibition of 1862. As leader of the Liberal party in the House of Lords, he displayed, in addition to his traditional courtesy, the qualities of firmness and skill; and especially distinguished himself, on the occasion of the introduction of the Suspensory Bill, for the conciseness and comprehensiveness with which he summarised the arguments against the Irish Church. In December, 1868, he returned to office as Secretary of State for the Colonies, in the administration of Mr. Gladstone, in which capacity he continued to carry out the policy of his recent predecessors by withdrawing Imperial troops from Canada and New Zealand, and successfully combated Earl Russell's motion for a committee on colonial administration. On the death of the Earl of Clarendon, Lord Granville was designated by universal opinion as the fittest successor to the deceased Secretary of State for Foreign Affairs; and in this capacity he has had opportunities of vindicating in the House of Lords the course of the English Government with reference to the questions raised by the war between France and Germany, and of replying with logical tact and dignity to the sometimes querulous expostulations contained in the despatches of Count Bernstorff, the minister in London of the North German Confederation, who was aggrieved by a neutrality which he regarded as being practically antipathetic to Germany. His reply, November 10, 1870, to the circular of Count Gortschakoff announcing that the Emperor and Government of Russia no longer hold themselves bound by the Treaty of 1856, has likewise met with general approval alike for the clearness and force of its reasoning and for the firmness, dignity, and courtesy of its language.

Earl Granville's first wife died in 1860, and on the 26th of September, 1865, he married Castalia Rosalind, the youngest daughter of the late Walter Frederick Campbell, Esq., of Islay, N.B.

GRATIOLET, LOUIS PIERRE, physiologist, was born at Sainte Foy, department of Gironde, July 6, 1815. In 1839 he went to Paris, and attended successively at the Stanislas College, at the École de Droit, and the École de Médecine. In 1839 he became a student in the hospitals. In 1842 he was admitted into Blainville's laboratory. In 1845 he took his degree of doctor. In the next few years he constantly acted as Blainville's and Duvernoy's substitute, and as such delivered courses of lectures on comparative anatomy and biology. In 1854 he was appointed assistant naturalist for comparative anatomy in the Museum of Natural History. On the death of I. G. Sainte-Hilaire he acted as a substitute, and in Nov. 1863, was appointed his successor as professor of anatomy, comparative physiology, and geology at the Sorbonne. Having thus gained a position in which he could turn his previous years of hard labour to account, and having established a high reputation as a deep thinker and as an eloquent lecturer, he was suddenly struck with apoplexy, which caused his death, Feb. 16, 1865. He was buried with public honours, and his family provided for by the State. The subject to which he gave most attention, and upon which he is considered to be one of the highest authorities, is the structure and functions of the brain of man and mammals, but he also made researches in various other departments of anatomical science. His best known memoirs are 'Mémoire sur les plis cérébraux de l'homme et des primates,' 4to, Paris, 1855; 'Études anatomiques sur la Térébratule australe,' in 'Journ. de Conchyliologie,' ii. pp. 209—258 (1857); 'Recherches sur l'organisation de système vasculaire dans la Sanguie médicinaire et Aulastome vorace,' in 'An. des Sci. Nat.' xvii. pp. 174—225 (1862); and in conjunction with M. Alix, 'Recherches sur l'Anatomie du *Troglodytes Aubryi*, Chimpanzé d'une espèce nouvelle,' in 'Nouvelle Archives du Mus. d'Hist. Nat.' ii. pp. 1—264 (1866).

* GRATRY, AUGUSTE JOSEPH ALPHONSE, a French theologian, was born at Lille on the 30th of March, 1805, and after a course of study at the École Polytechnique, entered somewhat later than usual upon an ecclesiastical career. In 1841 he was appointed director of the Collège Stanislas, and in 1846 was made almoner to the École Normale Supérieure, a post which he quitted in 1862 for the purpose of devoting himself, jointly with the Abbé Petetot, to the reconstruction of the order of the Oratorians of the Immaculate Conception. He became, in 1861, vicar-general to M. Dupanloup, Bishop of Orleans; and on the 28th of October, 1863, was appointed to the professorship of evangelical morality at the Sorbonne. M. Gratry received the decoration of the Legion of Honour on the 27th of April, 1845; and in 1867 was elected a member of the Académie Française, into which he was formally received in March, 1868.

His works comprise 'Catéchisme Social; ou, Demandes et Réponses sur les Devoirs sociaux,' 16mo, Paris, 1848; 'Lettres et Répliques à M. Vacherot,' 8vo, Paris, 1851; 'Philosophie Logique,' 2 vols. 8vo, Paris, 1855, fifth edition, 8vo, Paris, 1868; 'Philosophie. De la Connaissance de Dieu,' fifth edition, 2 vols. 8vo, Paris and Saint-Germain, 1856; 'Philosophie. De la Connaissance de l'Âme,' second edition, 2 vols. 8vo, Paris, 1857; 'La Philosophie du Credo,' 8vo, Paris, 1861; 'Les Sources: Conseils pour la Conduite de l'Esprit,' 12mo, Paris, 1861; 'La Paix. Méditations Historiques et Religieuses,' 8vo, Paris, 1861; 'Crise de la Foi: trois Conférences philosophiques de Saint-Étienne du Mont,' 1863, 12mo, Paris, 1863; 'Jésus-Christ. Réponse à M. Renan,' second edition, 12mo, Paris, 1864; 'Les Sophistes et la Critique,' 8vo, Paris, 1864; 'Description des Appareils de Maçonnerie les plus remarquables employés dans les Constructions en brique,' 8vo, Paris and Brussels, 1865; a Biography of 'Henri Perreyne,' 8vo, Paris, 1866; 'Petit Manuel de Critique,' 12mo, Paris, 1866; 'La Morale et la Loi d'Histoire,' 2 vols. 8vo, Paris, 1868.

GRAVATT, WILLIAM, was born at Gravesend, Kent, July 14, 1806. His father, Colonel Gravatt, R.E., having been appointed Inspector of the Royal Military Academy, settled at Woolwich, where William studied military and civil engineering. He entered the works of Messrs. Donkin and Co., and was employed for some time at the Thames Tunnel. In 1832 he became engineer to the Calder and Hebble Navigation at Halifax. In 1833 he was elected a fellow of the Royal Society. About this time he invented the level which bears his name, and introduced the system of reading the staff with the telescope instead of trusting to the staff-bearer, a method of working which has superseded other modes of observation. He also contrived an instrument called a Nadir for carrying out a system of levels where a regular staff of assistants cannot be had. In 1844, when

MM. Scheutz brought their calculating machine to this country, Gravatt announced its arrival to the Royal Society, and undertook to explain it; he also visited Paris for the same purpose, and superintended the publication of a volume of Specimen Tables. In 1856 he read a paper before the Royal Society on the gyroscope, and also published a pamphlet on the propulsion of ships by means of a jet of water. Mr. Gravatt died 30th May, 1866, through the accidental administration of an excessive dose of morphia.

* GRAVES, CHARLES, D.D., Bishop of Limerick, was born in Dublin, November 16, 1812. The grandson of Thomas Graves, Dean of Ardfurt, his views were early directed to the church. He entered Trinity College, Dublin, in 1829; won a scholarship in 1832; graduated with honours, and took the gold medal for mathematics in 1834. In 1836 he was elected Fellow of Trinity, and shortly after took orders. His early distinctions were mostly mathematical. His translation of Chasles's memoir on conic sections, with an appendix by himself on spherical coordinates, was adopted as a college class book. In 1843 he was appointed professor of mathematics, and his lectures on the higher branches of algebra and mathematics, including the calculus of operations, excited much admiration. Dr. Graves was a prominent and active member of the Royal Irish Academy, and for several years its secretary. His contributions to its proceedings are numerous and important. Several are on arcs of curves and other refined mathematical theorems; but of more general interest are those on Ogham inscriptions, and other obscure questions in Irish antiquities, on all of which he is a leading authority, and which he has done excellent service in elucidating. A pamphlet he wrote respecting the publication of the Breton Laws, led to the appointment by the government of a Commission for the Publication of the Antient Laws and Institutes of Ireland, of which he is a member, and has been the secretary from its origin. In 1860 he was nominated dean of the chapel-royal, and subsequently chaplain to the household of the lord-lieutenant, and dean of Clonfert. In November, 1866, he was consecrated bishop of the united dioceses of Limerick, Ardfurt, and Aghadoe.

* GRAY, ASA, M.D., a celebrated American botanist, was born at Utica City, New York, November 10, 1810. He studied medicine and graduated at Fairfield College in 1831. He afterwards settled in practice, but having acquired a taste for botany, he studied this science under Professor Torrey at New York. In 1834 he joined the United States exploring expedition as botanist, but resigned this position in 1837, having accepted the professorship of natural history at the University of Cambridge, Massachusetts. Professor Gray has laboured most assiduously at the flora of his native country. His botanical papers are scattered throughout the pages of scientific journals and transactions of societies of the United States, especially the 'Annals of the Lyceum of Natural History of New York,' the 'Transactions of the American Philosophical Society,' and the 'Smithsonian Contributions to Knowledge.' In 1836 he published an introductory work entitled 'Elements of Botany.' This was enlarged in subsequent editions, and was called 'The Botanical Text-Book,' and is extensively employed as a class book in the colleges of America. In the fifth edition, which was published in 1858, and illustrated with over 1300 woodcuts, the title was altered to 'Introduction to Structural and Systematic Botany and Vegetable Physiology.' In conjunction with Dr. Torrey, he commenced in 1838 the publication of 'The Flora of North America.' This work, which contains descriptions of a very large number of new plants, is still in the course of publication. The constantly extending boundaries of the United States into districts of an entirely new character give to this work great importance in relation to the history of the whole vegetable kingdom. In 1848 Professor Gray published a work of less magnitude, embracing descriptions of the plants of the northern states of America, under the title of 'Manual of Botany for the Northern United States.' A second and greatly extended edition of this work appeared in 1856 under the title 'Manual of Botany of the Northern United States; second edition; including Virginia, Kentucky, and all the rest of the Mississippi: arranged according to the Natural System (the Mosses and Liverworts by Wm. S. Sullivan), with 14 plates, illustrating the genera of the Cryptogamia.' He has also published an illustrated botany of the United States, under the title 'Genera Borealia Americana illustrata,' 3 vols. New York, 1848—66. In this work one species of each genus is figured. The extent of the flora of America forbids the possibility of illustrating every species, as has been done so successfully for

many of the limited districts of Europe, as, for instance, the plants of Great Britain. His later works are 'Botany for Young People and Common Schools. How Plants Grow, or Scientific Introduction to Structural Botany. With a Popular Flora, or an Arrangement and Description of Common Plants, both wild and cultivated. Illustrated by 500 wood engravings,' 4to, New York and Chicago, 1867; 'Manual of the Botany of the United States,' second edition. Professor Gray's knowledge of vegetable physiology is extensive, and few men in America have made a more decided impression on contemporary science.

* GRAY, GEORGE ROBERT, ornithologist, was born at Little Chelsea, July 8, 1808. He is a brother of Dr. J. E. Gray, and after studying zoology for several years in the British Museum, he obtained an appointment in the zoological department of that establishment in 1839. He has written numerous papers on butterflies and birds in the 'Annals and Magazine of Natural History,' 'Proceedings of the Zoological Society,' and the 'Zoologist;' but he is best known for his large work entitled 'Genera of Birds,' 1844—49, which embraces a description of most of the genera of birds then known, with lists of the species, and accompanied by 350 plates by D. W. Mitchell. His classification, which is a modification of that by Vigors, has been adopted by many subsequent authors. His numerous lists of birds and lepidoptera in the British Museum have been exceedingly valuable to zoologists. In 1869 he was made assistant keeper in the zoological department of the British Museum.

GRAY, HENRY, anatomist and physiologist, was born about 1823. He was lecturer on anatomy at St. George's Hospital, and in 1852 was elected a fellow of the Royal Society. His writings were not numerous, but the more important won for him a high reputation in his profession. They include a paper 'On the Development of the Ductless Glands in the Chick' ('Phil. Trans.' pp. 295—310, 1852), and another 'On the Structure and Use of the Spleen,' for which he was awarded the Astley-Cooper prize in 1854. His principal independent work is 'Anatomy, Descriptive and Surgical,' 8vo, 1858, fifth edition, 1869. He also contributed several articles to 'A System of Surgery,' edited by T. Holmes. He died June 8, 1861.

GRAY, STEPHEN, a name famous in the early history of electricity; but so little is known of the man that the date of his birth is not ascertained, nor even the correct spelling of his name, for Priestley ('History of Electricity') has it Grey, and Thomson ('History of the Royal Society') spells it Gray. Thomson laments the paucity of biographical information respecting him, and says: "From some observations made by Desaguliers, it appears that his character was very particular, and by no means amiable." Priestley refers to him as "a pensioner at the Charter House," and adds: "No person who ever applied to this study was more assiduous in making experiments, or had his heart more entirely in the work. This will appear by the prodigious number of experiments he made, and some considerable discoveries with which his perseverance was crowned; as well as by the self deceptions to which his passionate fondness for new discoveries exposed him."

Gray's most important discovery was, that all material substances may be reduced, so far as regards electrical phenomena, into two classes, electric and non-electrics, the former including all bodies then supposed to be capable of electric excitation by friction, and the other those which were incapable of it. He also found that non-electrics were capable of acquiring the electric state by contact with excited electrics. His experiments also led to the division of bodies into conductors and non-conductors. He likewise discovered the fact which afterwards led to the principle of induction. Du Fay saw the value of these experiments, and was one of the first to profit by them.

Gray became a fellow of the Royal Society in 1732, and died in London 15th February, 1736.

GREATRAKES, or GREATERICK, VALENTINE, celebrated as a pretender to the art of healing by manipulation, was born on the 14th of February, 1628, at Affane, in the county of Waterford, and received his early education at the Grammar School of Lismore. Being obliged to take refuge from the rebellion which broke out on the 23rd of October, 1641, his mother, who was the daughter of Sir Edward Harris, and at that time a widow, took refuge in England with her son, who, for five or six years, prosecuted his studies in Devonshire, under the guidance of a German clergyman, then settled in that county. Returning to Ireland, Greatrakes found it distracted by ecclesiastical and polemical disputes, and spent a year of contemplative brooding and retirement at the Castle of Caperquin. In 1649 he entered the service of the Parliament by accepting a lieutenant's com-

mission in the cavalry regiment under the command of the Earl of Orrery; and when this was disbanded in 1656, he retired to his ancestral residence at Affane. He was made clerk of the peace of the county of Cork, registrar for transplantation, and justice of the peace; all which places he forfeited, however, at the Restoration in 1660. About the year 1661, he began the practice of touching for the king's evil, in obedience to what he professed to be a divine impulse. After a successful treatment, extending over three years, of this single disease, another divine impulse gave him a like power over the ague, then violently epidemic in his neighbourhood; and this, according to a third divine impulse, April 2nd, 1665, was expanded into a general gift of healing. His patients, whom he treated gratuitously, thronged to him in great numbers from all parts of Ireland; and some even from England—among these being Flamsteed, the astronomer, who writes ('Autobiography,' p. 16):—"I was stroked by him all over my body, but found as yet no amends in anything but what I had before." At the request of the Earl of Orrery, Greatrakes came over to England, where, at Hagley and Worcester, he performed a great variety of cures. He did not claim a uniformity of success, however, and he confessed when any case was too much for his skill or his divine commission. His method of cure was that of stroking, which was affirmed to be especially efficacious in that class of disorder which he believed to arise from the presence of evil spirits, who could not endure the touch of his hand, or even of his glove. He was summoned from Worcester to attend upon the king at Whitehall; after which, he stayed for some time in London for the exercise of his gifts. The year in which Greatrakes died has not been ascertained, but it has been affirmed that he was living in Dublin in 1681. His pretensions, of course, gave rise to much discussion; and one unsuccessful attempt to work a cure occasioned the publication, by Mr. David Lloyd, reader to the Charter-house, of a pamphlet, entitled, 'Wonders no Miracles; or, Mr. Valentine Greatrakes' Gift of Healing examined, upon occasion of a sad Effect of his Stroking, March the 7, 1665, at one Mr. Cresset's House in Charter-house Yard,' 8vo, London, 1666. This brought forth from Greatrakes 'A Brief Account of Mr. Valentine Greatrakes, and Divers of the Strange Cures by him lately performed. Written by himself in a Letter to the Honourable Robert Boyle, Esq. Whereunto are annexed the Testimonials of several eminent and worthy Persons of the chief Matters of Fact therein related,' 8vo, London, 1666. The testimonials thus referred to were from Mr. Boyle, Sir William Smith, Sir Nathaniel Hobart, Sir John Godolphin, Dr. George Rust, dean of Connor, Dr. Wilkins, Bishop of Chester, Dr. Whichcot, Dr. Henry More, and Dr. Ralph Cudworth, as well as from a number of physicians, as, for instance, Drs. William Denton, James Fairclough, and Albertus Otto Faber. A more full voucher for the validity of Greatrakes' cures was afforded by a provincial physician, Dr. Henry Stubbe, of Stratford-on-Avon, who, in the form of a Letter to the Honourable Robert Boyle, published 'The Miraculous Conformist; or an Account of severall marvellous Cures performed by the Stroking of the Hands of Mr. Valentine Greatarick; with a Physicall Discourse thereupon,' 8vo, Oxford, 1666.

* GREELEY, HORACE, American journalist, was born at Amhurst, New Hampshire, February 3rd, 1811. The son of a farmer, he was employed at farm-work in the intervals of attending a district school. The bankruptcy of his father in 1820 led to his being apprenticed to a printer, with whom he remained five years. In 1826 he obtained employment in the office of the Vermont 'Spectator' newspaper; and was gradually entrusted with the condensing of paragraphs, and similar duties. After a time, he began to set up paragraphs and articles of his own, without writing them. This paper being discontinued in 1830, Greeley went to New York, where he worked as a journeyman printer; and in 1833 became partner in a firm of printers, Greeley and Story. They started the 'New York Morning Post,' the first cheap New York daily paper, at 2 cents. per copy. In 1834 commenced a weekly newspaper, the 'New Yorker,' with Mr. Greeley as editor. After this, for short periods, and with slight success, he carried on the 'Jeffersonian' and the 'Log Cabin.' In 1841 appeared the first number of the 'New York Tribune' newspaper, which, for nearly thirty years, has occupied his chief attention, and has become of great influence in the United States. The number of subscribers increased from 500 to 11,000 in two months; in recent years the circulation has reached 30,000; while two abridged editions, weekly and bi-weekly, command a much higher sale. The 'Tribune' is the chief American organ of Fourierism or socialism; and has persistently

advocated temperance, woman's rights, negro freedom, and the abolition of capital punishments. In 1848 Mr. Greeley entered Congress for a short time, but failed to attain any decided position. In 1851 he visited London, and served as one of the jurors at the Great Exhibition. His advocacy is believed to have secured the election of Mr. Lincoln, instead of Mr. Seward, as president, in 1860. At the outbreak of the civil war, he maintained, in the columns of the 'Tribune,' the doctrine that the Slave States had a right, by the declared principles of the Constitution, to secede from the Union if they chose so to do; but when fighting once began, he advocated the cause of the North with unswerving firmness. After the war was over, he counselled moderation on the part of the victors, and deprecated some of the prosecutions which were commenced.

GREEN, JOSEPH HENRY, D.C.L., an eminent surgeon and anatomist, was born in 1800. Having passed with success through the usual course of study in England, he visited Germany, made himself acquainted with the opinions and methods of the best surgeons, and studied the language and current philosophy, especially that of Tieck, which he continued to cultivate throughout his life. He ultimately established himself in practice at 22, Lincoln's Inn Fields, where he quickly won the confidence of the leaders of the profession. For some time he was associated with Sir Astley Cooper at St. Thomas's Hospital. Being appointed to deliver the Hunterian Oration before the Royal College of Surgeons in 1840, he selected for his subject, "Vital Dynamics," and the novelty of the combined metaphysical and physiological views attracted much attention, and led to its separate publication, 8vo, 1840. He again delivered the Hunterian Oration in 1847, and he contributed some anatomical and other papers to the scientific journals. Mr. Green was elected fellow of the Royal Society in 1825, and was also a fellow of the Geological and other scientific societies; and was for several years vice-president, and in 1858 president, of the Royal College of Surgeons. During many years he was professor of anatomy to the Royal Academy. But high as was his professional standing, he will perhaps be longest remembered by his friendship with Coleridge, who regarded him not only as a warm personal friend (and his portrait hung over the chimney-piece of the poet's bed-room at Highgate), but as his disciple and successor in philosophy. Green edited some of Coleridge's posthumous works, but he left unaccomplished the memoir of the poet, and the account of his philosophy, which it was understood he proposed to write. A work embodying his own views on the Intellectual Faculties, First Principles in Philosophy, the Truths of Religion, and the Idea of Christianity in relation to Controversial Theology, avowedly founded on the doctrines of Coleridge, appeared posthumously under the title of 'Spiritual Philosophy; founded on the teaching of Samuel Taylor Coleridge. Edited, with a Memoir, by John Simon,' 8vo, 1866. Mr. Green died at his residence, Hadley by Barnet, on the 13th of December, 1863.

GREENOUGH, GEORGE BELLAS, geologist and physical geographer, was born in 1778. By birth his name was Bellas, but his father dying when he was young, his maternal grandfather took charge of him, and left him his fortune, with a request that he should add the name Greenough to his own. He was educated at Eton, Cambridge, Göttingen, and Freiberg. He went to Göttingen for the purpose of studying law, but Blumenbach's lectures induced him to adopt natural history as his study. He went to Freiberg, and attended Werner's lectures on mineralogy, whose views he warmly advocated. He then travelled through various parts of Germany, Italy, and England. From 1801 to 1807 he was an active member of the Royal Institution. From 1807 to 1812 he sat as M.P. for Gatton, but he was more occupied in scientific matters than in parliamentary proceedings. In 1807 he collected a number of geologists together, and established the Geological Society, but the new society was opposed in every possible way by Sir J. Banks and some of the leading fellows of the Royal Society, who thought it would impair the dignity of their society. Many of Greenough's associates withdrew their names, and the Geological Society was almost annihilated. Greenough, however, persevered in his efforts to give it a status by removing the hostile feeling against it. The Royal Society proposed to make the Geological a branch of their own, but this was rejected. At length, in 1811, the new society was fully established, and Greenough was made the first president. In 1818 he was again president, and from 1833 to 1835 he served for the third time. Greenough was always busy collecting notes, which ultimately filled many volumes of manuscript, but he wrote little of much importance,

beyond his presidential addresses. His life was mainly spent in organizing and promoting the welfare of scientific societies. He took an active share in founding the British Association for the Advancement of Science, and assisted in the business of most of the scientific institutions of London. He was a skilful constructor of maps, and several which he published were the result of many years' labour. The most important are the 'General Sketch of the Physical Features of British India,' which was commenced in 1843, and completed in 1854, when it was published; and his 'Geological Map of England and Wales.' He had formed a fine collection of maps, as also of geological books, which he left to the Geological Society. The maps embody a large amount of labour by him in the form of additions and corrections. While travelling in Italy, he was attacked with dropsy, and died April 2, 1855.

* GREGORY, CHARLES HUTTON, civil engineer, son of Dr. Olinthus Gregory, the mathematician [GREGORY, OLINTHUS G., E. C. vol. iii. col. 193], was born in 1817, and was educated at a private school. After serving an apprenticeship to Timothy Bramah as a mechanical engineer, he became assistant to Mr. Robert Stephenson in the construction of the Manchester and Birmingham Railway; and then served in a similar capacity under Mr. James Walker, at that time engaged in some engineering works at Woolwich Dockyard. For some years, commencing with 1840, he was resident engineer of the London and Croydon Railway; conducted difficult operations in widening and improving the line without impeding the traffic of the Brighton and South Eastern Companies; and constructed the Croydon and Epsom line. In 1846 he succeeded Mr. Brunel as engineer-in-chief of the Bristol and Exeter Railway; and laid out many lines in the west of England. From 1855 to 1858 he was a member of the Ordnance Select Committee. He has been much employed by the Postmaster-General in arbitrating between the General Post Office and some of the railway companies, in disputed questions relating to the charge for carrying mails. He is engineer of the Somerset Central and Dorset Central Railways. In foreign countries, either as engineer-in-chief or consulting engineer, he has been concerned in the construction of the Pernambuco Railway, the Ceylon Railway, the Bezières and Graissessac Railways, and the draining of Lake Fucino in Italy. In 1869 Mr. Gregory was elected president of the Institution of Civil Engineers.

GRENVILLE, or GREENVILLE, SIR RICHARD, a famous Elizabethan soldier and seaman, was of the elder branch of the Cornwall Grenvilles, and was born in 1540 at Kilkhampton, on the Devon border. At the age of sixteen he joined as a volunteer the army of Hungary, at that time engaged in war with the Turks. On his return to England, he obtained the command of a body of troops sent to quell disturbances in Ireland; and was made sheriff of Cork. After this he was member of parliament and high sheriff for the county of Cornwall. A new career was opened to him by the example of his brother-in-law, Sir Walter Raleigh: who, notwithstanding the failure and death of Sir Humphrey Gilbert, determined to discover new lands in foreign parts, with that kind of private ownership which was in fashion in those days. Queen Elizabeth gave Raleigh a charter of discovery, empowering him to take possession of all lands he might discover in the new world, lying between 33° and 40° N. lat. (nearly equivalent to the region between the present Charleston and Philadelphia). Raleigh, who associated Grenville with himself in this venture, sent out two vessels, under the command of Captains Amidas and Harlow. They started April 27th, 1584, and returned in the following September, bringing with them a glowing account of the new land which they had seen, and which was at once named Virginia in honour of the virgin queen. Sir Richard Grenville then resolved to head a second expedition in person. Seven ships were fitted out, with all the necessities and some of the comforts for 108 colonists, who accompanied him. Setting sail from Plymouth on the 9th of April, 1585, he visited Porto Rico, San Domingo, and other islands and coasts of the new world; engaging in conflict with some of the natives, but establishing friendly relations with others. Leaving his settlers at a spot selected on the Roanoke, with Ralph Lee as governor, he set sail in August to return to England; on his way he captured a Spanish treasure-ship, which he brought as a prize into Plymouth. He went on another voyage to Virginia in 1586, with three ships; and found that the colonists, after fighting with the natives, had left the place and joined Drake (afterwards Sir Francis). Other colonists were left there, with provisions for a year, additional food being sent to them in 1587; and these were

the real pioneers of the English settlement of Virginia. In 1558, Grenville, in anticipation of the invasion of England by the Spanish Armada, took part in the defensive measures adopted; he was appointed member of the council of defence, and vice-admiral. In 1591 he was sent with a small squadron of six vessels, under Lord Thomas Howard, to intercept the Spanish bullion fleet. Near the Azores he fell in with fifty-three Spanish ships, having ten thousand soldiers on board. He achieved much, but was overpowered by numbers, defeated, received a mortal wound, and died three days afterwards, with his last breath thanking God that he had fallen in defence of his queen and country.

GRÈVE, ANTOINE, civil and hydraulic engineer, was born at Herrkendam, near the Maas, in Holland, November 12th, 1796. From early years he was associated with the surveying and engineering duties connected with the dykes, canals, and drainage of his native country; first in the college at Maastricht, then under a government surveyor, then as a member of the corps of surveyors. As engineer-surveyor of the first class, he assisted M. Hoogstraten in executing works at the mouths of the Maas; next fulfilled partial military duties with the army; then entered the office of the Inspector-General of Works, where he was engaged in large maritime works near Helder, in constructing the ship-canal from Amsterdam to the sea, and the canals of Huninhoek and Zederik. In 1825, as engineer of roads and bridges, he constructed a canal across the island of Voorne, in which he first introduced a new kind of flying bridge which he had invented, economical, but effective; and during many years he was engaged, in this office, in superintending various government works in South Holland. In 1834 he became engineer of the first class. In February, 1841, the rupture of a dyke and river wall at Gorinchem necessitated the adoption of prompt measures, which, for a time, placed his life in no small peril. In 1849 he received the Order of the Lion of the Netherlands from the king, and two gold medals from the Batavian Philosophical Society, for his skilful management of those public works. The same year witnessed the publication of his paper, 'Verhandeling over de Stoombemaling van Polders en droogmakerijen,' and two years later another paper, 'Verhandeling over het Zeegat van Goedereede,' in the 'Nederlandsche Verhandelingen.' In 1852 he received the appointment of engineer-in-chief of the second class, and soon afterwards that of engineer-in-chief of the first class, the head of the profession in a country where civil engineering is regarded with especial favour. One great work by him was the reconstruction of the locks of Mollegatsluis, near Gouda. As a member of the Town Council of the Hague, he advocated and introduced many public improvements. He died on the 15th of December, 1857. M. Grève was a member of the Batavian Philosophical Society, of the Royal Engineers of Holland, and of the Institution of Civil Engineers in England.

GREVILLE, ROBERT KAYE, botanist and philanthropist, was born at Bishop Auckland, Dec. 13, 1794. He studied at Edinburgh and London for the medical profession, but as he was possessed of independent means, he did not try for a degree, but resolved to devote himself to botany, to which science he had given much attention from a very early period of his life. He gave lectures on zoology and botany at the University of Edinburgh, and formed large collections, both botanical and zoological, which were purchased by the university. Towards the latter part of his life, altered circumstances induced him to resort to landscape-painting as a profession, but he still continued his botanical studies, the *Diatomaceae* being the principal object of his attention up to the last. He was an active social reformer, took a prominent share in repressing slavery in the British colonies, and was a member of numerous scientific associations. He assisted Sir W. J. Hooker in his 'Icones Filicum.' He published 'Flora Edinensis,' 8vo, 1824; 'Scottish Cryptogamic Flora,' 6 vols. 8vo, 1823-1827; and 'Algæ Britannicae,' 8vo, 1830. He also wrote numerous papers, mostly on the cryptogamic plants. He died June 4, 1866.

GRËW, NEHEMIAH, botanist, was born at Coventry about 1628. Having received his medical degree, he established himself at Coventry. In 1672 he removed to London, became a fellow of the Royal Society, contributed to it a paper on the structure of plants, and in 1677 became its secretary. He wrote several works, but the most important are the 'Anatomy of Vegetables, of Roots, and of Trunks,' 83 plates, fol. London, 1682. This work gave a considerable impetus to botany, and contains numerous novel observations on the structure and relations of the various parts of the seed, and on the various forms of pollen; indeed, he may be regarded as one of the pioneers of micro-

scopical research into plant structure. He also wrote a catalogue of the Royal Society's Museum; 'Museum Regalis Societatis' 1861; 'Cosmographia Sacra,' fol. 1701; and a few other works. He died in London, March 25, 1711.

* GREY, RIGHT HON. SIR GEORGE, BART. [E. C. vol. iii. col. 201]. Sir George Grey retained the post of Secretary of State for the Home Department till the resignation of Lord Palmerston's ministry, in March, 1858. When Lord Palmerston returned to office in June, 1859, Sir George Grey was made Chancellor of the Duchy of Lancaster, with, of course, a seat in the Cabinet; but on the re-arrangement of the secretaryships consequent on the death of Lord Herbert of Lea, August, 1861, he again became, for the third time, Home Secretary, and held the office till the disruption of the Whig Government in July, 1866. Sir George Grey was not included in the ministry of Mr. Gladstone, December, 1868. At the last election he was again returned member for Morpeth without opposition.

GRIFFIN, GERALD, Irish novelist, was born in Limerick city, December 18, 1803. At the age of seventeen he was left at Adare, under the charge of an elder brother, their parents having emigrated to America. Gerald soon began to send short poems and essays to the Limerick journals, with sufficient success to induce him to adopt a literary career. He went to London in 1823, taking with him a tragedy, called 'Aguire;' but he failed to find a publisher who would purchase it, or a manager who would put it upon the stage. He wrote another tragedy, 'Gisippus,' which met with like disregard. He now took to reporting, writing for the newspapers and periodicals, and gradually prepared himself to venture on distinct novels. He began in 1827 with 'Holland Tide.' This was followed soon after by 'Tales of the Munster Festivals,' a work which attracted much attention, on account of its vivid delineation of the character and habits of the Irish peasantry. In 1828 appeared the 'Collegians,' on which the popular drama of the 'Colleen Bawn' has recently been founded. Then followed 'Tales illustrative of the Five Senses,' in 1830; and at various dates, 'The Duke of Monmouth,' 'The Invasion,' 'The Rivals,' 'The Kelp Gatherers,' 'The Day of Trial,' 'The Beautiful Queen of Leix,' 'The Half Sir,' 'A Story of Psyche,' 'Tales of the Jury Room,' 'The Voluptuary Cured,' 'The Young Milesian,' and many minor tales. Mr. Griffin joined the Society of Christian Brethren in 1838, and died in the North Monastery, Cork, on the 12th of June, 1840. Two years after his death, his play of 'Gisippus' was brought out at Drury Lane Theatre by Mr. Macready with a certain success, but was soon withdrawn, and has not been revived. Griffin's collected works were published after his death, in ten volumes, and again in 1857 in eight volumes, with a memoir of him, by Daniel Griffin.

GRIMM, JAKOB LUDWIG CARL [E. C. vol. iii. col. 209]. This great philologist died at Berlin on the 20th of September, 1863, aged 78 years.

GRIMM, WILHELM CARL [E. C. vol. iii. col. 210]. Wilhelm Grimm, though a year younger than his brother, pre-deceased him by nearly four years, dying at Berlin on the 16th of December, 1859.

GRINDAL, or GRYNDALL, EDMUND, an English prelate of the 16th century, was born in or about the year 1519, at Hensingham, in the parish of St. Bees, Cumberland; and was educated at the University of Cambridge, where he was successively a member of Magdalen and Christ's Colleges, and of Pembroke Hall. He took his B.A. degree in 1538, and became a fellow of Pembroke; proceeded M.A. in 1541; B.D. in 1549; and D.D. on the 16th of April, 1564. On the 4th of July, 1544, he was ordained on a college title by Bird, Bishop of Chester. He served as senior proctor of the university in 1548; and on the 24th of March, 1549, was appointed Lady Margaret preacher, and in the same year became president of his college. He was made chaplain to Ridley, Bishop of London, by whom he was collated to the precentorship of St. Paul's on the 24th of August, 1551. In December, 1551, he became one of the king's chaplains; and having, in June, 1552, obtained a licence to preach, was installed on the 28th of the following month as a canon of Westminster. Being deprived of his ecclesiastical preferments on the accession of Mary, in 1553, he retired to Germany, and contracted a friendship with several of the continental reformers. The death of the queen opened a way for his return to England; and he arrived in London on the day of the coronation of Elizabeth, January 15th, 1559. On the 24th of February he preached before her majesty; and in March assisted at a solemn conference at Westminster between eight Popish and as many Protestant

divines. He was likewise employed in the revision of the Book of Common Prayer; and on the 19th of July was appointed one of the commissioners to put into execution the act for the uniformity of Common Prayer, and proceeded to the north to inspect the cathedrals there, and to inquire into the manners of the clergy and the state of religion generally. On the 20th of July he was elected to the mastership of Pembroke Hall, to which he was admitted by proxy on the 3rd of August, having on the 26th of July been elected to the bishopric of London, to which he was consecrated at Lambeth on the 21st of December, 1559. On the 8th of January, 1560, he preached at St. Paul's Cross; and was soon afterwards nominated by the Dutch Church in London to be their superintendent. He preached before the queen on Good Friday, March 27th, 1562; and in May of the same year resigned the mastership of Pembroke Hall, where, during the whole term of his incumbency, he had never once been in residence. On the 3rd of October, 1564, Bishop Grindal assisted at St. Paul's at the celebration of the funeral of the Emperor Ferdinand of Germany, in accordance with a custom retained from pre-Reformation times, which sanctioned the solemn performance of the funeral office, as if the corpse had been actually present. Upon this occasion he preached, and afterwards published, 'A Sermon [on Matthew xxiv. 44] at the Funeral Solemnitie of Prince Ferdinandus, the late Emperour, of most famous Memorye, holden in the Cathedrall Church of Saint Paule in London,' &c., 4to, London, 1564, Latin translation, by John Fox—whom, when they were both at Strasburg, the author had assisted in the compilation of his 'Acts and Monuments'—'Concio Funerbris,' &c., 4to, London, 1564. Dr. Grindal was an amiable and moderate man, but he was decidedly favourable to the Puritans; and when newly elected Bishop of London he corresponded with Peter Martyr, for the purpose of eliciting advice upon vestments, ceremonies, ritual, and various questions of ecclesiastical interest. He was elected Archbishop of York on the 11th of April, 1570; and was confirmed to that province, at Canterbury, on the 22nd of May. His election to the archbishopric of Canterbury took place on the 10th of January, 1576, and was followed by his confirmation on the 15th of February following. He now seriously meditated the reform of the Court of Arches and other ecclesiastical courts; but circumstances forbade the fulfilment of his intentions. He was anxious to advance the interests of the Church of England as a preaching church; and for this purpose encouraged and legislated for the religious exercises then common under the name of Prophesyings, at which the clergy of a district, assembled in a church, in the presence of the laity, and, under the control of a moderator, expounded in turn various passages of Scripture. The sensitive jealousy of Elizabeth saw in these clerical meetings the possibility of mischief; and, ignoring the regulations for their conduct which Grindal had propounded, she issued an order for their suppression. Against this mandate the conscience of the archbishop revolted; and he wrote, in December, 1576, a long and earnest letter of expostulation to her majesty. This letter enraged the queen, and resulted in the citation of the writer before the Star Chamber, and his sequestration from office. The sequestration was not fully removed until the close of the year 1582, although whilst it was in force the primate performed several acts of consecration, the less spiritual of his functions being performed by commission. The whole question is stated in 'Memorials of Archbishop Grindal: wherein the true Causes of his Suspension and Disgrace are impartially related. With his Letter to Queen Elizabeth in vindication of Prophesyings. Also the Address of the Convocation (to obtain his pardon) in Latin and English, with Remarks upon both,' 8vo, London, 1710. The archbishop died on the 6th of July, 1583, at his palace at Croydon, in the church of which town he was buried, having been blind for some time previously, and otherwise much afflicted. His works, which are rather numerous than bulky, and which comprise Sermons, Homilies, Forms of Prayer and Thanksgiving, &c., were for the most part included in a volume edited some years ago by the Rev. William Nicholson, for the Parker Society, 'Remains,' &c., 8vo, Cambridge, 1843. His biographer was John Strype, who wrote a 'History of the Life and Acts of the Most Reverend Father in God, Edmund Grindal, the first Bishop of London, and the second Archbishop of York and Canterbury successively, in the Reign of Queen Elizabeth,' folio, London, 1710, 8vo, Oxford, 1821.

* GRIS, JEAN ANTOINE ARTHUR, botanist, was born at Chatillon-sur-Seine, Dec. 11, 1829. In 1857 he obtained his degree of doctor of science; in the following year he was appointed an assistant naturalist in the Museum of Natural History at Paris;

and from 1864 almost to the present time he has acted as Brongniart's substitute in delivering lectures on botany. His writings consist chiefly of papers in the 'Comptes Rendus,' 'Annales des Sciences Naturelles,' and the 'Bulletins' of the Botanical Society of France. His principal works have consisted of descriptions of numerous New Caledonian plants in conjunction with M. Brongniart; of researches on chlorophyll, starch, and aleurone; and on the germination of seeds. He has followed by means of the microscope the changes which the starch undergoes, from its production to its final dissolution. In some plants it is eaten away in bits, which mode he distinguishes as local absorption; while in others it disappears in a uniform way so as always to have a smooth surface, which method he calls equal or uniform absorption. His papers on chlorophyll in the 'Annales des Sciences Naturelles,' vii. pp. 179—219 (1857), is probably the best account we have on the subject. It is to a certain extent a continuation and confirmation of Quekett's researches. He concludes that generally the chlorophyll originates from the nucleus of the cell as a green jelly, which is spread over the inner wall, then broken into polyhedral fragments, which ultimately assume the form of spherical masses, composed of numerous distinct particles.

*GRISEBACH, AUGUST HEINRICH RUDOLPH, botanist, was born at Hanover in 1814, studied at Göttingen and Berlin, and obtained his M.D. degree in 1836. In 1839 the Hanoverian government commissioned him to explore Turkey, and in execution of this duty he travelled over most parts of northern Greece and Asia Minor. In 1841 he became assistant professor of botany at Göttingen, and subsequently the full professorial rank was conferred on him. He has published 'Reise durch Rumelien,' 2 vols. 8vo, Göttingen, 1841; 'Spicilegium floræ Rumelicae,' 2 vols. Brunswick, 1843—45; 'Grundriss der systematischen Botanik,' 8vo, 1854; and 'Flora of the British West Indian Isles,' 8vo, London, 1864. This last work is important as being the first completed account of the flowering plants of any considerable tropical area. The area to which the book relates comprises about 15,000 square miles, in which 3050 flowering plants have been discovered. He has also written numerous botanical papers, which are partly descriptive and partly historical. The more important are 'Ueber den Einfluss des Klimas auf die Begränzung der natürlichen Floren' in 'Linnæa,' xii. pp. 159—200 (1838); 'Malpighiacearum Brasiliensium centuria' in 'Linnæa,' xiii. pp. 155—259 (1839); reports on the literature relating to the classification and distribution of plants for the period commencing from 1840 and ending with 1853, in Wiegmann's 'Archiv' for the years from 1841 to 1855; 'Ueber die Vegetationslinien des nordwestlichen Deutschlands' in 'Göttinger Studien' for 1847, pp. 461—562; 'Plantæ Kegelianæ Surinamenses' in 'Linnæa,' xxi. pp. 181—264 (1848); 'Beiträge zur Systematik der Ungarischen Flora' in Wiegmann's 'Archiv,' xviii. pp. 291—362 (1852); and 'Plantæ Wrightianæ e Cuba Orientale' in 'Memoirs of the American Academy of Arts and Sciences,' viii. pp. 152—192, 502—536 (1863).

GROSSETESTE, ROBERT [ROBERT (GROSSETESTE), E. C. vol. v. col. 113].

GROTEFEND, GEORG FRIEDRICH [E. C. vol. vi. col. 998].

*GROVE, WILLIAM ROBERT, M.A., F.R.S. [E. C. vol. vi. col. 999].

GRUBER, JOHANN GOTTFRIED [ERSCH, JOHANN SAMUEL, E. C. vol. ii. col. 802]. J. G. Gruber died August 7, 1851.

*GRUNDTVIG, NICOLAI FREDERK SEVERIN, a Danish poet, historian, and divine, was born on the 8th of September, 1783, at Udby, in Zealand, where his father was a clergyman. He was educated successively at the Gymnasium at Aarhus and at the University of Copenhagen, 1800—1803. In 1805 he officiated as a private tutor at Langeland, after which he entered a school at Copenhagen as teacher of history. About the same time the first fruits of his devotion to the study of northern antiquities appeared in a work on the Mythology of the North, or a Review of the Eddic Lore, 'Nordens Mythologie, eller Udsigt over Eddalæren,' 8vo, Copenhagen, 1808, of which a new and revised edition, being, in fact, an Historical and Poetical Explanation and Illustration of the Emblematical Language of the Northern Mythology, was published as 'Nordens Mythologie, eller Sindbilled-Sprog historisk-poetisk udviklet og oplyst,' 8vo, Copenhagen, 1832; to which succeeded a series of Episodes of the Ruin of the Heroic Life in the North, 'Optrin af Kæmpelivets Undergang i Nord,' 2 vols. 8vo, Copenhagen, 1809, second edition,

1861. Having received ordination, he became assistant to his father in the work of his parish, and having achieved great popularity by the eloquence of sermons preached at Copenhagen, received from the king, in 1822, the appointment of second preacher at the Church of Our Redeemer, Vor Frelser's Kirke, in that city, but surrendered this position in 1825, after he had been fined and censured for his manner of attack upon Clausen, a leader of the Rationalistic school. Grundtvig now founded, jointly with Rudelbach, a Monthly Religious Magazine, entitled 'Theologisk Maanedskrift,' 13 vols. 1825—28. In 1839 he was appointed preacher at the Hospital Vartou, a collegiate church at Copenhagen, and combined with his professional duties that of lecturing in the university on history and mythology, Greek and Scandinavian. Always a lover of his country, the war of race between Denmark and Germany in 1848 gave a new energy to his patriotism; and from that date, without omitting any of his literary or professional activities, he has been constantly a zealous and popular member of the Diet.

The principal works, not yet mentioned, which Grundtvig has produced are an Epitome of the History of the World, 'Kort Begreb af Verdens Kronike i Sammentræng,' 8vo, Copenhagen, 1812; 'Specimens of Saxo and Snorri Sturluson,' 8vo, Copenhagen, 1815; Europe, France, and Napoleon, &c., 'Europa, Frankrig og Napoleon, en dansk historisk Betragtning,' 8vo, Copenhagen, 1815; Songlings, or Small Poems, 'Kvædinger, eller Smaakvad,' &c., 8vo, Copenhagen, 1815; Rhyme Leaves out of Denmark's Church-Book for the Jubilee Year, 'Kong Harald og Ansgar. Rim-Blade af Danmarks Kirke-Bog til Juebel Aaret,' 8vo, Copenhagen, 1826; Christian Sermons, or Sunday-Book, 'Christelige Prædikener, eller Søndags-Bog,' 3 vols. 8vo, Copenhagen, 1830; Political Reflections with Regard to Denmark and Holstein, 'Politiske Betragtninger med Blik paa Danmark og Holsteen,' second edition, 8vo, Copenhagen, 1831; Handbook of the History of the World, 'Haandbog i Verdens-Historien,' 4 vols. 8vo, Copenhagen, 1833—43; Danish Folk-Fests, a Voice from the Danish Nation, 'Danske Folke-Fester, en Røst fra Danske Samfund,' 8vo, Copenhagen, 1842; Small Poems of the North, 'Nordiske Smaadigte,' 12mo, Christiania, 1838; a work for both sexes on Greek and Northern Myths and Antiquities, 'Brage-Snak om Græske og Nordiske Myther og Oldsager, for Damer og Herrer,' 8vo, Copenhagen, 1844; Danish Proverbs and Adages, collected and arranged, &c., 'Danske Ordsprog og Mundheld, samlede og ordnede,' &c., 8vo, Copenhagen, 1845; Historical Memories of the North. A Discourse delivered at the Northern Festival, 'Nordens Historiske Minder. Tale ved den Nordiske Høitid,' 8vo, Copenhagen, 1847; The Seven Stars of Christendom: an Ecclesiastical Epos, 'Christenhedens Syvstjerne: Et Kirkeligt Sagakvad,' 8vo, Copenhagen, 1860; The Living Voice: Leaves of Remembrance from the Friends' Meeting in the Days of September, 'Den levende Røst: Minde Blade fra Venue-Mødet i September-Dagene,' 8vo, Copenhagen, 1863; Message to the High North, in Verse, 'Budotikke i Hinorden,' 8vo, Copenhagen, 1864; The Danish State-Church, impartially considered, 'Den Danske Stats-Kirke upartisk betragtet,' 8vo, Copenhagen, second edition, 1868. Grundtvig is also known as the editor of a volume of Psalms and Hymns of the Danish Church, 'Sangværk til den danske Kirke,' 8vo, Copenhagen, vol. i. 1837; and as the translator into Danish of Saxo Grammaticus, 'Danmarks Kronike af Saxe Runemester, fordansket,' &c., 8vo, Copenhagen, second edition, 1855.

*GRUNER, WILHELM HEINRICH LUDWIG, engraver and decorative artist, was born February 24th, 1801, at Dresden, studied design in the Akademie der Decorationsmalerei there, and copper-plate engraving under Krüger, at Prague. In 1825 he went to Italy, where he worked under Longhi and Anderloni, studying at the same time the works of the great masters in the principal galleries. His early plates were portraits after Velasquez and Mengs, but later he sought to reproduce the choicer works of Perugino and Raffaello, one of the best of the latter being the 'Knight's Dream' from the picture in our National Gallery. He also executed a series of engravings of the frescoes of Raffaello and Lo Spagna, in the Villa Magliana, near Rome, and another of the mosaics in the Chigi chapel. For some time Herr Gruner resided in England, and whilst here was much patronised by the Prince Consort, for whom he executed plates of the 'Decorations of the Garden Pavilion in the Grounds of Buckingham Palace,' folio, 1840; and, under the authority of the Department of Art of the Council of Education, a series of 80 'Specimens of Ornamental Art, selected from the best Models of the Classical Epochs,' folio, 1850. In 1844—54 appeared his 'Fresco Decorations and Studies of Churches and Palaces in Italy, executed

during the fifteenth and sixteenth centuries; the Caryatides from the Stanza dell' Eliodoro in the Vatican, 16 plates, folio, London, 1852; the ceiling of the Sistine Chapel, after Michaelangelo, executed in chromo-lithography at the cost of Mr. Harford, and various other costly works. In 1858 he was nominated professor of engraving in the Dresden Academy; and the same year began the issue of a series of 83 plates in folio of the bas-reliefs on the principal front of Orvieto Cathedral, with text by Braun. The decorations of the mausoleum of the Duchess of Kent, and the very elaborate interior of that of the Prince Consort, were executed under the direction of Herr Gruner.

GRYNÆUS, JOHANN JACOB, a Protestant theologian, was born at Berne on the 1st of October, 1540. He was educated in classical and theological literature at Basel, and, at the age of 19, was made deacon or assistant minister of the church of Rötelen. In 1563 he repaired, for the further prosecution of his studies, to Tübingen, where he took the degree of D.D. In 1565 he succeeded his father, Thomas Grynæus, in the pastorate of Rötelen, which he left in 1575 to occupy the chair of Old Testament Exegesis at Basel, where he was instrumental in bringing about a better accord, on the subject of the Lord's Supper, between the followers of Luther and of Zwingli. About the year 1583 he accepted the appointment of Professor of Theology and History at Heidelberg, and in 1586 returned to Basel to succeed Sulzer as Professor of New Testament Exegesis, and as chief pastor of the city. He died on the 31st of August, 1618, having for five years previously been afflicted with blindness, a circumstance which had, however, the least possible effect in abating either his academical or his pastoral activity. His works comprise—'Monumenta S. Patrum Orthodoxographia, hoc est, Theologia sacrosanctæ Fidei Doctores numero circiter LXXXV. * * * Authores partim Græci, partim Latini, &c., 3 vols. folio, Basel, 1569; 'Sciagraphia sacre Theologiæ: accedunt thesæ 60 complectentes præcipua Religionis capita, et totidem de Studio Theologiæ,' 4to, Basel, 1577; 'Synopsis Historiæ Hominis: seu, de prima Hominis Origine, ejusdem Corruptione, Reconciliatione cum Deo et æterna Salute, &c., 12mo, Basel, 1579; 'Apologia respondens ad Criminationes J. Andree de Cœna Domini,' 4to, 1584; 'Disputationes theologicæ in Basiliensi Academia habitæ,' 4to, Geneva, 1584; 'Theologica Theoremata et Problemata, de quibus in inclyta Basiliensi Academia ~~zuercheris~~ institutæ fuerunt, 3 parts, 4to, Basel, 1588—90; 'Aethiæa sive Opuscula nonnulla theologico-miscellanea,' 8vo, Basel, 1746; 'Character Christianorum, &c., 8vo, Basel; and various Commentaries and Pælectiones on the Prophets and the Epistles, and on the Fathers of the Church.

GRYNÆUS, SIMON, a German Protestant divine, and great-uncle of the subject of the preceding notice, was born at Varingen, in Hohenzollern, in the year 1493. After filling various academical appointments, and undergoing several painful vicissitudes in consequence of his friendship for the leaders and the doctrines of the Reformation, he became in 1523 Professor of Greek in the University of Heidelberg, which he quitted in 1529 to undertake the duties of the Chair of Philosophy and Theology in the University of Basel. In 1531 he visited England, and in several succeeding years was identified with the principal measures which were taken for the reformation of faith, manners, and literature. He died at Basel, in the year 1541. He was the first who published the *Almagest* of Ptolemy in Greek; and who discovered, in 1531, five of the Books of Livy (xli.—xlv.). His other works include 'Novus Orbis Regionum ac Insularum Veteribus incognitarum, cum Tabula cosmographica, et aliquot aliis consimilibus Argumenti Libellis,' folio, Basel, 1532, 1537, 1539, 1556, and other editions; 'In Librum viii. Topicorum Aristotelis Commentaria: accedunt selectiores Epistolæ,' 8vo, Basel, 1556; an edition of Euclid in Greek, with a Preface, 1533, and one of the Works of Plato, with some Commentaries on Proclus, 1534.

GRYNÆUS, SIMON, the younger, the son of the preceding, who acquired considerable reputation as a physician and mathematician, was born at Berne on the 1st of December, 1539. He became Professor of Mathematics and a medical practitioner, at Heidelberg, which he quitted in order to establish himself, in 1580, at Basel, where he died on the 3rd of September, 1582. He is the author, *inter alia*, of 'Commentarii Duo: unus de igitis Meteoris; alter de Cometarum Causis atque Significationibus: accessit Observatio Cometæ qui in 1577 et 1578 fulsit; et Disputatio de inusitata Magnitudine et Figura Veneris conspecta in fine Anni 1578 et ad Initium 1579,' 4to, Basel, 1580, a work which is sometimes erroneously attributed to his father.

GUOHT, MICHEL VAN DER (called by Walpole MICHAEL

VANDERGUTCH), a celebrated engraver, was born at Antwerp, in 1660. He learnt engraving of one of the Bontats of that city, but settled in London, where he found employment at first in engraving anatomical plates, but afterwards chiefly portraits. He engraved several of the plates in Clarendon's History; Sir Josiah Child, after Riley; Sprat, Bishop of Rochester, after Lely; Bishop Atterbury, Addison, Congreve, and Betterton, after Kneller; Queen Elizabeth, after Sir Antonio More, and many other well-known prints. He died at his house in Bloomsbury, October 16, 1725. Two of his sons practised with success in London as engravers. The elder, GERARD VAN DER GUOHT, born about 1695, was much employed by the booksellers. Among his plates are three portraits of Milton, Dryden after Kneller, Jervas the painter, Colley Cibber after Van Loo, James II. and his Queen, and Archbishop Tillotson after Kneller. He kept a shop for the sale of prints and pictures in Great Brook Street, and died there, March 18, 1776. JAN VAN DER GUOCHT, born in 1697, etched various academic figures after Cheron; engraved many of the plates in Cheselden's 'Osteography,' 1773; some of those of Thornhill's Cupola of St. Paul's, and the portraits of John Dennis the critic, and of Ker of Kersland, prefixed to his 'Memoirs.' George Vertue was the pupil of Michiel Van der Gucht.

* GUÉRIN-MÉNEVILLE, FÉLIX ÉDOUARD, zoologist, was born at Toulon, October 12th, 1790. He was educated at Paris, and attended the classes of Cuvier, Latreille, Geoffroy St. Hilaire, and other eminent naturalists. His life has been mainly spent in teaching entomology in various Paris educational establishments, in encouraging the culture of silkworms, and in conducting or writing numerous literary works. He is a member of most of the scientific societies of France, and has been the secretary of the 'Société d'Acclimatation.' In 1846 he was decorated with the ribbon of the Legion of Honour. His principal separate works are 'Iconographie du "Regne Animal," de M. le Baron Cuvier,' 7 vols. 8vo and 4to, Paris, 1830—1844, consisting of 450 plates; and, 'Genera des Insectes,' with A. Percheron, 6 vols. 8vo, Paris, 1835. He has been editor of the 'Revue Zoologique,' 1838—1848, and of the 'Revue et Magasin de Zoologie' since its commencement in 1849. His scientific papers are very numerous, as many as 331 being cited in the Royal Society's 'Catalogue of Scientific Papers;' but a large proportion of them are very short, while some are little more than a paragraph long. For many years he has been the chief promoter of improvements in sericulture. His papers and his reports to Government contain almost a complete history of silkworm breeding and culture in most parts of the world, but especially in France.

* GUERRAZZI, FRANCESCO DOMENICO, an Italian poet, romance-writer, and politician, was born at Leghorn in 1805, and at the age of fourteen became a student of law at the University of Pisa, where he early became obnoxious to the Government by the boldness and freedom of his opinions. He was a great admirer of Lord Byron, and wrote verses after his manner. On leaving the University, he returned to Leghorn, and began life with great success as an advocate. For expressions which he used whilst pronouncing an eulogium on a brave Livornese soldier, in 1828, he was banished to Monte Pulciano, where he was detained until 1831, when he was allowed to return to Leghorn, but only to be arrested immediately after on the charge of having fomented a disturbance in the city, which he had, in reality, tried to allay. He was thrown into prison, and finally released, without having been brought to trial, to be seized again in 1834, and sent to a prison at Porto Ferrajo, in the island of Elba. Here he was allowed the use of the library left by the Emperor Napoleon, and occupied himself with writing his celebrated novel, entitled 'L'Assedio di Firenze,' in which he magnified the reputation of Francesco Ferruccio, the republican hero of the sixteenth century. On leaving prison, he returned to the practice of his profession, and it was not until 1847 that the more important part of his public career commenced, when he prepared to lead the democratic party in the revolution which was impending over his country. In January, 1848, he was arrested as the instigator of the insurrection which broke out at Leghorn against the Austrian alliance, and was confined at Porto Ferrajo until the 17th of February, the day on which a Tuscan constitution was granted. Upon his liberation, he was elected as a deputy to the Chambers, and became, in October, a member of the Montanelli ministry; and on the flight of the Grand Duke to Gaeta, formed one of the triumvirate, Montanelli and Mazzoni being the other two, to whom the affairs of Tuscany were committed. Of this triumvirate, Guerrazzi was the leading spirit;

and he presently assumed the dictatorship, having until April 12th, 1869, the entire responsibility of government. Internal dissensions, however, brought about the establishment of the Grand Duke's Government, and Guerrazzi was arrested and imprisoned in the fortress of Belvedere, which he quitted after a sentence, delivered upon him by a court specially constituted, of perpetual exile. He now repaired to Bastia, where he solaced himself with a return to his literary activity, from which he emerged to resume a share in political life as a member of the Parliament of Turin. He is remembered for having taken part in the stormy sessions of 1862; and in 1865 was returned as deputy by the Electoral College of Lecce. His principal works are—'La Battaglia di Benevento. Storia del Secolo XIII.,' 4 vols. 8vo, Milan, 1829, edizione nuovamente rivista e corretta dall'Autore, 8vo, Florence, 1852, and frequently reprinted and translated; 'Isabella Orsini, Duchessa di Bracciano,' 12mo, Florence, 1844, fourth edition, 8vo, Florence, 1847; 'Documenti diversi,' 12mo, Leghorn, second edition, 1846, being the Correspondence of Guerrazzi and S. Uzielli, &c., respecting the bank of Leghorn; 'Al Principe e al Popolo. Intorno allo Stato delle Cose in Toscana,' 8vo, Leghorn, 1847; 'Scritti,' 8vo, Florence, 1847; 'Memorie scritte da lui medesimo,' 8vo, Leghorn, 1848; 'Sull'Indipendenza Italiana, Discorso,' 8vo, Venice, 1848; 'Apologia della Vita Politica di F. D. Guerrazzi, scritta da lui medesimo,' 8vo, Florence, 1851; 'Orazione detta in sua Difesa avanti la Corte Regia di Firenze,' 8vo, Florence, 1853; 'Beatrice Cenci, Storia del Secolo XVI.,' 8vo, Pisa, 1854, English translation by G. A. Scott, with the title of 'Beatrice Cenci, an historical Novel of the sixteenth century,' 8vo, London, 1858; 'La Torre di Nanza, Racconto storico,' 8vo, Turin, 1857, fourth edition, 8vo, Milan, 1864, forming part of the 'Biblioteca delle Famiglie'; 'L'Asino-Sogno,' 4to, Turin, 1857; 'Amelia Calani: Considerazione sull'Educazione delle Donne Italiane. Proemio del Pasquale Paoli, Racconto corso del Secolo XVIII.,' &c., 16mo, Genoa, 1859; 'Il Buco nel Muro, Storia,' 8vo, Milan and Turin, 1862.

GUETTARD, JEAN ÉTIENNE, naturalist, was born at Étampes, September 22, 1715. He received his taste for the natural-history sciences from his grandfather, Bernard de Jussieu, and Réaumur. He had the care of the Duke of Orleans' museum, which was bequeathed to himself, but he relinquished his claim in favour of the Orleans family on receiving an annuity and free quarters in the Palais Royal, where he spent most of his life constantly engaged in scientific work. He wrote on subjects in all departments of natural history—zoology, botany, geology, and even on meteorological and medical topics. In botany he made some valuable discoveries on the glands of plants, both as regards their structure and their value for purposes of classification; on the transpiration of vegetables; on the paper-yielding species; and on the colouring matter of *Galium*, analogous to madder. In zoology he made great progress in the determination of fossils, at a time when many scientific men were disputing as to their organic nature; he first recognised the crustacean affinities of the trilobites; and recognised the true nature of many fossil sponges and *Actinozoa*, which had previously been enigmatical bodies; and he was the first to discover the existence of mammalian remains in the gypsum of Montmartre, which subsequently yielded such a rich field of discovery to Cuvier. In lithology he did an immense amount of good work, but his results have mostly been rendered antiquated, owing to the more finished and detailed researches of later investigators. He was one of the pioneer geologists of Western Europe, and in his works will be found many important facts and generalizations which had not been previously announced. Amongst these are the resemblance of the strata on both sides of the British Channel, the discovery of the extinct volcanoes of Auvergne, his observations on thermal springs, and his discovery of kaolin in France, which formed an important step towards the establishment of the older porcelain manufactures of that country. He first proposed and attempted to construct a geological map of France, but after publishing thirty-three sheets the work was stopped, his resources being insufficient, and the state of science scarcely forward enough for the enterprise to be efficiently carried out. Besides numerous papers, his principal publications are 'Atlas de Description Minéralogique de la France,' by himself and Monnet, 1 vol. fol., Paris, 1778–1780; 'Mémoires sur diverses questions d'histoire naturelle de Science et d'Art,' 6 vols. 4to; and 'Mémoires sur la Minéralogie, du Dauphiné,' 4to, Paris, 1779. He died January 7, 1786.

* GUIGNIAUT, JOSEPH DANIEL, French archaeologist, was born May 15th, 1794, at Paray-le-Monial, department of Saône.

et-Loire, and educated at the Lycée Impérial and the École Normale. In 1813 he was appointed teacher of classics in the Lycée Charlemagne, and then for several years was master of the studies, first in history, afterwards in Greek literature, at the École Normale, and finally, after the revolution of 1830, was made head-master to the school. In 1835 he was nominated professor of history to the Faculté des Lettres de Paris; from 1845 to 1850, was member of the Council of Instruction, then became secretary to the council of the university, and in 1854 was called to lecture on history and morals at the Collège de France. He retired in 1862, with the rank of honorary professor. M. Guigniaut was elected a member of the Institute (Académie des Inscriptions et Belles-lettres), in 1837, in 1847 received the cross of officer, and in 1862 was promoted to be commander of the Legion of Honour. M. Guigniaut has been distinguished chiefly by his zeal in promoting the study of the Greek language and literature in France during the last half century. His papers on ancient literature, mythology, and archæology, in the proceedings of the Institute and of learned bodies, in serials, and as separate monographs, have been very numerous and valuable, but his chief independent work is his 'Religions de l'Antiquité, considérées principalement dans leur formes symboliques et mythologiques,' in four divisions, 11 vols. 8vo, with 400 engraved plates, Paris, 1825–51. This vast work is founded on the 'Symbolik und Mythologie der alten Völker,' of Creuzer, but M. Guigniaut has added to it a great body of notes and much original illustrative matter, so that it is, in fact, a treasury of information on classical mythology.

GUILLIM, JOHN, a writer on heraldry, was born in Herefordshire, about the year 1565, and received his education at Oxford. In 1617 he was appointed rouge-croix poursuivant-at-arms, and died vested with that office in 1621. His name is principally known by his connection with a work which he published under the title of 'The Display of Heraldry,' &c., folio, London, 1610, which has been frequently reprinted, receiving the augmentations of various editors and others, and the original authorship of the greater part of which is referred to John Barkham, Dean of Bocking. [E. C. S. col. 167.]

* GUIMET, JEAN BAPTISTE, French chemist, was born at Voiron, department of Isère, July 10th, 1795, and educated at the École Polytechnique. In 1817 he was engaged at the Government Saltpetre and Gunpowder Works: and in 1830 was commissary of gunpowder at Toulouse. In 1846 he made the discovery with which his name is chiefly associated: that it is possible to produce a blue colour which shall serve as a substitute for the exquisite but costly ultramarine, by artificially combining the ingredients of which that mineral is found to consist. During a long course of experiments, he ascertained that silica, alumina, sulphur, and soda, carbon, &c., would suffice, in proportions varying according to the tint to be produced. This discovery obtained for Guimet a prize of 6000 francs offered by the Société d'Encouragement des Arts, and many gold medals. In 1855 he received the Cross of the Legion of Honour. The German chemist Gmelin, about the same time, introduced another method of producing artificial ultramarine: and the two plans have since become so extensively adopted, that ultramarine, instead of being confined to the use of artists, is now used also by house painters, coach painters, paper stainers, and others. Circumstances connected with the experiments, brought Guimet into controversy with Gmelin concerning the honour of priority; but they appear to have been independent investigators. Gmelin, however, published his process, whilst Guimet kept his secret, and maintained a manufactory which, for several years, enjoyed an almost exclusive monopoly. In 1827, the artificial ultramarine having received the stamp of approval from the French artists Ingres and Horace Vernet, Guimet established his manufactory in the environs of Lyons, in which city he was president of the Academy of Sciences. The Jury report of the Paris International Exhibition of 1855 stated that, at that time, there were sixty to eighty manufactories of artificial ultramarine, producing 2,500,000 kilogrammes annually, at an average of 2 francs 10 centimes per kilogramme (5,500,000 English lbs., at 1s. 9d. per lb.); as against a very small amount of real ultramarine, at 3000 francs per kilogramme (about 70s. per oz.). The quantity manufactured has since largely increased, especially in Germany, which now takes the lead in the manufacture. For artistic purposes, the artificial ultramarine is very inferior to the real; but it is of great value in decorative work, as the colour is very beautiful when well managed, and the enormous difference of price renders it available where real ultramarine would be out of the question. Two scientific papers by M. Guimet are

'Lettre à M. Gay Lussac, sur la fabrication de l'Outremer,' *Annales de Chimie*, 1831; 'Rapport sur la Garancine de M. Bastet,' *Annals of the Agricultural Society of Lyons*, 1841.

GUINAND, PIERRE LOUIS, an improver of optical glass, was born at Brenets, near Neuchâtel, Switzerland, in 1745. Under his father, who was a cabinetmaker, he became skilful in handling tools, and made and repaired many articles lying beyond the usual range of his trade. Having to mend an English telescope, he resolved to make one for himself; and having weak sight, he made himself a pair of spectacles. This practice, and a little instruction in optics under Droz, enabled him to enter upon the business of making spectacle-glasses and telescope-lenses. For seven years he experimented, with a furnace and kiln of his own construction, to ensure achromatism in lenses. At length, in 1798, he sent to Lalande at Paris two discs of optical glass, four inches and six inches in diameter respectively, remarkably free from striae and imperfections. He seems to have adopted some mode of stirring up the ingredients of flint glass, while in a molten state, more completely than had been before practised; and he also effected improvements in the grinding and polishing processes. In 1805 he was invited to Munich by Fraunhofer, the celebrated optician; and there he assisted in fabricating a large number of fine object-glasses for telescopes, one of which, nine inches diameter, gained great celebrity in the Dorpat Observatory. Returning to Switzerland in 1814, Guinand recommenced lens-making on his own account; and one of his lenses, submitted to the Astronomical Society of London, was reported on in terms of high commendation by Messrs. Herschel, Dollond, and Pearson. His prime production was a disc of flint glass, 24 inches diameter by $\frac{1}{4}$ thick, almost absolutely free from speck and striae. Louis XVIII., hearing of his skill, invited him to settle in Paris; but Guinand, now an old man, preferred to end his days in his own country. He died in 1825. A pamphlet by his son was published in 1831, 'Reclamation sur l'invention de flint et de crown glass.'

* GUIZOT, FRANÇOIS-PIERRE-GUILLAUME [E. C. vol. iii. col. 224]. The later activity of M. Guizot has been of an almost exclusively literary kind, and besides the production of several new works, he has prepared new editions of many of those which have been already mentioned. He has taken part in the questions which have agitated the Protestant communities of France; and although a sometime President of the Protestant Consistory of Paris, has been a consistent advocate of the temporal power of the Pope, in favour of which he spoke very emphatically on the 21st of April, 1861, when presiding over one of the annual meetings of a Protestant society in the Temple de l'Oratoire. The most public of his recent acts were the addressing of a letter to the 'Times,' which appeared in that journal on the 26th of October, 1870, the object of which was to combat the "general belief" of England, "first, that France wished for and brought about the present war with Prussia; and secondly, that, in consequence of the reverses experienced by the French army, France is no longer able to carry on the war, and ought to accept the conditions of peace which Prussia dictates, however hard these conditions may be;" and a long and elaborate letter to Mr. Gladstone, setting forth the duty of England to exert her "moral influence," in order to re-establish peace on a firm and honourable basis. The principal works of M. Guizot still remaining to be mentioned are 'Sir Robert Peel. Étude d'Histoire contemporaine,' 8vo, Paris, 1856, 12mo, 1858; 'Memoirs of Sir Robert Peel,' 8vo, London, 1857; 'Études sur les Beaux Arts,' 8vo, Paris, 1858; 'Mémoires pour servir à l'Histoire de mon Temps,' 8 vols. 8vo, Paris, 1858—67; English translation, by J. W. Cole, 4 vols. 8vo, 1858—61; 'L'Eglise et la Société Chrétienne,' 8vo, Paris, 1861; English translation, 1861; 'Discours académiques, suivis des Discours prononcés pour la Distribution des Prix aux Concours Général de l'Université et devant diverses Sociétés religieuses, et de trois Essais de Philosophie littéraire et politique,' 8vo, Paris, 1861; a Speech delivered in his capacity of Director of the Académie Française, entitled 'Discours en Réponse au Discours prononcé par M. Lacordaire pour sa Réception à l'Académie Française le 24 Janvier, 1861,' 8vo, Paris, 1861, and another entitled 'Discours en Réponse au Discours prononcé par M. Prevost-Paradol pour sa Réception à l'Académie Française le 8 Mars, 1866,' 8vo, Paris, 1866; 'An Embassy to the Court of St. James's in 1840,' 8vo, London, 1862; 'Un Projet de Mariage Royal,' 12mo, Paris, 1863, reprinted from the 'Revue des Deux Mondes'; 'Trois Générations 1789, 1814, 1848,' 12mo, Paris, 1863; 'Complément des Mémoires pour servir à l'Histoire de mon Temps. Histoire parlementaire de France. Recueil complet des Discours pro-

BIOG. DIV.—SUP.

noncés dans les Chambres de 1819 à 1848,' 5 vols. 8vo, Paris, 1863—64; 'Méditations sur l'Essence de la Religion chrétienne,' 8vo, 1864, &c.; English translation, 1864, and 'Meditations on the Actual State of Christianity, and on the Attacks which are now being made upon it,' 8vo, London, 1866; 'Memoirs of a Minister of State from the Year 1840,' 8vo, London, 1864; 'The Last Days of the Reign of Louis Philippe,' 8vo, London, 1867; 'Mélanges biographiques et littéraires,' 8vo, Paris, 1868; and 'Mélanges politiques et historiques,' 8vo, Paris, 1869.

GUTCH, JOHN, F.S.A., &c., a divine and antiquary, was born in 1745, and educated at All Souls' College, Oxford, of which he became chaplain in 1769, and retained his appointment for sixty-two years. He proceeded M.A. on the 8th of June, 1771. In 1786 he was preferred to the rectory of Kirkby Underwood, in Lincolnshire, and in 1795 to that of St. Clement, near Oxford; and was for many years chaplain of Corpus Christi College. In 1797 he was elected to the office of registrar of the university, and also of registrar of the Courts of the Chancellor, the former of which he resigned in 1824, but retained the latter till his death on the 1st of July, 1831, at which time he was the oldest resident member of the university. His works comprise, 'Collectanea Curiosa; or Miscellaneous Tracts, relating to the History and Antiquities of England and Ireland, the Universities of Oxford and Cambridge, and a variety of other Subjects. Chiefly collected, and now first published, from the Manuscripts of Archbishop Sancroft; given to the Bodleian Library by the late Bishop Tanner,' 2 vols. 8vo, Oxford, 1781; 'The History and Antiquities of the University of Oxford, now first published from the original Manuscripts in the Bodleian Library; written by Anthony Wood, M.A., published in English, with a Continuation to the present Time,' 5 vols. 4to, Oxford, 1786—96; an edition of another work by Anthony Wood, 'Fasti Oxonienses; or a Commentary on the Supreme Magistrates of the University; with a Continuation, and Additions and Corrections to each College and Hall,' 4to, Oxford, 1790.

* GUTHRIE, THOMAS, D.D., a Scottish divine and philanthropist, was born at Brechin, in Forfarshire, in the year 1800, and was educated at the University of Edinburgh. After being admitted a probationer of the Church of Scotland, he proceeded to Paris in order to prosecute the study of medicine, a knowledge of which he designed to turn to account in his future pastoral experience. Returning to his native country, he was ordained in 1830, minister of the parish of Arbirlot, in the presbytery of Arbroath, which he left on his appointment to the collegiate church of Old Greyfriars, Edinburgh. In 1840 he became minister of the new church and parish of St. John; and in 1843 took a prominent part as one of the leaders of the Disruption party, with which originated the Free Church. A new church, Free St. John's, was built for him, to which for a long series of years he has attracted a large congregation by the earnestness, fervour, and pathos of his eloquence. As a philanthropist, Dr. Guthrie is known as the originator of the Ragged or Industrial Schools of Edinburgh, and as a strenuous advocate of the temperance movement, and of nearly all the current schemes of Christian benevolence. His works include 'A Plea for Ragged Schools,' 8vo, Edinburgh, 1847, of which eleven editions were printed in the first year of its issue; 'Supplement to a Plea for Ragged Schools,' 8vo, Edinburgh, 1847; 'A Second Plea,' &c., 8vo, Edinburgh, 1851; 'A Short Plea for the free and full Use of the Bible in Ragged Schools,' 8vo, Edinburgh, 1852; 'A Plea on behalf of Drunkards, and against Drunkenness,' 8vo, Edinburgh, 1850; 'The Gospel in Ezekiel, illustrated in a Series of Discourses,' 8vo, Edinburgh, 1856, fortieth thousand, 8vo, 1863; 'Christ, and the Inheritance of the Saints,' &c., 8vo, Edinburgh, tenth thousand, 1858, twelfth thousand, 1859; 'Speaking to the Heart, or Sermons for the People,' 8vo, London and Edinburgh, 1862; 'Platform Sayings, Anecdotes, and Stories,' &c., 12mo, London and Edinburgh, 1863, fourth thousand, 1864; 'The Parables read in the Light of the present Day,' 8vo, London and New York, 1866, originally published in 'Good Words'; 'Out of Harness,' 8vo, London, 1867; 'Our Father's Business,' 8vo, London, 1867; and 'Studies of Character from the Old Testament,' 8vo, London, 1867, both of which were reprinted from the 'Sunday Magazine,' of which, on its foundation in 1864, Dr. Guthrie became the editor; 'Early Piety,' 32mo, London, 1867; and a number of Sermons, either published separately or grouped together in volumes.

GUY, THOMAS, bookseller, the founder of Guy's Hospital, London, was the eldest son of Thomas Guy, "lighterman and coalmonger," Fair Street, Horselydown, where he was born about 1645. His mother being left a widow when Thomas was

about 8 years old, removed to Tamworth, her native town, and married again, but took care that her children should have a good education, and in 1660 apprenticed Thomas to John Clarke, the younger, "a binder and seller of books in Mercers' Hall Porch in Cheapside," for the term of eight years. On the expiration of his apprenticeship, Guy was admitted a freeman of the Stationers' Company and of the City, October, 1668. He at once commenced business on his own account, as bookseller and publisher, "with a stock of about two hundred pounds," taking for the purpose the little corner-house at the angle formed by Cornhill and Lombard-street, afterwards occupied by Bish, the lottery-office keeper. From the first he seems to have been of an enterprising turn. Few books are known which bear his name as publisher, but he did a good trade as a bookseller, and was on the watch to turn his profits to account. His earliest venture was in bibles. The printing of bibles in London was limited by patent to the king's printer, and they were consequently badly printed and high-priced. Guy joined with other booksellers in inducing some printers in Holland to prepare editions at a lower price, yet with better types and paper, and he "became a large dealer therein." But the monopoly was far too valuable to be readily lost. Prosecutions were instituted, the copies seized, and the traffic of necessity abandoned. Guy did not, however, give up the contest. The University of Oxford had a concurrent privilege with the king's printer; of this Guy purchased an assignment, "and, having furnished himself with types from Holland, carried on a very great trade in bibles for divers years to his very great advantage."

Guy was a flourishing and prosperous tradesman, and a prominent member of the Company of Stationers; but the bulk of his fortune was not made by bookselling. The purchase of the payment tickets of seamen of the royal navy was, during the war with France, exceedingly profitable, and Guy was an early dealer in them; he also dealt largely and successfully in other government securities; but his crowning speculation was in South Sea Stock. For this he subscribed at the commencement to the amount of over forty-five thousand pounds, and seeing the rapid rise, and predicting the reaction, like a prudent man "began to sell out his stock at about three hundred (for that which probably at first did not cost him above 50*l.* or 60*l.*), and continued selling till it rose to about six hundred, when he disposed of the last of his property in the said company." (Maitland.) Guy was chosen sheriff of London, but preferred paying the fine of 500*l.* to serving the office. About 1695 he was elected member of Parliament for Tamworth, which place he seems to have kept up his early connection with, and to have regarded with especial interest. He built and endowed an almshouse in Tamworth, for 14 poor men and women, providing them with a small pension and a library; and is said to have been "a generous benefactor to the corporation" in various other ways. But the townsmen, by electing, 1706, another representative, diverted his benevolence into a different channel. He was a bachelor, and resolved to apply the bulk of his property to charitable purposes. In 1707 he built and furnished three new wards to St. Thomas's Hospital, appropriated 100*l.* a-year to their support, and afterwards added two new houses, and otherwise improved the establishment. In 1721 he purchased a large spot of ground near St. Thomas's Hospital, removed the houses which were standing on it, and commenced the erection of a new hospital, with the intention at first of making it an appendage to St. Thomas's, but eventually establishing it as an independent institution, which has ever since been known by his name. He lived to see the fabric roofed-in, dying on the 27th of December, 1724, in his 80th year. Guy's munificent provision for his hospital was probably without parallel. The building, which provided for 400 beds, cost nearly 18,800*l.*, and he endowed it with about 219,500*l.* (the exact total was 238,292*l.* 16*s.* 5*d.*), besides an annuity of 400*l.* to Christ's Hospital, conditionally on the governors admitting four children annually on the nomination of the governors of Guy's Hospital. Nor was his munificence exhausted by his favourite foundation. He left 1,000*l.* for the relief of poor prisoners, and various other charitable bequests. For many years he had given stated allowances to his needy relatives, which by his will he continued as annuities, while he left above seventy-five thousand pounds "amongst his younger relations and executors." It is an illustration of the customs of the period that his executors finding in his iron chest a thousand guineas, which they imagined were put there for the purpose, "caused him to be buried in a very pompous manner; at whose burial there were no less than forty coaches, with six horses each." A statue of him, in bronze, by Scheemakers, was erected

shortly after his death in the first court of the hospital; and another, in marble, by Bacon, has since been erected in the chapel. Guy's title to remembrance is the hospital which preserves his name. But he was in many ways a memorable man. John Dunton, writing in his lifetime (1705), and long before the foundation of his hospital, says: "He entertains a very sincere respect for English liberty. He is a man of strong reason, and can talk very much to the purpose upon any subject you will propose. He is truly charitable," &c. And Maitland, about 14 years after his death, writes: "As Guy was a man of an unbounded charity and universal benevolence, so was he likewise a great patron of liberty and the rights of his fellow subjects; which, to his great honour, he strenuously asserted in divers Parliaments, whereof he was a member." (Maitland, *History of London*, p. 607, &c.; John Dunton, *Life and Errors*; Nichols, *Literary Anecdotes*; Charles Knight, *Shadows of the Old Booksellers*, chap. i.)

GUYON, RICHARD DEBAUFRE, GENERAL [E. C. vol. iii. col. 238]. General Guyon died at Constantinople of cholera on the 12th of October, 1856, aged 44.

* GUYOT, ARNOLD HENRY, physical geographer, was born near Neuchâtel, Switzerland, September 8, 1807. He was educated at Neuchâtel, Stuttgart, and Karlsruhe, and was much influenced as to the direction of his studies by Humboldt, Steffens, and K. Ritter, as also by Agassiz, with whom he formed an intimate friendship. In 1835 he took his degree of M.D. at Berlin, and then resided five years in Paris, passing the winter in study and the summer in excursions, a habit which he has kept up all his lifetime. In 1838 he visited the glaciers of Switzerland. He discovered the laminated structure of the ice, and showed that the motion of the glacier was due to the displacement of the molecules. These discoveries were confirmed by Agassiz, Forbes, and others. He supported the opinion which had been long before announced by Venetz, that the glaciers had formerly extended far beyond their present bounds, and as far as the Jura mountains, by tracing the lines of erratic blocks from the Jura range to their original valleys, a task which occupied him for seven summers, and involved the taking of upwards of 3000 barometric observations for altitudes. These details were intended for Vol. ii. of the 'Système Glaciaire,' by himself, Agassiz, and Desor, the publication of which was prevented by the disturbances in France in 1848. The results are, however, published in the 'Bulletins' of the Society of Natural Science at Neuchâtel. From 1839 to 1848 he was professor of history and physical geography in the Academy of Neuchâtel, and then the establishment was broken up. He removed to the United States, where he was occupied in delivering lectures on physical and political geography, under the direction of the Massachusetts Board of Education, and in organizing a system of meteorological observation for the Smithsonian Institution. In 1855 he was appointed professor of physical geography in the College of New Jersey at Princeton. One course of lectures which he delivered at Boston in 1848, on the relations between physical geography and history, has been published under the title of 'Earth and Man,' 8vo, 1849. His summer work in the United States has consisted in investigating the physical structure and elevation of the Alleghany range of mountains. He made important improvements in the method of determining altitudes by means of barometric observation, and has thereby been enabled to ascertain the heights of most of the prominent points, with a liability to error of not more than a few feet.

GWILT, JOSEPH [E. C. vol. iii. col. 241]. This able architect died on the 14th of September, 1863.

GWYNN, JOHN, R.A., was born at Shrewsbury in the first quarter of the 18th century. He obtained fair practice as an architect, built a church or two, and some mansions, but his professional fame rests on the picturesque English Bridge at Shrewsbury and the better known Magdalen Bridge at Oxford. He competed for the erection of Blackfriars Bridge, and the respective merits as to beauty and stability of two of the designs—Gwynn's, having semicircular arches, and Mylne's, in which the arches were elliptical,—led to a warm controversy, Gwynn's claims being stoutly supported by his friend, Dr. Johnson. Mylne was, however, successful, and his bridge, which was completed in 1769, lasted exactly a century. Gwynn will perhaps be longest remembered on account of the very remarkable suggestions contained in his writings. His 'Essay on Design, including Proposals for erecting a Public Academy,' 4to, 1749, comprised a carefully considered plan of 'An English Academy of Painting, Sculpture and Architecture,' which afforded the ground-work of the scheme of the Royal Academy

of Arts, established in 1768, and of which Gwynn was one of the original members, his name standing seventh on the list in the 'Instrument,' or Charter of Foundation. Still more noteworthy were the suggestions contained in his 'London and Westminster Improved,' 4to, 1766, to which Johnson contributed an admirably written dedication to the King. In this work Gwynn pointed out the necessity of most of the great improvements which have since been effected in the metropolis, as well as others yet waiting to be accomplished; and this not in a general way merely, but with ample and detailed descriptions, maps and plans. Among the leading improvements thus suggested were the embankment of the Thames, between London and Westminster bridges, and the formation of the river-side road, 100 or 120 feet wide, half the width being devoted to quays and half to a carriage way; the erection of a new bridge across the Thames by Somerset House (the site now occupied by Waterloo Bridge), and the widening of the Strand; the formation of new approaches to London Bridge; the removal of Smithfield Market; the construction of a complete system of sewers; the prohibition of interments within the metropolis, and the establishment of extra-mural cemeteries; the formation of open central spaces,

and the construction of several new and broad streets connecting the principal places of business and public resort. His scheme was no crude or hasty project. He tells us that he had in the first instance prepared a much less comprehensive proposal, based on Wren's plan for the rebuilding of London after the Great Fire, but becoming convinced of its inadequacy he had spent seventeen years in the elaboration of the scheme he at length laid before the public. But the author was in advance of his age. He was set down as a visionary, and his suggestions were neglected—till some three quarters of a century afterwards they were one by one revived to make the fame and fortune of men who had not the candour to mention the source of their inspiration. The year of Gwynn's death does not appear to be recorded, but as an Academician was elected in 1786, "in the place of John Gwynn, Esquire, deceased," it most probably occurred in that year. Boswell describes Gwynn as "a fine, lively, rattling fellow." He adds that "Dr. Johnson kept him in subjection, but with a kindly authority." It is evident, however, that Gwynn could hold his own in argument and retort with the conversational potentate, and his books show that he possessed great mental vigour as well as liveliness of imagination.

H

HAGEDORN, CHRISTIAN LUDWIG VON, younger brother of Friedrich von Hagedorn, was born at Hamburg, February 14th, 1713. Educated with a view to diplomatic employment, he served at several courts as secretary of legation, but became known by his writings on art. 'Lettres à un Amateur de la Peinture,' 8vo, Dresden, 1755, showed considerable technical knowledge, and also that he had read and reflected much on the subject. His fuller dissertation 'Betrachtungen über die Malerei,' 2 vols. Leipzig, 1762, French translation by Michael Huber, 1775, was even better received, and led to his appointment, in 1763, as director-general of the Art Academies of Dresden and Leipzig. He established the first exhibition of the Dresden Academy, in 1765, and generally did much to promote the study of the arts in Saxony. He died at Dresden, on the 24th of January, 1780. A selection from his correspondence on Art was published under the care of F. Baden, 'Briefe über die Kunst von und an Hagedorn,' 8vo, Leipzig, 1797.

HAGEDORN, FRIEDRICH VON, a poet, whom Wieland called the Horace of Germany, was born on the 23rd of April, 1708, at Hamburg, and was educated successively at the Gymnasium of that city, and at the University of Jena, where he was a student of law from 1726 to 1729. In the latter year he published a small collection of his poems, and immediately afterwards repaired to London, where he became private secretary to the Danish ambassador. He devoted his leisure to the study of the great English writers, especially to the works of Pope; and, returning to Hamburg in 1731, was appointed in 1733 to be secretary to the company of British merchants there, an office which left him sufficient time for the purposes of literary and general cultivation. He died at Hamburg, on the 28th of October, 1754.

The works of Hagedorn, comprising odes, fables, songs, and humorous and didactic poems, were published separately at various times, and were issued collectively, with the title of 'Poetische Werke,' 3 vols. 8vo, Hamburg, 1756. Several editions followed, amongst which may be mentioned that of his complete poetical works, 'Sämmtliche Poetische Werke,' 5 vols., 12mo, Vienna, 1790—91, which occupied vols. xii. to xvi. of a collection of the best works of the German poets and prose writers, 'Sammlung der vorzüglichsten Werke deutscher Dichter und Prosaisten.' The best edition, however, is one which appeared in 5 vols. 8vo, Hamburg, 1800, under the care of Professor Johann Joachim Eschenburg, the translator of Shakspeare into German, who contributed a biography of Hagedorn and a critical estimate of his genius and his place in German literature.

HAGEN, FRIEDRICH HEINRICH VON DER, celebrated as one of the most ardent cultivators and students of ancient German poetry, was born on the 19th of February, 1789, at Schmiedeburg, in Uckermark, and was educated successively at the Gym-

nasium of Prenzlau, and the University of Halle, where he studied jurisprudence. In 1803 he commenced his professional career at Berlin, but in a few years abandoned it for the more exclusive pursuit of ancient German literature. In 1810 he was appointed extraordinary professor of the German language and literature at the newly founded University of Berlin; was called to Breslau in 1811; and in 1821 returned as ordinary professor to Berlin, where he was afterwards admitted a member of the Academy of Sciences. He died at Berlin, on the 11th of June, 1856.

His works, which have given a strong impetus to the study of the German philology and literature of the middle ages, comprise various researches into the history of the Nibelungen, as, for example, his work entitled 'Zur Geschichte der Nibelungen,' 8vo, Vienna, 1800, a critical edition of which he published, 'Der Nibelungen Lied,' 8vo, Berlin, 1810; 'The Book of Fools,' 'Narrenbuch: herausgegeben,' &c., 8vo, Halle, 1811; 'The Book of Heroes,' 'Der Helden Buch: herausgegeben,' &c., 7 parts, 8vo, Berlin, 1811; 'Pictures of the Heroes from the legendary Cycles of Charlemagne, &c.,' 'Heldenbilder aus den Sagenkreisen, Karls des Grossen, Arthurs, der Tafelrunde und des Grals, Attilas, der Amelungen und Nibelungen,' 2 vols., 8vo, Breslau, 1819—1821, each volume being illustrated with thirty coloured prints; 'Literary Outline of the History of German Poetry, &c.,' 'Literarischer Grundriss der Geschichte der deutschen Poesie, von den ältesten Zeit bis in dem 16^{ten} Jahrhundert,' 8vo, Berlin, 1812, in which he was assisted by J. G. G. Buchsing; 'Letters written from Germany, Switzerland, &c.,' 'Briefe in die Heimat aus Deutschland, der Schweiz, und Italien,' 4 vols., 12mo, Breslau, 1818—21; 'Monumenta mediæ ævi plerumque inedita,' &c., 8vo, Breslau, 1821, and 'Denkmale des Mittelalters,' first part, 8vo, Berlin, 1824; 'Tales and Legends,' 'Erzählungen und Märchen: herausgegeben,' &c., 2 vols., 8vo, Prenzlau, 1825—26, and 'Histories, &c.,' 'Geschichten, Sagen, und Märchen,' 8vo, Breslau, 1824, edited in conjunction with E. T. A. Hoffman and H. Steffens; 'Thousand and One Days,' 'Tausend und ein Tag,' 11 vols., Prenzlau, 1826—32, second edition, 1836; 'On the oldest Representations of the Faust Legends,' 'Ueber die ältesten Darstellungen der Faustusage,' 8vo, Berlin, 1844; a Collection of Adventures, &c., 'Gesamtabenteuer. Hundert altdeutsche Erzählungen: Ritter und Pfaffen-Mären, Stadt und Dorfgeschichten, Schwänke, Wundersagen und Legenden von Jak. Appet, Dietrich von Glatz, und anderen, meist zum erstenmal gedruckt und herausgegeben,' &c., 3 vols., 8vo, Stuttgart and Tübingen, 1850; 'Crusade of Louis the Saint,' 'Kreuzfahrt des Landgrafen Ludwig des Heiligen,' Leipzig, 1854; 'Pictures of the Knightly Life and Poetry, &c., of the Middle Ages,' 'Bilder aus dem Ritterleben und aus der Ritterdichtung nach Elfinbeingebilden und Gedichten des Mittelalters,' 4to, Berlin, 1856. Besides the above, and others, Hagen took part with collaborators in the production of various works; and also contributed to various

Periodicals, especially to the Yearbook of the Berlin Society for the cultivation of the German Language and Antiquities, 'Jahrbuch der Berliner Gesellschaft für deutsche Sprache und Alterthumskunde,' which was instituted, under his direction, in 1835.

* HAGENBACH, KARL RUDOLF, a Swiss divine and ecclesiastical writer, and son of Karl Friedrich Hagenbach, a naturalist of distinguished attainments and professor of anatomy and botany in the University of Basel, was born in that city on the 4th of March, 1801. After receiving his earlier education in his native place, he repaired successively to the Universities of Bonn and Berlin, where he prosecuted the study of divinity. He returned to Basel in 1823, and after passing the intermediate grades of tutorial experience in the university there, became in 1828 professor of theology, an honorary doctorate in which faculty was conferred upon him in 1830. His works, which are almost exclusively professional, include Ecclesiastical Memorabilia of Basel, in connection with the Reformation, 'Kirchliche Denkwürdigkeiten zur Geschichte Basels, mit der Reformation,' 8vo, Basel, vol. i. 1821; Presentation of Christ in the Temple, 'Darstellung Christi im Tempel: eine Homilie,' 8vo, Basel, 1825; Conspectus of the History of Doctrines, &c., 'Tabellarische Uebersicht der Dogmengeschichte bis auf die Reformation,' &c., 8vo, Basel, 1828, a subject which he further developed in his great work entitled 'Lehrbuch der Dogmengeschichte,' 2 vols. 8vo, Leipzig, 1840—41, fourth edition, 1857, English translation, by Carl W. Buch, forming part of 'Clark's Foreign Theological Library,' and entitled 'Compendium of the History of Doctrines,' 2 vols. 8vo, Edinburgh, 1846—47; an academical Lecture on the Importance of Scientific Method in Theology, 'Ueber den Begriff und die Bedeutung der Wissenschaftlichkeit im Gebiete der Theologie,' 8vo, Basel, 1830; Lectures upon the Spirit and History of the Reformation in Germany and Switzerland, &c., 'Vorlesungen über Wesen und Geschichte der Reformation in Deutschland und der Schweiz, mit steter Beziehung auf die Richtungen unserer Zeit,' 6 vols. 8vo, Leipzig, 1834—43, second edition, 1851—56; Encyclopædia and Methodology of the Theological Sciences, 'Encyclopädie und Methodologie der theologischen Wissenschaften,' 8vo, Leipzig, 1833, seventh edition, 1864; Ecclesiastical History of the 18th and 19th Centuries, from the Stand-point of Evangelical Protestantism, 'Die Kirchengeschichte des 18 und 19 Jahrhunderts aus dem Standpunkte des evangelischen Protestantismus,' &c., 2 vols. 8vo, Leipzig, 1848—49, third edition, 1856, of which a condensed English translation, by W. L. Gage and J. H. W. Stuckenberg, appeared with the title of 'German Rationalism, in its Rise, Progress, and Decline, in Relation to Theologians, Scholars, Poets, Philosophers, and the People: a Contribution to the Church History of the eighteenth and nineteenth Centuries,' 8vo, Edinburgh, 1865; Lectures on the Ancient Christian Church, 'Vorlesungen über die ältere Kirchengeschichte,' vol. i. embracing the first three centuries, 8vo, Leipzig, 1853, second edition, 1856; vol. ii. embracing the next three centuries, 8vo, Leipzig, 1855; Guide to Christian Instruction, &c., 'Leitfaden zum christlichen Religionsunterrichte an höhern Gymnasien und Bildungsanstalten,' &c., 8vo, Leipzig, 1853, third edition, 1861. Professor Hagenbach has also published several volumes of Sermons and various academical Lectures. As a poet he has produced 'Luther und seine Zeit. Eine Sammlung von Gedichten,' Zurich and Frauenfeld, 1839; and 'Gedichte,' 2 vols. 8vo, Basel, 1846, second edition, 1863; and as a biographer has written Lives of Ecolampadius and Myconius: 'Johann Oekolampad und Oswald Myconius, sein Leben und ausgewählte Schriften der Väter und Begründer der reformirten Kirche.'

* HAHN-HAHN, IDA MARIE LUISE SOPHIE FREDERIKE GUSTAVE, GRÄFIN VON, was born at Tressow, in Mecklenburg-Schwerin, June 22, 1805. Her father, Count Carl Friedrich von Hahn, in his enthusiasm for theatrical affairs, neglected the family. The mother and daughter resided successively at Rostock, New Brandenburg, and Griefswald, until, in 1826, Ida married her wealthy cousin, Count Friedrich Adolf von Hahn, from whom, however, she was divorced in 1829. From that time Countess Ida kept herself almost constantly in public notice as a traveller and an authoress. She visited Switzerland in 1835, Vienna in 1836—37, Italy in 1838—39, Italy, Spain, and France in 1840—41, Sweden in 1842, and afterwards Syria and the East. Well received in the best society of the several countries, she had opportunities of painting one aspect, at least, of national life; consequently her letters and books of travel were much read at the time. She was made known to English readers by a translation of her 'Letters of a German Countess,' written during her Travels in Turkey, Egypt, the Holy Land,

Syria, Nubia, &c., 1845. Her travels, however, have little permanent value. As a novelist she has been called the George Sand of Germany; but the resemblance is chiefly in the fact that both authoresses have taken as a favourite subject the wrongs of divorced wives. Written between 1838 and 1848, these novels, or romances of society, comprised 'Aus der Gesellschaft,' 'Der Rechte,' 'Gräfin Faustine,' 'Urich,' 'Sigismund Forster,' 'Cecil,' 'Zwei Frauen,' 'Clelia Conti,' 'Sibylle,' and 'Levin'; they were collected into a new edition in 21 volumes, completed in 1851. Her poems were mostly of earlier dates—'Gedichte,' 1835; 'Neue Gedichte,' 1836; 'Venetianische Nächte,' 1836; and 'Lieder und Gedichte,' 1837. She did not escape bantering criticism in her own country, as was shown in 'Diogenes, Roman von Iduna Gräfinn von H.-H.,' by Fanny Lewald, 1847, a satirical imitation of her style. Disturbed in various ways by the revolutionary events of 1848, the Countess took to religious reading; abjured Protestantism in 1850; and soon afterwards entered the Convent of the Good Shepherd, Breslau, founded by herself for the reclamation of degraded women. Between 1851 and 1853 she wrote several religious works, some of which have been translated into English. These were followed, at various dates, by several religious stories or romances, intended to contrast the peacefulness of the cloister with the turmoil of worldly life. The German titles of several of these religious publications are—'Von Babylon nach Jerusalem,' Mainz, 1851, an account of her conversion; 'Aus Jerusalem,' 1851; 'Die Liebhaber des Kreuzes,' 1852; 'Maria Regina,' 1860; 'Doralice,' 1861; 'Zwei Schwestern,' 1863; 'Peregrina,' 1864; 'Bilder aus der Geschichte der Kirche,' 3 vols. 1856—64. An English translation of one of her works was published in 1867, under the title of 'Lives of the Fathers of the Desert.'

* HAIDINGER, WILHELM VON, geologist and mineralogist, was born at Vienna, February 5th, 1795. His early education was received at Vienna, and his father, who was himself distinguished for his knowledge of mineralogy and geology, early imbued him with a taste for these sciences. In 1813 he went to Gritzz for the purpose of attending Mohs's lectures on mineralogy, and when that professor removed to Freiberg, in 1817, Haidinger accompanied him. In 1822, he was Count Breunner's companion in a tour through France and England, and in the following year we find him residing in the house of Allen, the banker, at Edinburgh, where he seems to have stopped some time. It was here that he translated and published an English translation of Mohs's 'Grundriss der Mineralogie.' Most of his papers written prior to 1830 were published in the scientific journals of Edinburgh. In 1825 he went with a son of Allen through Norway, Sweden, Denmark, Germany, Italy, and France. In 1827 he undertook the direction of his brother's porcelain works at Elbogen, and he continued to do so until 1840. In the last-mentioned year he succeeded Mohs as a counsellor of mines. The care of the imperial collection of minerals, or Montanistic Museum, was entrusted to him, and in 1843 he commenced his lectures on mineralogy in connection with that duty. In 1849 he was appointed director of the Geological Institute of Austria, in which capacity he has had the editing of the publications of the institute, and the directing of the geological survey of the empire. This survey has been mapped on several scales, from 1-144,000th to 1-576,000th. Of the larger scale, upwards of 168 sheets, comprising the larger portion of Austria, have been published. The maps are accompanied by explanatory treatises by the various surveyors, which are inserted in the 'Jahrbuch' and 'Abhandlungen' of the 'Geologischen Reichsanstalt.' From 1847 to 1851 he also edited the 'Naturwissenschaftliche Abhandlungen;' and 'Berichte über die Mittheilungen von Freunden des Naturwissenschaften in Wien,' of which society he has been president. His principal works consist of a 'Treatise on Mineralogy,' 3 vols. 8vo, Edinburgh, 1825, a translation of the work by Mohs; 'Handbuch der bestimmenden Mineralogie,' 8vo, Vienna, 1845, in which he incorporated the substance of his lectures; 'Krystallographisch-Mineralogisch Figuren Tafeln zu dem Handbuch,' 4to, 1846; and 'Die Kais. Königl. Montanistische Museum und die Freunde der Naturwissenschaften in Wei in die Jahren 1840—50,' 8vo, 1869. He has also written a large number of papers; 289 are enumerated in the Royal Society's 'Catalogue of Scientific Papers,' and since 1863 about a dozen more have come from his pen. These embrace a great variety of subjects, but those to which he has given most attention are the physical properties of minerals and aërolites.

HALDANE, JAMES ALEXANDER [E. C. vol. vi. col. 1001].

HALDANE, ROBERT [E. C. vol. vi. col. 1000].

HALES, JOHN, a scholar and divine of the 17th century, and known as the "ever-memorable" was born at Bath, in the year 1684; and, after receiving his early education in his native city, was entered, in the beginning of 1697, of Corpus Christi College, Oxford. He stood successfully for a fellowship at Merton College, and distinguished himself so much in the course of the examination that he was appointed college lecturer in Greek; and in 1612 was made Greek professor in the University. Six years afterwards he went out with Sir Dudley Carleton, King James's ambassador to the States of Holland, in quality of chaplain, and was employed by him to attend the sittings of the Synod of Dort, upon the proceedings of which he reported in a series of thirty-two Letters written to Carleton, between November, 1618, and February, 1619, which were published, three years after the author's death, by Dr. Pearson, afterwards Bishop of Chester, as forming, with nine sermons, the 'Golden Remains of the ever-memorable Mr. John Hales, of Eton College,' 8vo, London, 1659; second edition, enlarged by the addition of four Sermons, and several miscellaneous Tracts, 4to, London, 1673. Hales had been educated as a Calvinist, but the arguments of Episcopius, the Arminian champion at the Synod, so greatly prevailed with him that, as he observed to his friend Anthony Farindon, he "bade John Calvin good night." Shortly after his return to England, Hales was appointed to a fellowship at Eton College, through the joint exertions of Sir Dudley Carleton and Sir Henry Savile, the latter of whom was then Provost of Eton, as he had been Warden of Merton, at the time when Hales, through his encouragement, contested a fellowship in that College. In 1628 he composed the famous tract on 'Schism and Schismatics,' which was first published without the author's consent, and from an imperfect copy, in 4to, London, 1642, and 4to, Oxford, 1642, but of which a manuscript copy fell into the hands of Laud, who was naturally offended at the freedom with which the author reduced "Church Authority" to a nonentity. "Church authority," he had written, "there is none." Hearing of the offence he had given, Hales addressed a 'Letter to Archbishop Laud, upon occasion of the Tract concerning Schism,' &c., the wit, learning, and courage of which procured him a conference with the primate, who, it is probable, employed him in preparing for the press the second edition of his Answer to the Jesuit Fisher. Hales was placed on the list of chaplains at Lambeth, and soon afterwards, in June, 1639, was presented with a canonry of Windsor. He forfeited this preferment, however, together with his fellowship, by his refusal to take the "Engagement" imposed by the Parliament; and was obliged to sell his valuable library for his support. Owing to his generosity in sharing the produce with his fellow-sufferers in the same cause, and to the final declaration of Cromwell against the clergy, in 1655, which forced him to retire from a private tutorship he then held in a family near Eton, he was at length reduced to extreme destitution, in the midst of which he shrank from accepting the offered assistance of friends and admirers, even of Farindon, to whose necessities he had formerly administered. Hales died on the 19th of May, 1656, leaving behind him a character for liberality and toleration at that time all but unparalleled. Although Wood calls him a "walking library," he wrote little—scarcely anything, except at the earnest desire of his friends; "and yet he cannot," says Dr. Pearson, "be accused for hiding of his talent, being so communicative that his chamber was a church, and his chair a pulpit." His works, besides those already mentioned, include four 'Sermons preached at Eton,' 4to, London, 1673; 'A Tract concerning the Sin against the Holy Ghost,' 8vo, London, 1677; and 'Several Tracts,' 8vo, London, 1677, the fifth of which is the famous one concerning 'Schism and Schismatics.' Peter des Maizeaux published an 'Account of the Life and Writings of John Hales; being a Specimen of an Historical and Critical English Dictionary,' 8vo, London, 1719; and an edition of his 'Works. Now first collected together,' &c., 3 vols., 8vo, Glasgow, 1765, was issued under the care of Sir David Dalrymple, Lord Hailes, known as the learned author of the 'Annals of Scotland,' and various other historical works.

HALÉVY, JACQUES FRANÇOIS ELIE FROMENTHAL [E. C. vol. vi. col. 1002]. M. Halévy was born at Paris, March 27, 1799. Subsequently to the performance of 'La Tempesta,' referred to in the above notice, M. Halévy produced 'Jaguarita,' an opera in three acts, 1855; 'Valentine D'Aubigny,' a comic opera in three acts, 1856; and his grand opera, 'La Magicienne,' in five acts, 1858, the success of which procured his promotion to be Officer of the Legion of Honour. He died on the 19th of March, 1862. A pension of 5000 francs (200l.) was voted to his

widow by the Corps Législatif. A selection from his posthumous papers was published under the title of 'Derniers Souvenirs et Portraits,' with a biographical and critical notice by Fiorentino, 18mo, 1863.

HALIBURTON, THOMAS CHANDLER [E. C. vol. iii. col. 257]. At the general election in May, 1859, Mr. Haliburton was returned as member for Launceston. Born in 1797, he entered the House too late in life to adapt himself readily to the tone of thought and manners of that assembly, and after a few trial speeches, he subsided into a steady, but for the most part silent, supporter of the Conservative party. Occasionally he spoke on colonial and especially on Canadian subjects, when he always secured the attention of the House. To literature he made no further contributions. He died at Gordon House, Isleworth, on the 27th of August, 1865.

HALL, THE RIGHT HON. BENJAMIN, LORD LLANOVER [E. C. vol. iii. col. 261]. Sir Benjamin Hall went out of office with his party in February, 1858. He was not included in Lord Palmerston's ministry, June, 1859, but he was shortly after raised to the peerage with the title of Baron Llanover of Llanover and Abercorn in the county of Monmouth; and in 1861 he was nominated lord-lieutenant of Monmouthshire. In the House of Peers Lord Llanover did not assume a prominent place. His great work as a politician was the carrying through the House of Commons of the Act which created the Metropolitan Board of Works. Lord Llanover died at his residence, Great Stanhope Street, on the 27th of April, 1867, in his 65th year. He was born on the 8th of November, 1802. He married in 1823 Augusta Charlotte Elizabeth, daughter and co-heir of Benj. Waddington, Esq., of Llanover, by whom he left an only daughter. The title is consequently extinct. Lady Llanover is known as having edited the 'Diary of Mrs. Delany.'

* HALL, JAMES, geologist and palæontologist, was born of English parents, at Hingham, Massachusetts, in 1811. From 1831 to 1836 he attended the Rensselaer school at Troy, New York, where his studies were directed by the geologist, Amos Eaton. In 1837 he was appointed one of the geologists on the survey of the State of New York, and as such the investigation of the fourth, or western district, was committed to his charge. His reports thereon extend from 1837 to 1843, when they were collected into a thick quarto volume, forming one of the series of volumes devoted to the natural history of the state. He gave especial attention to the organic remains, and by their means he has succeeded in establishing the stratigraphical succession of the older formations. His palæontological labours have been unintermittent, although he has had to contend with many obstacles. Thus in 1850 the survey was ordered to be stopped, but he nevertheless continued his labours, and employed persons to collect, not only in his own district, but also in the far western states, at his own expense. While thus out of employment, Sir W. Logan was anxious to secure his services on behalf of the Canadian Survey, and some arrangement was made, but, owing to subsequent events, his assistance resulted in little more than a report on the Canadian graptolites, forming Decade II. of the Geological Survey of Canada, under the title 'Graptolites of the Quebec Group,' 8vo, 1865. In 1855 he was appointed State Surveyor of Iowa, and the printing of his reports on the New York Survey was recommenced; in 1857 he was commissioned to survey Wisconsin. In 1858 he received the Wollaston medal of the Geological Society of London, of which society he had previously been elected a foreign member, in recognition of his merits. The work on which his reputation mainly rests is the 'Palæontology of New York,' forming Part VI. of the 'Natural History of New York,' published by a State Commission. It consists of four large quarto volumes, illustrated with hundreds of plates, drawn partly by himself, partly by his wife, and partly by Meek and other draughtsmen. Vol. 1 was issued in 1847, vol. 2 in 1852, vol. 3 in 1859, the text of vol. 4 in 1867, but the plates were not issued till long after, we believe, not until 1870; and the manuscript of vol. 5 has been in the hands of the Commissioners for some time past. The fossils are described in the order of their antiquity, beginning with the oldest. The fourth volume completes the Devonian fauna; the fifth deals with the Crinoidea, Crustacea, Mollusca, &c., of the higher rocks. With Whitney he wrote 'Report on the Geological Survey of the State of Iowa,' vol. 1, 8vo, Iowa, 1858. He has also contributed the descriptions of fossils to most of the reports issued under Government auspices, such as those of Fremont, Stainsbury, &c. Besides a few other books, he has written a large number of papers for the scientific journals of America, mostly relating to palæozoic fossils and formations.

HALL, MARSHALL, physician and physiologist, belonged to an old Nottinghamshire family, and was the son of an eminent cotton-spinner at Basford, near Nottingham, at which place he was born, February 18, 1790. His early education was received at Nottingham, and subsequently at Edinburgh, where he manifested much earnestness of study, and frequently acted as demonstrator to the professor of anatomy, Dr. Fyfe. He was one of the most prominent members of the Royal Medical Society of Edinburgh, and in 1811 was elected its senior president, an honour much coveted, and rarely obtained by one so young. In the following year he took his degree of M.D., and was almost immediately afterwards appointed the resident house physician to the Royal Infirmary at Edinburgh. In 1814 he made a tour through Europe, in the course of which he walked from Paris to Göttingen. In 1817 he commenced practice at Nottingham, and soon rose to eminence. In 1825 he became physician to the General Hospital at Nottingham. Desiring to extend his reputation, he removed to London in 1826, and there he carried on a successful practice for about a quarter of a century, his professional income ranging from 800*l.* to upwards of 4,000*l.* per year. In 1853 he visited America, and in 1854 he went to Italy for the benefit of his health, but the disease which he had gradually gained upon him, and he died at Brighton, August 11, 1857.

Dr. Marshall Hall wrote several books and numerous papers. His most important contributions to medical literature relate to the circulation of the blood, the nervous system, and the diagnosis of diseases. From his earliest days as a medical student he paid especial attention to the symptoms of illness. His habit was to write the name of each disease, with its characters, on separate slips of paper, to arrange these in every possible way, according as one or other, or a group, of the characters appeared to be the most important, and to check the conclusions he arrived at by observations in the hospital. In this way he discovered that several diseases which had been confounded with others having strong similarity of symptoms, were distinct, and required a very different mode of treatment. When he commenced practice at Nottingham, he published a work 'On Diagnosis,' 8vo, 1817, which at once won a high reputation, and obtained a place among the standard works of medical literature. Soon after he settled in London he wished to become a fellow of the Royal Society, and, as a qualification for the election, he commenced a series of researches, on which he based his 'Essay on the Circulation of the Blood,' 8vo, 1831. It contains an account of his discovery of the connection of the arteries and veins (in the lower vertebrates), by means of simple channels, in which the most important chemical alterations of the blood are effected; as also, of the so-called "caudal heart" in the tail of the eel. At a somewhat earlier date he wrote a paper 'On the effects of the loss of blood,' for the 'Transactions of the Medical and Chirurgical Society,' vol. xiii., pp. 121—151 (1827), which, together with his practice, did much towards lessening the almost indiscriminate use of the lancet by medical men. In 1833 was published a paper 'On the reflex functions of the Medulla oblongata and Medulla spinalis,' Phil. Trans., pp. 635—666, which was the first of a long series of communications embodying the results of his investigations on the nervous system during a period of nearly twenty-five years. He established the doctrine of the reflex function of the nervous system, and applied his doctrine to the elucidation of disease. The second paper was 'On the function of the Medulla oblongata and Medulla spinalis, and on the excitomotor system of nerves,' which formed the Bakerian lecture for 1837. The Royal Society refused to print it in their 'Transactions,' on the ground of its being essentially the same as the first; this Dr. Hall considered a grievance, and a coolness existed for years between him and the Royal Society in consequence. It was published in the 'Annales des Sciences Naturelles,' vol. vii., pp. 321—370 (1837). Most of his subsequent papers on the subject appeared either in the 'Transactions of the Medical and Chirurgical Society,' in Müller's 'Archiv für Anatomie,' or in 'Comptes Rendus.' Amongst other works by him, we may mention the following: 'Commentaries on some of the more important of the diseases of females,' 8vo, London, 1827; 'Memoirs on the Nervous System,' 8vo, 1837, 4to, 1843; 'Researches principally relative to the morbid and curative effects of loss of blood,' 8vo, 1830; and 'Principles of the Theory and Practice of Medicine, including a third edition of the work on Diagnosis,' 8vo, 1837. He was the inventor of a method of restoring suspended respiration, which is now usually adopted in the case of partially drowned persons. Details respecting it are given in 'Prone and Postural Respiration in Drowning,' 8vo, 1857. Obituary memoirs of Dr. Hall were given in most of the medical

journals of 1857, and a full account of his life was published by his widow, in 2 vols, 8vo, 1861.

HALLAM, HENRY [E. C. vol. iii. col. 264.] This distinguished historian died on the 21st of January, 1859. His latest literary labour was, we believe, the incorporation of his 'Supplemental Notes' with the text of the eleventh edition of the 'View of the State of Europe during the Middle Ages,' 8vo, 1855, &c.

* HALLECK, HENRY WAGER, an American general, was born at Westernville, State of New York, in 1816. After attending Union College, he entered the Military Academy at West Point in 1835, graduated in 1839, was made lieutenant of engineers, and became assistant professor of engineering. Between 1841 and 1844 he was engaged on the fortifications of New York; and in 1845—6, gave the course of lectures at Boston which formed the basis of his work 'Elements of Military Art and Science.' From 1846 to 1854 he filled various duties in the Pacific States of the Union, being at different times Secretary of the State of California under military government, Chief of the Staff to Commodore Shubrick, member of the Convention which framed the constitution of California, lieutenant-governor of Mazatlan, judge advocate, and inspector of lighthouses. In 1854 he retired from the army, in which he had been appointed first lieutenant in 1845, brevet captain in 1847, and captain in 1853. He settled at San Francisco as a lawyer, and was engaged in that profession about seven years, and was also director-general of the New Almaden quicksilver mines. During this time he published a 'Treatise on International Law and the Laws of War,' and a translation of the mining laws of Mexico. When the Civil War broke out, in 1861, he rejoined the army, with the rank of major-general. He relieved General Hunter in the command of the department of the West, which resulted in the conquest of Tennessee by the Federals. About the middle of 1862 he was summoned to Washington, to assume the post of Commander-in-Chief of the U. S. army, which had been withdrawn from General McClellan on account of his failure before Richmond. He held the supreme command, without many great military successes, until 1864, when he was superseded by General Grant, who made him Chief of the Staff. General Halleck held for a time the post of Minister of War, succeeding Mr. Stanton in that office.

HAMILTON, PATRICK, one of the earliest martyrs for the Reformed faith in Scotland, was born about the year 1503. He was of a noble family, the Earl of Arran and the Duke of Albany being respectively his paternal and maternal uncles; and his circle of relatives included James V. He was carefully educated for a high career, and whilst prosecuting his studies received the emoluments of the abbacy of Ferne. He became suspected of favouring the doctrines of the Reformation, and proceeded to Germany, where he made the acquaintance of Luther, Melancthon, and other reformers, and unreservedly adopted their opinions. Returning to Scotland about the year 1526, he preached in various places against the corruptions of the Romish Church, so that he was presently brought to trial at St. Andrew's, before Archbishop Beaton and his convention, on the charge of maintaining and propagating sundry Lutheran and heretical opinions. The articles on which he was arraigned accused him of holding:—That the corruption of sin remains in children after their baptism; that no man, by the power of his free-will, can do any good; that no man is without sin as long as he liveth; that every true Christian may know himself to be in a state of grace; that a man is not justified by works, but by faith only; that good works make not a man good, but that a good man doth good works, and that an ill man doth ill works; yet the same works, truly repented of, make not an ill man; that faith, hope and charity are so linked together, that he who hath one of them hath all, and he that lacketh one lacketh all; that God is the cause of sin in this sense, that he withdraweth his grace from man: and grace withdrawn, he cannot but sin; that auricular confession is not necessary to salvation; that actual penance cannot purchase the remission of sin; that there is no Purgatory, and that the holy patriarchs were in heaven before Christ's passion; that the pope is anti-Christ, and that every priest hath as much power as he. For these articles, and for refusing to abjure them, Hamilton was condemned as an obstinate heretic on the 28th of February, 1527, on which day he was also condemned by the secular power, and burnt to death in the area before the gate of St. Saviour's College, St. Andrew's.

HAMILTON, WILLIAM JOHN, geologist and geographer, was born in London, July 5, 1805. He was educated at the Charterhouse School and at Göttingen; served in the diplomatic

department of government for some years; was then a member of parliament for Newport, Isle of Wight, and lastly, was chairman of the Great India Peninsula Railway Company, from 1849 to 1867. Through his intimacy with Sir Roderick I. Murchison, his attention was directed to geology, and he himself was introduced to Hugh Strickland, with whom he commenced a scientific examination of Asia Minor, but Strickland was his companion for a few months only. He left England in July, 1835, made a rapid tour through Italy and Greece, and reached Smyrna towards the end of October. From there he traversed most parts of Asia Minor, and terminated his travels at Smyrna, in August, 1837. The results of his researches formed the subject of various papers read before the Geological Society, but the fullest account is given in 'Researches in Asia Minor, Pontus, and Armenia, with some account of their antiquities and geology,' 2 vols. 8vo, London, 1842. The map of Asia Minor which was drawn up from his notes, was an important improvement upon those previously published. Amongst his other literary contributions may be noticed his paper 'On the geology of the Mayence basin,' in the 'Quarterly Journal of the Geological Society,' vol. x., pp. 254—298 (1854); and 'On the Tertiary Formations of the North of Germany,' in the same journal, vol. xi. pp. 126—143 (1855). He was for many years an officer of the Geological Society; from 1832 to 1835, and from 1841 for several years afterwards he was secretary; and in 1854, 1855, 1865, 1866, he was president. He was also president of the Royal Geographical Society in 1837, 1841, 1842, and 1847. He died June 27, 1867.

HAMILTON, SIR WILLIAM ROWAN, was born at Dublin, August 9, 1805. His father, Archibald Hamilton, was an attorney; his mother was related to the mathematician, Dr. Hutton. The precocity of young Hamilton's intellectual powers was very marked. Being placed with his uncle, the Rev. James Hamilton, curate of Trim, he knew a good deal of Hebrew at seven years old, wrote a Persian letter to the Persian ambassador in his fourteenth year, and was at that time familiar with the rudiments of the Latin, Greek, French, Italian, Spanish, German, Syriac, Arabic, Sanscrit, Hindustani, and Malay languages. In mathematics he was almost self-taught. Beginning with a Latin Euclid at ten years old, and advancing to fluxions at fourteen, he mastered Newton's 'Principia,' the Differential Calculus, and Laplace's 'Mécanique Céleste,' before he was nineteen. No sooner had he entered Trinity College, Dublin, in 1822, than he began to carry all before him, becoming optime in Greek and in science, and being almost as much distinguished in poetry and metaphysics as in mathematics. Even a year before he entered the college he had attracted the notice of Dr. Brinkley, Irish Astronomer Royal, by a paper discussing a demonstration in the 'Mécanique Céleste,' and by an original research on the calculation of certain curves of double curvature. He read a memoir on caustic curves before the Royal Irish Academy in 1824. The astronomers of Europe were somewhat astonished when, in 1827, a young man who had not attained the age of 22 stepped at once from the position of an undergraduate to that of Andrews' professor of astronomy and superintendent of the Observatory, at Dublin, especially as he was not known to have displayed any talent for practical astronomy or observing. In truth, the authorities of Trinity College were so proud of this undergraduate, that when Dr. Brinkley died they gave young Hamilton the appointments in order to keep him amongst them. They were so far right that the great mathematician shed lustre on their college for a further period of nearly 40 years, although not for the kind of labour usually expected in an astronomical observatory. About this period he produced one of his great works, the 'Theory of Systems of Rays,' which, with its supplements, is regarded as of the highest order in relation to the geometry of optics. Chasles spoke of it as "dominant toute cette vaste théorie." Starting from the fundamental idea that light, whatever be its cause or constitution, must be amenable to the principle of least action (nature's economy in using up force), he arrived at most important deductions relating to reflection and refraction. One of his discoveries, literally made upon paper, was that of conical refraction, a thing neither known nor surmised by practical experimenters in optics. He found by calculation that a single ray of light falling at a certain angle on a bi-axial crystal ought to become a conical sheet of light under certain circumstances. Dr. Lloyd, of Dublin, went through a difficult and delicate course of experiments, suggested by this speculation, and found the truth to be as Hamilton had predicted. The relation between Hamilton and Lloyd in this remarkable instance was analogous to that afterwards presented between Leverrier and Galle, and between Adams and Challis, in regard

to the planet Neptune. In 1834—5 Hamilton developed his 'General Method in Dynamics,' a great step in advance in theoretical dynamics, and considered by competent authorities worthy to rank with Lagrange's 'Mécanique Analytique.' More especially on the Continent has this work been appreciated and developed in important ways. Probably the work which brought him most into fame is his 'Calculus of Quaternions,' the invention and development of which occupied him nearly twenty years. Ever since the time of Descartes, it had been customary to denote the position of a point in space by its distance from three co-ordinate planes. Hamilton's conception was to represent such a point by the relation which exists in space between two intersecting lines. Four elements would be involved—(1) the relation between the lengths of the two lines; (2) the angle at which they cross each other; (3) the inclination to some fixed or known plane of the plane in which the two lines lie; and (4) the nodal points of these two planes. These four he calls quaternions. The theory grew out of an early paper by him on 'Algebra as the Science of Pure Time.' There was a strong tinge of metaphysics about Hamilton; he believed that no great advance in mathematics is now to be looked for, except from a metaphysical point of view. A "metaphysical atmosphere" surrounds Hamilton's theory of quaternions, which deters many mathematicians from grappling with it, but all admit that it is a product of the highest order of mathematical genius.

Sir W. R. Hamilton (he was knighted on the occasion of the first Dublin meeting of the British Association for the Advancement of Science, in 1835) developed his great theory in two publications, 'Lectures on Quaternions,' 1853, and 'Elements of Quaternions,' 1866, nearly ready for the press at the time of his death. The work was still further developed, at Sir William's request, by Professor Tait, of Edinburgh University, whose 'Elementary Treatise on Quaternions' appeared in 1867. Sir William wrote more than 70 papers in various scientific journals, principally the 'Transactions of the Irish Academy,' the 'Philosophical Magazine,' the 'British Association Reports,' the 'Correspondence Mathématique,' and the 'Cambridge and Dublin Mathematical Journal.' Besides researches on rays, on analytical dynamics, and on quaternions, these papers treated of equations of the fifth degree, the theory of probabilities, variable functions, &c. Although a member of the Astronomical and many other learned societies, president of the Irish Academy, and the recipient of gold medals as recognitions of his mathematical genius, he was not a Fellow of the Royal Society: it was understood that he objected to some of the conditions under which admission to that body is obtained. During many years he was in receipt of a pension of 200*l.* a year from the Crown. Poetry had always a great charm for him; he numbered Coleridge, Wordsworth, Southey, and Mrs. Hemans among his personal friends; and a poetical vein, as well as a metaphysical subtlety, is to be met with in many of his mathematical writings. He last appeared in public at the Dublin Exhibition in 1865, and died September 2nd in that year.

HAMMER-PURGSTALL, JOSEPH, BARON VON. [E. C. vol. vi. col. 1002.]

* **HAMON, JEAN LOUIS**, French painter, was born May 5, 1821, at Plouha (Côtes-du-Nord), and studied painting in the ateliers of Paul Delaroche and G. C. Gleyre. He exhibited in the Salon of 1848 and in the following years pictures of historical and ecclesiastical character, one or two of which were purchased by the Government and consigned to provincial museums; but, failing to secure popular attention, he accepted an engagement in the Sèvres porcelain works, where he remained till 1852. Vases painted by him are now greatly esteemed. On returning to the Salon in 1852, his picture of 'La Comédie humaine' proved a great attraction, but it was the naïveté, grace, and artistic charm of his little Greek idylls, 'Ma sœur n'y est pas' (1853) and 'Ce n'est pas moi' (1854) which secured his fame. M. Hamon has since continued to produce these quaintly graceful classic fancies, in which for the most part children imitatively painted are exhibiting some pretty wilfulness. He has of course found many imitators, but none with his native piquancy or rare artistic talent. M. Hamon is spoken of by French writers as the head of the 'École neo-grecque,' but, with all its cleverness and charm, even M. Hamon's own work, if Greek, is Greek of Paris, and of the second empire. About it there is an air of enervation and lassitude, and just a touch of voluptuousness, whilst the pale and hazy colour seems redolent rather of the atmosphere of Pompeii than of Athens. M. Hamon received the cross of the Legion of Honour in 1855.

HAMPDEN, RIGHT REVEREND RENN DICKSON,

D.D., late bishop of Hereford, was born in 1793, in the island of Barbados, where his father was colonel of the local militia. He was brought to England when six years of age, and was privately educated under Dr. Rowlandson, vicar of Warminster, in Wiltshire. In 1810 he entered as a commoner at Oriel College, Oxford, where he had Copleston for his tutor, and Arnold and Whately among his friends. He took his B.A. degree in Michaelmas term, 1813, and proceeded M.A. in 1817; and in 1833 took the degrees of B.D. and D.D. by accumulation. In 1814 he carried off the Chancellor's prize for a Latin essay on the office of the Ephors at Sparta, 'De Ephorum apud Lacedæmonios Magistratu Disputatio Præmio donata,' &c., 8vo, Oxford, 1814; and was appointed to a fellowship in his college, which he vacated on his marriage on the 24th of April, 1816. After a short residence at Bath, he became successively curate of Newton, Faringdon, and Hackney; the literary results of this period of his life being 'An Essay on the Philosophical Evidence of Christianity; or the Credibility obtained to a Scriptural Revelation, from its Coincidence with the Facts of Nature,' 8vo, London, 1827, which was spoken of as an appropriate and worthy companion to Butler's 'Analogy,' and 'Parochial Sermons illustrative of the Importance of the Revelation of God in Jesus Christ,' 8vo, London, 1828. Returning to Oxford in 1828, he became college tutor at Oriel, and in 1829—30, and again in 1831—32, acted as public examiner in classics. He delivered the Bampton Lectures in 1832, which were published with the title of 'The Scholastic Philosophy considered in its Relation to Christian Theology,' 8vo, Oxford, 1833; second edition, with an 'Introduction,' which was also separately published, 8vo, London, 1837; third edition, 1848, of which 'An Epitome,' &c., 8vo, London, 1848, was published by the Rev. W. J. Irons. The lectures were upon an abstruse and difficult subject, into which few theologians had penetrated, and their tendency was affirmed by the High Church party to be Arian and heretical, yet their author was promoted by Lord Grenville to the principalship of St. Mary Hall, left vacant by the death of Dr. John Dean, on the 12th of April, 1833. Next year Dr. Hampden was elected to be Whyte's professor of political economy, the patronage of which, it is worthy of remark, is vested in the vice-chancellor, the dean of Christ Church, the presidents of Magdalen and St. John's, and the two proctors. The lectures which he delivered in this capacity were published as 'A Course of Lectures introductory to the Study of Moral Philosophy,' 8vo, London, 1835. On the recommendation of Lord Melbourne, he was appointed on the 17th of February, 1836, to the Regius professorship of divinity, in succession to Dr. Edward Burton; and on the 1st of March following was preferred to be one of the eight prebendaries or canons of Christ Church. Dr. Hampden's nomination to the chair of theology gave rise to much opposition, especially from the High Church party, who, with the help of some of the Evangelicals, procured the passing of a university statute of censure against him on account of the assumed heterodoxy of the Bampton lectures. The Crown, however, persisted in the appointment, and the new professor of divinity delivered his first lecture on the 17th of March, and published it with the title of an 'Inaugural Lecture read before the University of Oxford in the Divinity School,' 8vo, London, first three editions, 1836. The appointment raised a storm of controversy, into which nearly every review of importance in England, and some American ones, entered on one side or the other. The very voluminous literature of the subject may be represented by a 'Letter to the Archbishop of Canterbury, by Jortin Redivivus,' 8vo, London, three editions, 1836; 'State of Parties in Oxford. With an Appendix containing Letters relative to the Persecution of the Regius Professor,' 8vo, 1836; 'Statements of Christian Doctrine, extracted from the published Writings of Dr. Hampden,' 8vo, London, second edition, 1836; 'Elucidations of Dr. Hampden's Theological Statements,' 8vo, Oxford, 1836; 'Correspondence between Dr. Hampden and the Archbishop of Canterbury,' 8vo, Oxford, second edition, 1838; 'Dr. Hampden's past and present Statements compared,' 8vo, Oxford, 1836; 'Dr. Hampden's Theological Statements and the Thirty-Nine Articles compared,' 8vo, 1836, from the pen of Dr. Pusey; 'The Propositions attributed to Dr. Hampden by Professor Pusey compared with the Text of the Bampton Lectures, in a Series of Parallels,' 8vo, London and Oxford, 1836; 'Observations on a Letter addressed to the Archbishop of Canterbury,' &c., 8vo, Oxford, 1836, by Misopseudes; and 'The Oxford Persecution of 1836. Extracts from the Public Journals in Defence of the present Regius Professor of Divinity,' 8vo, London and Leamington, 1836. Three years after his appointment Dr. Hampden produced 'A Lecture

on Tradition, read before the University in the Divinity School, Oxford, March 7th, 1839, with additions,' 8vo, London and Oxford, second edition, 1839; fourth edition, enlarged, 8vo, London, 1841, which he followed by 'The Thirty-Nine Articles of the Church of England,' &c., 8vo, London, first and second editions, 1842. On the 11th of December, 1847, he was nominated to the bishopric of Hereford, to which he was consecrated on the 26th of March, 1848. Between these two dates great wrath and agitation prevailed against Lord John Russell, at that time Premier, and an organised opposition to the appointment was the result, with which Dr. Merewether, the Dean of Hereford, so closely identified himself as to vote against the election when the *congé d'élire* reached the cathedral. The chief literary results of the controversy are 'Letters to Lord John Russell on the Nomination of Dr. Hampden,' by an "Englishman"; 'The Hampden Controversy: the Whole of the Correspondence, &c., between the Bishops of London, Exeter, Norwich, &c., and Lord John Russell. Also Dr. Hampden's Letter to his Lordship, together with some Prefatory Remarks by the Editor of the "Church Warbler,"' 16mo, London, 1847; 'Fifty-Two Propositions. A Letter to Dr. Hampden, submitting to him certain Assertions in his Bampton Lectures, &c.,' 8vo, 1848, by the Rev. W. J. Irons; 'The Official and Legal Proceedings connected with the Appointment of Dr. Hampden to the See of Hereford, including the principal Documents connected with this important Controversy, and a Translation of all the Extracts. With Notes and an Appendix,' 8vo, London, 1848; and 'A Concise History of the Hampden Controversy, from the Period of its Commencement in 1832 to the Present Time. With all the Documents that have been published, and a Brief Examination of the "Bampton Lectures" for 1832, and of the "Observations on Dissent,"' 8vo, London, 1848, from the pen of the late Rev. Henry Christmas.

Dr. Hampden was always known rather as a student and a thinker than a man of action, and his academical habits of seclusion attached to him after he became the incumbent of a diocese. Two years before his death he suffered from a paralytic seizure, which incapacitated him from severe mental activity; but the disease which proved fatal to him was congestive apoplexy from concussion of the brain. He died in Eaton-place, London, on the 23rd April, 1868, and was buried in the cemetery at Kensal Green. His works, in addition to those already mentioned, include 'Observations on Religious Dissent,' 8vo, Oxford, first and second editions, 1834; 'A Postscript to Observations on Religious Dissent, with particular Reference to the Use of Religious Tests in the University,' 8vo, London, 1835; various 'Visitation Charges' and 'Sermons,' especially a volume entitled 'Sermons preached before the University of Oxford from 1836 to 1847,' 8vo, London, 1848; a review of Thomas Aquinas and the Scholastic Philosophy, contributed to the 'Encyclopædia Metropolitana,' and articles on Socrates, Plato, and Aristotle, which, after having been issued in the 'Encyclopædia Britannica,' were reprinted, with additions, under the title of 'The Fathers of the Greek Philosophy,' 8vo, Edinburgh, 1862.

HANKA, WACLAW. [E. C. vol. iii. col. 280.] In 1849, Hanka, who had for some time been lecturer on the Slavonic language at the University of Prague, was nominated professor. He died at Prague on the 12th of January, 1861.

HANMER, SIR THOMAS, a statesman and man of letters, a member of the family of the Hansmers of Hanmer, in the marches of North Wales, was born at Bettisfield Park, the seat of his grandfather, on the 24th of September, 1677, and was educated at Westminster, and at Christ Church, Oxford. He succeeded to the title and estates of his uncle, Sir John Hanmer, in 1701, and in the following year was elected to represent the county of Flint in the first parliament of Queen Anne. He was for nearly 30 years an influential member of the House of Commons, of which he was elected Speaker in 1713. In the latter part of his life he devoted himself almost exclusively to literary pursuits, and is chiefly remembered for an edition of Shakspeare, which he prepared and presented to the University of Oxford, under whose auspices it was printed, with engravings by Gravelot, with the title of 'The Works of Shakspeare, carefully revised and corrected by former Editions, and adorned with Sculptures,' 6 vols. 4to, Oxford, 1744 and 1770—71; reprinted in 9 vols. 12mo, London, 1747, &c., which contained prefaces severally by the editor and by Pope, and "some account of the Life, &c., of Mr. William Shakspeare, written by Mr. Rowe." Sir Thomas Hanmer died at his estate in Suffolk, on the 5th of May, 1746.

Amongst the publications conversant about him may be mentioned a 'Castrated Letter in the Sixth Volume of the "Biographia Britannica," wherein is discovered the First Rise of the present Bishop [Warburton] of Gloucester's Quarrel with him about his Edition of Shakespeare's Plays,' 4to, London, 1763; and Sir Henry Edward Bunbury's 'Correspondence [1706-44] of Sir Thomas Hanmer, with a Memoir of his Life. To which are added other Relicks of a Gentleman's Family,' 8vo, London, 1838, a work which contains much curious literary and political matter.

HANNEMAN, ADRIAAN, Dutch portrait painter, according to the usual authorities was born at the Hague in or about 1610, and died there in 1680; but recent Dutch writers place his birth in 1601, and his death in 1669. As much difference exists respecting his master, English writers stating that he was a pupil of the elder Ravesteyn, the Dutch of Mytens; but it is certain that his style was formed on that of Vandyck. He came to England and worked for a time as assistant to Mytens, but afterwards on his own account, when he met with abundant patronage. Yet, though his name often occurs in old catalogues, English portraits attributed to Hanneman are now seldom met with,—whilst doubtless many of those attributed to Vandyck are really by Hanneman. On the outbreak of the Civil War, Hanneman, after a residence of 16 years in England, returned to the Hague, was appointed portrait-painter to the Princess of Orange, and continued in great reputation till his death. He was one of the founders in 1656 of the Fraternity of Painters at the Hague, and was elected its first dean. His portraits are numerous in Holland, and include many of his most distinguished contemporaries. His most celebrated picture is an allegorical figure of Peace, over the fire-place of the great room of the States-General of Holland, with which the States were so pleased that in addition to a liberal payment to the artist, they voted a sum of 1000 florins to the person who served as his model. A portrait by him of Charles II., painted before his restoration, was engraved by H. Danckers.

HANSEMAN, DAVID JUSTUS LUDWIG, a German economist and politician, was born at Finkenwerder, near Hamburg, July 12th, 1790. His father, a Protestant pastor, apprenticed him to a commercial firm in Westphalia, and the experience thence obtained enabled David to establish himself as a wool merchant at Aix-la-Chapelle. As a successful and influential trader he founded a fire insurance company in 1824, and in subsequent years became member of the Tribunal of Commerce, of the Chamber of Commerce, and of the Diet of Rhenish Prussia. In 1830 he headed the party of constitutional reformers; in 1834 founded a society for the encouragement of handicrafts; in 1838 was president of the Chamber of Commerce at Aix-la-Chapelle. He fostered the construction of railways both as a capitalist and a writer. Four of his publications are on this subject, viz., 'Die Eisenbahnen und deren Actionärn in ihrem Verhältniss zum Staat,' 1837; 'Preussens wichtigste Eisenbahnfrage,' 1837; 'Kritik des Preussischen Eisenbahngesetzes von 1838,' 1841; and 'Ueber die Ausführung des Preussischen Eisenbahnsystems,' 1843. Hanseman retired from business in 1840, to devote himself to political life. In 1845 he was elected member of the Diet, and took an active part in the advocacy of political and administrative reforms. During a few months in 1848 he was Minister of Finance, but the discomfiture of the liberals led to his retirement. As a member of the Upper Chamber he opposed the Frankfurt scheme for a German empire, expressing his preference for a Federal Government based on a liberal constitution. Some of his writings relate to this subject, of which two were 'Die deutsche Verfassungsfrage,' 1848; and 'Die deutsche Verfassung vom 28 März, 1849,' 1849. When governor of the Bank of Prussia, he established a discount bank at Berlin. On this subject he wrote in 1854 an introduction to 'Das Statut der Discontogesellschaft.' In 1861 he published a pamphlet, 'Ueber die Einführung des deutschen Handelsgesetzbuches,' and edited the 'Verhandlungen des Handelstages in Berlin vom 20 Februar bis 2 März.' He died at Schlangenbad, August 4th, 1864.

* **HANSEN, PETER ANDREAS**, a Danish astronomer, was born at Tondern, in Schleswig, December 8th, 1795. After being engaged for a time under Schumacher, on the trigonometrical survey of Holstein, he became assistant to the same astronomer at the Altona Observatory. In 1825 he received the appointment of director of the Seeberg Observatory, near Gotha. Hansen has been a voluminous contributor to the scientific journals, which contain more than one hundred papers by him, ranging from 1822 to 1863 or later. They relate to almost every

branch of astronomy, and to many important researches connected with barometrical pressure, chronometrical determinations of longitude, the reflecting angles of prisms, the theory of probabilities, &c. The papers were originally published chiefly in the 'Astronomische Nachrichten,' the Transactions of the Academy of Sciences of Saxony, and the Memoirs of the Royal Astronomical Society of London. His separate works comprise the following:—'Methode mit dem Fraunhoferschen Heliometer Beobachtungen anzustellen,' 1827; 'Untersuchungen über die gegenseitigen Störungen des Jupiter und Saturn,' 1831; this paper was crowned by the Berlin Academy, for the light it threw on the perturbations of the exterior planets; it aided in suggesting those later calculations which led to the discovery of the planet Neptune. 'Fundamenta nova investigationis orbitæ veræ, quam Luna perlustrat, quibus annexa est solutio problematis quatuor corporum breviter exposita,' 1838. 'Ermittelung des absoluten Störungen in Ellipsen von beliebiger Excentricität und Neigung,' 1843; this, a kind of general theory of perturbations in elliptical orbits, was translated into French by Mauvais, in 1845. 'Theorie des Æquatorials,' 1854. 'Theorie der Pendelbewegung,' 1854 (crowned by the Academy of Sciences of Saxony). 'Auseinandersetzung einer zweckmässigen Methode zur Berechnung der absoluten Störungen der kleinen Planeten,' 1856—9, another of his contributions to the general theory of reciprocal planetary perturbations. Great value is attached by astronomers to Hansen's Lunar Tables, 4to, published in French, 1853—57, under the auspices of the Royal Society of Sciences of Copenhagen. The English Government presented Hansen with 1,000*l.*, in recognition of the value of these Tables for practical purposes. Other works by him are, 'Theorie der Sonnenfinsternisse und verwandter Erscheinungen,' 1858; 'Darlegung der theoretischen Berechnung der in den Mondtafeln angewandten Störungen,' 1862—4; and 'Geodätische Untersuchungen,' Leipzig, 1865. Professor Hansen superintended the construction of the new Observatory at Erfurt, in 1859.

* **HANSTEEN, CHRISTOPHER**, a Norwegian astronomer and physicist, was born at Christiania, September 26th, 1784. In 1802 he went to Copenhagen with a view to studying law, but natural inclination led him to mathematics. While employed as a teacher at Hillerød, an incident drew his attention to the science with which his subsequent labours were chiefly associated. A large terrestrial globe was brought to the school, constructed by the Cosmographical Society at Upsal, on which two south magnetic poles, one strong and the other weak, were marked, with lines of magnetic direction tending towards them. This had been prepared from the observations of Captain Cook and other navigators in the South Seas. Hansteen conceived the idea of extending the researches to the northern hemisphere. In 1814 he was appointed professor of mathematics at Christiania. In 1819, after a laborious examination of all obtainable observations, and the preparation of a chart showing the magnetic direction and dip at numerous places, he published 'Untersuchungen über den Magnetismus der Erde.' It was translated by Hansen from the Swedish MS., and published in German. This work attracted much attention, especially in England. It led to the recording of magnetic observations in all expeditions of a scientific character. Hansteen was the first to trace out the magnetic equator; and in 1821 he discovered the diurnal variation of magnetic intensity. After travelling in various parts of Europe, he found that his researches would be wanting in completeness unless he knew the magnetic condition of the vast region of Siberia. Aided by the countenance of the King of Sweden, and by funds from the Norwegian parliament, he spent the years 1828—30 mainly in Siberian travel. The scientific results were published in various journals and transactions. The fatigues and perils suffered were the subject of 'Reiseerinnerung aus Sibirien,' published in 1854 in German. A French translation of this work, 'Souvenirs d'un Voyage en Sibérie,' was published in 1856. The observations, tables, and charts were collected in 1863, in a quarto volume entitled 'Resultats magnetischer Beobachtungen auf einer Reise nach dem östlichen Sibirien.' In 1833 Hansteen was appointed director of the new observatory near Christiania, to which, at his suggestion, a magnetic observatory was added in 1839. He filled, at various periods, the offices of professor of mathematics at Christiania University, professor of applied mathematics at the military school of artillery and engineers, director of the topographical survey and map of Norway, and president of the commission on weights and measures. In the last-named office he introduced numerous improvements of great value. In 1835 appeared his 'Lærebog i Plangeometrie;' and in 1836—38 his 'Lærebog i

Mechaniken,' since become recognised text-books on their respective subjects. Some of his works were published in Latin, of which one is 'De Mutationibus quas subit momentum virgæ magneticæ, partim ob temporis, partim ob temperaturæ mutationes,' 1842. Many of his scientific works were published at the expense of the Norwegian government, such as his account of the observatory, 'Beschreibung und Lage der Universitäts-Sternwarte in Christiania.' The scientific journals and transactions contain above 150 papers by Hansteen; they relate to astronomy, mathematics, magnetism, &c., and give the results of more than half a century of research. Many of them originally appeared in the 'Magazin for Naturvidenskaberne,' which journal he founded in conjunction with Maschmann and Lund in 1823, and of which he was for several years joint editor. Two separate works by him have more recently appeared in French, 'Observations de l'Inclination Magnétique, faites pendant les Années 1855 à 1864,' Brussels, 1865; and 'Sur les Variations Séculaires du Magnétisme,' Brussels, 1865. Hansteen is a corresponding member of the French Institute, and foreign member of the Royal Society.

HARDING, JAMES DUFFIELD [E. C. vol. iii. col. 287]. This distinguished painter in water-colours died on the 4th of December, 1863, aged 65.

HARDWICK, PHILIP, R.A. [E. C. vol. iii. col. 291]. From about the date to which the above memoir is brought down, increasing illness caused Mr. Hardwick to withdraw almost entirely from active professional practice. His latest important building was the Roman Catholic Cathedral, Limerick, completed in 1860, but not under his personal superintendence. In 1861 Mr. Hardwick resigned the offices of treasurer and trustee of the Royal Academy, and in 1868 became Honorary Retired Academician. He died at his residence, Westcombe Lodge, Wimbledon Common, on the 28th of December, 1870, in his 79th year. Mr. Hardwick was elected a fellow of the Royal Society in 1831; he was also a fellow of the Society of Antiquaries and the Geological Society.

* HARDY, RIGHT HON. GATHORNE, M.P., &c., of Hemsted Park, Staplehurst, Kent, the third and youngest son of the late John Hardy, Esq., of Dunstall, in Staffordshire, who was M.P. for Bradford, was born at that town on the 1st of October, 1814. He was educated at Shrewsbury and at Oriel College, Oxford, where he took his B.A. degree as a second-class in classics in 1836, and proceeded M.A. in due course. In 1866 he was admitted to the honorary degree of D.C.L. He was called to the bar by the Society of the Inner Temple in 1840; and in July, 1847, carried on an unsuccessful contest for the parliamentary representation of the borough of Bradford. He entered the House of Commons as member for Leominster in February, 1856, and continued to represent that constituency until July, 1865, when, being returned for Leominster and also for the University of Oxford, which then rejected Mr. Gladstone, he elected to sit for the University. In Lord Derby's second administration he held the office of Under Secretary of State for the Home Department, from February, 1858, to June, 1859; and when the Conservative party returned to power in July, 1866, he was appointed to the presidency of the Poor Law Board, which office, on the resignation of Mr. Walpole in May, 1867, he exchanged for that of Secretary of State for the Home Department. In December, 1868, he resigned with the other members of the Disraeli administration. Mr. Hardy is a D.L. and J.P. for the West Riding of Yorkshire, and is also a magistrate for Kent, having been for several years—up to October, 1867, when he resigned—chairman of the West Kent quarter sessions. His chief political achievement is his carrying, in conjunction with Mr. R. Anstruther Earle, at that time parliamentary secretary to the Poor Law Board, of the "Metropolitan Poor Law Act" of 1867.

HARDY, PETER, F.R.S. [E. C. vol. iii. col. 292]. This very able mathematician and actuary died April 23rd, 1863, aged 50.

* HARDY, SIR THOMAS DUFFUS, Knt., Deputy Keeper of the Public Records, was born in Jamaica in 1804. The son of Major Hardy, of the Royal Artillery, he was educated with a view to the public service, and in 1819 was appointed junior clerk in the Record Office, then held in the Tower of London. Here he distinguished himself by application to his duties, by skill in deciphering ancient documents and estimating their value, and by breadth and accuracy of learning. He rose by regular gradations in the office, was entrusted to edit, and superintend the publication of, several volumes of important records; on the death of Sir Francis Palgrave, in 1861, was nominated

by the Master of the Rolls to succeed him as Deputy Keeper of the Public Records, and in 1870 received the honour of knighthood.

Sir Thomas Hardy's publications connected with the Record, comprise—'Rotuli Litterarum Clausarum in Turri Londinensi asservati,' vol. i. (1204—1224), folio, 1833, vol. ii. (1224—1227), 1844: the introductory 'Report on the Close Rolls to the Commissioners of the Public Records of the Kingdom,' being also published separately; 'Rotuli Litterarum Patentium in Tur. Lond. asservati' (1201—1216), fol. 1835, the elaborate Introduction being also published separately; 'Rotuli Normannæ in Tur. Lond. asservati,' royal 8vo, 1835; 'Rotuli de Oblatis et Finibus in Tur. Lond. asservati, tempore Regis Johannis,' 8vo, 1835; 'Rotuli Chartarum in Tur. Lond. asservati' (1199—1216), fol. 1837; 'Rotuli de Liberte ac de Misis et Præstitis, Regnante Johanne,' 8vo, 1844; 'Modus tenendi Parliamentum: an Ancient Treatise on the Mode of Holding the Parliament in England,' Latin and English, 8vo, 1846; 'Monumenta Historica Britannica,' vol. i. fol. 1848: this great work planned and prepared by Mr. H. Petrie, Keeper of the Records in the Tower of London, was after his death "finally completed for publication, and with an Introduction, by Thomas Duffus Hardy, Assistant Keeper of Records;" 'Fasti Ecclesiæ Anglicanæ . . . corrected and continued from 1715 to the present time,' 8vo, 1854; 'Descriptive Catalogue of Manuscripts relating to the History of Great Britain and Ireland,' vol. i. (anterior to the Norman Invasion), 8vo, 1862, vol. ii. (1066—1200), 1865; vol. iii. (1201, &c.). This last is, as far as it has yet been carried, quite exhaustive in treatment, and a model of brevity, perspicuity and accuracy: to the historical student it is invaluable. Sir Thomas Hardy is also the author of Reports to the Master of the Rolls 'Upon the Carte and Carew Papers,' 1864, and 'Upon the Documents in the Archives and Public Libraries of Venice,' 1866, and of a valuable 'Syllabus, in English, of Rymer's Fœdera,' vol. i. (Will. I.—Edw. I.), 8vo, 1869. Outside his special department Sir Thomas Hardy has written 'A Catalogue of Lords Chancellors, Keepers of the Great Seal, Masters of the Rolls, and principal officers of the High Court of Chancery,' 8vo, 1843; 'Memoirs of the Rt. Hon. Henry Lord Langdale,' 2 vols. 8vo, 1852; and a 'Review of the Present State of the Shaksperian Controversy,' 8vo, 1860.

HARDY, SIR THOMAS MASTERMAN, a distinguished naval officer, was born at Martin's Town, near Dorchester, April 5th, 1769. In 1781 he entered the royal navy as a midshipman, and during a long professional career he served in a very large number of ships in succession. He was first in the *Helena*, 14 guns; cruised in the Channel, in 1790, in the *Hebe* frigate, and afterwards in the *Tisiphone*; joined the *Amphitrite* in the Mediterranean, under Lord Hood, in 1793; became lieutenant in the *Meleager* under Nelson in the same year; served in *La Minerve* in 1796 at the battle of St. Vincent; and was promoted to the rank of commander in 1797 for gallantry in a boat expedition, during which he captured a 16-gun brig under the walls of Vera Cruz. He next served in succession in the *Mutine*, the *Vanguard*, the *Foudroyant*, the *Princess Charlotte*, the *Namur*, the *St. George*, the *Isis*, and the *Amphion*; and when Nelson took the command of the Mediterranean fleet in 1803, Hardy went with him as captain of the flag-ship *Victory*. Hardy, who was Nelson's favourite captain and most trusted friend, was with his chief at his death, received his wishes, and on him devolved the painful duty of bringing home the dead body of Nelson in the *Victory* from Trafalgar. In 1806 Hardy was created a baronet for his services. He next served in the *Samson*, 64 guns, and the *Triumph*, 74, and in 1809 was transferred to the *Barfleur*, 98 guns. In 1812 he was on the North American station in the *Ramilies*. On the conclusion of peace he held a sort of honorary command of the royal yacht *Princess Augusta*, at Deptford; but in 1818 went to sea again in the *Superb*, and for six years commanded the South American squadron. After this he served in the *Wellesley*, *Sibylle*, and *Pyramus*. During an active service of thirty-six years Hardy had witnessed, and in most cases taken part in, the capture of no less than fifty-seven line-of-battle ships. In 1830 he was appointed a lord of the admiralty, and in 1834 was made governor of Greenwich Hospital, which office he retained till his death, on the 29th of September, 1839.

* HARGRAVES, EDMUND HAMMOND, known by his connection with the discovery of gold in Australia, was born at Gosport, Hampshire, in 1816, his father being a lieutenant of militia. Between the years 1830 and 1834 he was at sea, making voyages to various parts of the world. In 1834 he settled in Australia, married, and became a farmer and stock-rearer. In

1849 he went to California, and worked as a gold-digger. Here it was that he was struck with a certain analogy between the auriferous rocks of California and a range of hills he had seen in the interior of Australia; and on this point he wrote a letter to a friend in Australia, on the 5th of March, 1850, in which he said:—"I am very forcibly impressed that I have been in a gold region in New South Wales, within three hundred miles of Sydney; but unless you know how to find it you might live for a century in the region, and know nothing of its existence." Returning to Australia in 1851, and having his thoughts bent on this matter, he set out on horseback, and sought in the region near the river Macquarie. He washed a little gold out of some sand, and formed an opinion that the precious metal might be found along seventy miles or more of that river. He thereupon addressed a letter to the Colonial Secretary at the seat of government, offering to point out the spot if a bonus or present of 500*l.* were given to him—any further compensation being left to the discretion of the government and legislature. The Colonial Secretary declined to award a sum, but expressed a belief that the legislature would act liberally if the information proved to be valuable to the Colony. On April 30th, Mr. Hargreaves named several places in Bathurst district, where gold could be found. So successful was the find, that within one year from that period gold to the value of 4,000,000*l.* was exported from Australia. Mr. Hargreaves received in all a reward of 10,000*l.* from the New South Wales government; a gold cup, worth 500*l.*, purchased by public subscription, and the office of Commissioner of Crown lands. He returned to England in 1854, and in 1855 published 'Australia and its Gold Fields.'

Hargreaves will continue to be popularly known as the original discoverer of gold in Australia; but in point of fact Sir Roderick Murchison had, in 1841 and subsequently, publicly stated his belief that gold existed in Australia, and in 1848 addressed a formal letter on the subject to the then Secretary of State for the Colonies; while in 1839 Count Strzelecki had actually found gold in the Vale of Clwydd, but was enjoined strict secrecy by Sir George Gipps, lieutenant-governor of New South Wales, and in 1841 and 1849 small quantities of gold were found by other parties: in fact the knowledge that gold existed could not have been kept secret much longer, but Mr. Hargreaves came to the investigation with the advantage of his Californian experience, and was able to put the discovery forward in so practical a shape that to ignore it longer was impossible. (See E. C. Geographical Div. vol. i. col. 697, for a more detailed statement of the discovery.)

HARGREAVE, CHARLES JAMES, was born near Leeds, in December, 1820. He was educated at Bramham College, distinguished himself at University College, London, and took the degree of LL.B., with honours, in the University of London. From 1843 to 1849 he was Professor of Jurisprudence in University College. Having acquired a great reputation at the Equity Bar, he was appointed in 1849 a Commissioner of the Encumbered Estates Court in Ireland, in which capacity his patience, learning, and impartiality secured for him the respect and confidence of the practitioners in his Court. He became a Fellow of the Royal Society in 1844. In the Transactions for 1848, 1850, 1858, are some remarkable papers on Differential Equations (which received a Royal Medal), and also on Linear Equations of Differentials and of Differences. He also contributed to the Philosophical Magazine, between 1847 and 1864, and prepared a work on the Resolution of Algebraic Equations, which was printed after his death. This event took place at Bray, county Wicklow, April 23, 1866. His constitution seems to have been destroyed by his junction of two severe intellectual pursuits.

HARGREAVES, JAMES, inventor of the Spinning Jenny, was born of humble parents at Stanhill, near Blackburn. He employed himself and his family in domestic spinning and weaving, with the aid of the very simple apparatus known in those days. Until 1760 cotton had always been carded or combed out by means of hand-cards, a kind of brushes studded with teeth or spikes; but he greatly expedited the process by inventing a carding machine, in which the cards were set upon a revolving cylinder. A much more important improvement, however, bore relation to the process of spinning. Although he had often tried to spin with two or three spindles at once, holding the yarns between his fingers, he was baffled by having the spindles side by side horizontally. According to the received story, one of his children upset the spinning-wheel at which he was at work. Hargreaves's attention was called to the fact that, while the thread was still in his hand, the wheel rotated for a time horizontally, and the spindle vertically. The idea at once

suggested itself to his mind that a spinning apparatus, capable of spinning two or more threads at once, might be constructed. He set to work, and produced what he called the *Spinning Jenny*. It had eight spindles, which were made to revolve by means of bands from a horizontal wheel. By various improvements the number of spindles was increased to eighty, and the wheel placed vertically. Hargreaves and his family kept the secret for a time, and worked at the Jenny with good results. But the neighbours, finding that he worked up much more than the usual allowance of cotton, suspected the cause, broke into his cottage, and destroyed the machine. Again and again did poor Hargreaves try, but was always frustrated by his jealous neighbours, who were hostile alike to the carding machine and to the Spinning Jenny. He removed to Nottingham in 1768, erected a spinning mill, and took out a patent for his Jenny. He now had a new set of enemies, the manufacturers, who used his machines without paying him any royalty or patent fee. Refusing 3000*l.* for his patent, offered to him by a company, he had the mortification to find the patent declared invalid, on the ground that he had sold many of the machines before the patent was obtained. During the rest of his life Hargreaves carried on a small trade as a yarn manufacturer, in partnership with a Mr. Jones, and died in April, 1778. Although Arkwright's spinning-machine was far more important than Hargreaves's Spinning Jenny, it would be satisfactory to know that the latter, like the former, brought fortune to its inventor; but such was not the case. The share of Hargreaves in the partnership was valued at only 400*l.* at the time of his death; and his family were left in very poor circumstances. Nearly seventy years afterwards Sir Robert Peel gave 250*l.* out of the Royal Bounty Fund to the youngest and only surviving daughter; and this was the sole national recognition of the services rendered by Hargreaves.

HARRIS, REV. JOHN, D.D. [E. C. vol. iii. col. 303], was born on the 8th of March, 1802; he died on the 21st of December, 1856, shortly after the publication of the memoir above referred to. His 'Posthumous Works,' chiefly sermons and addresses, were published in two volumes, 8vo, 1857, under the editorial care of the Rev. Philip Smith.

HARRIS, THADDEUS WILLIAM, entomologist, was a native of Dorchester, Massachusetts, where he was born Nov. 12, 1795. He graduated at Harvard College in 1815; studied medicine under Dr. Amos Holbrook, of Milton Hill, whose daughter he married; and practised in that village until his appointment as librarian of Harvard College in 1831. From that year until his death on Jan. 16, 1856, he resided at Cambridge. When young he acquired a taste for natural history, but as he had no books, he was compelled to obtain his knowledge by observation. He did much to foster the culture of his favourite science in Harvard College by giving instruction on botany and zoology, and by organising a local natural history society. He gave most attention to entomology, and wrote upwards of 50 papers, although only 19 are enumerated in the Royal Society's 'Catalogue of Scientific Papers.' Most of his literary contributions were published in out-of-the-way places, such as local newspapers, amongst others the 'New England Farmer,' 'Hovey's Horticultural Magazine,' the 'Massachusetts Plowman,' 'Cambridge Chronicle,' &c. In 1837 he was appointed one of the commissioners for making a botanical and zoological survey of Massachusetts, one result of which was his 'Systematic Catalogue of the Insects of Massachusetts,' 8vo, 1832, in which he enumerated 2350 species; and another was the work by which he is best known, namely, a 'Report on Insects injurious to Vegetation,' 8vo, 1841, in which most of his scattered papers are embodied. A second edition appeared in 1842, and a third in 1862.

HARRIS, SIR WILLIAM SNOW [E. C. vol. iii. col. 303]. This electrician died at Plymouth, January 22, 1867, in his 75th year. He was the only son of Thomas Harris, of Plymouth, solicitor, whose family had settled in that town as early as the year 1600. He was educated first at the Grammar School of Plymouth, after which he entered the medical profession, and completed his studies in Edinburgh. He began practice as a militia surgeon, and afterwards became a general practitioner in Plymouth, but his love of electricity interfered with his practice.

He contrived his system of lightning conductors in 1820, and after his marriage in 1824 he devoted himself to the cultivation of science. He showed great tact and ingenuity in improving and constructing apparatus, and his papers in the 'Phil. Trans.' for 1834, 1836, and 1839, contain various examples of ingenuity and delicate manipulative skill. In the obituary notice of

Harris, contributed by Mr. Tomlinson to the 'Proceedings of the Royal Society' (xvi. 1868), it is remarked that Harris was not satisfied with the attainment of his end by *any* means, but the means themselves were the subject of long and patient thought and repeated trials, until the best means possible under the circumstances had been hit upon. This care in the selection and improvement of apparatus might seem to an ordinary observer to be often superfluous, but it led to success, and to the thorough understanding of the conditions of success; so that the ultimate failure of an experiment in Harris's hands became next to impossible. But with all this love of apparatus, and of its minute details, Harris had none of the spirit of a mere mechanical artist; he knew that the best instrument does the best work under the guidance of the best mind. But Harris's ingenuity was by no means confined to his apparatus. There was not a room in his house, from the attic to the kitchen, that did not bear marks of an original mind. He converted the ceiling of his children's nursery into a planetarium, and the floor into a compass-card. He did not disdain to invent a child's toy, or to rectify a defect in his ingenious kitchen-range.

In 1835 he received the Copley Medal of the Royal Society, and in 1839 delivered the Bakerian Lecture. During many years he laboured, under many disadvantages, to get his system of lightning-conductors adopted by the navy. In 1843 he published his work on Thunder Storms, and endeavoured by means of separate pamphlets, as well as by papers in the Nautical Magazine, to diffuse information respecting damage by lightning. "He was always on the watch for an illustrative example, and having once got the trace, never gave it up until he had tracked it to the ship's log, deposited in Somerset House, or obtained an account from the captain, or one of the officers of the ship that had been struck." At length, in 1847, his plan was fully adopted; he was knighted, and a grant of 5,000*l.* was made to him by Government, in addition to an annuity of 300*l.* which he had already enjoyed some years.

Harris contributed the Manuals of Electricity, Magnetism and Galvanism to Weale's Rudimentary Series. He was nearly always engaged in some work of research, and also spent much time in the cultivation of music.

In August, 1861, in returning from an excursion in his yacht, he was seized with an attack of iritis, which did not yield to medical treatment during some months. In 1862 he had to undergo two operations, but he lost the sight of one eye, and the vision of the other was impaired. Recovering somewhat from this illness, he became anxious to complete a work, the materials for which had been accumulating during many years. This was a complete Treatise on Frictional Electricity, the first portion of which was printed under the supervision of the author, with the assistance of Mr. Tomlinson, who, after the author's death, completed the treatise, from the papers left by the author, and also added a biographical notice to the work, which was published in October, 1867.

The following summary of Harris's scientific character is from the Royal Society Notice, already referred to:—"Harris's sympathies were with the Bennetts, the Cavendishes, the Singers, the Voltas of a past age. Frictional electricity was his *forte*, and the source of his triumphs. He was bewildered and dazzled by the electrical development of the present day, and almost shut his eyes to it. He was attached too closely and exclusively to the old school of science to recognize the broad and sweeping advance of the new. He was not conscious even of being behind his age when he presented to the Royal Society in 1861 an elaborate paper on an improved form of Bennett's discharger, and still less in 1864, when he discussed the laws of electrical distribution, and still relied upon the Leyden jar and the unit-jar. Although Sir W. Harris's powers as a scientific inquirer cannot be reckoned as on a par with those of some of his great contemporaries, he was highly ingenious and inventive, a clear thinker, and a suggestive writer. He did his work well, and left his mark on the science of his day; and while some of his labours will be forgotten and others be absorbed and blended with the branch of physical science that he cultivated, still there are many points in Harris's character as a man, and in his habits as a philosopher, which will be dwelt on with pleasure and profit."

HARTLIB, SAMUEL, "the great promoter of husbandry during the times of the Commonwealth," and son of the King of Poland's merchant, came over to England, according to Warton's account, about 1640; and in the year following published 'A briefe Relation of that which hath been lately attempted to procure ecclesiastical Peace amongst Protestants,' 4to, London,

1641, a work expressive of his sympathy with the schemes then promulgated for a union amongst the Protestant Churches. Although extensively engaged in commercial pursuits, he found time for the cultivation of literature and for the society of scholars; and also to concern himself in the establishment of what was afterwards called the Royal Society. He was a man of much practical wisdom and public spirit, and evinced so thorough an interest in the work of education that Milton addressed to him his tractate on that subject, written about 1644. Sir William Petty also addressed to him his 'Advice for the Advancement of some particular Parts of Learning.' He was himself the author of some theological and educational treatises; but his reputation at present chiefly depends upon his activity in furthering the interests of British agriculture. For his service in this direction he was made a pensioner of the Commonwealth; and when, after the Restoration, his public services seemed to be forgotten, he spoke of himself, in a petition to the House of Commons, as having exerted himself for thirty years and upwards in procuring "rare collections of MSS. in all parts of learning, which he had freely imported, transcribed, and printed, and sent to such as were most capable of making use of them; also, the best experiments in husbandry and manufactures, which by printing he hath published for the benefit of this age and posterity." The success of this petition is unknown; as are also the time, place, and manner of his death. His works include, 'The Discourse of Husbandry used in Brabant and Flanders, showing the wonderful Improvement of Land there, and serving as a Pattern for our Practice in this Commonwealth,' 4to, London, 1650; 'His Legacie; or, an Enlargement of the Discourse of Husbandry,' &c., 4to, London, 1652; 'The Compleat Husbandman; or, a Discourse of the whole Art of Husbandry, both forraign and domestick * * * unto which is added a particular Discourse of the Naturall History and Husbandry of Ireland. [With various Letters on the same subject, collected and edited by Samuel Hartlib], 4to, London, 1659; 'Considerations tending to the happy accomplishment of England's Reformation in Church and State,' 4to, 1647; and the 'Reformed Commonwealth of Bees, with the reformed Virginian Silk-worm,' 4to, London, 1655.

HARVEY, GABRIEL, a lawyer and poet, known as the friend of Spenser, to whom he addressed, with the signature of "Hobynoll," a set of verses generally prefixed, with others, to the 'Faerie Queene,' was born at Saffron Walden, in Essex, about the year 1545. He is said by his antagonist, Nash, probably with more malice than truth, to have been the son of a rope-maker. He was educated at Christ's College and at Pembroke Hall, Cambridge; became a fellow of Trinity Hall, and served as proctor of the University in 1582. He took the degrees of B.A. and M.A. in due course; and, having graduated as LL.D., was admitted, July 13th, 1585, to the degree of D.C.L. at Oxford, by incorporation. He practised as an advocate in the Prerogative Court of Canterbury, in London. He was embroiled in quarrels with Nash, Greene, and others, who overwhelmed him and his partizans with abuse as "false prophets, weather-wizards, fortune-tellers, poets, philosophers, orators, historiographers, mountebanks, ballad-mongers," &c. These compliments were repaid by Harvey in kind, and the story of his literary disputes is given in Isaac Disraeli's 'Calamities of Authors.' The first two or three of the epithets just quoted have reference to the astrological studies to which Harvey was addicted, and which he turned to account in the compilation of almanacs, which were much in esteem in the reign of Elizabeth. It is probable that his life was prolonged until the year 1630, at which time he was, according to Wood ('Fasti Oxonienses') "at least 85 years of age, if not 90."

His works comprise 'Rhetor: vel Oratio de Natura, Arte, et Exercitatione rhetorica,' 4to, London, 1577; 'Ciceronianus: vel Oratio post Reditum habita Cantabrigiæ,' 4to, London, 1577; 'Harveii Gratulationum Valdensium, Libri quatuor, ad illustrissimam augustissimamque Principem Elizabetham, Angliæ, Franciæ, Hiberniæ, Regiam longe serenissimam atque optatissimam,' 4to, London, 1578, which is a collection of epigrams, in Latin and Greek, upon the Queen, by Harvey himself, and by others, Englishmen and foreigners. The second book consists of epigrams on the Earl of Leicester; the third, of epigrams on Lord Burghley; and the fourth, on the Earl of Oxford and Christopher Hatton; 'Three proper and wittie familiar Letters: lately passed between two Universitie men; touching the Earthquake in Aprill last, and our English reformed Versifying. With the Preface of a Well-willer to them both,' 4to, London, 1580, reprinted in vol. ii. of 'Ancient Critical Essays'; 'Four

Letters, and certain Sonnets: especially touching Robert Greene, and other parties by him abused: but incidentally of diverse excellent Persons, and some matters of note. To all courteous Mindes, that will vouchsafe to Reading,' 4to, London, 1592, and in vol. ii. of 'Archæica,' 'A new Letter of notable Contents: with a straunge Sonet intituled "Gorgon," or the wonderful Yeare,' 4to, London, 1593, and in vol. ii. of 'Archæica,' and 'Pierce's Supererogation: or a new Prayse of the old Asse. A Preparative to certain larger Discourses intituled Nashes S. Fame,' 4to, London, 1593, and in vol. ii. of 'Archæica.'

* HARVEY, SIR GEORGE, President of the Royal Scottish Academy, was born in 1806, at St. Ninian's, near Stirling, Fifeshire. He was apprenticed to a bookseller, but occupied every spare hour in drawing, and when, in 1824, he was permitted to enter the Trustees' Academy as a student, he made rapid progress. From the first his pictures, referring chiefly to events connected with the history of the Covenanters, were popular with his countrymen; and when the Scottish Academy was founded in 1826, Harvey, though not yet of age, and a very immature artist, was invited to join it as an associate, and in 1829 he was elected full member. The range of Sir George Harvey's works is shown by the titles of some of the more important: 'Covenanters Preaching' (1830), a picture that did more than any other perhaps to extend his reputation; and which was followed at intervals by 'Covenanters' Baptism' and 'Covenanters' Communion.' Other Scottish subjects were 'The Battle of Drumclog,' 'The Duke of Argyll an hour before his execution,' 'Quitting the Manse,' 'Dismissal of a Village School,' 'Highland Funeral,' 'Sabbath in the Glen,' and 'The Penny Bank.' He has painted several English subjects, connected with the history of the Reformation and the persecution of the Puritans, as 'The First Reading of the Bible in the Crypt of St. Paul's,' 'Bunyan in Bedford Jail,' and 'Bunyan and his Daughter selling laces at the door of Bedford Jail.' But whilst most of his pictures relate to church history or social piety, he has occasionally painted portraits and landscapes: thus in the Royal Academy Exhibition of 1870, he had a 'Portrait of Mrs. Napier,' and a view of 'Glen Falloch.' On the death of Sir J. Watson Gordon, in 1864, Mr. Harvey was elected to succeed him as president of the Royal Scottish Academy, and in 1867 he received the honour of knighthood.

HARVEY, WILLIAM [E. C. vol. iii. col. 311]. This graceful designer and amiable man died at his residence, Prospect Lodge, Richmond, Surrey, on the 13th of January, 1866. During the last few years of his life he made comparatively few drawings on wood, his attention having been a good deal directed to painting in oil, and particularly to landscape painting, an art in which he would probably have excelled had he commenced the practice earlier.

HARVEY, WILLIAM HENRY, botanist, was born at Summerville (the country house of his parents), near Limerick, February 5, 1811. He was the youngest of eleven children. His love for botany was acquired from an old lady who used to teach him the names of the flowers in the garden; and throughout the whole of his after life he manifested a child's love for natural objects. In 1824 he went to the Ballitore School, Kildare, and there his tastes were fostered by Mr. White, the conductor of the school and a botanist, and by Mr. Sulist, the French master, between whom and himself an intimate friendship arose. In 1826 he found several shells which, as he himself states at the time, Turton even had never seen. This indicates that at this early age he had made considerable advance in his knowledge of the native fauna. In 1827 he left school, and after some time he settled down in his father's office; but he devoted all his leisure hours to botanising with his cousins. In 1829 he became acquainted with J. Bicheno, then secretary to the Linnean Society. Frequent excursions into the country enabled him to form a large herbarium, comprising numerous rare plants. One of these was *Hookeria luteo-virens*, found at Killarney, but which had not been previously recorded as Irish. By means of this he introduced himself to Sir W. J. Hooker, who, recognising his merits, helped him by corresponding with him, sending him books which he required, giving him parcels of *Algae* from all parts of the globe to examine, by asking him to describe the *Confervæ* for the 'British Flora' which Hooker was then publishing, and by introducing him to the more eminent English cryptogamists of the time. In 1834 his father died, an event which somewhat unsettled him, as he had no aptitude for business, and had a longing to explore the world as a botanist, but without any prospect of fulfilling his wish. In 1835 his brother was appointed treasurer to the Cape of Good Hope

colony. He accompanied his brother, and reached the colony in September, 1835. In March of the following year his brother was compelled to return to England on account of ill health, and Harvey resolved to be his companion, but his brother died long before the ship reached home. The appointment thus left vacant was offered to himself, and accepted; and in October, 1836, we find him back again at the Cape. In 1838, being in declining health, he obtained leave of absence, which was occupied in visiting his friends at home, and in visiting Italy. His third residence in the colony brought on a renewal of his complaint, so that he was compelled to throw up his appointment in 1842. For some time after this he had no settled employment, until he was appointed curator of the herbarium of Trinity College, Dublin. In 1848 he was appointed professor of botany to the Royal Dublin Society, and in 1856 he succeeded Dr. Allman as professor of botany at Trinity College. In 1849 and 1850 he gave a course of lectures on *Algae* before the Lowell Institute at Boston, and took the opportunity of visiting many places and naturalists in the United States. A longer excursion was subsequently made to the southern hemisphere for the purpose of collecting seaweeds for the college herbarium. It occupied him from August, 1853, to October, 1856. During the whole time of his connection with Trinity College he was a most assiduous worker, frequently commencing at 5 o'clock in the morning, and continuing his labour, with a few brief intervals, till 11 or 12 o'clock at night. Towards the latter part of his life his health was very much broken. He died at Torquay, May 16, 1866. Most of his books and papers deal with cryptogamic plants, which formed the chief object of his attention throughout life. His works include 'Genera of South African Plants,' 8vo, Cape Town, 1838, second edition, 1865; 'A Manual of the British *Algae*,' 8vo, London, 1841, second edition, 1849; 'Phycologia Britannica,' 4 vols. 4to, 1846—51, containing 350 plates; 'Nereis Australis,' 8vo, 1847; 'The Seaside Book,' 16mo, 1849, fourth edition, 1857; 'Nereis Boreali-Americana,' first published in vols. iii., v., and x. of 'Smithsonian Contributions to Knowledge,' but afterwards collected into a single volume; 'Phycologia Australica,' 5 vols. 8vo, 1858—63; 'Thesaurus Capensis,' 1859, and 'Flora Capensis,' written in conjunction with Dr. Sonder, of which only three volumes have been published. Most of his papers were contributed to Hooker's 'Journal of Botany,' 'Annals and Magazine of Natural History,' and to the 'Natural History Review,' of which last he was one of the conductors. A memoir of Harvey, mostly made up from his own letters, was published in 1869.

HAUSSMANN, JOHANN FRIEDRICH LUDWIG, a German mineralogist and geologist, was born at Hanover, February 22, 1782. After studying at Brunswick and Göttingen, and filling various government appointments in connection with the mines of Brunswick and Westphalia, he became a professor at Göttingen, in 1811, which post he retained till his death, December 26, 1859. Haussmann spent much time in exploring various parts of Europe, from Norway and Sweden on the north to Italy and Spain on the south. He wrote a large number of papers and books on minerals and rocks. The most noteworthy are the 'Handbuch der Mineralogie,' 3 vols. 8vo, Göttingen, 1813; 2nd ed. 1828—1847; and 'Reise durch Skandinavien in der Jahren 1806 und 1807,' 5 vols. 8vo, 1811—1818. His papers as given in the Royal Society's 'Catalogue of Scientific Papers,' are 128 in number. Most of them are printed in the publications of the scientific associations of Göttingen, of one of which, the 'Studien des Göttingischen Vereins Bergmännischer Freunde,' 8vo, vols. i.—vii. (1824—1856), he was the editor.

* HAUSSMANN, GEORGE EUGÈNE, BARON, was born at Paris, March 27th, 1809. After studying law, and qualifying as an advocate, he entered government service at an early age. In 1831 he was appointed Secretary-General of the Department of Vienne; after this he was sous-préfet successively at Issengeaux, Nérac, St. Giron, and Blaye; and then Secretary-General of the Department of the Gironde. In 1849 he was préfet of the department of the Var; and afterwards in those of the Yonne and the Gironde. These municipal and departmental offices prepared him for that in which his fame has been derived, viz., préfet of the department of the Seine, in which Paris is situated; this office was given to him in 1853. One of his first works was the establishment, in 1854, of a kind of bread bank, to produce an approximation to equality in the price of flour in scarce years and abundant years; a scheme which is stated to have been attended with beneficial results. He then set about numerous improvements in Paris, which employed large bodies of workmen, involved the expenditure of vast sums of money, and supplied

Paris with an unrivalled series of magnificent streets and buildings. He transformed the Bois de Boulogne and the Bois de Vincennes into parks; prolonged the Rue de Rivoli far eastward of its former limit; erected sumptuous hotels, mansions, and shops along the route; constructed many new Boulevards, especially the noble Boulevard de Sebastopol; made several public gardens and squares; transformed the Canal St. Martin into a promenade; cleared the spaces round numerous public monuments; built the great central markets; built or rebuilt more than a dozen bridges over the Seine, and several churches and monumental fountains; reconstructed the Théâtre Lyrique, the Gaieté, and the Cirque Impériale; built the magnificent new Opera House; reconstructed the Hôtel Dieu: built or rebuilt many hospitals and asylums; and opened the *banlieu* or suburb of Paris into the city, thereby rendering the whole of it one city of over a million and a half of souls. These works were so costly, that after numerous sums had been spent on them, a great loan of 250,000,000 francs (10,000,000*l.*) was raised in 1865. The prefecture had raised much money by a kind of bonds or loan notes beyond the powers sanctioned; dealings with the Crédit Foncier Company came to light; and the whole matter occupied much attention on the part of the press. A new loan for 260,000,000 francs was contracted in 1869, but not without violent discussions and strong opposition in the legislature. Baron Haussmann caused to be prepared a 'Histoire Générale de Paris,' which appeared in 1866 and subsequent years, in 4to, illustrated with plates and maps; the materials were derived from a vast collection of historical and archaeological documents; a special service was established for it in the Hôtel de Ville; and a Museum of Parisian antiquities formed at the Hôtel Carnavalet. He was created Senator in 1857, Grand Cross of the Legion of Honour in 1862, member of the Académie des Beaux-Arts in 1867, and Member of the Imperial Council of Public Instruction. He retired from the prefecture in January, 1870, soon after M. Emile Ollivier became Minister.

HAVELOCK, MAJOR-GENERAL SIR HENRY, K.C.B. [E. C. vol. vi. col. 1003]. In the above memoir the narrative of Havelock's career was brought down to the date of his successful march to Lucknow; and it is added that "as a reward for his eminent services he was created (September, 1857) a major-general in the British army, his promotion bearing date July 30, 1857; made a baronet and raised to be a Knight-Commander of the Bath; and, in accordance with a royal message to both houses of parliament, voted a pension of 1000*l.* a year for life." Havelock was, however, to hear but in part of these national recognitions of his rare merits. He received intelligence of his promotion; but before the baronetcy was gazetted he had ceased to care for earthly honours.

On entering Lucknow Havelock resigned the command-in-chief to Sir James Outram. The British troops, though strong enough to bring succour to their beleaguered countrymen, were not sufficiently strong to force their way back through the rebel army, and carry with them the sick and the wounded, the women and the children; and they in fact became in their turn shut up within the fortress. Sir Colin Campbell arrived before Lucknow with a new relieving army on the 11th of November. After a series of short but sanguinary encounters, in which Havelock afforded important aid, the British became masters of the entire city. Havelock was active in superintending the arrangements for the homeward march, when he was stricken with dysentery, and died on the morning of the 24th of November, 1857. The grief throughout the camp was deep and general, for Havelock was as much beloved as a man as he was esteemed as a soldier. In England his death was regarded as a national loss. In parliament the Premier, the Secretary of State for India, and the Commander-in-Chief of the army, bore warm testimony to his services, and expressed their deep regret for his death, and the same sentiments were expressed on behalf of the public by many of the great municipal corporations. The pension of 1000*l.* a year, which had lapsed by his decease, was renewed to his widow, and the baronetcy which Sir Henry was to have received was transferred to his son, who was further granted a pension of 1000*l.* a year. 'A Memoir of Sir Henry Havelock, K.C.B.,' by his brother-in-law, Mr. J. C. Marshman, appeared in 1860.

HÄVERNICK, HEINRICH ANDREAS CHRISTIAN, a biblical critic and commentator, from whose zeal, learning, and ability much was yet expected when he died prematurely in the year 1846, was for some time a tutor (Privatdocent) in the University of Rostock, afterwards professor of theology in the Imperial University of Dorpat, and subsequently ordinary professor of theology in the University of Königsberg. The principal

works which he left are—a Commentary on the Book of Daniel, 'Commentar über das Buch Daniel,' 8vo, Hamburg, 1832, and a New Critical Enquiry, &c., 'Neue Kritische Untersuchungen über das Buch Daniel,' 8vo, Hamburg, 1838; 'Handbuch der historisch-kritischen Einleitung in das Alte Testament,' 3 vols. 8vo, Erlangen, 1836—49, partly translated into English by Dr. W. L. Alexander, and forming one of the volumes of 'Clark's Foreign Theological Library,' as 'A General historico-critical Introduction to the Old Testament,' 8vo, Edinburgh, 1852, and partly by Professor A. Thomson, for the same series, as 'An historico-critical Introduction to the Pentateuch,' 8vo, Edinburgh, 1850; Commentary on the Prophet Ezekiel, 'Commentar über den Propheten Ezechiel,' 8vo, Erlangen, 1843; and Lectures on the Theology of the Old Testament, 'Vorlesungen über die Theologie des Alten Testaments,' 8vo, Erlangen, 1848, a work of posthumous publication, which was brought out under the editorial care of Dr. H. A. Hahn, and which contained a Preface by Dr. J. A. Dörner, professor of theology at Bonn.

HAVILAND, JOHN, architect, was born December 15, 1792, at Gundenham Manor, near Taunton, Somersetshire. He was a pupil of Mr. Elmes, and superintended the erection of a church and other buildings designed by that gentleman; then went to Russia with a view of entering the Imperial corps of engineers, but in 1816 availed himself of an offer to proceed to the United States. Having obtained the commission to erect the Pennsylvania Western Penitentiary at Pittsburgh, he adopted what was known as the radiating principle, which, though admitted in theory, had previously been only imperfectly carried out in practice. The advantages of the system were so evident that Haviland was directed to design a still larger and more costly structure, the Eastern Penitentiary, on the same plan. He was afterwards employed to erect penitentiaries for the States of Rhode Island, Missouri, and New Jersey, besides several state prisons, and came to be known as the Prison Architect of America. The celebrity obtained by his prisons led several European Governments to send commissioners to inspect them, and their reports as to the facilities afforded by the radiating system for the classification, superintendence, and discipline of the inmates caused a very general adoption of the principle in most subsequent structures of the class. Mr. Haviland erected many other important buildings, including the United States Mint, and the State Lunatic Asylum, and Deaf and Dumb Asylum, at Philadelphia; the United States Naval Asylum, Norfolk, Virginia; the Halls of Justice (better known as the Tombs), New York; and several churches and town-halls. Most of these have received and deserve high commendation for convenience and constructive skill, but their merits as works of art are open to question. Mr. Haviland continued to the close of his life to enjoy the esteem and confidence of his adopted countrymen, while his professional ability met with due recognition in Europe by his election to the honorary membership of the Royal Institute of British Architects, and of similar institutions on the continent. He died at Philadelphia on the 28th of March, 1852.

* HAWKINS, BENJAMIN WATERHOUSE, eminent for his skill as a draughtsman of animals, and for his life-size representations of the larger and more remarkable of the extinct vertebrates, was born in London, February 8, 1807. He received his art instruction from Mr. Behnes, the sculptor, and acquired his facility in drawing animals from a close study of them during a residence of more than five years and a half at Knowsley Park, where the Earl of Derby had a fine zoological collection. The numerous life-size models of the *Iguanodon*, *Pterodactyle*, and other remarkable creatures in the grounds of the Crystal Palace at Sydenham were made by him during 1852 and three or four subsequent years. Still more recently he has modelled some of the extinct genera of the United States, such as *Laelaps* and *Hadrosaurus*. His lectures on geology and zoology have acquired considerable popularity. His literary works consist chiefly of artistic studies on the forms of animals, in which he has shown a keen appreciation of the relation between form and function. Amongst others, may be mentioned his plates in Gray's 'Gleanings from the Menagerie at Knowsley Hall,' fol. 1850; the plates in an 'Elementary Atlas of Comparative Osteology,' fol. 1864, by himself and Professor Huxley; 'A Comparative View of the Human and Animal Frame,' fol. 1860; 'The Artistic Anatomy of the Horse,' 8vo, 1865; and 'The Artistic Anatomy of Cattle and Sheep,' 8vo, 1868.

HAWKINS, JOHN ISAAC, an ingenious and fertile inventor, was born at Taunton, Somersetshire, March 14, 1772. He went to America at an early age, and studied medicine at Jersey

College, Pennsylvania, but soon turned his attention to the application of science to useful purposes. One of his first inventions was a charcoal filter for separating chemical and mechanical impurities from water. Returning to England, he patented a machine for taking profile likenesses, of all dimensions from life-size downwards. He patented and manufactured many novel improvements in pianofortes, and invented a musical instrument called the claviole, or finger-keyed viol, having singular contrivances for imitating the sounds of several different instruments. In 1808 he associated himself with Mr. Vesey in a scheme for driving a tunnel under the Thames. Cylinders of brick, set in roman cement, were to be sunk in the river, and placed in excavations made in the river bed; when they had settled down at the required depth, they were to be covered in at the top, and opened at the side to establish a communication. Such was the scheme, but failure of a joint-stock company's funds defeated it in an early stage. Mr. Hawkins applied his knowledge of the filtering powers of charcoal to the refining of sugar, and several years of his life were devoted to the erecting and fitting up of sugar refineries at home and abroad. His familiarity with engineering (which gained him admission to the Institution of Civil Engineers in 1824) enabled him to introduce two or three novelties in building construction. He was one of the first to use whole timbers for scaffolding, in 1827. For many years he was a patent agent and consulting engineer. A pentagraph for copying letters, ever-pointed pencils, and gold pens with hard iridium nibs, were among the objects to which his inventive talent was directed. He once said, in relation to himself, "The Creator has constituted me an inventor, and I consider every useful invention given me as a commission from Him in trust for the benefit of mankind." He went to America in 1848, and died there on the 28th of June, 1855.

* HAWKSHAW, JOHN, civil engineer, was born at Leeds, in 1811. On leaving the Leeds Grammar School, he was articled to Mr. Charles Fowler, a civil engineer employed at that time in the construction of turnpike roads in Yorkshire. On the completion of his articles he became assistant to Mr. Nimmo, government engineer for many public works in Ireland. After Mr. Nimmo's death Mr. Hawkshaw took the management of the engineering and machinery at the Bolivia Copper Mines in South America. On his return to England from America he entered upon those works as a railway engineer which have since occupied the chief portion of his attention. The Manchester and Bolton, the Lancashire and Yorkshire, and other important lines in the North of England, were constructed by him. The Penarth harbour and dock, near Cardiff, the long bridge at Londonderry, and the extensive new docks at Hull, were of his construction. His most recent work of this class is the new South Dock of the East and West India Docks system, Blackwall, completed by him in 1870 at a cost of about 620,000*l*. On the Continent he has constructed the Riga and Dunaberg and the Dunaberg and Vitebsk railways; in the colonies the Government railways in Mauritius; while in the East he has been consulting engineer to the Madras and the Eastern Bengal railway companies. One work by Mr. Hawkshaw, among the most costly ever constructed in proportion to its length, was the extension of the South-Eastern Railway from London-bridge station to Charing-cross, with a branch to Cannon-street: it included the construction of two broad railway bridges over the Thames, and two terminal stations with roofs of noble span and elevation. He is engineer of the Government harbour of refuge at Holyhead, and has been employed by the War Office on the Spithead forts. When an irruption took place at the sluice near St. Germain's, in the fenny district of Norfolk, he was called in by the Commissioners of the Middle Level to repair the injury. In doing this he successfully substituted siphons for the fallen sluice. He was a member of the royal commission appointed to inquire into the sewerage and drainage of the metropolis; he was chosen in 1860 as a referee to decide between rival schemes for the supply of the City of London with water; and he has been much employed as a consulting engineer by the Government. In 1870 he brought forward a scheme for a railway tunnel from Dover to Calais, under the English Channel; but this and all other schemes for the same purpose have been placed in abeyance by the Franco-German war of 1870-71. Mr. Hawkshaw, who is a fellow of the Royal Society, and member of the Institution of Civil Engineers, besides numerous professional papers in the 'Proceedings' of the last-named body, has written a 'Description of the Fossil Trees found in the Excavations for the Manchester and Bolton Railway,' 1839; 'Notice of the Fossil Footsteps in the New Red Sandstone Quarry at Lymm,

in Cheshire,' 1842; and 'Some Observations on the Present State of Geological Enquiry as to the Origin of Coal,' 1843.

HAWKWOOD, SIR JOHN, a general in the English service, and a soldier of fortune, was born about the year 1320, at Sible Hedingham, in Essex, where his father, Gilbert Hawkwood, was a tanner. "This John," says Fuller ('Worthies of England'), "was first bound apprentice to a Taylor in the City of London, but soon turned his needle into a sword, and thimble into a shield, being pressed in the service of King Edward the Third for his French wars, who rewarded his valour with knighthood." Having only his courage and sword for a patrimony, he passed for the poorest knight in the army; and, after the conclusion of the treaty of Bretigni, in 1360, finding his fortune too small for peace, associated himself with a certain corps called "Les Tard Venus," or "Magna Comitiva," which was made up of soldiers of fortune who found it necessary to invent some way of supporting their retainers, either by pillage and marauding, or by taking service as mercenaries for whatever state was willing to engage them. Sir John Hawkwood (Giovanni della Guglia, or John of the Needle) became notorious by the exploits he performed in France in the way of the sack and plunder of towns; and became so formidable that he was in a position to levy black mail from the whole surrounding country. After some time he repaired to Italy, where, having, according to Machiavelli, "long served the Pope and others," he was finally engaged by the Signory of the republic of Florence. After the peace which supervened by the death of Giovanni Galeazzo, duke of Milan, in 1391, Hawkwood, with a band of a thousand men, was the only mercenary retained in the Florentine service, in which he continued until his death, on the 6th of March, 1394, when he was buried with great splendour in the church of St. Reparata. An equestrian representation of him, probably a portrait, although sometimes described as a statue, was put up to his memory by a public decree; whilst a cenotaph was erected to him in the church of his native place, which still perpetuates his memory. Friends and foes were unanimous in regarding Hawkwood as one of the greatest soldiers of his time; and, though a mercenary, he was remarkable for the faithfulness and honour of his engagements. He founded an English hospital at Rome, for the entertainment of poor travellers; and his representatives in England founded two chantries for prayers for his soul, and the souls of John Oliver and Thomas Newenton, Esquires, his military companions. His earlier exploits in love and war are celebrated in a romantic volume, entitled, 'The Honour of the Taylors: or the famous and renowned History of Sir John Hawkwood, Knight. Containing his many rare and singular Adventures, witty Exploits, heroick Achievements, and noble Performances. Illustrated with Pictures, and embellished with Verses and Songs, wonderfully pleasant and delightful,' 4to, London, 1687, a work which is said to have suggested to Sir Walter Scott his romance of 'Quentin Durward.'

HAWTHORNE, NATHANIEL [E. C. vol. iii. col. 320]. Actively occupied in the duties of his consulship, Mr. Hawthorne contributed nothing to literature during his residence in Liverpool. A visit to Italy gave occasion to his writing 'Transformation,' which appeared in 1860, and displayed, if not quite the power of his earlier writings, much of his characteristic grace of thought and style. Shortly after his return to America he published 'Our Old Home,' 2 vols. 8vo, 1863, an account of England written in a morbid querulous tone and temper. He was at this time in a bad state of health, and he continued to suffer till his death, which occurred at Plymouth, New Hampshire, on the 19th of May, 1864. He had begun a new novel, but lived to complete but a small portion of it, which was published a few months after his death, under the title of 'Pansie.' An occasional diary and note-book, extending from the age of twenty-three to forty-one, and containing the germs of several stories which he purposed writing, appeared under the title of 'Passages from the American Note-Books of Nathaniel Hawthorne,' 2 vols. 8vo, 1868. The 'Passages from the English Note-Books of Nathaniel Hawthorne,' 2 vols. 8vo, 1870, though somewhat gloomy in temperament, are free from the unpleasant querulousness which disfigured 'Our Old Home,'—but they were written for personal use, not for publication.

HAY, DAVID RAMSAY [E. C. vol. iii. col. 321]. Mr. Hay, who was born in March, 1798, died at Jordan Bank, Edinburgh, on the 10th of September, 1866.

* HAYEZ, FRANCESCO, Italian painter, was born in Venice, of Flemish parents, in 1791. He was a pupil of Magiotto, and in 1804 entered the Academy of Painting, Venice. His success there led to his being sent to Rome in 1810, where

he formed the acquaintance of Canova, who rendered him much assistance in his studies. Partly, perhaps, from this influence, partly from the prevalent tendency of Italian art, Hayez's early pictures were classical in subject, and academic in character. Indeed, he never in his long career wholly threw off the academic manner, though he was regarded by his partial countrymen as not only a great original painter, but as the head of a new school. His 'Laocoon' gained the first prize at the Academy, Milan; in 1820 he removed to that city, and there he has ever since resided. For several years he has been professor of historical painting at the Milan Academy. His works are chiefly historical, and often of large dimensions, but he has also painted many portraits. His best known works are 'Ajax,' 'Romeo and Juliet,' 'Bathsheba,' 'The Two Foscari,' 'Peter the Hermit preaching the First Crusade' (his finest work), 'Alberic de Romano' (his most elaborate composition), and 'The Taking of Jerusalem,' which, with a portrait of himself, he sent to the International Exhibition of 1862. The characteristics of Hayez as a painter are elevation of style, purity of design, and richness and force of colour, but over all is the fatal blight of imitative feebleness.

HAYTER, SIR GEORGE, principal painter in ordinary to the Queen, was born in London in 1792. The son of Mr. Charles Hayter, a well-known teacher of drawing, and author of treatises on 'Drawing' and on 'Perspective,' very popular in their day, though now forgotten, he received a careful artistic training, and won when very young two medals in the Royal Academy. His father did not, however, wish him to become an artist, and he entered the navy as a midshipman in 1808, but, disliking the sea, he in the following year commenced his professional career at Southampton as a miniature painter. In this line he met with considerable success. His father was teacher of drawing to the Princess Charlotte: he thus probably obtained an introduction at Claremont, and in 1815 was appointed miniature painter in ordinary to Princess Charlotte and Prince Leopold. In 1816 he went to Rome, where his copies in oil from the works of the great masters were much admired, but he also painted some original pictures, the principal being 'Christ and the Tribute Money,' which secured his election as member of the Academy of St. Luke. Returning to London towards the end of 1819, he established himself in Wimpole-street as an historical and portrait painter. In the latter capacity he met with a large amount of royal and fashionable patronage. But though his likenesses were good, the expressions favourable, the costumes unexceptionable, the execution neat, and the manner courtly, he had no claim to rank among the great masters of portraiture, and after retaining a foremost professional standing for some years, his popularity declined even in aristocratic circles. In 1826 he made a second visit to Italy, where he stayed some time, painted one or two historical pictures and the portraits of several illustrious personages, and was elected a member of the academies of Venice, Florence, Parma, and Bologna. On his return from Italy he made a rather prolonged stay in Paris, where he painted the portraits of Charles X., Louis Philippe, and various distinguished persons. Hayter had given instruction in painting to the Princess Victoria, and on his return to London received a commission to paint her portrait. Shortly after her accession to the throne he was appointed principal portrait painter to her Majesty, and in 1841 historical painter in ordinary to her Majesty, shortly after which he received the honour of knighthood. His historical works include 'The Meeting of the First Reformed Parliament,' purchased by the government for the National Portrait Gallery, 'Marriage of the Queen and Prince Albert,' 'Coronation of Queen Victoria,' 'The Trial of Lord William Russell' (familiar to every one by the engravings), 'The Trial of Queen Caroline,' and 'Joseph Interpreting the Chief Baker's Dream.' To the exhibition of the Royal Academy in 1838 he contributed 'A Portrait of Her Most Gracious Majesty Queen Victoria, seated on the Throne in the House of Lords, painted by Her Majesty's Command for the City of London,' and 'The Right Hon. Lord Melbourne, First Lord of the Treasury,' but his name does not, we believe, occur in any subsequent catalogue. The Royal Academy of London was less appreciative of his merits than the academies of Italy. Sir George Hayter died at his residence, Marylebone-road, on the 18th of January, 1871, aged 78.

HAYWARD, or HAYWARDE, SIR JOHN, an English historian, of whose earliest years nothing is certainly known, was probably born shortly after 1560, at Felixstow, a small town on the coast of Suffolk, or in its immediate neighbourhood. His education was completed at Cambridge, where he took the degree

of Doctor of Civil Law. Removing to London, he practised as an attorney in the ecclesiastical courts. Towards the close of the reign of Elizabeth, when both court and country were disquieted by the question of the succession to the throne and the intrigues of the Earl of Essex, Hayward published, with a dedication to that nobleman, his first work, entitled, 'The first Part of the Life and Raigne of King Henrie the iiiii., extending to the end of the first yeare of his Raigne,' 4to, London, 1599, reprinted in 8vo, London, 1642, with Sir Robert Cotton's 'Short View of the long Life and Raigne of Henrie iii.,' prefixed. The principal events upon which Hayward's work dwelt were the misgovernment of a sovereign and his advisers; the unauthorised return to England of Henry of Lancaster, and the unbounded popularity by which he was borne onwards to the throne. These circumstances, conjoined with the fact of the extremely adulatory style of the dedication, were sufficient to excite the jealousy and anger of Elizabeth. The author of the work—which was characterised by the lawyers concerned in the trial of the Earl of Essex as having been "written on purpose to encourage the deposing of the Queen"—was committed to prison, and would have been subjected to very severe treatment had not Lord Bacon used his wit, tact, and benevolence in mitigation of the royal displeasure. Although he escaped the rack, Hayward was subjected to an imprisonment which continued until some time after the death of his ambitious patron, in 1601, and, probably, until the death of the Queen. His pen, at least, was set free by the accession of James I., and he published a political treatise, in which he championed the king's claim to the throne, with the title of 'An Answer to the first Part of a Conference concerning Succession, published not long since under the name of R. Dollman,' 4to, London, 1603, which was reprinted as 'The Right of Succession asserted against the false Reasonings and seditious Insinuations of R. Dolman, alias Parsons, and others,' 8vo, London, 1683. Hayward's next production was a skillful exposition of the advantages likely to accrue from a legislative union of the two kingdoms, and called 'A Treatise of Union of the two Realmes of England and Scotland,' London, 4to, 1604. In 1610 he was appointed one of the two historiographers, Camden being the other, of the College at Chelsea, which was, however, never permanently established. In the summer of 1612, at the instigation of Prince Henry, his patron, he wrote 'The Lives of the three Normans, Kings of England: William the First, William the Second, Henrie the First,' 4to, London, 1613, which was reprinted in the Harleian Miscellany, part in vol. ii. p. 438, &c., and the remainder in vol. ix. p. 264, &c. The same request of the Prince of Wales produced also from Hayward the 'Annals of the first four yeares of the Reign of Queen Elizabeth,' which was edited for the Camden Society, by John Bruce, Esq., F.S.A., from a manuscript in the Harleian collection, and published in 4to, London, 1840. The death of Prince Henry put an end at once to both "the endeavours and the hopes" of Hayward; who, in default of a patron for his historical labours, turned his attention to the production of several devotional works, which commanded great popularity, and were often reprinted. Such were 'The Sanctuarie of a troubled Soule,' 12mo, London, 1616, &c.; 'David's Teares: or, an Exposition of the Penitential Psalms,' 8vo, London, 1622, 4to, 1623, 1625, &c.; and 'Christ's Prayer on the Crosse for his Enemies,' 8vo, London, 1623. On the 5th of August, 1616, Hayward was admitted a member of the College of Advocates in Doctors' Commons; in 1617 unsuccessfully applied to be incorporated in his law degree at Oxford; and on the 9th of November, 1619, received the honour of knighthood. He was a successful practitioner, and attained considerable professional eminence, as well as amassed considerable wealth. He died on the 27th of June, 1627. Besides the works already mentioned, Sir John Hayward wrote a treatise 'Of Supremacie in Affaires of Religion,' 4to, London, 1624; and a work, of posthumous publication, of greater interest and pretensions than any of his preceding ones, entitled, 'The Life and Raigne of King Edward the Sixt,' 4to, London, 1630, 12mo, 1636, &c., and reprinted in Kennet's 'Complete History of England,' vol. ii. p. 273, &c.

* **HAYWOOD, WILLIAM**, Chief Engineer and Surveyor to the Corporation of the City of London, was born in 1821. He received his professional education under Mr. George Aitchison, who was architect and resident surveyor to St. Katharine's Dock Company, and was much engaged in dock and warehouse engineering. Mr. Haywood became, in 1846, engineer and surveyor to the Commissioners of Sewers in the City of London, a post which he has occupied to the present time (1871). The duties that devolve upon that office are very varied, seeing that

the Commissioners discharge all the usual functions of an Improvement Board, a Highway Board, a Local Board of Health, and a Burial Board; and their engineer has had to plan and construct works of a diversified kind. In 1851, Mr. Haywood, in conjunction with the late Mr. Frank Forster, designed a plan of main drainage and interception of the sewage on the Middlesex side of the Thames; and in 1854 was employed with Mr. Bazalgette in developing that larger scheme which has since been finished in regard to the High Level and Middle Level, though not the Low Level Sewers. In 1857 he laid out the City of London Cemetery at Little Ilford, one of the largest in the kingdom. In 1861 he built the court-house for the Commissioners of Sewers at Guildhall. While superintending all the arrangements connected with the drainage, paving, cleansing, &c., of the City, Mr. Haywood gradually developed the scheme for the Holborn Viaduct, the most important and best arranged work of its kind yet constructed in this country, which was finished in 1869, and opened by the Queen in person. In addition to the ordinary difficulties of such a work, constant attention had to be paid to arrangements necessary for carrying on the operations without interrupting the two great streams of traffic, east and west, north and south. The subway system is more completely carried out here than in any other part of the metropolis; effective arrangements having been made for the pneumatic tube, for sewers, gas pipes, water pipes, and telegraphic wires beneath the roadway. Mr. Haywood has been largely consulted by commissions and parliamentary committees on matters relating to town improvements, street traffic, city railways, suburban railway communications, pavements, drainage, gas supply, water supply, &c. His printed reports on some of these subjects afford information not easily obtained in other quarters. One of them, a report in relation to the traffic of the City, and the possible means of improving the accommodation for it, was presented to the Improvement Committee of the Court of Common Council in 1867; in the fifty folio pages of text and the accompanying coloured plans, valuable details of various kinds are given, and an excellent scheme laid down for improving the great line of thoroughfare from east to west through the metropolis. Mr. Haywood is a Member of the Institution of Civil Engineers, and a Fellow of the Royal Institute of British Architects.

HEAD, THE RIGHT HON. SIR EDMUND WALKER, BART., K.C.B. [E. C. vol. iii. col. 326]. Sir Edmund Head retained the Governor-Generalship of Canada till 1861. On his return to England, he was appointed, 1862, a Civil Service Commissioner. He had been sworn in a member of the Privy Council in 1857, and in 1860 created a Knight Commander of the Order of the Bath. He died at his residence, Eaton-square, London, on the 28th of January, 1868. Sir Edmund Head was an excellent classical and general scholar, an admirable public servant, and an accomplished gentleman. He had received the honorary degree of D.C.L. at Oxford and LL.D. at Cambridge, and was a Fellow of the Royal Society. His son John, mentioned in the original memoir as his heir, was accidentally drowned in Canada in 1859, and the baronetcy consequently is extinct.

* **HEBERT, AUGUST ANTOINE ERNEST**, a popular French painter, was born at Grenoble (Isère), November 3rd, 1817. In 1835 he went to Paris, in order to study law, but gave more attention to art, and, after working some time in the atelier of David D'Angers, completed a picture of 'Tasso in Prison,' which was purchased from the exhibition by the Government. By the advice, and with the aid of Paul Delaroche, he competed for and won the grand prize of the École des Beaux-Arts, which entitled him to study in Rome. Having remained his five years' term at the Medici Villa, and sent home 'Odaliques' and other pictures, he spent two or three years in other Italian cities, and on his return to Paris, contributed to the Salon of 1848 several Italian subjects which were very well received, but the work which first secured general regard was his 'Mal' Aria,' 1850, the celebrity of which, as was said a few years later, led M. Hebert to seek as diligently after disease as other men seek after health. Certainly there is a morbid, unwholesome colour and feeling in most of his pictures, though his countrymen consider him a great colourist. His more celebrated later works include 'Le Crescenza,' 'Les Fienaroles,' 'Le Jeune Fille au Puits,' 'Rosa Nera à la Fontaine,' painted for the Empress Eugénie, and sent by her to the International Exhibition of 1862, where also was 'Les Cervarolles (États Romains),' sent by the Emperor from the Luxembourg. M. Hebert is an accomplished artist, refined in style, learned in

BIOG. DIV.—SUP.

design, and skilful in execution, but essentially artificial and Parisian. He has received medals of the first class (genre historique) in 1851 and 1855, and was created knight of the Legion of Honour in 1853.

HÉBERT, JACQUES RENÉ, known to his companions during the stormy period of the first French revolution as 'Le Père Duchesne,' was born at Alençon, in 1755. Obscure in family, and almost uneducated, he went to Paris at an early age, and obtained a situation as check-taker at the Théâtre des Variétés; but this, as well as another situation under a medical practitioner, he lost through dishonesty. He was in a state of abject poverty when the revolution broke out in 1789. He plunged eagerly into the vortex, and had ability enough to write pamphlets of the most inflammatory kind, which at once made him a hero in the eyes of the populace, and obtained for him ready admission into the revolutionary clubs. There happened at that time to be a moderately liberal journal in course of publication by Lemaire, who called himself 'Le Père Duchesne.' The clubs proposed to establish a rival to it under the same name, to advocate more violent action, and Hébert undertook the editorship. His writing was so abusive of the Court and the aristocracy, and so ferocious, filthy, and blasphemous, that it hit the depraved taste of the *sans culottes*, and obtained for him the above sobriquet. After the events of the 10th of August and the 2nd of September he was made a syndic. On the 24th of May, 1793, he was arrested by order of the Convention, on the motion of the Girondists, and charged with a scheme for assassinating such of the members as were opposed to his extreme violence. He was defended by Marat in the Convention, and was acquitted on the 27th. Furious against the Girondists, he joined the fiercer party in the Convention in bringing them to the scaffold; then affected for a time a little moderation, but soon broke out again into violent writing, and defied the Convention. He was one of the interrogating commissioners against the hapless Queen Marie Antoinette—an office in which his brutality disgusted even Robespierre. With Chaumette, Pache, and Anacharsis Clootz, he inaugurated atheism, and converted the Church of Notre Dame into a temple of reason. Robespierre and Danton, seeing that Hébert was endeavouring to make the clubs and the communes more powerful than the Convention, suspended for a time their own feud, and joined to crush him. On the 13th of March, 1794, he was denounced from the tribune, and on the following night was arrested with 19 others of his party (known as Hébertists). They were speedily tried, found guilty of crimes against the Convention and the republic, and guillotined on the 24th. Hébert was perhaps the least worthy of all the prominent actors in the revolution, brutal alike in language and conduct, and, whilst inveighing coarsely against all luxury and refinement in others, luxurious and selfish in his own personal habits during his brief tenure of magisterial office.

HEDWIG, JOHANN, botanist, was born December 8, 1730, at Kronstadt, in Transylvania. He studied at Leipzig, where his taste for botany was so decided that he was employed in classifying and arranging the plants in the herbarium belonging to the university of that city. On leaving Leipzig he settled as a doctor at Chemnitz, in Saxony, and took up the study of the grasses and cryptogamous plants. In 1781 he returned to Leipzig, and after filling some medical posts, he became professor of botany and director of the botanical gardens in connection with the university in 1789. He died at Leipzig, February 7, 1799. He was one of the most eminent cryptogamists of his day, and his works did much towards advancing our knowledge of mosses, ferns, and other allied groups of plants. He was an excellent observer with the microscope, which instrument he employed largely in his researches. His more important publications are: 'Fundamentum Historiæ Naturalis Muscorum frondosorum,' 2 vols. 4to, Leipzig, 1782—83; 'Species Muscorum frondosorum,' 4to, 1801, to which a supplement has been added since his death; 'Descriptio et adumbratio microscopico-analytico Muscorum frondosorum, etc.' 4 vols. folio, Lipsiæ, 1787—97; 'Theoria generationis et fructificationis plantarum cryptogamicarum Linnæi,' 4to, Petropoli, 1784, Lipsiæ, 1798; 'Abbildungen neuer und zweifelhafter cryptogamischen Gewächse, nebst ihrer analytischen Geschichte,' 4 vols. folio, Lipsiæ, 1785—95; and 'Sammlung seiner zerstreuten Abhandlungen und Beobachtungen über botanisch ökonomische Gegenstände,' 2 vols. 8vo, Leipzig, 1793—97.

* **HEFFTER, AUGUST WILHELM**, a distinguished German lawyer, was born on the 30th of April, 1796, at Schweinitz, and having studied law at the Universities of Leipzig and

U U

Berlin, became in 1820 assessor of the court of appeal at Cologne, and subsequently was appointed to a judicial function at Düsseldorf. Whilst at the latter place he produced his treatise on the Judicial Organisation of the Athenians, &c., 'Die athenaische Gerichtsverfassung, ein Beitrag zur Geschichte des Rechts, insbesondere zur Entwicklung der Idee des Geschworenengerichtes in alter Zeit,' 8vo, Cologne, 1822, a work which had the effect of procuring his appointment in 1824 as professor of law at the University of Bonn, from which he received his doctor's degree. He performed the duties of this office for six years, after which he was appointed to a similar position at the University of Halle, which he exchanged in 1833 for a chair in the faculty of law at Berlin.

Dr. Heffter's principal works are his *Institutions of Roman and German Civil Law*, 'Institutionen des römischen und deutschen Civil-Processes,' 8vo, Bonn, 1825, second edition, entirely recast, and entitled 'System des römischen und deutschen Civil-Processrechts,' 8vo, Bonn, 1843; *Outline of Lectures on the ancient and modern Public Law of Germany*, 'Grundriss zu Vorlesungen über altes und neues deutsches Staatsrecht,' 8vo, Bonn, 1827; *Thoughts on the Introduction of the Prussian Code in the Prussian Rhine-Provinces*, 'Gedanken über die Einführung der allgemeinen Preussischen Gesetzgebung in den Preussischen Rheinprovinzen,' 8vo, Bonn, 1827; *Contributions to the Law of the States and Princes of Germany*, 'Beiträge zum deutschen Staats- und Fürstenrecht,' 8vo, Berlin, 1829; an edition of the *Institutes of Gaius*, 'Gaii Institutionum Commentarii quatuor,' 12mo, Berlin, 1830; *Manual of the Criminal Law of Germany*, &c., 'Lehrbuch des gemeinen deutschen Criminalrechts, mit Rücksicht auf die nicht exklusiven Landesrechte,' 8vo, Halle, 1833, second edition, 1840, sixth edition, 8vo, Brunswick, 1857; *Right of Succession of Illegitimate Children*, &c., 'Die Erbfolgerechte der Mantelkinder, Kinder aus Gewissenssehen, aus putativen Ehen, und der Brautkinder bei Lehen und Familienfideicommissen,' &c., 8vo, Berlin, 1836; 'Das europäische Völkerrecht der Gegenwart,' 8vo, Berlin, 1844, third edition, 1855, fourth edition, 1861, French translation, from the third German edition, by M. Jul. Bergson, entitled 'Le Droit international public de l'Europe,' 8vo, Berlin, 1857; *Civil Process, or the legal Proceedings in civil Actions within the operation of the common Law of the Prussian States*, 'Civil-Prozess, oder das gerichtliche Verfahren bei bürgerlichen Rechtsstreitigkeiten im Gebiete des allgemeinen Landrechts für die Preussischen Staaten,' &c., 8vo, Berlin, 1856.

* HEFFTER, MORITZ WILHELM, a German historian and archaeologist, and elder brother of the subject of the preceding notice, commenced life as rector of the College of Torgau, which he left in 1824 for Brandenburg, where, in 1831, he was appointed conrector, and in 1839 was promoted to be a professor. He has been concerned in the production of various works in geography and philology, and has likewise produced a treatise on the Ancient Religion of Rhodes, 'Die Götterdienste auf Rhodus im Alterthume,' 3 parts, 8vo, Zerbst, 1827—29—33; *History of Brandenburg*, &c., 'Geschichte der Chur- und Haupt-Stadt Brandenburg, von den frühesten bis auf die neuesten Zeiten,' 3 parts, 8vo, Potsdam and Brandenburg, 1838—40; *Mythology of the Greeks and Romans*, 'Die Mythologie der Griechen und Römer,' &c., 5 parts, 8vo, Brandenburg, 1845—49; *Rivalry of the Germans and the Slaves*, &c., 'Der Weltkampf der Deutschen und Slaven seit dem Ende des 5 Jahrhunderts,' &c., 8vo, Hamburg and Gotha, 1847; *Religion of the Greeks and Romans, the ancient Egyptians*, &c., 'Die Religion der Griechen und Römer, der alten Aegypter, Indier, Perser und Semiten,' 8vo, Brandenburg, 1848, new edition, Leipzig, 1854.

HEIBERG, JOHAN LUDWIG [E. C. vol. iii. col. 338], died at Paris on the 25th of August, 1860.

HEIDELOFF, CARL ALEXANDER VON, German Gothic architect, was born at Stuttgart, February 2, 1788. The son of Victor Peter Heideloff (born 1757, died 1816), a well-known sculptor and architect of that city, he early commenced his artistic studies under the guidance of his father, and at the Art Academy under Dannecker and Scheffhauer. His predilection for mediævalism in art was early manifested, and being appointed architect, and later conservator of the monuments of his native city, he was able to exhibit his knowledge of the Gothic style in the construction of the tomb of the last Prince-Bishop of Bamberg, Albert Dürer's fountain, the altar in St. Sebald's, the restoration of the portal of the Frauenkirche, and the rebuilding of the Jakobikirche. Heideloff travelled widely in order to examine the remains of mediæval art, and was considered one of the most accomplished Gothic architects of Germany. From

1822 till his retirement with the rank of emeritus-professor in 1854, Heideloff was professor in the Polytechnic school of Nürnberg, and laboured diligently in advancing his architectural opinions. The substance of his teaching and the results of his investigations and experience were for the most part embodied in his numerous publications. Among the more important of these are—'Entwürfe zu einem neuen Theater-Gebäude in Nürnberg,' folio, Nürnberg, 1829; the series of introductions to the several styles of architecture, 'Der kleine Grieche,' 16mo, 1836; 'Der kleine Byzantiner,' 12mo, 1837; 'Der kleine Altdeutsche (Gothic), oder Grundzüge des alt-deutschen Baustyles,' 8vo, 1849—52, a clear and useful summary of German Gothic; 'Die Lehre von Vignola's Säulenordnungen in Zusammenstellung mit jenen des Palladio, Serlio, Cataneo, Branca, Scamozzi, und einigen römischen Antiken,' folio; 'Die Bauhütte des Mittelalters in Deutschland,' 4to, 1844; 'Die Ornamentik des Mittelalters,' 4to, 1843—52, also with English text; 'Architektonische Entwürfe und ausgeführte Bauten im byzantinischen und altdeutschen Style,' 8vo, with fol. atlas of plates, 1850, &c., besides other works undertaken in conjunction with F. Müller and with G. Neumann. Besides the restorations and buildings already mentioned, Heideloff erected the handsome château of Reinhardtsbrunn, the castles of Landsberg and Altenstein, the small castle of Rosenberg by Bonn, and restored the mortuary chapel at Lichtenstein, and the chapel of the castle of Rheinstein; the churches of St. Lorenz and St. Sebald in Nürnberg, and the cathedral at Bamberg. His latest work was the restoration of the Ritterkapelle at Hassfurt, at which place he died on the 26th of September, 1865.

HEIM, FRANÇOIS JOSEPH, French historical painter, was born at Belfort (Haut-Rhin), December 16, 1787; studied art in the central school, Strasbourg, where at the age of 15 he carried off the first prize; went to Paris, and entered the atelier of Vincent and the Académie, where he obtained the second grand prize in 1806, and the first in the following year. This freed him from military service, and entitled him to study at Rome. The pictures which he sent from Rome were purchased for the museums of Strasbourg and Bordeaux, and on his return to Paris he secured a gold medal of the first class at the Salon of 1812. Thenceforward his pencil was devoted to the grand style, and his vast canvases met with unbounded admiration and envied places in palaces and churches. Such were 'Le Martyre de St. Julienne et son Fils,' &c., for the church of St. Gervais, and 'Le Roi distribuant les Récompenses au Salon de 1824,' 'La Prise du Temple de Jerusalem par les Romains,' bought for the Luxembourg, and 'St. Hyacinthe ressuscité un Jeune Homme,' for Notre Dame. Official patronage descended richly on M. Heim. He was commissioned to paint, among other things, a ceiling of the Musée Charles X. at the Louvre, and represented on it 'Le Vésuve personnifié recevant de Jupiter le feu qui doit consumer Herculanum et Pompéi,' a number of allegorical figures in other apartments, and a composition symbolising 'La Renaissance des Arts en France,' in the Galerie Française. For Versailles he painted 'Louis Philippe recevant au Palais-Royal les Députés de 1830,' and 'Le Champ de Mai du 1^{er} Juin, 1815.' He also decorated la Chapelle des Ames du Purgatoire at the church of St. Sulpice and some other churches. His chief commission, however, was the decoration of the Salle des Conférences of the Chamber of Deputies. This comprised four large compositions from French history; allegorical figures of Prudence, Justice, &c., with others symbolising Agriculture, the Industrial and Fine Arts, &c.; and a dozen medallion portraits of great French jurists and legislators. But with all his grand works, Heim was almost forgotten, or only spoken of ironically by those who remembered his existence as 'Le Pere Heim,' when the exhibition of a collection of his pictures and drawings at the Exposition of 1855 revived his fame, and he was again spoken of as one of the great artists of France. The revival, it may be feared, was but temporary. Heim was a bold and skilful artist, drew admirably, composed well, and painted with a great deal of vigour. But his art was essentially acedemical, a thing of the past which is not likely to be galvanised into lasting vitality. M. Heim was a member of the Institute, into which he was elected in 1829, and an officer of the Legion of Honour, 1855. He died at Paris, October 2, 1865.

* HELMERSEN, GREGOR VON, a distinguished Russian geologist, was born September 29, 1803, near Dorpat, at the university of which place he was educated. While still a youth he had explored many parts of the Volga, and in 1828 he took part in a scientific expedition which the Russian government sent out to

explore that river. In 1830 he was appointed mining engineer, and was ordered by the government to make a general survey of the southern portion of the Ural mountains. About this time he became acquainted with Humboldt, who recommended him to acquire an idea of the state of science in Europe by a residence at Freiburg and Heidelberg. In 1833 he explored the Altai mountains, and in 1834 he carried out an extensive survey of the mineral productions of Asiatic Russia. In 1835 he was appointed professor of geology at the School of Mines at St. Petersburg, and in 1865 he was raised to the post of director of the Mining Institute of St. Petersburg. While holding these posts he has made repeated excursions into various parts of Russia, and has contributed largely to our knowledge of the geology of that country. In conjunction with K. E. von Baer, he has conducted the series of volumes entitled 'Beiträge zur Kenntniss der Russischen Reiches und der angränzenden Länder Asiens,' 8vo, St. Petersburg, 1839—58. He has contributed to several of the volumes, while two are entirely by himself, viz., vol. x., entitled 'Reise nach dem Ural und der Kirgisenstepe in 1833—35,' 1841; and 'Reise nach dem Altai im Jahre 1834,' 8vo, 1848, forming vol. xiv. In conjunction with M. Hoffmann, he wrote 'Geognostische Untersuchungen des Südruralgebirgs,' 8vo, Berlin, 1831. We have also from him 'Geologische Bemerkungen auf einer Reise in Schweden und Norwegen,' 4to, St. Petersburg, 1858, and an elaborate work in Russian on coal formations, published in 1864. Numerous articles on the geology of Russia have also been furnished by him to the scientific periodicals of St. Petersburg.

*HELMHOLTZ, HERMANN LUDWIG FERDINAND, physiologist, was born at Potsdam, August 31, 1821. His studies were mainly prosecuted at Berlin. In 1848 he obtained a professorship at the Academy of Fine Arts at Berlin, and after filling the physiological chair at Königsburg for six years, and that at Bonn for three, he finally settled at Heidelberg as professor of physiology in 1858. He is especially remarkable for his thorough knowledge of both physics and physiology; hence most of his enquiries are of an experimental nature, and in most of them he has manifested the highest ingenuity in contriving instruments and mechanical arrangements whereby the problems under investigation may be solved. As a few illustrative cases, the following may be noticed:—He ascertained that the motor nerves of a frog transmit an electrical current at the rate of from 80 to 126 feet per second, and that the muscle requires an appreciable time, one or two-hundredths of a second, to respond to the stimulus, the time being longer in proportion to the weight or force which the muscle has to overcome. His theory of acoustics was the result of a very recondite investigation. A simple primary or fundamental note is the lowest tone produced by a body all of whose parts vibrate in unison. Such notes are rarely produced. In musical instruments the note is of a compound nature, consisting of the fundamental note in conjunction with the harmonic notes which respond to it. The nature of the combination constitutes the quality of the note or its *timbre*. In the case of the human voice he finds that the vowels (German) consist of the same fundamental note, each vowel being distinguished by its *timbre*. When they are sung close to a piano whose wires are free to vibrate, the vocal sounds are analyzed into their primary and secondary notes. He conceives that a similar analysis is effected by the auditory apparatus, thus enabling us to distinguish the differences between the same note when played on different instruments. His more important publications are 'Ueber die Erhaltung der Kraft,' 8vo, Berlin, 1847; 'Handbuch der Physiologische Optik,' 8vo, Leipzig, 1856-66; 'Die Lehre von den Ton-empfindungen als physiologische Grundlage für die Theorie der Musik,' 8vo, Brunswick, 1862; 'Die Mechanik des Gehörknöchelchens und des Trommelfells,' 8vo, 1869; and 'Populäre wissenschaftliche Vorträge,' 1871. He has also written a large number of papers upon the same or kindred subjects.

HENDERSON, ALEXANDER, a Scottish divine and ecclesiastical leader, was born at Criegh, in Fifeshire, about the year 1583, and was educated at the University of St. Andrew's, where he so distinguished himself that soon after taking his M.A. degree, he was appointed regent or professor of philosophy. At this period of his life he was an adherent of the Episcopal party in the Church; and was preferred by Archbishop Gladstones to the living of Leuchars in his native county. In a few years he became a convert to presbytery, in favour of which he made his first public stand on the occasion of the passing of the Five Articles of Perth, in August, 1618. For his opposition to these Articles, he was summoned, with two other ministers, before the Court of

High Commission in St. Andrew's, August, 1619, on the charge of publishing a book proving the nullity of the Perth Assembly. They defended themselves so well as to escape with threats and a caution against future offences. For about 18 years after this period, Henderson lived retired, occupying himself chiefly with the spiritual affairs of his parish, until the issue of a proclamation which forced the use of the Liturgy or Service-Book on the Church of Scotland, without having been submitted to the presbyteries, and without the sanction of the General Assembly. Hereupon he went to Edinburgh to present a petition to the Privy Council against the measure, and succeeded in procuring its suspension until the pleasure of the King should be taken. His majesty was unyielding, and Henderson became at once the head and the right hand of the party of Nonconformists, whose memorials and petitions he drew up, and whose measures he suggested and directed. He remodelled the National Covenant of 1580 and 1581; and it was first exhibited for public signature on the 28th of February, 1638, in the Grey Friars' Church, Edinburgh, where an immense number of enthusiastic Covenanters bound themselves by a vow to extirpate Popery and Prelacy from the three Kingdoms. He was unanimously chosen Moderator of the General Assembly which the king allowed to be convened on the 21st of November, at Glasgow, and the result of which was the overthrow of Episcopacy. Henderson now accepted a call to a church in Edinburgh, where he was soon advanced to be first or King's Minister, without, however, receding from his position "at the head of the Church as now once more reformed." In 1639 he was one of the commissioners deputed by the Scottish army, then encamped on Dunse Law, to treat with the king, who, with his forces, had taken post at the Birks, a plain on the English side of the Tweed, within three or four miles of Berwick; and on the 31st of August, in the same year, he presided, in his clerical capacity, at the opening of the Scottish Parliament. In 1640 he was made Rector of the University of Edinburgh, the discipline of which he fortified, and the interests of which he advanced to such an extent as to ensure his annual re-election until his death. He accompanied the Scottish Commissioners to London, whence, after a stay of nine months, during which he was honoured with a private and cordial conference with the king, he returned to Edinburgh in July, 1641, and was immediately chosen again to the Moderatorship of the General Assembly. In August following the king visited Edinburgh, whither he repaired, in prospect of the civil war then on the eve of breaking out, in order to conciliate the chiefs of the Presbyterian party, and nominated Henderson to a royal chaplaincy, the duties of which office kept the latter in constant attendance upon his majesty. In 1642, after the beginning of hostilities, Henderson was one of the commissioners who visited London with the view of effecting a reconciliation between Charles and his English subjects. Returning disappointed from this mission, he was once more, in 1643, chosen Moderator to the General Assembly; and was soon afterwards sent to take part in the Assembly of Divines at Westminster. He remained in London for three years, during which time he assisted largely in the preparation of the public formularies of the religious union between the three Kingdoms. His biographer claims that he had a principal hand in "proposing and partly framing the Confession of Faith, the Larger and Shorter Catechisms, the Directory or Platform of Church Government and Worship, and also in forwarding the metrical version of the Psalms still used in Scottish churches."

In 1645 he was appointed to assist the Commissioners of the Scottish and English Parliaments to treat with the king at Uxbridge; and finally was deputed to negotiate with the latter, when his fortunes had reached a crisis, at Newcastle, where he arrived on the 15th of May, 1646, and maintained a written discussion with the king on religious and ecclesiastical subjects. The series of papers, eight in number, which passed between them, from the 29th of May to the 15th of July, five of them being by the king, and three by Mr. Henderson, was published with the title of 'The Papers which passed at Newcastle betwixt His Majesty and Mr. Alexander Henderson, concerning the Change of Church Government, A.D. 1646,' 8vo, London, 1649, and reprinted in vol. iv. of the first collection of 'Somers' Tracts.' Henderson had been in feeble health at the outset of this discussion, and he returned by sea to Edinburgh, only to die there on the 19th of August, 1646, praying in his last moments for a "happy conclusion to the great and wonderful work of Reformation." He was buried in Grey Friars' churchyard, where his nephew erected a monument to his memory,

which, with others in memory of the leading Covenanters, being demolished after the Restoration, was replaced at the Revolution.

Literary remains of a life so largely devoted to action and administration are scanty; and it suffices to mention that on the 28th of May, 1643, Henderson preached a Fast Sermon before the House of Lords; a Fast Sermon before the House of Commons on the 27th of December following; and a Thanksgiving Sermon before both Houses on the 18th of July, 1644, all of which were separately published. A small work of posthumous issue was entitled 'The Declaration of Mr. Alexander Henderson, Principall Minister of the Word of God at Edinburgh, and Chiefe Commissioner from the Kirk of Scotland to the Parliament and Synod of England: made upon his Death-bed,' 4to, London, 1648. His principal biography is entitled the 'Life and Times of Alexander Henderson,' 8vo, Edinburgh, 1836, by John Aiton.

HENFREY, ARTHUR, F.R.S. [E. C. vol. vi. col. 1004.] Professor Henfrey died on the 7th of September, 1859, in his 40th year. He was born at Aberdeen on the 1st of November, 1819.

* HENGSTENBERG, ERNST WILHELM, an eminent German divine and commentator, was born on the 20th of October, 1802, at Fröndenberg, and after receiving his preparatory education from his father, who was the minister of that parish, proceeded to the University of Bonn, where he applied himself chiefly to philosophy and the oriental languages. He signalled his proficiency in the latter by the production of a Latin translation of the 'Moallakah' of Amrualkais, one of the principal Arab poets of the 6th century, which obtained a prize from the Bonn Academy, and was published in 8vo, Bonn, 1823. He followed up this work with a translation in German of Aristotle's 'Metaphysik,' 8vo, Bonn, 1824; and, having completed his studies in theology, became a tutor (Privatdocent) in that faculty at Berlin, in which university he became extraordinary professor in 1826, ordinary professor in 1828, and received the degree of D.D. in 1829.

The principal works of Dr. Hengstenberg, who has been long known as a leader of the orthodox school, are his 'Christologie des Alten Testaments, und Commentar über die Messianischen Weissagungen der Propheten,' 3 vols. 8vo, Berlin, 1829—35, second edition, greatly improved, 1854—57, English translation, by R. Keith, 'Christology of the Old Testament, and a Commentary on the Predictions of the Messiah by the Prophets,' 3 vols. 8vo, 1835—39, of which the first volume was published at Alexandria, and the others at Washington, and of which an Abridgment was published by T. K. Arnold, 8vo, London, 1847. A more complete version, from the second German edition, of which the first two volumes were translated by Theodore Meyer, and the third and fourth by James Martin, appeared as part of 'Clark's Foreign Theological Library,' in 4 vols. 8vo, Edinburgh, 1854—58; Contributions for an Introduction to the Old Testament, 'Beiträge zur Einleitung ins Alte Testament,' 3 vols. 8vo, Berlin, 1831—39, portions of which were published in English in a volume entitled 'Dissertations on the Genuineness of Daniel and the Integrity of Zechariah, translated by the Rev. B. P. Pratten; and a Dissertation on the History and Prophecies of Balaam,' translated by J. E. Ryland, 8vo, Edinburgh, 1848, and in two other volumes, translated by J. E. Ryland, and entitled 'Dissertations on the Genuineness of the Pentateuch,' 2 vols. 8vo, Edinburgh, 1847; 'Die Bücher Moses und Aegypten,' 8vo, Berlin, 1841, English translation, by R. D. C. Robbins, with additional Notes by W. Cooke Taylor, and forming Part iii. of the new series of the 'Biblical Cabinet,' with the title of 'Egypt and the Books of Moses: or the Books of Moses illustrated by the Monuments of Egypt,' 12mo, Andover (U.S.), 1843; 'Commentar über die Psalmen,' 4 vols. 8vo, Berlin, 1842—45, second edition, 1849—52, English translation, by Patrick Fairbairn and J. Thomson, entitled 'Commentary on the Psalms,' 3 vols. 8vo, Edinburgh, 1844—48, of which the first volume formed a portion of the 'Biblical Cabinet: or hermeneutical, exegetical, and philological Library,' and the other two, of 'Clark's Foreign Theological Library; Commentaries on the most important and most difficult parts of the Pentateuch, 'Erläuterungen über die wichtigsten und schwierigsten Abschnitte des Pentateuches,' vol. i. 8vo, Berlin, 1842; 'Die Offenbarung des heiligen Johannes für solche die in der Schrift forschen erläutert,' 2 vols. 8vo, Berlin, 1849—51, second edition, 1861—62, English translation, made by the Rev. Patrick Fairbairn, for 'Clark's Foreign Theological Library,' and entitled 'The Revelation of St. John, expounded for those who search the Scriptures,' 2 vols. 8vo, Edinburgh 1851—52; 'Ueber den Tag des Herrn,' 8vo, Berlin,

1852, English translation, by J. Martin, 'The Lord's Day,' 8vo, London, 1853; The Sacrifices of Holy Scripture, 'Die Opfer der heiligen Schrift,' 8vo, Berlin, 1852, a discourse delivered before the Evangelical Alliance, and reproduced in the 'Evangelische Kirchenzeitung,' a periodical founded and edited by Dr. Hengstenberg in 1827; an Exposition of Solomon's Song, 'Das Hohelied Salomonis ausgelegt,' 8vo, Berlin, 1853; several other discourses delivered at meetings of the Evangelical Alliance, as, for instance, 'Der Prophet Iesaias. Ein Vortrag auf Veranstaltung des Evangelischen Vereins für Kirchliche Zwecke gehalten am 12. März, 1854,' 8vo, Berlin, 1854; 'Ueber das Buch Hiob. Ein Vortrag,' &c., 8vo, Berlin, 1856; and 'Der Prediger Salomo. Ein Vortrag,' &c., 8vo, Berlin, 1858, of which an English translation, by D. W. Simon, was published as a 'Commentary on Ecclesiastes, with other Treatises,' 8vo, Edinburgh, 1860; a Discourse on the Exordium of St. John's Gospel, 'Ueber den Eingang des Evangeliums St. Johannis. Ein Vortrag gehalten auf der Berliner Pastoral-Conferenz,' 8vo, Berlin, 1859; 'Das Evangelium des heiligen Johannes erläutert,' 3 vols. 8vo, Berlin, 1861—63, English translation, in 'Clark's Foreign Theological Library,' entitled 'Commentary on the Gospel of St. John,' vol. i. 8vo, Edinburgh, 1865, a work of which an English translation, by Messrs. Murphy, appeared with the title of 'The Prophecies of the Prophet Ezekiel elucidated,' 8vo, Edinburgh, 1869; and several Sermons preached on special subjects and occasions, and various academical discourses.

* HENLE, FRIEDRICH GUSTAV JAKOB, physiologist and anatomist, was born at Fürth, in Franconia, July 9, 1809. He studied medicine at Heidelberg and Bonn, obtaining his medical degree at the latter place in 1835. He then went to Berlin, and after serving in some minor capacities, he became professor in the university in 1837. In 1840 he was appointed to the chair of anatomy and physiology at Zurich; in 1844 to a similar chair at Heidelberg; in 1849 he became director of the anatomical institute at the last-named place; and in 1852 he succeeded Langenbeck at Göttingen. His work has consisted largely of dissertations on general anatomy, investigations into the minute microscopical structure of the tissues, and pathological researches. We may cite, amongst other works, his 'Handbuch der allgemeinen Anatomie,' 8vo, Berlin, 1841; and 'Handbuch der systematischen Anatomie des Menschen,' 3 vols. 8vo, Brunswick, 1855, 1856, in general anatomy; and his 'Handbuch der rationellen Pathologie,' 2 vols. 8vo, Brunswick, 1846—52, second edition, 1855; and 'Pathologische Untersuchungen,' 8vo, Berlin, 1840. He has also written 'Vergleichende Anatomie der Kehlkopf,' 8vo, Leipzig, 1839, in which he traces the relative development of the larynx in the different species of vertebrates. He is one of the editors of the 'Zeitschrift für rationelle Medicin,' which commenced in 1844, and still exists. In 1838 he published in Müller's 'Archiv für Anatomie' a 'Bericht über die Fortschritte der physiologischen Pathologie und pathologischen Anatomie in den Jahren 1836—37.' He has contributed or edited similar reports which have since appeared from time to time either in anatomical journals or as separate publications. The last is a 'Bericht über die Fortschritte der Anatomie und Physiologie im Jahr 1868,' 1869.

HENLEY, JOHN, an eccentric Anglican divine, commonly known as 'Orator Henley,' was born on the 3rd of August, 1692, at Melton Mowbray, of which parish his father, the Rev. Simon Henley, was vicar, in succession to his maternal grandfather, the Rev. John Dowel. He was educated successively at the Grammar-schools of Melton and Oakham; and about the year 1709, when, in addition to his classical attainments, he had already made some progress in Hebrew, was entered of St. John's College, Cambridge. Whilst an undergraduate he addressed a letter, dated from his college, February 3rd, 1712, to the 'Spectator,' which, subscribed with the pseudonym of Peter de Quir, abounds with "quaintness and local wit." His independence of mind made him uneasy under the discipline of the University. "He was impatient," says Mr. Westead, his friend and biographer, "that systems of all sorts were put into his hands ready carved out for him, and that he incurred the danger of losing his interest, as well as incurring the scandal of heterodoxy and ill principles, if, as his genius led him, he freely disputed all propositions, and called all points to account, in order to satisfy and convince his own reason. It shocked him to find that he was commanded to believe against his judgment, in points of logic, philosophy, and metaphysics, as well as religion; and that a course of mathematics was the least, if any, part of the usual academical education." Upon taking his degree of B.A., he was invited by the trustees of the Melton school, to become at first

the assistant, and afterwards the head master of that institution, which he raised from a state of decline to great celebrity. He was ordained deacon by Dr. Wake, at that time Bishop of Lincoln; and made a priest, after proceeding M.A., by Bishop Gibson, Wake's successor. Whilst at Melton, where with other duties, he conjoined that of assistant curate—he produced an historical Poem in four Books, of some merit and popularity, entitled 'Esther, Queen of Persia,' 8vo, London, 1714; and commenced a philological work, entitled 'The Complete Linguist: or, an universal Grammar of all the considerable Tongues in Being,' 2 vols. 8vo, London, 1719—21, in which he analysed the rationale of ten languages, and which he published with a dedication to the Duke of Newcastle. Resigning his clerical and scholastic functions at Melton, he repaired to London, the bearer, it is said, of above thirty letters of recommendation from the most considerable men in the county of Leicester, both of the clergy and the laity. His eloquence soon attracted attention in the metropolis, and Dr. Burscough, afterwards Bishop of Limerick, appointed him to be his assistant preacher in the Chapels of Ormond Street and Bloomsbury. Whilst holding this office he published 'Apotheosis. A Funeral Oration sacred to the Memory of John, Duke of Marlborough,' 8vo, London, 1722; 'A Translation of the Epistles of the younger Pliny,' and of De Vertot's 'Critical History of the Establishment of the Bretons among the Gauls, and of their Dependence upon the Kings of France and Dukes of Normandy,' 8vo, London, 1722. In 1723 he was presented by Lord Chancellor the Earl of Macclesfield to the rectory of Chelmondiston, in Suffolk, which he was allowed to serve by a curate, until Dr. Long, Bishop of Norwich, moved by representations made to Mr. Henley's disadvantage, insisted upon his residence. Hereupon he resigned both his country rectory, and a lectureship which he held in the city; and in the following year, on Sunday, July 3rd, 1726, opened an "Oratory" in Newport Market, which he licensed under the Toleration Act as a Dissenting meeting-house. He took this step, however, without joining any existing sect, and endeavoured to place himself at the head of a society of Henleyarians, to be composed of those who should become his followers. He drew up, for the use of his congregation, a formulary comprising three services for the morning, and one evening service, which he caused to be published as 'The Primitive Liturgy for the use of the Oratory,' 8vo, London, 1726, &c., and which discarded the Nicene and Athanasian creeds. For these symbols were substituted two creeds taken from the Apostolical Constitutions; and he adopted, for the current "Gloria Patri," the heterodox one which ran, "Glory be to the Father *through* the Son and *in* the Holy Ghost," a form which he maintained to have been used by "the first Fathers, at latest till the beginning of the first age." As to the sacrament, he vindicated its weekly and even daily administration by the medium of unleavened bread and mixed wine, which he deemed so essential to the rite, that without them he asserted the ceremony was no sacrament at all. Henley lectured on Sundays in theology, and on Wednesdays upon political and miscellaneous topics. His dissatisfaction with what he thought the defective and confined training of Oxford and Cambridge, led to his conceiving the idea of incorporating with his system an enlarged course of liberal education under a corps of competent professors, of whom he should be the president; so that it has been claimed for him that he projected a London University, although the scheme had to wait for a century for its realisation. Welstead says of Henley that he had "the assurance to frame a plan, which no mortal ever thought of; that he singly executed what would sprain a dozen of modern Doctors of the tribe of Issachar; that he had success against all opposition; that he challenged his adversaries to fair disputation, without any offering to dispute with him; worked, read, and studied twelve hours a day, and yet appeared as untouched by the yoke as if he never wore it; composed three dissertations each week, on all subjects however uncommon, treated in all lights and manners, by himself, without assistance; taught in one year what schools and Universities taught in five; was not terrified by cabals, or menaces, or insults, or the grave nonsense of one, or the frothy satire of another." Satire and accusation were, indeed, abundantly levelled against him. Pope ridiculed his "gilt tub," and gave him a place in the 3rd Book of the 'Dunciad,' in the well-known passage beginning,

"Imbrowned with native bronze, lo! Henley stands,
Tuning his voice and balancing his hands."

The clergy impeached Henley's moral character, but he averred that their imputations were as false as they were malignant; and

when his mode of delivery was stigmatised as theatrical, he replied that he had adopted it before he had ever seen a theatre, and asked, as there were enough of religious dormitories in the metropolis, why should he be blamed for providing one place of worship where people were kept awake? That he violated the sense of decorum of the age, both in his preaching and in the advertisements which he habitually caused to be inserted in 'The Daily Advertiser,' is notorious; but many of the anecdotes which have obtained currency about him are apocryphal. Admission to his orations was procured by the payment of a shilling; and he had medals struck for that purpose, which represented a star rising to the meridian, with the motto, "Ad Summa," and below, "Inveniam viam aut faciam." For some time he was the editor of a weekly paper called the 'Hyp Doctor,' set up to ridicule the arguments of the 'Craftsman,' and in the interest of Sir Robert Walpole, from whom Henley received an allowance of 100*l.* a year; upon the withdrawal of which in 1746, he became a violent opponent of the government, and was in consequence made the subject of an arrest and short detention. He died on the 14th of October, 1756, leaving behind a career and a character which still await a discriminating biographer.

Besides the works already mentioned, Henley produced 'The Orator's Miscellany,' 8vo, London, 1731; 'The Oratory Magazine,' 8vo, London, No. 3, 1748; several numbers of 'Oratory Transactions,' 8vo, London, 1728, &c., of which numbers 4, 5, and 6, were entitled respectively 'The Butchers' Lecture,' 'Milk for Babies,' and 'An Oration on grave Conundrums and serious Buffoons, justifying Burlesque Teaching,' &c., and various sermons, orations, lectures, and translations.

HENNING, JOHN, Scotch sculptor, was the son of a carpenter at Paisley, where he was born May 2nd, 1771. He followed his father's trade, received no instruction in art, and made no attempt to design till he was in his twenty-ninth year, when the sight of some wax medallions led him to try to imitate them. Some likenesses of his fellow-workmen in this manner were seen by Mr. J. Monteith of Glasgow, who was so much struck with their merit, that he persuaded Henning to go with him to Glasgow, and there found him so many sitters, that he was readily induced to adopt modelling as a profession. From Glasgow he went to Edinburgh with good introductions, and modelled portraits of Scott, Dugald Stewart, Jeffrey, Brougham, and other celebrities. Anxious to acquire a little regular instruction he came to London in 1811, and obtained permission from Fuseli, then keeper, to draw in the life-school of the Royal Academy, but on taking his place he was ignominiously expelled on the ground of not having been regularly admitted. The Elgin Marbles were then being exhibited in London, and Henning availed himself of the permission to draw from them. The Princess Charlotte to whom he showed his sketches, proposed to him to model a group from the Panathenaic Frieze, in ivory, restoring the lost members. His effort was liked, and he received commissions for other groups from the Duke of Devonshire, the Marquis of Lansdowne, and other patrons of art. He now resolved to make a copy (reduced and restored) of the entire frieze—a task that occupied him 12 years, but which was carried out with a really remarkable degree of success. For the rest of his life Henning was well employed, but he executed little original work. The reliefs on the gate at Hyde Park corner, and those on the façade of the Athenæum Club, are, perhaps, his boldest efforts. He also made numerous small reliefs from Raffaele's Cartoons and Transfiguration. He will be chiefly remembered, however, as a remarkable example of a wholly self-taught sculptor, and one who did not commence his career of self-instruction till of an age when many artists have achieved eminence. He died in April, 1851, at the ripe age of 80.

*HENRY, JOSEPH, an American experimentalist in physical science, was born at Albany, in the State of New York, December 17th, 1797. After a rudimentary education, he established himself as a watchmaker in his native city; but by the year 1826 he had advanced to the position of professor of mathematics in the Albany Academy. In the following year he commenced his experiments in electricity, which were continued through a considerable number of years. In 1832 he was appointed professor of natural philosophy in the College of Princeton, New Jersey. In 1837 he paid a visit to England. In 1846 he was elected secretary of the Smithsonian Institution at Washington. Mr. Henry is the author of 'Contributions to Electricity and Magnetism,' 4to, 1839. He has also contributed a great number of articles to the 'Transactions of the Albany Institute,' 'Silliman's Journal,' the 'Journal of the Franklin Institute,' and the 'Transactions of the American Philosophical

Society.' In those papers he treats of electricity and electro-magnetism, capillary attraction, phosphorescence, the colours of soap bubbles, the velocity of projectiles, the spots on the sun, the corpuscular hypotheses, heat, the perception of sound, the theory of imponderables, the conservation of force, &c. Some of his countrymen claim for him discoveries in relation to electro-magnetic machines, and to electric telegraphs, which are controverted in Europe.

HENSEL, WILHELM, German historical and portrait painter, was born at Trebbin, Prussia, July 6, 1794. He was educated as an engineer, served in the army from 1813 to 1815, and whilst at Paris had his enthusiasm so stimulated by the works of art collected there, that he resolved, on his return to Berlin, to study with a view to becoming a painter. Whilst carrying out his purpose he maintained himself by designing for the booksellers. In 1825, he went as an academy pensioner to Italy, and whilst there painted a large picture of 'Christ and the Woman of Samaria.' On his return to Berlin in 1828, he was appointed professor in the Art Academy, and Court painter, and received the order of the Red Eagle. His most famous pictures are, 'Christ before Pilate,' and 'The Duke of Brunswick at the Ball the night before Waterloo.' Several of his works are in the royal galleries and churches of Prussia, and some are in the collections of the Queen, the Earl of Ellesmere, and other English magnates. Hensel's reputation as an historical painter is not likely to be lasting. His compositions display learning and correctness, but they are of the careful and somewhat pompously pedantic type which characterises the Prussian school. His portraits, and especially the series of distinguished contemporaries which he drew for engraving, are valuable for the fidelity of the likenesses. Hensel was a liberal in youth, and published, in conjunction with W. Müller, a patriotic poem; but on the occurrence of the disturbances of 1848, he distinguished himself by his royalistic activity. He was killed by an omnibus accident, November 26, 1861.

HENSLOW, REV. JOHN STEVENS [E. C. vol. vi. col. 1005], was born at Rochester, in Kent, Feb. 6, 1796. The short summary of his life already given requires but little addition, although much might be said as to his labours as a naturalist and as a minister. Henslow's eminence as a worker did not depend upon his scientific investigations or even his teaching on scientific subjects so much as on his constant endeavour to forward the discovery of truth by assisting others, and to ameliorate the mental and moral conditions of his fellow-men. He used science as a means of attaining these ends. He died May 16, 1861. Fuller details respecting him are given in a 'Memoir of the Rev. J. S. Henslow,' by the Rev. L. Jenyns, 1862, to which is appended a list of all his writings arranged in chronological order.

HERAPATH, WILLIAM [E. C. vol. vi. col. 1006]. After a short illness, Mr. Herapath died at his residence, Old Park, Bristol, on the 13th of February, 1868, in his 72nd year.

* **HERBERT, JOHN ROGERS, R.A.** [E. C. vol. iii. col. 391.] Mr. Herbert completed his great picture, 'Moses bringing the Tables of the Law from Mount Sinai,' in the principal committee-room of the House of Lords, in the summer of 1864. He had been engaged on it, though not of course continuously, for fifteen years: the actual time spent on it, he himself says, was, "on the fairest computation," six years and a half. It is the largest, and by general consent, the most important mural painting of a biblical subject which has been executed in England in the present century. It is usual to speak of it as a fresco, but it was really painted on a fresco ground (*intonaco*) in water-glass, the same vehicle, but with some difference in the manipulation, as that in which Mr. Maclise painted his two great pictures, the 'Meeting of Wellington and Blücher after the Battle of Waterloo,' and the 'Death of Nelson,' in the adjacent gallery. Mr. Herbert's picture is the result of the most conscientious study, and executed with infinite care. Its treatment is severely realistic and literal; as a consequence it is by most people felt to be deficient in the grandeur, solemnity, and impressiveness that seem proper to such a scene and subject. Whilst engaged on his masterwork and since, Mr. Herbert has painted few easel pictures: 'Mary going with haste to the Mountainous Country,' painted for the Queen in 1860; 'The Sower of Good Seed,' exhibited in 1865; 'St. Edmund,' 1867; 'St. Mary Magdalen at the Tomb of Our Lord,' 1869, are the more important. He has, besides, exhibited some studies of North African and Egyptian scenery and character.

HERBERT OF LEA, RIGHT HON. SIDNEY, LORD [E. C. vol. iii. col. 392]. On the resignation of Lord Derby's ministry, June 1859, Mr. Herbert (he was not then a peer), re-

turned to office under Lord Palmerston, as Secretary of State for War, with a seat in the Cabinet. Thenceforward he devoted all his strength and energy to a reorganisation of the army. Earnest and unceasing as were his labours, he was but very partially successful in respect of its general administration, but he happily succeeded in effecting great improvements in the sanitary arrangements, and in raising to some extent its moral tone. He also sought to put the military service on a better footing, and did much to encourage the volunteer movement. But his strength was overtaken. Towards the close of 1860 his health was grievously impaired, and in the hope that he might, if spared the long hours and turmoil of the House of Commons, be able to continue in the post in which he had won general esteem, he was, in the beginning of 1861, raised to the peerage, with the title of Lord Herbert of Lea. But the relief came too late. His death, which occurred on the 2nd of May, 1861, caused widespread regret. His memory has been honoured by a bronze statue by Foley, erected in front of the War Office, Pall Mall; and a marble statue in the market place, Salisbury. A Herbert Convalescent Hospital has been erected at Bournemouth, and as a mark of the value attached to his measures for improving the health of the soldiers, the new military hospital, Woolwich, in the erection of which he had taken great interest, has been named the Herbert Hospital.

HERMANN, JOHANN GOTTFRIED JAKOB VON, German philologist, was born at Leipzig on the 28th of November, 1772, and received his early education at the hands of Ilgen, afterwards rector of Pforta, under whom he made such progress in classical studies that at fourteen years of age he was already fit for the university. In compliance with the wish of his father, he devoted some time to the study of law at Leipzig, but his chief attention was given to classical literature, in which he was encouraged and guided by his relative, F. W. Reiz. In 1793 he repaired to the University of Jena, but returned, after six months' residence, to Leipzig, where he became, in 1794, an academical tutor, in 1798 extraordinary professor of philosophy, and in 1803 ordinary professor of elocution, with which he conjoined in 1809 the duties of the chair of poetry. In these offices he continued till his death on the 31st of December, 1848, having throughout his academical career been remarkable for the clearness, precision, and popularity of his lectures, by which he had materially helped to form successive generations of able teachers. He founded the Hellenic Society of Leipzig in 1799; received in 1815 the decoration of the Order of Merit, which was some time after followed by letters of nobility; in 1834 became director of the philological seminary; and in 1835 was admitted a foreign associate of the French Académie des Inscriptions et Belles-Lettres. With Hermann originated valuable reforms in the method of Greek grammatical instruction; and he is especially known for his editions of the ancient writers, particularly of the Greek tragedians, and for the controversies in which his theories and assertions involved him with Böckh, Ottfried Müller, and other philologists. His more miscellaneous labours in the field of classical literature comprise 'De Metris Poetarum Græcorum et Romanorum, Libri III,' 8vo, Leipzig, 1796; 'Observationes Criticæ in quosdam Locos Æschyli et Euripidis,' &c., 4to, Leipzig, 1798; 'De Emendanda Ratione Græcæ Grammaticæ, pars prima,' &c., 8vo, Leipzig, 1801, of which no further part was published; 'De Metrorum quorundam Mensura rhythmica Dissertatio,' &c., 4to, Leipzig, 1805; 'De Dialecto Pindari Observationes,' &c., 4to, Leipzig, 1809; 'De Præceptis quibusdam Atticistarum Dissertatio,' &c., 4to, Leipzig, 1810; 'De Æschyli Glaucis Dissertatio,' 4to, Leipzig, 1812; 'De Versibus spuris apud Æschylum Dissertatio,' 4to, Leipzig, 1814; 'Elementa Doctrinæ Metricæ,' 8vo, Leipzig, 1816, English translation, by J. Seager, entitled 'Hermann's Elements of the Doctrine of Metres, abridged, translated,' &c., 8vo, London, 1830; 'De Mythologia Græcorum antiquissima Dissertatio,' 4to, Leipzig, 1817; 'De Historiæ Græcæ Primordiis Dissertatio,' 4to, Leipzig, 1818; 'Epitome Doctrinæ Metricæ. In usum Scholarum,' 8vo, Leipzig, 1818; a Letter to Creuzer on the Character and Treatment of Mythology, 'Ueber des Wesen und die Behandlung der Mythologie,' &c., 8vo, Leipzig, 1819; 'De Sogenis Aeginetæ Victoria Quinquentii Dissertatio,' &c., 4to, Leipzig, 1822; 'De Æschyli Niobe Dissertatio,' 4to, Leipzig, 1823; 'De Emendationibus per transpositionem Verborum Dissertatio,' 4to, Leipzig, 1824; 'De Æschyli Philoctetæ Dissertatio,' 4to, Leipzig, 1825; a criticism on Professor Böckh's Treatment of Greek Inscriptions, 'Ueber Herrn Professor Böckh's Behandlung der Griechischen Inschriften,' 8vo, Leipzig, 1826; 'De Æschyli Prometheus Soluto Dissertatio,' 4to, Leipzig, 1828; 'De Particula &, Libri

IV. 4to, Leipzig, 1831; a Criticism of K. O. Müller's *Eumenides* of *Æschylus*, &c., 'Rescension von Herrn K. O. Müller's *Eumeniden* des *Æschylus*. Mit Zusätzen,' 8vo, Leipzig, 1835; 'De Græca Minerva, Dissertatio,' &c., 4to, Leipzig, 1837; the Universe from a geographical point of view: a manual for elementary schools, 'Die Weltkunde aus dem Standpunkte der Erdbeschreibung. Ein Hilfsbuch für Volksschullehrer,' &c. 8vo, Merseburg, 1838; 'Opuscula,' 7 vols. 8vo, Leipzig, 1827—39; 'De Hippodromo Olympiaco Dissertatio,' 4to, Leipzig, 1839; 'Oratio in tertiis sacris secularibus receptæ a Civibus Lipsiensibus reformatæ par M. Lutherum Religionis,' 4to, Leipzig, 1839; and 'Oratio in quartis Festis secularibus Artis typographicæ habita,' 4to, Leipzig, 1840.

HERMANN, KARL FRIEDRICH, a distinguished German philologist and archæologist, was born on the 4th of August, 1804, at Frankfurt-am-Main, and after receiving his earlier education at his native place and at Weilburg, repaired successively to the Universities of Heidelberg and Leipzig for the study of philosophy, in which faculty he took his doctor's degree whilst still in his 20th year. In the same year he visited Italy for the purpose of archæological investigation; and having returned to Germany, became tutor in the University of Heidelberg in 1826, from which he was called in 1832 to undertake the chair of philology at Marburg. With the duties of this office he conjoined, from the year 1833, the second keepership of the university library, and the directorate of the philological seminary. In 1842 he migrated to Göttingen, where he remained as professor of classical eloquence and director of the philological seminary until his death on the 8th of January, 1856.

The works of Hermann comprise a critical edition of Lucian's treatise, 'De conscribenda Historia,' 8vo, Frankfurt, 1828; 'Questionum de Jure et Auctoritate Magistratum apud Athenienses Capita duo,' 8vo, Heidelberg, 1829; A Word on the Relation of modern speculative Philosophy to classical Archæology, 'Ein Wort über des Verhältniss der neuern speculativen Philosophie zur classischen Alterthumsforschung,' 8vo, Heidelberg, 1829; 'Lehrbuch der griechischen Staatsalterthümer, aus dem Standpunkte der Geschichte entworfen,' 8vo, Heidelberg, 1831, 1836, 1840, &c., English translation, entitled 'A Manual of the Political Antiquities of Greece historically considered,' 8vo, Oxford, 1836; 'Progymnasmatæ ad Aristophanis Equites Schediasmatæ tria,' 4to, Marburg, 1835; 'Disputatio de Vestigiis Institutorum Veterum, imprimis Atticorum, per Platonis de Legibus Libros indagandis,' 4to, Marburg, 1836; 'Disputatio de Socratis Magistris et Disciplina juvenili,' 4to, Marburg, 1837; 'Disputatio de sacris Coloni et Religionibus cum Cædipi Fabula conjunctis,' 4to, Marburg, 1837; 'Questionum Cædipodearum Capita tria,' 4to, Marburg, 1837; History and System of the Platonic Philosophy, 'Geschichte und System der Platonischen Philosophie,' 8vo, Heidelberg, first volume, 1839; 'Vindicium Platoniarum Libelli duo,' 4to, Marburg, 1840; 'Antiquitatum Laconicarum Libelli quatuor,' 4to, Marburg, 1841; 'Disputatio de Distributione Personarum inter Histriones in Tragediis Græcis,' 8vo, Marburg, 1841; 'Disputatio de Hippodamo Milesio ad Aristotelis Politicæ,' 4to, Marburg, 1841; 'Disputatio de Satiræ Romanæ Auctore ex Sententia Horatii Serm. 1. 40. 66,' 4to, Marburg, 1841; Compendium of Greek Antiquities, 'Lehrbuch der griechischen Antiquitäten,' 3 vols. 8vo, Heidelberg, 1841—52, and 8vo, Heidelberg and Göttingen, 1855, &c.; 'Lectiones Persianæ,' 3 parts, 8vo, Marburg, 1842; On the Lunar System of the Greeks and the Results of their latest Researches, 'Ueber griechischen Monatskunde und die Ergebnisse ihrer neuesten Bereicherungen,' 4to, Göttingen, 1844; Lectures on Archæology, or History of the Art of classical Antiquity, 'Schema akademischer Vorträge über Archæologie, oder Geschichte der Kunst des classischen Alterthums,' 8vo, Göttingen, 1844; 'Symbolæ ad Doctrinam Juris Attici de Injuriarum Actionibus,' 4to, Göttingen, 1847; an Essay on the Studies of the Greek Artists, 'Ueber die Studien der griechischen Künstler,' 8vo, Göttingen, 1848, reprinted, as some other of Hermann's works were, from the 'Göttinger Studien,' 1847; a Selection of Discourses, &c., 'Gesammelte Abhandlungen und Beiträge zur classischen Litteratur und Alterthumskunde,' 8vo, Göttingen, 1849; 'De Partibus Animæ immortalibus secundum Platonem,' 4to, Göttingen, 1850; 'Disputatio de Thrasyllo Grammatico et Mathematico,' 4to, Göttingen, 1852; Six Academical Lectures, 'Sechs akademische Reden,' 8vo, Göttingen, 1852; 'Vindiciæ Juvenalianæ,' 4to, Göttingen, 1854; 'Disputatio de Socratis Accusatoribus,' 4to, Göttingen, 1854; On the Principles and the Application of Criminal Law in Greek Antiquity, 'Ueber Grundsätze und Anwendung des Strafrechts

im griechischen Alterthume,' 4to, Göttingen, 1855; On the artistic sentiment of the Romans and their place in the History of ancient Art, 'Ueber den Kunstsinne der Römer und deren Stellung in der Geschichte der alten Kunst,' 8vo, Göttingen, 1855; and a work of posthumous publication, on the History of Greek and Roman Civilisation, which was brought out under the editorial care of Karl Gustav Schmidt, with the title of 'Culturgeschichte der Griechen und Römer,' &c., 2 vols. 8vo, Göttingen, 1857—58.

HÉROLD, LOUIS JOSEPH FERDINAND, a French musical composer, was born at Paris, January 28th, 1791. His father, a professor of the pianoforte, placed him in 1806 in the class of Adam at the Conservatoire de Musique, where in 1810 he received a prize for pianoforte playing. After studying harmony under Catel, and composition under Méhul, he obtained in 1812 the first grand prize for musical composition at the Institute, his subject being a cantata called 'Mademoiselle de la Vallière,' which entitled him to study in Italy. His first work, a two-act opera, 'La Gioventù di Enrico Quinto,' had a slight success. Returning to Paris in 1815, he composed the operas 'Charles de France' and 'La Clochette,' and assisted Boieldieu in 'Les Rosières.' In 1818 he wrote the music to a three-act comedy, 'Premier Venu,' and in 1819 new music to the old opera 'Les Troqueurs.' He now became for a time accompanist at the Opéra Italien; again visited Italy, and in 1823 composed 'Le Muletier' and 'Læsthenie,' and assisted Auber in the music for 'Vendôme en Espagne.' These were followed by 'Le Roi René,' 'Le Lapin Blanc,' and 'Marie,' the last of which met with considerable success. On resigning the post of accompanist, he became master of the chorus at the Opéra Italien, and composed the music for several ballets, including 'Astolphe et Jocunde,' 'La Somnambule,' 'Lydie,' and 'La Belle au Bois Dormante.' At length, in 1831, appeared his 'Zampa,' which had a decided and immediate success both in France and Germany. After taking part with others in composing the opera 'Marquise de Brinvilliers,' he composed 'Le Pré aux Clercs' in 1832. When he died, on the 19th of January, 1833, he left behind him the MS. of an opera 'Ludovic,' which was brought out by Halévy in 1834. Hérold composed three sonatas and seven capriccios for the pianoforte, a pianoforte rondo for four hands, sixteen rondos and divertissements, seven fantasias, and numerous variations and minor pieces; but his fame rests on his 'Zampa' and 'Le Pré aux Clercs,' which exhibit much original power, and appear to have taken a permanent place among French operas. 'Zampa' was brought out in an English form in London in 1870; its overture is especially in favour as an orchestral composition.

* HERRICH-SCHAFER, GOTTLIEB AUGUST WILHELM, entomologist, was born at Ratisbon, in Bavaria, and learned natural history from his grandfather and Professors Döllinger, Tiedemann, and Klug. In 1825 he was appointed to a position in connection with the judicial court of his native place. He is known as one of the highest authorities in Germany on all subjects in connection with *Lepidoptera*, but he has also a general reputation as an entomologist. He has published several works of an elaborate and expensive nature, such as 'Nomenclator Entomologicus,' 2 vols. 8vo, Ratisbon, 1835—40; 'Systematische Bearbeitung der Schmetterlinge von Europa,' 1843—1857; 'Synonymia Lepidopterorum Europæ,' 4to, 1856; 'Systematisches Verzeichniss der Europäischen Schmetterlinge,' 8vo, 1861; 'Sammlung neuer oder wenig bekannter ausser-europäischen Schmetterlinge,' 8vo, 1850, and still in progress. He has also written some other books, and a few papers in entomological journals.

HERTZ, HENRIK [E. C. vol. iii. col. 409]. This favourite Danish poet died at Copenhagen on the 25th of February, 1870, in his 72nd year.

HERTZEN, ALEXANDER [E. C. vol. iii. col. 409]. Herten remained for some years longer in London, editing his journal the 'Kolokol' (the Bell), which for a time had great influence with liberal Russians everywhere, though it was the special organ of the extreme republican refugees who had made London their headquarters. Gradually, however, his countrymen grew tired of his politics, and when he became the advocate of the Poles, they grew tired of him, and he was as extravagantly condemned as he had once been lauded. Herten withdrew to the neighbourhood of Geneva, and the 'Kolokol' ceased to sound. Two works which he published before leaving England attracted much notice, 'Mémoires de l'Impératrice Catherine, écrits par Elle-même,' London and Paris, 1868, and 'Le Monde Russe et la Revolution,' translated into French by M. H. Delaveau, 3 vols.,

18mo, Paris, 1860—62. Subsequently he wrote 'La Nouvelle Phase de la Littérature Russe,' Paris, 1864, and 'Le Vieux Monde et la Russie,' which appeared in the same year and place. Herten was in the habit of spending a portion of the year in Paris, and he died in that city on the 21st of January 1870.

HERVEY, JOHN, BARON HERVEY, of Ickworth, in Suffolk, a courtier and man of letters, son of John, first Earl of Bristol, was born on the 13th of October, 1696, and was educated at Westminster and at Clare Hall, Cambridge, where he graduated as a nobleman, taking his M.A. degree in 1715. After the death of his half brother, Carr, Lord Hervey, he succeeded to the courtesy title. He entered the House of Commons as member for Bury; and in 1730 was appointed vice-chamberlain to King George II., and a member of the Privy Council. He was for many years the faithful servant and friend of Queen Caroline; and is known also as the friend of Lady Mary Wortley Montagu, and as the antagonist of Pope, who characterised Lord Hervey as "Sporus," and launched against both his most unmeasured and abusive satire. In 1733 Lord Hervey was summoned by writ to the House of Lords, and was appointed Lord Privy Seal in 1740, an office which he vacated in 1742. His constitution and frame were excessively delicate, and he died, after having been long a helpless invalid, on the 8th of August, 1743.

Lord Hervey was a partisan and apologist of Sir Robert Walpole; and in that capacity was credited with an attack on Pulteney, afterwards Lord Bath, which appeared under the title of 'Sedition and Defamation displayed: in a Letter to the Author of the "Craftsman,"' 8vo, London, 1731, and which provoked from Pulteney a 'Proper Reply to a late Scurrilous Libel,' &c., in which Hervey was described as "a thing below contempt," whilst his personal appearance was ridiculed in the grossest terms. A duel was the result; and Hervey was slightly wounded, escaping more serious injury by the opportune slipping of his foot when on the point of being run through by his adversary's sword. Afterwards it transpired that Hervey was not the author of the 'Letter' which had given offence to Pulteney, who declared that he would never again renew the quarrel either in speech or writing.

Lord Hervey was a man of great and varied accomplishments, and if his tact and prudence had not made him so necessary at court, it is probable that he might have played a more prominent part in the sterner arena of political life. He contributed to Middleton's 'Life of Cicero' the translations of the passages from Cicero which occur in that work; and he carried on a special correspondence with Middleton, which was afterwards "published from the original MS." with the title of 'Letters between Lord Hervey and Dr. Middleton concerning the Roman Senate,' 4to, London, 1778. But the most important and valuable of Lord Hervey's works is one which has been praised as offering the most intimate portraiture of a court that has ever been presented to the English people. It was left by the author in manuscript, and long remained in that state in the possession of his family, by whom it was jealously guarded, owing to an injunction given in his will by the Earl of Bristol, Lord Hervey's son, that it should not see the light until after the death of King George III. It was at length published with the title of 'Memoirs of the Reign of George the Second, from his Accession to the Death of Queen Caroline.' By John, Lord Hervey. Edited from the Original Manuscript at Ickworth, by the Right Hon. John Wilson Croker, LL.D., F.R.S.' 2 vols. 8vo, London, 1848. The poems of Lord Hervey were published in a volume entitled 'Poetical Works of J. Hammond and Lord Hervey,' &c., 12mo, 1818.

HERVEY, THOMAS KIBBLE [E. C. vol. iii. col. 411]. Mr. Hervey died on the 17th of February, 1859. A collected edition of the 'Poems of Thomas Kibble Hervey.' Edited by Mrs. T. K. Hervey, with a Memoir, was published at Boston, Massachusetts, in 1867.

HESS, HEINRICH HERMANN JOSEPH, BARON VON, an Austrian general, was born at Vienna, March 17, 1788. In 1806 he joined an infantry regiment as ensign, and was employed with the staff, and on trigonometrical operations. He served as a lieutenant during the campaign of 1809 under the Archduke Charles, and distinguished himself at the battles of Aspern, Wagram, and Leipzig, but resumed his scientific employments on the conclusion of peace. In 1813 he was made staff captain; in 1814 was sent on a military mission to Piedmont; in 1815 was raised to the rank of major at the head-quarters of Prince Schwartzburg; and after the war took a post at the ministry of war. In 1822, he became lieutenant-colonel, and military commissioner to Turin; and in 1829, colonel. In 1831 he was with Radetzky as

general quartermaster in Lombardy; became major-general in 1834; served as military attaché at Berlin and elsewhere, and was promoted to the rank of field-marshal lieutenant in 1842. As quartermaster-general to the army of Italy under Radetzky in 1848, he contributed greatly to the success of the campaign against the Piedmontese, the strategic movements culminating in the victory at Novara having been planned by him. He also conducted the masterly retreat from Milan. He signed the armistice with the Piedmontese, and was soon afterwards decorated with the orders of Leopold, Maria Theresa of Austria, and St. George of Russia. In 1849 he was made a Baron, Feldzugmeister, and chief of the Emperor's staff. After fulfilling military missions to Warsaw, Berlin, and St. Petersburg, he commanded two army corps in Hungary, Galicia, and Transylvania in 1854, employed in watching the movements of the Russians during the Crimean war. Upon the defeat of the Austrian forces at Magenta, June, 1859, Hess was summoned to take the place of Giulay, but he was too late to turn the tide of success. Solferino was the result of his tactical movements. The Emperor Francis-Joseph showed his satisfaction with Hess's efforts by naming him field-marshal in the following month, July 12, 1859. He was nominated, in 1861, member of the Upper House of the Reichsrath, where he distinguished himself by his steadfast advocacy of conciliatory and liberal measures. In 1862, he was created chancellor of the order of Leopold. He died on the 13th of April, 1870. Full of years and honours, the most widely-esteemed man in Austria, he was decreed a public funeral on the most magnificent scale, the Emperor and the chief notabilities of the empire taking part in the ceremony. The regiment he commanded is "to bear his name for ever."

HESS, HEINRICH MARIA VON, a distinguished German historical painter, son of the line engraver K. E. C. Hess (b. 1755, d. 1828), was born at Düsseldorf, April 19, 1798. When the Düsseldorf Academy and Gallery were removed to Munich, 1806, Karl Hess followed them, taking his family with him. Heinrich, like his brothers, took to art as a matter of course, pursuing diligently, under his father's guidance, the curriculum of the Munich Academy. His predilection for religious art was carefully fostered, and at the age of 18 he had produced a 'Holy Family,' which was highly commended. In 1821 the King of Bavaria, Maximilian-Joseph, sent him to Rome to complete his studies. He remained there five years, made the acquaintance of Thorwaldsen, and other distinguished artists, and painted for the King a large picture of 'Apollo and the Muses on Mount Parnassus,' which excited great enthusiasm when it was exhibited in Munich. On his return to Munich, Hess was made professor of painting in the Academy. The example of Cornelius, and the influence of the Crown Prince, had developed a strong feeling for mural fresco painting, and Hess especially devoted himself to this branch of art. One of his earliest important commissions was an extensive series of frescoes on gold grounds, in the Allerheiligen Court chapel: these were lithographed by J. B. Müller, and published at Munich, 46 plates, imp. folio, 1837—41. A still more important work was the entire decoration of the basilica of St. Boniface, executed 1835—50, for King Ludwig. The pictures comprise a vast Gloria, Virgin, and Saints in the tribune, 12 large designs on the sides of the chapel, illustrative of the legend of St. Boniface, and 36 smaller ones above, representing events in the lives of saints and martyrs, together with numerous medallions and much subsidiary ornament. In both these series, however, as in most of his works, whilst the designs were made by Hess, much of the actual painting on the wall was done by his scholars and assistants—a practice generally adopted by the Munich fresco painters. Lithographs of the 12 frescoes illustrating the life of St. Boniface were published at Munich, oblong folio, 1862. His oil paintings are not numerous, but there are several in the Pinacothek, the palace at Schleissheim, and elsewhere. Hess had some reputation as a portrait painter. He has likewise designed a large number of painted glass windows; for several years he held the post of director of the royal painted glass works, Munich, and it is in a great measure owing to his influence that a school of glass painters was formed whose characteristic is the pictorial style, as distinguished from the mediæval mosaic manner adopted in England. Hess was elected corresponding member of the French Institute in February, 1862, and died on the 30th of March, 1863.

* HESS, PETER, elder brother of Heinrich von Hess, was born at Düsseldorf, July 29, 1792, and studied art in the Munich Academy. Two years' service in the Bavarian army during the campaign of 1813—15, rendered him familiar with military details, and on the return of peace he made the painting of

battle-fields his specialty. Of these he has painted a great number, many of them of large size and filled with figures and martial paraphernalia, and so successfully, that he has been commonly designated the German Horace Vernet. He accompanied Prince Otho to Greece in order to paint his entry into Athens as king of Greece, at the head of the Bavarian troops. In 1839 he went to Russia, by invitation of the Emperor, to paint a series of pictures of the chief events of the war of 1812, in which the Russian troops were engaged. For King Maximilian of Bavaria he painted the Battle of Leipzig, his largest and most important picture. For King Ludwig he painted the walls of the Banquet Hall of the Royal Palace with battle-pieces, and prepared a series of 39 cartoons of scenes in the great war of liberation, which were painted in encaustic by assistants, on the arcades of the Hofgarten. Peter Hess is court-painter and member of the academies of Munich, Berlin, Vienna, and St. Petersburg. A selection from his pictures, lithographed by Fr. Hohe, was published at Munich in 1825.

* HEUGLIN, THEODOR VON, zoologist, was born at Hirschlanden, Württemberg, March 24, 1824. Early in life he qualified himself for his subsequent career by making extensive excursions through Europe, with a view chiefly to studying zoology. In 1850 he explored the countries bordering both sides of the Red Sea. In 1852 he was attached to the Austrian consulate at Khartoum, and later he himself became the consul. His residence there for some years enabled him to form an excellent collection of the vertebrate fauna of the Nile basin. In 1856 he made scientific journeys through the contiguous parts of Europe, Asia, and Africa. In 1860 he undertook a more arduous enterprise, viz., a search for E. Vogel, in the prosecution of which he travelled up the Nile valley into Nubia and Abyssinia. The result of his journeys has been a large addition to our knowledge of the fauna of North-Eastern Africa, and probably no one has a more intimate acquaintance with the birds of that region. His scientific papers mostly deal with the geography and zoology of the regions visited by him. They are published in *Petermann's 'Mittheilungen'*, the '*Journal für Ornithologie*,' edited by Cabanis, and in the '*Nova Acta physico-medica Academiæ Cæs. Leopoldino-Carolinæ Naturæ Curiosorum*.' He has also written several separate works, the more important of which are '*Reisen in Nordostafrika*,' 8vo, Gotha, 1857; '*Systematische Uebersicht der Vögel Nordostafrikas*,' 8vo, Vienna, 1855; and '*Reisen in Abessinien*,' 1868.

HEYWOOD, SIR BENJAMIN, BART., was born 12th December, 1793. He was the eldest son of Nathaniel Heywood, banker, of Manchester. His mother was the daughter of Dr. Thomas Percival, author of *Medical Ethics*, who became a fellow of the Royal Society in 1765, at the age of twenty-five. On leaving school, Benjamin completed his studies in the University of Glasgow, and in 1811 entered the bank at Manchester. In 1824 the Manchester Mechanics' Institution was founded, and Mr. Heywood was elected president, which office he held during twenty years. On his retirement, his addresses were collected and published. In 1831 Mr. Heywood was elected one of the members for Lancaster, to support the Government measure of Reform, but parliamentary life did not suit his health, and on the dissolution after the passing of the Reform Act, in 1832, he retired from public life. Mr. Heywood earnestly supported the formation of the Manchester Statistical Society, and conducted an inquiry into the condition of the working classes in Manchester, the results of which in 1834 were laid before the statistical section of the British Association at Edinburgh. On the accession of Her Majesty, in 1837, Mr. Heywood was created a baronet. In 1843 he was elected a fellow of the Royal Society; and on two occasions, when the British Association met at Manchester, he filled the office of vice-president. He died on the 11th August, 1865.

* HILDEBRAND, BROR EMIL, Swedish archaeologist, was born, February 12th, 1806, at Fleröhop in Calmar, where his father was engineer in mines. He completed his education at the University of Lund, where he took his doctorate in philosophy in 1826. Three years later he distinguished himself by the publication of his '*Numismata Anglo-Saxonica Musei Regii Academiæ Lundensis ordinata et descripta*,' 3 parts, Lund, 1829. This was followed by an essay on the history of Swedish money, '*Upplysningar till Sveriges Mynthistoria*,' 5 parts, 1831-32. In the latter year he was appointed to arrange and describe the coins in the Royal Museum, Stockholm, and in 1846 published, as one of the results of his labours, '*Monnaies Anglo-Saxonnes du Cabinet Royal de Stockholm, toutes trouvées en Suède, classées et décrites*,' &c., 1846. In 1836 and following years, he

BIOG. DIV.—SUP.

was appointed keeper of the royal medals, of the medals, &c., of the bank, and guardian of the national antiquities; secretary and editor of the Society for the Publication of Scandinavian Historical Documents, and perpetual secretary (1837) of the Stockholm Academy. He is also a member of the Academies of Copenhagen, Berlin, &c. Besides the above works, and those issued by the Scandinavian Publication Society, he has published '*Minnespenningar öfver enskilda Svenska Män och Quinnor*,' with 21 lithographic plates, 8vo, Stockholm, 1860; '*Svenska Sigiller från medeltiden*,' fol. Stockholm, 1862, &c.

* HILDEBRANDT, FERDINAND THEODOR, an eminent German historical painter, was born at Stettin, July 2, 1804, and studied in the Berlin Art Academy under W. Schadow, whom he accompanied to Düsseldorf in 1826, and to Italy in 1830. Subsequently he worked with Cornelius in Munich, but eventually settled in Düsseldorf. Here he gradually emancipated himself from the system of his former masters Schadow, Overbeck, and Cornelius, formed a new style, and became the acknowledged head of a new school, known as the Düsseldorf, or Naturalistic school, which has exercised a marked influence on the younger painters of Germany, and also, though in a far less degree, on the painters of the rest of Europe. Its leading characteristic is, as the name implies, that of a more direct imitation of nature than prevailed among the other contemporary schools of historical art in Germany, but the great Düsseldorf master has his own idealistic theory, and in colour, as well as in design, departs often widely from the simplicity and modesty of Nature. Still, as compared with the painters under whom he learned his art, he may be said to have adopted a freer and less conventional manner, a warmer tone of colouring, and a greater variety of character and expression. Several of his earlier subjects were derived from Shakspeare, as '*Lear and Cordelia*,' 1826, and '*Romeo and Juliet*,' 1827, and in his latter years he has recurred to the same text-book, in '*Othello relating his Adventures*,' 1848, one of his most admired works, and '*Cordelia and Kent*,' 1859. But he has also painted largely from the German poets, from German history, and from the Scriptures. Many of his pictures have been engraved or lithographed, and he has illustrated Reinick's '*Liederbuch*,' and one or two other works.

* HILDRETH, RICHARD, an American writer, was born at Deerfield, in Massachusetts, June 28th, 1807; graduated at Harvard University in 1826, and was admitted to the bar in 1830; but adopted literature as a profession. He wrote for the '*Boston Magazine*' and the '*New England Magazine*,' and in 1832 became editor of the '*Boston Atlas*' newspaper. In 1834, while in the Southern States, he wrote an anti-slavery novel, '*Archy Moore*,' subsequently known in England as the '*White Slave*.' In 1836 he translated Jeremy Bentham's '*Traité de Legislation*' from the French, and also wrote a *History of Banks*, in which he advocated free banking. In the following year he wrote against the schemes then agitating for the annexation of Texas to the slave states. He continued to write against slavery, published his '*Despotism in America*' in 1840, and edited two anti-slavery journals in Demerara. A '*Letter on Miracles*,' a '*Theory of Morals*,' and an attempt to apply the inductive method to a '*Theory of Politics*,' are among his publications; but his largest complete work is a '*History of the United States*,' 6 vols. 8vo, 1849-56, bringing down the narrative to the end of Monroe's first presidency in 1820. Written with less vehemence of style, and perhaps displaying somewhat inferior literary power, it is yet a fairer and more trustworthy work than Bancroft's, though it is not likely to win so wide a popularity. In 1854 Mr. Hildreth added a chapter on the legal basis of slavery, as a supplement to his work on '*Despotism in America*.' His '*Japan as it was and is*' appeared in 1855, and he has since written on a variety of subjects for newspapers, magazines, and cyclopædias. For a time he was American consul at Trieste.

HINCKS, REV. EDWARD, D.D., was the son of the Rev. T. Dex Hincks, LL.D., minister of the Presbyterian church, Cork, and afterwards professor of the Hebrew and Oriental languages in the Belfast Theological Academy. Edward Hincks was born at Cork in August, 1792, and after a careful preparatory training under his father, entered Trinity College, Dublin, where he graduated optime in mathematics and languages in 1812, and obtained a fellowship the following year. Having taken orders in the Established Church, he received the college living of Ardrea, and in 1826 was promoted to the rectory of Killeleagh in the diocese of Down, which he held till his death, December 3rd, 1866. The fact of his not having received any other promotion, notwithstanding his European reputation and high personal character, has been ascribed to the earnestness with

X X

which he advocated a reform in the Irish established church, and a larger and more liberal system of education. Dr. Hincks was an excellent oriental scholar, and published a Hebrew Grammar which has been recommended by competent judges. But it was in the field of Egyptian and Assyrian translation, and especially the latter, that his laurels were chiefly won. As Mr. Layard observed in the introduction to his great work, 'Nineveh and its Remains,' "It is to Dr. Hincks we owe the determination of the numerals, the name of Sennacherib on the monuments of Kouyunjik and of Nebuchadnezzar on the bricks of Babylon—three very important and valuable discoveries." But he also threw much light on the grammar of the language, on the use of phonetics in writing, on cuneiform writings generally, and on the history and chronology of the people, and in various ways did much to smooth the path for subsequent investigators. All Dr. Hincks's views have not met with acceptance by Assyrian scholars, but of the value of his researches and the soundness of his judgment there is no difference of opinion. Most of Dr. Hincks's investigations were published in the 'Transactions of the Royal Irish Academy,' but he also communicated several important papers to the British Association, and articles and letters to the 'Journal of Sacred Literature,' the 'Athenæum,' &c., besides an elaborate 'Report to the Trustees of the British Museum respecting certain Cylinders and Terra-cotta Tablets, with Cuneiform Inscriptions,' 8vo, London, 1854; a valuable essay 'On the Polyphony of the Assyrio-Babylonian Cuneiform Writing: a Letter to Professor Renouf,' 8vo, Dublin, 1863, &c.

HIRSCHVOGEL, AUGUSTIN, a celebrated old German painter and engraver, born at Nürnberg in 1506, was the son of Veit Hirschvogel, a noted glass-painter of that city (born 1461; died 1523). Augustin Hirschvogel himself painted on glass and in enamel as well as in oil, and used the dry-point with considerable facility. He lived for some time at Vienna. His etchings, which are very numerous, embrace scripture subjects, ancient mythology and history, genre, portraits, and landscapes, the last in particular displaying much originality and spirit. He died in 1580.

(Nagler; Bartsch, ix. 170; Passavant, i. 231, iii. 257.)

HITCHCOCK, EDWARD [E. C. vol. iii. col. 436]. A short time before his death at Amherst, February 27, 1864, Mr. Hitchcock resigned the presidency of Amherst College, but continued to give instruction in geology and natural history. In 1856 he undertook the geological survey of Vermont, a task which occupied him some years, and in which he was assisted by his sons, E. Hitchcock, jun., and C. H. Hitchcock, and by A. D. Hagen. The results were published under the title of 'Report on the Geology of Vermont, descriptive, theoretical, economical, and scenographical,' 2 vols. 4to, 1861. His last work was his 'Reminiscences,' published just before his death. His son, C. H. Hitchcock, has written reports addressed to the government, descriptive of his survey of the state of Maine.

HITTORF, JACQUES IGNACE [E. C. vol. iii. col. 437]. This eminent architect and able writer lived just long enough to complete the concluding volume of his 'Sicilian Antiquities,' a task on which he had set his mind, and for which he had made a recent visit to Italy. His last important architectural work, scarcely completed at his death, was the vast terminus of the Chemin de Fer du Nord, the most original and one of the noblest structures of its class yet erected. As member of the Institute he wrote several papers, which appeared in the recent volumes of the proceedings; among others, biographical and critical notices of C. F. Schinkel, 1857; of L. Visconti, 1859; and of Sir Charles Barry, 1860; 'Notes on the Ruins of Agrigento,' 1859, and an elaborate 'Mémorial upon Pompeii and Petra,' 1866; in which he sought to show the close similarity between the fresco decorations of the baths, &c., at Pompeii, and the carvings on the rock-façades in the valley of Petra. M. Hittorf died on the 25th of March, 1867.

HOBBS, WILLIAM FISHER, a scientific agriculturist, was born at White Colne, Essex, in 1809. He learned the general routine of farming under his father; then familiarised himself with sheep farming in Leicestershire, and with grazing in Suffolk; and finally took a lease of a farm of 500 acres near Coggeshall. He gained the first prize for cereals at the first meeting of the Royal Agricultural Society at Oxford. His wheat came early into great repute. He was accustomed to offer a bonus of 1s. to his harvestmen for every ear of wheat containing 100 grains or more. On one occasion one man brought six ears averaging 107 grains each. These grains he sowed separately; and found not only that the best ears were the most prolific, but that the largest and best-formed grains yielded the

best products. Coming into possession of an ample fortune in 1844, he redoubled his exertions for the improvement of agriculture, giving a fair trial to all the new machines, and the various chemical manures and composts. Instead of being frightened, as many of the Essex farmers were, with the prospect of ruin when the Corn Laws were repealed, he made his farm at Boxted Lodge more and more what a scientific farm should be; and contributed more than any other man to the extension of sound principles of agriculture in his county, and very much to their general diffusion throughout England. In grazing he introduced the improved breed of Essex pig, sometimes known as the "Fisher Hobbs Pig." He was vice-president of the Royal Agricultural Society, associate of the Institution of Civil Engineers, member of the Council of the Smithfield Club, and member of the committee of the Farmers' Club. He represented the Royal Agricultural Society at the Paris Exhibition in 1855, and acted as jurymen in the Section on Agriculture. Mr. Hobbs died October 11th, 1866.

* HOCHSTETTER, FERDINAND VON, geologist, was born at Esslingen, April 30, 1829. He studied theology at Tübingen, but had a decided leaning towards natural history pursuits. In 1853 he went to Vienna, and there acquired such a thorough knowledge of geology, that he soon obtained an appointment in connection with a scientific commission appointed by the Austrian Government to explore Bohemia. In 1856 he was elected to a special professorship in the University of Vienna, but when the "Novara" was commissioned to make a journey round the world for scientific purposes, he obtained the post of geologist. The voyage began in 1857 and terminated in 1859. On his return he was made professor of mineralogy and zoology at the Polytechnic Institute of Vienna. He has written numerous papers, partly for the scientific publications of Vienna, partly for Petermann's 'Mittheilungen,' and partly for some other journals. They principally relate to the geology of Bohemia and of New Zealand. His more important publications relate to the latter country. When the 'Novara' was at New Zealand the authorities of that colony were particularly anxious to secure the services of a competent geological surveyor to examine certain areas in order to ascertain their value as coal-fields. They induced Hochstetter to undertake the task, and the main result was an excellent report on the geology and palæontology of a portion of New Zealand, which formed part of the series of volumes illustrative of the 'Novara' expedition. It forms two volumes, the first published in 1865, the second in 1867. The geological portion is by Hochstetter, but the palæontology is mainly contributed by Unger, Sues, Karrer, Stoliczka, Stache, and Jäger. In 1867 an English edition appeared in a somewhat reduced form under the title of 'New Zealand: its Physical Geography, Geology, and Natural History.' In 1869 he published a report, 'Ueber der Erdbeben in Peru am 13 Aug., 1868,' etc., in which he gives details as to the remarkable series of waves which this earthquake generated in the Pacific Ocean; and by a comparison of the rates at which the waves travelled in various directions he ascertained approximately the average depths of most parts of that ocean.

HOEVEN, JAN VAN DER, zoologist, was born at Rotterdam, Feb. 9, 1801. In 1819 he entered the University of Leyden, where he became a pupil of Sandifort, the professor of human anatomy and physiology. The Academy of Ghent had proposed a prize question on the use of comparative anatomy in the classification of animals, and the essay which he sent won the prize in 1820. In the following year he obtained a prize offered by the University of Utrecht for an essay on the ear, which the judges stated showed an extraordinarily wide knowledge of anatomy and natural science generally. In 1822 van der Hoeven graduated doctor in the mathematical and natural history sciences, and in 1824 he had that of medicine conferred upon him. For a short while after leaving the university he was unsettled, spending a few months at Paris, where he became acquainted with Cuvier, Latreille, Strauss-Durckheim, and others, practising as a physician at Rotterdam, and lecturing on physics. In 1826 he became extraordinary professor in the University of Leyden, and in 1835 ordinary professor, while his connection with the university only ceased with his death on March 10, 1868. His most important book was his 'Handboek der Dierkunde,' 2 vols. 8vo, Leyden, 1828—1833; second edition, 1849—1850. It was translated into English by Professor Clark, and published in 1856—58. There is also a German translation. His 'Philosophia Zoologica,' 1864, is also a highly valuable work, being a quintessence of zoological knowledge. Amongst his papers are monographs on *Cryptobranchus Japonicus*, *Ornitho-*

rynchus paradoxus, *Nautilus Pompilius*, and *Menobranchus*. As an anthropologist and craniologist he may be ranked alongside of Blumenbach, Morton, and Retzius. His principal anthropological works are 'Bijdragen tot de natuurlijke geschiedenis van den Negerstam,' 4to, 1842; 'Catalogus craniorum diversarum gentium,' 8vo, 1860; and amongst the same class of papers may be mentioned his 'Bijdragen tot de natuurlijke geschiedenis van den Mensch,' which forms a series of memoirs in the 'Tijdschrift voor Natuurlijke Geschiedenis en Physiologie' for the years from 1834 to 1839. This last-named periodical was edited by himself and De Vriese from 1834 to 1845. Accounts of his life have been given by Dr. Harting in a paper read before the Royal Society of Amsterdam in 1868, and by Dr. J. Barnard Davis, in the 'Journal of the Anthropological Society,' vol. vii. pp. lxxii—ciii (1869).

* HOFFMANN VON FALLERSLEBEN, AUGUST HEINRICH, a German poet and philologist, was born at Fallersleben, in the district of Lüneburg, in Hanover, on the 2nd of April, 1798, and received his early education at Helmstadt and Brunswick. He entered the University of Göttingen in 1816, and migrated in 1819 to that of Bonn. At first a student of theology, his acquaintance with the brothers Grimm, which commenced in 1818, determined him finally to the cultivation of general literature, and especially of German philology. After the production of his edition of the fragments of Otfried, 'Bonner Bruchstücke von Otfried,' &c., 4to, Bonn, 1821, he travelled in the Rhineland and in Holland for the purpose of investigating and collecting the antiquities of the popular speech and poetry. For some time he resided at Berlin, and in 1823 was appointed keeper of the university library at Breslau, which office he resigned in 1838. He became extraordinary professor of the German language and literature in the same university in 1830, and ordinary professor in 1835. One of his collections of poems, entitled Unpolitical Songs, 'Unpolitische Lieder,' 2 vols. 8vo, Hamburg, 1840—41, second edition, 1842, gave such offence by the republican spirit and tendency with which it was charged, that on the 20th of December, 1842, he was deprived of his academical office by a special royal decree. He now commenced a course of travel, which embraced Germany, Switzerland, and Italy, everywhere investigating the traditions of the people, and making collections of their songs and ballads. In 1845 he settled at Mecklenburg, and in 1848 was recalled to Prussia, and allotted a pension. He married in the year following, and for some time lived a retired life on the banks of the Rhine, first at Vingerbrück, and afterwards, 1851, at Neuwed. Repairing to Weimar in 1854, he became the editor of the 'Weimarische Jahrbuch,' Hanover, 1854—57, and in 1860 received from the Duke of Ratibor the appointment of librarian at his palace of Korvei, on the Weser.

The works of Dr. Hoffmann comprise a Collection of Old High German Glosses, 'Althochdeutsche Glossen, gesammelt und herausgegeben,' &c., 4to, Breslau, 1826; Old High German, according to the Wolfenbüttel Manuscripts, 'Althochdeutsches aus Wolfenbüttel Handschriften, herausgegeben,' &c., 8vo, Breslau, 1827; 'Hortæ Belgicæ,' 8vo, Wratisslau and Leipzig, 1830, &c.; Quarryings for the History of the German Language and Literature, 'Fundgruben für Geschichte deutscher Sprache und Litteratur,' 2 vols. 8vo, Breslau, 1830—37; Science of German Manuscripts, &c., 'Handschriftenkunde für Deutschland. Ein Leitfadens zu Vorlesungen,' 8vo, Breslau, 1831; History of German Hymns down to the time of Luther, &c., 'Geschichte des deutschen Kirchenliedes bis auf Luthers Zeit. Ein Literarhistorischer Versuch. Mit einer Musikbeilage,' 8vo, Breslau, 1832, third edition, 2 parts, 8vo, Hanover, 1861; 'Bartholomäus Ringwaldt und Benjamin Schmolck. Ein Beitrag zur deutschen Literar-Geschichte des XVI. und XVIII. Jahrhunderts,' 8vo, Breslau, 1833; a Fragment of an unknown German Poem, 'Merigarto. Bruchstück eines unbekannten deutschen Gedichtes aus dem XI. Jahrhundert, herausgegeben,' &c., 8vo, Prague, 1834; Original Poems, 'Gedichte,' 2 vols. 12mo, Leipzig, 1834: a New Collection, 'Gedichte. Neue Sammlung,' 8vo, Breslau, 1837, another edition, 'Gedichte,' 16mo, Hanover, 1862, sixth edition, 1864; Leaves of Old German, 'Altdeutsche Blätter,' 2 vols. 8vo, Leipzig, 1835—40; Outlines of German Philology, 'Die deutsche Philologie im Grundriss. Ein Leitfadens zur Vorlesungen,' 8vo, Breslau, 1836; Popular Songs and Melodies of Silesia, 'Schlesischen Volkslieder. Mit Melodien,' 8vo, Leipzig, 1842; Songs of South Germany, 'Allemannische Lieder,' &c., 8vo, Mannheim, fifth edition, 1843; Ancient Political Poems, &c., 'Politische Gedichte aus der deutschen Vorzeit, herausgegeben,' &c., 8vo,

Leipzig, 1843; German Songs from Switzerland, 'Deutsche Lieder aus der Schweiz,' 8vo, Zurich, 1843; fourth edition, Altona, 1862; German Glees, &c., 'Die Deutschen Gesellschaftalieder des XVI. und XVII. Jahrhunderts. Aus gleichzeitigen Quellen gesammelt,' 12mo, Leipzig, 1844, second edition, 1860; Contributions to German Literary History, 'Spenden zur deutschen Literaturgeschichte,' 2 vols., 8vo, Leipzig, 1844—45; Home Tones, 'Heimathklänge. Lieder,' 8vo, Mayence, third edition, 1851; The Child-World in Song, 'Die Kinderwelt in Liedern,' 8vo, Mayence, 1853; Soldiers' Songs, 'Soldatenlieder,' 8vo, Mayence, 1851; and Soldiers' Life, 'Soldatenleben,' 8vo, Berlin, 1852; Songs from Weimar, 'Lieder aus Weimar,' third enlarged edition, 16mo, Hanover, 1856; Popular Songs of the Low Countries, 'Niederländische Volkslieder,' second edition, 8vo, Hanover, 1856; Our Popular Songs, 'Unsere Volksthümlichen Lieder,' second edition, 8vo, Leipzig, 1859; Small Contributions towards a History of the German Language and Poetry, 'Findlinge zur Geschichte deutscher Sprache und Dichtung,' 2 vols. 8vo, Leipzig, 1859—60; Little Frank's Songs, 'Franzchens Lieder,' 16mo, Lubeck and Leipzig, 1859; 'Schleswig-Holstein. Zehn Lieder,' 8vo, Cassel, 1864; Life on the Rhine, 'Rheinleben,' 8vo, Mayence, 1851, and Neuwed, 1865; Songs of the Free-Lances, &c., 'Lieder der Landsknechte unter G. & C. von Frundsberg,' 12mo, Hamburg, 1868; together with various editions of the older authors, and miscellaneous contributions to periodical literature.

HOGAN, JOHN [E. C. vol. iii. col. 452]. This excellent Irish sculptor died, in straitened circumstances, March 20, 1858.

HOGARTH, GEORGE [E. C. vol. iii. col. 452]. Mr. Hogarth died in London, on the 12th of February, 1870, aged 80. Several of the memoirs of musicians in the 'English Cyclopædia' were written by him.

HOLLAND, JAMES, landscape painter, was born at Burslem, Staffordshire, September 17, 1800. The son of a small potter, he served seven years with Mr. Devenport, of Longport, as a painter on porcelain. In 1819 he came to London and maintained himself by painting flowers and teaching drawing, but gave his spare hours to sketching the old buildings and scenery along the banks of the Thames. His water-colour drawings found purchasers and he was able to release himself from teaching. A large 'View of London from Blackheath' was exhibited at Somerset House in 1833. In 1835 he was elected an Associate of the Society of Painters in Water Colours. The following year he visited Italy, and his stay at Venice gave him new conceptions respecting colour, surface, and the general treatment of pictures. He now sought in oil the depth and force he was anxious to attain. Large views of the 'Interior of Milan Cathedral,' exhibited at the Society of British Artists, and 'The Rialto,' exhibited at the British Institution, and several smaller scenes in Venice showed his altered perception and enlarged artistic ambition. For a time, he pretty well abandoned water-colours, and in 1841 was elected a member of the Society of British Artists. Annual trips to Italy, Germany, France, Holland, Portugal, Normandy, Geneva, and Wales, varied his range of subjects, but produced no marked change of manner. His rank as a landscape painter was recognised, but landscape painting was persistently discouraged at the Royal Academy, and Holland became aware that he could not hope for admission among the forty. Somewhat tardily and reluctantly he returned to his original course; in 1856, was re-admitted associate, and in 1858, member of the Society of Painters in Water Colours, and continued to send to their exhibitions during the following years. But his later pictures evinced no increase of power and too frequent repetition of subject. In his own line he was an admirable painter, and, with due encouragement, might have become a great one. He died on the 12th of February, 1870. His large 'View of Greenwich Hospital' is in the Painted Hall of that institution. In the South Kensington Museum (Ellison Collection) is a series of 18 sketches made in Portugal.

HOLLES, DENZIL, LORD, Commonwealth statesman, was born in 1597, the second son of John, first Earl of Clare. He entered parliament as member for St. Michael's, Cornwall, and at once took his part with Sir John Eliot and the members opposed to the encroachments of the Court. In the parliament of 1628, Holles sat for Dorchester, was conspicuous in the impeachment of Buckingham, and when Eliot, March 2nd, 1629, brought forward the resolutions of the committee on religion, in the shape of protestations against "whoever should advise innovations in religion, the levying of tonnage or poundage not granted by parliament, and whoever should pay the same," on the Speaker refusing to read the paper and rising to quit the

chair, Holles was one of the two members who held him in it by force, and then himself read the paper and put it to the vote. Charles dissolved the parliament, and, on the 5th of March, Eliot, Holles, Selden and other members were arrested and sent to the Tower and their papers seized. A writ of habeas corpus failed to obtain their release, but the following Michaelmas, the attorney-general, dropping the charge against the rest, proceeded, by information, against Sir John Eliot for words uttered in the House of Commons, and against Mr. Denzil Holles and Mr. Valentine for a tumult on the last day of the session. Their plea against the jurisdiction of the court, on the ground that the offence was committed in parliament and consequently only to be examined into and punished there, was overruled and judgment was given against them that they should be imprisoned during the king's pleasure, and not released but upon payment of a fine and finding sureties for good behaviour. It was not the king's pleasure that Eliot should be released, and he died in prison in 1632; but Holles was discharged after a year's incarceration. The proceeding of the king, indefensible as it was, was ultimately productive of benefit. The legality of the proceeding was strongly condemned by votes in the Long Parliament, but as the parliament itself was hardly admitted to be legitimate, the subject was, as Hallam well puts it ('Const. Hist.' c. i.), "revived again in a more distant and more tranquil period. In the year 1667, the commons resolved that the Act of 4 H. VIII., concerning Strode, was a general law, 'extending to indemnify all and every the members of both houses of parliament, in all parliaments, for and touching any bills, speaking, reasoning, or declaring of any matter or matters in and concerning the parliament to be commended and treated of, and is a declaratory law of the ancient and necessary rights and privileges of parliament.' They resolved also that the judgment given, 5 Car. I., against Sir John Eliot, Denzil Holles, and Benjamin Valentine, is an illegal judgment, and against the freedom and privilege of parliament. To these resolutions the Lords gave their concurrence. And Holles, then become a peer, having brought the record of the king's bench by writ of error before them, they solemnly reversed the judgment. An important decision with respect to our constitutional law, which has established beyond controversy the great privilege of unlimited freedom of speech in parliament."

In the Long Parliament, 1640, Holles occupied a conspicuous place, being regarded as the leader of the Presbyterians. He was one of the five members, the others being Pym, Hampden, Haerlig and Strode, whom the king caused to be charged with high-treason at the bar of the House of Lords, January 3rd, 1642, and the next day made the ill-advised attempt in person to arrest in their places in the House of Commons. This foolish proceeding brought matters to a crisis, and was speedily followed by an appeal to arms. Denzil took the command of a regiment of horse, and fought at Edghill and Brentford. But he longed for peace and laboured to bring about a reconciliation, with which view he procured himself to be nominated one of the commissioners to treat with others, named by the king, at Uxbridge. The duplicity of the king caused the negotiations to fail. But Holles and the Presbyterians became more and more estranged from Cromwell. He moved the resolution in the house, March, 1647, for the disbanding of the army; but the army could not be spared, and Cromwell was too strong to be overturned by a side wind like that. Holles found it prudent to withdraw to Normandy. In his absence he was charged with treason, but he returned the following year and resumed his seat and his attempts to effect an accommodation. The commission to the king at the Isle of Wight, in which he took part, was fruitless, but he was one of the majority to vote in the Commons, December 5th, 1648, that the king's concessions are a ground of settlement. Cromwell and the army, however, thought otherwise, and the application of Pride's Purge a day or two after, effectually excluded Holles from Parliament, and from all further influence. The execution of Charles quickly followed. Holles escaped to Brittany, and returned no more to England whilst Cromwell was alive.

In 1660 he resumed his seat with the rest of the Long Parliament, and was one of the deputation sent by the House to Charles II. at the Hague, and delivered the address inviting him to return to England. He was one of the batch of new peers created by Charles II. on the eve of his coronation, April, 1661, when he assumed the title of Baron Holles, of Isfield. In 1661 he was sent to France to endeavour to secure Louis XIV. as an ally in the war with the Dutch; and he was one of the plenipotentiaries who concluded the treaty of peace between

England, France and Holland at Breda, July 29th, 1667. But the tyrannical measures of the king disgusted him, and he withdrew from the Court. He appears, however, to have been one of those who, through Barillon, carried on secret negotiations with Louis XIV., though he peremptorily refused to receive the French king's money. He died in 1680, at the age of 83. 'The Memoirs of Denzil Lord Holles, from 1641 to 1648,' 8vo, London, 1680, must not be overlooked by the student of that portion of English history.

HOLLOWAY, THOMAS, engraver, was born in 1748, and educated as a seal engraver, but on completing his apprenticeship turned to line engraving. He was chiefly employed on book plates, such as portraits for magazines, illustrations to the British Classics, the plates to the translation of 'Lavater's Physiognomy,' and on Boydell's publications. His claim to be remembered, however, rests on his series of large engravings of Raffaele's Cartoons, a work undertaken at his own risk, and prosecuted with great zeal and diligence. It is a neat and elegant, but feeble production. Mr. Holloway died in 1827, at Coltishall, near Norwich.

HOLMAN, JAMES BAPTISTE [E. C. vol. iii. col. 463], the "Blind Traveller," retained his passion for roaming long after his physical strength had so far declined as to render it advisable for him to take rest. His latest journeys were in Spain, Portugal, Wallachia, Moldavia, Montenegro, and Turkey. At the time of his death in London, July 28, 1857, he was preparing for publication his notes on these countries and places.

* HOLMES, OLIVER WENDELL, an American physician, poet, and man of letters, was born on the 29th of August, 1809, at Cambridge, Massachusetts, where his father, Dr. Abiel Holmes, known for his 'Annals of America,' was pastor of the first Congregational Church. He was educated at Harvard College, and, having graduated in 1829, devoted about a year to the study of law, which he abandoned for that of medicine. He visited the Old World in 1833, and occupied nearly three years in attending the hospitals of Paris and other large European capitals. He returned to America in 1835, and commenced practice at Boston; in the following year took the degree of M.D. at Cambridge; in 1838 was elected professor of anatomy and physiology in Dartmouth College; succeeded Dr. John C. Warren as professor of anatomy in the medical faculty of Harvard University, in 1847; and in 1849 retired from the general practice of his profession in order to command greater freedom for his literary activity. It is the habit of Dr. Holmes to make his winter residence chiefly at Boston, and to spend the rest of the year on an estate which was formerly in the possession of his great-grandfather, the Hon. Jacob Wendell, situated on the banks of the Housatonic, in Pittsfield, Berkshire County, Massachusetts.

To Dr. Holmes's professional and academical authorship we are indebted for his 'Boylston Prize Dissertations for the years 1836, 1837,' 8vo, Boston, 1838, which, three in number, were respectively on 'Indigenous Intermittent Fever in New England,' the 'Nature and Treatment of Neuralgia,' and the 'Utility and Importance of Direct Exploration in Medical Practice'; 'Lectures on Homœopathy and its Kindred Delusions,' 1842; a 'Report on Medical Literature,' which appeared in the 'Transactions of the National Medical Society,' for 1848; a pamphlet, entitled 'Puerperal Fever as a Private Pestilence'; a number of papers in the 'New England Quarterly Journal of Medicine and Surgery,' and in the 'Boston Medical and Surgical Journal,' an edition, in conjunction with Jacob Bigelow, M.D., of Dr. Marshall Hall's 'Principles of the Theory and Practice of Medicine,' 8vo, 1839; 'An Introductory Lecture delivered at the Massachusetts Medical College,' 8vo, Boston, 1847, and another, entitled 'The Benefactors of the Medical School of Harvard University,' &c., 8vo, Boston, 1850; and 'Currents and Counter-currents in Medical Science. With other Addresses and Essays,' 12mo, Boston, 1861.

Early in his college life, Dr. Holmes attracted attention as a poet. He contributed to the 'Collegian,' a periodical published in 1830 by the Harvard undergraduates; as well as to 'Illustrations of the Athenæum Gallery of Paintings,' in 1831, and to the 'Harbinger, a May Gift,' in 1833. In 1836 he read before the 'Phi Beta Kappa Society,' of Harvard, a metrical essay, entitled 'Poetry,' which established his fame as a writer of verse, and was published in the first collected edition of his 'Poems,' 12mo, Boston, 1836, 12mo, London, 1846, new and enlarged edition, 12mo, Boston, 1851, seventeenth edition, 8vo, Boston, 1859. In 1843, he published 'Terpsichore,' a poem read at the annual dinner of the Phi Beta Kappa Society in

that year; and followed this up by the issue of 'Urania. A Rhymed Lesson,' 8vo, Boston, 1846, which had been pronounced before the Mercantile Library Association, and of 'Astræa: the Balance of Illusions. A Poem delivered before the Phi Beta Kappa Society of Yale College, August 14th, 1850,' 12mo, Boston, 1850. The editions and the forms in which the collected, or separate, or selected poems of Dr. Holmes have appeared are very numerous; one which claimed to be the "first English edition" of his 'Poetical Works,' was issued in 12mo, London, 1852; and, a selected volume, with the title of 'Wit and Humour. Poems,' 8vo, London, 1867.

Dr. Holmes has been a contributor of miscellaneous articles to various periodicals, as the 'North American Review,' the 'New England Magazine,' the 'Knickerbocker,' &c.; but especially to the 'Atlantic Monthly: devoted to Literature, Art and Politics,' 8vo, Boston, 1857, &c., in the first twelve numbers of which appeared a series of papers, which were afterwards extremely popular in America and England, in the shape of an independent publication entitled, 'The Autocrat of the Breakfast Table: every Man his own Boswell,' 12mo, Boston, 1858, 8vo, Edinburgh, 1859, "with illustrations by J. G. Thomson," 8vo, London, 1865, &c.; followed by 'The Professor at the Breakfast Table: with the Story of Iris,' 8vo, London, 1860, &c. His other works comprise an 'Oration delivered before the City Authorities at Boston, on the Eighty-seventh Anniversary of the National Independence of America,' 8vo, Philadelphia, 1863; 'Elsie Venner: a Romance of Destiny,' 8vo, London, 1861, reprinted from the 'Atlantic Monthly,' where it appeared, in successive numbers, under the name of 'The Professor's Story'; a tale entitled, 'The Guardian Angel,' 8vo, Boston and Cambridge (U. S.), 1867, and several times reprinted in England; and 'Mechanism in Thought and Morals. An Address. With Notes and Afterthoughts,' 1870. In 1867, Dr. Holmes, in conjunction with Mr. D. G. Mitchell, instituted an annual, entitled the 'Atlantic Almanac,' 4to, Boston, which they still continue to conduct.

HOME, SIR EVERARD, BART., surgeon and anatomist, was born at Hull, May 6, 1756. He attended at Westminster School, and was about to proceed to Cambridge, when John Hunter (who had married his sister), undertook to give him a sound education in anatomy, an offer which he gladly accepted. From 1780 to 1784 he served on the medical staff in the West Indies, and then returned to assist Hunter both in completing his museum, and in his various official duties. In 1793 Hunter died. In 1808, Home was appointed sergeant-surgeon to the king, and in 1812 was created a baronet, an honour conferred for the first time on a practising surgeon. In 1821 he was appointed surgeon to Chelsea hospital, and in 1822 he was elected president of the College of Surgeons. He died at Chelsea, August 31, 1832. He was, to a certain extent, the successor of Hunter, and produced numerous papers detailing important researches in anatomy and physiology, some of which were continuations of lines of inquiry suggested by Hunter, and are believed to have been appropriated from Hunter's manuscripts, of which he held possession, and which, in order to escape detection, he eventually destroyed, although they were the property of the College of Surgeons. [HUNTER, JOHN, E. C. vol. iii. col. 524.] Many of his papers were published in the 'Philosophical Transactions,' but the more important results noticed in them were collected in his 'Lectures on Comparative Anatomy,' 6 vols. 4to, 1814—28.

HONDT, or HONDIUS, HENDRIK: there are two engravers of this name, both skilful artists, who flourished at the same time, and whom, especially as both practised for a while in London, it is desirable not to confound. Hendrik Hondt, known as the Elder, was born at Duffel, in Brabant, in 1573, and was a pupil of Jan Wierix. He visited and worked in both Paris and London, but settled at the Hague, where he engraved a great many portraits, including the leading reformers, from Wycliffe to Calvin, a series of 140 painters, some religious pieces, landscapes, &c. He was a good engraver, and the founder of a school which numbered some distinguished names. He was also a proficient in the art of perspective, which he learnt from De Vries, and on which he wrote a work 'Institutio artis Perspectivæ,' published after his death, Haag, 1622; Amsterdam, 1697; French translation, 1625. He died in 1610.

HONDT, or HONDIUS, HENDRIK, the Younger, was born about 1588 in London, where his father, Jost Hondt (b. 1563, d. 1611) was settled as an engraver and a maker of mathematical instruments: Speed's maps, and several of those of Mercator, as well as many portraits, were engraved by him. The younger Hondt,

besides finishing various plates begun by his father, engraved portraits of Elizabeth, James I., Charles I., Archbishop Cranmer, Sir Ralph Winwood, Sir Francis Drake, and other eminent Englishmen; some scripture subjects from Dutch and Flemish painters; and a few landscapes. He died at Amsterdam about 1648.

HONE, NATHANIEL, R.A., born at Dublin in 1730, was a portrait and miniature painter, drew in crayons and executed several works in enamel, and two or three mezzotints; but he acquired more notoriety by his quarrels and caricatures than admiration by his pictures. He was one of the original members of the Royal Academy, but soon got involved in disputes with his colleagues. Envyng the success of Reynolds he, in 1755, sent a large picture to the Academy for exhibition, which he called 'The Conjuror,' and in which a magician, painted from the model who sat for Reynolds's 'Count Ugolino,' was seen pointing with his wand to various engravings from the old masters, under which were sketches of pictures by Sir Joshua Reynolds, which it was suggested were derived from them. The council, of course, refused to admit the picture, and Hone made an independent exhibition of it, along with some others of his paintings. Sir Joshua took no notice of the attack, and public opinion went strongly against the satirist. A like attack on Angelica Kauffmann excited even stronger feeling. Hone died August 14th, 1784, and would have been long since forgotten but for having become thus unluckily associated with the name of Reynolds.

HOOGSTATEN, SAMUEL VAN, Dutch painter, was born at Dordrecht, in 1627, and learned painting in the first instance of his father, Dirk van Hoogstraten, an historical painter of some ability (b. 1596, d. 1640), and afterwards of Rembrandt, in whose manner he at first painted, but changed it for a lighter and brighter style. Besides portraits he painted, as his pupil Houbraken writes, "buildings, landscapes, stormy seas and still waters, animals, flowers, fruit, and still life," and all with a certain amount of success. He visited Vienna, where his works were greatly in vogue, and where the Emperor, Ferdinand III., tried hard to retain him; Rome, in order to study the works of the great masters; and, in 1633, England. Returning to Dordrecht, he obtained considerable popularity, and from his studio proceeded many of the best painters of the succeeding generation. Houbraken says he was careful to warn his scholars against the faults of his own style, especially a certain crudity of colouring of which he could not rid himself. Hoogstraten was an accomplished writer as well as painter. We have from him 'Den urlyken Jongeling of de edele Kunst van zich by groote en kleyne te doen eeren en beminnen,' 12mo, Dordrecht, 1657; 'De Gestrafte Ontschaking,' 12mo, Amsterdam, 1669; 'Inleyding tot de Hooge Schoole der Schilderkonst; anders de Zichtbaere Werelt,' 13 plates 4to, Rotterdam, 1678. This work (sometimes referred to by Houbraken as 'Zichtbare Waerelt,' and sometimes as 'Van de Schilderkonst,' and hence spoken of by some later writers as separate publications), is valuable as containing the statements of an accomplished painter, the pupil of Rembrandt, and one familiar with the traditions alike of the Dutch and Flemish schools. Hoogstraten died at Dordrecht, October 21st, 1678.

* HOOKER, JOSEPH, American general, was born at Hadley, Massachusetts, in 1819. Entering the Military Academy at West Point as a cadet in 1833, he became a second lieutenant of artillery in 1837; rose gradually in rank, and became adjutant of the same regiment. During the Mexican war he served in the same regiment with the officer who afterwards made himself famous as the Confederate General Stonewall Jackson; and was for a time aide-de-camp to Lieutenant-General Hawes. His services at Monterey brought him the rank of brevet-captain, then that of assistant-adjutant-general. He was made brevet-major in 1847; and after the battle of Chapultepec in the same year brevet lieutenant-colonel, and full colonel in 1848. He was employed in the Adjutant-General's department at Washington till 1850, when he retired from the army; went to California, established himself as a farmer, and became superintendent of the construction of the National road through that State. When the civil war broke out in 1861, he returned to the east, and was present at the battle of Bull's Run, but only as a spectator. He obtained the appointment of lieutenant-colonel of a newly raised regiment, which he exchanged for that of brigadier-general of volunteers. With these volunteers he entered on active service in Maryland and Eastern Virginia, assisting in clearing the Potomac of the Confederate blockading batteries. As commander of a division under General

McClellan, he distinguished himself at the battles of Williamsburg and Fair Oaks (May and June, 1862); also in a series of engagements known as the "Seven Days' Battles." His success at Malvern Hill, in the following August, led to his promotion to the rank of major-general of volunteers. He was wounded at the battle of Antietam, September 17th, 1862. He now became brigadier-general in the regular army, and on the 13th of December commanded the centre division of General Burnside's army, which was so thoroughly defeated by General Lee at the battle of Fredericksburg. In January, 1863, as major-general of the United States army, Hooker succeeded Burnside in command of the Army of the Potomac, which he reorganised, and then crossed the Rappahannock, some distance above Fredericksburg. He was attacked and totally defeated on the 30th of April at Chancellorsville by the Confederates under Stonewall Jackson, who here received his death wound. Lee attacked Hooker on the 3rd of May, and compelled him to retreat after great loss; but Hooker succeeded in recrossing the Rappahannock on the following day. A further defeat which he suffered in June led to his supersession by General Meade. Hooker was now transferred to the Army of the Tennessee, with which he was more successful—repulsing the Confederates severely at Chattanooga. In November he came to the relief of General Grant, who had been blockaded. During the sanguinary campaign of 1864 he was mostly with Grant, and acquired by his promptness and bravery the sobriquet of "Fighting Joe Hooker."

HOOKER, SIR WILLIAM JACKSON [E. C. vol. iii. col. 481]. In the above notice reference is made to the numerous works which Sir William wrote, and which fully indicate the great activity of his mind. His literary labours were continued to the last, and even when nearly 80 years of age he began publishing 'Synopsis Filicum,' for which he had been preparing some time. Hooker wrote upwards of fifty volumes of descriptive botany. His literary labours, however, were probably exceeded in importance by the encouragement which he otherwise gave to the pursuit of botany. His correspondence was so unusually extensive that he was fully informed of what was being done in his favourite science in all parts of the world; and he was generally resorted to by those who had any appointment suitable for botanists. In this way he lent a helping hand to many naturalists, and was instrumental in having larger regions explored by well-trained botanists, such as Gardner, Scouler, Douglas, Drummond, Thomson, and numerous others. He also organised a plan for a complete series of colonial floras, of which several are already published, such as those of Australia, Ceylon, and Cape of Good Hope. He died August 12, 1865, having completed his 80th year: he was born July 6, 1785.

HOOLE, JOHN, a dramatic poet and translator, especially from the Italian poets, was born in Moorfields, London, in December, 1727, and was educated successively by his uncle, a tailor in Grub-street, and at a private boarding-school in Hertfordshire. At the age of 17 he was appointed to a clerkship in the East India House, and devoted his leisure to the cultivation of Latin and Italian literature. He became in 1773 auditor of Indian accounts to the East India Company, an appointment which engrossed his time to such an extent as to delay by ten years the publication of his translation of Ariosto's 'Orlando Furioso,' the first volume of which appeared in 1773. About the end of 1783 he resigned his official appointment; and in 1786 retired with his wife and son to the rectory of Abinger, near Dorking, in Surrey, where he died on the 2nd of April, 1802. His son, the Rev. Samuel Hoole, published 'Anecdotes respecting the Life of the late Mr. John Hoole. To which are added some Pieces written by the Deceased, never before published,' 8vo, London, 1803.

Mr. Hoole early produced fugitive and anonymous specimens of his poetical talents, amongst which was a Monody on the Death of Mrs. Margaret ("Peg") Woffington; and his more important works comprise a Tragedy in five Acts and in Verse, entitled 'Cyrus,' 8vo, London, 1768, which, together with another, called 'Cleonice, Princess of Bithynia,' 8vo, London, 1775, was published in vol. xxiv. of Bell's 'British Theatre,' the 34th volume of which contained his 'Timanthes: A Tragedy,' 8vo, London, 1770, third edition, 1771. His principal translations are those of Tasso's 'Jerusalem Delivered,' 8vo, London, 1763, eighth edition with notes, 4to, London, 1803, 12mo, 1807, &c., the Dedication, which was to the Queen, being written by Dr. Johnson; Metastasio's 'Dramas and other Poems,' 2 vols. 12mo, London, 1767, of which he after-

wards published a more complete edition in 3 vols. 8vo; Tasso's 'Rinaldo,' 8vo, London, 1792; and Ariosto's 'Orlando Furioso,' with Notes, in 5 vols. 8vo, London, 1783, 8vo, London, 1785, &c., of which he produced a clever condensation, out of deference to the objections raised against the tediousness of Ariosto, with the title of 'Orlando, &c., reduced to Twenty-four Books,' 8vo, London, 1791, 12mo, 1816, &c.

HOPKINS, WILLIAM, mathematician and geologist, was born in 1793. His father had an objection to public schools, and the consequence was that what little education he got was of the most desultory nature. When about fourteen years old he obtained a copy of 'Euclid,' which, he afterwards stated, he read with intense interest. His inclination for mathematics was, however, repressed, for his father caused him to learn farming, and as a farmer he remained till his thirtieth year. Finding that this occupation only diminished the property which he inherited from his father, he gave it up, and entered himself as a Cambridge student. His college career was highly successful, and on taking his degree in 1827, he became a tutor, in which capacity he evinced unusual skill, especially as regards mathematics. About 1833 he became acquainted with Professor Sedgwick, by whom he was induced to take an interest in geological inquiries, to which he applied his talents as a physicist and mathematician. One of his earlier papers was 'Researches in Physical Geology,' which appeared in the 'Transactions of the Philosophical Society of Cambridge,' vi. pp. 1-84 (1838). In it he discussed the effects of a force acting from below and pushing the earth's crust outwards; and amongst the conclusions arrived at by him the most important was, that a system of parallel fissures must have been formed simultaneously, not consecutively. His inquiries as to the indications which the phenomena of precession and nutation afford as to the condition of the earth's interior led him to believe that the amount of precession requires that the earth's crust be at least 400 miles thick. He wrote several papers on the motion of glaciers in 'The London, Edinburgh, and Dublin Philosophical Magazine,' vol. xxvi. (1845), in which he maintained that the glaciers slid down the valleys as solid bodies, mainly by the force of gravitation, the process being materially assisted by the melting of the lower surface, acting like a lubricator in diminishing the friction against the rocky bottom of the valley. Another paper was 'On the cause which may have produced changes in the earth's superficial temperature,' in 'Quart. Jour. Geological Society,' vol. viii. pp. 56-92 (1852), in which he shows that the temperature of the earth's interior has scarcely any influence upon the temperature of the air, and that if the superficial temperature were raised 1° Fahr. higher, in consequence of the greater heat of the earth's interior, all springs rising from greater depths than 60 feet would be near or at the boiling point. This inquiry naturally led to others, which sought to ascertain the relative heat-conducting powers of rocks and other materials, and the influence which pressure has in raising the points at which they melt. For these researches he received the Wollaston medal in 1830. In 1831-32 he was the president of the Geological Society. In 1853 he was president of the British Association. He died on the 13th of October, 1866.

HORN, or HORNE, PHILIP DE MONTMORENCY-NIVELLE, GRAAF VAN, a Flemish general and statesman, son of Joseph de Montmorency, Lord of Nivelles, &c., and who succeeded to the title and estates of his mother's second husband, the Graaf van Horn, was born in 1522. From the outset of his career he was one of the richest and most influential of the nobility of the Netherlands; and he received from the Emperor Charles V. and from his son, Philip II. of Spain, many tokens of favour, and various places of confidence and distinction. He was made a knight of the Order of the Golden Fleece, chamberlain and captain of the guard to the King of Spain, finance minister to the Low Countries, and councillor of state, admiral of the Flemish fleet, and lieutenant-governor of Gelders and Zutphen. He materially contributed to the Spanish victories over the French at St. Quentin, 1557, and Gravelines, 1558; and in 1559 accompanied Philip II. to Spain, where he remained for two years, during which he is supposed to have communicated to the Prince of Orange, the measures which were meditated by the Spanish Government against the Netherlands. Upon his return to his own country, he joined the Prince of Orange and Count Egmont—the latter of whom was his maternal relative—in resisting the aggressive policy of Philip, and in urging upon him, March 11th, 1563, the recall of Cardinal Granvelle, Bishop of Arras, who had been left as Councillor to Margaret, Duchess-dowager of Parma, and natural

sister of Philip, upon whom he had, on his own departure for Spain, devolved the government of the Low Countries. Notwithstanding the heavy disbursements in the king's service, by which Horn had considerably reduced his fortunes, Philip conceived the idea of punishing him for the opposition, or at best, the tardy assent with which he had received the measures of the regent, Margaret of Parma. Unconscious, however, of any circumstances by which their safety could be seriously compromised, both Horn and Egmont awaited the arrival of the Duke of Alva, who had been appointed to succeed Margaret in the regency in 1567. Meanwhile, the Prince of Orange, who had more openly and fatally committed himself to the insurrection which Alva was commissioned to suppress, felt it expedient to leave the country, and was safe. But his escape told disastrously upon the fate of his two friends, who were arrested at Brussels on the 9th of September, 1567, on a charge of treason and other offences of magnitude. Egmont and Horn were conveyed, under a strong military escort, to Ghent, where for two months they were kept in rigorous confinement. In vain they claimed, as knights of the Golden Fleece, the privilege of being tried before a chapter of their own order; they were brought before a tribunal, known in Flemish history as the "Council of Blood," and, after a hollow trial, were convicted of treason and rebellion. The Duke of Alva determined to make the execution of the two counts an appalling and exemplary spectacle; and, in accordance with this design, he caused three thousand Spanish troops to be drawn up around the scaffold, in the great square of Brussels, where they were beheaded amongst the tears and the horror of the spectators on the 5th of June, 1568. Count Horn, who died last, met his fate with perfect composure, although, when his sentence was first made known to him, he indignantly protested against its injustice, exclaiming that it was a poor requital for twenty-eight years of faithful service. In the month of September following his execution, there were published a Dutch and a French apology for Count Horn, and a declaration of his innocence, entitled respectively, 'De Bewijssinghe vande onschult van Myn Herre Philips Baenreheere van Montmorency, Grave van Horne, Frijheere van Weert, &c., Admiraal ende Capiteaen Generael van der Zee vanden Nederlande, Ridders vander Oorden vander Gulden Vliese, &c.,' 8vo, Brussels, 1568, and 'La Deduction de l'Innocence de Messire Philippe Baron de Montmorency, Conte de Hornes, franc Seigneur de Weert, Admiral et Capitaine general de la Mer du Pais Bas, et Chevalier de l'ordre de la Toison d'Or. Contre la malicieuse Apprehension, indeue Detention, injuste Procedure, fausse Accusation, iniques Sentences, et Tyrannique Execution en sa Personne à grand tort, par voye de Fait perpétrée,' 8vo, Amsterdam (?) 1568.

HORNE, REV. THOMAS HARTWELL [E. C. vol. iii. col. 489]. In the above memoir Mr. Horne's labours as a theological writer are pretty fully noticed. Not so his services as a bibliographer, respecting which chiefly, we, therefore, supply a few supplementary particulars. He was born in London, October 20th, 1780; was educated at Christ's Hospital, and was afterwards a clerk to a barrister. It was whilst so employed that he found time not only to greatly extend his school studies, but to secure an unusual acquaintance with theology and especially with its literature. During these years he published 'A Brief View of the Necessity and Truth of the Christian Religion,' 8vo, 1800; prepared the materials for a really valuable 'Introduction to the Study of Bibliography,' 2 vols. 8vo, London, 1814; and began to collect the materials for the first edition of his chief work, the 'Introduction to the Study of the Scriptures,' 3 vols. 8vo, 1818, a work that at once met with a wide welcome, alike from clerical and lay students, and was adopted as a text book in the universities. The year after its publication, Mr. Horne was ordained by the Bishop of London and presented to the united City livings mentioned in the original memoir. The duties of these benefices allowed him ample time to pursue his literary and bibliographical studies. He accepted the appointment of librarian to the Surrey Institution, and made an excellent classified catalogue of the library. The institution was broken up in 1823; and it being about this time proposed to make a classified catalogue of the Library of the British Museum, Mr. Horne's Surrey Institution Catalogue, as well as one he had drawn up for the library of Queen's College, Cambridge, seemed to point him out as a suitable person to undertake it, especially as he was already favourably known to the trustees by a classed index to the Harleian MSS., which he had prepared in 1808. He was accordingly appointed in 1824, and in 1825 he printed 'Outlines for the Classification of a Library :

submitted to the Trustees of the British Museum,' 4to. In conjunction with Sir Frederic Madden and others, he was engaged for several years on this work, when the trustees decided to abandon their idea of a classified catalogue, and to prepare instead an alphabetical one. The system ultimately adopted was that proposed by Mr. (afterwards Sir A.) Panizzi, but Mr. Horne was retained to assist in carrying it out. Mr. Horne continued to be connected with the Museum, one of the most familiar and widely known of the library officials, till 1861, when, in his 81st year, he resigned the office he then held of supernumerary keeper of the printed books. He died on the 27th of January, 1862.

HORNECK, ANTHONY, a devotional writer and divine, was born, in 1641, at Bacharach, a small town between Mentz and Coblenz, of which his father was recorder. He studied divinity at the University of Heidelberg, under Dr. F. Spanheim, and made considerable progress in a knowledge of the oriental languages and the rabbinical writings; and after a time removed to Wittenberg, where he took his degree of M.A., in which, having come to England in 1661, he was incorporated at Queen's College, Oxford, on the 15th of March, 1664. After having resided for some time in the university, he was ordained; and through the influence of Dr. Barlow, then provost of Queen's, and afterwards Bishop of London, was appointed chaplain to his college. He was also instituted to the vicarage of All Saints, or All Hallows, in the city of Oxford; and having acted as tutor to Lord Torrington, eldest son of the Duke of Albemarle, received from the duke the rectory of Doulton, in Devonshire, and through his influence was collated by Bishop Sparrow to a stall in Exeter Cathedral on the 13th of June, 1670. He left England in 1669 for a two years' sojourn in Germany; and immediately upon his return in 1671 was appointed to the church of St. Mary-le-Savoy, commonly known as the Savoy Chapel, with which, having resigned the rectory of Doulton, it is probable that he conjoined the spiritual charge of the adjoining parish of St. Mary-le-Strand. He was admitted to the degree of D.D. at Cambridge in 1681, and subsequently became chaplain to William and Mary. On the recommendation of Archbishop Tillotson, he was promoted by the queen to the twelfth prebend in Westminster Abbey, in which he was installed on the 1st of July, 1693. In the following year he resigned his canonry at Exeter, in order to enter, on the 28th September, 1694, on the stall of Compton Bishop in the cathedral church of Wells, to which he was appointed by his friend and biographer, Bishop Kidder. He laboured for many years as incumbent of the Savoy, and when the measures of James II. seemed to threaten the restoration of popery, he opposed them by the promotion of those associations which were known as "Religious Societies" and "Societies for Reformation." He died of the stone, on the evening of Sunday, the 31st of January, 1696, and was buried on the 4th of February in Westminster Abbey.

Dr. Horneck's works, several of which have been extremely popular, comprise 'The great Law of Consideration: or, a Discourse concerning the Nature and Use of it in order to a serious Life,' 8vo, London, 1677, eleventh edition, 8vo, 1729, new edition, 8vo, 1840; 'A Letter to a Lady revolted to the Church of Rome,' 8vo, London, 1678, and 'Questions and Answers concerning the two Religions: viz., that of the Church of England and the order of the Church of Rome,' 4to, London, 1688, French and English version, 8vo, London, 1723, both of which works were issued anonymously; a translated work entitled 'An Account of some Persons that were accused for Witches and tried and executed in Sweden,' 8vo, London, 1682; 'The Fire of the Altar: or, certain Directions how to raise the Soul into holy Flames, before, at, and after receiving the Sacrament of the Lord's Supper, with Prayers and Devotions, and a Dialogue betwixt a Christian and his own Conscience concerning the true Nature of the Christian Religion,' 8vo, London, 1684; 'The Exercise of Prayer: or, a Help to Devotion,' 8vo, London, 1685, thirteenth edition, 12mo, 1718, new edition, 18mo, 1845; 'An Account of Edward Scater's Return to the Church of England, and his public Recantation,' 4to, London, 1689, which is a monument to the care with which Horneck sifted the motives of a "revolter," who, having once been vicar of Putney, might have owed his re-conversion to the motions of a self-interest quickened by the Revolution of 1683; the 'Preface' to a work by a "divine of the Church of England," entitled 'The true Interest of Families: or Directions how Parents may be happy with their Children, and Children with their Parents,' &c., 8vo, London, 1692; 'The Happy Ascetic: or, the best Exercise with Prayers. With a Letter to a Person of Quality,' 8vo, Lon-

don, 1693, &c., new edition, 8vo, 1724, a work dedicated to Bishop Barlow, the author's early patron at Oxford; and, amongst other translations, one entitled 'An Antidote against a careless Indifference in Matters of Religion, &c. Done out of French,' 8vo, London, 1694. Dr. Horneck published separately many of the sermons which he delivered on special occasions, particularly a 'Sermon [on 2 Timothy, i. 6] at the Consecration of Gilbert Burnet, Bishop of Sarum,' 4to, London, 1688; and a collection of 'Sermons,' 2 vols. 8vo, 1706, third edition, 1717, was posthumously issued under the care of Bishop Kidder, who supplied an interesting memoir of the author's life.

HORNER, LEONARD [E. C. vol. iii. col. 491]. He was born Jan. 17, 1785. To the general outline of his life already given we may add that he was president of the Geological Society of London in 1856, 1857, 1860, and 1861, and that he died March 5, 1864.

HORSFIELD, THOMAS [E. C. vol. ii. col. 1006]. He was born at Bethlehem, in Pennsylvania, May 12, 1773, and was educated for the medical profession in the University of Pennsylvania. Soon after taking his degree of M.D. in 1798 he started for Java, where he spent so many years of his life. The 'Catalogue of the Lepidopterous Insects contained in the Museum of the Hon. East India Company,' of which only two parts were published in 1828—29, was never completed; it, however, deserves notice on account of the introduction and of the classification of those insects, which is largely based upon their metamorphoses. At the time of his death Dr. Horsfield was busy on a similar catalogue, but only one volume was published, entitled 'Catalogue of the Lepidoptera in the East India Museum,' in the production of which he was assisted by Mr. F. Moore. Dr. Horsfield spent three years in Java in making observations on the development of butterflies. He died July 24, 1859.

HOSKING, WILLIAM [E. C. vol. iii. col. 395]. This able architect and writer died on the 2nd of August, 1861.

***HOSMER, HARRIET**, one of the few ladies who have succeeded in the difficult art of sculpture, was born in 1831 at Watertown, in Massachusetts, U.S. Her passion for art was shown at an early age, and as it developed into a decided preference for modelling the human form, her father resolved to teach her anatomy; she continued the study at the St. Louis Medical College, and the advantage of the course is shown in every one of her works. The success of her first statue, 'Hesper,' 1851, led to her proceeding to Rome to procure the best European teaching. Mr. Gibson, to whom she was introduced, was so much struck with her talent, that in her favour he broke through his resolution not to take a regular pupil. Gibson was so proud of her progress and so warm an admirer of her talent that in arranging the little temple in which his Venus and other tinted statues were displayed at the International Exhibition of 1862 he appropriated one of the four divisions to Miss Hosmer's 'Zenobia Captive.' With the exception of occasional visits to America and England, Miss Hosmer has continued to reside at Rome. Her works include classic statues and busts, as Medusa, Daphne, Ceneone, and the like; others of a romantic and historical class, as 'Puck' (repeated for the Prince of Wales), 'Will o' the Wisp,' 'Beatrice Cenci'; some portrait busts and monumental works. Her latest and most important effort in this class is the monument to President Lincoln, which, if carried out as designed, will be a magnificent and impressive work. Miss Hosmer designs and models with much grace, vigour, and originality, and has achieved an admirable mastery over the chisel.

HOUDON, JEAN-ANTOINE, a distinguished French sculptor, was born at Versailles in 1740. He was a pupil of Michel-Angelo Stolze and of Pigalle, and won the grand prize for sculpture at the École des Beaux-Arts, which entitled him to complete his studies in the French Academy at Rome. He stayed at Rome for ten years, and whilst there executed some of his most admired works; among others, a colossal statue of S. Bruno for the porch of Sta. Maria in the Certosa, Rome, and Morpheus for the Salon at Paris. Returning to France, he soon secured a high place in public favour. His classic statues—Minervas, Venuses, Vestals, and so forth, including a Diana executed for the Empress of Russia, which was refused a place in the Salon, as being too scantily draped and too free in action—strangely affected and unclassic as they seem to us, were regarded as in the purest style of art, and his portrait statues were universally popular. These last include one of Washington for the senate-house of Virginia, which he went to Philadelphia to model, and which has served as the type of most of the portraits of the great liberator; busts and statues of Louis XVI., Napoleon I. and Josephine, Catherine of Russia, Voltaire, Rousseau, Diderot,

Franklin, Gluck, Sophie Arnault, D'Alembert, Mirabeau, and many other of the remarkable personages of that memorable period. Houdon was elected associate member of the Academy in 1774, full member and professor in 1778. He was denounced in the Convention on account of a statue of Theology on which he was engaged, but was rescued by the promptitude of a friend in the tribune, who declared it to be a figure of Philosophy. The empire brought safety and imperial favour; and under the Restoration Houdon's good fortune was continued. He was nominated member of the Institute, and Chevalier of the Legion of Honour, and died at a ripe old age, July 16th, 1828.

***HOUGHTON, RICHARD MONCKTON MILNES, BARON** [MILNES, RICHARD MONCKTON, E. C. vol. iv. col. 253]. Mr. Monckton Milnes remained M.P. for Pontefract till he was raised to the peerage, August 20, 1860, with the title of Baron Houghton. He has made no substantial addition to literature since the above memoir was written.

***HOUSSAYE, ARSÈNE**, a versatile French writer, was born at Bruyères, near Laon, March 28, 1815. He went to Paris in 1836, and commenced a literary career, which he has continued to the present time. His first productions were two novels, 'La Couronne de Bluets' and 'La Pécheresse.' With the friendly aid of Jules Janin, Théophile Gautier, and Jules Sandeau, he was introduced into literary and theatrical circles, which brought much employment for his pen. He published the 'Revue de Salon, 1844,' the 'Galerie de Portraits du XVIII^e Siècle,' 1844; and 'L'Histoire de la Peinture Flamande et Hollandaise,' folio, with 100 copperplate engravings, 1846. This last-named work brought upon him a charge of plagiarism by Alfred Michiels, against which he defended himself in a pamphlet. Through the influence of Mlle. Rachel he obtained, in 1849, the directorship of the Théâtre Français, which for some years he conducted with much success. On the proclamation of the Napoleonic Empire in 1851 he wrote a cantata for Rachel, 'L'Empire c'est la Paix.' In 1856 he resigned the directorship, wearied with the difficulty of satisfying the demands of jealous actors and authors; and accepted a place created for him—that of "Inspector-General of Provincial Museums." Houssaye's pen has seldom been inactive. His publications take a wide range, including novels, poems, dramas, criticisms, and miscellaneous contributions to various journals. His novels and romances are upwards of thirty in number. One of the latest of these is a series of four romances, under the general title 'Nos Grandes Dames,' 4 vols. 8vo., 1868. His 'Mademoiselle de la Vallière and Madame de Montespan,' 1860, is an historical study of Court life in the time of Louis XIV.; it has gone through many editions. His 'Notre Dame de Thermidor,' 1865, is a history of Madame Tallien. In poetry his chief works are 'Les Sentiers Perdus,' 1841; 'La Poésie dans les bois,' 1845; 'Poèmes Antiques,' 1855, &c. They have appeared in several editions, and in a collective form under the title of 'Poésies Complètes,' 1851, and again in 1858 as 'Œuvres Poétiques.' Houssaye's dramas, 'Les Caprices de la Marquise,' 1844, and 'La Comédie à la Fenêtre,' 1852, were not so successful as his other writings. In criticism and miscellaneous literature his productions are very numerous. One of the most remarkable among them is 'L'Histoire de la Quarante et unième fauteuil de l'Académie Française,' 1855. The idea is an ingenious one. The Académie being limited to forty members, Houssaye has invited the reader to be present at the imaginary reception (as the forty-first) of various great men in France, whom the Academy has refused or neglected to admit, from Descartes to Béranger. Another remarkable work by him is 'Le Roi Voltaire; sa généalogie, sa jeunesse, sa cour, ses ministres, son peuple, sa dynastie, &c.,' 1858. Several editions of his 'Œuvres' have appeared. He has written largely in 'Le Constitutionnel,' 'La Revue de Paris,' the 'Revue des Deux Mondes,' and especially 'L'Artiste,' the last of which periodicals was for some years managed by him. In 1861 he became chief proprietor and editor of 'La Presse.'

HOUSTON, SAMUEL, American general, remarkable for his extraordinary career, was born at Lexington, Virginia, March 2, 1793. When his father died, in 1807, his mother and her nine children retired to the backwoods of Tennessee, near the land of the Cherokees. Young Houston, after a little schooling, entered a store as a clerk; but soon absconding, he went to live with the Indians, who cherished him, and whose chief adopted him. In 1811 he returned to his relatives, and opened a school; in the following year he enlisted as a soldier; in 1814 became an ensign under General Jackson, and in the course of the campaign was severely wounded. In 1818 he began to study the law, in which he practised with success at Knoxville. In

1823, and again in 1825, he was elected to Congress, and also assumed the peaceful duties of major-general of militia. In 1827 he was made governor of Tennessee. His restlessness of character, however, did not allow him to remain long in any one place or any one employment. In April, 1829, after being three months married to the daughter of an ex-governor, he quitted his wife and the several duties of civilised life, went to his old acquaintances the Cherokees, in a new settlement beyond the Mississippi, and stayed with them as a chief for four or five years. During this period, in 1832, he went to Washington to protest against the misconduct of some of the Government agents in the breach of their engagements with the Indians; but although he succeeded in substantiating many of his charges, he made a host of enemies, who harassed him with prosecutions in various ways. A new field of enterprise opened to him soon afterwards, by the revolt of Texas from the Mexican Government; he joined the revolutionists, and became commander-in-chief of the small army of the Texans in 1835. Santa Anna opposed him with superior forces, and compelled him to retreat 300 miles; rallying his troops, however, Houston gained a signal victory at San Jacinto, April 21, 1836. This achieved the independence of Texas, which became a distinct republic; and in October he was elected the first president. After a term of two years he retired from office; but, matters becoming disorganised, he was re-elected in 1841. He then began to negotiate the union of Texas with the United States, which was effected in 1845; and he sat in the Senate of the United States at Washington from that year till 1859, as one of the two representatives for the State of Texas. Throughout this period he was the zealous friend of the Indians, in all matters of legislation and treaty. In 1854 he opposed the Kansas and Nebraska measure, and joined the party of the "Know-Nothings." When the Civil War broke out in 1861, he was governor of the State of Texas; he opposed the secession of the State, but finding his opposition unavailing, retired into private life. He died on the 23rd of July, 1863.

HOWARD, LUKE, was born in London in 1772, of Quaker parents. He was sent to a school in the north of Oxfordshire, where, as he was afterwards accustomed to say, he learned too much Latin grammar and too little of anything else. But he was fond of observation, especially of watching the appearances of the sky and the forms of clouds. On leaving school Howard was apprenticed to a chemist at Stockport. Here he devoted his spare time to the study of French, botany, and chemistry, on which last science the labours of Lavoisier and Priestley were then exerting a quickening influence. In 1798 he entered into partnership with William Allen, a celebrated manufacturing chemist; but after a few years the connection was amicably dissolved, Howard retaining the laboratory at Plaistow, and working it for profit.

Howard's first paper on the Modifications of Clouds was read before the Askesian Society. He also contributed some papers on Atmospheric Electricity, and one which was considered as an anticipation of the "cell" theory as regards the structure and functions of plants. But as the Askesian was not a publishing society, Howard lost the benefit of discoveries which he more or less originated. His paper on Clouds was published in 1803, and was, as he tells us, "the result of his early boyish musings, enriched by the observations of many a walk and ride morning and evening, to or from his day's work at the laboratory." He contributed many, if not all, the articles on Meteorology to Rees's Cyclopædia; also a series of papers to a journal, embodying the results of his observations from 1806. These were afterwards collected into 2 volumes, 1818—20, under the title 'Climate of London, deduced from Meteorological Observations made in the neighbourhood.' This was republished in 1833.

Howard became a fellow of the Royal Society in 1821. His reputation as a meteorologist was now established. His classification of the clouds is still retained in all observatories; and although the increasing perfection of instruments of observation has superseded some of his methods, his labours imparted more of a scientific character to meteorology than it had before received. Those who knew him well speak of his intense interest in the appearance of the sky. "Whether at morning, noon, or night, he would go out to look around on the heavens, and notice the changes going on. His intelligent remarks and pictorial descriptions gave a character to the scene never before realised by some. A beautiful sunset was a real and intense delight to him; he would stand at the window, change his position, go out of doors, and watch it to the last lingering ray;

BIOG. DIV.—SUP.

and long after he ceased, from failing memory, to name the 'cirrus' or 'cumulus,' he would derive a mental feast from the gaze, and seem to recognise old friends in their outlines."

Howard participated in the active beneficence of the Society of Friends. He exerted himself greatly to mitigate the sufferings of the Germans, during the campaigns that preceded the first abdication of Napoleon I. He took a great interest in Ackworth school, and in order the better to watch over its welfare, as well as to be able to offer hospitality to the visitors, he bought the Ackworth Villa Estate in 1823, and made it his summer residence, his winter residence being at Tottenham.

In 1796 Howard married Mariabella Eliot, also a member of the Society of Friends. They had seven children, but only two sons survived their parents. At about the age of eighty Howard was much enfeebled by illness, and he was greatly afflicted by the death of his wife, after a union of fifty-six years. He died at Tottenham on the 21st of March, 1864. His portrait, bequeathed to one of his friends, is eventually to be added to the Royal Society's collection.

In 1832 Howard published an essay on the 'Modification of Clouds.' In 1837, 'Seven Lectures on Meteorology'; in 1842, 'A Cycle of Eighteen Years in the Seasons of Britain,' &c.; in 1847, 'Barometrographia; twenty years' variation of the barometer in the Climate of Britain'; in 1850, 'Fifty-four Papers on Meteorology.' He was also writer or editor of a religious and literary periodical, entitled 'The Yorkshireman,' in 5 vols., 1833—37.

HOWARD, SIR ROBERT, politician and play writer, a younger son of Thomas Howard, first Earl of Berkshire, was born in January, 1626, and educated at Magdalen College, Oxford. He was an eager Royalist, and distinguished himself in more than one encounter with the Parliamentarians. At the Restoration he was knighted, made auditor of the Exchequer, elected M.P. for Stockbridge in 1661, and in 1679 for Castle Rising. He was employed by Charles II. in procuring the assent of the House to his many applications for money. Evelyn speaks disparagingly of his morals, and styles him "that universal pretender," a term that explains the appropriation to him of the character of Sir Positive At-All in Shadwell's play of the 'Sullen Lovers.' He first appeared as a poet in a volume of 'Poems, viz., a Panegyrick to the King, Songs and Sonnets, the Blind Lady a Comedy, the Fourth Book of Virgil, Statius his Achilleis, with Annotations, and a Panegyrick to General Monk,' small 8vo, London, 1696; to which Dryden prefixed a very laudatory copy of verses. Howard afterwards wrote the 'Indian Queen' in conjunction with Dryden, whom he patronised and introduced to his family, and who afterwards married his sister. But later, Dryden, resenting some slights, handled his brother-in-law rather roughly in his 'Defence of the Essay of Dramatic Poesy.' The Duke of Buckingham made Sir Robert the original Bilboa of his 'Rehearsal,' though he afterwards transferred the satire to Dryden as Bayes. Howard published 'Four New Playes,' folio, 1665, and others subsequently; his 'Dramatic Works' were collected in 1722. Pepys mentions being present at the performance of his 'Committee,' which he thought "a merry but indifferent play." Others were the 'Surprisa!,' 'The Duke of Lerma,' &c., dreary rubbish, now utterly forgotten. The reign of James II. cured him of his absolutist notions. He was a warm partisan of the Revolution; was made a privy councillor; in the first Parliament of William III. carried the Act annulling the sentence on Titus Oates, and continued thenceforward to take a prominent part as a steady Whig. In his last years, abandoning plays and poetry, he wrote on history, politics, and religion: 'Historical Observations upon the Reigns of Edward I., II., III., and Richard II., with Remarks upon their faithful Counsellors and false Favourites,' 12mo, London, 1689; 'The History of Religion,' 8vo, 1694; and one or two pamphlets. He died September 3, 1698.

HOWE, ELIAS, the inventor, or chief inventor of the sewing machine, was born at Spencer, Massachusetts, in 1819. He was the son of a farmer and miller; the family was large, and all had to labour. After working, as a boy, at sticking wire teeth into strips of leather, to make the hand apparatus for carding cotton, he went to Lowell in 1835, where he entered a manufactory of cotton machinery. In 1837 he worked in a machine shop at Cambridge (Mass.), and then at a nautical instrument maker's at Boston. In 1839 a conversation in his master's shop suggested to him the possibility of constructing a sewing machine; but it was not until 1843, when he was supporting a young family on the wages of a journeyman mechanic, that he bent his attention steadily to the matter. He experimented for twelve months on

Y Y

some contrivance that might imitate his wife's sewing; employing a needle pointed at both ends, with an eye in the middle, that should work up and down through the cloth, and carry the thread with it. But all his attempts failed. He then tried another kind of stitch: he conceived the idea of using two threads, one to be carried by a curved needle with the eye near the point, the other by a shuttle, the two threads locking together into a tight stitch. This was the turning point in his career. In 1844 he was convinced that he had hit upon the right principle, and what remained was to work it out practically. He entered into partnership with one George Fisher, who had a little capital to spare; and, after working sedulously during the winter, produced his first sewing machine in 1845: (it was at the Paris Exhibition in 1867). He himself sewed two suits of clothes with it, one for himself, and one for Fisher. But difficulties beset him: some tailors refused to believe in the possibility of a sewing machine; others feared that it would injure their trade; and he met with no encouragement. After employment for a time as engine-driver on one of the railways, he made a model of a somewhat improved sewing machine, deposited it in the patent office at Washington, and obtained a patent for it in 1846. Fisher had by this time spent all his money; Howe was as poor as ever; and he and his brother Amasa made a voyage to England in 1847. Howe made a bargain with a manufacturing staymaker in London, whereby the latter, for a sum of 250*l.*, was to become the purchaser of the machine which Howe brought with him, and was to have the right of making and using as many similar to it as he chose, Howe being employed by him for a time at weekly wages. The staymaker made an ample fortune, while the inventor returned to America nearly penniless in 1849. He found that during his obscurity in London his invention had attracted notice in America, and numbers were beginning to construct sewing machines. Obtaining a little money on loan, he bought up Fisher's share in the patent, and defended his patent rights in a court of law. In 1850 he superintended the construction of fourteen sewing machines at a machine-shop in New York, for a manufacturer who consented to pay him a licence fee. After a lengthened lawsuit against the infringers of his patent, decided in his favour in 1854, Howe repaid the money advanced to him, became unshackled owner of his patent, and began rapidly to accumulate a fortune. In 1860 his patent was renewed, and the Howe Machine Company, of which he was the chief partner, carried on the manufacture on a vast scale. Early in the Civil War the War Department sent an order for 50,000 sand-bags, such as are used in siege works; they were finished and shipped off by the company within 24 hours. Mr. Howe raised and equipped a regiment of volunteers at his own expense, presented every officer in it with a horse, and himself served for a time as a private. He died September 3rd, 1867. It is now generally admitted on both sides of the Atlantic that Elias Howe was, more than any other person, the real inventor of the sewing machine.

HOZIER, PIERRE D', Sieur de la Garde, in Provence, a celebrated genealogist and family historian, was born on the 12th of July, 1592, at Marseille, where his father, Etienne d'Hozier, was an advocate. After receiving his early education under the careful superintendence of his father, he was sent, in 1612, to prosecute his studies at Paris, from which, however, after about a year's stay, the weakness of his sight compelled him to return. He revisited Paris after the death of his father, in 1615, with an inclination to a military career, and entering the army, served under the Count de Crequi Bernieules, whom he assisted in the prosecution of his genealogical investigations. The success which attended his devotion to the elucidation of the antiquities of the illustrious family of which M. de Crequi was at that time the head, was conclusive in determining the after career of d'Hozier, who in 1620 obtained a place among the hundred gentlemen of the household of Louis XIII. in order that he might with greater ease and facility occupy himself with illustrating the archives of other principal families of France. Gaston de France, Duc d'Orleans, struck with admiration at the unexampled power of memory exhibited by d'Hozier in the recapitulation of the names, surnames, arms, exploits, and contracts of illustrious individuals, appointed him, January 12th, 1627, one of the gentlemen of his train; and in the following year, 1628, he received from the king the distinction of the Order of St. Michael, to which was added, in 1629, a pension of 1200 livres. In 1641 d'Hozier was appointed juge d'armes de France, in succession to St. Mauris, the first holder of the office; on the 31st of December, 1642, was made maître d'hôtel to the king; and after the death of Louis XIII., on the 14th of May, 1643, was

confirmed in his offices and honours by Louis XIV., by whom he was raised to his final dignity of conseiller d'état in 1654. After having acquired, by his ability, earnestness, and honesty, the reputation of being the founder of the science of genealogy, d'Hozier died at Paris, on the 1st of December, 1660.

His works include, 'Généalogie des Seigneurs de la Dufferie, sortis de la Maison de Baglioni, Seigneurs Souverains de Perouse en Italie,' folio, Paris, 1622; 'Généalogies et Alliances de la Maison des Sieurs de Larbour, dits depuis de Combault, sortie autrefois puinée de la première Race de Bourbon non Royale, dès avant l'An 1200, &c. Justifiée par Titres,' 4to, Paris, 1629; 'Table Généalogique pour faire voir que la Maison de S. Simon descend par les Femmes de la Royale Maison de France. Justifiée par Preuves,' folio, Paris, 1631; 'Généalogie de la Maison des Gilliers,' folio, Paris, 1631; 'Les Noms, Surnoms, Armes, et Blasons des Chevaliers et Officiers de l'Ordre du S. Esprit, créés par Louis XIII. le 24 May, 1633,' folio, Paris, 1634; 'Généalogie de la Maison de Rouvroy,' folio, Paris; 'Histoire de Bretagne jusqu'en 1458: avec les Chroniques des Maisons de Vitré et de Laval, par Pierre le Baud, Aumônier de la Reine Anne, Doyen de Saint Tugal de Laval. Les Breviaire des Bretons, ou leur Histoire abrégée en vers. Ensemble quelques autres Traités servant à la même Histoire, et l'Armorial des Maisons de Bretagne. Le tout tiré de la Bibliothèque du Marquis de Molac, et mis en Lumière par Pierre d'Hozier,' folio, Paris, 1638; 'La Généalogie de la Maison de Rosmadec,' folio, Paris, 1644; 'Remarques sommaires sur la Généalogie de la Maison de Gondy,' folio, Paris, 1652; 'Généalogie de la Maison Bournonville,' folio, Paris, 1657; 'La Généalogie et les Alliances de la Maison d'Amahé au Comté de Maconnais, par Pierre d'Hozier: avec les Preuves et Additions, par Pierre Palliot,' folio, Dijon, 1659; 'Généalogies des principales Familles de France: avec beaucoup de Titres servant de Preuves, rangées par Ordre alphabétique: recueillies par Pierre d'Hozier, et par Charles d'Hozier son Fils,' a work in 150 folio volumes, preserved in the national library of France, upon which each of the d'Hoziers is said to have spent 50 years, so that the whole may be regarded as the result of a century of labour.

CHARLES RENÉ D'HOZIER, whose name occurs jointly with his father's in the title of the last-named work, was born at Paris on the 24th of February, 1640, and succeeded his father in his office of juge d'armes de France. He enjoyed a pension of 4000 livres, and received from the Duke of Savoy the Croix de la Religion, and the knighthood of the military orders of St. Maurice and St. Lazare. He signalled his proficiency in heraldic knowledge by the composition of various works; and especially produced, under the direction of M. de Caumartin, 'Recherches sur la Noblesse de Champagne,' 2 vols. folio, Chalons, 1673; and 'Généalogies des Maisons de Conflans et de Lafare,' &c. He died in 1732; and was succeeded in his office by his nephew, LOUIS PIERRE D'HOZIER, who was born on the 20th of November, 1685, and died on the 26th of September, 1767, and who, jointly with his son, Antoine Marie d'Hozier de Sévigny, edited the 'Armorial Général de la France; ou, Registre de la Noblesse de France,' 10 vols. folio, Paris, 1738—68. The last-mentioned is also the author of 'Histoire Généalogique de la Maison de Chastellard,' folio, Paris, 1756.

HROSWITHA, whose name is more correctly written Hrôth-suth, corresponding with the old High German Hruodsuind, and varies as Hrosvita, Hrosvitha, Roswida, &c., a canoness of the Benedictine abbey of Gandersheim, in the duchy of Brunswick, was celebrated, towards the close of the 10th century, for her poetical talents, and especially for her dramatic compositions. She was born about the year 935, and died later than 968: possibly in one of the earliest years of the 11th century. Her life is little known, except as it has found expression in her works; and these have given rise to considerable discussion amongst bibliographers. The following list of them is given on the authority of M. Charles Magnin, the author of a French translation, with the Latin text, introduction, and notes of the 'Théâtre de Hrosvitha,' 8vo, Paris, 1845:—'Panegyria, sive Historia Oddonum,' of which she appears to have completed only the first part, 'Carmen de Gestis Oddonis I. Imperatoris,' a poem of about 900 hexameters, which has often been reprinted, as, for instance, in Justus Reuber's 'Veterum Scriptorum qui Cæsarem et Imperatorem Germanicorum Res per aliquot Secula gestas, Literis mandarunt, Tomus unus,' Frankfurt, 1784; a poem, also in hexameter verse, very valuable for the light which it throws on the literary and monastic history of the 9th and 10th centuries, entitled 'Carmen de Constructione Cœnobii Gandershemensis,' which was first published by J. G. Leuckfeld, in his

'Antiquitates Gandershemenses,' 4to, Wolfenbüttel, 1709, afterwards by Leibnitz, in his 'Scriptores Rerum Brunsvicensium Illustrationi inservientes,' 3 vols, folio, Hanover, 1707—10, and by J. Chr. Harenberg, in his 'Historia Ecclesiæ Gandershemensis cathedralis ac collegiæ diplomatica,' folio, Hanover, 1734, and by various editors of the works, or selections from the works of Hroswitha, German translation, by Fr. Horn, in the first volume of 'Nordalbingische Blätter,' 8vo, Hamburg, 1820, &c.; 'Maria. Historia Nativitatis laudabilisque Conversationis intactæ Dei Genitricis, quam scriptam reperi sub nomine Sancti Jacobi, Fratris Domini;' 'De Ascensione Domini;' 'Passio Sancti Gongolfi, Martyris;' 'Passio Sancti Pelagii, pretiosissimi Martyris, qui nostris Temporibus in Corduba Martyrio est coronatus;' 'Theophilus. Lapsus et Conversio Theophili Vice-domini;' 'Historia de Conversione cujusdam Juvenis desperati per Sanctum Basilium Episcopum;' 'Passio Sancti Dionysii, egregii Martyris;' 'Historia Passionis Sanctæ Agnetis, Virginis et Martyris;' and six comedies, composed avowedly on the model of Terence, which are exemplary for their pure morality, and very valuable as forming one of the links of the chain which connects, through works of a religious interest, the old pagan theatre with the later stage, and are entitled respectively, 'Gallicanus,' 'Dulcitius,' 'Callimachus,' 'Abraham,' 'Paphnucius,' and 'Sapientia,' in the last of which the interlocutors are "Antiochus, Adrianus, Sapientia, Fides, Spes, Charitas, Matronæ."

Amongst the partial or complete editions of the works of Hroswitha, may be mentioned, as the first in the order of time, that of Conrad Celtis, 'Opera, &c., nuper a Cr. Celte inventa,' folio, Nürnberg, 1501; 'Opera, &c., partim soluto partim vincto Sermonis Genere conscripta, recognita et repurgata Cura et Studio H. Lh. Schurzleischii,' 4to, Wittenberg, 1717; 'Poésies Latines de Roswithe, Religieuse saxonne de X^e Siecle, avec une Traduction libre en Vers français, &c., par Vignon Rétif de la Bretonne,' 8vc, Paris, 1854; 'Hroswithæ Gandershemensis Comœdiæ sex ad Fidem Codicis Emmeranensis Typis expressas, edidit J. Bendixen,' 16mo, Lubeck, 1857; 'Die Werke der Hrotswitha, herausgegeben von Dr. K. A. Barack,' 8vo, Nürnberg, 1858. The principal of the biographical and critical essays which have been produced in relation to Hroswitha, Canoness of Gandersheim, are 'Geschichte der Roswitha eines Stiftsfräuleins von Gandersheim,' 8vo, Leipzig, 1758; 'Roswitha die Nonne aus Gandersheim, von Edmund Dorer,' 8vo, Aarau, 1857; and an essay by Franz Löher, on Hroswitha and her Time, 'Hrotswitha und ihrer Zeit,' which appeared in a volume of scientific discourses delivered at Munich in the winter of 1858, 'Wissenschaftliche Vorträge gehalten zu München im Winter, 1858,' 8vo, Brunswick, 1858.

HUBER, FRANÇOIS, naturalist, was born at Geneva, July 2, 1750. When about seventeen years of age he lost his sight. Notwithstanding this defect, he occupied himself with making a series of observations and experiments on bees, which resulted in his drawing up one of the most accurate and fullest accounts in existence of the habits of bees. His inquiries were materially aided by his assistant Burnens, his son, and especially by his wife, who devoted herself to him, and endeavoured in every way to alleviate his misfortune. Her endeavours were so successful that he asserted that he should be miserable were his blindness to cease. His 'Nouvelles observations sur les Abeilles,' 8vo, Paris, 2nd ed., 1796, contains many important additions to our knowledge of those insects. He also helped to determine the fact that the bees secrete their wax, in a 'Mémoire sur l'origine de la Cire,' in 'Bibliothèque Britannique,' vol. xxv., pp. 58—79 (1804). He also wrote some observations on the germination of plants. He died October 22, 1830. His son, PIERRE HUBER (died 1841) was also an entomologist. He wrote several articles for the Mémoires of the Physical Society of Geneva, but is best known for his remarkable work on the manners of ants.

* HÜBNER, RUDOLF JULIUS BENO, German historical painter, was born in 1806, at Oels, in Silesia, and studied at Berlin, under Schadow, whom he accompanied to Düsseldorf, and whose manner he adopted. He was associated in various works with Hildebrandt and Lessing, and he enlarged his views of art by Italian travel. In 1839 he settled in Dresden, where, in 1841, he was appointed professor in the Royal Academy. His works consist of religious subjects, as 'Ruth and Boaz,' his earliest picture; 'Job and his friends,' 'Samson breaking the pillars of the Temple,' 'Christ Teaching,' 'Christ Scourged,' 'Samuel brought to Eli,' 'Guardian Angels,' of allegories, as the 'Germania,' known by Stahl's engraving; of historical subjects, like his great work, 'Luther's Disputation with Eck;' and of historical portraits, as the 'Emperor Frederick III.' for the city of Frankfurt. Hübner is

admired for the purity of his forms, for his skilful composition and for a certain mystic depth of feeling; but his works seem to an English eye cold, elaborate, and conventional.

HÜBSCH, HEINRICH, celebrated German architect, was born at Weinheim, February 9th, 1795. On quitting Heidelberg University, he entered the Bauschule, Karlsruhe, and there studied architecture under Weinbrenner. During 1817—20 he travelled in Greece, Turkey, and Italy, making a careful study of the architectural remains of Athens and Rome. Having settled in Karlsruhe he was appointed in 1827 court architect and member of the state architectural commission; in 1829 a commissioner of buildings, and subsequently chief director of buildings in the grand duchy. As architect he found ample employment, and he is regarded as the founder of a new epoch of architecture in Baden. He held decided opinions on architectural style, which he set forth in his essay 'In what Style shall we build?'—'In welchem Stile sollen wir bauen?' 8vo, Karlsruhe, 1828, and exemplified in the numerous buildings he erected. Among these were the Hotel of the Finance Minister, the Kunsthalle, the Polytechnic Institute, the Botanical Museum, the Court Theatre, &c., in Karlsruhe; the theatre and salons at Baden-Baden, &c. These and other civil buildings are mostly a modification of, or based on, the Lombardic style, but exhibit a considerable amount of difference and some originality in the ornamentation. In his later years he gave increasing attention to ecclesiastical architecture, and built a large number of both Lutheran and Catholic churches at Freiburg, Mühlhausen, Mannheim, Bülach, Stahringen, and elsewhere. His latest, and perhaps most important work in this line was the magnificent restoration of Spiers cathedral, carried out chiefly at the expense of King Ludwig of Bavaria. Besides the essay already cited, Hübsch published an essay on Greek Architecture, 'Ueber griechische Architektur,' Heidelberg, 1822; on Architecture and its connection with Painting and Sculpture, 'Die Architektur und ihr Verhältniss zur heutigen Malerei und Sculptur,' 8vo, Stuttgart and Tübingen, 1847; a series of views in Athens, a treatise on architectural ornament, and a learned and elaborate work on early ecclesiastical architecture, 'Die altchristliche Kirchen nach den Baudenkmalen und ältern Beschreibungen,' 8vo, with an atlas of 63 plates, Karlsruhe, 1859—62. Hübsch died at Karlsruhe on the 3rd of April, 1863.

HUC, EVARISTE RÉGIS, a French missionary, was born at Toulouse, August 1, 1813. In 1839 he went to China as a missionary. In 1844 he was instructed, in conjunction with M. Gabet, to penetrate into the central deserts of Asia, for the purpose of propagating their religion. They stopped at the celebrated Buddhist convent at Kounboun for some months, studying the Thibetan language; and then joined a caravan on its way from China to Lhasa, the capital of Thibet. They resided at Lhasa for a time, but towards the end of 1846 the Chinese ambassador insisted on their being compelled to quit the country. In the course of his wanderings, the Abbé Huc obtained much interesting information about people and places which had hitherto been almost unknown to Europe. The books which he wrote acquired considerable popularity; and, although from a scientific point of view they are not of much importance, still they contain accounts of places which no other Europeans had visited and reported on. Recently, however, much more accurate geographical information about Lhasa and its environs has been obtained. The works written by Huc are entitled 'Souvenirs d'un Voyage dans la Tartarie, Thibet et la Chine, pendant les années 1844, 1845, et 1846,' 2 vols, 8vo, Paris, 1850; 'L'Empire Chinois,' 2 vols, 8vo, Paris, 1854; and 'Le Christianisme en Chine, en Tartarie, et au Thibet,' 3 vols, 8vo, 1857. Huc died in March, 1860.

* HUGHES, THOMAS, M.P., the second son of Mr. John Hughes, of Donnington Priory, near Newbury, in Berkshire, was born at Uffington, Berks, on the 20th of October, 1823. He was educated at Rugby, under Dr. Arnold; removed to Oriel College, Oxford, in 1841, and took his B. A. degree in 1845. He entered as a student at Lincoln's-inn, was called to the bar in 1848, and became a Chancery barrister. In 1856 he published 'Tom Brown's Schooldays'—a book which has since become closely associated with his name, and which is a vigorous reminiscence of the author's experiences as a Rugby boy. In 1858 appeared his 'Scouring of the White Horse,' a lively account of an annual festival, held avowedly for the purpose of cleansing the vast effigy, known as the White Horse of Berkshire, on the side of a down near his native village of Uffington. In 1861 he published 'Tom Brown at Oxford,' treating college life in the same spirit as he had treated public-school life. Mr.

Hughes has not practised much at the bar. He has rather turned his attention to politics, and especially to the well-being of the working-classes, and the maintenance of amicable relations between them and their employers. Mr. Hughes has been applied to by men and masters to act as arbitrator in trade disputes, and with the happiest results. "As an instance of what may be accomplished in this way," said Mr. Mundella, in the House of Commons, February 14, 1871, "he might mention that the hon. member for Frome, by his labours in a court of arbitration, within the last few days, had settled the question of wages in a town formerly torn by strikes, to the entire satisfaction of both master and workmen, until March, 1872." At the general election of 1865 he was chosen one of the members for Lambeth, and for three years took an active part in the furtherance of liberal measures. When the Reform Act of 1867 led to a general election in 1868, Mr. Hughes withdrew his candidature, in order that a working-man might have a chance of election for Lambeth: but that object was not attained. He became member for Frome, which borough he still represents (1871). Mr. Hughes has shown a warm interest in the intellectual as well as the social advancement of the industrial classes. He was one of the founders of the Working Men's College, Great Ormond-street, London, and during its early years an active member of the council, and lecturer; he has continued to afford it his zealous support and counsel, and has given willing aid to all similar institutions. After writing prefaces to new editions of the works of Lowell, Whitmore, and other American authors, he visited the United States in 1870, and was received with marked cordiality. He took advantage of the opportunity to deliver a lecture at Boston, on the best means of maintaining friendly relations between the two countries. The lecture was afterwards published in England, under the title 'John to Jonathan.' Mr. Hughes is colonel of the Working Men's Volunteer Rifle Corps, which he assisted in establishing and organising.

* HUGO, VICTOR MARIE, VICOMTE. [E. C. vol. iii. col. 507.] First at Jersey, and then for a longer period at Guernsey, M. Hugo spent the years during which the Emperor of the French remained in power. From first to last he refused to acknowledge the rule of Napoleon III. In 1856 he published his 'Contemplations,' 2 vols. 8vo: a work in which the souvenirs of a poet are treated under the heading 'Autrefois,' and the inspiration of a prophet under that of 'Aujourd'hui.' This work has gone through many editions. 'Les Enfants, Livre des Mères,' 12mo, 1858, is a smaller and less pretentious work. 'La Légende des Siècles,' 2 vols. 8vo, 1859, is a collection of poems, announced as being the first part of a trilogy, of which the second and third parts were to bear the titles 'La Fin de Satan,' and 'Dieu.' The same year witnessed a decree of the Emperor, on August 15th, which permitted the re-entrance of political exiles into France. Victor Hugo, with Louis Blanc, Edgar Quinet, Charras, and some others, refused to avail themselves of the concession, and published a protest against the terms in which it had been made. 'Les Misérables,' a romance of a singular kind, was published with more than usual trade boldness. Besides the French edition, (10 vols. 8vo, 1862,) the work was translated into English, German, Italian, Spanish, and Russian, and published on the same day at Paris, Brussels, London, New York, Berlin, Turin, and St. Petersburg. An illustrated French edition, in small 18mo vols., 1863-5, had an enormous sale. Hugo's son, Charles Victor, dramatised the work, and had it brought out at Brussels; but it did not meet with much success. 'Victor Hugo raconté par un témoin de sa vie,' 2 vols. 8vo, 1863, is understood to have been written by his wife, with his concurrence. 'Littérature et Philosophie Mélangées,' and 'William Shakespeare,' both published in 1864, passed without special attention; but 'Chansons des Rues et des Bois,' 1865, earned for the author the sobriquet of the 'Paganini of poetry': so bizarre in form, idea, and imagery are the caprices, and yet so picturesquely truthful the details. 'Les Travailleurs de la Mer,' 3 vols. 8vo, 1866, has been characterised as a sort of idyllic épopée, simple recitals presented in a picturesque form. In 1867 his drama of 'Hernani' was acted with great success at Paris for many weeks, when the city was crowded with visitors to the International Exhibition. 'L'Homme qui rit,' 4 vols., 8vo, 1869, is intended to develop a sort of metaphysical and social programme; but it has met with only a limited amount of favour. An English version of the work appeared in the 'Gentleman's Magazine,' in 1870. When the Revolution took place at Paris, September 4th, 1870, by which the imperial power was deposed, France was re-opened to such of the exiles as had continued to reside abroad. M. Victor Hugo was among

those who returned to Paris, where he was received with great enthusiasm. He did not, however, join the Committee of National Defence; nor did he render much practical service in the ensuing troubled period of five months. In February, 1871, he was elected to the new National Assembly.

* HULL, EDWARD, geologist, was born in Antrim, in 1829. He has been long employed on the geological survey of Great Britain, in connection with which he has contributed several memoirs, descriptive of the geology of parts of Wiltshire, Gloucestershire, Leicestershire, Berkshire, Oxfordshire, Lancashire, Cheshire, Cumberland, and Westmorland. He has written several papers on the Permian rocks near Heidelberg, on isodiametric lines in sedimentary deposits, and on the old palæozoic ridge of land across what is now the central portion of England. He has also written a book, entitled 'The Coal Fields of Great Britain, their History, Structure, and Duration; with notices of the Coalfields of other parts of the World,' 8vo, London, 1861, which is an excellent popular digest of what is known on the subject. On the death of Professor Jukes, 1869, Mr. Hull succeeded to the directorship of the Geological Survey of Ireland. He is also professor of geology in the Royal College of Science for Ireland, and a fellow of the Royal and other societies.

HULLS, JONATHAN, the inventor, or one of the inventors of steam navigation, was a native of Kingston-upon-Hull, and is known to have exercised his ingenuity during the reign of George the Second; but personal details relating to him are wanting. He took out a patent, December 21st, 1736, for a mode of applying steam power to the propulsion of vessels; and in the following year he published a pamphlet containing a description of the boat and its mechanism, an illustrative plate, and a refutation of certain objections which had been urged against his plan. The pamphlet had for title—'A Description and Draught of a new Invented Machine for carrying Vessels out of or into any Harbour, against Wind and Tide, or in a Calm,' 12mo, 1736. The description related to a tug-boat, to draw sailing vessels under circumstances when the sails would be useless. So little was this pamphlet known at the time when steam navigation became really established, that the name of Jonathan Hulls was scarcely mentioned by any the claimants to the honour of the invention; but since the publication of an edition comprising a small number of copies, edited by J. Sheepshanks, in 1855, it has been found that Hulls must no longer be excluded from the list. "In some convenient part of the tow-boat," he says, "there is placed a vessel about two-thirds full of water, with the top close shut. This vessel being kept boiling, rarifies the steam, which being conveyed through a large pipe to a cylindrical vessel, and there condensed, makes a vacuum, which causes the weight of the atmosphere to press on the vessel, and so presses down a piston fitted into the cylindrical vessel, in the same manner as Mr. Newcomen's engine, with which he raises water by fire." He calculates the power of the steam generated in a cylinder of certain size, and from thence deduces the tractive force of the tug-boat. The propelling machinery adopted by him was very curious. Two paddle-wheels were suspended in a frame projecting from the stern; two ropes, from two pistons (which worked alternately in two cylinders), extended to the two paddle-wheels, one to each; the ropes passed over pulleys, and the free ends were kept hanging down by weights. The ropes conveyed the motion from the pistons to the paddles, and each gave a pull in turn. However clumsy the arrangements may have been, as described and depicted, it is certain that a boat *could* have been propelled by such means. The late Professor Barlow, after noticing the complexity of the apparatus, said, "Yet as the first idea of such an application of the power of steam, it is as an historical fact extremely interesting. It appears to have altogether failed at that time, either from want of encouragement, or from the inefficiency of the apparatus."

* HULLAH, JOHN. [E. C. vol. vi. col. 1096.]

HUMBOLDT, FRIEDRICH HEINRICH ALEXANDER, BARON VON [E. C. vol. iii. col. 509]. Almost to the end, Humboldt retained his usual good health, and clearness of intellect; although for the last few years of his life he was feeble in body. He took an active interest in science, and kept up an enormous correspondence, so that in one of his letters written a few weeks before his death, he states that the answering letters at the rate of 2000 a year is becoming rather a burthen to him. His time was mostly occupied with his 'Cosmos,' of which the first part of the 4th volume appeared in 1858; the remainder, which was in a forward state at the time of his death, was published in 1862. Humboldt died on the 6th of May, 1859. In 1869 the first centenary of his birth was celebrated at Berlin,

when a long account of his life and labours was delivered by Ehrenberg, which has since been published under the title of 'Gedachtnisrede auf Alex. von Humboldt,' 1870. A notice of him has been given in almost every important scientific journal. Memoirs of him have also been published by F. A. Schwarzburg, and Bayard Taylor.

HUNT, JAMES, anthropologist, was born at Swanage in 1833, and was educated for the medical profession. His father had established a successful practice in the cure of stammering, and he himself adopted the same specialty, in which he acquired considerable skill and reputation. He made numerous observations on stammering, and published the results in two works, one entitled 'On Stammering and Stuttering, their nature and treatment,' which has attained its seventh edition, and the other 'A Manual of the Philosophy of Voice and Speech.' He was an active member of the Royal Society of Literature, and of the Ethnological Society. In 1863 he founded the Anthropological Society, of which he was for several years president. His scientific papers include his presidential addresses, treatises on the negro, acclimatisation of man, prehistoric monuments of various parts of Europe, and a translation of Karl Vogt's 'Lectures on Man.' He was a member of a large number of foreign scientific societies. He died at Ore House, near Hastings, August 26, 1869.

HUNT, JAMES HENRY LEIGH [E. C., vol iii. col. 518]. Mr. Hunt died on the 28th of August, 1859. A new edition of 'The Autobiography of Leigh Hunt, with a further Revision and Introduction by his eldest son,' appeared in 1860; 'The Correspondence of Leigh Hunt: Edited by his eldest son,' in 2 vols, 8vo, 1862; and 'A Day by the Fire; and other Papers, hitherto uncollected,' in 1870.

* HUNT, THOMAS STERRY, chemist and geologist, was born at Norwich, Connecticut, September 5, 1826. After attending the educational establishments of his native city (where he acquired sufficient chemical knowledge to make out the complicated composition of monazite), he went to Yale College, New-haven, first as a private student with Professor B. Silliman, jun., and afterwards as chemical assistant to the elder Silliman. On leaving Yale he became chemist and mineralogist to the Geological Survey of Canada, of which Mr. (now Sir) W. E. Logan, was director, a post which he still occupies. He has given most of his attention to the chemistry of organic and inorganic compounds. He has been the leading disciple and expounder in America of the doctrines and theories of Dumas, Laurent, Wurtz and Gerhardt. His work in connection with the Canadian geological survey has led him to numerous important conclusions relating to the composition, alteration, and mode of formation of minerals and rocks, such as serpentines, limestones, dolomites, euphotide, and numerous others; to the composition of spring-waters, and the reactions which take place in them under various conditions; to the reaction of the salts of lime and magnesia, and the light which these give as to the mode of formation of gypsum and the magnesian rocks; and to the explanation of volcanic phenomena. His researches are published in the reports of the geological surveyors of Canada, in 'Comptes Rendus,' in 'The American Journal of Science and Art,' in the 'Canadian Naturalist,' and in a few other scientific journals.

HUNT, WILLIAM [E. C. vol. iii. col. 520]. This admirable water-colour painter, unrivalled in his way, died February 10, 1864, aged 74. Six or eight of his pictures are in the National Collection at South Kensington, and several small studies of shells, &c.—marvellous as minutely accurate, yet broad, imitations of simple natural objects—have been distributed among the art schools of the country, they having been commissioned by Mr. Ruskin for that purpose.

HUNTER, REV. JOSEPH, Sub-commissioner of the Public Records [E. C. vol. iii. col. 525]. After a painful illness of two years' continuance, Mr. Hunter died in London on the 9th of May, 1861. He was born at Sheffield, February 6, 1783.

HUNTINGTON, WILLIAM, S.S., a Calvinistic preacher, the reputed son of a day-labourer named Hunt, but really the son of a farmer named Russel, was born in 1744, at Cranbrook, in the Weald of Kent. The circumstances of his family were so straitened that his earlier years were passed in "hunger, cold and almost nakedness;" and to supply his wants he was occasionally driven into petty acts of childish dishonesty, as he himself narrates in his autobiography. His means of education were restricted to the desultory advantages of a free school; and he was early taken from this in order to help his father in farm labour. After a time he became an errand-boy; was a servant in the employ of various persons, and varied his occupations by acting as day-

labourer, gardener, coalheaver, and shoemaker. He married early in life, and lived successively at Mortlake, Sunbury, Ewell Marsh, and Thames Ditton. When he made his début as a preacher, he was known as the Coalheaver, a name by which, with other curious epithets, he frequently designated himself in after-life. After preaching at Woking, Thames Ditton, Farnham, Petworth, and other places, he was called upon to take his turn in officiating at Margaret Street Chapel; but when he found that this was "open to every erroneous preacher, the hearts of his hearers were stirred up to look out for another place for him, and very soon, 1788, a larger chapel was built, in Gray's Inn Lane, which he called by the name of Providence Chapel." At this time he resided in Church Street, Paddington, often leaving town for the purpose of itinerating in the country, throughout which he preached in most of the counties of England between Devonshire and the North Riding of York. About the year 1800 he migrated to Cricklewood House, near the Edgware Road, where he combined with his spiritual avocations, the business of a farmer and grazier. As after fixing upon the site of his chapel, "God had drawn the pattern of the chapel to be erected, on the imagination of a wise man while hearing him preach a sermon," and had put it into the hearts of friends to supply the fittings and all requisites for worship, so now Huntington found the same providential impulses at work for his secular interests. Every necessity for stocking his farm and carrying it on, together with every convenience—including a coach and pair of horses—for an increasing family, followed in the order of his prayers, his wants, his wishes, and his opportune imparting of them to persons able and willing to entertain them favourably. In the "Bank of Faith" it was scarcely possible for him to overdraw his account. In the days of his poverty, prayer had brought him annual suits of professional clothes, riding breeches, and horseman's coats, all of which fitted him—in many cases without his measure having been taken—as if the tailors had laboured under a divine inspiration; and in the days of his prosperity, this last was increased by his marriage—his first wife having died not long before—with Lady Sanderson, the daughter of Alderman Skinner, who was Lord Mayor in 1795, and widow of Sir James Sanderson, Bart., M.P., who had served the same office with great distinction in 1792. In 1810 Huntington's chapel was burned down, and when his wife and daughter stood weeping over the calamity, he asked them, "Why do you weep? Is God Almighty bankrupt?" Another chapel speedily arose, the freehold of which he demanded and received for himself before he would officiate in it, in order that he might with the more independence and fearlessness give utterance to his opinions. As he was not blessed with academical distinctions, as M.A., or D.D., he adopted the style of S.S., by which he meant Sinner Saved, after his name, and had these letters, as well as his initials, W. H., blazoned on the panels of his coach. In his latter years he resided at Pentonville, and having been taken violently ill there on the 11th of June, 1813, determined to go down to Tunbridge Wells, where he died on the 1st of July following. On the 29th of June, when his friend, Mr. Bensley, expressed his gladness at "seeing him look so comfortable," he replied, "Why should I look otherwise? Death with me has lost its sting these forty years; I am no more afraid of death than I am of my nightcap." A monument was erected to his memory in Providence Chapel, which, *inter alia*, states that "he was interred in the burying ground belonging to Jireh Chapel, at Lewes, in Sussex; where the following Epitaph, dictated by himself a few days before his death, is inscribed on his tomb: 'Here lies the Coalheaver; beloved of his God, but abhorred of men. The Omniscient Judge, at the Grand Assize, shall ratify and confirm this, to the confusion of many thousands; for England and its Metropolis shall know 'that there hath been a prophet among them.' It is, at least, certain that he fixed upon the year 1870 as the extreme limit of the temporal power of the Pope. So great was the affection of his adherents to his person, and their devotion to his memory, that at the sale of his effects at Pentonville, an old arm-chair sold for sixty guineas, and many other articles fetched proportionally high prices."

His preaching partook of the peculiarities of his ordinary life; full of independence and individuality, novel in his expositions, dogmatic in his assertions, confident in his ability as an interpreter of the Bible, which he seemed to know by heart, to recapitulate at will, and to use as suited him in argument. His sermons were desultory and frequently protracted through a delivery of a couple of hours. Chapels still exist in Sussex and other

counties where his peculiar tenets are taught, and they are periodically advocated by the 'Gospel Magazine,' the conductor of which, the Rev. Dr. D. A. Doudney, vicar of St. Luke's, Westminster, Bristol, edited his 'Select Works,' in 1856.

The personal and professional career of a man like Huntington, as is to be expected, was a pretty nearly constant succession of controversies. "God enabled him," he says, "to put out several little books, which were almost universally exclaimed against both by preachers and professors, and by these means God sent them into all winds. They are calculated to suit the earnest enquirer, the soul in bondage, in the furnace, in the path of tribulation, or in the stronghold of Satan. I have heard of them from Wales, from Scotland, from Ireland, from various parts of America, from Cadiz in Spain, from Alexandria in Egypt, and, I believe from both the East and West Indies." These "little books" include, "A Divine Poem upon a Spiritual Birth," 8vo, London, 1784, second edition, with additions, 1789, fifth edition, 1815, other editions, 1830, 1836, and 12mo, 1852; "A Divine Poem on the Shunamite," 8vo, London, 1787, new edition, revised and corrected, 8vo, London, 1808; "Epistles of Faith," two parts, 8vo, London, 1785, 1789, 1792, &c., 8vo, London and Brighton, 1851, 16mo, London and Guildford, 1858; "Justification of a Sinner and Satan's Law Suit with him," 8vo, London, 1787, &c.; "The Arminian Skeleton: or, the Arminian dissected and anatomized," 8vo, London, 1788, sixth edition, 8vo, London, 1814, new edition, 8vo, London, 1835, 16mo, London and Guildford, 1855, &c.; "Cry of Little Faith," 8vo, London, 1768, fifth edition, 1814, new edition, 1823, &c.; "The Naked Bow of God," a record of Divine judgments on the author's adversaries and antagonists; "God the Guardian of the Poor, and the Bank of Faith: or, a Display of the Providences of God which have at Sundry Times attended the Author," and the "Kingdom of Heaven taken by Prayer," all of which have gone through numerous editions; "The Bank of Charity at Providence Chapel," 8vo, London, 1790, &c.; "The Bond Child brought to the Test, and his Use of the Letter considered," 8vo, London, 1789, fourth edition, 8vo, London, 1814; "The Broken Cistern," &c., 8vo, London, 1791, second edition, 1800, and "Forty Stripes save none for Satan: or, The Devil beaten with Rods," 8vo, London, 1792, 1809, &c., jointly published in 16mo, London and Woking, 1855; "The Barber: or, Timothy Priestley shaved, as reflected from his own Looking-glass," two parts, 8vo, London, 1791-92, second edition, 1798, &c., being a reply to Dr. Priestley's "Christian's Looking-glass"; "Advocates for Devils Refuted, and their Hope of the Damned Demolished: or, an Everlasting Task for Winchester and all his Confederates," 8vo, London, 1794, new edition, 1815; "An Answer to Fools and a Word to the Wise. Addressed to the Reverend Maria de Fleury," &c., 8vo, London, 1792, being a reply to the work entitled, "A Farewell to Mr. Huntington"; "The Lying Prophet Examined and his False Predictions Discovered: being a Dissection of the Prophecies of Richard Brothers," 8vo, London, 1795, &c.; "Correspondence between Noctua Aurita and Philomela," 8vo, London, 1799, new edition, 1809; "Contemplations on the God of Israel, in a Series of Letters to a Friend," 8vo, London, 1802, 1810, and 16mo, 1838, 16mo, London and Woking, 1840 and 1855; "Destruction of Death by the Fountain of Life," 8vo, London, 1804, second edition, 1805, 16mo, London and Woking, 1840; "The Coalheaver's Scraps; a Present to his Venerable and Reverend Brother Jenkins," 8vo, London, 1809; "The Doctrine of Garrett Refuted," 8vo, London, 1808, 1830, 1836, &c.; and a sermon, on Psalm civ. 3, entitled "The Apartments, Equipage and Parade of Emmanuel," 8vo, London, 1811, 1835, &c. The "Works of William Huntington, completed to the close of the year 1806," 20 vols., 8vo, London, 1811, &c., were published by Mr. T. Bensley; and the Rev. Dr. Doudney edited, with an introductory preface, "The Select Works of the late Rev. William Huntington, S.S.," six vols., 8vo, London, 1856. Huntington's "Posthumous Letters," were published in four vols., 8vo, London, 1815-22, of which the first three volumes were edited by his widow, Lady Sanderson, and the fourth by Mr. Bensley; a *verbatim* reprint of which was published in two vols., 8vo, Brighton, 1850. The writer of these "Letters" speaks of himself in all kinds of allegorical and other quaintness; subscribing himself now as the "Coalheaver," and again as "S. S.," "The Doctor," "Parson Sack," and "Jonah under the Booth near Nineveh." A few years ago appeared a volume of "Recollections of the late William Huntington; together with Selections from his Writings, Anecdotes, remarkable Incidents, &c. By William Stevens, one of his Hearers," 8vo, London, 1868.

HUPFELD, HERMANN, a German orientalist and divine, was born in 1796, at Marburg, in the University of which he was first a student and afterwards a tutor. After acting for a few years as extraordinary professor at Halle, where he diligently prosecuted his researches in eastern learning, he returned, in 1825, to Marburg, and became professor of the oriental languages in that university in 1827, adding to his duties, in 1830, those of the chair of theology. In 1843 he was called upon to succeed Gesenius, by whose instructions he had formerly profited, as professor of theology at Halle; and held that position until his death on the 24th of April, 1866.

The results of his labours, which were mainly occupied with the Semitic languages, and especially with Hebrew, in the composition of which he claimed to have discovered the débris of a primitive Semitic language, and to have ascertained its ancient laws and transformations, are to be found in the following works:—"Exercitationes Æthiopice, sive Observationum criticarum ad emendandam Rationem Grammaticæ Semiticæ," 4to, Leipzig, 1826; Letters on North America, and especially on a Settlement in Alabama, 'Briefe eines deutschen Ausgewanderten aus Nordamerika, besonders eine Ansiedelung in Alabama betreffend,' 12mo, Marburg, 1834; On the Idea and Method of the Introduction to the Bible, together with a Review of its History and Literature, 'Ueber den Begriff und Methode der sogenannten biblischen Einleitung, nebst ein Uebersicht ihrer Geschichte und Literatur,' 8vo, Marburg, 1844; 'De Rei Grammaticæ apud Judæos Initii antiquissimisque Scriptoribus, Commentatio,' 4to, Halle, 1847; 'Commentatio de antiquioribus apud Judæos Accentuum Scriptoribus,' 2 vols. 4to, Halle, 1846-47; 'Commentatio de primitiva et vera Festorum apud Hebræos, ex Legum Mosaicarum Varietate eruenda,' 2 parts, 4to, Halle, 1851-52; 'Quæstionum in lobeoides Locos vexatos Specimen. Commentatio,' &c., 4to, Halle, 1853; Sources and Composition of the Book of Genesis, 'Die Quellen der Genesis und die Art ihrer Zusammensetzung,' &c., 8vo, Berlin, 1853; Translation and Commentaries on the Psalms, 'Die Psalmen. Uebersetzt und ausgelegt,' 4 vols. 8vo, Gotha, 1855-62; and a Critique on the theosophic or mythological Theology of the Day, 'Die heutige theosophische oder mythologische Theologie und Schrifterklärung. Ein Beitrag zur Kritik derselben,' 8vo, Berlin, 1861.

HURLSTONE, FREDERICK YEATES [E. C. vol. iii. col. 528]. Mr. Hurlstone died at his residence, Charles-street, Belgrave-square, on the 10th of June, 1869, in his 59th year.

HUTTEN, ULRICH VON, who, on account of his philippics against the Papacy, has been called the Demosthenes of Germany, and who, as a member of one of the noblest families of Franconia, exhibited in his own person the characteristics of the knightly and the theological adherents of the Reformation, was born at the Castle of Steckelberg, on the 20th of April, 1488. In 1499 he was sent to the Convent of Fulda, with a view to the life of the cloister; but not feeling a vocation for this career, he escaped from it at 16 years of age, and repaired to the University of Cologne, where he devoted himself to the study of languages. In 1506 he migrated to the University of Frankfurt-on-the-Oder, where he took his M.A. degree. In 1508 he went to Italy, and served for a short time as a soldier of fortune; and returned to lead an unsettled life in various parts of Northern Germany, during which he temporarily acted as a teacher in the University of Rostock. In 1510 he produced a Latin poem, entitled 'De Arte Versificandi: Liber unus in heroico Carmine,' 4to, Wittenberg, 1511, which has been many times published, edited, and annotated; and addressed in the following year, 'Ad Divum Maximilianum Cæsarem, Exhortatio,' by which he gained considerable applause. Out of deference to the wishes of his father, he revisited Italy in 1512, for the purpose of studying jurisprudence at the University of Padua; and, after having suffered spoliation at the taking of this city in 1513, repaired to Bologna in a state of destitution, and once more took temporary military service. After a visit to Rome, during which he prepared the weapons with which he subsequently attacked the Papal system, he returned in 1514 to Germany, and repaired to the Court of Archbishop Albert of Mayence, in whose praise he wrote 'In Laudem Reverendissimi Alberthi Archiepiscopi Maguntini Panegyricus.' In 1515 he paid a visit to Frankfurt to see Erasmus; and in the following year, after another sojourn in Italy, had a principal hand in producing the famous satirical defence of Reuchlin against the Dominican theologians of Cologne, entitled 'Epistolæ obscurorum Virorum ad Venerabilem Virum Magistrum Ortuinum Gratium Davenportensem Coloniam Agrippinensem bonas Litteras docentem: variis

et Locis et Temporibus missæ ac demum in Volumen coactæ, 4to, 1516, of which editions have been constantly issuing from various English and continental presses up to the present time, amongst the latest being one by "Rocchus Bocchus, LL., A.A.M., Muselmannus," 8vo, Leipzig, 1858, and a very complete one in 16mo, Leipzig, 1864. In this celebrated satire, monks, who are adversaries of Reuchlin, and the supposed authors of the letters, discourse on the affairs of the time, and on theological subjects, after their own manner and in their own barbarous Latin. They address to their correspondent, Ortuinus Gratius, professor at Cologne, and friend of Pfefferkorn, the silliest and most useless questions, exhibiting their ignorance, incredulity, superstition, vulgarity, gluttony, pride, fanaticism, and persecuting zeal. They inform Gratius of several of their droll adventures, their escapes, their dissoluteness, and a variety of scandals in the lives of Hochstraten, Pfefferkorn, and other leaders of their party. The satire is highly coloured, and yet the style of the letters is so natural that they were accepted as genuine by a large proportion of the Dominicans and Franciscans, who regarded them as offering a valuable apology for the monastic life. But the rage of the monks was at length fiercely stirred against the reputed authors of the letters; and Erasmus, Reuchlin, and Hutten, were the especial objects of their denunciations. It was to Pirckheimer, of Nürnberg, one of the Army of Reuchlinists, "*Exercitus Reuchlinistarum*," that Hutten addressed his '*Epistola Vitæ suæ Rationem exponens*,' 4to, Augsburg, 1518. Whilst in Italy, Hutten had produced, in Latin verse, his '*Epistola ad Maximilianum Cæsarem Italiæ fictitia*,' 4to, Bologna, 1516; and on his return to Germany, dedicated to the same Emperor a book of epigrams, '*Epigrammatum, ad Maximilianum Imperatorem, Libellus*,' 1517, after which he was admitted by the Emperor to the dignity of knighthood, and of the poetical crown, at Augsburg. In 1518 he again went to reside at Mayence, under the patronage of Archbishop Albert, to whom he dedicated an edition of two Books of Livy, which he discovered in 1519, as well as the works, or portions of the works, of other classical authors. In the last-named year, he varied those scholarly pursuits which won for him from Erasmus the epithet of "*Linguae Latine Delicium*," by fighting under Franz von Sickingen, against Ulrich, Duke of Würtemberg, who had put to death his cousin, Johann von Hutten, and against whom he directed his complaints to the Emperor and the States of the Empire, in a style of vehement eloquence which reminded his contemporaries of the invectives of Cicero against Catiline. He produced, in this connection, his '*Super Interfectione Propinqui sui Johannis Hutteni, Equitis, Deploratio*,' which was published, with other treatises, in 4to, 1519, and '*In Ulricum Wirtembergensem Orationes quinque*.' He next edited, with a preface, a MS. which he had discovered, On the Preservation of the Unity of the Church, '*De Unitate Ecclesiæ conservanda, et Schismate quod fuit inter Henricum IV., Imp. et Gregorium VII., Pont. Max. cujusdam ejus Temporis Theologi Liber, ab Hutteno inventus nuper*,' 4to, Mayence, 1520; and produced his Roman Trinity, '*Trias Romana*,' a pamphlet, in which he unveiled the disorders of the Court of Rome, and showed the necessity of pulling down its tyranny by main force, and an English version of which appeared with the title of '*The Triades, or Trinities of Rome, wherein you shall see what Things be either set by, used, or hated at Rome*,' 8vo, London. The publication of these works obliged Hutten to quit the court of the Archbishop of Mayence; and he applied for the protection of Charles V., who had at this time quarrelled with the Pope, repairing for that purpose to Brussels, where Charles was holding his court. But learning that the Pope had required the Emperor to send him to Rome bound hand and foot, he quitted Brabant and took refuge in the castle of Ebernburg, where Franz von Sickingen offered an asylum to all who were persecuted by the Ultramontanists. It was at this "hotel of the just," as Hutten called it, that he produced the remarkable letters which he addressed to Charles V.; Frederick, Elector of Saxony; Albert, Archbishop of Mayence, and the princes and nobles, and which entitle him to a place amongst the most distinguished authors. His appeal to the Emperor was entitled '*Ad Carolum Imperatorem, adversus intentatam sibi a Romanistis vim et injuriam, Conquestio*,' &c., 4to, Ebernburg, 1520, 8vo, Basel, 1538, &c. It was at Ebernburg, also, that he composed several works which, being read and comprehended by the people, inspired Germany with a hatred of Rome and a love of freedom. He addressed Luther on the occasion of his excommunication in an '*Epistola ad Martinum Lutherum*,' 4to, Wittenberg, 1520, and edited, with notes, the '*Bulla Leonis Decimi, contra Errores Martini*

Lutheri et Sequacium,' 4to, 1520. But Hutten was unwilling to confine himself to a war of words; and taking up arms, he served in the campaign of 1522, under Franz von Sickingen, after whose death, amid the ruins of his Castle of Landstein, he repaired to Basel, where Erasmus, upon whose friendship and hospitality he had reckoned, refused to see him. In a short time the magistrates also, who had at first received Hutten with distinction, requested him to leave the town; and he accordingly retired, first to an Augustine Convent at Mulhausen, whence he attacked the inconstancy and timidity of Erasmus in a remonstrance, entitled '*Ulrichi ab Hutteno cum Erasmo Roterodamo, Presbytero, Theologo, Expostulatio*,' 4to, Strasburg, 1523, 8vo, 1530, &c., German translation, 4to, Strasburg, 1523. From Mulhausen Hutten repaired to Zurich, where he was generously received by Zwingle; but which he was obliged to quit, first for the baths of Pfeffers, and finally for the little island of Uffnau, in the Lake of Zurich, to the pastor of which Zwingle had recommended him. In this retreat he died on the 31st of August, 1523, leaving "neither money, nor furniture, nor books—nothing in the world except a pen."

To the productions of Ulrich von Hutten, which have already been mentioned, only two need be added—'*Julius Secundus. Dialogus*,' &c., which has gone through many editions in Latin, German, English, and French, and which exhibits his Holiness after death knocking vainly for admittance into heaven, and holding a bootless controversy with St. Peter at the gate; and a Dialogue of posthumous publication, entitled '*Arminius, Dialogus Huttenicus, quo Homo Patriæ amantissimus Germanorum Laudem celebravit*,' 8vo, Hagenau, 1529. His works, whether selected or complete, have been constantly undergoing reproduction, and amongst the editions may be mentioned his '*Opera poetica, ex diversis illius Monumentis in unum collecta*,' 8vo, Frankfurt-am-Main, 1538; Poems by Hutten and his Contemporaries, '*Gedichte von Ulrich von Hutten, und einigen seiner Zeitgenossen. Herausgegeben von A. Schreiber. Mit Hutten's Portrait*,' 8vo, Heidelberg, 1810; his Select Works, &c., '*Des teutschen Ritters Ulrich von Hutten auserlesene Werke. Uebersetzt und herausgegeben von Ernst Münch*,' 3 vols. 8vo, Leipzig, 1822—23; his Complete Works, &c., '*Des teutschen Ritters Ulrich von Hutten Sammtliche Werke. Gesammelt und, mit den erforderlichen Einleitungen, Anmerkungen und Zusätzen, herausgegeben von E. J. H. Münch. Ulrichi ab Hutteno, Equitis Germani, Opera quæ extant omnia*,' &c., 5 vols. 8vo, 1821—25, of which the first 3 volumes were published at Berlin, and the remainder at Leipzig; his early Poems, &c., '*Ulrich von Huttens Jugend-Dichtungen, didaktisch-biographischen und satyrisch-epigrammatischen, Inhalts, &c. Uebersetzt und erläutert. Herausgegeben von E. Münch*,' 8vo, Stuttgart, 1838; '*U. Hutteni Equitis Germani Opera quæ reperiri potuerunt omnia. U. von H. Schriften. Herausgegeben von E. Böcking*,' 8vo, Leipzig, 1859, an edition in Latin and German; to which may be added, also by Professor Edward Böcking, the '*Index Bibliographicus Huttenianus. Verzeichniss der Schriften Ulrich von Hutten*,' 8vo, Leipzig, 1858.

The principal biographical or critical works relating to Hutten are—'*A Tribute to the Memory, &c.: Translated from the German of Goethe, the celebrated Author of the Sorrows of Werther. By Anthony Aufrey, Esq.*,' &c., 8vo, London, 1789; Life and Character, '*Ulrich von Hutten. Leben und Charakter*,' 8vo, Leipzig, 1791, by Ludwig Schubart; a Life which appeared in the '*Pantheon der Deutschen*,' &c., 3 vols. 8vo, Chemnitz, 1794—1800; a Biography by G. W. Panzer, entitled '*Ulrich von Hutten in litterarischer Einsicht*,' 8vo, Nürnberg, 1798; the Quarrel between Hutten, &c., '*Der Streit zwischen Ulrich von Hutten und Erasmus von Rotterdam: ein Beitrag zur Charakteristik Ulrich von Huttens und seiner literarischen Zeitgenossen. Herausgegeben von Carl Kieser*,' 8vo, Mayence, 1823; Life, Character, and Writings, '*Ulrich von Hutten nach seinem Leben, seinem Charakter, und seinem Schriften, geschildert von C. J. Wagenseil*,' 8vo, Nürnberg, 1823; a poetical Biography, by A. E. Frölich, entitled '*Ulrich von Hutten. Siebenzehn Gesänge*,' 8vo, Zurich, 1845; a Thesis by Jules Zeller, entitled '*Ulrich von Hutten. Sa Vie, ses Œuvres, son Temps*,' 8vo, Rennes, 1849; a Portraiture, by August Bürck, of '*Ulrich von Hutten, der Ritter, der Gelehrte, der Dichter, der Kämpfer für die deutsche Freiheit*,' 8vo, Leipzig, second edition 1850; a Life in M. Chauffour-Kestner's '*Études sur les Réformateurs du XVI. Siècle*,' 2 vols. 12mo, Paris, 1853, of which an English translation of as much as referred to Hutten, was published by Mr. A. Young, with the title of '*Ulrich von Hutten, the Great Knightly Reformer of the Sixteenth Century*,' 8vo, Edinburgh,

1863; a Biography, by Dr. D. F. Strauss, entitled 'Ulrich von Hutten,' 2 vols. 8vo, Leipzig, 1858; a Study of the Life and Works of Ulrich von Hutten, the Champion of German Liberty, 'Ulrich von Hutten, der Streiter für deutsche Freiheit, in seinem Leben und Werken. Mit 7 Stahlstichen,' 16mo, Leipzig, 1862; and a 'Thèse présentée à la Faculté de Théologie protestante de Strasbourg,' &c., by M. Georges Macier, entitled 'Études sur Ulrich de Hutten dans ses Rapports avec la Réforme,' 8vo, Strasbourg, 1867.

HUTTON, JAMES, geologist, was born at Edinburgh, June 3, 1726. In 1740 he entered the University of Edinburgh, and commenced studying for the law. He was articled to a writer to the signet, but as he neglected his duties for the purpose of making experiments in chemistry he was discharged. He then abandoned the law, and adopted the study of medicine, attending courses at Edinburgh, Paris, and Leyden, at which last place he took his degree of M.D. in September, 1749. For some years after this his occupations were very unsettled. He set up as a manufacturer of sal-ammoniac; then resided with a Norfolk farmer for the purpose of learning agriculture; and on his father's death he settled down as a farmer on an estate in Berwickshire, which he inherited. Prior to his settling in Berwickshire, in 1754, agriculture, as an art, was in a very low state, but he soon brought it up to a higher standard by introducing improved methods of culture. During all this time he was constantly occupied with the study of mineralogical and geological subjects; and in 1768 he relinquished his farm and went to Edinburgh, in order to devote himself entirely to geology. He wrote little for several years, and almost his first publication was a pamphlet on coal and culm in 1777. His next contribution to literature was 'The Theory of Rain,' read in 1784, and published in the 'Transactions of the Royal Society of Edinburgh,' i., pp. 41—86 (1788). This is one of the earliest hypotheses proposed to explain the mode of occurrence of aqueous vapour in the air, and the causes which lead to its condensation as rain. In the main, it is the theory which is now generally adopted. [RAIN, E. C., ARTS AND SCIENCES DIV. vol. vi., col. 925.] In the same volume first appeared his 'Theory of the Earth,' pp. 204—304, which was subsequently expanded into a two-volume work, bearing the same title, and published in 1795—96. This work marks an era in geological science. In it he was the first to declare that geology did not concern itself about questions as to the origin of things, and that, so far as material phenomena guided us, there was nothing indicative of a period when the present physical forces and laws of nature were not in operation. The present continents are being ground down and distributed over the sea bottom, and they themselves were formed from the degradation of still older continents. "In the economy of the world," he says, "I can find no trace of a beginning, no prospect of an end"—a statement which has been the foundation of a charge against him of denying the action of God as creator, but which is quite consistent with the belief that the creation took place prior to the existence of anything discovered by Hutton. His statement implies that the laws which come under the cognizance of the geologists are those by which the world is sustained, not those by which it was created, nor those by which it will be destroyed. The amount of excitement which existed on this subject in Hutton's time was extraordinary, and party feeling ran strongly in opposition to his doctrines. Hutton was in many points the opponent of Werner, whose general theory was that the ocean once reached to the mountain tops, that the land remaining perfectly stationary the waters gradually subsided, and that during this subsidence the various rocks, both sedimentary and igneous, were formed by precipitation from the water. As regards the igneous rocks, such as basalt and granite, Hutton's view was that they were once in a state of fusion; that they penetrated the sedimentary rocks in their fused state; and that their compactness and crystalline condition is owing to their having solidified under immense pressure. The alteration which the basaltic rocks have produced in the strata through which they have burst he held to be indicative of their former heated or molten condition; and a similar proof was looked for in the case of granite. In order to put his idea to the test he explored the line of junction of granite with the stratified beds above it, and in 1785 discovered the facts he sought for in Glen Tilt, where red granite traverses schist and limestone. This discovery so delighted him that the guides who accompanied him thought he had found a vein of silver or gold. Hutton's views as to the igneous origin of granite are still held to a certain extent, viz., that some granites have been introduced through strata in a fused condition; but it is unquestionable that some granitic rocks are

simply metamorphosed sedimentary beds, while others seem to be veins formed from aqueous solutions. He recognised more fully than any previous, and more than most subsequent, geologists, the importance of freshwater currents in moulding the minor inequalities of the surface of the land. According to him, valleys have been formed almost exclusively by rivers, while the sea has had little to do with their formation. It has generally been considered that he did not give sufficient prominence to marine denudation; but the state of science at the present time seems to show that Hutton saw more clearly than his successors the true importance and action of the denudation which takes place above the level of the sea, so far as regards the formation of orographic details. In some respects, however, he over-estimated the work performed by it, at the expense of other phenomena. Thus he considered that continents were submerged wholly by means of degradation; that new continents were formed by the upheaval of the sea bottom; and that these actions took place alternately, not simultaneously. He denied that the land was ever submerged by subsidence. In holding this idea he was less advanced than many geologists who flourished centuries before him. His disciple and biographer, Dr. John Playfair, greatly aided in disseminating and supporting his doctrines. Hutton wrote a few other papers and books, but of minor importance to those already mentioned; one of these is, 'An Investigation of the Principles of Knowledge, and of the Progress of Reason from Sense to Science and Philosophy,' 3 vols. 4to, 1795. He died March 26, 1797.

* HUXLEY, THOMAS HENRY [E. C. vol. iii. col. 1007].

* HYACINTHE, PÈRE, a French preacher and Reformer, whose secular name is Charles Loyson, was born in the year 1827, at Orleans, whence in his infancy he removed to Pau, on the appointment of his father to the rectorship of the academy in the latter place. Here he prosecuted his earlier studies, and attained some reputation for his poetical talent, which, it has been said, displayed a marked inclination to the dramatic form. At the age of eighteen he was sent to Saint-Sulpice, and after four years of theological study, was ordained to the priesthood. After teaching philosophy at the seminary of Avignon, and theology at that of Nantes, he became one of the parochial clergy of Saint-Sulpice. Some years later he yielded to a vocation for the monastic life, and, repairing to Lyons, passed a two years' novitiate in the Carmelite Convent there, after which he took the vows of the order. He now became celebrated as a preacher successively at Lyons, Bordeaux, and Périgueux; repairing in the summer of 1864 to Paris, where, first at the Madeleine, and afterwards, in Advent, 1865, at Notre Dame, he achieved a success which increased with each succeeding year, and with every exhibition of his zealous and fearless oratory. The liberality of the opinions expressed in his *Conferences*, caused his orthodoxy to be suspected by the Ultramontanes; and he was denounced to the Court of Rome by the editor of the 'Univers' in the commencement of 1869, but found means to exonerate himself from the charges brought against him. In June of the same year he again gave offence to the Catholic press by an address which he delivered at a meeting of the International Peace Association, in which he spoke of Judaism, Catholicism, and Protestantism, as "les trois grandes religions des peuples civilisés." The audience received the sentiment with applause, but it brought upon him the censure of his canonical superiors, who peremptorily placed before him the alternatives of silence and of modifying the expression of such opinions. Against this censure he rebelled, and in a letter addressed, on the 20th of September, to the General of the Carmelites at Rome, he broke with his order, protesting against "the sacrilegious perversion of the Gospel," and adding that "if France and the Latin races are delivered over to social anarchy, the principal cause of it is, not doubtless in Catholicism itself, but in the manner in which Catholicism has for so long a time been understood and interpreted." Such an animadversion brought upon him the vituperations and remonstrances of all the Ultramontanes in France; and he was called upon to suffer the indignity of the greater excommunication, as a monk who had deserted his order. In 1870 he paid a visit of some months' duration to the United States of America, where he was received with much sympathy and demonstrative respect by the various Protestant communities, to whom, however, he professed his unshaken determination to continue in the Catholic faith. Since the disasters which have fallen upon France he has addressed audiences at St. George's Hall, London, on the question of the war, appearing in a layman's garb, and exhibiting little passion and gesture in his delivery, which was rather of a graceful and

subdued order. He has lately addressed an appeal, dated Christmas-day, 1870, to the Bishops of Catholic Christendom, in which he protests against the recent promulgation of the "impious dogma" of Papal infallibility, and against the two enemies of France, Ultramontanism and Infidelity, against which "she ought to combat with an energy equal at least to that with which she combats those who have invaded her soil alone." He enjoins the bishops to declare whether the decrees of the recent Council are or are not binding on the faithful; and argues from the unfairness of the proceedings that Catholics "remain free, after as before the Council, to reject the infallibility of the Pope as a doctrine unknown to ecclesiastical antiquity, and resting only on apocryphal writings, concerning which criticism has pronounced its final judgment."

The contributions of Père Hyacinthe to literature are few and slight. He has a part in the authorship of a volume, entitled 'Distribution des Prix de l'Ecole Albert-le-Grand, présidée par le R. P. Hyacinthe, de l'Ordre des Carmes, à Arcueil, le 6 Août, 1867. Matérialisme et Spiritualisme; Discours prononcés par le R. P. Captier, Prieur de l'Ecole, et par le R. P. Hyacinthe,' 8vo, Paris, 1867; and he wrote a letter for an edition of the 'Œuvres Choiesies de Charles Loyson,' 8vo, Paris

and Nantes, 1869, to which MM. Patin, Sainte-Beuve, and others, contributed biographical and literary notices.

* HYRTL, JOSEPH, anatomist, was born at Eisenstadt, in Hungary, December 7, 1811. In 1837 he was appointed professor of anatomy at the University of Prague, and in 1845 he removed to the University of Vienna, to occupy a similar post, which he still holds. His reputation mainly rests upon the excellence of his anatomical preparations, some of which are amongst the finest pieces of work of their kind; but he is also eminent for several literary works, and for numerous anatomical researches which he has conducted. His papers are upwards of 70 in number, the more important of them include monographs on *Lepidosiren paradoxa*, *Manis*, *Myrmecophaga*, *Chlamyphorus truncatus*, and *Cryptobranchus japonicus*. His more important books are 'Lehrbuch der Anatomie des Menschen,' 2 vols, 8vo, Vienna, 1847, of which the 9th edition was published in 1865, and the latest in 1870, and which is in general use as a textbook in all the German Universities; 'Handbuch der topographischen Anatomie,' 8vo, 1847, which has passed through five or six editions; 'Vergleichende Anatomische Untersuchungen über das Gehörorgan des Menschen und der Säugethiere,' 8vo. Prague, 1845.

I

ICTINUS (*Ἰκτινός*), a famous Greek architect, was contemporary with Pericles at Athens. Nothing is known of his personal history. He erected several of the temples which are the accepted standards of Greek architecture. The Parthenon, in which he was assisted by Callicrates, was completed by him B.C. 438, when Phidias's colossal chryselephantine statue of Athena was uncovered and the temple consecrated. The Temple of Apollo Epicurius, at Bassæ, near Phigalia, was another of his famous works. Both of these were of the Doric order, constructed of Pentelic marble, heightened with colour and gold, and adorned with sculpture by Phidias. The temples remain magnificent in their ruin; what is left of the sculpture is in the British Museum, and is best known as the Elgin and Phigalian marbles. The temple of Ceres, at Eleusis, was another of the great works of Ictinus, his assistants being Metagenes and Corœbus. Like the other temples, it was of the Doric order. In conjunction with Carpius, Ictinus wrote a description of the Parthenon, of which, however, nothing is left.

IDELER, CHRISTIAN LUDWIG, a Prussian chronologist and astronomer, was born September 21st, 1766, at Gross-Brese, near Perleberg. After being employed as an astronomical assistant to calculate the Prussian kalendar, he became, in 1816, preceptor to the Princes Wilhelm Friedrich and Karl. In 1821 he was appointed professor at the University of Berlin; and in later years director of studies to the Cadet Corps, instructor to the School of Forestry, and also to the military schools. He became member of the Academy of Sciences at Berlin, and in 1839 honorary member of the French Institute. Ideler is favourably known for his excellent works on chronology, astronomy, and the kalendar, of which the following are the principal:—'*Historische Untersuchungen über die Astronomische Beobachtungen der Alten*,' 1806; '*Untersuchung über den Ursprung und die Bedeutung der Sternnamen*,' 1809; '*Handbuch der mathematischen und technischen Chronologie*,' 1825-6: re-edited and published in 1831, under the title '*Lehrbuch der Chronologie*,' it has become a standard work in Germany; '*Die Zeitrechnung der Chinesen*,' 1839. In conjunction with Nolte, he wrote '*Handbuch der französischen Sprache und Literatur*,' and '*Handbuch der englischen Sprache und Literatur*,' of both of which there have been numerous editions. Ideler died August 10th, 1846.

INGEMANN, BERNHARD SEVERIN. [E. C. vol. iii. col. 551.] Ingemann retained the directorship of the Academy of Sörø till the dissolution of the institution in 1849. He died February 24th, 1862. During a period of nearly half a century Ingemann published a vast number of works, which he himself considered to represent three phases in his mental character—romantic and sentimental poems from 1811 to 1814; dramas

and dramatic poems from 1814 to 1821; historical romances, somewhat in the style of Sir Walter Scott, and novels, in later years. His works are much read in Denmark, especially those relating to old national legends, such as '*Waldemar*,' '*Holger Danske*,' and '*Landsbybørnene*'; several have been translated into German, and a few into French and English. A collected edition of his works, '*Samlede Skrifter*,' was published in 39 vols, 1847-56, in four series, viz., dramatic works, 6 vols; historical poems and romances, 12 vols.; stories and tales, 12 vols.; songs, romances, and tales in verse, 9 vols. Ingemann wrote an autobiography, '*Levnetsbøg*,' which was published by Galskjøt, in 1862.

INGRAM, JAMES, D.D., was born December, 1774, at East Codford, Wiltshire; educated at Westminster and Oxford; elected fellow and tutor of Trinity College, and was for awhile a master in Winchester school. In 1803 he was elected professor of Anglo-Saxon at Oxford University, and published his '*Inaugural Lecture on the Utility of Anglo-Saxon Literature*' in 1807. In 1815 he was appointed keeper of the university archives. In 1823 appeared the work on which he had been engaged from the time he held the Anglo-Saxon professorship, '*The Saxon Chronicle*,' with an English translation and notes, 4to, London. The investigations of later scholars have carried our knowledge far beyond the condition in which Ingram left it, but his book was for the time a very valuable one, and the result of an immense amount of labour. Dr. Ingram collated all the known and accessible texts, made a careful translation, and added a great body of notes in elucidation of the text, indexes of persons and places, and a short Anglo-Saxon grammar. The year following the publication of the '*Chronicle*' he was elected president of Trinity College, an office he held with great acceptance till his death, on the 4th of September, 1850. He left his fine library to the college with which he had been connected for over half a century, and for a moiety of the time as president. Besides his Anglo-Saxon publications, Dr. Ingram wrote the '*Memorials of Oxford*,' 3 vols. (100 plates) 8vo, and 4to, 1827; '*The Church in the Middle Centuries*,' 8vo, Oxford, 1842; '*Memorials of the Parish of Codford St. Mary, in the County of Wiltshire*,' 8vo, Oxford, 1844.

INGRES, JEAN DOMINIQUE AUGUSTE [E. C. vol. iii. col. 553]. In the memoir just cited it was stated that at the International Exposition of 1855 an entire gallery was devoted to the works of M. Ingres. It was recognised as the apotheosis of the greatest living painter of France. But though he might well have been content to rest on his laurels, Ingres was too true an artist to abandon his art whilst he could hold a pencil. To the International Exhibition of 1862 he sent his latest and one of his noblest classic pictures, '*The Source*,' seemingly little more than the life-size study of a nude female, or a statue trans-

formed into flesh and blood, but full of poetry and beauty, chaste as the marble from which it might have been hewn, a masterpiece of drawing and execution, and, as the work of a man of eighty, little less than wonderful. It was his last great work, the chef d'œuvre of his old age, though he did not yet cease to labour. His last years were passed amidst the general homage of his countrymen. He had been nominated grand officer of the Legion of Honour in 1855; in 1862 he was raised to the dignity of senator, and made a member of the Imperial Council of Public Instruction. He died at his residence on the Quai Voltaire, Paris, January 14, 1867, after a short illness, the consequence of a severe cold, in his 86th year, and was interred with great solemnity in the cemetery of Père La Chaise.

IRVING, WASHINGTON [E. C. vol. iii. col. 563]. Mr. Irving lived to complete the biography of Washington, the fifth and concluding volume of which appeared in 1859, but the task, though courageously prosecuted and successfully accomplished, was too much for his strength and years. His health gave way, and after protracted suffering from extreme nervousness, mental depression, and physical exhaustion, he died at his pleasant residence, Sunnyside, Irvington, about 25 miles from New York, on the 28th of November, 1859, aged 76. Irving had outlived his three score years and ten, but his death was felt in both hemispheres as the loss not merely of one of the best and pleasantest writers of his age, but almost as that of a warm-hearted and cherished friend.

* ISABEL II. (MARIA ISABEL LUISA), ex-Queen of Spain [E. C. vol. iii. col. 566]. On the 12th of October, 1856, upon the downfall of the O'Donnell administration, the direction of affairs was assumed by Narvaez, by whom the most reactionary measures were instituted or promoted. The new President of the Council and his colleagues laboured resolutely to recover the absolute integrity of the royal prerogative, to introduce various severities in the administration of justice, and to efface from the laws the last traces of the revolution of July, 1854. These measures met with no considerable opposition throughout the country; and it was chiefly by means of intrigues about the court and the person of the Queen that the Narvaez cabinet was superseded in October, 1857, by one of a more liberal character, which prepared the way for the return of O'Donnell to the presidency of the Council on the 1st of July, 1858. On the 28th of November, 1857, the Queen was safely delivered of a son, the Prince of Asturias. The Cortes were opened on Sunday, January 10th, 1858, by the Queen in person; who, in her speech from the throne, announced a settlement of the questions relating to the clergy, and a balance between income and expenditure, and spoke of an augmentation of the navy, of reform in the electoral laws and of those relating to the press, and of the redemption of State lands. In the course of the year 1858 the Queen paid visits to various places in her dominions, and everywhere was well and loyally received. On the 11th of September, having signed a decree for the dissolution of the Cortes, she ordained their convocation to take place on the 1st of December, when she again opened them in person. On the 25th of August, 1859, a convention was concluded between Spain and the Papal See respecting the property of the Church. War was declared against Morocco on the 22nd of October following; and on the 4th of November the command of the African expedition of 50,000 men was confided to O'Donnell, who, after a campaign of almost unvaried success, finally forced the Moorish government to a satisfactory treaty by the decisive defeat of its army on the 23rd of March, 1860. Early in the following month a futile attempt at insurrection was made by General Ortega, commander of the Balearic Isles, in the interest of the Comte de Montemolin, son of Don Carlos de Bourbon, and nephew of Ferdinand VII. Ortega ordered his troops, 3000 in number, to embark without informing them of their destination, which they only discovered on their landing at Tortosa, where he proclaimed the Comte de Montemolin as King of Spain, under the title of Carlos VI. His men, however, refused to follow him, and he was constrained to flee, but being overtaken, was arrested, and shot at Tortosa, on the 19th; whilst the Comte de Montemolin, who, with his brother Ferdinand, was arrested on the 21st, was allowed to quit the kingdom after having executed at Tortosa, on the 23rd, a 'solemn act' of renunciation of all pretensions to the throne of Spain, in favour of Isabella and her descendants. In a letter addressed from Cologne to the Queen, on the 15th of June, the Comte de Montemolin retracted his renunciation; but his pretensions came to a conclusion by his sudden death on the 13th or 14th of January, 1861. The Queen of Spain gave her ready adhesion to the French Emperor's scheme of a congress for a

revision of the treaties of 1815, which had been submitted, by a circular dated November 4th, 1863, to the leading powers of Europe. In February, 1865, in consequence of the embarrassment of the Spanish treasury, Isabella signalled her sympathy with the remedial measures proposed, by surrendering three-fourths of the crown domains for sale on behalf of the nation. But no act of self-sacrifice could now avail to restore the Queen in the respect of her subjects, who, with slight intervals of tranquillity and apparent content, had for many years been in the habit of giving utterance, in insurrections and *pronunciamientos* of more or less magnitude, to the impatience they felt at the meanness of her superstition, the intensity of her bigotry, and the notorious laxity of her morals. Pity, chivalry, and loyalty did their utmost in the way of excusing the last as being probably owing to the unfortunate marriage of which, so early in life, she had been made the victim; but at length it was found to be intolerable. In August, 1867, another insurrection broke out, which raged in the provinces of Arragon, Catalonia, and Valencia, and on the borders of Murcia and Castille, where bands of armed men made their appearance, whilst in some places the mayors of towns and other functionaries joined in the movement. The leaders of the movement had reckoned on the sympathy and co-operation of at least a part of the army; but the soldiers, for once, were true to their colours, and inflicted several defeats upon the insurgents, many of whom were taken and executed. Afterwards an amnesty was granted by the Queen, whose ministers, in a circular to the Spanish representatives abroad, described the revolt as being aimed "at the destruction of social order and existing policy, including, as social consequences, the constitutional principle, the monarchical principle, the Catholic principle, and the dynasty as symbol and practical application of the whole." It failed owing to "the indifference and good sense of the population, the noble determination of our worthy and valiant army, the zeal and co-operation of the authorities, and the confidence her Majesty's government had never ceased for an instant to feel and to inspire." This confidence was rudely assailed, however, and finally broken in the following year, when a decisive revolution, in the carrying out of which both the army and the navy were of accord, roused all the provinces, and after having triumphed at Cadiz, gained the capital just after the Queen had quitted it to find a refuge across the French frontier. The 29th of September, 1868, had seen her accession, and the 29th of September, 1868, witnessed her downfall. She found shelter for about a month, with her husband, children, and her favourite, Marfori, a principal cause of her misfortunes, at the château of Pau, whence she issued an unavailing proclamation to the Spanish people, and whence she repaired to Paris, in the gaieties of which she seemed to find abundant distraction and compensation. Soon after the outbreak of the war which originated in an effort made to find an occupant for the throne of which she had been declared unworthy, she left Paris for Geneva, where, it is perhaps scarcely surprising, she does not give signs of long remaining. It may be mentioned that in February, 1868, Queen Isabella was selected by the pope as the recipient of the sacred rose which he occasionally confers on the crowned faithful who are nearest to his heart; and that the opening of the present year, 1871, found Prince Amadeus, second son of the King of Italy, installed at Madrid as her successor.

* ISMAIL PASHA, Khedive or Viceroy of Egypt, was born in 1830 at Cairo. He was the nephew of Said Pasha, whose rule over that country commenced in 1854; and was related by collateral descent to Mehemet Ali and Ibrahim Pasha. Ismail and his eldest brother Ahmed received the principal part of their education in France, where they acquired European ideas and habits, then very unusual among orientals. Returning to Egypt in 1849, Ismail placed himself in opposition to the court party: Abbas Pasha having become viceroy instead of a more direct descendant of Mehemet Ali and Ibrahim Pasha; but when Said became viceroy, Ismail acted in full loyalty to him. He visited the Sultan at Constantinople, and in 1855 went on confidential missions to France and Rome. He afterwards filled many important posts in Egypt, and acted as regent during a visit of Said Pasha to Europe in 1861. At the end of that year, and during a portion of 1862, he commanded an army of 14,000 men engaged in the subjugation of rebellious tribes on the Soudan frontier. On the death of Said Pasha, in January, 1863, Ismail succeeded him as viceroy of Egypt. By obtaining and conducting vast areas of cotton cultivation, and by the establishment of sugar factories, on his own private account, he gradually accumulated enormous wealth; while his intelligence, shrewdness,

and European experience, enabled him to consolidate his viceregal power. He pursued the same policy as his uncle Said in regard to the Suez canal, investing in it largely both as a viceroy and as an individual. He made it a steady rule of policy to cultivate as friendly relations as possible both with France and with England; facilitating the plans of the one with regard to the Suez canal, and the requirements of the other in reference to the overland route to India. In 1867 he visited France and England, at the same time as his suzerain, the Sultan. He again visited the European courts in 1869 to invite the sovereigns and princes to the opening of the Suez canal. The Sultan took umbrage at this and other of his proceedings, and sent him a letter of reproof. Ismail had been greatly favoured. On his entreaty, the line of succession was changed. The rule had been, for some years, to regard the eldest living male descendant of Mehemet Ali as the heir; but it was transferred to the eldest son of the existing pasha, in other words, was made directly hereditary. He had also been created *Khidiv* or *Khedive* of Egypt, a title midway between king and pasha, and implying something like "Lord of Egypt." The ceremony of opening the Suez canal in November, 1869, was witnessed by the Empress of the French, the Emperor of Austria, the Crown Prince of Prussia, the Prince of Orange, &c., and was conducted at lavish cost by the Khedive. The Sultan complained that his proceedings in this instance, his maintenance of a large army and the formation of an iron-clad fleet, the imposition of taxes in Egypt without the Sultan's consent, and the negotiation of European loans in the Khedive's own name, would only have been justifiable had he been an independent sovereign. After some correspondence, and the friendly intervention of other powers, mutual concessions were made, the Khedive gave a formal submission, and amity was restored. In 1870 Ismail, with the aid of all the powers who had consuls in Egypt, made a great reform in the constitution of the consular tribunals, courts which tried all cases in which natives and foreigners were jointly concerned. There is now a mixed tribunal, on a better basis. It was stated in 1870 that during his seven years of viceroyalty Ismail had brought 1,000,000 acres of land into cultivation, constructed 40 canals, and built 200 bridges and 25 aqueducts. European customs are being gradually introduced into the Egyptian palaces and government offices.

* ISTURIZ, FRANCISCO XAVIER DE, a Spanish statesman, and the son of a Basque merchant established at Cadiz, was born in that city in the year 1790. He served as a deputy to the national Cortes from 1812 to 1814, the year of the restoration of Ferdinand VII., who signalled his return to his capital by repudiating the Constitution of 1812, by restoring the Inquisition, and generally proceeding in the most absolute and reactionary manner. Isturiz now became an influential member of the malcontent party, of which his house, known as the Casa Otomana, became the head-quarters. He took a prominent part in the insurrection of Riego and Quiroga, which broke out at Cadiz on the 1st of January, 1820, and which, it was said, introduced a three years' anarchy in succession to a six years' despotism. It had, at least, the effect of forcing from the unwilling King, March 10th, 1820, an oath to observe the Constitution; and on the 9th of July following the Cortes assembled for the consolidation of the kingdom on liberal principles, General Quiroga being the vice-president. Isturiz now repaired to Madrid, where, with Alcala and Galiano, he founded various clubs in opposition to the moderate constitutional party, at that time represented by Arguelles and Martinez de la Rosa. In 1822 he gave more direct effect to his opposition on his election to the Cortes, of which, in the following year, he was named president. He now agitated in the Cortes, which met successively at Seville and Cadiz, the suspension of the royal government, and when Ferdinand was re-established, November, 1823, on a despotic throne by the assistance of a French army, Isturiz fled to London where he became interested in the commercial house of Zulueta and Co. Riego was executed at Madrid on the 7th of November, 1823; and Isturiz, condemned to death in his absence, was able to return to Spain only after the death of Ferdinand, September 29th, 1833, by favour of an amnesty granted by Maria Christina, the Queen Regent, in the following year. Being named by the city of Cadiz procurador to the Cortes, he identified himself with the democratic party, and took part in exciting those insurrectionary and other movements, which after the fall successively of the ministries of Martinez de la Rosa, on the 7th of June, 1835, and of Toreno on the 4th of July following, raised Mendizabal to power as chief of the cabinet, September 14. Of this minister, Isturiz was the trusted friend and counsellor, and took

office under him as president of the Chamber of Procuradores, a kind of state council, in November; but when this Chamber, having shown itself too extreme in its liberality, was dissolved by Mendizabal, in January, 1836, a quarrel and a duel ensued between the latter and Isturiz, who succeeded in effecting the downfall of his former friend, and in raising himself, May 15th, 1836, to the ministry of foreign affairs and the presidency of the Council. But his want of tact and conciliation prevented his enjoying a long tenure of office; and his unpopularity was so great that, after the commotions of August, 1836, which resulted in the proclamation of the Constitution of 1812, he fled in disguise to Lisbon, and afterwards sought refuge a second time in England. After some time he repaired to Paris, where he attached himself to Toreno, Miraflores, and other aristocratic emigrants; and having been again annested by the Queen Regent, in 1837, returned to Spain, and took his seat in the Cortes, in the following year, as deputy for the city of Cadiz. In 1839 he became president of the Congress. The regency of the Queen-mother determined in October, 1840; but during the occupancy of this office by Espartero, Isturiz was constantly at work for the restoration to it of Christina, whose thorough confidence he succeeded in attracting. On the resignation of the Narvaez administration in February, 1846, Isturiz held for a few weeks the office of prime minister, of which, after having been temporarily supplanted by his predecessor, he took a more definitive possession in April. It is to his ministry that the sinister distinction belongs of having negotiated, on the part of Spain, the marriages of the young Queen Isabella II. and her sister, October, 1846. In December following he resigned in the face of a vote of want of confidence, and retired to Cadiz, with the design of giving up public or political life. Circumstances, however, occurred which completely frustrated such an intention. He was appointed ambassador to England in 1848, and returned to the same post in June, 1850, after the resumption of the negotiations which had been interrupted by the difficulties which forced Sir Henry Bulwer Lytton, the English minister at the Court of Spain, to leave Madrid. In 1856 Isturiz was appointed ambassador to St. Petersburg, after which, in October, 1858, he was once more accredited to London, which he left in 1862, in order to undertake the presidency of the administration at Madrid. In March of the following year he was accredited as Spanish ambassador to France, fulfilling the duties of this office until October, 1864, when he resigned.

ITURBIDE, or YTURBIDE, AUGUSTIN DE, a Mexican general and sometime emperor, was born at Valladolid de Michoacan, in Mexico, most probably on the 27th of September, 1784, although some authorities make the year of his birth to have been 1790. His father, who was a member of an ancient Basque family, was a native of Pampeluna, in Spain, and emigrated about the year 1770 to Mexico, where he married a wealthy Creole lady. Augustin was bred to agricultural pursuits, and from early youth was addicted to hardy and athletic exercises. After serving as a subaltern in the militia of his province, he obtained in 1810 a lieutenant's commission in the regular army, and assisted in combating the insurgents who at this time wished to throw off the yoke of Spain. The success which attended his activity and courage in the suppression of Morelos and others secured his rapid promotion in the army, and his advancement to the command of the provinces of Guajuato and Valladolid, as well as of the Army of the North, in 1816. Men of inferior qualities became jealous of his advancement; and, disgusted with the intrigues that were set in motion against him—although acquitted by the viceroy of the disaffection with which he was charged—he resigned his command, and retired to his plantation. Being invited, however, to take the command of an army destined to the south, he marched to Acapulco in the latter end of 1819, and soon afterwards matured a plan for the emancipation and independence of Mexico. According to this plan, which was called the plan of Iguala from the fact of its having been first promulgated to the army under his command at that place, February 24th, 1821, all interests were studied and reconciled. Protection was promised to all—promotion to the soldiery; authority over souls to the priests; to the nobles their titles; to the merchants, privileges; to the planters, commerce; and to the various classes of labourers, liberty. The plan proposed was successful, and Mexico was at once transformed from a colony into "a great and independent empire;" so that when the viceroy-general, Don Juan O'Donoju, arrived from Spain, he found the whole country virtually on the side of Iturbide, with whom he concluded a treaty at Cordova, on the 24th of August, 1821. On the 27th of September,

Iturbide, who had accepted the title of generalissimo of the empire, entered the city of Mexico, where he at once proceeded to establish a provisional government, composed of five members, and a junta, or assembly of notables. In February, 1822, the Cortes of Mexico proclaimed the independence of the nation; but the dissensions and mutual jealousy of parties having brought about a state of things fast verging on anarchy, the people and the army simultaneously proclaimed Iturbide emperor on the evening of the 18th of May. In the words of the emperor himself, as they occur in an apologetic autobiography, "Long live Augustin I.!" was the universal cry that astonished and appalled me." This spontaneous appointment was ratified by a majority of 74 to 20 in an extraordinary meeting of the Congress, who soon after declared the crown hereditary in the family of Iturbide, gave to his sons and his father the title of princes, and established an order of knighthood, called the Order of Guadalupe. The prospects of peace and confidence which at first smiled upon the empire were soon overclouded by jealousy, mistrust, partial insurrection, and general dissatisfaction; so that Augustin I., on the 20th of March, 1823, resigned his power into the hands of a Congress, the president of which, Victoria, proceeded to organise the Mexican States on the model of the United States of the North. Up to this time the conduct and manner of Iturbide are described as being rather persuasive than imperative. Neither presuming nor assuming too much, he insensibly brought those up to his level with whom he conversed, and never failed to excite great attachment. His military operations were distinguished for their vigilance, patience, and perseverance; and "when he struck, it was with the decision of thunder." In the most critical and hazardous situations he was composed, collected, and smilingly indifferent to danger. The fear and jealousies natural to a people emerging from despotism to independence ascribed to him a sinister ambition incompatible with free government; yet he publicly repeated his resolve to terminate his political career by following the example of Washington. After his abdication he repaired to Italy, and having resided for some months at Leghorn, quitted that city in November, 1823, for England, where he arrived on the 31st of December, and organised a weak and inefficient expedition for the recovery of the empire he had surrendered, with the declaration that if he obtained any influence upon his return to Mexico he would use it, so far as the genius of that country would permit, in introducing the political institutions of England, which during his stay here he had studied with admiration. He embarked on the 11th of May, 1824, and landed in disguise near the port—"que es un puerto, que no es puerto"—of Soto-la-Marina, on the 14th of July, accompanied by his wife and his two youngest sons, having left his other six children to be educated at different institutions in England. On the 17th he was arrested by General Felipe de la Garza, commander of the province of Tamaulipas, who conducted his prisoner to Padilla, and sent to the provincial Legislature for instructions. These were to the effect that the decree of Congress, which was passed on the 28th of the previous April, and proscribed him as a traitor, declaring that the mere fact of his landing in Mexico should constitute him a public enemy, should be forthwith put into execution. Iturbide in vain solicited a reprieve until the general government should be informed of his situation, and have an opportunity to decide upon his case. To all his representations and protests against death, the immovable and often-repeated answer was, "La ley lo manda" ("The law commands it"). At six o'clock in the evening of the 19th of July, 1824, after having confessed himself, he was led to the place of execution, where he made a short address to the assembled people, in which he protested his innocence of any treasonable purpose, exhorted them to observe the duties of patriotism, religion, and civil subordination, and declared that he pardoned all his enemies. The unfortunate Iturbide fell dead at the first fire. The conduct of the Government towards his family was just and liberal; and the pension promised to him at the time of his abdication was continued to his widow, on condition that she

should reside in Colombia or the United States. She chose the latter, and repairing to Philadelphia, devoted herself to the education of her children, two of whom afterwards returned to Mexico, and were appointed to places of trust by the Government.

Whilst resident at Leghorn, Iturbide produced a 'Statement' of the events and motives of his career, which was framed especially as a manifesto addressed to the people of Mexico. This 'Statement' was translated by Mr. Michael Joseph Quin, a personal friend of the writer, and published as 'A Statement of some of the Principal Events in the Public Life of Augustin de Iturbide, written by himself. With a Preface by the Translator, and an Appendix of Documents,' 8vo, London, 1824; of which a French version, by M. J. T. Parisot, was published with the title of 'Mémoires Autographes de Don Augustin Iturbide, Ex-Empereur du Mexique,' &c., 8vo, Paris, 1824. The original 'Statement,' or 'Memoria,' was not allowed to be printed in Tuscany at the time of its completion, but it formed the substance of a volume, published three years after, under the editorship of Pablo Villavicencio, with the title of 'Carrera militar y política de Don Augustin de Iturbide, o sea Memoria que escribió en Liorna,' &c., 4to, Mexico, 1827. A "literal translation" of the 'Memoria,' from a Spanish manuscript, "received from Mexico, through a channel of the highest respectability," was given in the 28th volume of the 'Pamphleteer,' 8vo, London, 1827, as the 'Political Life of the Ex-Emperor of Mexico,' &c. Other works conversant about the career of Iturbide are—'Catastrofe de Don Augustin de Iturbide, aclamado Emperador de Méjico, el 18 de Mayo del Año, 1822,' &c., 8vo, Paris, 1825; a Biographical Sketch, &c., 'Bosquejo biografico de los Generales Iturbide y Teran, escrito por Don Manuel Payno,' &c., 4to, Mexico, 1843; a 'Biography,' included in Albert M. Gilliam's 'Travels over the Table-Lands and Corderillas of Mexico,' &c., 8vo, Philadelphia, 1846; and a work written by Carlos Maria de Bustamente, in continuation of his voluminous 'Cuadro historico de la Revolucion Mexicana,' with the sub-title of 'Historia del Emperador Don Augustin de Iturbide, hasta su Muerte y sus Consecuencias,' &c. 8vo, Mexico, 1846.

IVARA or JUVARRA, FILIPPO, a celebrated Italian architect, was born at Messina, about 1685, of an ancient but poor family; learned the rudiments of design under a brother; took ecclesiastical orders, and then proceeded to Rome, where he studied architecture under Fontana. His first employment was to decorate the Villa Ottoboni. When Victor Amadeus became king of Sardinia, he commissioned Ivra to build a palace at Messina; afterwards took him to Turin, appointed him his architect, and gave him the abbey of Salve. Ivra's principal buildings are at Turin. They include the royal hunting-palace of Stopinigi; the Birago di Borgaro palace; the royal basilica of La Superga, a circular edifice, the cupola of which is a conspicuous object in the general view of the city; the churches of the Carmelites, del Carmine, and of the fathers of the oratory. At Milan he erected the façade of the church of St. Ambrogio; at Mantua he finished the cupola of St. Andrea; and at Como he made various additions to the Cathedral. He went to Lisbon at the special request of the king, in order to superintend the erection of the royal palace. On the destruction of the royal palace at Madrid by fire in 1734, Ivra was invited to erect a new one. He prepared a design of extraordinary magnificence, but the national dilatoriness interposed obstacles, and Ivra died in 1736, of a violent fever, brought on, it is believed, from vexation, before any steps had been taken for carrying his design into execution. The present building, a modification of his design, was erected by G. Sacchetti, a countryman of Ivra's, and on a scale of much less magnitude, yet it is pronounced by Ford to be "certainly one of the most magnificent palaces in the world." Ivra was a facile and skilful designer, but his buildings are deficient in dignity, and overlaid with the florid exuberances of the period. Ivra published 'Raccolta di Targhe fatte da' Professori primari in Roma, disegnatte ed intagliate dal Cav. D. F. J.,' 4to, Rome, 1715, another edition 1722.

J

* **JACKSON, CHARLES THOMAS**, geologist and mineralogist, was born at Plymouth, Massachusetts, June 21, 1805. His first education was received at a private school at Duxbury. He then served for a short time in a mercantile house in Boston, during which period he manifested his bent for scientific pursuits by devoting his leisure hours to making electrical and chemical experiments. He then went through a course of study preparatory to entering Harvard College, but his health breaking down, he joined Baron Lederer, together with Messrs. Maclure, Say, Lesueur, and Troost in a scientific pedestrian tour through the states of New York and New Jersey. On returning to Boston he received instructions from Drs. J. Jackson and W. Channing, which enabled him to take his degree of M. D. at the Harvard University, in January, 1829. From 1827 to 1829 he associated himself with F. Alger in making a mineralogical and geographical survey of Nova Scotia, during which a good collection of the minerals and fossils was brought together. The results of the survey were given in papers which appeared in 1828 and 1833. In 1829 he embarked for Europe, where he stayed till October, 1832. During his stay he was occupied partly as a student at Paris and partly as a scientific tourist through most parts of the continent. While at Vienna the cholera was prevalent in that city, and he was engaged in dissecting the bodies of a large number of persons who had died from that disease. The results of his research were given in the Boston 'Medical Magazine,' for 1832. He also made a careful examination of the volcanic areas of Etna, Vesuvius, the Lipari Islands, and Auvergne. While returning to New York he was engaged in a conversation with Professor Morse and others on the applicability of electro-magnetism for telegraphic purposes, and, as he states, he suggested a plan which was essentially the same as that subsequently patented by Professor Morse. In 1834 he made a working model. A controversy arose between him and Professor Morse as to their respective claims, which led to the issue of several pamphlets. Admitting the originality of his idea (which, however, had occurred to various persons before him), and that he imparted it to Professor Morse, still it seems unquestionable that the establishment of electric telegraphy was little, if at all, dependent on his influence. The merits of the rival claims of the various persons said to have originated the electric telegraph will be found under TELEGRAPH, ELECTRIC, E. C. ARTS & SCI. Div. vol. viii. cols. 70, *et seq.* On reaching Boston he settled down for a short while as a medical practitioner, but he abandoned the profession in consequence of the great request for his services as a geological surveyor and analyst. In 1836 he was appointed state geologist for Maine; in that year also he drew up a plan for surveying the state of New York, which was adopted by the authorities, and he himself was appointed one of the geological surveyors; but he resigned this post in consequence of its interfering with his duties in Maine. The survey of Maine being finished, he was in 1840 charged with a similar survey of Rhode Island. In 1840 he had to undertake a similar task for New Hampshire. While engaged in New Hampshire he made a cursory survey of the district on the south shore of Lake Superior, which resulted in his revealing the great mineral riches of that area. In a subsequent visit in 1845 he reopened the copper mines which had been worked in some former time beyond the reach of tradition, and discovered the great masses of magnetic iron ore, which have since been extensively worked. From 1847 to 1849 he was occupied in surveying Michigan. Since the last mentioned year he has surveyed portions of New Brunswick. From 1834 to 1842 he also interested himself in experiments on anæsthetics. In 1834 he discovered that when lint saturated with chloroform was applied locally there was a local insensibility to pain. In 1837 he made experiments on nitrous oxide. In 1841 and 1842 he experimented on the effects of pure sulphuric ether, and he strongly recommended its use as an anæsthetic. During the same period Dr. Morton also had been giving his attention to the same subject, and seems to have the strongest claim as the introducer of practical anæsthetics. Dr. Jackson has published numerous geological reports in connection with his surveys, and a large number of papers, chiefly consisting of analyses of minerals.

JACKSON, THOMAS JEFFERSON, better known as STONE-

WALL JACKSON, an American general, was born January 21st, 1824, at Clarksburg, State of Virginia. In 1842 he entered as cadet in the Military Academy at West Point. Receiving a commission in 1846 as second lieutenant in the first corps of artillery, he took part in the Mexican war. For his gallant conduct at Contreras and Cherususco he was made captain, and before the end of the war he rose to the rank of major. Resigning his commission in 1852, he became professor of mathematics and artillery tactics in the Military Institute at Lexington, Virginia. In 1856 he made the tour of Europe. When the Civil War broke out in 1861, he, like most Virginians, took part with the South. His grave, reserved, and religious character caused him to be much respected; and his adhesion was valued by the Confederates. He at once raised a regiment and headed it; and in May was placed in command of a Confederate corps of observation near Harper's Ferry. On the 3rd of July, 1861, he was created brigadier-general; and on the 21st of that month the incident took place by which he earned his singular cognomen. The battle of Bull's Run, the first important action between the belligerents, was fought near a small stream about twenty miles from Washington. M'Dowell commanded the Federals, Beauregard the Confederates, with Jackson at the head of the reserve. At one time fortune was going against Beauregard; some of his forces retreated so hastily as to break into a flight; they came to the position where Jackson was posted with his reserves, and an officer said to him "They (the enemy) are beating us back!" Jackson replied calmly, "Well, sir, we will give them the bayonet." The officer was encouraged; he rallied his men, saying, "Form, form! There stands Jackson like a stone wall!" The day ended victoriously for the Confederates; Beauregard himself, in his despatch relating to the battle, used the "stone wall" simile; and the name Stonewall Jackson was at once adopted. During the remainder of the year he was engaged in various operations, which won for him the rank of major-general. In May, 1862, he frustrated the plans of the Federal general, Banks, by taking up a strong position on the Potomac, between Williamsport and Harper's Ferry. He was, however, defeated by Fremont at Cross Keys on June 8th; but won the admiration of his opponent by the energy, rapidity, and sagacity of his retreat. In July he was concerned in the defensive operations near Richmond; commanded General Lee's advanced corps on the Rapidan and Rappahannock in August; won the second battle of Bull's Run; and captured Harper's Ferry on the 15th of September. On the 17th he was with Lee at the sanguinary battle of Antietam. On December 13th he aided Lee in resisting a formidable attack by the Federals at Fredericksburg. During these varied services he was raised to the rank of lieutenant-general. After various engagements in the early part of 1863, Jackson aided Lee in winning the battle of Chancellorsville on the 2nd of May; but, unhappily, whilst Jackson and his staff were returning to head-quarters in the evening, the party were mistaken by one of his own South Carolina regiments for a body of the enemy, and fired upon. The general was wounded; amputation of the arm failed to save him, and he died in a few days, May 9th, 1863. Memoirs of him have been written, generally under his popular name of Stonewall Jackson, by Addey, Cooke, Dabney, Daniells, Hotchkiss, Allen, and other American authors; and his memory is held in respect by all parties as one of the bravest and best of American soldiers, and one of her worthiest men.

JAMES, GEORGE PAYNE RAINSFORD [E. C. vol. iii. col. 596]. In 1858 Mr. James was appointed consul-general for the Austrian ports in the Adriatic. His official residence was at Venice, and in that city he died on the 9th of May, 1860.

JAMES, SIR HENRY, geodetist, was born in Cornwall in 1803, and educated first at Exeter, afterwards at the Royal Military Academy, Woolwich. In 1825 he entered the army, and became colonel in the Royal Engineers in 1857. Although a military man, his life has been almost entirely spent in engineering and surveying works. Originally Director of the Geological Survey of Ireland, he became, in 1857, the Superintendent of the Ordnance Survey of the United Kingdom, and of the Topographical and Statistical Depôt of the War Office, which two departments had, previous to his appointment, been

conducted by officers quite independent of each other. In connection with this office he has written several papers and contributed to, as well as superintended, several reports. His principal paper is 'On the Figure, Dimensions and Mean Specific Gravity of the Earth, as derived from the Ordnance Trigonometrical Survey of Great Britain and Ireland' in 'Philosophical Transactions' for 1856, pp. 607—626. His application of the invention of photolithography arose from an attempt to solve some difficulties in the working of the Ordnance Survey. The authorities decided that the mapping should be executed on several scales from 126 inches to 1 inch to a mile. The country generally was to be planned on the scale of 25 inches to a mile, and then reduced to the smaller scales, an operation generally performed by a pentagraph. After a time it was decided to discontinue the larger scale as being too expensive, and the grant for the survey was reduced by 30,000*l*. In 1855 he made some experiments on the applicability of photography for the purpose of reducing the ordnance maps, and satisfied himself that the process could be usefully adopted. It was put into practice and effected a saving of 2,000*l*. a year. Photolithography was invented by M. Poitevin, who patented his process in 1856, but failed in its practical application. It was first rendered practically available by Mr. J. W. Osborne, an officer of the Department of Lands and Surveys at Melbourne, Victoria, who, in November, 1859, communicated to the Melbourne Institute a paper on a 'Photolithographic Process,' in which he had overcome the difficulties in Poitevin's process. After being fully tested, the Melbourne Government purchased the right of using Mr. Osborne's process, including his methods of enlarging and reducing, for the sum of 1,000*l*., and various maps and plans were produced by it. The process and its results were, however, unknown to the authorities in England till the autumn of 1860, when the earliest specimens were received. Meantime, Mr. Asser, of Amsterdam, had, in 1860, introduced a process resembling Mr. Osborne's to the Ordnance authorities at Southampton; and Captain Scott, under Col. James's instructions, applied it to the reproduction and reduction of the Ordnance Maps. Subsequently, Mr. Osborne himself visited England, and in 1862 described his process before the British Association. [PHOTOLITHOGRAPHY, E. C. S., Arts and Sciences Div.] The process was afterwards rendered cheaper and simpler, partly by substituting zinc for stone, and partly by taking the negative photograph by the carbon process on waxed paper instead of by the collodion process on glass. Col. James's photographs were so successful that he was requested to copy the 'Domesday Book,' a fac-simile of which he has photolithographed in 32 volumes. The art has since been much employed in multiplying accurate copies of rare and costly documents at a cost far below that of the methods previously employed. In 1860 Col. James received the honour of knighthood for his public services.

JAMESON, ANNA [E. C. vol. iii. col. 598]. Mrs. Jameson died on the 17th of March, 1860, in her 63rd year. A second edition of her 'Legends of the Madonna, as represented in the Fine Arts,' corrected and enlarged, with additional etchings and woodcuts, appeared in 1858. The last of the series 'The History of Our Lord as exemplified in Works of Art; with that of His Types: St. John the Baptist, and other persons of the Old and New Testament. Commenced by the late Mrs. Jameson, continued and completed by Lady Eastlake,' was published in 2 vols., 4to, 1864.

JAMESON, ROBERT, mineralogist, was born at Leith, July 11, 1774. Although educated for the medical profession he never practised, but devoted his attention entirely to natural history. His first original work was 'An Outline of the Mineralogy of the Shetland Islands and of the Island of Arran,' 8vo, Edinburgh, 1798, which was soon followed by a more extensive work on the 'Mineralogy of the Scottish Isles,' 8vo, 2 vols., 1800. The reputation which they brought him induced him to obtain a deeper insight into geological knowledge by spending two years as a student in Werner's class at Freyburg. On returning to Scotland in 1804, he was elected to the chair of natural history in the University of Edinburgh. Soon after this he projected a large work on the geology of Scotland, each county of which was to be treated in succession, but the work did not advance beyond an account of the mineralogy of Dumfriesshire in consequence of his undertaking other engagements, more especially the preparation of class books for students. Amongst these the more important are a 'System of Mineralogy,' 3 vols., 8vo, 1804-1808, which has passed through several editions; and a 'Manual of Mineralogy,' 8vo, 1821. He wrote numerous papers relating to a great range of subjects in natural history, such as

minerals, rocks, stratigraphy, physical geography, plants and birds. He contributed various articles to the 'Encyclopædia Britannica,' founded the Wernerian Society of Edinburgh, started and conducted, from 1819 to 1854, the 'Edinburgh New Philosophical Journal,' in conjunction with Sir D. Brewster, and assisted Hugh Murray and others in drawing up a series of geographical works of a popular character. His knowledge of the physical characters of minerals and rocks was extensive, but he paid little attention to their chemical properties and composition. He was for long an ardent supporter of the Wernerian doctrines, but he ultimately abandoned them as insufficient. As a teacher he achieved much success, not by any oratorical powers but by earnestness of manner, clearness of language, and by frequently having recourse to the means of instruction afforded by field excursions. He belonged to many scientific societies. He died on April the 19th, 1854.

JAMITZER, WENZEL, one of the most famous of the German goldsmiths and engravers of the sixteenth century—a time when the goldsmith's art attained its highest excellence in Germany—was born at Vienna about 1508, and settled in Nürnberg, where he died in 1585. He worked both in gold and silver, fashioning the metals into the quaintest and most fanciful forms, and modelling and chasing on the surface plants, flowers, and animals with rare truth and delicacy. He also excelled in a sort of niello work and enamel. Jamitzer was employed by Charles V., Ferdinand I., Maximilian II., and Rudolf II. By his fellow-citizens, who held him in great esteem, he was elected a member of the city council. He published a treatise on perspective, 'Perspectiva corporum regularium,' folio, Nürnberg, 1568, the plates to which were drawn and engraved by himself. Nagler gives a list of several other plates by him. In his metal work he was assisted by his brother, ALBRECHT JAMITZER, who died about 1590. He had a son, CHRISTOPH JAMITZER—born at Nürnberg about 1560; died in 1619—who also worked as a goldsmith, and executed some good engravings, especially several prints of children at play, and a 'Neuw Grotteszen Buch. Inventirt, gradirt und verlegt, durch C. J.,' with 42 etchings, oblong 4to, Nürnberg, 1610.

JANSEN, JANSSEN, or JANSENIUS, CORNELIUS, a Dutch theologian, famous as being eponymous of the sect called Jansenists [JANSENISTS, E. C., Arts and Sciences Div., vol. iv. col. 1010], was born on the 28th of October, 1585, at the village of Acquoy, near Leerdam, in Holland; and was educated successively at the Universities of Utrecht and Louvain. In 1604 or 1605 he repaired to Paris, where he contracted a lasting friendship with Jean du Verger de Hauranne, afterwards Abbot of St. Cyran, and a native of Bayonne, whom, about the year 1611, he accompanied to that city, the bishop of which placed Jansen at the head of a college he had recently founded. After a stay of five or six years, during which he applied himself to the study of the Fathers, and especially of St. Augustine, Jansen returned to Louvain, where he was chosen principal of the College of St. Pulcheria. Here also he took the degree of D.D. in 1619; in 1624 was sent on a special mission to the King of Spain; and in 1630 was appointed professor of the Holy Scriptures. In 1635 he attracted the special favour of the Spanish King, then on the eve of a war with France, which sought to detach the Low Countries from the rule of Spain, by a work which he produced as an apology for the war, and in which he attacked the prerogatives of the Kings of France, the political system of Richelieu, and the alliances contracted between France and the Protestant States. This work, which appeared with a pseudonym, was entitled 'Mars Gallicus; seu de Justitia Armorum et Foderum Regis Gallie Libri duo. Per Alex. Patricium,' folio, 1635, enlarged edition, 8vo, 1637, and elicited, amongst other attacks, a reply from Daniel Priezacus, with the title of 'Vindiciæ Gallicæ adversus Alex. Patricium Armacanum,' 8vo, Paris, 1638. The 'Mars Gallicus,' of which a French translation, by Charles Hersant, D.D., was published with the title of 'Le Mars françois ou la Guerre de France,' &c., 8vo, 1637, procured for its author the appointment of Bishop of Ypres; where, in the midst of reforms which he had projected but did not live to complete, he died of the plague, on the 6th of May, 1638.

Jansen's principal work is one upon the doctrines of St. Augustine, upon which he was employed for upwards of twenty years, and which, leaving it finished at the time of his death, he submitted, by his last will, to the judgment of the Holy See. This work, which treated of divine grace, free-will, and predestination, and which was conceived against the doctrines of the Jesuits and gave rise to much controversy, was entitled

'Augustinus : seu Doctrina S. Augustini de humanæ Naturæ Sanitate, Ægritudine, et Medicina, adversus Pelagianos et Masilienses,' 3 vols., folio, Louvain, 1640; Paris, 1641; Rouen, 1642, &c. The other productions of Bishop Jansen comprise 'Letters,' and 'Commentaries' on various parts of the Bible, as, for instance, on the Pentateuch, the Books of Proverbs and Ecclesiastes, and the Gospels.

JAQUOTOT, MARIE-VICTOIRE, a celebrated French painter on porcelain, was born at Paris, in 1778. At the exposition of 1808, Mme. Jaquotot received a gold medal, being the first awarded for painting on porcelain, and she was engaged soon after as a principal painter at the manufactory of Sèvres, in which capacity she painted the magnificent dessert service presented by Napoleon I. to Alexander of Russia after the peace of Tilsit. From 1808 to 1827, the paintings of Mme. Jaquotot were always among the attractions of the annual expositions. A large proportion of them were reduced copies from celebrated pictures of the great masters; but many were from original designs, others from state portraits of royal personages, and some from the life, among which were several distinguished members of the English aristocracy. Mme. Jaquotot was appointed, in 1817, cabinet painter to the king (Louis XVIII.), and in 1828, principal painter on porcelain to Charles X.; under Louis Philippe she retained the title, but was not employed by the court. She died at Florence in 1855.

* JARDINE, SIR WILLIAM, BART., zoologist, was born on the family estate of Jardine Hall, in the parish of Applegarth, Dumfriesshire, February 23, 1800. On the death of his father in 1821, he succeeded to the baronetcy and estate. His attention has been given chiefly to birds, but he has written more or less on all the other vertebrate classes. His writings consist of editions of well-known works, books, articles in the scientific journals and notes contributed to various sources. He edited the editions of White's 'Natural History of Selborne,' in Bohn's Library, Constable's Miscellany, and The National Illustrated Library; Strickland's 'Ornithological Synonyms,' 8vo, 1855; and the 'Magazine of Zoology and Botany,' which, however, only lasted for about a couple of years, when it was changed into the 'Annals of Natural History,' of which he has been one of the editors since its commencement in 1838. He is also one of the editors of the 'Edinburgh New Philosophical Journal.' He was the conductor of the 'Naturalist's Library,' 40 vols., 16mo, to which he contributed the volumes relating to monkeys (vol. 2), the *Felineæ* (vol. 3), the pachyderms (vol. 9), the ruminating animals (vols. 10, 11), the humming birds (vols. 14, 15), the *Nectarinidæ* or Sun birds (vol. 16), the gallinaceous birds (vols. 20, 21), the birds of Great Britain and Ireland (vols. 24 to 27), and the perches (vol. 29). He has also written a 'Calendar of Ornithology,' 8vo, 1849; 'The Ichthyology of Annandale,' folio, Edinburgh, 1853; 'Memoir of H. E. Strickland,' 8vo, London, 1858; 'British Salmonidæ,' folio, Edinburgh, 1861. He has contributed to 'Illustrations of Ornithology,' 4 vols., fol., by himself, Selby, Raffles, and Horsfield; to Wilson's 'American Ornithology,' 12mo, 1840, and to 'The New Statistical Account of Scotland,' in which the natural history of Applegarth, in vol. 4, is by him. His scientific articles relate to the same subjects as his other works; the most important are those on salmon, in the 'Edinburgh New Philosophical Journal,' for 1835 and 1862, and the report on the experiments at Stormontfield for the artificial propagation of salmon, in the 'British Association Report' for 1856, pp. 451-458. He is a magistrate and vice-lieutenant of Dumfriesshire, and belongs to many scientific societies. He married in 1820, and one of his daughters married H. E. Strickland.

JASMIN, JACQUES, or JAQUOU JANSMIN [E. C. vol. iii. col. 603], died at Agen, on the 4th of October, 1864. The death of the hairdresser of Agen, who had lived on in his own simple way to the last, produced a lively sensation throughout the south of France. He received a pompous funeral, services were performed in his honour, and the outward marks of esteem for the man, and admiration of the poet, were universal. Longfellow has translated Jasmin's exquisite 'Blind Girl of Castel Cuillé,' (*L'Abuglo de Castel-Cuillé*), and in a note has given an interesting account of the author from Miss Costello's 'Béarn and the Pyrenees,' i. 369, &c. Jasmin's own autobiographical sketches, 'Las Papillotos de Jasmin,' have been several times reprinted since the author's death.

JAY, JOHN, American statesman, was descended from a Huguenot family which emigrated to America after the revocation of the Edict of Nantes, and was born at New York, December 12th, 1745. At the age of 14 he entered King's (now Columbia)

College, and, after a brilliant course, graduated with the highest honours in 1764. He studied law under B. Kissam, was called to the bar in 1768, and soon obtained a large share of business. Like most men of his standing, he engaged passionately in the disputes with the home government, became a leading member of the New York Committee of Correspondence, and was elected a member of the first Congress, September, 1774. The 'Address to the People of Great Britain,' put forth by the congress, and which produced a profound impression in both countries, was written by Jay. He was one of the leaders in the proceedings for separating New York from the mother country, was appointed to write the draft of the declaration of independence, and was nominated first chief justice of the State, 1777. Jay was one of the Council of Safety chosen to act during the recess of the legislature; and in 1778 was elected president of the Congress. In 1779 he went as minister to Spain. In 1782 he was sent to England as commissioner with Franklin, Adams and Laurens to negotiate peace; on November 30th, signed the preliminary treaty, and in September, 1783, the definite treaty of pacification, by the first article of which England acknowledged the Independence of the United States. On his return to America, in 1784, Jay was appointed secretary for foreign affairs, and he continued to fill this important post till the new Federal Constitution came into operation, when he became first Chief Justice of the United States. Jay had a large share in the preparation of this constitution, and was active in promoting its adoption both in the debates in the Convention and by writing, in conjunction with Hamilton and Madison, the very remarkable series of papers which were afterwards published in a collected form under the title of 'The Federalist.' In 1794 he was appointed by Hamilton, then at the head of the foreign office, envoy-extraordinary, to settle the differences between the governments of England and the States, and to negotiate a commercial treaty between the two countries. He succeeded in both, but there was a strong party in America desirous to draw closer to France and violently opposed to England, and Jay and his treaty were made the objects of bitter and persistent attacks. But though unpopular with the country at large, he was esteemed at home, and in 1795 was elected governor of New York, an office he retained till 1801, when he formally withdrew from public and political life. He continued, however, to take an active part in the promotion of the American Bible Society, of which he was president, and of other religious and philanthropic institutions, till his death, which occurred at his seat Bedford, Westchester county, New York, on the 17th of May, 1829, in his 84th year. Jay was one of the purest, the ablest, and the most unselfish statesmen the war of American Independence called forth, and in private life one of the most estimable of men.

(William Jay, *Life and Correspondence of John Jay*.)

JELLACHICH DE BUZIN, JOSEPH, GRAF VON [E. C. vol. iii. col. 613]. Jellachich received the title of Graf in 1855. He died on the 20th May, 1859, at Agram.

JERDAN, WILLIAM [E. C. vol. iii. col. 615]. In 1866 Mr. Jerdan published a work supplementary to his 'Autobiography,' under the title 'Men I Have Known.' He died at his residence, Bushey Heath, near Watford, Herts, on the 11th of July, 1869, aged 87.

* JERICHAU, ADOLPH, Danish sculptor, was born at Assens in the island of Fühnen, April 17th 1816. On completing his course of study at the Copenhagen Academy he went to Rome, where he derived great assistance from the encouragement and advice of Thorwaldsen. His first important work, executed at Rome, was a frieze of the 'Marriage of Alexander and Roxana' for the royal castle of Christiansburg. This was followed by a colossal group of 'Hercules and Hebe,' 'Penelope,' and other classical subjects. He was also called to execute some religious pieces; and after his return to Copenhagen, about 1849, his chisel found most employment in this line. Among the works executed for churches and private persons were colossal statues of the Saviour, Moses, King David, the Ascension, the Angel of Death, Adam and Eve, &c. Many of his works are in the royal and other collections in England. Jerichau is professor of sculpture and director of the Academy, Copenhagen. His style as a sculptor is grave, learned, and somewhat academical, but with much vigour and breadth of thought and handling. His wife,

* ELIZABETH JERICHAU, born at Warsaw, November 21st, 1819, has achieved a European reputation as a painter. Her artistic training was completed at Düsseldorf, and she still retains much of the manner of the school. But she studied the great Italian masters and Italian life at Rome, and thus super-

added to the German precision something of Italian warmth and feeling. Many of her pictures are of Italian peasants and scenes of homely Italian life; others exhibit the wrongs and sufferings of the poorer Poles; others again, and those which have been most popular in England, represent, without special reference to nationality, sick children, hospital patients nursed by sisters of mercy, 'Reading the Bible,' and other circumstances and incidents which appeal to the feelings and illustrate female compassion, sympathy, and devotion. Such scenes she paints with much power and pathos; her style is simple and unaffected, and her pictures display considerable technical knowledge and skill. She generally contributes to the exhibition of the Royal Academy, and some of her best pictures are in English collections.

JERROLD, DOUGLAS [E. C. vol. iii. col. 620]. The brilliant wit, dramatist, journalist, the earnest politician, the warm-hearted friend, lived but a few short months after the above notice of him was printed. He died at his residence, Kilburn Priory, on Monday, the 8th of June, 1857, and was interred on that day week in the Cemetery, Norwood, in the presence of one of the most remarkable assemblages of representatives of nearly every class of mental culture which had been brought together in England on any similar occasion. To the memoir referred to it is unnecessary to add anything here. A fuller biography of him was published in 1858, 'The Life and Remains of Douglas Jerrold.' By his son, Blanchard Jerrold. This son,

* **WILLIAM BLANCHARD JERROLD**, born 1826, succeeded his father as editor of 'Lloyd's Weekly Newspaper,' and has secured an independent reputation by several dramatic pieces, tales, sketches of London and Parisian life and manners, notes of continental journeys, and numerous contributions to periodicals.

JERVIS, THOMAS BEST, lieutenant-colonel, engineer, and geographical surveyor, was born at Jaffnapatam, Ceylon, August 2, 1796. On the completion of his school education he went to the East India Company's College at Addiscombe, where he distinguished himself for proficiency in mathematics, French and Hindustani. On leaving the college he entered the corps of Royal Engineers, and was employed on the ordnance survey to plan and map Bromsgrove and its neighbourhood. In 1814 he reached Bombay, and was engaged in erecting civil and military buildings. In 1820 he was appointed to survey South Cancon, and the result of his labours was a series of valuable reports on and maps of that part of India, chiefly embodied in 'Geographical and Statistical Memoir of the Konkun,' 8vo, Calcutta, 1840. After serving in various engineering posts in different parts of India, he was in 1835 made superintending engineer of the Bombay Presidency. From 1836 to 1839 he returned to England on furlough, and on going back to India he was appointed superintending engineer of the Northern Provinces. While in London he had been nominated to succeed Colonel Everest as surveyor-general, but finding that that officer had no intention of retiring, he himself retired from the East India Company's service in January, 1842. After his return to England he continued to employ himself actively in assisting the government authorities both at home and in India. He established a private lithographic press, and succeeded in printing forms and maps with remarkable excellence and rapidity.

When the Russian war broke out he urged the importance of supplying the army with accurate maps of Russia. The best map of the Crimea, that prepared by General Muhkin, was not to be obtained in England, and only one or two copies existed on the continent. He obtained a tracing, translated the Russian names into English, and in ten days produced 200 copies, each copy consisting of 21 sheets. This map proved to be of great service to the army. He then impressed upon the government the necessity of having a collection of maps for the use of the army. Accordingly, the Topographical and Statistical Depot of the War Office was established, and himself appointed director. He also recommended that a topographical corps should be sent out with the army during every campaign. He conducted the first corps, and surveyed portions of the Euphrates valley, the Caucasus, the Caspian Sea, and other districts. He died April 3, 1857. He was greatly assisted by his son,

* **WILLIAM PAGET JERVIS**, who has obtained a reputation in connection with the Italian department in the International Exhibition of 1862, and with the Royal Italian Industrial Museum at Turin, of which he is the director. He is the author of 'Mineral Resources of Tuscany,' 8vo, London, 1860; 'The History, Geological and Geographical Distribution and Commercial Bearings of the Marbles of Tuscany and Modena, and the Boracic Acid Lagoons of the Maremma,' 8vo, London, 1860;

'Guida alle Acque Minerali d'Italia,' 8vo, Turin, 1868; and of a few papers on mineralogical subjects.

JESSE, EDWARD, naturalist, son of the Rev. William Jesse, was born at the vicarage, Hutton Cranswick, in the East Riding of Yorkshire, on the 14th of January, 1780, and received a good private education. By the influence of Wilberforce, he obtained a clerkship in a government office in 1798, and was appointed secretary to Lord Dartmouth when that nobleman became president of the Board of Control. He served for a time as lieutenant-colonel of the Birmingham volunteers, and captain in the Leicestershire Militia, when he was appointed deputy-surveyor of the royal parks and palaces and gentleman of the Ewery at Windsor Castle, and, upon the abolition of the latter office, commissioner of hackney coaches. Mr. Jesse's connection with the parks and palaces, Windsor, Richmond, and Hampton Court being specially within his jurisdiction, and his habits of observation and fondness for out-door exercises and animal life, led him to cultivate natural history, and to publish the results of his observation and experience in a number of light, gossiping books, which were very popular, and, though of no scientific value, contain much interesting information, and are pleasant reading. These include 'Gleanings in Natural History,' three series, 3 vols. 8vo, 1832-35, eighth edition, 1858; 'An Angler's Rambles,' 8vo, 1836; 'Anecdotes of Dogs,' 4to, 1846, enlarged edition, 1858; 'Lectures on Natural History,' 1863. Another class of books of perhaps equal popularity comprised 'A Summer's Day at Hampton Court,' 1839; 'A Handbook to Hampton Court,' 1841; 'A Summer's Day at Windsor, and a Visit to Eton,' 1841; 'Favourite Haunts and Rural Studies, including Visits to Spots of Interest in the Vicinity of Windsor and Eton,' 1847; 'Windsor Castle and its Environs,' 1848; and 'Scenes and Tales of Country Life,' 1844, third edition, 1853. He also edited new editions of Izaak Walton's 'Complete Angler,' Gilbert White's 'Natural History of Selborne,' Hofland's 'Angler,' &c., and wrote many papers in the 'Gentleman's Magazine,' 'Once a Week,' and other journals. On his retirement on a pension in 1862, Mr. Jesse removed to Brighton, where he took an active part in establishing 'The Fisherman's Home,' and in other plans of local usefulness; and as a mark of the esteem in which he was held, his bust was in 1865 placed in the great room of the Pavilion by a subscription of the townspeople. Mr. Jesse died at Brighton on the 28th of March, 1868. His son,

* **JOHN HENEAGE JESSE**, born in 1808, is known by his 'Court of England under the Stuarts,' 4 vols. 1840; 'England under the House of Hanover,' 'Memoirs of the Pretender,' 'Memoirs of Richard III.,' 1861; 'Memorials of London,' 1847; 'London and its Celebrities,' 1850, new edition, 3 vols. 1870; 'Memoirs of George Selwyn,' and 'Memoirs of the Life and Reign of George III.,' 1867.

JOHN, FRIEDRICH, German engraver, was born at Marienburg in 1770. He served for a time in a mercantile establishment in Warsaw, but abandoned commerce for art, and eventually attained great success as an engraver. He resided in Vienna till 1832, when he retired to Mahrburg in Styria, where he died shortly after. His best plates are the 'Death of Abel,' and a portrait of Joseph II., after Füger; St. Catherine, after C. Dolce; and St. John, after Raffaele. He also engraved illustrations to the works of Klopstock and Wieland, and many other book-plates.

* **JOHNSON, ANDREW**, seventeenth President of the United States of America, was born December 29th, 1808, at Raleigh, North Carolina. His father, who had been a porter, sexton, and constable, died in 1818; and his mother, a work-woman, apprenticed Andrew to a tailor. During his apprenticeship he learned to read, and acquired a great relish for public affairs. In 1826 he removed to Lauren's Court House, where he worked as a journeyman; he then began to travel about North Carolina and Tennessee as an itinerant tailor; he married, and his wife taught him writing and arithmetic. In 1828 he was chosen alderman of Greenville, Tennessee. In 1830 he became mayor of the same place; in 1835, member of the lower House of Legislature, in the State of Tennessee; in 1841, member of the Tennessee Senate; and in 1843 member of Congress. During the earlier part of this career he was still a journeyman tailor, but gradually gave up his time and thoughts to public matters. During his ten years in Congress, he defended the Democratic or Southern party in upholding slavery, but raised his voice against the mode in which the slaveowners treated the "mean whites," the class to which he had himself belonged. In 1853, and again in 1855, he was elected governor of Tennessee, and in 1857 entered the United States Senate at Washington. Although

himself a slaveowner, he did not go with the extreme Democratic party. Shortly after the Civil War began, President Lincoln appointed him military governor of Tennessee; and the Republicans, satisfied with his conduct, elected him Vice-President of the United States in 1864. From the 4th of March, 1865, till the assassination of President Lincoln on the 14th of the following month, Mr. Johnson acted as Vice-President; but, by the terms of the Constitution, he now became President without any election. At the commencement of his presidency, Mr. Johnson startled the country by a thoughtless and intemperate speech; but, recovering his self-control, he went through the first year of office, steadily endeavouring to lessen the acerbity of North and South, and to mitigate the extreme measures which the Abolitionists wished to enforce against the Southern States after the termination of the Civil War. Difficulties commenced early in 1866; the President was much vituperated in both Houses of Congress, and he retaliated in a violent speech made at a public meeting at Washington, singling out three of the leading Abolitionists for special censure. Congress wished to treat the Southern States as a conquered people; taxing them, but without allowing them any share in the representation. To this course the President was resolutely opposed. He contended that the Southern States could not be, had not been, out of the Union; that they had been rebels, but, the rebellion having been crushed, and slavery abolished, it would be wise policy to let their representatives sit in Congress as before. All through the year did the struggle continue; the President vetoed the Freedmen's Bureau Bill, and other measures passed by Congress; while Congress passed those measures into law by a two-thirds vote over the veto; threatening, moreover, to disallow his nominations to official posts, and to reject his appropriation bills. He was frustrated in an endeavour to remove Mr. Stanton from the office of Secretary for War, an unseemly struggle on this point occurring within the walls of the War Office itself. After two or three important measures had been vetoed in the early months of 1867, Congress appointed a committee to examine whether there were grounds for impeaching the President. While this committee was sitting Mr. Johnson went to Raleigh, to be present at the inauguration of a memorial to his father; on which occasion he was moderate and careful in his speech-making. On March 4, 1868, the House of Representatives sent up to the Senate articles of impeachment against the President; he was cited; the trial began late in the month; his defence was opened on April 10, and on the 16th of May the decision was announced, there being 35 senators against him and 19 for him. As a two-thirds vote was necessary, this decision acquitted him; and his victory over Congress, narrow as it was, gave satisfaction. In this year, at a meeting of a Tailors' Union, met to do him honour, he declared that "the most pleasant hours of his life were those he had spent in his tailor's shop." At the presidential election in the autumn, General Grant was chosen President for the four years 1869 to 1873. Mr. Johnson, whose presidency did not expire till March 4, 1869, brought forward (in December, 1868) a scheme for paying off the national debt, which had accumulated to the amount of 600,000,000*l.* during five years of civil war; but the scheme, which savoured of partial repudiation, a violation of the terms on which the money had been raised, fell to the ground. Mr. Johnson continued on ill terms with both Houses of Congress, but his influence had declined long before the termination of his presidency.

JOHNSON, MANUEL JOHN, Radcliffe Astronomer at Oxford University, was born in May, 1805. After receiving a professional education at Addiscombe, he joined the East India Company's Artillery at St. Helena in 1821; the island at that time belonging to the Company. He paid great attention to the study of astronomy, and prepared a catalogue of 606 stars in the Southern hemisphere, which was published some years afterwards at the Company's expense, in the 'Memoirs of the Royal Astronomical Society,' and earned for Mr. Johnson the Society's medal. A small observatory was built on the island, from which the observations were made. In 1832, when St. Helena was transferred from the Company to the Crown, he retired, and was pensioned as a lieutenant of artillery. In the following year he entered Magdalen Hall, Oxford, graduated in 1839, and was appointed, the same year to succeed Professor Rigaud as Radcliffe Observer. The instruments at his command were not of a high character, but he succeeded in obtaining a new and efficient transit instrument in 1843. He introduced the plan of publishing a yearly volume, recording the observations and calculations made; and for ten years, with one assistant only (Mr. Lucas) he went through the

BIOG. DIV.—SUP.

labour of observing, recording, reducing, and superintending the printing and publishing, with a punctuality which was highly appreciated by astronomers generally. He devoted his chief attention to the circum-polar stars, down to lat. 40° N., determining their positions with great accuracy. The list comprised about 4,000 stars, concerning which his figures are regarded as a valuable supplement to those in Groombridge's Catalogue of 1810. In 1848 an important addition was made to his instruments by the construction of a fine heliometer by Repsold, of Hamburg, which measured the angular diameter of sun, moon, planets, and satellites with great accuracy, as well as the distance between the two components of double stars. Another assistant at the Radcliffe Observatory being now necessary, Mr. Pogson quitted Mr. Bishop's Observatory in the Regent's Park, and joined Mr. Johnson in 1849. The heliometer was fully described in the Observatory volume for 1850. A new series of observations was undertaken by Mr. Johnson with the aid of this instrument. He observed certain stars which had been catalogued by Bradley in 1755, Piazzi in 1800, and Groombridge in 1810; he compared the present angular distances apart of those stars, with the distances recorded in past years; and in so doing he rendered important service towards determining the proper motions of the stars, and of the sun as one of them, in space. Two series of heliometer observations were published, one in 1853 and the other in 1857. He prepared another catalogue of stars, selecting 1,481, which were, on various grounds, of special interest to astronomers; this was published in 1856. Mr. Johnson facilitated the making of meteorological observations at the Observatory, and the introduction of photographic registration; but astronomers afterwards regretted that these subsidiary labours had interfered with the continuance of his valuable observations with the great heliometer; for this instrument was not much used by him after 1855. His accurate measurements assisted in determining the parallax of 61 Cygni, Castor, Arcturus, Vega, and the star known as 1830 Groombridge. Mr. Johnson was elected Fellow of the Royal Society in 1856, and filled the office of President of the Royal Astronomical Society in 1857 and 1858. He died February 28, 1859.

JOHNSON, PERCIVAL NORTON, died at the age of 73 on the 1st of June, 1866. His father, John Johnson, was at one time the only commercial assayer in London. Percival worked with his father during some years, and about 50 years ago established himself as an assayer and metallurgist in Hatton Garden. He soon became celebrated in his profession, and his opinion was so much valued that he could hardly get through his work. The accuracy of his assays was a novelty at the time, and even a ground of objection; for he was the first to report the exact proportions of gold and silver in the specimens submitted to him, whereas previously the quantities had been stated approximately only. Purchasers of bullion objected to these accurate reports, since the contingent advantages in buying upon exactly known values were not so great. Johnson immediately offered to purchase all bars upon his own assays, and this led to his taking up the refining business, which he carried on with great success. He even obtained a public recognition of his skill; for when the gold bars from the Brazilian Gongo-Soco mines were refused at the Mint on account of their brittleness, Johnson undertook to refine and toughen them. He found palladium in this gold, and having succeeded in separating it, he introduced it commercially, and pointed out its appropriate uses.

During a visit to Germany Johnson met with the alloy known as "German silver," the manufacture of which was in a crude state. On his return he analysed the metal, and commenced and carried on its manufacture in this country. It now came into general use, and the working of it formed an important branch in our national manufactures.

In Germany he gave special attention to mining operations, and was now consulted professionally, and visited most of the mines in great Britain and Ireland. He was the first to introduce into Cornwall the German shaking, jigging, and washing-table, with improvements of his own. He also exerted himself to improve the social condition of the miners, and to establish schools in the neighbourhood of the mines. He likewise did much to promote schemes for relieving the men from the toil of ascending and descending the mines.

Johnson first refined and manufactured platinum on a commercial scale, and seeing its importance he made this his specialty. He also contrived several pottery colours, among which was the "rose pink," at a time when it was much wanted in our potteries. But his great skill was as an analyst, and this

was so far recognised that the other commercial assayers in London were accustomed to send him compounds or minerals of a difficult or complicated nature to report upon. As an adviser and assayer, Johnson succeeded in giving a scientific tone to his profession, and it was felt that he deserved the honour conferred upon him by the Royal Society in electing him a Fellow in 1846.

* JOHNSTON, ALEXANDER, Scottish painter, was born at Edinburgh in 1816. A student of the Royal Academy, London, he there exhibited his first picture in 1836, and has continued to exhibit ever since. His subjects have been chiefly taken from the graver side of Scottish poetry, or from the religious history of England and Scotland. Of these classes the 'Covenanter's Marriage' and 'Burial,' 'The Sabbath,' the 'Introduction of Flora Macdonald to the Young Pretender,' 'Tyndal Translating the Bible' (1854), 'The Abdication of Mary Queen of Scots' (1856), 'John Bunyan in Bedford Jail' (1861), 'The Flight of the Queen of James II.' (1869), will serve as examples. He has also painted many portraits. His 'Lord William Russell Receiving the Sacrament in the Tower' (1845) is in the National Gallery (Vernon collection). Several of his pictures have been engraved.

JOMARD, EDMÉ FRANÇOIS, geographer, was born at Versailles, November 17, 1777. He received his education at the college of Versailles, at the Mazarin Collège in Paris, at the École des Ponts et Chaussées, and at the École Polytechnique. The last was left in 1794; and in the following year he went to the school of practical geography and surveying, then conducted by Prony. In 1798 he was selected to join the scientific commission appointed by Bonaparte to draw up a description of Egypt. From July 1, 1798, to the assassination of Kleber in 1801, he was actively engaged in surveying the country and exploring its antiquities. The death of Kleber brought this work to a close, and he returned to France, but collected some notes respecting the Grecian Archipelago, where his vessel was detained by adverse winds. On reaching Paris he was commissioned by the War Department to survey a portion of Bavaria. In 1803 he was again in Paris, and was ordered to assist in drawing up the official account of Egypt. In 1807 the chief management of this work was entrusted to him, and for nearly twenty years he was chiefly occupied in superintending the printing and engraving, and in directing the labours of more than three hundred persons who were engaged upon the work, of which the first part was issued in 1809, and the last in 1826. In the course of his labours he had occasion to visit England, for the purpose of examining the monuments and antiquities of Egypt in the national collection. During this visit he became so great an admirer of the method of education pursued in the Bell and Lancaster schools, that he promoted its introduction into France. In 1816 he was appointed to direct the Bureau de l'Instruction primaire du Commerce et des Arts in the Seine prefecture. In 1818 he was elected a member of the Institute. In 1828 he was appointed to the management of the department of maps and geographical documents which was founded in that year in connection with the Bibliothèque Royale, a post for which he possessed unusual qualifications. In 1859 he helped to establish the Institut Égyptien at Alexandria, and was selected to be its first president. He was in the enjoyment of excellent health in September, 1862, and proposed making a voyage to Egypt in 1863. On the 28th of that month he performed his usual official labours, and was in the act of lifting a map down from the wall of his room when he suddenly dropped from the steps which supported him into the arms of a friend who was assisting him, and died before the day closed. His long life of 86 years was one of incessant activity. His great work was in connection with the 'Description de l'Égypte,' a large proportion of which was written by him. He was also frequently occupied in promoting the interests of Egypt. Thus, in 1826, he urged upon Mehemet Ali the desirability of sending thirty Egyptians of good birth to be educated in Paris. His proposal was adopted, and he was entrusted with the direction of their studies and the regulation of their conduct. He acquitted himself of this task with so much success, that the Viceroy of Egypt granted him an annuity of 400*l.*, but on his declining the gift Mehemet Ali wrote him a letter of thanks enclosed in a diamond-covered casket, and conferred upon him the dignity of bey. He was an enthusiastic supporter of the Suez Canal scheme, towards the successful issue of which he greatly contributed by his advice. His second most important work was the promotion of the collection of maps in the Bibliothèque Royale. As a geographer he did a great deal of other work. He was associated with

Humboldt, Laplace, Malte Brun, and others, in founding, in December, 1821, the Société de Géographie, of which he was president and vice-president for many years, and for forty-one years perhaps the most active member. He assisted most of the French travellers of his time, more especially those whose explorations were devoted to Africa, by advising them, looking after their interests, or making the results of their labours known to the world. Thus he was instrumental in publishing the travels of Cailliard, Caillé, and Cheik el Tounsy. In 1839 he commenced working on a detailed catalogue of the map collection in his charge, which was designed to be a contribution towards the history of maps. About the same time Viscount Santarem was engaged on a similar task, under the auspices of the Portuguese Government. A discussion arose as to whom the priority belonged, and an umpire was called in to decide, but as he could not settle in favour of either, both continued their respective works independently. Jomard's was published at his own expense, and absorbed a large portion of his personal fortune. It extended to eight parts, comprising eighty maps, and, amongst others, the remarkable one of the world drawn by Juan de la Cosa, one of Columbus's pilots. Jomard was a member of the Société Impériale d'Acclimation, and took an active share in its work. He also belonged to various other societies, and wrote numerous books, pamphlets, and papers.

JOMINI, HENRI, BARON [E. C. vol. iii. col. 643]. The Baron Jomini died at Passy, Paris, on the 24th of March, 1869, in his 91st year.

JONES, GEORGE, R.A., born January 6, 1786, was the son of a mezzotint engraver of ability. He became a student of the Royal Academy in 1801, began to exhibit in 1807, and practised for some years chiefly as a landscape painter, but on the outbreak of the Peninsular war entered the militia service, in which he rose to the grade of lieutenant; then volunteered for foreign service, served under Wellington, and entered Paris with the army of occupation in 1815. With the return of peace he resumed his practice as an artist. He painted continental street scenes with success, and he now added the representation of battle-fields, a class of subjects which continued for several years to be popular. The Directors of the British Institution announced that they would, in 1816, distribute 1000 guineas in premiums for finished sketches illustrative of the success of the British army in the recent war. Mr. Jones sent in two sketches of the Battle of Waterloo. From that entitled 'Waterloo, evening—the Duke of Wellington leading on the whole of the British Line in pursuit of the routed enemy,' the Directors commissioned him to paint a picture, 15 feet by 11 feet, and when it was completed in 1820, marked their approbation of his labours by presenting him with a premium of 100 guineas, in addition to the 500 guineas which they had agreed to pay for the work. The picture they presented to Chelsea Hospital, where it remains. It was much admired, obtained from the Duke of Wellington the characteristic commendation—"Not too much smoke," and secured to the painter commissions for several repetitions on a smaller scale, to one of which the Directors of the British Institution awarded in 1822 a "donation of 200*l.* in compliment for merit." His 'Battle of St. Vincent, Nelson boarding,' exhibited at the British Institution in 1827, was purchased by the Directors for 500 guineas, and presented to Greenwich Hospital. Mr. Jones continued to paint battle scenes with unwearied industry as long as he could wield a pencil, and though they lost their favour with critics and the general public, they were appreciated by military authorities, and some of his later works, illustrative of the successes of Napier and other Indian heroes, and incidents of the war in the Crimea, were especially admired by officers who had been present at the scenes depicted: several of the pictures were indeed painted under the direction of the commanders. During the last years of his life he alternated scripture subjects with battle scenes, but his attempts in this line were very feeble. Indeed, though his earlier paintings have unquestionable merit, it is probable that he will be longer remembered for the services he rendered at the Royal Academy than for his pictures. Mr. Jones was elected A.R.A. in 1822, and R.A. in 1824. In 1834 he was elected librarian, and on the removal of the Academy to Trafalgar-square, he classified, arranged, and catalogued the books. In 1840 he was made keeper, and as this officer has the superintendence of the students, Mr. Jones, in order to qualify himself for the proper discharge of his duties, visited the principal art schools of the continent, and studied their methods of instruction. He was in every respect an admirable keeper, and the students evinced their sense of his "undeviating kindness

of manner and affectionate regard for their interests, progress, and success," by presenting him, in 1845, with a silver tazza. In that year, in consequence of the illness of Sir M. A. Shee, the president, he was chosen deputy to act in his place, and he remained deputy till Shee's death in 1850. Mr. Jones survived till September 25th, 1869, retaining almost to the last something of his fine military bearing, and all his old kindness of manner. He wrote 'Sir Francis Chantrey, Sculptor. Recollections of his Life, &c.,' 8vo, 1849; and in 1852 appeared a series of 34 etchings from his drawings illustrative of Waterloo. Four pictures by him, which very fairly represent his style and range of subjects, are in the National Gallery (British School), Nos. 389—92, 'The burning Fiery Furnace,' 'Lady Godiva preparing to ride through Coventry,' 'Battle of the Borodino,' and 'Town Hall, Utrecht.'

* JONES, HENRY BENCE, chemist and physiologist, was born at Lowestoft, in 1814, and educated at Harrow and Cambridge. In 1836 he came to London, where he studied medicine. In 1846 he was elected physician to St. George's Hospital. He is a fellow of the Royal and numerous other learned societies, and the honorary secretary of the Royal Institution of Great Britain. He has written numerous articles and books, chiefly relating to animal chemistry and medicine. The more important books are 'On Gravel, Calculus, and Gout,' 8vo, London, 1842; 'On Animal Chemistry in its application to Stomach and Renal Diseases,' 8vo, London, 1850; 'Lectures on some of the applications of Chemistry and Mechanics to Pathology and Therapeutics,' 8vo, London, 1867; and 'The Life and Letters of Faraday,' 8vo, London, 1870. He has edited Du Bois Reymond's work 'On Animal Electricity,' 8vo, 1852; several editions of Fownes's 'Manual of Elementary Chemistry,' and Mulder's 'Chemistry of Wine,' 8vo, 1857. His papers include some important contributions on urine in the 'Philosophical Transactions' for 1845, 1846, 1849, 1850, and 1851; and the Croonian Lecture 'On the rate of passage of crystalloids into and out of the vascular and non-vascular textures of the body,' 8vo, London, 1868. In the latter paper he notices the use of the spectroscope for tracing the passage (sometimes very rapid) of various substances, such as a salt of lithia, through living animal tissues. He also detected the presence of a substance like quinine in animals.

* JONES, THOMAS WHARTON, oculist and physiologist, was born at St. Andrews, Fifeshire, in 1808, and educated at Edinburgh and at various places on the continent. In 1838 he settled down to medical practice in London, and soon associated himself with numerous English and foreign societies. He is the professor of ophthalmic medicine and surgery in University College, London, and ophthalmic surgeon in the hospital connected with it. He has obtained a high reputation on all subjects connected with the structure and diseases of the eye, and has written several works relating thereto, of which we may mention 'Defects of Sight and Hearing,' 8vo, London, 1st ed. 1856, 2nd ed. 1866; 'A Manual of the principles and practice of Ophthalmic Medicine and Surgery,' 16mo, London, 1st ed. 1847, 3rd ed. 1865; and 'The Wisdom and Beneficence of the Almighty as displayed in the Sense of Vision,' 8vo, London, 1851, being the Actonian Prize Essay for 1851. His papers in the scientific journals relate to the eye, the blood, and the earlier phases of development of the ova of mammals.

JOSIKA, MIKLÓS, or NICHOLÁS. [E. C. vol. iii. col. 658.] Josika published an historical romance, founded on the life of Franz Rakóczi II., 'Második Rákóczi Ferencz,' 4 vols., Pesth, 1861, and another entitled 'A Négváriak,' 3 vols., Pesth, 1865. In 1864 he removed to Dresden, where he died on the 27th of February, 1865.

JOUFFROY, THOMAS SIMON, called also THÉODORE, a distinguished French metaphysician, was born at the hamlet Des Pontets (Doubs) on the 7th of July, 1796; and, after receiving his earlier education at Pontarlier, became a student of rhetoric at the college of Dijon. He was admitted at the École Normale in 1814; and in 1817 became tutor in philosophy in that institution, with which office he conjoined a professorship at the Collège Bourbon, afterwards known as the Lycée Bonaparte. The liberality and independence of his opinions caused his deprivation in 1821, after which he opened, in the Rue Saint Honoré, classes for the study of philosophy which were attended by many of the most promising young men of the time. Here he trained the staff of 'Le Globe,' a philosophical and literary journal which he founded in 1824, in association with MM. Dubois and Damiron, and to which, up to the year 1830, he was one of the principal contributors. In 1826 he

published a translation of the Moral Philosophy of Professor Dugald Stewart, 'Esquisses de Philosophie morale de Dugald Stewart,' 8vo, Paris, which he followed by a translation of the Works of Reid, 'Œuvres complètes de Thomas Reid,' 6 vols. 8vo, Paris, 1828—36. In 1829 he became assistant professor of philosophy in the Faculty of Literature in Paris; professor-adjoint in 1830, and Master of the Conférences at the École Normale. From 1831 to 1838 he represented Pontarlier in the Chamber of Deputies, where he took part in various political discussions; became in 1833 a Member of the Académie des Sciences morales et politiques; and in 1840 a member of the Grand Conseil d'Instruction Publique. He died on the 1st of March, 1842. At his interment the funeral oration was pronounced by M. Victor Cousin.

The principal works of M. Jouffroy are his 'Mélanges Philosophiques,' 8vo, Paris, 1833, third edition, 12mo, Paris, 1860, a selection of articles which had been published in the 'Globe,' together with some inedited pieces under the divisions of 'Philosophie de l'Histoire,' 'Histoire de la Philosophie,' 'Psychologie,' and 'Morale'; 'Nouveaux Mélanges philosophiques: précédés d'une Notice, et publiés par Ch. Damiron,' 8vo, Paris, 1842, second edition, 12mo, Paris, 1861, a selection of articles which had appeared in the 'Recueil de l'Académie des Sciences Morales et Politiques,' and the 'Encyclopédie Moderne,' together with some inedited pieces; 'Cours du Droit naturel professé à la Faculté des Lettres de Paris,' 3 vols. 8vo, Paris, 1833—42, second edition, 2 vols. 8vo, Paris, 1843, third edition, 2 vols. 12mo, Paris, 1857; 'Cours d'Esthétique: suivi de la Thèse de l'Auteur sur le Sentiment du Beau et de deux Fragments inédits,' 8vo, Paris, 1843, second edition, 12mo, Paris, 1862, a work which was edited and introduced with a 'Preface' by M. Damiron. Besides contributing articles in history, geography, and general literature to the 'Globe,' Jouffroy was the author of some articles in the 'Revue des Deux Mondes,' and of one or two historical works.

Although adopting the general conclusions of M. Cousin, Jouffroy is by no means a repeater of his master's ideas, and has claims to be considered as an original scientific observer whose modes of thinking and developments are entirely his own. His thought is profound and accurate, and his style is of great transparency. He proclaims and vindicates the absolute and immutable distinction of right and wrong, the absolute law of moral obligation, and the idea of right in itself as the motive of moral action.

* JOULE, JAMES PRESCOTT, D.C.L., LL.D., was born in Salford, December 24, 1818, the son of Benjamin Joule, who carried on business as a brewer, and in which he assisted until 36 years of age, his spare time only being devoted to science. His scientific education consisted in attending private lessons by Dr. Dalton thrice a week for three or four years. These instructions implanted in him the desire of original research. His attention was at first directed to the electro-magnetic engine, and a description of one manufactured by himself appeared in the 'Annals of Electricity' for January, 1838. His researches on this subject showed the impossibility of substituting it for the steam-engine as an economical machine. The phenomenon of heat evolved by electricity followed naturally, the law of evolution being shown to be proportional to the resistance and the square of the quantity of current. Following up this fact, he ascertained in 1841 that the quantity of heat evolved by the combustion of the chemical equivalents of bodies is proportional to the intensities of their affinities for oxygen. These results indicated the mechanical nature of the origin of heat; and an elaborate series of experiments with electro-magnetic apparatus, in the year 1843, showed that, in an electro-magnetic engine, work is given out in proportion to the diminution of heat evolved by the zinc consumed in the battery. Also that the heat of the circuit per consumption of zinc can be increased by reversing the engine, so as to do work on the battery. These experiments established the fact that an equivalency existed between work and heat. This equivalent was at first stated to be 838 foot lbs. per unit of heat. But the simple method of agitating fluids afforded a much readier and more accurate means of determining this constant. Commencing in 1843, very numerous experiments were made with various fluids, the equivalent being finally placed at 772. Further experiments on the heat evolved by electricity passing through resistances measured absolutely, make him of opinion that this number is very slightly under the correct figure. The applications of the principle of the mechanical equivalent of heat thus discovered were numerous and interesting. The first of these was to the calorific phenomena observed on the

compression or rarefaction of air. Then the phenomena of shooting stars were explained. He also showed that the physical properties of gas could be explained by the motion of its constituent particles. In 1847 he formed the friendship of Professor, now Sir W. Thomson. With this eminent philosopher he commenced, in 1852, a series of researches on the thermal effects of fluids in motion, which have been extended over four memoirs, and are still in progress. A research on the effects of magnetism on the dimensions of iron and steel was commenced in 1840. These remarkable phenomena were made manifest to a large audience in the lecture-room of the Victoria Gallery of Manchester. Dr. Joule is the author of several new processes and instruments; in particular, he was the first to construct and use calibrated thermometers in this country, and to use small needles in tangent galvanometers. He is the constructor of an instrument for the delicate absolute measurement of currents of electricity, and of an instrument for observing the magnetic dip in which the needle is suspended on an original principle. Dr. Joule is a fellow of the Royal Societies of London and Edinburgh, a corresponding member of the Academy of Sciences of Paris, and a member of various other learned bodies.

* JOWETT, BENJAMIN, an eminent scholar and divine, was born at Camberwell in the year 1817; and after receiving his earlier education at St. Paul's school, became, in 1836, a scholar of Balliol College, Oxford, of which, whilst still an undergraduate, he became a Fellow in 1838. In 1837 he obtained the Hertford scholarship; and, having taken his B.A. degree in the first class of *Literæ Humaniores* in 1839, proceeded M.A. in 1842, in which year he was made a deacon by the Bishop of Oxford, who admitted him to priest's orders in 1845. In 1841 he carried off the Chancellor's prize for the best Latin essay, which was published with the title of '*De Etruscorum Cultu, Moribus, et Legibus, eorumque apud Romanos Vestigiis Oratio*, in *Theatro Sheldoniano habita*,' 12mo, Oxford and London, 1841. In 1842 he commenced his career as a tutor, the duties of which office he discharged with singular devotion and success. He was Examiner in the Classical Schools in 1849—51, and again in 1853; and he held the office of Moderator in 1859—60. In 1854 he was named a member of the Commission appointed to consider the examinations and terms of admission to be exacted from candidates for the Indian Civil Service, whose report, dated November, 1854, was conceived in the idea of securing the highest education and the most complete efficiency, and published with the title of '*The Indian Civil Service*. Report to the Right Hon. Sir Charles Wood, Bart., M.P., &c., by the Right Hon. T. B. Macaulay, the Right Hon. Lord Ashburton, the Rev. Principal H. Melvill, B. Jowett, Esq., and the Hon. the Speaker of the House of Commons,' 8vo, London, Calcutta, and Bombay, 1855. In the last-mentioned year, Mr. Jowett was appointed, on the recommendation of Lord Palmerston, to the Regius Professorship of Greek in the University of Oxford; and published his Commentary on '*The Epistles of St. Paul to the Thessalonians, Galatians, and Romans*,' 2 vols. 8vo, London, 1855, second edition, 1859, a work which, owing to the breadth of opinions therein expressed, occasioned him many years of opposition, controversy, and pecuniary loss. In 1860 he contributed to '*Essays and Reviews*' a remarkable article '*On the Interpretation of Scripture*,' in which he was charged with having denied the inspiration of the Bible, and its agreement with the creeds of the Church, as he had been said to have denied the Atonement in his Commentary. Various members of the High Church and rigidly orthodox party, having taken an opinion on the '*Case as to the Legal Position*,' &c., 8vo, London, 1862, proceeded to procure a citation which should compel Professor Jowett to appear in the Chancellor's Court, in the Apodyterium of the Convocation House, in February, 1863, there to answer certain articles or interrogatories touching his infraction of the Statutes and Privileges of the University, by having, in the years 1859, 1860, 1861, and 1862, written, uttered, or published, within the precincts of the University and elsewhere, a certain book entitled '*The Epistles of St. Paul*,' &c. In this book, and also in the article contributed to '*Essays and Reviews*,' Professor Jowett was charged with having "advisedly promulgated, maintained, declared and affirmed certain erroneous and strange doctrines, positions, or opinions, contrary to and inconsistent with the doctrines of the Church of England, the Thirty-nine Articles of Religion agreed upon in the Convocation holden at London in the year 1562, and the Catholic faith; thereby contravening the laws and statutes of the said University, and against the peace and

unity of the Church." The promoters of the citation prayed that the Professor, on legal proof of the charges, should be duly corrected and punished, and be inhibited from promulgating or publishing such erroneous doctrines or opinions. On the 20th of February, 1863, Mr. Jowett's proctor entered a formal protest against the jurisdiction of the court; and at the second sitting, on the 27th of the same month, the Assessor, whilst expressing himself with reserve and hesitation about the question of jurisdiction, expressed himself also as being perfectly clear as to the inapplicability of the statute under which the proceedings had been instituted. The case is given in detail in a pamphlet entitled '*Pusey and others v. Jowett*. The Argument and Decision as to the Jurisdiction of the Chancellor's Court at Oxford,' 8vo, London and Oxford, 1863.

Although the opponents of Professor Jowett were thus discomfited, they were powerful enough to perpetuate for two years longer an injury under which he had all along been suffering. The original endowment of each of the five Regius Professorships established by King Henry VIII. was a stipend of 40*l.* a year; and with this payment, so far as the Professors of Divinity, Hebrew, and Greek are concerned, the Dean and Chapter of Christ Church are charged, as being in possession of certain lands which were originally set apart for the emoluments of these chairs. It was long a cause of scandal and irritation, both within the University and without its limits, that the stipend of the Regius Professor of Greek was kept down to its original amount of 40*l.*, notwithstanding that no other professor had a smaller income than 400*l.*, and that the lands in question had so much increased in value that the canons of Christ Church, whose stipends were first fixed at 15*l.* each, were in actual receipt of eighty times as much, or 1200*l.*, per annum. It was contended that the Dean and Chapter were bound, legally and morally, to increase Professor Jowett's salary to at least the minimum amount enjoyed by other professors. The Attorney-General, however, and several other eminent lawyers were of opinion that the Christ Church authorities were under no obligation to increase the emoluments of the Greek chair; and it was, therefore, with great satisfaction that it became known, in February, 1865, that the Dean and Chapter, on the ground of "general expedience," and "considering the great difficulties which had, now for some time, attended the proposal to endow the Greek chair, had agreed to take such measures as might be necessary for increasing the yearly salary of the Regius Professor of Greek to the sum of 500*l.*" On the 7th of September, 1870, Mr. Jowett received the reward of thirty years of self-denying, devoted, and successful labour as a tutor, by his election to the Mastership of Balliol College, left vacant by the promotion of Dr. Scott to the Deanery of Rochester. The latest result of the diligence and scholarship of Professor Jowett is a work upon which he has spent a large proportion of his life, entitled '*Plato's Dialogues*, translated into English, with Analysis and Introductions,' 4 vols. 8vo, London and Oxford (Clarendon Press), 1871.

* JUAREZ, BENITO, President of the Republic of Mexico, was born at Tixtlan, in that country, in or about the year 1807. Although with some Spanish blood, he may more nearly be regarded as an Indian, being descended from the race of the Tapatecos. He studied law, and became an advocate at the bar, entered the Mexican Congress in 1846, and in 1848 was chosen governor of the State of Oaxaca. As a member of the liberal party, he was exiled during the dictatorship of Santa Anna, and lived at Havana and New Orleans from 1853 to 1855. On the restoration of republican government, under Alvarez, he was elected to the new Congress in 1856, and chosen President of the Supreme Court in the following year. In 1858, the clerical party overthrew the liberal President Comonfort; Juarez refused to recognise the usurper Zuluaga, retired to Vera Cruz, secured to himself the greater half of the customs' duties received at that port, set up a provisional government, and assumed the title of Constituent President. Miramon, who had supplanted Zuluaga as president of the republic, prepared to attack Juarez early in 1859. Juarez frustrated an attack made by Miramon at Vera Cruz in 1860, and defeated him at Miguelito. Miramon having fled to Europe, Juarez entered the city of Mexico, and in June, 1861, caused himself to be elected president of the republic for four years. Embarrassed by financial difficulties, he decreed the suspension, for two years, of indemnities due to England and France, which had been secured by the hypothecation of customs' duties. This proceeding, and the numerous outrages permitted to be made upon Europeans, led to an agreement between England, France, and Spain, and the sending of a

combined force by those powers. Vera Cruz was taken and held by the allies as security. England and Spain formally withdrew from the alliance in April, 1862, having obtained the avowed objects of their intervention; but the French remained. Juarez proclaimed a sort of guerilla war against the French, and contracted a loan with the United States Government for 25,000,000 dollars. The war became one in which Juarez was backed by the United States; while the clerical party, under Miramon and Almonte, were supported by the French. Juarez defeated the French at Puebla in May, 1862; he was defeated by them about a year later at the same place, and afterwards at Mexico and San Luis de Potosi; and in 1864 he removed his government to Monterey. Then it was that the French set up the hapless Archduke Maximilian as Emperor of Mexico under their protection. In 1865 Maximilian issued a decree, announcing the extinction of the republic, and sentencing to death all Juarists taken in arms. The United States, friendly to Juarez, and not wishing to see an empire under European protection close to their frontier, assumed so threatening an attitude, that in 1866 the French withdrew from Mexico altogether, leaving the new emperor to struggle on alone. The struggle was not of long continuance; he was defeated at Queretaro, taken prisoner, and put to death by Juarez (June 19th, 1867). Mexico and Vera Cruz being recovered, Juarez was re-elected president in October. There were many revolts in 1868, some headed by Ortega; but they were suppressed. In April, 1869, with the consent of his Congress, he proclaimed an amnesty for all the adherents of Maximilian; and about the same time removed some of the restrictions which had been laid upon the press. On opening the 15th Congress of the Republic of Mexico, in September, 1869, President Juarez congratulated the country on being at peace at home and abroad.

JUKES, JOSEPH BEETE, geologist, was born near Birmingham, October 10, 1811. He was educated at the Merchant Taylors' School, Wolverhampton; King Edward's School, Birmingham; and at St. John's College, Cambridge, which he entered in 1830, taking his B.A. degree in 1836, and his M.A. degree in 1841. Professor Sedgwick's genial enthusiasm did much to induce him to devote himself to geology, and his earliest papers consist of sketches of the geology of Leicestershire, Derbyshire, and Staffordshire, in 'The Analyst' for 1838 and 1839. In 1839 he was appointed geological surveyor of Newfoundland, and the results of his researches there were published in 'Excursions in and about Newfoundland during the years 1839 and 1840,' 2 vols. 12mo, London, 1842. In 1842 there also appeared his account of the geology of Charnwood Forest, in Potter's history of that district. From 1842 to 1846 he was engaged as naturalist on board H.M.S. Fly, which had been sent to survey the great barrier reef along the east coast of Australia. The results obtained by him appeared in a 'Narrative of the Surveying Voyage of H.M.S. Fly,' 2 vols. 8vo, London, 1847. This work contains a large fund of information relative to coral reefs, the distribution of mollusca, physical geography, and other branches of science. In September, 1846, he joined the Geological Survey of Great Britain, and did good service in assisting to survey North Wales, which occupied his summer months, while during the winter he was engaged in surveying the South Staffordshire coal field. This last work resulted in one of his most important contributions to literature, viz., the Geological Survey memoir entitled 'The South Staffordshire Coal Field,' 8vo, London, 1853, 2nd ed. 1859. In 1850 he succeeded Professor Oldham as Local Director of the Geological Survey of Ireland, in which capacity he directed the survey of about one-half the area of Ireland, and contributed to most of the memoirs explanatory of the maps resulting from that survey. For many years he was professor of geology to the Royal Dublin Society, and to the Royal College of Science in Dublin. This occupation led to his writing several educational works, such as 'Popular Physical Geology,' 8vo, London, 1853; 'The Student's Manual of Geology,' 12mo, Edinburgh, 1857, 2nd ed. 1862, forming an excellent book of reference, and one or two others. At the time of the earliest gold discoveries in Australia he lectured and wrote on the geology of that continent. He wrote numerous scientific papers, mostly geological. The most noteworthy are those 'On the formation of some of the river valleys in the south of Ireland,' in 'Quarterly Journal Geol. Soc.' xviii., pp. 378—403 (1862), in which he advocated the view that those valleys have been cut through high ridges by the rivers, which originally flowed on a level with the summit of those ridges, and have gradually deepened their beds; and on the carboni-

ferous slates of Ireland, and the Devonian rocks of England, in which he attempted, though unsuccessfully, to prove that the Devonian rocks of Devonshire are of carboniferous age. In 1866 his health broke down, and, although he rallied somewhat, his disease gained on him, and carried him off on August 1, 1869.

JULIEN, STANISLAS-AIGNAN [E. C. vol. vi. col. 1008].

JUNG, JOACHIM, naturalist, was born at Lübeck, Oct. 21, 1587. His education was conducted amidst great difficulties, owing to poverty. For five years he was professor of mathematics at Giessen, which post he quitted owing to his strong predilection for natural history. In 1618 he settled at Rostock, and proposed to found a society for advancing the natural sciences, a proposal which exposed him to much opposition, on the supposition that he was one of the chiefs of the Rosicrucian brotherhood. The intrigues against him prevented him from obtaining a professorship till 1624, and soon after compelled him to quit Rostock. He returned in 1626, and in 1629 he finally left the place, and lived for the rest of his life, which ended September 23, 1657, at Hamburg, where he filled the position of rector of St. John's School. Jung wrote largely on philosophy, mathematics, minerals, invertebrates, and botany, but, owing to a fire many of his works have been lost or rendered very scarce. Those that exist were collected by J. P. Albrecht, under the title of 'Opuscula Physica botanica,' Cobourg, 1747. Jung was probably the first botanist who saw the necessity of a binomial nomenclature, but this detracts in no way from the merits of Linnaeus, who not only had the same idea, but fully developed it without being aware of Jung's opinion. Jung also seems to have acquired a sufficient mastery of the specific differences of plants to form some notion upon what characters a good classification should be based.

JUNGHUHN, FRANZ WILHELM, naturalist, was born at Mansfeld, in Prussian Saxony, October 26, 1812. Early in life he entered the Prussian army as a surgeon, but owing to a duel he was imprisoned for nearly two years. He afterwards joined the Dutch army in Java, and in 1836 commenced the long series of investigations into the natural history of Java upon which his reputation is based. His principal works are a 'Java Album,' oblong fol., Leipzig, 1856; 'Java, deszelfs gedaante bekleedende en invindige structuur,' 4 vols. 8vo, and fol. atlas, Amsterdam, 1850—1853; 'Topographische und naturwissenschaftliche Reisen durch Java,' 8vo, and oblong fol. atlas, Magdeburg, 1845. The Dutch work on Java was translated into German by Hasskarl, and published at Leipzig in 1852; it contains the best account known of the geology and volcanoes of Java. He collected a large number of plants, which were described by himself, Göppert, De Vriese, and others, in 'Plantæ Junghuhnianæ,' 8vo, Leyden, 1851. He also wrote numerous papers in Dutch and German periodicals on the plants and physical geography of Java. He died at Lombang, April 24, 1864.

JUSSOW, HEINRICH CHRISTOPH, German architect, was born at Cassel, October 9th, 1754. He was educated with a view to the law; but preferring architecture, he in 1780 went to Paris, where he studied for two years under Wailly; then spent some time at Rome, Naples, &c., investigating the principal buildings, and finally, by order of the Landgrave of Hesse-Cassel, Wilhelm IX., proceeded to England to make himself acquainted with the laying out of the parks and gardens. Returning to Cassel in 1790, he was appointed director of public works; added a new wing to the Palace of Wilhelmshöhe, and laid out the adjacent park; built a city gate, the Friedrichsthor; a church at Neustadt, &c. During the French occupation, Jussow was continued in his office by King Jerome Bonaparte, for whom he designed the so-called Chinese Gallery. On the return of Wilhelm, now elector, Jussow was commissioned to build the new Palace of Haltenburg, at Cassel, on a vast scale; but only the ground story was completed at the death of Wilhelm in 1821, and it has not been carried farther. Jussow died, July 26th, 1825.

JUSTUS OF PADUA, an eminent Italian painter, whose real name was Justus or Giusto di Giovanni de' Menabuoi, was born at Florence in the second quarter of the 14th century. He was a follower, though not a scholar, of Giotto; settled in Padua, where he was admitted a citizen in 1375; executed numerous frescoes in the churches of that city, and died there September 29th, 1400. Easel pictures by him are rare. The National Gallery possesses a small but very interesting triptych by him, No. 701, 'The Coronation of the Virgin,' with representations of the principal events in her life. It is on panel and bears on the plinth the date 1367. It formed a portion of the

Oettingen Wallerstein Collection presented by the Queen to the National Gallery in 1863.

JUVARRA, FILIPPO [IVARA, F., E. C. S.].

JUXON, WILLIAM, an English prelate of the 17th century, was born in the year 1582, and was educated at the University of Oxford, in which he served the office of Vice-Chancellor in 1626. On the 29th of November, 1621, he was elected President of St. John's College, in the chapel of which he was buried. He was made Dean of Worcester in January, 1628; was elected to the Bishopric of Hereford in 1633, but before his consecration was preferred, October 23rd, to the see of London. He was appointed to be High Treasurer of England on the 6th of March, 1635, and held this office till 1641. He suffered, in common with other bishops, during the rebellion and the Commonwealth, and retired to his manor of Little Compton, in Gloucestershire. A few months after the

Restoration he was translated, September 20th, 1660, to the see of Canterbury; in the incumbency of which he died at Lambeth on the 4th of June, 1663, and was interred in St. John's College chapel, Oxford, on the 9th of July following. The archbishop owes his principal claim to notice to the circumstance of his having attended King Charles I. in his last moments; and he deserves to be remembered for the faithful counsel which he gave the same unhappy sovereign, when consulted by him as to the attainder of Strafford—"not to do anything against his conscience for the world." His very scanty contributions to literature include 'The Subjects' Sorrow: or, Lamentations upon the Death of Britain's Josiah, King Charles. A Sermon,' 4to, London, 1649; and 'Some Considerations upon the Acts of Uniformity: with an Expedient for the Satisfaction of the Clergy within the Province of Canterbury. By a Servant of the God of Peace,' 4to, London, 1662.

K

KALKBRENNER, CHRISTIAN, German composer and musical writer, was born September 22nd, 1755, at Minden, Hanover. His father, Michael, a musical professor, placed him, at the age of fifteen, under Becker, court organist at Cassel; lessons on the violin were also given to the youth by Rodwald; and at the age of seventeen young Kalkbrenner entered the chorus at the Opera. In 1777 a symphony won for him a gift of fifty thalers from the landgrave, and a mass for four voices was favourably received by the Philharmonic Academy of Bologna. He was appointed kapellmeister at Berlin, in 1788; and afterwards to a similar post, under Prince Henry of Prussia, at Rheinsberg. Turning his attention to French opera, he composed 'La Veuve du Malabar,' 'Démocrite,' 'La Femme et le Secret,' and 'Lanassa.' After a few months' sojourn at Naples he settled at Paris, filled a post at the Opera, and remained there till his death, which took place August 10th, 1806. Besides the operas above mentioned, Kalkbrenner composed 'Cenone,' 'La Descente des Français en Angleterre,' 'Olympie,' and minor pieces for the stage. With Lachnith he produced two Oratorios, 'Saul,' and 'La Prise de Jericho,' French adaptations of German models. Many other pieces of music were composed by him; but he is chiefly known as a musical writer of four works—'Theorie der Tonsetzkunst, mit 13 Tabellen,' 8vo, Berlin, 1789; 'Kurzer Abriss der Geschichte der Tonkunst, zum Vergnügen der Liebhaber der Musik,' 8vo, Berlin, 1792; a book which formed the basis for a larger work in French, 'Histoire de la Musique,' 2 vols. 8vo, Paris, 1802. Both works are, however, so full of errors as to be of little value. A more useful, though not original, work was a new edition of the treatise by Richter, 'Traité d'Harmonie et de Composition, par Fr. Xav. Richter; revu, corrigé, augmenté, et publié avec quatre-vingt-treize planches,' 4to, Paris, 1804. His son,

FRIEDRICH WILHELM KALKBRENNER, was born at Cassel in 1784. After studying music at Cassel and Naples, he entered M. Adam's piano class in the Conservatoire at Paris in 1798, and studied harmony under Catel in the following year. Visiting Vienna in 1805, he closely studied the style of pianoforte fingering introduced by Clementi; and on returning to Paris in the following year, he attracted notice by the brilliancy of his playing. After eight years of composing and teaching in Paris, he spent 1814 to 1823 in London. His services were in constant requisition as a teacher of the pianoforte; he was engaged all day long giving lessons at the rate of one guinea for forty minutes. In 1818 he joined Logier in introducing the "chiroplast" method of teaching the pianoforte; concerning which he wrote 'Méthode pour Apprendre le Piano-forte à l'aide de guide-mains,' &c., which was speedily translated into English, German, and Italian. In 1823 Kalkbrenner joined Dizi, the harpist, in a musical tour in Germany. In 1824 he and Camille Pleyel established a pianoforte factory at Paris, which, like most of his undertakings, was a source of emolument to him. In later years he paid successful visits to England, Belgium, France, and other countries. His compositions for the pianoforte were very numerous, but displayed little originality. He died at Paris, June 11th, 1849.

KALL, ABRAHAM, a Danish historian and philologist, son of the orientalist, Professor Johan Christian Kall, and descending from a German family, was born on the 2nd of July, 1743, at Aarhus, in Jutland. After receiving his earlier education from his father, he repaired in 1763 to the University of Göttingen, from which he returned after a three years' stay to Copenhagen. After filling various offices of minor importance in the university of the latter city, he was appointed, in September, 1770, to the professorship of Greek, which he exchanged in 1781 for that of history and geography. He was soon afterwards appointed to the newly-instituted chair of mythology and art-history at the Academy of Arts; a post which he resigned about the year 1808. In the course of his life he filled various extra-academical offices, having been a member of the Royal commission on public instruction, a member of the Royal Academy of Sciences at Copenhagen, and historiographer of the kingdoms of Denmark and Norway. He died at Copenhagen on the 5th of December, 1821, having contributed articles of learning and interest to various periodicals, and having published several works of value in Greek philology, and in the history and antiquities of his native country.

KANE, ELISHA KENT, Arctic voyager, was born at Philadelphia, February 3, 1822. As a boy, he was averse to all systematic restraint, and so repugnant to him was the usual routine of education that he derived little benefit from his schooling. He, however, contrived to pick up a considerable fund of knowledge, since his delight was to make chemical experiments, contrive mechanical toys, study the weather from the tops of trees and houses, and to amuse himself with perilous enterprises involving courage and agility. When about 16 he began to feel the necessity of preparing for some occupation, and, selecting civil engineering, he sought admission to Yale College, but found his studies were not sufficiently advanced. He went to the University of Virginia, where he devoted himself more especially to geology and the allied sciences, but always worked with a view to civil engineering. His intense application brought on so severe an illness that he was compelled to leave the university after having been there a year and a half. In his eighteenth year he had inflammation of the lining membrane of the heart, and for a long while his life was despaired of, and when he recovered strength he was told that he was liable to be carried off at any moment. Indeed, the heart disease never left him, and he ultimately died from it. The result of his illnesses so weakened his constitution that his friends considered he could not follow the profession of an engineer, and persuaded him to adopt that of medicine in order that he might be able to manage his own case. He was placed with Dr. Harris, and in 1840 was elected a resident physician in the Pennsylvania Hospital at Blockley. While occupying this position his health was very delicate, and he could only sleep with the body in a raised position. Although constantly contemplating sudden death, he was buoyant in spirits and enthusiastic in the performance of his duties. In 1841 he became one of the four senior resident physicians of the hospital. Soon after this he graduated in medicine, and wrote a thesis which was

much applauded. The hospital life proving to be too sedentary an employment for him, he obtained the post of physician to an embassy to China. On the voyage to China he stopped at several places, and frequently made inland excursions of great length, which were generally spiced with some personal adventure or bold piece of daring. Thus from Rio de Janeiro he went to the eastern Andes of Brazil; while at Bombay he went to the cave temples at Karli and into Ceylon; and while at Macao he visited the island of Luzon, and went down into the crater of Taal volcano for the purpose of collecting some of the water in it—a feat which was exceedingly difficult, and nearly cost him his life. In August, 1844, the embassy returned home, but he, wishing to explore some of these eastern regions, resigned his post of physician, intending to practise his profession in China until he had collected funds sufficient to defray his travelling expenses. About the end of 1844 he was struck down by a fever, which compelled him to relinquish his plan and return home. He sailed for Europe in January, 1845, visited Singapore, spent some months in exploring India, and, joining the suite of Dwaganoth Tagore, he accompanied that prince through Persia and Syria to Egypt on his way to a visit to England. The prince proceeded to Europe, but Dr. Kane resolved to make a tour through Egypt, and he visited most places as far south as Sennar. He made large collections of antiquarian and natural objects, but these, together with nearly all his property were lost by the upsetting of his boat. On reaching Alexandria he had an attack of the plague. On recovering from this he walked through Greece, and then passed rapidly through Italy, France, and England from whence he took ship to the United States. Arrived at home, he offered himself for active service, hoping he would be sent to Mexico, with which country war had been declared by the United States; he was sent to Africa, where he visited the King of Dahomey, and early in 1847 he caught the coast fever, which left him in so reduced a condition as to compel his being sent home as the only chance of saving his life. For several weeks after reaching home he was confined to his room, but as soon as he found strength to walk about he requested permission from his Government to proceed on duty to Mexico. He went, charged with the conveyance of some important messages which previous individuals had failed to carry to their destination. His journey was a perilous one, and he got engaged in a conflict in which he displayed extreme courage and force of will, but one result of which was that he was wounded in the abdomen, and laid up with typhus fever. The medical attendants announced his case hopeless, but after some weeks he rallied and so far recovered as to permit of his going about. In 1849 and 1850 great efforts were being made to find Sir John Franklin; Dr. Kane's enthusiasm to join in the search impelled him to offer his services, which were accepted, and he joined the expedition under De Haven. The expedition left New York in May, 1850, and returned in September, 1851. Notwithstanding Dr. Kane's broken-down constitution, his indomitable will and unflinching courage bore him up, and carried him through the hardships incident to a winter in the Arctic regions. In 1852 and 1853 he wrote his account of the voyage with a view to stir up public sympathy and support in favour of another search. Book writing, lecturing, and preparations for a second Arctic voyage broke his strength down more than once. In 1853 he again started for the North, and sailed up Smith's Straits, but was obliged to return home without finding the object of his search. He reached New York in November, 1855. Although the primary object of this expedition was not attained, he and his party, including Messrs. Hayes, Sontag, and Brookes, added considerably to our knowledge of the northernmost reached portions of Greenland. His crew went farther north than any previous travellers had been, and discovered a large sheet of open water. A full account of this voyage is given in *E. C. S. GEOG. DIV., art. NORTH POLAR COUNTRIES*. In 1856 he was busily occupied in drawing up his narrative of his second polar expedition. As soon as it was finished, though in very feeble health, he sailed for England, but there cold and fogs were so prejudicial that he started for Cuba. On the voyage he was seized with paralysis, which deprived him of the use of his limbs and tongue. He lingered for some weeks after reaching Havana, where he died February 16, 1857. His books comprise two narratives, one entitled 'The U.S. Grinnell Expedition in Search of Sir J. Franklin,' 8vo, London, 1854; and 'Arctic Explorations: the Second Grinnell Expedition in Search of Sir John Franklin, 1853—4—5,' 2 vols. 8vo, Philadelphia, 1856. These were the popular accounts of his voyages, but his intention was, if possible, to publish full details

of the scientific observations he had made. Biographies of him have been written by Dr. Elder, Dr. M. Jones, and Mr. Smucker; while shorter notices occur in most of the dictionaries and in several presidential addresses.

KAPELLER, JOSEPH ANTON, Austrian painter and engraver, was born at Imst, in the Tyrol, in 1760, and educated at Vienna. In 1787 he went, at the invitation of Prince Jablonowsky, to Warsaw, where he remained till the capture of that city (1794), when he settled in Vienna, practised painting in oil, crayons, and miniature, as well as engraving; and, in conjunction with Holer, founded an artistic establishment, at which many superior works were produced, and in which H. Rahl, and other excellent engravers were trained. In 1802 he removed to the neighbourhood of Gratz, where he died in 1806. Out of Austria Kapeller is best known by his engravings of Tyrolese scenery and costumes, but he has the reputation of being a good designer and colourist.

KARAJICH, VUK STEPHANOVICH [*E. C.* vol. iii. col. 684] died February, 1864.

* KATE, HERMAN FREDERIK CAREL TEN, a distinguished Dutch painter, was born at the Hague, on the 22nd of February, 1822. He was a pupil of Cornelis Kruseman, but completed his professional studies at Paris, and then settled in Amsterdam. His pictures are usually representations of incidents of a semi-historical character, as 'Calvinist Prisoners, time of Louis XIV.,' 'Council of War, 17th Century,' in the Museum, Rotterdam; interviews, with incidents of a soberly humorous kind, like 'The Surprise,' 'The Marquis's Levee,' and 'Political Discussion;' or busy out-door scenes, as 'Sunday Mornings, Isle of Marken,' and 'The Fête Champêtre.' They are mostly small in size, and painted with great care, taste, and skill, and amply justify the esteem in which he is held by his countrymen.

KEAN, CHARLES [*E. C.* vol. iii. col. 693]. In 1859 appeared, in two octavo volumes, 'The Life and Theatrical Times of Charles Kean, F.S.A.; including a Summary of the English Stage for the last Fifty Years, and a Detailed Account of the Management of the Princess's Theatre, from 1850 to 1859.' By John William Cole, an ill-written but curious work compiled for Mr. Kean, and from materials supplied by him. To this book the reader desirous of fuller information about the actor and manager will do well to refer: the foolish and indiscriminate praise will not disguise the weakness nor altogether conceal the good qualities of the actor or the man, and the book altogether throws much light on the career of a prosperous performer and on the state of the stage during the period to which it refers. Mr. Kean retired from the management of the Princess's Theatre in 1860. A few months later, a public dinner was given to him as a mark of the esteem in which his private and professional career was held. It was presided over by the late Duke of Newcastle, and it was said that 600 noblemen and gentlemen were present; and, shortly afterwards a service of plate, of the value of 2000*l.*, was presented to him at a meeting at which Mr. W. E. Gladstone took the chair. Mr. Kean played subsequently in London and the provinces, and in 1863 made, with Mrs. Kean, a visit to California, and other parts of the United States, Canada, Panama, Jamaica, and Australia, returning in 1866. By this tour he is said to have realised upwards of 20,000*l.*; but he returned in broken health, and died on the 23rd of January, 1868. He was born on the 18th of January, 1811.

KEBLE, REV. JOHN [*E. C.* vol. iii. col. 695]. In 1859 Mr. Keble developed his views on Eucharistic Adoration in a work entitled 'The Worship of Our Lord and Saviour in the Sacrament of Holy Communion,' which has since passed into a third edition. In 1863 appeared, as a part of the Anglo-Catholic Library, his 'Life of Thomas Wilson, D.D., Lord Bishop of Sodor and Man,' a work on which he had been long occupied, and which was, as stated on the title-page, "compiled chiefly from original documents." The work is carefully and well executed, but it deals much more with the bishop than with the man, and especially with that portion of his labours to which the bishop and his biographer attached most importance—his persistent efforts for the revival of church discipline. Keble's health in these years was very feeble, and he was constrained, more, however, on his wife's account than his own, to spend his winters away from Hursley, in one or other of the warm sheltered sea-side retreats of Devon, Cornwall, or Dorset. During the winter of 1865—66 he was at Bournemouth, watching with tender assiduity the flickering health of his wife, who seemed to be fast hastening to the grave. But Keble was the first to be released. He died on the 29th of March, 1866; his

wife followed him on the 11th of May, and they were laid side by side in Hursley churchyard. Keble's death was widely mourned. He was regarded as the originator of the Oxford Tract movement,—in the words of his biographer, "John Keble was its true and primary author,"—and of the revival of confession in the Church of England, and this caused some to look on him with distrust, but even those who differed most from him in doctrinal views venerated the author of the 'Christian Year,' and recognised in his saintly life the ideal parish priest and Churchman. Up to the time of his death his 'Christian Year' retained its extraordinary popularity; "in the nine months immediately following his death seven editions were issued of 11,000 copies" (Coleridge), and there has been a steady continuous demand for it ever since. It is the devotional companion of persons of all sects, and is almost as much in favour in America as in England. Since his death a Selection from his Poems and one or two volumes of his parochial sermons have been published. The only important work not mentioned in the original memoir was his standard edition of Hooker's Works, prepared for the Delegates of the University Press, Oxford, 1836, the preface, notes, and text of which are alike admirable for learning and candour.

Shortly after Mr. Keble's death a meeting of his friends and admirers was held at Lambeth Palace, under the presidency of the Archbishop of Canterbury, to consider the propriety of raising a suitable memorial to the author of the 'Christian Year.' The proposal was warmly responded to, and, subscriptions being offered with remarkable liberality, it was determined that the memorial should take the form of a new college at Oxford, which should bear Mr. Keble's name, be distinct from, and in its government independent of any existing foundation, and have for its specialty the training of young men in simple and religious habits and strict fidelity to the Church of England. The preliminary steps necessary to the inception of such an institution occupied much time, but on the 25th of April, 1868, the first stone of Keble College was laid by the Archbishop of Canterbury, and in 1870 the building was opened for students: the college has not yet been formally admitted into union with the University, but the act giving it its legal status will be proposed at the Convocation to be held April 18, 1871. The buildings at present completed, which are of parti-coloured bricks and of an early Gothic character, designed by Mr. Butterfield, provide rooms for a hundred students, but the hall, chapel, and gatehouse are only provisional.

(*Memoir of the Rev. John Keble, M.A.*, by the Right Hon. Sir J. T. Coleridge, D.C.L., 1869.)

KEITH, HON. JAMES FRANCIS EDWARD, a field-marshal in the Prussian service, the younger son of William, ninth Earl Marischal of Scotland, was born at the family seat of Inverugie Castle, in Aberdeenshire, on the 11th of June, 1696. He was originally destined for the profession of law, and was sent to Edinburgh for the prosecution of his studies in that faculty. But his inclination led him to a military career; and sharing in the pique and disappointment of his brother, the Earl Marischal, and other members of the Tory party, at their non-employment under the new dynasty, and instigated by his mother, who was a Catholic, he declared for the Pretender at the commencement of the insurrection of 1715. He was wounded at the battle of Sheriff-muir, November 13th, 1715; and, a few months after, escaped from the Hebrides to France, where he landed on the 12th of May, 1716, at St. Paul de Léon, in Brittany. He repaired at once to Paris, and continued there in pursuance of his military studies, until the beginning of the year 1718; having, in June, 1717, endeavoured unsuccessfully to obtain service from Peter the Great, of Russia, who was at that time in Paris. Early in 1719 he went to Madrid, and received a colonel's command in the expeditionary force sent out by the King of Spain for the restoration of the Stuart family in Great Britain. The enterprise came to an end by the defeat at Glen-shields on the 10th of June, and the surrender of the Spaniards on the following day to General Wightman. Keith escaped, after many dangers and difficulties, to Madrid. In October, 1722, he accompanied the Duke of Liria to Paris, and continued there until the beginning of 1725, when he once more returned to Spain. Finding his Protestantism to stand in the way of his employment and promotion in the Spanish service, he secured a recommendation from the King of Spain to the sovereign of Russia, who honoured it by admitting Keith into that service as major-general, in the commencement of 1728. Keith now repaired to Moscow; and, soon after his arrival in Russia, was promoted to the command of a regiment of guards, and was

further preferred to be one of three inspectors of army details, receiving as his department the frontier of Asia, with the country on both sides of the Volga and the Don, together with part of the frontier of Poland. In 1734, Keith had attained the rank of lieutenant-general; and highly distinguished himself against the Turks in 1737, especially at the taking of Oczakow, where he was severely wounded in the knee. In 1741 and 1742 he commanded against the Swedes, especially distinguishing himself in the former year by his victory in the fiercely contested battle of Williamstrand. At length, after a career of many years in the service of Russia, which had been signalised by valour, conduct, and great results, and which had been rewarded with various honours and with a fame that was spread all over Europe, Keith accepted, in 1747, an offer made to him by Frederick the Great, of Prussia, by whom he was raised to the rank of field-marshal, and invested, in 1749, with the governorship of Berlin and the order of the Black Eagle, with a pension of 12,000 dollars besides his pay. He was honoured with the intimacy and confidence of the king, to whom he acted as a trusted counsellor in the most momentous affairs whether of peace or war, and as a principal companion in times of relaxation and amusement. After a series of important services in the war which Frederick waged against Austria, Keith attained his final distinction as a brave soldier and a great commander, at the battle of Hochkirchen; where, at the head of the Prussian infantry, he obstinately maintained the combat against the whole weight of the Austrian army. Though wounded, he refused to quit the field; and, having by his persevering valour, repulsed the Austrians, was already in pursuit of them, when he received a fatal bullet in the breast, on the 14th of October, 1758. Marshal Keith left an interesting but unfinished autobiography, which has been lately edited for the Spalding Club, by Mr. Constable.

KELLER, JEAN BALTHAZAR, Swiss sculptor and bronze founder, was born at Zurich, in 1638. He was brought up as a goldsmith, but having studied sculptural design, joined his brother, who was a cannon founder at Paris. Jean Keller soon came to be regarded as an able designer, and as the most skilful founder of his time. To him were entrusted the execution of several of the bronze statues for the garden of Versailles, and various works for the royal palaces; but his most important undertaking was the casting of Girardon's colossal equestrian statue of Louis XIV., which was regarded as the greatest achievement of its kind in modern times. This immense work, which with its bronze pedestal was twenty-one feet high, and weighed sixty thousand pounds, was cast by Keller at once, or in a single jet, and with entire success. An account of the process was published by G. Boffrand, 'Description de ce qui a été pratiqué pour fondre d'un seul jet la Statue Equestre de Louis XIV. en 1699.' The statue was erected in the Place Vendôme, but was destroyed by the populace in 1792; it is now only known by the engraving of it by M. Simonau. Keller was in 1697 appointed director of the royal foundry, and inspector of the foundries at the various arsenals. He died at Paris in 1702.

* KELLER, JOSEPH, German line engraver, was born March 31st, 1811, at Linz, on the Rhine, and studied in the Düsseldorf Academy. Herr Keller is one of the ablest engravers of the day. He has a good eye for colour and chiaroscuro, works with a firm yet delicate line, and employs indifferently, with skill and freedom, the dry point, the needle, or the burin, in order to produce the effect he desires. He is known by various prints after Overbeck, including 'The Triumph of Religion,' 'The Four Evangelists,' &c.; also by a 'Salvator Mundi' and 'Regina Cœli,' after Deger; 'The Holy Woman,' after Raffaele, &c.; but his masterpiece is his large plate (thirty-six inches by twenty-four) from Raffaele's famous 'Dispute of the Sacrament,' a work which cost him twelve years of labour, and which stands out among the best modern productions of the burin. Keller was appointed professor of engraving in the Düsseldorf Academy in 1839, and elected a corresponding member of the French Institute in 1859.

KELLERHOVEN, MORITZ, painter and engraver, was born in 1758, at Altenrath, in the Herzogenberg; studied in the Düsseldorf Academy and at Antwerp, and practised for a while in Vienna. In 1804, after visiting Italy, he returned to Bavaria, where he was appointed court painter, and in 1808 professor in the Academy of Munich. Kellerhoven painted several historical pictures, but he is best known as a portrait painter. His portrait of Maximilian-Joseph in the senate house, Munich, is

much admired. He painted numerous portraits of the king and of different members of the royal family and other notables of Bavaria. Kellerhoven engraved several of his own portraits, and some pictures by the old masters. He died in 1830.

KELLY, MICHAEL, singer and musical composer, was born in 1764 at Dublin. When a mere boy he played the pianoforte with great facility, and was taught singing by Rauzzini. He entered the Conservatorio at Naples at the age of sixteen, stayed there five years, and studied singing under Fenaroli and Aprile. He performed with success as a tenor singer at Leghorn, Florence, and Venice; then went to Vienna, where Mozart composed for him the music of Basilio in 'Le Nozze di Figaro.' After this continental experience, Kelly returned to England in 1787, and acted as principal tenor at Drury Lane Theatre in the (now forgotten) opera of 'Lionel and Clarissa'; he also sang at the King's Theatre and at the Concerts of Ancient Music; but the later years of his life were mostly passed in the duties of musical director of Drury Lane Theatre, and director of the King's Theatre. Between 1797 and 1819 he composed no less than sixty operas and musical dramas, mostly of a light and lively character. Those of which the names are best known at the present day are the 'Castle Spectre,' 'Blue Beard,' 'Of Age To-morrow,' the 'Forty Thieves,' 'Love Laughs at Locksmiths,' and 'We Fly by Night.' It is very rarely that any of them are now performed; while they are wholly unknown on the Continent. Some of the separate songs, however, are still in favour for their sweetness of melody. It was said by his detractors that he made rather too free use of the music of Italian and German operas, and when he set up as a wine merchant Sheridan suggested that he should inscribe over his door, "Michael Kelly, Composer of Wine and Importer of Music." Shortly before his death he published 'Reminiscences of Michael Kelly, of the King's Theatre and the Theatre Royal Drury Lane, including a Period of nearly half a Century; with Original Anecdotes of many Distinguished Personages, Political, Literary, and Musical,' 2 vols. 8vo, 1826. It is an amusing farrago, but not entirely trustworthy: for this, however, Kelly was only in part responsible; he furnished the materials, but the book was written, or remodelled throughout, by Theodore Hook, without much regard to plain fact. Kelly died October 9th, 1826.

KEMBLE, JOHN MITCHELL [E. C. vol. iii. col. 699]. Mr. Kemble published in 1857, 'State Papers and Correspondence, illustrative of the social and political state of Europe from the Revolution of 1688 to the accession of the House of Hanover,' illustrated by a valuable introduction and notes. He lived to publish no more, dying prematurely at Dublin on the 26th of March, 1857; but he had for some time been engaged on a work of much research and erudition, 'Horæ Ferales, or Studies in the Archæology of the Northern Nations,' which was completed by Dr. Latham, and published in 1864.

KEMPELEN, WOLFGANG VON, was born at Pressburg, 23rd January, 1734. His name has become celebrated from its association with the famous automaton chess-player, as it is improperly called, since it is not a machine performing its work by automatic means, but a deception or conjuring apparatus for concealing a living player. Von Kempelen was Aulic Counsellor to the Royal Chamber of the Domains of the Emperor of Germany, and being at Vienna in 1769, on business relative to his office, he witnessed some magnetic games or performances which were being shown to the Empress Maria Theresa. During the exhibition the Empress conversed with Von Kempelen, and he ventured to hint that a machine might be made of a more surprising and deceptive character than anything she had seen at this magnetic exhibition. He was requested to undertake the invention, and at the end of half a year he again appeared at the court of Vienna, in company with his so-called automaton. He had been led to the idea of a chess-playing machine by the fondness of the Empress for the game, which he had frequently played with her.

It is not necessary in this place to describe the deception; it will be sufficient to refer to Tomlinson's 'Amusements in Chess' (1845), the sixth chapter of which contains a minute account of the whole affair, together with specimens of the games played by the automaton during its visits to London.

Von Kempelen's real skill as a mechanic has been overlooked in the interest felt in this toy. In 1778 he produced a speaking machine in which a bellows, when set in motion, gave sounds as of a child of three or four years of age, uttering distinct syllables and words. In 1791 he published at Vienna a work on the Mechanism of Human Speech, illustrated by twenty-seven copper-plate engravings. He died at Vienna, 26th March, 1804.

BIOG. DIV.—SUP.

KEN, THOMAS, an Anglican divine and poet, the son of a solicitor, of Furnival's Inn, who descended from an ancient family seated at Ken Place, in Somersetshire, was born in July, 1637, at Berkhamstead, in Hertfordshire, and received from his "virtuous parents, an education pious, careful, mild." Anne, the elder of his two sisters, was married to Izaak Walton, the famous angler and biographer. On the 30th of January, 1651, he was admitted to Winchester College; and in 1656, in default of a vacancy at New College, he was entered of Hart Hall, which then occupied the site of the present Magdalen Hall, Oxford. He took his bachelor's degree on the 3rd of May, 1661; proceeded M.A. on the 21st of January, 1665; and became B.D. and D.D. respectively on the 6th of July, 1678, and the 30th of June, 1679. He received ordination soon after taking his B.A. degree; and on the 17th of August, 1663, was admitted, on the presentation of William, Lord Maynard, to the living of Easton Parva, which he resigned early in 1665. In 1666, he was elected to the vacant fellowship in Winchester College; and, upon his going to reside there, was welcomed by Bishop Morley, to whom he became domestic chaplain, and by whom he was preferred to the rectory of Brixton, in the Isle of Wight, and collated, on the 11th of April, and again on the 29th of May, 1669, to a stall in his cathedral, and finally presented to the rectory of Woodhay, which last benefice Ken presently resigned into the hands of his patron. About this time he composed his 'Manual of Prayers for the Use of the Scholars of Winchester College,' 8vo, London, 1675, which has gone through nearly fifty editions, amongst the latest being those in 12mo, Oxford, 1840, and 12mo, Oxford and London, 1868; and his 'Morning, Evening, and Midnight Hymns,' the pious simplicity of which have attracted a wonderful popularity. In 1675, the year of the papal jubilee, he accompanied his nephew, the son of Izaak Walton, and afterwards a prebendary of Salisbury, to Italy; and although some professed to discover in this tour a tendency to the Romish doctrine and Church system, he affirmed that his Protestantism was fortified by the near view it afforded him of papal corruption. In 1679 he was appointed chaplain to the Princess of Orange at the Court of the Hague. He filled this office for a year, and then returned to England. In September, 1683, he sailed with Lord Dartmouth in the expedition sent out to destroy the fortifications of Tangier, a town on the coast of Africa, which had formed part of the dowry of the Infanta of Portugal on her marriage with Charles II., and to bring home the garrison. During the voyage, from which he returned on the 2nd of April, 1684, he composed an epic poem called 'Edmond,' founded upon the history of a king of the East Angles.

Ken had been already appointed chaplain to the king; and on St. Paul's day, January 25th, 1685, he was consecrated at Lambeth to the bishopric of Bath and Wells, to which he was expressly nominated by the king, upon the translation of Dr. Peter Mew to the diocese of Winchester. Bishop Ken attended Charles II. in his last illness (February 2—8, 1685); but although, as Burnet says, "he spoke with great elevation both of thought and expression, like a man inspired," all his pious prayers and ejaculations seem to have passed the dying king without arresting his attention. Ken was a laborious and devoted bishop, constant in earnest and eloquent ministrations; and one of his first objects was to secure the competent and religious instruction of the young, in whose behalf he established many schools, and for whom he composed his 'Exposition of the Church Catechism: or, the Practice of Divine Love,' 8vo, London, 1685, which in its parts, as well as in its integrity, has gone through numerous editions, and of which an Italian version, by the Count di Tergolina, was lately published with the title of 'La Pratica del Divino Amore: ossia una Esposizione sul Catechismo della Chiesa d'Inghilterra,' 8vo, London, 1665.

Ken was one of the seven bishops who, in May, 1688, were committed to the Tower for refusing to order the reading and distribution throughout their dioceses, of the Declaration of Indulgence. They were released upon their own recognizances on the 15th of June, tried on the 29th, and acquitted, to the great and grateful joy of the people. The loyalty of Bishop Ken forbade him, however, to transfer his allegiance from James II.; and, as a non-juror, he suffered the deprivation of his episcopal emoluments, on the 1st of February, 1691. Although he did not surrender his dignity without a protest, he limited his opposition to a public announcement in the cathedral, of his readiness, at all times, to fulfil the duties of his episcopal office, and he retained the title until he resigned the see in favour of his friend Dr. Hooper. He retired to Longleat, the seat of Lord Weymouth; where he varied his stay by occasional visits to his

nephew, at Salisbury, to Mrs. Thynne, of Leweston, Dorsetshire, and other friends in the West of England.

During his leisure from diocesan business, and his intervals of freedom from the pains of a disease which afflicted him for more than ten years, he composed many pious works, both in poetry and prose, which were afterwards collectively published as 'The Works of the Right Reverend, Learned and Pious Thomas Ken, D.D., late Lord Bishop of Bath and Wells,' 8vo, London, 1721. His 'Prose Works,' to which were added "some of his Letters, never before published," were collected by the Rev. James Thomas Round, in 8vo, London, 1838; whilst a more recent selection from his poems has been issued with the title of 'Bishop Ken's Christian Year of Hymns and Poems for the Holydays and Festivals of the Church,' 4to, London, 1868. Ken died at Longleat on the 19th March, 1711, and on the 21st of the same month was buried at the east end of the churchyard at Frome Selwood. His funeral took place at sunrise, and the attendants upon the occasion, having seen his body committed to the tomb, broke forth in salutation to the day in the strains of his 'Morning Hymn.' In his last will he found it expedient to defend his memory against the possible recurrence of the charges of popish predilections which had occasionally been brought against him in his life-time. "As for my religion," he wrote, "I die in the holy Catholic and Apostolic faith, professed by the whole Church before the disunion of East and West; more particularly, I die in the communion of the Church of England, as it stands distinguished from all Papal and Puritan innovations, and as it adheres to the doctrine of the Cross."

Several works have been produced in illustration of the life and career of Bishop Ken, amongst the more copious and important of which may be mentioned one by the Rev. William Lisle Bowles, entitled 'The Life of Thomas Ken, D.D., deprived Bishop of Bath and Wells. Including some Account of the Fortunes of Morley, Bishop of Winchester, his first Patron and the Friend of Izaak Walton, Brother-in-Law of Bishop Ken,' 2 vols. 8vo, London, 1830—31; and another by a "Layman," Mr. J. L. Anderson, entitled 'The Life of Thomas Ken, Bishop of Bath and Wells,' 8vo, London, 1851, second edition, 2 vols. 8vo, 1854.

* KENNEDY, BENJAMIN HALL, an English scholar and divine, eldest son of the late Rev. Charles Rann Kennedy, incumbent of St. Peter's, and second Master of King Edward's School, Birmingham, who attained some distinction as a poet and translator, was born on the 6th of November, 1804, at Summer Hill, near Birmingham. He received his earlier education at King Edward's School in that town, and at the Grammar-school, Shrewsbury. He entered St. John's College, Cambridge, in 1823, and in his first year carried off the Pitt University Scholarship. He was Sir William Browne's medallist for Greek and Latin Odes in 1824, and for Epigrams in 1825, his prize productions being entitled respectively, 'Carmen Græcum [on the Greek Insurrection]. Numismate annuo dignatum, A.D. 1824,' 8vo, Cambridge, 1824; 'Carmen Latinum [Aleppo Terræ Motu eversa]. Numismate, &c., A.D. 1824,' 8vo, Cambridge, 1824; and 'Epigrammata. Numismate, &c., A.D. 1825,' 8vo, Cambridge, 1825. In 1823, 1824, and 1826, he took the Porson prize, which is given to such resident undergraduates as shall make the best translation of a proposed passage in Shakspeare, Ben Jonson, Massinger, or Beaumont and Fletcher, into Greek verse. He took his B.A. degree as senior optime and first in the first-class classical tripos in 1827, and was also senior Chancellor's medallist; gained the University member's prize for the bachelors' Latin essay in 1828, in which year he was elected fellow of his college; proceeded M.A. in 1830; and took the degree of D.D. in 1836. He was made a deacon by Bishop Sparke of Ely in 1829, and a priest in 1830 by Bishop Kaye of Lincoln. In the last-named year he became an assistant-master at Harrow; and in 1836 was elected by St. John's College to succeed his former tutor, Dr. Butler, then preferred to the see of Lichfield, in the head-mastership of Shrewsbury School, which he held for a period of thirty years. He was admitted, in January, 1843, to the prebend of Gaia Major in Lichfield cathedral; and in 1865 was presented to the rectory of West Felton, in Shropshire, both which preferments he resigned on his appointment to the Regius Professorship of Greek in the University of Cambridge in 1867, an office which is endowed with a canonry in Ely cathedral. Since his appointment he has lectured on Thucydides, Aristotle, Pindar, and Aristophanes. Whilst at Shrewsbury, Dr. Kennedy, besides labouring successfully as a schoolmaster, interested himself warmly in behalf of technical and popular education; and he

has for some years been President of the Royal College of Preceptors, London. His contributions in furtherance of the cause of classical education comprise 'An Elementary Grammar of the Latin Language,' 12mo, London, 1847; 'The Child's Latin Primer: or, First Latin Lessons, extracted (with model Questions and Answers) from an "Elementary Latin Grammar,"' 12mo, London, 1848, "new edition, adapted to the Principles of the 'Public School Primer,'" 12mo, London, 1868; 'Græcæ Grammaticæ Institutio prima,' &c., 12mo, London, 1847, second edition, 12mo, 1848; 'A Latin Vocabulary, arranged on Etymological Principles,' &c., 12mo, London and Shrewsbury, 1848, second edition, London, 1856; 'Palæstra Latina,' &c., 12mo, London, 1850; 'Palæstra Stili Latini: or, Materials for Translation into Latin Prose,' &c., 12mo, London, 1855; 'Tirocinium: or, an Elementary Latin Reading Book,' &c., new edition, 12mo, London, 1855; 'Palæstra Musarum: or, Materials for Translation into Greek Verse,' 12mo, London, 1856; 'Curriculum Stili Latini,' &c., 12mo, London, 1858; and contributions, with two others, to 'Sabrinæ Corolla,' 8vo, London, 1850, third edition, 1867. He has likewise edited 'Hymnologia Christiana: or, Psalms and Hymns selected and arranged in the Order of the Christian Seasons,' 8vo, London, 1863. He was appointed select preacher in his university in 1860; and he has published 'Faith and Love the Commandments of God. A Sermon [on 1 John iii. 23], 8vo, Shrewsbury, 1837; and 'A Sermon [on Matthew xxiii. 23] preached in the Abbey Church, Bath, on the Occasion of the Tercentenary Commemoration of King Edward VI., 28th December, 1853. With Notes,' 8vo, Bath, 1854.

* KENNEDY, JOHN PENDLETON, American writer and politician, was born at Baltimore, Maryland, October 25th, 1795. After graduating at Baltimore College in 1812, he served as a volunteer in the army in 1814, fighting in the battles of Bladenburg and North Point. In 1816 he began to study the law; but gradually settled down to literature and politics. In conjunction with Peter Hoffman Cruse, he brought out a fortnightly periodical of light literature, called the 'Red Book,' which continued from 1818 to 1820. In 1820 he became member of the Maryland House of Delegates, and gradually assumed a position as an advocate of protective legislation in matters of commerce. Three novels by him, viz., 'Swallow Barn,' 1832; 'Horseshoe Robinson,' 1835; and 'Rob of the Bowl,' 1838, met with considerable success as pictures of some of the peculiarities in American life. In 1838 he was elected to the House of Representatives at Washington, where he joined the Whig party. 'Quodlibet,' a political satire, was published by him in 1840. Appointed by Congress chairman of the Committee of Commerce in 1841, he drew up a report on reciprocity treaties, and their effects on the shipping interests of the United States. In 1846 he became speaker of the Maryland House of Delegates. In 1849 appeared his 'Life of William Wirt, Attorney-General of the United States,' 2 vols. 8vo. When secretary of the navy, in 1852, he was instrumental in planning and fitting out the United States expedition to Japan, and also Dr. Kane's second voyage for the discovery of Sir John Franklin. After paying two visits to Europe, between 1855 and 1860, he published in 1861 'The Border States, their Power and Duty in the present Disordered Condition of the Country,' urging the citizens of his native State of Baltimore, and others on the border, to remain firm against the Confederates in the Civil War then commencing. In 1864 he edited 'Autograph Leaves of our Country's Authors.' He has printed several speeches, addresses, and political pamphlets. Mr. Kennedy has been provost of the University of Maryland, and vice-president of the Maryland Historical Society.

KERGUÉLEN-TREMAREC, YVES JOSEPH DE, navigator, was born in Bretagne in 1745. He entered the navy when very young, and in 1767 was placed in command of a vessel in which he made two voyages to Iceland. In 1769 he was commissioned to report on Grenier's proposed route to India, and on the extent and nature of land about the Antarctic pole. He reported favourably on Grenier's route, and in February, 1772, he discovered a long extent of coast, which was afterwards more carefully examined by Captain Cook, who named it Kerguelen's Land, and proved it to be an island. Kerguelen, however, announced that he had discovered the great antarctic continent, but his discovery was questioned, and some persons suggested that it was only a mass of ice. He returned in order to verify his discovery, and touched on many parts of the coast; but he left without attempting to ascertain its form or size. Soon after his second return to France in September, 1774, numerous complaints were made against him

for want of enterprise and neglect of his crew. He was brought to trial, condemned, and imprisoned. While in prison he prepared his 'Relation d'un Voyage dans la mer du Nord, etc., 4to, Paris, 1771; and 'Relation de deux Voyages dans les mers Australes et des Indes, faits de 1771 à 1774,' 8vo, Paris, 1782. After a few months' incarceration he was released, and was frequently engaged in contests with the English. He wrote an account of the naval war of 1778 between France and England, as also a description of Madagascar. He died March, 1797.

KERHALLET, CHARLES PHILIPPE DE, hydrographer, was born in Bretagne in 1809. His first important work was to continue the survey of the Brazilian coast, from San Luiz de Maranhao, where Admiral Rousin's labours terminated, to Para. This occupied him from 1837 to 1840, and the results appeared in 1841 in 'Instruction pour remonter la côte du Brésil, depuis San Luiz le Maranhao jusqu'au Para.' In 1847 he was engaged to survey the west coast of Africa, and the maps prepared were accompanied by a 'Manuel de la Navigation à la côte occidentale d'Afrique,' 3 vols. 8vo, 1851—53. In 1857 he and Vincendon-Dumoulin surveyed the coast of Morocco, and wrote a 'Description nautique de la Côte nord de Maroc,' 8vo, 1857; and 'Manuel de la Navigation dans le Détroit de Gibraltar,' 8vo, 1857. He also prepared several other guides for the African pilot, based partly upon his own knowledge, but largely upon the works of others, such as the large work on the west coast of Africa already noticed; a 'Manuel de la Navigation dans la mer des Antilles,' 8vo, 1862; and a 'Guide du Marin,' 1863. He gave considerable attention to the winds and other meteorological phenomena of the Atlantic, Indian, and Pacific Oceans, with a view to facilitating navigation. His works on this subject appeared in 1851 and 1856. They are still valuable, but have been to a certain extent superseded by the more extensive data collected by Maury. Kerhallet died in February, 1863.

* KERN, JEAN CONRAD, a Swiss statesman, and son of a wealthy merchant, was born in 1808 at the village of Berlingen, near Arenenberg, in the canton of Thurgau, and received his earlier education successively at the town-school of Diesserhofen on the Rhine, and at the Gymnasium at Zürich. He quitted the study of theology, which he commenced at the University of Basel, in order to devote himself to law, which he prosecuted at the Universities of Berlin, Heidelberg, and Paris, and in which faculty he took his doctor's degree. On his return to Switzerland, he began to interest himself in public affairs; and in the anxious year 1833 sat in the Diet as representative of the canton of Thurgau, in which he became, in 1837, president of the Supreme Court of Judicature, and of the Council of Public Instruction. He took an active part in the revision of the cantonal institutions; and, whether in the Diet or in the National Assembly, distinguished himself by the liberality of his views and the power of his eloquence. After the unsuccessful attempt of Louis Napoleon at Strasburg in 1836, the prince was sent to the United States of America, whence he escaped to Switzerland in 1838. Fearing new conspiracies and new attempts at insurrection, the French Government instructed its ambassador, the Duc de Montebello, peremptorily to demand the expulsion of the prince. Great agitation followed; and Dr. Kern, as deputy for the canton of Thurgau, in which Louis Napoleon enjoyed the rights of citizenship, energetically protested against the demand of France, and vindicated the right of his canton to the exercise of hospitality and of the prince to liberty. "Do your duty at all hazards," he said; and the whole country adopted the formula with enthusiasm, and rose in arms to defend its right of asylum, when the voluntary departure of Louis Napoleon for London, September 20th, 1838, put an end to the quarrel. On other occasions, in matters connected both with the internal and external affairs of his country, Dr. Kern has distinguished himself for his intelligent patriotism; and especially in the tact and success with which he conducted the negotiations at the Court of the Tuileries, to which he was accredited as envoy extraordinary in order to bring about a peaceful solution of the Neuchâtel difficulty, between Switzerland and Prussia, in 1857.

In 1861 he returned to Paris as Swiss plenipotentiary; and in this character he was the first to recognise in person the government of M. Thiers, in February, 1871.

KESSEL, FERDINAND LEONARD VAN, son of Jan van Kessel the elder, was born at Antwerp, in April, 1648, and died there in 1696. Like his father, whose pupil he was, he painted highly-finished landscapes of cabinet size. His pictures are inferior to those of his father, but are still much valued. In his

own day they were greatly sought after. John Sobieski so highly admired his pictures that he built a cabinet for their exclusive reception, and invited the artist to Breda. He was also patronised, among others, by Prince William of Orange.

KESSEL, JAN VAN, Dutch painter, born at Antwerp, in April, 1626, was a successful imitator of the manner of Breughel, his maternal grandfather. He painted small landscapes, in which he imitated the details of herbage, &c., and introduced birds, insects, and the like, with minute accuracy. He also painted some flower pieces. He died towards the end of the century.

KESSEL, JAN VAN, the younger, nephew of the above, born at Antwerp in 1648, imitated the manner of Teniers, painting village fêtes, boors carousing, and the like. He succeeded to the property of his relative, Ferdinand van Kessel; when he gave up painting, and, being of intemperate habits, he became impoverished; he then took to portrait painting, and went to Madrid, where he was patronised by the Court, and where he died in 1708.

KESSEL, THEODOR VAN, engraver, was born at Antwerp in 1620. His engravings and etchings, which are numerous, are executed in a free and spirited manner, but are deficient in precision. They include scriptural and historical subjects after Giorgione, Guido, and other Italian masters; a boar hunt, landscapes, and allegories after Rubens; a 'Virgin and Child,' after Vandyck, and many more. His name is also attached to a folio volume of vases and ornaments, designed by Adam van Viane, and ten plates of animals, designed by G. van der Hecke. The year of his death is unknown; his latest dated engraving is 1656.

KEYSER, HENDRIK DE, an eminent Dutch architect, was born at Utrecht in 1565, and early distinguished himself by the skill with which he designed in that modification of the Renaissance style which prevailed in Holland. When only 29 he was appointed architect to the city of Amsterdam, and he erected there two or three churches, the Haarlem Gate, and the Bourse, an important work, but which is surpassed in architectural character by the Stadthouse erected by him at Delft. He was also distinguished as a sculptor: the famous monument of William I., Prince of Orange, one of the richest works of the kind in Europe, was completed by him in 1619, and the no less celebrated statue of Erasmus at Rotterdam is attributed to him. He died in 1621.

* KEYSER, NICAISE DE, an eminent Belgian painter, was born August 26th, 1813, at Sandvliet in the province of Antwerp, and studied in the Antwerp Academy under Van Brée. One of the earliest of his pictures which attracted attention was a 'Christ on the Cross,' painted in 1834 for a Roman Catholic church at Manchester. Since then he has painted many religious subjects of great merit, including a 'Calvary,' 'Jephtha's Daughter,' 'St. Dominic,' 'St. Elizabeth giving Alms,' a work of considerable freshness and power, painted for King Leopold; also numerous historical and genre pieces, as the 'Battle of Worringen,' for the national palace at Brussels; the 'History of the Flemish School of Painting,' on the walls of the vestibule of the Museum at Antwerp; the 'Battle of Spiers'; 'Dante in the Atelier of Giotto,' and several portraits. De Keyser is director of the Antwerp Academy, and keeper of the Antwerp art-treasures.

KEYSER, THEODOR DE, Dutch painter, the son of Hendrik de Keyser, was born at Amsterdam about 1595. His pictures are seldom large, and he is most celebrated for his small full-length and carefully-finished portraits. His finest works are perhaps 'The Burgomasters of Amsterdam in Council,' in the Stadthouse, and an archery piece, dated 1633, in the new Town-hall, Amsterdam. Theodor de Keyser was living in 1660, but probably died soon after. The National Gallery possesses a good example of his pencil, No. 212, 'A Merchant with his Clerk,' which has the painter's monogram, T. D. K., and the date 1627.

KINASTON, SIR FRANCIS, poet and founder of Minerva's Museum, was born at Otley, Shropshire, in 1587; entered at Oriel College, Oxford, but removed to Cambridge, where he graduated. He obtained employment at court and the favour of the king, by whom he was knighted in 1618, and created one of the four Esquires of the King's Body. Kinaston's poetical works consist of a Latin translation of the first two books of Chaucer's 'Truillius and Cressida'; 'Muses Querulæ de Regis in Scotiam profectio.' The Muses' Complaint of the King's Journey into Scotland,' 12mo, London, 1633; 'Coronæ Minervæ, a Masque,' 4to, 1635; 'Muses Aulicæ Arthurii, interprete F. K.,' 1635; and 'Leoline and Sydanis, an heroic Romance of the Adventures

of amorous Princes: together with sundry affectionate Adresses to his Mistress under the name of Cynthia,' 4to, London, 1642. These are not of any value, and have long been forgotten by all but book collectors. What chance he has of being remembered arises from his connection with the premature attempt to found a sort of London University, or "Academy," where "noblemen and gentlemen" might be taught "philosophy, physick, astronomy, geometry, musick, languages, and defence" (which last was explained to comprise "skill at all weapons and wrestling, also riding, dancing, and behaviour"), and to each of which arts a professor was allotted. The scheme was warmly approved by the king, who granted a special licence under his seal, June 26, 1635, for the foundation of the 'Museum Minervæ' as it was to be called, and for the erection of a suitable building for it in Covent Garden; and appointing Sir Francis Kinaston to be regent or governor, and six other persons to be professors. The Academy was fairly commenced, but the times were unpropitious, and though Kinaston published a tract, entitled 'The Constitutions of the Musæum Minervæ,' 4to, 1636, in order to set forth its real purpose and great utility, and for "a further and more full satisfaction of all men, as well ignorant detractors as vertuous favorers of this designe," yet it gained little support from those it was intended to serve, and came to a speedy end. Kinaston died in 1642.

KISS, AUGUST [E. C. vol. iii. 721]. This popular German sculptor died on the 24th of March, 1865, in his 63rd year.

KISSLING, LEOPOLD, Austrian sculptor, was born in 1770, at Schöneben in Upper Austria; studied in the art academy at Vienna; and was then sent by Count Cobenzl to Rome. Here he remained several years, during which he executed various models in plaster; and an 'Achilles and Ajax,' and other classical figures in marble. In 1810 he returned to Vienna; executed for the Emperor, at the suggestion of Canova, a marble group of 'Venus and Mars, with Cupid,' which was sent by the present Emperor to the International exhibition of 1862, and later several busts of the Emperor and members of the Royal family, for the imperial palaces: a colossal bust of his patron, Count Cobenzl, his finest work of this order; several classic groups and single figures, and the monument erected in memory of the orientalist, Von Hammer. Kissling died at Vienna in 1827.

* KLEIN, JOHANN ADAM, German painter and engraver, was born at Nürnberg, November 24th, 1792. He studied under the landscape painter Bemmle, and the engraver A. Gabler, also in the academy of Vienna, besides making several sketching tours in Styria, Hungary, Poland, and along the Rhine. In 1819 he went to Rome, through the aid of Prince Ludwig, afterwards king of Bavaria. After staying in Italy about three years he returned to Nürnberg, and soon attained great and well-merited popularity by his paintings of scenes of military life, landscapes, market-waggons with peasants, and other pictures in which horses formed a principal object. Herr Klein is also an able engraver; his prints, chiefly from his own designs, are very numerous, and he has published several series of etchings from sketches made during his various travels. An account of Klein and his works has been published by C. Jahn, under the title 'Das Werk von J. A. Klein, Maler und Kupferstecher zu München,' with portrait, 8vo, Munich, 1863.

KLENZE, LEO, RITTER VON [E. C. vol. iii. col. 721]. This very distinguished German architect died, full of years and honours, on the 27th of January, 1864. He was born on the 29th of February, 1784.

KMETZ, GENERAL GEORGE (Ismail Pasha) [E. C. vol. iii. col. 733]. In 1861, Ismail Pasha was appointed governor of the disturbed province of Candia. He died April 25, 1865.

KNAPP, JOHANN, botanist and fruit and flower painter, was born at Vienna in 1768, and studied in the art academy of that city. He was a designer in the tapestry works at Erdberg until 1791, when he joined the army and remained with it till the treaty of 1797. He settled at Schönbrunn, where he was appointed by the Archduke Anton to a post in connection with the botanical garden, and became exceedingly skilful and popular in the representation of plants and fruits. He painted many fruit and flower pieces in oil, but is best known by the collections of folio plates from his drawings. Of these the chief are—'Native Fungi,' two hundred and eighty plates; 'Exotic Plants,' one hundred plates; 'The Fruits of Austria,' four hundred plates; 'The Grapes of Austria,' 'Flora Alpina,' &c. He died at Schönbrunn in 1831.

KNAPTON, GEORGE, portrait painter, was born in 1698. He was a pupil of Richardson; then went to Italy, and acquired reputation for knowledge of the theory as well as practice of

art, and a critical acquaintance with the works of the old masters. He found patrons in the highest circles, and his gentlemanly and social habits obtained him admission into the aristocratic art-club, known as the 'Dilettanti Society,' which, in 1740, passed a resolution, "That every member of the Society do make a present of his picture in oil colours, done by Mr. George Knapton a member, to be hung up in the room where the Society meets." Knapton accordingly painted twenty-three of the members, all well-known personages—the Duke of Dorset, the Duke of Bedford, the Earl of Beesborough, Lord Le-Despencer, the Earl of Sandwich, Viscount Barrington, &c.—all, or nearly all of whom were represented in fancy dresses, the libidinous Sir Francis Dashwood of the Medmenham Abbey orgies as a tonsured monk adoring a statue of Venus, the Earl of Holderness as a waterman, and so forth. These pictures have long been famous, and it is by them that Knapton will be remembered. In reality they are feeble, insipid productions, but they are invaluable as memorials of the men and the time. The Dilettanti Society preserves them with jealous care, but liberally permitted the entire series to be shown at the Exhibition of National Portraits in 1868. Other of Knapton's portraits had been exhibited in the collection of the previous year. Knapton executed portraits in crayon as well as in oil. He is said to have engraved some plates; at any rate he was a partner with Pond in publishing the collection of heads of illustrious persons, engraved by Houbraken and Vertue. On the death of Stephen Slaughter in 1765 he was appointed surveyor and keeper of the royal pictures, and removed to Kensington, where he died in 1778.

* KNIGHT, CHARLES. When the Biographical Division of the English Cyclopædia was published, Mr. Knight, as its conductor, refused to allow a memoir of himself to be inserted; but now that the supervision is in other hands, it would be as unfair to the reader as unsatisfactory to ourselves to issue a Supplement without supplying the deficiency.

Charles Knight was born on the 15th of March, 1791, in a house close to the entrance of the lower ward of Windsor Castle, in which his father carried on the business of a bookseller and publisher. His school training was completed at the then celebrated classical school of Dr. Nicholas of Ealing, where he remained from 1802 to 1805, when he was removed to be apprenticed to his father. On the completion of this term he came to London, in order to obtain some practical insight into journalism, previous to starting, with his father, the 'Windsor and Eton Express,' of which the first number appeared August 1, 1812, and which he continued to edit till 1826. It was commenced in the belief that he "might do some good socially and intellectually with such an instrument." The leading articles "were written under a strong sense of the serious nature of the vocation of a public writer." It did good service in the furtherance of social reform and local improvements, and it afforded an excellent preparation for the future career of its editor. But journalism and bookselling were even then far from satisfying his activity. He widely extended his acquaintance with literature, and, especially with our earlier English authors, wrote poems and a tragedy ('Arminius,' which, though not played, was printed), as well as newspaper leaders, and began to collect old books; made his first essay (1820) in publishing a cheap miscellany, 'The Plain Englishman,' and began the publication of the 'Etonian,' of which Præd was the editor, and Macaulay, Henry Malden, Nelson Coleridge, and Moultrie were leading contributors.

In 1820 Mr. Knight removed to London, having purchased the 'Guardian' newspaper, to which he gave a literary turn, and which he continued to edit till the end of 1822, when he sold it in order to commence business as a publisher in Pall-mall. He had been partly led to take this step by the wish expressed by the leading contributors to the 'Etonian,' no longer Eton boys but Cambridge men, to set up a new magazine under his auspices. 'Knight's Quarterly Magazine' was accordingly the first important venture of the new house. It contained some of Macaulay's sparkling prose and vigorous lyrics, and Præd's brightest verses, but the contributors were wilful as well as witty, and the magazine came to an end with its sixth number. Milton's 'Christian Doctrine' was perhaps the most remarkable of the works issued by Mr. Knight at this period; but more characteristic was his comprehensive scheme of a 'National Library'—"a cheap series of books which should condense the information contained in voluminous and expensive works," and for which he "settled the subjects of about 100 volumes in history, science and art, and miscellaneous literature." The scheme

appearing too large for a single publisher to undertake, others were offered a share; but then came the great commercial crisis in which so many publishing houses were involved, and the Library, which had been adopted by the newly-formed Society for the Diffusion of Useful Knowledge, was ultimately abandoned. Mr. Knight's establishment was broken up, and he, in 1827, undertook the superintendence of the Useful Knowledge Society's publications.

His connection with the Society continued for nearly twenty years, and was the great central incident in his career. The superintendence of the Society's publications required judgment and discretion, as well as enterprise, but it was marked also by that originaive activity which has most distinguished him as a caterer for the public information. Not only did he sketch the broad outline of series of works, or of particular books, but valuable suggestions were, as we know, often afforded by him as to the mode of treatment and sources of information. The 'British Almanac,' and the 'Companion to the Almanac,' were projected by him in 1828; the former a vast improvement on all existing almanacs, the latter a handbook of great current value, and forming as a whole an important work of reference. Mr. Knight edited both the Almanac and the Companion for forty years, and they are still flourishing. But besides providing a better almanac than previously existed, he exerted himself to get rid of the stamp they bore, and a report which he drew up in 1833, led to the total repeal of the duty on almanacs. The 'Library of Entertaining Knowledge,' an offshoot from the 'National Library,' originated with, and was throughout published as well as edited by him, he having in view of the issue of this work resumed in 1829 his business as a publisher. For this Library he wrote the volumes entitled 'Menageries,' and 'The Elephant.' In 1830, in the hope of removing some of the popular prejudice against the use of machinery as tending to abridge employment and reduce wages, he wrote 'The Results of Machinery,' as one of the volumes of a serial entitled the 'Working Man's Companion,' and in the following year produced a sequel, 'The Rights of Industry; or, Capital and Labour.' Both had an immense circulation, and undoubtedly did much to bring about a sounder feeling on the subjects of which they treat.

In 1832 he began the publication of the 'Penny Magazine,' which at once obtained an unparalleled circulation, it having by the end of the year "reached a sale of 200,000 in weekly numbers and monthly parts." Mr. Knight was its editor as well as publisher, and remained so till its discontinuance in 1845. 'The Penny Cyclopædia' was commenced in 1833. As projected by Mr. Knight, it was to form "a moderate-sized book of eight volumes;" it grew into a bulky work of 27 volumes: it was intended to be a kind of companion and sequence to the Penny Magazine and Entertaining Knowledge series: it ultimately took its place as the most learned and original, as well as the most complete work, of the kind in the language. Though the Cyclopædia of the Useful Knowledge Society, it was published by Mr. Knight at his own risk, and it entailed on him a heavy pecuniary loss. Concurrently with these works, was proceeding the Society's Gallery of Portraits, of which Mr. Knight was the publisher. In 1832 and following years Mr. Knight was engaged in bringing out a remarkable series of illustrated works—'The Pictorial Bible;' 'Prayer Book;' 'Palestine;' 'London;' the 'Thousand and One Nights;' and the 'Shakspeare'—works which, with the 'Penny Magazine,' gave an immense stimulus to the art of wood-engraving, and created a revolution in illustrated literature. The 'Shakspeare,' an admirable book, was Mr. Knight's own work—text, notes, and biography—"one of the most pleasant labours," he terms it, of his life—and one with which his name will be permanently associated.

In these last years the Society for the Diffusion of Useful Knowledge, its task having been pretty well accomplished, was relaxing its efforts, and gradually subsiding into abeyance; whilst Mr. Knight's activity was directed in a very different direction. A great change had been wrought in the laws for the management of the poor, a change which his writings had a considerable share in bringing about, and when the new Poor Law Board was established, his familiarity with the subject was found of great value in the preparation of the numerous forms required for use in the several unions, and he was appointed publisher to the Board. With him also originated the proposal of a penny stamp for franking newspapers by post, a suggestion afterwards applied with such marked success when the penny postage was adopted for letters.

With the year 1844, Mr. Knight originated a new serial called

the 'Weekly Volume,' and later, when issued monthly, 'The Shilling Volume,' for which he wrote the first volume, 'William Caxton; a Biography,' and suggested several of the more successful works of the series, as well as acted as editor to the whole. In 1846 appeared 'Old England,' in part written by himself, and other illustrated works of a similar class. To 'The Land We Live in,' 1847, &c., a more ambitious serial, which extended to four volumes, he also contributed some papers. The selections, the best of the kind yet published, entitled, 'Half Hours with the Best Authors,' 'Half Hours with the best Letter-writers,' &c., were compiled, and the introductory notices of the several authors written by him.

The publication of the 'English Cyclopædia' commenced in 1853, and was completed under his superintendence in eight years. During its progress Mr. Knight was occupied in writing an entirely original work, the 'Popular History of England.' It occupied him seven years, 1854–61, and forms eight thick 8vo volumes. The 'Popular History of England' is a work of substantial value, but it is something more: it is the only complete library history of England—ranging over the whole period from the Roman occupation to the reign of Victoria—the production of the same writer; and it consequently possesses a unity of design and harmony of treatment peculiar to itself. At the same time it is the most comprehensive history we possess, being as much a history of the people as of the kingdom, of social progress as of political events. And it is written fairly, conscientiously, with an animation which seldom flags; fuller of facts than opinions, but never shrinking from the expression of personal views when they seem called for.

This long and heavy labour by no means exhausted the activity of the author. He withdrew from direct participation in business, but he employed his well-earned leisure in remodelling his 'Results of Machinery' and 'Capital and Labour' into a single volume, entitled 'Knowledge is Power;' his 'Caxton,' &c., into 'The Old Printer and the Modern Press,' and in collecting some of his miscellaneous essays into a volume entitled 'Once upon a Time.' In 1865 he published an original work, 'Shadows of the Old Booksellers;' in 1867, a romance of the Commonwealth period, 'Begg'd at Court;' and in 1868 a new series of 'Letter Writers, Autobiographers, and Diarists.' One other work of these later years remains to be noticed—'Passages of a Working Life during Half a Century,' 3 vols. 8vo, 1864–65. This book is, in fact, an autobiography, brought down to the year of publication, but referring to the work in which he had been engaged rather than to his private life. It is unnecessary to say that it has been our chief authority for this sketch, which, brief as it is, and referring only to his larger literary labours, will suffice to show that the life has been emphatically "a working life," and one in which the fixed purpose has been to assist in bringing wholesome literature within the reach of every one, in the removal of class prejudices, and in the general extension of social and political knowledge.

KNOLLES, or KNOWLLES, RICHARD, a scholar and historian, and a member of a family whose residence was at Cold Ashby, Northamptonshire, was born in that county about the year 1543, and about 1560 was entered of Lincoln College, Oxford, of which, after taking his B.A. degree on the 26th of January, 1565, he was elected fellow. He proceeded M.A., on the 4th of July, 1570, and whilst his future career was still undeclared, received, through the influence of Sir Peter Manwood, the appointment to the head-mastership of the free grammar-school at Sandwich, in Kent, where he laboured with great assiduity, and successfully prepared many young men for the Universities. He died at Sandwich, according to Wood, "before he had quite attained to the age of man," in the latter end of June, 1610, and was buried in St. Mary's Church on the 2nd of the following month.

His works comprise, 'Grammaticæ Latinæ, Græcæ, et Hebræicæ Compendium: cum Radicibus,' 4to, London, 1600, &c.; an English translation of Jean Bodin's 'Six Livres de la République,' entitled 'The Six Books of a Commonwealth,' folio, London, 1606; and a manuscript translation in folio, of which the original is still preserved in the Ashmolean Museum at Oxford, of Camden's 'Britannia,' &c. But his most important work is one which was praised in the 'Rambler' (No. 122), as "displaying all the excellencies that narrative can admit. . . . Nothing could have sunk the author in obscurity but the remoteness and barbarity of the people whose story he relates." This work is entitled 'The Generall Historie of the Turkes, from the first Beginning of that Nation to the Rising of the Othoman Familie: with all the notable Expeditions of the Christian Princes

against them. Together with the Lives and Conquests of the Othoman Kings and Emperours, faithfully collected out of the best Histories, both auncient and moderne, and digested into one continuat Historie untill this present Year 1603,' with a dedication to King James I., folio, London, 1603, second edition, "unto the year 1610," folio, London, 1610, fifth edition "with continuation," &c., 1638. The best edition, however, is the sixth, which appeared as 'The Turkish History, &c. With a Continuation to this present Year, MDCLXXXVII. Whereunto is added the present State of the Ottoman Empire. By Sir Paul Rycart, late Consul of Smyrna,' 3 vols. folio, London, 1687, of which an 'Abridgment,' by Mr. Savage, "revised and approved by the late Sir Paul Rycart," was published in 2 vols. 8vo, London, 1701, &c.

KNOWLES, JAMES SHERIDAN [E. C. vol. iii. col. 738]. Mr. Knowles died on the 1st of December, 1862, in his 79th year: he was born on the 12th of May, 1784. He had for some years been in receipt of a pension from the Civil List of 100*l.* per annum.

KOBELL, HENDRICK, Dutch painter, was born at Rotterdam in 1751. The son of a merchant, he was brought up to commerce, and in that pursuit accompanied his father to England, but on his return to Amsterdam in 1788 took to painting, and in 1770, was elected member of the Amsterdam Academy. Later, he returned to Rotterdam, where he died in 1782. Hendrick Kobell's best pictures are marine subjects, especially naval fights, which he painted with great spirit. Many of them have been engraved, mostly in mezzotint, but some in aquatint. He also painted landscapes, made numerous tinted drawings, and etched a few plates.

KOBELL, JAN, son of the above, was born at Delfshaven in 1779. He was brought up in the orphan asylum till he was of age to be placed with W. R. Van der Wall, the animal and landscape painter. Jan Kobell adopted the same line of art as his master, but took as his model Paul Potter, whom he is considered to have approached more nearly than any other of his imitators. His paintings of animals were in great request during his life, and they have become more so since his death. He was a member of the Institute of the Netherlands, and in 1812 received the gold medal of the Exposition at Paris. There are a few plates of animals etched by him. He died September the 14th, 1814.

KOBELL, WILHELM VON, was born at Mannheim in 1766. From his father, Ferdinand Kobell, he learned the rudiments of his art, completing his training in the Düsseldorf academy. He settled in Munich; became famous for his battle-pieces, and landscapes with animals; was in 1808 nominated professor in the Munich academy, and in 1816 was ennobled. He was much patronised by the king, Maximilian Joseph, and his successor Ludwig. He died at Munich, July 15th, 1853.

* KOCH, KARL HEINRICH EMMANUEL, botanist and traveller, was born at Weimar in 1809, and educated in the universities of Wurzburg and Jena, from which last corporation he received his degree of doctor about 1833. In 1836 he commenced his travels through the southern portion of Russia, and gave his experience in 'Reise durch Russland nach dem Kaukasischen Isthmus in den Jahre 1836, etc.,' 2 vols. 8vo, Stuttgart and Tübingen, 1842—43. In 1839 he was appointed assistant professor of botany at Jena, but in 1843 he resigned the post in order to devote himself to exploring, in conjunction with George de Rosen, Turkey, Armenia, and the countries contiguous to the Caspian Sea. This afforded him the materials for his 'Wanderungen im Oriente während der Jahre 1843 und 1844,' 3 vols. 8vo, Weimar, 1846—47. The third volume was reprinted in 1854, under the title of 'Die Krim und Odessa,' 8vo, Leipzig, 1854, and of which two or three English translations were published during the Crimean war. He has also written several other geographical works on these eastern regions, on the Danube, and on Xenophon's account of the retreat of 10,000 Greeks. His botanical works comprise 'Hortus Dendrologicus,' 2 vols. 8vo, Berlin, 1853—54, which is a catalogue of nearly all the trees that have been cultivated in the open air in the central portions of Europe, and of which a second edition, under the modified title of 'Dendrologie,' appeared in 1869; 'Das natürliche System der Pflanzenreichs nachgewiesen in der Flora von Jena,' 8vo, Jena, 1839; and 'Beiträge zu einer Flora des Orients,' 8vo, Halle, 1848—1854.

KOEKKOEK, BAREND CORNELIS, Dutch landscape painter, was born at Middelburg, October 11, 1803. His father, Jan Hermann Koekkoek (born 1778, died 1851), a marine painter of ability, was his earliest teacher, and he studied three

years in the Amsterdam academy. He learned most, however, from nature, and the works of the earlier painters of the Netherlands. Koekkoek painted a large number of landscapes—almost exclusively of the scenery of the Low Countries—which rank among the best of their kind and time. They exhibit breadth of manner, combined with patient regard to the minutest details of nature; at the same time they are poetical in feeling and well coloured. He established himself at Beek, but removed to Cleves, where he founded an art academy, and where he died, April 5th, 1862. Koekkoek was a knight of the legion of honour, of the orders of Leopold of Belgium, and of the Lion of the Netherlands. He published 'Erinnerungen und Mittheilungen eines Landschaftmalers' (Recollections and observations of a Landscape-painter), Amsterdam, 1841. Three of his brothers are honourably known as painters—JAN KOEKKOEK, a marine painter of promise (born 1811, died 1831); MARINUS-ADRIAN, and HERMANUS, born 1815, landscape and marine painters, who reside at Amsterdam.

* KOHL, JOHANN GEORG, traveller, was born at Bremen, April 28, 1808. He studied at Göttingen, Heidelberg, and Munich, and on leaving the University engaged himself as tutor in the families of Baron Manteuffel and Count Medem. He resided five years in Livonia, and in returning home he took the opportunity of visiting various other parts of Russia. He wrote a work on the country, which was so favourably received that it was followed up by others on Russia, to which he added in rapid succession accounts of travel in Austria, Bavaria, Denmark, Schleswig Holstein, the British Isles, Canada, and the United States, amounting in all to some thirty or forty octavo volumes, and forming a series which has attained great popularity in Germany. In addition to these he has written some works involving more research and thought, such as 'Beiträge zur Geschichte,' 8vo, Königsberg, 1834; 'Die Donau von ihrer Ursprünge bis Pesth,' 4to, Triest, 1854; 'Der Rhein,' 2 vols. 8vo, Leipzig, 1851; 'Der Verkehr und die Ansiedelungen des Menschen in ihrer Abhängigkeit von der Gestaltung der Erdoberfläche,' 8vo, Dresden, 1841; 'Skizzen aus Natur und Volkenleben,' 2 vols. 8vo, Dresden, 1851; 'Geschichte der Entdeckung America's von Columbus bis Franklin,' 8vo, Berlin, 1861; 'Die beiden ältesten Generalkarten von Amerika ausgeführt in den Jahren 1527 in 1529, erläutert von J. G. Kohl,' fol. Weimar, 1860; 'Kitchi-Gami,' 2 vols. 8vo, 1859; and 'Geschichte des Golfstroms und seiner Erforschung von den ältesten Zeit bis auf der grossen Amerikanischen Burger Krug,' 8vo, Bremen, 1868. From 1854 to 1858 he was engaged in travelling in North America, and since the last mentioned year he has chiefly resided at Bremen.

KOLBE, KARL WILHELM, German engraver and author, was born at Berlin, November 20th, 1757. Until his twenty-sixth year he was professor of the French language in the Philanthropium of Dessau; but on the breaking up of that establishment he resolved, in accordance with the advice of his relative, the engraver Chodowiecki, to trust to his artistic talent. He accordingly entered the Berlin academy, and studied landscape design and engraving, making rapid progress in both. He learned to sketch with wonderful facility, and engraved many of his sketches; was elected a member of the academy in 1795; and ultimately recalled to Dessau as professor in the art-school. In 1796 he published a series of forty-nine plates of landscapes; in 1805 a set of folio etchings from the paintings and drawings of Solomon Gessner; and in 1825 a series of eighteen studies of herbage. His engravings, one hundred and twenty-five in all, were republished in a collected form. Kolbe used the pen with as much facility as the graver. Late in life he published several works of a philological character, chiefly on the characteristics of the French and German languages; and his autobiography, 'Mein Lebenslauf und meine Werke im Fache der Sprache und der Kunst,' 8vo, Berlin, 1825. He resigned his professorship in 1829, and died January 15th, 1835. His nephew,

KARL WILHELM KOLBE, born at Berlin in 1781, was a student in the art academy there, and attained considerable reputation as an historical painter. He executed numerous oil paintings, several mural pictures, and a series of cartoons of events in German history, to be painted on glass for the windows of the Castle of Marienburg, and in oil for the Crown Prince of Prussia. He was elected a member of the Berlin Academy in 1815, and professor in 1819; and died, April 8th, 1853.

KONIG, FRANZ NIKOLAUS, German painter and engraver, was born at Berlin in 1760, and learned painting and engraving of S. Freudenberger. His paintings and drawings of Swiss and mountain scenery are much esteemed; as are also his

etchings and aquatints—about fifty in number. He resided chiefly in Switzerland, and died at Berne in 1832.

KONIG, FRIEDRICH, chief inventor of the printing-machine, was born at Eisleben, Prussia, in 1775. Printing was his boyish amusement, with his mother's mangle as a press. He afterwards learned the trade in a regular way at Leipzig, in the printing office of Breitkopf. He invented a new printing-machine, to effect a saving in manual labour; but his rough model failed to find favour in Germany, and in 1806 he brought it to England. He succeeded after a time in making an arrangement with Bensley the printer, who, in 1807, agreed to furnish capital enough to make a complete machine from the model. König modified many of the working parts, and employed three years in developing what was virtually a new machine, for which, in 1810, he took out a patent. It was not till April, 1811, however, that the first sheet of a book was printed by a steam-worked printing-machine; this was sheet H of the 'Annual Register' for 1810. The machine acted on the platen system, the pressure being produced by two flat plates, not by a cylinder; while the ink was applied by rollers, not by padded balls. Two other printers, Woodfall and Taylor, joined Bensley and König in a partnership for the manufacture and sale of printing machines. König made numerous improvements, and on October 30, 1811, took out a patent for a machine presenting many new features. A cylinder was substituted for the two platens; the two forms of type travelled to and fro under it on a cast-iron table, with strong spiral springs at either end. He even included a double-cylinder machine in his patent. The first single-cylinder machine was ready in December, 1812, and the first work it performed was to print sheets G and H of Clarkson's 'Life of Penn,' which it did at the rate of 800 per hour. Mr. Walter, of 'The Times,' who went to see the work, at once ordered the construction of two double-cylinder machines. König took out two other patents; one, in 1813, for improving the inking apparatus, and using endless tapes to keep the sheets well up to the cylinder; the other, in 1814, for numerous minor improvements. Surmounting numberless mechanical difficulties, as well as trade difficulties with the pressmen, Mr. Walter at length printed the first newspaper by steam-machine, 'The Times' of November 29, 1814, at the rate of 1100 copies per hour. König's fourth patent enabled him to increase the speed to 2000 per hour. In 1816 he made for Messrs. Bensley a single-cylinder registering machine, for book-work, which struck off 1000 sheets per hour, printed on both sides. The first entire book thus printed by steam was Elliotson's translation of Blumenbach's 'Physiology,' and the first weekly periodical the 'Literary Gazette.' He also made the double-cylinder machine first employed on the 'Weekly Dispatch.' But the ingenious inventor made little by his exertions; his patents were disregarded and evaded by other machine-inventors; his relations with Bensley were unsatisfactory; and about the end of 1816 he quitted England in disgust. After his departure, attempts were made to deprive him of the credit of being the real inventor of steam-printing; but it is now generally admitted that his claim is valid. Mr. Walter steadily supported the good name of König. In 1823 he wrote to him, inviting him to return to England and construct a far finer machine than any up to that time known; but König, wearied with his experience of English patents, declined. On December 3, 1824, Mr. Walter wrote and published in 'The Times' a full exposition of the German's ill-requited merits. König settled as a printing-machine maker in Germany, where he constructed machines printing 1200 sheets per hour on both sides, or 2400 on one side. His establishment was at Oberzell, near Würzburg, in Bavaria, in an old deserted monastery granted to him on easy terms by the Government. Here he was joined, in 1817, in partnership with Andrew F. Bauer, who had been his assistant in London. It was not, however, till 1821 that they were able to turn out two single-cylinder machines, so difficult was it to obtain good tools and workmen in a secluded village; but by 1825 they had supplied seven double-cylinder machines; in 1829 the number had risen to fifty-one, and about a hundred persons were employed. König, who was also a partner with Bauer and Cotta in a paper-mill, died at Oberzell in 1833. Mr. Smiles has published, in 'Macmillan's Magazine' for December 1869, a memoir of him, partly based on a pamphlet published by Bauer, and partly on information supplied by König's sons, who now carry on the establishment at Oberzell.

KONING, PHILIP DE, an eminent Dutch painter, was born at Amsterdam in 1619. He was the pupil of Rembrandt, whose general feeling for tone and colour he assimilated with his own natural manner. He painted some religious and historical

pieces, and in his own day enjoyed a high reputation as a portrait painter; but he is now most esteemed for his landscapes, which are among the very finest of their kind. His especial excellence lies in the representation of extended stretches of the level country of the Netherlands, in which the aspects of space, air, and sky are rendered with exquisite truth and refinement. The galleries at Amsterdam, the Hague, and Rotterdam possess fine examples of his pencil; but his best works are probably in English collections. 'A Landscape: Cleves in the distance,' in the collection of the Marquis of Westminster, exhibited among the works of the old masters, 1871, is a very celebrated specimen; but still finer, perhaps the finest extant, is the large 'Landscape, with sandy hills in the distance,' recently purchased from Sir Robert Peel for the National Gallery (1871). Philip de Koning died at Amsterdam in October, 1689.

KONING, or KONINCK, SALOMON, a celebrated Dutch painter, the son of a jeweller at Antwerp, was born at Amsterdam in 1609. He was a pupil of N. Muijaert, but formed his style on that of Rembrandt, whom in his best works he closely approaches. He painted historical, religious and domestic subjects, and portraits, and etched a few plates with great brilliancy. His pictures are found in most of the principal public and private galleries. He was admitted a member of the guild of painters, Amsterdam, in 1630, and died in that city in 1668.

* KOPP, JOSEPH EUTYCHE, an historian, who has been called the Niebuhr of Switzerland, was born at Munster, in the canton of Lucerne, in 1793. He became successively rector of the Lyceum at Lucerne, and president of the department of public instruction for that canton. Professor Kopp has done much towards freeing the antiquities of his country from the mythical element, and has even had the boldness to challenge the authenticity of the legend of William Tell. His principal works are, a collection of nearly 100 Documents connected with the History of the Swiss Confederation, 'Urkunden zur Geschichte der eidgenössischen Bünde. Herausgegeben und erläutert vom Prof. J. E. Kopp,' 8vo, Lucerne, 1835, in which he establishes the ancient sovereignty of the House of Hapsburg over the three Waldstetten, or Forest Cantons; a History of the Swiss Confederation, 'Geschichte der eidgenössischen Bünde. Mit Urkunden,' 5 vols. 8vo, of which the first four volumes were published at Leipzig, 1845—57, and the fifth at Berlin, 1858, a work which, the result of twenty years' labour, commenced with 'König Rudolf und seine Zeit,' and terminated with 'Die Gegenkönige Friedrich und Ludwig und ihre Zeit, 1322—1330.' Besides other enterprises, alone or associated with others, of an archaeological kind, and various contributions to periodicals, Kopp has signalled his skill in dramatic poetry, by the publication of a work entitled 'Dramatische Gedichte,' in two small volumes, the first of which, published in 8vo, Lucerne, 1855, contained 'Count Bero of Lenzburg. The Camp before Basel,' 'Graf Bero von Lenzburg. Das Lager von Basel,' and the second, a dramatic poem in two parts, entitled 'Rudolf von Habsburg,' 8vo, Lucerne, 1856.

KRAFFT, PETER, an Austrian painter, was born at Hanau, September 17th, 1780. The son of an enamel painter, he entered the Academy of Vienna in 1799, and completed his studies in Paris and Rome. At first he painted mythological subjects, such as Europa, Hebe, Sappho, &c.; then on returning to Vienna, battle-pieces and court ceremonials, which were highly esteemed, and a few scriptural and poetical subjects, including an 'Adam and Eve,' illustrations of Goethe's Hermann and Dorothea; a 'Belisarius,' and 'Ossian.' In 1833 and following years he painted in encaustic, on the walls of the Imperial palace, a series of subjects illustrating the recent history of the House of Hapsburg. He also painted many portraits of members of the imperial family. He held the offices of professor in the Imperial Academy, and director of the Gallery of the Belvedere. He died October 28th, 1856. His brother, JOSEPH KRAFFT, born in 1787, died in 1828, was a fashionable portrait painter in Vienna.

KREIL, KARL, Austrian astronomer and magnetician, was born November 4th, 1798, at Ried, in Upper Austria; and after passing through the Gymnasium at Kremsmünster, studied law at Vienna. His natural taste, however, leading him rather to science, he paid close attention to astronomy and mathematics. In 1826 he acted as assistant at the Vienna Observatory; next at the Milan Observatory; in 1830 was appointed joint observer at Prague; and in 1845, director of the Prague Observatory. In 1851 he went to Vienna to direct the department of Meteorology and Terrestrial Magnetism. In the fulfilment of these several duties he published elaborate reports and tables, which occupy

an extensive series of volumes. Between 1836 and 1838 appeared two volumes on terrestrial magnetism, forming a supplement to the Milan 'Effemeridi Astronomiche.' Between 1839 and 1850 appeared eleven more volumes on the same subject, in connection with the scientific records of Prague Observatory. Between 1846 and 1851, similar volumes appeared relating to the magnetic phenomena observed in Bohemia and other parts of the Austrian Empire, 'Magnetische und geographische Ortsbestimmungen im österreichischen Kaiserstaate,' 5 vols. In 1850 he published a memoir on the influence of the Alps on the terrestrial magnetism of the neighbouring countries. Between 1854 and 1861 he published eight annual volumes of observations made in the magnetic and meteorological department. Other memoirs by him related to comets, the influence of the moon on the atmosphere, and the influence of the moon on the magnetic direction and intensity of the horizontal component of the earth's magnetism. Kreil closed a laborious and useful life on the 21st of December, 1862.

* KREMER, PETER, one of the ablest and most prolific of the historical and genre painters of Belgium, was born at Antwerp in 1801, and studied under M. van Brée. He is somewhat dry in execution, but intelligent and sympathetic in his conception of a subject. His works generally refer to some domestic or biographical incident connected with the history of the Netherlands, or some circumstance in the life of one of the great old Flemish painters. Several of his pictures have been engraved.

KREUTZER, KONRADIN, German musical composer, was born November 22nd, 1782, near Möskirch, Baden. After learning singing, the violin, and the pianoforte, he became at nine years old a choir-boy at the Monastery of Zwiffallen; where a monk, named Weinrauch, taught him composition. In 1796 he removed to the Monastery of Schussenried. When his voice broke, he served for a time as organist and teacher, and then went to Vienna, where he studied under Albrechtsberger. He composed two operas, 'Konradin von Schwaben,' and 'Der Taucher,' but failed to get them performed. He joined Lepping, inventor of the 'panmelodion,' on which he played with great success. For some years he was director of the Conservatorium at Stuttgart, where his opera 'Feodora' found favour with the Court. From 1817 to 1827, he travelled about Germany, composing, and endeavouring to get his compositions accepted by managers. After a brief visit to Paris, he returned to Vienna in 1828; and filled the post of director of the Josephstadt Theatre from 1833 to 1840. He next became musical director at Cologne; and in 1846 was appointed kapellmeister at Riga, where he died December 14th, 1849. He composed about thirty operas, only five of which obtained success in his day; and even those are now nearly forgotten. He also composed an oratorio, 'Moïse,' a sacred cantata, three grand masses, six minor masses, Te Deums, offertories, and graduals. In instrumental music he produced numerous compositions for violin, pianoforte, and orchestra; and there are by him some unaccompanied part songs.

KREUTZER, RUDOLF, musician, was born at Versailles, November 16th, 1766. When quite a boy, he learned the violin under Stamitz; and at the age of thirteen played a concerto of his own composition. In 1782, he succeeded his father as violinist at the royal chapel. After producing two lyrical dramas, 'Jeanne d'Arc,' in 1790, and 'Paul et Virginie,' in 1791, he composed his opera of 'Lodoiska.' Another opera, 'Lodoiska,' by Cherubini, was brought out at another Paris theatre at the same time; there was a consequent rivalry between the composers; but Cherubini's bore off the palm. Between 1792 and 1796 Kreutzer composed many other operas; in 1801 he became first violinist at the opera, in 1816 second chief of the orchestra, and in 1817 chief. He received the appointment of maître de chapelle to Louis XVIII.; and became musical director of the opera in 1825. In conjunction with Baillot, he prepared the 'Méthode de Violon,' adopted by the Conservatoire de Musique. Although his operas, musical dramas, and ballets amount to nearly fifty in number, they have little merit. The only piece from his operas that lives, is the overture to Lodoiska, which to this day is a stock favourite among instrumentalists, although held of little account by composers. He also produced numerous symphonies-concertante, concertos, romances, quartettes, trios, duets, and sonatas, for the violin; these are better known than his operas. Kreutzer died at Geneva, January 16th, 1834.

KRÜDNER, BARBARA JULIANE, BARONESS VON, a celebrated pietist and enthusiast, was the wife of the Baron von Krüdner, a Russian diplomatist, who was ambassador at Venice, Copenhagen, and Berlin, in which last city he died in 1802.

Her father, the Baron von Viestinghoff, one of the wealthiest nobles of Courland, was governor of Riga, in which city she was born on the 21st of November, 1764. She was early remarkable for her intelligence, and for a tendency to reverie and melancholy, which was fostered by the solitary grandeur and wildness of the summer residences of her father, by whom she was taken to Paris in 1777. Here she enjoyed considerable educational advantages, and intercourse with the most distinguished men of the day, as Diderot, d'Alembert, Helvetius, and Grimm. In 1783 she became the wife of Baron von Krüdner, whom she accompanied in 1784 on his mission to Venice, and in a tour of the other cities of Italy, and afterwards to Copenhagen. Meanwhile the romance of her disposition was so developed by indulgence, which, though unguarded, is believed to have been innocent, as to lead to a separation from her husband in 1791, at which time she was the mother of two children. She now repaired to Riga, where she spent some years, and where she began to exhibit proofs of that charitable zeal by which she was afterwards distinguished. In 1796 she quitted Riga, and commenced a limited course of travel, in which she took up her temporary abode in various cities of Germany, and even joined her husband, at that time ambassador at Berlin, for some months in the years 1800 and 1801. Towards the end of the latter year she visited Geneva, from which she went to Paris, where she published her romance of 'Valérie; ou, Lettres de Gustave de Linar à Ernest de G***,' 2 vols. 12mo, Paris, 1803, which created a great sensation, and which has gone through many editions. In this work the romance of her nature is very distinctly expressed, and her sentiments and adventures, more or less amplified, enter so largely into it as to constitute it a partial autobiography. Yet her claim to its authorship has been disputed by M. Tournachon de Montvéran, one of her lovers, in favour of another of her admirers, a certain Oratorian of the house of Montmorency, who is said to have followed her from France to Switzerland, where, to beguile the time, he composed the romance of 'Valérie.' He died, bequeathing to the baroness a certain sum for the expenses of the publication of his book, which took place, indeed, but under the name of his executrix. (Querard, 'Les Supercheries Littéraires,' vol. ii. p. 332.) Being at Berlin in 1816, the baroness sought, with slight success, to acquire an ascendancy over the mind of the Queen Louisa Augusta, after whose death, July 19th, 1810, she gave herself up to a greater and greater extravagance of mysticism, in which she even surpassed Jung Stilling, to whom she attached herself for some time at Carlsruhe. Her correspondence for several years abounds in mystical effusions, and reveals her double tendency to illuminism and to worldly frivolity. She believed that she had received a mission for the re-establishment of the kingdom of Christ upon earth, and traversed Germany, distributing alms, and preaching, especially at Heidelberg, where she commenced her progress, in the public prisons, and to the most abandoned of the population. On the fall of Napoleon, she followed the Emperor Alexander to Paris, whose interest she had excited by a vague prophecy of the escape of Napoleon from Elba, his triumphant return to Paris, and the second exile of the Bourbons. The fulfilment of some of her prognostications gave her great influence over the mind of the Russian sovereign; and to her has been referred the first conception of the idea of the Holy Alliance (September, 1815). Leaving Paris on the 22nd of October, about a month after the departure of the Emperor, who had invited her to St. Petersburg, the Baroness Krüdner paid a visit to Switzerland, and caused such a commotion at Basel, that she was expelled by the authorities for the disturbance to which the promulgation of her doctrines had given rise. The example of Basel was followed by city after city, and state after state, so that at length she was conducted through Leipzig and Königsberg into Russian territory, where, owing to the waning of the Czar's belief in her pretensions, she found herself interdicted from Moscow and St. Petersburg. Her final effort after the fulfilment of her mission was made by her undertaking a philanthropic journey in 1822 to the Crimea, for the purpose of opening a house of refuge for criminals and social offenders. She died at Karasu-Bazar, on the 25th of December, 1824. She left a few inconsiderable works behind her, of which need be mentioned only the 'Camp des Vertus; ou, la grande Revue de l'Armée Russe dans la Plaine de ce Nom par l'Empereur Alexandre,' 8vo, Paris, 1815; and a Journal for the Poor, 'Armenzeitung,' 5th May, 1817, of which only the first number was published, and which is with considerable probability referred alternatively to Kellner, the agent of the baroness, as its author. Amongst the works which have been written to throw light upon her life

and character may be enumerated a volume entitled 'Frau von Krüdener in der Schweiz,' 8vo, St. Gall, 1817; and the several volumes of J. B. H. R. Capéfigue, 'La Baronne de Krüdener, l'Empereur Alexandre 1^{er} au Congrès de Vienne et les Traités de 1815,' 12mo, Paris, 1866; of Charles Eynard, 'Vie de Madame de Krüdener,' 2 vols. 8vo, Paris, 1849; and the Rev. W. Ziethe's Lecture delivered in the Hall of the Evangelical Alliance, entitled 'Juliane von Krüdener. Ein Vortrag gehalten im Saale des evangelischen Vereins für Kirchliche Zwecke den 29 Febr., 1864,' 16mo, Berlin, 1864.

KRUG, LUDWIG, an old German goldsmith and engraver, was the son of a goldsmith in Nürnberg, where he was born towards the end of the 15th century. Neudörffer, who knew him, says that he worked as a master in Nürnberg in 1523; that he was of an inventive and philosophical mind, and that he executed artistically gold and silver work, chasing, repoussé, sculpture, painting, and portraiture. It is as an engraver, however, that he is remembered, and it is remarkable that a contemporary and fellow-townsmen of Albert Dürer, and working when his style was being everywhere imitated, Krug, both as designer and engraver, shows a much closer approximation to the manner of Lucas van Leyden. Among his well-known prints are a 'Nativity,' a 'Christ crowned with thorns,' 'The Adoration of the Magi,' the 'Virgin Mary,' and 'The Fall.' De Jongh and some others have assigned the prints of 'The Fall,' 'The Nativity,' &c., which bear Krug's monograph, a jug (Germ. Krug) between the letters L. and K., to Lucas Cornelisz of Leyden, but apparently on insufficient grounds. Krug died, according to Neudörffer, after 1536. The British Museum possesses fine impressions of some of his prints; in the Berlin Museum is a small rilievo in stone ascribed to him. (Bartsch, *Peintre Graveur*, vol. vii. 535; Passavant, vol. i. 228, vol. iii. 132; Neudörffer, *Nachrichten von den vornehmsten Künstlern so innerhalb hundert Jahren in Nürnberg gelebt haben*; Nagler, *Künstler-Lexicon*.)

KRÜGER, FRANZ, German painter, born September 3rd, 1797, at Radegast, Anhalt-Dessau, was in the main self-taught. He settled at Berlin, drew portraits, military subjects, hunting-pieces, and landscapes with animals, in depicting which he had acquired great facility. He was named member and professor of the Academy, and appointed court painter, and found thenceforward abundant occupation in painting official pictures, and equestrian and other portraits of the sovereigns of Germany and the more distinguished personages of their courts. His works have been much praised, and they are favourable examples of their class. Franz Krüger was an officer of the Red Eagle, and a knight of several other German orders. He died January 21st, 1857.

KRUPP, FRIEDRICH, proprietor of the largest cast-steel works in the world, was born at Essen, in Rhenish Prussia. His father established a small work in the midst of a rich coal and iron district, with only two workmen in his employ, in 1827; and this has gradually developed into a concern of vast magnitude, chiefly under the management and ownership of Friedrich. His experiments led him to modes of procedure by which he was able to produce masses of cast-steel larger than had been before known. At the Great Exhibition in Hyde Park in 1851, his ingot or block, weighing 45 centners (a little under 45 cwt.), attracted much attention; at the Munich Exhibition in 1854, this weight was greatly exceeded; still further, at the Paris Exhibition in 1855; while at the International Exhibition in London, in 1862, the display was little less than marvellous. One specimen was a solid cylinder of cast steel, 9 feet long, 44 inches diameter, and weighed 400 cwt.; it was purposely broken into two parts, and did not exhibit the slightest flaw, even when examined through a lens. What is known as 'Krupp's Steel' is made from a highly crystalline variety of cast iron called 'Spiegeleisen,' by decarburisation in a puddling-furnace; and its excellence depends conjointly on the choice of materials and the care observed in the processes. Until 1846 Herr Krupp was chiefly engaged in the manufacture of steel rails, tyres, cranks, axles, pump-rods, &c.; but in that year he began to manufacture steel guns. He sent his first six-pounder to the Hyde Park Exhibition in 1851; his progress after this was so rapid, that by the end of 1865 he had made 2600 steel guns for the Prussian, Austrian, Italian, Belgian, Dutch, Turkish, and Japanese governments. The largest in size and weight was displayed at the Paris Exhibition in 1867. Its weight was 50 tons, or 1000 cwt., calibre 14 inches, length 17 feet; it had 40 rifle grooves, took a charge of 110 lb. to 130 lb. of powder, and propelled a shell of 1080 lb., or a shot of 1212 lb. This mighty gun took sixteen months to manufacture, working night and day; it was valued at

15,750*l*. Lieutenant-Colonel Owen, who wrote an official report on the artillery at the Paris Exhibition, stated that in that year (1867) Krupp's works at Essen occupied 450 acres of ground, about one-fourth under cover; 8000 men were employed at Essen, besides 2000 more at various coal and iron works belonging to the firm; there were 112 smelting, reverberating, and puddling furnaces; 195 steam-engines, from 2 to 1000 horsepower; 49 steam-hammers, from 1 to 50 tons weight; 110 smith's forges, 318 lathes, 111 planing-machines, 61 cutting and shaping machines. The firm had up to that year delivered 3500 steel guns, valued at 1,050,000*l*., and had received orders for the immediate delivery of 2200 more. During the Franco-German war, 1870-71, Krupp's steel guns were largely used by the Germans; but the heaviest siege guns, from which great results were expected, had not long been brought into position when the armistice put an end to the firing. In the competitive trials made in Prussia in 1869, between Krupp's and Armstrong's large guns, the superiority of the English guns was most decided in every trial, whilst their cost was much less; but Krupp has been busy experimenting since then, and has had Armstrong guns to work by, so that he may possibly have succeeded in removing the former disparity. Herr Krupp's personal history has been absorbed in that of his great establishment. He was offered a patent of nobility in 1864, by the King of Prussia, but declined it. The qualities of the Krupp steel have been made the subject of G. Weber's 'Expériences faites relativement à la Force de Cohésion et à la Torsion de l'Acier fondu pour bouches à feu de M. Krupp . . . avec une Plaque,' Paris, 1864.

KRUSEMAN, CORNELIS, a celebrated Dutch painter, was born at Amsterdam, September 25th, 1797; and studied in the art-academy of that city under C. H. Hodges. He at first painted interiors, but the contemplation of the great historical paintings in Italy led him to devote himself entirely to the higher walks of art. Among his more important scriptural pictures were a 'St. John Preaching,' of colossal dimensions, which was much admired, and 'St. Mary Magdalen at the Sepulchre,' which is in the collection of the King of Holland. He also painted a 'Holy Family,' a 'Belisarius asking Alma,' several subjects from Dutch history, &c. In 1826 he published an interesting account of his professional tour in Italy, 'Aanteekingen van C. Kruseman, betrekkelijk des zelfs Kunstreis en verblyf in Italie,' which was translated into German by C. Mayboom, in 1832. C. Kruseman died November 14th, 1857. His brother,

JAN ADAM KRUSEMAN, born at Haarlem, February 12th, 1804, studied in the Amsterdam Academy, of which he was for some years sub-director. He painted many scriptural pieces, one of which, 'Elisha and the Shunamite Woman,' is in the Haarlem Museum; subjects from ancient and modern history; and familiar life and portraits. He died at the Hague, March, 1862.

KRUSENSTERN, ADAM JOHANN VON, hydrographer, was born in Esthonia in 1770. In 1793 he entered the British navy, and served for two years in the Chinese seas. He observed that a trade in furs was being carried on between the Russian possessions in North-west America and China, the goods being conveyed at considerable risk by the overland route. He proposed an expedition to the Russian government for the purpose of opening up a safer and quicker route by sea. The proposition was favourably received, and Krusenstern was appointed to conduct the expedition. His first difficulty was to find ships, there being none in Russia suited for a long sea voyage; and he was ultimately compelled to buy two in England. The expedition started from Kronstadt, June 26, 1803. Cape Horn was doubled January 3, 1804. At the Sandwich Isles the vessels parted company, one proceeding to Russian America, the other to Kamtschatka. Krusenstern's ship passed by Japan, and stayed there four or five months, endeavouring, but without success, to induce the Japanese authorities to receive one of the party, M. de Resanoff, as the ambassador for Russia. On April 18, 1805, he left Nangasaki, passed through the Japanese seas, correcting much of the geography about Sangar Strait and the island of Yesso, and discovering several of the Kurile islands. He explored the mouth of the Amur, and verified the previous observations of La Pérouse. In returning home he passed through the Chinese Sea, rounded the Cape of Good Hope, and reached Kronstadt, August 7, 1806. The Emperor Nicholas, and his successor Alexander, conferred many honours upon him, such as the orders of Santa Anna and the Red Eagle; appointed him a member of a standing scientific

committee for improving the construction of ships for the Russian navy; and raised him to the rank of vice-admiral. He was elected a member of numerous societies in Russia and elsewhere. His voyage is noteworthy, partly on account of the geographical discoveries which resulted from it, and partly because it was the first Russian circumnavigatory expedition. The details of the voyage are given in 'Reise um die Welt in den Jahren 1803—1806,' etc., 4to, St. Petersburg, 1810—1811. Translations of it have been given by Hoppner in English, and by Eyries in French. He also wrote 'Wörter Sammlungen aus den Sprachen einiger Völker des östlichen Asiens und die Nordweste Kuste von America,' 4to, St. Petersburg, 1843; 'Recueil de Mémoires hydrographiques pour servir d'Analyse et d'Explication à l'Atlas de l'Océan Pacifique,' 3 vols. 4to, with folio atlas, St. Petersburg, 1824—1835, which contains valuable information on the winds, currents, and tides of the Pacific Ocean; and several papers on ships' compasses, Plymouth Harbour, discoveries in the South Pacific and Atlantic Oceans, and Middel-dorf's journey in Northern Siberia. He died at Revel in 1846.

KUGLER, FRANZ THEODOR [E. C. vol. iii. col. 755]. Dr. Kugler died on the 18th of March, 1858. A new edition, being the fourth, of his 'Handbuch der Kunstgeschichte,' in 2 vols. 8vo, was published in 1861, under the editorial care of Von Lübke.

KUNTZ, KARL, German animal painter and engraver, born at Mannheim, July 28th, 1770, was a pupil of J. Rönger. After travelling in Italy and Switzerland, he settled in Karlsruhe, where he was appointed court painter and director of the grand-ducal picture-gallery, and where he died, September 8th, 1830. As a painter, Kuntz imitated Paul Potter, whose famous 'Cow' forms the subject of one of the best of his engravings. Another celebrated engraving is the 'Abraham and Agar' of Claude Lorrain. He also engraved several landscapes in aquatint. His son, RUDOLF KUNTZ, born at Mannheim, September 10th, 1797, died at Karlsruhe, May 8th, 1848, was widely known by his paintings and lithographs of horses; while a second son, LUDWIG KUNTZ, born July, 1810, has published a collection of lithographs of his father's sketches, 'Thierstudien nach der Natur gemalt von Karl Kuntz,' 4to, Karlsruhe, 1837; and several series of sketches from nature.

KÜRSCHNER, CONRAD, a learned divine of the Reformed Church, the son of Roman Catholic parents who were in humble circumstances, was born on the 8th of January, 1478, at Ruffach, in Alsace, where he received his earlier education. In 1491 he entered upon a sixteen months' residence at Heidelberg, upon which occasion, at the dictation of his uncle, Jodocus Galle, to whom he was indebted for assistance, he assumed the name of Pellican. He returned to Ruffach in 1492, where he became assistant to a schoolmaster, and received encouragement in his studies from the monks of a neighbouring convent of Cordeliers, into whose order he entered in 1493, without the knowledge of his parents. In 1494 he was ordained sub-deacon; and in 1496, at the instance of his uncle, repaired for the completion of his studies, first to Basel, and afterwards to Tübingen. Here, in 1499, he commenced, with the assistance of a converted Jew, who was a member of his order, the study of Hebrew, in which he subsequently attained so great proficiency as to be reckoned, after Reuchlin, the most eminent Hebrew scholar in Germany. He was ordained priest at Pfortzheim, and celebrated his first mass in his convent at Ruffach in 1501; and in the following year was appointed professor of theology in a Minorite convent at Basel. Here he was employed by Amerbach, the printer, on an edition of the works of St. Augustine, which was published in 9 vols. folio, 1506; and he also superintended an edition of the Psalter in four languages. In 1508 he removed to Ruffach, where he officiated as divinity professor; in 1511, became guardian of the convent of his order at Pfortzheim, and, in 1519, of the convent at Basel. The reading of the works of Luther precipitated the doubts as to the validity of the Romish Church which the study of the Scriptures had already raised; and he became a firm adherent of the principles of the Reformation. For some time he professed the Reformed doctrines with some reserve; but,

growing bolder in his propagandism, he was accused of heresy in a chapter of his order in 1522. He defended himself successfully; and when in 1523, upon the visitation of the convent by the provincial, Gaspar Sazgar, steps were being taken to depose him from his office, these were stayed by the interference of the Senate, by whom he was made fellow-professor of divinity with Ecolampadius, and continued to act in that capacity in the university even after a more successful effort had been made to deprive him of his position as guardian of the convent. In 1526, on the invitation of Zwingle, he repaired to Zürich, where he became professor of divinity and of Hebrew; and soon afterwards contracted marriage, in order to signalise the completeness of his protest against the Romish system in general, and against the immorality incidental to enforced clerical celibacy in particular. By this step he forfeited the friendship of the more temporising scholar, Erasmus. Kürschner died on the 5th of April, 1656, having produced works which are said to have been published together in 7 vols. folio; but this is to be understood of the aggregate bulk of his works rather than of any collective edition that can be identified or authenticated. He had great reputation as a Biblical commentator, and as an expert in Rabbinical literature.

KÜSELL, or KYSELL, MATTHIAS, German engraver, was born at Augsburg in 1621; settled in Munich, and engraved a large number of portraits, two or three Scriptural subjects, and a set of forty-six etchings of scenes, &c., from the opera 'Il Poma d'Oro,' all of which are in much request among collectors. He also published a folio volume on the fine arts, 'Nobilissima Artis Graphice soboles.' He died in 1682.

KÜSELL, or KYSELL, MELCHIOR, brother of the preceding, born at Augsburg in 1622, was a pupil of M. Merian, and stayed for a while in Frankfurt, but returned to Augsburg in 1655. His style is more refined and spirited than that of his brother; his etchings are especially admirable. He engraved several portraits; the 'Life and Passion of Christ,' oblong folio, twenty-five plates; and about ninety landscapes, marine views, architectural and miscellaneous subjects, and a series of plates illustrating Ovid's 'Metamorphoses,' oblong 4to, 1681, all after J. W. Baur; a set of two hundred and forty-nine plates in quarto (1679), from the Old and New Testaments; one hundred and eighty-two plates of 'Spiritual Emblems,' after Strauch; and sixty plates of the 'Adventures of Ulysses,' after N. Kraus. Nagler gives a full list of his works. He died in 1683.

*KÜTZING, FRIEDRICH TRAUGOTT, botanist, was born at Ritterbourg, in Thuringia, December 8, 1807. His education was completed at Halle. His earliest papers were on the genera *Viola* and *Callitriche*; but, in 'Flora' for 1833, he published a paper on an 'Algologische Excursion am salzigen See im Mansfeldischen in Jahre 1832'; another in 'Linnæa' for the same year, giving a systematic résumé of all the genera of Diatoms; which was succeeded by a long account, in the 'Annales des Sciences Naturelles' for 1834, of the origin and development of the simpler Algæ. These and a few other papers by him attracted considerable attention, and, in 1835, the Academy of Berlin commissioned him to draw up a report on the plants growing in the Adriatic and Mediterranean. On his return he was elected professor of natural history in the Realschule of Nordhausen. He is now recognised as one of the highest authorities on the *Algae*. Most of his principal works are devoted to their description; and amongst others we may cite 'Die Kiesel-schaligen Bacillarien oder Diatomeen,' 4to, Nordhausen, 1844; 'Die Umwandlung niederer Algenformen in höhere, sowie auch in Gattungen ganz verschiedener Familien höherer Cryptogamen,' Haarlem, 1839; 'Phycologia generalis,' 4to, Leipzig, 1843; 'Phycologia Germanica,' 8vo, Nordhausen, 1845; 'Tabula Phycologia,' 2 vols. Nordhausen, 1845—52, a work containing 200 plates of figures; and 'Species Algarum,' 8vo, Lipsiæ, 1849. He has also written some students' books on botany, chemistry, and geography, of which the most noteworthy is 'Grundzüge der philosophischen Botanik' 2 vols. 8vo, Leipzig, 1851—52.

KYNASTON, SIR FRANCIS [KINASTON, SIR FRANCIS, E. C. S.].

L

LABADIE, JEAN DE, a French enthusiast, son of Jean Charles de Labadie, governor of Bourg, in Guienne, was born in that town on the 13th of February, 1610. At six or seven years of age he was sent to Bordeaux to be educated at the College of the Jesuits there, and was received into their society about the year 1624, after the death of his father, who had been opposed to such a step. Finding his aspirations after perfection and his mystical tendencies to be incapable of satisfaction in this community, he was released in 1639; and, after having made a preaching tour of Guienne, repaired to Paris, where he preached in various places, and attracted the favourable regard of M. de Gondren, general of the Oratoire. His zeal and eloquence procured for him the patronage of Caumartin, bishop of Amiens, who presented him to a prebend in his cathedral church of St. Nicholas. He left Paris the more willingly because he believed he had already made himself obnoxious to the ecclesiastical authorities by his opinions concerning grace, predestination, and penitence. At Amiens he aimed at being a director of consciences, and, arrogating to himself the title of a second John the Baptist, sent into the world as the forerunner of a second Messiah, presently found himself at the head of a devoted band of admirers and adherents. His reputation for sanctity was exploded by the discovery of an intrigue in a nunnery at Abbeville, and by the suspicion of others; and he avoided arrest by escaping to Paris. He sojourned for a time at Port Royal, where, however, he did not continue long, as he found the subtlety and intelligence of the society at that place too great for the validity of his pretensions. Accordingly, he repaired first to Bazas, and afterwards to Toulouse, where Archbishop de Montchal became his patron, and gave him the direction of a female convent of the third order of St. Francis. Here his desire to restore the notions of primitive purity led him into various indecent familiarities; and it is even said that he, in the costume of Adam, preached twice or thrice a week to a female auditory in the costume of Eve. The scandal caused by his irregularities at length necessitated his flight from Toulouse; and in 1650 he became a convert to Calvinism at Montauban, upon which occasion he published a 'Déclaration de J. de L'Abadie, cy-devant Prestre, contenant les Raisons qui l'ont obligé à quitter la Communie de l'Eglise Romaine pour se ranger à celle de l'Eglise Réformée,' 8vo, Montauban, 1650, which was followed by a 'Lettre à ses Amis de la Communie Romaine touchant sa Déclaration. Divisée en deux Parties,' 8vo, Montauban, 1651. He officiated for eight years as pastor of the Reformed Church at Montauban, from which he was expelled for exciting a sedition; and, having found a temporary asylum at Orange, repaired in 1659 to Geneva. Being obliged to quit this city on account of the commotions which he excited, he became, in 1666, pastor of the church at Middleburg, where he caused such disorders that he was cited to appear before the Synod at Dort, by which he was formally deposed from his office. His most notable exploit about this time was his gaining over Mademoiselle Schurmann, of literary celebrity, as one of his most ardent adherents, who in her turn made a proselyte of Elizabeth, the Princess Palatine, who offered an asylum to the fugitive disciples of Labadie. After various adventures in Germany and Holland, in the course of which he established a printing-press at a kind of communistic settlement between Utrecht and Amsterdam, from which many of his works were issued, he repaired finally to Altona, in Holstein, where he held private conferences, and where he died of the colic on the 2nd of February, 1674. The sect of the Labadists, as his followers were called, after a distinct existence which continued till the 18th century, became merged into other mystical communions. They held that the regenerate alone could be admitted to the sacraments, and glorified the illumination of the spirit to the prejudice of the letter, which, they held, led to idolatry. They asserted the dignity and the necessity of manual labour, and their social life was modified by communistic doctrines.

The more remarkable of the numerous works of Labadie are—'Le Hérault du grand Roi Jésus,' 12mo, Amsterdam, 1667; 'Le véritable Exorcisme; ou, l'unique Moyen de chasser le Diable du Monde Chrétien,' 12mo, Amsterdam, 1667; 'Le Chant royal du Roi Jésus-Christ,' 12mo, Amsterdam, 1670; 'Les saintes

Décades,' 8vo, Amsterdam, 1671; 'L'Empire du Saint-Esprit,' 12mo, Amsterdam, 1671; 'Traité de Soi: ou, le Renoncement à Soi-même,' &c., &c. The biography of Labadie was published as 'Vie de Jean Labadie,' 12mo, the Hague, 1670; and an apology for his career was published in French and Dutch, with the title of 'Preuves véritables de la Piété du Sr. J. de Labadie, tirées de son Livre, intitulé Nouvelle Conviction manifeste des Calomnies semées par les Ennemis du Sr. J. de L. contre sa Vie,' &c., 4to, Utrecht, 1670.

LABBÉ, PHILIPPE, a learned Jesuit, was born at Bourges, July 10th, 1607. He entered the Jesuit College at Bourges in 1623; afterwards taught there theology and philosophy till about 1644, when he removed to a similar chair at Paris. He ranks among the most learned members of the society. His memory was prodigious, and his diligence untiring; but his judgment was not conspicuous; he had little critical acumen, and his style is tedious and slovenly. He produced a vast number of books; but many are compilations, and of little value. It will suffice to name such works as 'De Byzantinæ Historiæ Scriptoris,' fol., Paris, 1648; 'Nova Bibliotheca Manuscriptorum Librorum,' fol., 1657, of which only two out of the five volumes announced appeared; 'Bibliotheca Bibliothecarum,' fol., Paris, 1664, 1672, and 1686, and 4to, Geneva, 1680; 'Chronologie française, ou Abrégé Chronologique de l'Histoire sacrée et profane,' 5 vols. 12mo, Paris, 1666; 'Concordia Chronologica,' 5 vols. fol., 1670; and 'SS. Concilia ad regiam editionem exacta,' written in conjunction with the Père Cossart, 17 vols. fol., Paris, 1672, and of which a second edition was published at Venice, in 1728, by N. Coleti, in 25 folio volumes. Besides these, the Père Labbé published a vast number of other works on ecclesiastical and French history and chronology; a 'Bibliotheca anti-Janseniana,' 4to, 1654, and other polemical works, chiefly directed against the Jansenists; several books on geography and general history, bibliography, philology, and Greek poetry, and some of a devotional character, whilst others with which he had made more or less progress were stopped by his death, which occurred at Paris on the 25th of March, 1687. Chaudon has fairly characterised his endless and bulky volumes:—"They have been so far useful, in that they have furnished the means of doing better, and have abridged the labours of later writers."

LABILLARDIERE, JACQUES JULIEN DE, botanist, was born at Alençon, October 23, 1755. From the school at Alençon he went to Montpellier, where he studied botany under Gouan, and afterwards proceeded to Paris, from the university of which city he took his degree in medicine in 1780. From this period his life was almost wholly spent in botanical research, and a large portion was occupied in personally exploring many and widely separated regions. He visited England, and there examined the large collection formed by Banks; then he traversed the Alps contiguous to the boundary between France and Italy. In 1786 Syria was visited, and some valuable observations made on the remnants of the forest of Mount Lebanon, as well as on the Druses who dwell there. In 1791 he was attached to Entrecasteux's expedition in search of La Pérouse, and was thus enabled to examine the botanical productions of the Cape of Good Hope, Van Diemen's Land, New Caledonia, and numerous other islands in Polynesia, New Guinea, Amboyna, Australia, and Java. On this voyage he collected upwards of 4000 species, of which about 3000 had not previously been described. The materials which he thus brought together, and whose study occupied him several years, formed one of the most important additions ever made by one individual to our knowledge of the plant-growth of the southern hemisphere. The principal results of his researches are given in 'Icones plantarum Syriæ rariorum descriptionibus et observationibus illustratæ,' 4to, Paris, 1791—1812, which is enriched with excellent plates by Redouté; 'Relation du Voyage à la recherche de La Pérouse fait par ordre de l'Assemblée constituante pendant les années 1791, 1792,' &c., 2 vols. 4to, with a folio atlas, Paris, 1800; 'Novæ Hollandiæ Plantarum Specimen,' 2 vols. 4to, 1804—1806; and 'Sertum Austro-Caledonicum,' 2 parts, 4to, 1824—1825, 80 plates. He also wrote a few short papers in the 'Mémoires' of the Institute and of the Museum of Natural History, as also in the 'Bul-

letins' of the Société Philomathique de Paris. He died at Paris, January 8, 1834.

LACORDAIRE, JEAN BAPTISTE HENRI DOMINIQUE, a French divine, and one of the greatest of modern orators, was born on the 12th of May, 1802, at the village of Recy-sur-Ouche, in the arrondissement of Châtillon-sur-Seine. At four years of age he lost his father, a physician of some distinction, and was taken by his mother to Dijon, the Collège of which he entered in 1812, and presently gave promise of eminence as a rhetorician. From the Collège he migrated in 1819 to the École de Droit, where for several years he devoted himself successfully to jurisprudence, history, philosophy, and general literature, cherishing all the time an ardent republicanism and a theological system dictated by Voltaire, and "respiring scepticism," as he afterwards said, "with the air in the University." Having graduated in law, he repaired, in 1821, to Paris, where he became a *stagiaire*, or probationary advocate, and pursued his studies for two years under the direction of M. Guillemin, an advocate of the Cour de Cassation. In 1824, having discovered a way for the reconciliation of philosophy and Christianity, he determined upon devoting himself to the Church, and entered, May 12th, 1824, the Seminary of Saint-Sulpice. He was ordained priest on the 22nd of September, 1827, and was appointed by Archbishop de Quélen as almoner of the Visitation. He gave his leisure to the study of Plato and the fathers of the Church; and preached his first sermon—the only sermon, it is said, which he ever wrote beforehand—at the Collège Stanislas, on Christmas-day. In 1828 he became almoner-adjoint to the Collège Henri IV.; and having laboured with success as a preacher to the young, was on the eve of leaving for America, where the Bishop of New York had offered him the post of Vicar-General, when he was kept back by the revolution of 1830. He now connected himself closely with the Abbé de Lamennais, by whose character and talent he was fascinated, and by whom he was moulded into one of the most brilliant contributors to the democratico-Catholic journal, 'L'Avenir,' which they founded together on the 15th of October, 1830, in association with the Abbé Gerbet and the Comte de Montalembert, adopting as the motto of their literary venture the words "Dieu et la Liberté," which was regarded by its authors as nearly synonymous with "Le Pape et le Peuple." Cited, jointly with M. de Lamennais, on the 31st of January, 1831, before the Cour d'Assises of Paris to answer for the appearance of two articles in the 'Avenir,' Lacordaire said:—"I stand here near the man who began the reconciliation of Catholicism with the world. Let me tell him how affected I am by the part that God has made for me in giving me him as my master and my father." The advocacy was successful; but the 'Avenir' brought its conductors into collision with the Pope as well as with the government of July; and Lacordaire, having made a journey to Rome to defend his opinions, submitted them to the authority of his Holiness. On his return to Paris, he resumed, by permission of Archbishop de Quélen, his modest position as almoner of the Visitation, occupying his leisure, as before, with the study of Plato and of St. Augustine, whom, of all the Christian fathers, he prized the most for the profundity of his theological speculations. In 1834 he began his conferences at the chapel of the Collège Stanislas, and in the following year at Notre Dame, where he attracted crowds by the freedom and eloquence with which he introduced the treatment of political and social affairs into his discourses. He discussed, with a boldness which laid him open to ecclesiastical censure and suspicion, the topics of the day and of the moment—nationality, liberty, railroads, and the general resources and the development of industry. In 1836 he repaired for the second time to Rome, where he was well received by the Pope, and where he wrote a 'Lettre sur le Saint-Siège,' which, however, he did not publish till two years after, and in which he solemnly retracted the doctrines promulgated in the 'Avenir,' and glorified faith, which was of God, to the prejudice of human reason, which was a child of naught, and came from the devil. He preached at Notre-Dame during Lent, 1838, and revived the disquiet of the more rigidly conservative of the clergy. He paid a third visit to Rome; and, in order to be able to preach with greater freedom from episcopal control, he took the habit of the Preaching Friars at their Convent of Santa Maria sopra Minerva, on the 9th of April, 1839, and the next day retired, for the performance of his noviciate, to a convent in the neighbourhood of Viterbo. Here he wrote an apology for the religious orders, entitled 'Mémoire pour le Rétablissement en France de l'Ordre des Frères Prêcheurs,' 8vo, Paris, 1840. On taking the vows of the order, on the 6th of

April, 1840, he added to his Christian names that of the founder, of whom he produced a Life, 'Vie de Saint Dominique,' 8vo, Paris, 1840, second edition, 12mo, Paris, 1841—a work which, especially on account of the boldness with which it apologised for the Inquisition, achieved a considerable circulation in several European languages. Returning to France, he made his first re-appearance in the pulpit of Notre-Dame in February, 1841, in the habit of a Dominican, and startled his auditory by dwelling mainly on the historical glories of France. His fame as an orator soon spread everywhere. He was called upon not only to advocate the cause of various charities in Paris, but also to preach at Bordeaux, Lyons, Nancy, Grenoble, and other principal towns in France, where the novelty he had introduced into pulpit oratory excited mingled wonder and admiration. On the breaking out of the revolution of February, 1848, he was elected a member of the Constituent Assembly for the department of Bouches-du-Rhône. He took his place, in his habit of a Dominican friar, two benches below the seat of his old ally, Lamennais; but a few weeks' trial convinced him that he had mistaken his sphere, and he resigned. In 1850 he went to Rome as representative of M. Sibour, Archbishop of Paris, who had condemned the editors of 'L'Univers' for their bitterness of political feeling. It was on this occasion that the Pope recognised the convents of the Dominicans in France as constituting a province, and conferred upon Lacordaire the office of Provincial, which the latter held for four years, and then refused to be nominated for re-election. His last great sermon in Paris was preached in 1853 in the church of Saint-Roch, and touched perilously on the then recent extensions of the Imperial prerogative. Complaint was made to the ecclesiastical authorities on account of his political allusions; and, before the year was out, Lacordaire was offered and accepted the direction of the free College of Sorrèze, in the department of the Tarn. Early in 1861 he visited Paris for the purpose of being received into the Académie Française, to which he was elected on the death of M. de Tocqueville. The introduction of the new member devolved on M. Guizot; and whilst the speech of the former upon his reception was published as 'Discours de Réception à l'Académie Française par H. D. Lacordaire, 24 Janvier, 1861,' 8vo, Paris, 1861, the interest of the public in the transaction, which they regarded as having a political significance, was partially represented by a brochure entitled 'Un Moine à l'Académie,' 8vo, Paris, 1861. Lacordaire returned to his seminary at Sorrèze, where he died on the 21st of November, 1861.

The several or collective works of M. Lacordaire include 'Conférences prêchées à Lyon et à Grenoble,' &c., 8vo, Lyon, 1845; 'Conférences de Notre-Dame de Paris,' 4 vols. 8vo, Paris, 1844—51, English translation, vol. i. 8vo, London, 1851; 'Éloge funèbre du Général Drouot, prononcé dans le Cathédrale de Nancy, le 25 Mai, 1847,' 8vo, Paris, 1847; 'Éloge funèbre de Mgr. Charles Auguste de Forbin-Janson, Evêque de Nancy et de Toul, prononcé dans le Cathédrale de Nancy le 28 Août, 1844,' 8vo, Paris, 1844; 'Conférences de Toulouse, suivies de divers Opuscules,' 8vo, Paris and Tours, 1857; 'Discours sur le Droit et le Devoir de la Propriété,' &c., 8vo, Toulouse, 1858; 'Œuvres,' 6 vols. 8vo and 12mo, Paris, 1858; 'Lettres à un jeune Homme sur la Vie Chrétienne,' 3 parts, 8vo, Paris and Tours, 1858, another edition, 1860; 'Sainte Marie-Madeleine,' 12mo, Paris and Tours, 1860, second edition, 1860; 'De la Liberté de l'Italie et de l'Eglise,' 8vo, Paris, 1860; 'Lettres du Père Lacordaire à des jeunes Gens, recueillies et publiées par H. Herreyve,' second edition, 12mo, Paris, 1863, third augmented edition, 8vo, Paris, 1863; 'Lettres à Madame la Comtesse E. de la Tour du Pin, publiées par Madame D***,' 8vo, Paris, 1864; and 'Jesus Christ. Conférences delivered at Notre-Dame,' 8vo, London, 1869.

The literature illustrative of the life and career of Père Lacordaire is very voluminous, and includes 'Les derniers Moments du R. P. H. D. Lacordaire, par un Religieux de l'Ordre des Frères Prêcheurs,' 8vo, Paris and Toulouse, 1861; 'De l'Influence du R. P. Lacordaire sur la Génération actuelle,' 8vo, Paris and Toulouse, 1862; 'Le Révérend Père Lacordaire: sa Vie, sa Mort, ses Funérailles, son Portrait,' 16mo, Paris and Toulouse, 1862; 'Le Père Lacordaire: ses Œuvres et sa Doctrine, par Ernest Hello, extrait de la "Revue du Monde Catholique" du 25 Janvier, 1862,' 8vo, Paris, 1862; 'Lacordaire: sa Vie, ses Œuvres, par M. François Beslay, précédé d'une Lettre du Père Lacordaire à l'Auteur,' 8vo, Paris, 1862; 'Le Père Lacordaire, dans l'Audace et dans l'Humilité de son Génie,' &c., par M. Alexandre Guillemin, Docteur en Droit, &c.,

8vo, Paris and Tours, 1862; 'Le Père Lacordaire, par le Comte de Montalembert,' &c., 8vo, Paris, 1862, English translation, 8vo, London, 1863; 'Le Père H. D. Lacordaire. Étude historique et biographique par Maxime de Fourcheux de Montrond,' 12mo, Lille and Paris, 1863; 'Le R. P. H. D. Lacordaire, de l'Ordre des Frères Prêcheurs: sa Vie intime et religieuse par le R. P. B. Chocarné, du même Ordre,' 2 vols. 8vo, Paris and Tours, 1866, English translation, 'The Inner Life,' &c., 8vo, Dublin, 1868; 'Lacordaire,' 8vo, Edinburgh, 1867, by Miss Dora Greenwell; and a Life in E. de Mirecourt's (C. J. B. Jacquot) 'Histoire Contemporaine,' 8vo, Paris, 1867, &c.

LACORDAIRE, JEAN THEODORE, entomologist, elder brother of the Abbé Lacordaire, was born February 1, 1801, at Recey-sur-Ource. He was educated at Dijon for the law, but travelling and natural history being more to his liking, he went to sea in 1825, and during the following seven years repeatedly visited South America, and once went to Senegal. On his return home in 1832, he worked for several scientific journals, and in 1835 he accepted the offer of the chair of zoology in the University of Liège, to which that of comparative anatomy was added a few years after. He translated several books and pamphlets from the English and German, and frequently contributed notices and reviews of the more important books of travel to the 'Revue des Deux Mondes'; but his reputation is mainly based upon his articles and books on insects, of which the following may be mentioned:—'Mémoire sur les Habitudes des Insectes Coléoptères de l'Amérique méridionale,' in the 'Annales des Sciences Naturelles,' xx. pp. 185–291 (1830); xxi. pp. 149–194; 'Essai sur les Coléoptères de la Guyane Française,' in the 'Nouvelles Annales du Muséum d'Histoire Naturelle,' ii. pp. 35–94 (1833); 'Monographie des Coléoptères subpentamères de la Famille des Phytophages,' in the Memoirs of the Royal Society of Science at Liège, vol. iii. pp. 1–740 (1845), v. pp. 1–390 (1848); 'Introduction à l'Entomologie,' 2 vols. 8vo, Paris, 1834–1838; and the 'Histoire Naturelle des Insectes, Genéra des Coléoptères,' etc., both of which works form part of the series called 'Suites à Buffon.' The last mentioned is his greatest production, and is a very elaborate and remarkable one. It is devoted entirely to the Beetles, or *Coleoptera*, and consists of eight octavo volumes, the first published in 1854, and the eighth in 1868; but the work is not completed, and probably one or two more volumes would have been required to terminate it. The author died August 31, 1870.

LAFAGE, RAIMOND, a celebrated French designer and engraver, was born October 1st, 1856, at Lisle, in Albigeois. He was a pupil of Rivalz, and spent several years in Rome and other cities of Italy. He led a dissolute life, and died in poverty, in Paris or Lyons, November 4th, 1890. Lafage was a singularly rapid, dexterous, and brilliant designer, and a clever engraver. His subjects were Biblical, historical, mythological, and bacchanalian; and he executed his pen-drawings especially with great spirit. His drawings are still, as they always have been, in great request in France, but are comparatively rare in this country. A series of 86 plates from his designs was published at Paris shortly after his death.

LA FARINA, GIUSEPPE, an Italian politician, antiquary, and journalist, who at the age of thirteen was for eleven months the partner of the political imprisonment of his father, who was distinguished as a lawyer, archaeologist, littérateur, and liberal, was born at Messina, in Sicily, on the 20th of July, 1815, and was educated at the University of Catania, where he took his doctor's degree in civil and ecclesiastical law in 1834. The youthful ardour of his liberalism led him to become one of the promoters of the popular rising in 1837; and after the defeat of his party, he took refuge abroad. Returning to Sicily after a two years' expatriation, he devoted himself to his profession as an advocate, but especially interested himself in political affairs, to further his views in which he started successively three or four journals, which were successively repressed. His principal work about this time was his 'Messina ed i suoi Monumenti,' 8vo, Messina, 1840. When at length he was interdicted from every kind of journalistic or literary activity, he repaired to Florence, where he found a freer scope for his energies. He here published three illustrated works, entitled respectively, 'La Germania Renana, coi suoi Monumenti e le sue Leggende, descritta,' &c., 8vo, Florence, 1842; 'L'Italia coi suoi Monumenti, le sue Rimembranze ed i suoi Costumi, descritta,' &c., 4to, Florence, 1842, &c.; and 'La Svizzera storica ed artistica, descritta,' &c., 4to, Florence, 1842–43, each of which formed a part of a collection entitled 'Italia, Grecia, Svizzera, e Germania Renana,' &c.; 'Studi sul Secolo decimoterzo,' 8vo, Florence,

1842, &c.; 'La China considerata nella sua Storia, ne' suoi Riti, ne' suoi Costumi, nella sua Industria, nelle sue Arti e ne' più memorevoli Avvenimenti della Guerra attuale. Illustrata,' &c., 4 vols. 8vo, Florence, 1843–47; and 'Storia d'Italia narrata al Popolo Italiano (568–1815),' 7 vols. 8vo, Florence, 1846–54. In June, 1847, he established a journal called 'L'Alba' (The Dawn), which was conceived and conducted in the interests of the unification of Italy on a democratic basis. It was his purpose "fare l'Italia," to achieve the independence and the unity of Italy; and when the revolution of 1848 broke out in Sicily, he repaired thither, landing at Messina on the 22nd of February, when he was immediately elected one of the vice-presidents of the War Committee, and colonel of the 11th battalion. In March following he was elected to represent Messina in the Sicilian Parliament, which assembled at Palermo, and on the 13th of April proposed the deposition of Ferdinand from the throne of Sicily, and the election of a constitutional successor from one of the royal houses of Northern Italy. La Farina, whilst declaring that the first and most urgent care should be the organisation of their resources and the demonstration of confraternity with the rest of Italy, limited the choice of a sovereign for Sicily to members of the families of Tuscany and Savoy. It was accordingly decreed that Ferdinand and his dynasty had for ever fallen from the throne of Sicily, and that, after the reform of the *Statuto*, or constitution, the crown should be offered to an Italian prince. By a decree of the Sicilian Parliament, of the 11th of July, the crown was offered to the Duke of Genoa, second son of Charles Albert, King of Sardinia, by whom, however, it was declined. Against this offer, to give effect to which La Farina was at once accredited with a mission to the courts of Rome, Turin, and Florence, the King of Naples drew up a formal protest, which he fortified by sending an expedition against Messina, which, after fierce fighting and a bombardment of five days and nights, was compelled (September 7th) to surrender. But the Council of Ministers of the Provisional Government—in which, from the 13th of August, La Farina (having returned to Palermo on the 22nd of July) had held the portfolios of the Interior, Public Instruction, and Public Works, and in which, after the fall of Messina, he assumed the Ministry of War and Marine—held out until the 22nd of April, 1849, when the keys of Palermo were surrendered to General Filangieri, and unqualified submission was offered to the king's authority. Thus came to an end the insurrection, or "holy war," of which La Farina furnished a history, entitled 'Istoria documentata della Rivoluzione Siciliana (1848–1849),' 2 parts, 8vo, Capolago, 1850, which form the 19th and 20th fascicoli, or numbers, of the collection of 'Documenti della Guerra santa d'Italia,' 26 fascicoli, 8vo, Capolago and Turin, 1848–51. La Farina was not in office at the time of the catastrophe; for, not finding all the energy of resistance which he desiderated in his colleagues, he resigned in February, 1849, and on the 23rd of April once more expatriated himself, to seek refuge in France. He lived at Paris until June, 1853, afterwards at Tours, and finally went to establish himself at Turin on the 21st of August, 1854. Here one of his first labours was the establishment and direction of the 'Rivista Enciclopedica Italiana,' 8vo, Turin, 1854, &c.; and he otherwise gave proofs of great literary industry, initiating new works, or completing those already begun, the most important being his valuable and exhaustive 'Storia d'Italia dal 1815 al 1850,' 6 vols. 8vo, Turin, 1851–52, 'seconda Edizione, corretta dall'Autore e continuata fino al 1861,' 2 vols. 8vo, Milan, 1864; 'Gli Albighesi, Romanzo storico,' 6 vols. 8vo, Genoa, 1845; 'Dei Fatti più notevoli della Repubblica Romana, Dialoghi,' 16mo, Turin, 1857. On the 1st of June, 1856, he published No. 1 of the 'Piccolo Corriere d'Italia,' which, in the beginning of 1858, became the organ, "bollettino settimanale," of the "Società Nazionale Italiana," which La Farina succeeded in constituting, August 1st, 1857, in furtherance of a plan conceived by Daniele Manin. He was one of the most active and influential promoters of the war declared against Austria on the 26th of April, 1859, and was closely concerned in all the movements having for their end the independence of Italy, for which, after the peace of Villafranca, he laboured more strenuously than ever. In March, 1860, he was chosen as deputy to the first Italian Parliament by six different electoral colleges; on the 27th of October following was named Councillor of State; and on the 2nd of December landed in Sicily as director of the Interior and of Public Safety, to which office he had been appointed on the 10th of November, and which he resigned on the 1st of June, 1861. He returned to Turin, where he pursued his patriotic labours in the Società Nazionale, in the Consiglio di Stato, and in the Parlamento,

until his death, on the 5th of September, 1863. His correspondence, occupying nearly 1200 pages, and consisting of letters addressed (1835–1863) to most of the liberal leaders of Italian opinion, was published as 'Epistolario di Giuseppe La Farina. Raccolto e Pubblicato da Asonio Franchi,' 2 vols. 8vo, Milan, 1869, which called forth on Professor Franchi, for the political and personal bias with which he was alleged to have executed his task, the animadversions of Dr. Agostino Bertani, in a small volume entitled 'L'Epistolario di Giuseppe La Farina. Ire politiche d'oltre Tomba. Raccolte da Agostino Bertani,' 8vo, Florence, 1869.

LAGRÉE, ERNEST MARC LOUIS DE GONZAGUE DOUDART DE, French traveller, was born at St. Vincent de Mercuze, March 31, 1823. From the École Polytechnique he passed into the navy, and took so distinguished a part in the Crimean war of 1854, that he was decorated with the Legion of Honour. In 1862 he went to Cambodia, where he became the commander of the French forces stationed there. In 1866 he was selected to command an exploring expedition through Cochin China. Soon after commencing the journey, he had several attacks of indisposition; but, in spite of his sufferings and the advice of his doctors to return to Saigon, he persisted in proceeding, until at last he became seriously ill on reaching Tung-chuan, January 18, 1868. The expedition was obliged to proceed without him, under the command of M. Garnier. Lagrée lingered for a few weeks, and died at Tung-chuan, March 12, 1868. The general results of this important journey have already been given under GARNIER, M. J. F., in this Supplement.

LA GUÉRONNIÈRE, LOUIS ÉTIENNE ARTHUR DUBREUIL HELION, VICOMTE DE, a French statesman and man of letters, whose elder brother, the Comte Alfred de La Guéronnière, is known for his works entitled 'Les Hommes d'État de l'Angleterre au XIX^e Siècle,' 18mo, Paris, 1854, and 'Vues politiques historiques,' 8vo, Limoges, 1840, was born near Limoges in the year 1816, of a noble family of Poitou distinguished for the strength of their legitimist traditions. Adopting these as his personal opinions, he found, about the year 1835, in 'L'Avenir National' of Limoges, a journal established by his brother, a vehicle for the exposition of his political principles. He thus attracted the attention of Lamartine, who, after the Revolution of 1848, offered him the position of préfet of the department of Corrèze, which he refused for the purpose of continuing an unofficial life in Paris. On the retirement of Lamartine from the Ministry of Foreign Affairs, La Guéronnière joined him in the direction of 'Le Bien Public,' a journal which had been established by the former at Mâcon in 1846, and had been transferred to Paris. 'Le Bien Public' was discontinued towards the end of 1848, and La Guéronnière associated himself for about fifteen months with M. de Girardin, as an almost daily contributor to the 'Presse,' from which he formally separated on the 9th of April, 1851, in order to become the editor of 'Le Pays,' a new journal of which Lamartine was the political director. To this paper La Guéronnière contributed a series of political portraits, one of which, devoted to the Prince President, gave such offence to Lamartine as to force him to disavow the sentiments which it embodied. The portrait of the Prince President gained, however, the admiration and the confidence of its subject; and after the coup d'état of December 2nd, 1851, which La Guéronnière defended as an unhappy necessity, he became one of the staunchest supporters of the new emperor, whose elevation he had predicted, and for whose person he professed an ardent affection. In 1852 he was elected to the Corps Législatif as deputy for the department of Cantal, and assumed the direction of both the 'Pays' and the 'Constitutionnel;' and was admitted, in August of the same year, to the Legion of Honour, in which he was promoted to be a commander on the 21st of July, 1858, and grand officer on the 14th of August, 1866. On the 18th of September, 1854, he was appointed Councillor of State, and subsequently president of the Council-General of Haute-Vienne; and in May, 1859, received the further appointment of superintendent of all matters connected with literature and the press. On the 5th of July, 1861, he was elevated to the Senate, and distinguished himself by his speeches on questions of home and of foreign policy. He assumed the direction of 'La France' in August, 1862, a journal which aimed at the reconciliation of imperial with Catholic interests; and in August, 1868, was sent as ambassador to Brussels, where it fell to him to conduct, on the side of France, the negotiations relative to the Belgian railways. Under the Ollivier ministry La Guéronnière was appointed ambassador to Constantinople, but was recalled after the disasters of the empire. Upon landing at Marseilles,

he was arrested, but presently released, and is now living in retirement.

The works of M. La Guéronnière include 'Portraits politiques contemporains,' second edition, 12mo, Paris, 1853, &c.; another edition, 'Études et Portraits,' &c., 8vo, Paris, 1856, English translation by Lieutenant-Colonel Gillies, 'Contemporary Political Portraits,' forming part of a series entitled, 'Contemporary French Literature,' 8vo, London, 1853, &c.; 'Souvenirs et Notes sur M. Bineau et les Finances de l'Empire,' 8vo, Paris, 1858; 'L'Abandon de Rome,' 8vo, Paris, 1862; and 'De la Politique intérieure et extérieure de la France,' 8vo, Paris, 1862. To these must be added four remarkable brochures which, although published without his name, are unanimously referred to La Guéronnière, who, from the faithfulness with which he represents the Napoleonic ideas, is believed to have enjoyed in their composition the confidence and assistance of the Emperor. These works are 'L'Empereur Napoléon III. et l'Angleterre,' 8vo, Paris, 1858, English translation, 'The Emperor Napoleon III. and England,' 8vo, London, 1858, Dutch translation, 'Napoleon III. en England. Naar het Fransch,' &c., 8vo, the Hague, 1858; 'L'Empereur Napoléon III. et l'Italie,' 8vo, Paris, 1859, &c., German translation by Baron Eduard von C***, 'Italien und die Karte von Europa,' 8vo, Leipzig, 1859; 'Le Pape et le Congrès,' 8vo, Paris, 1859, which called forth animadversions from B. Poujoulat, P. Redins, C. de Riancey, Count Solaro della Margherita, and the Bishops of Nîmes and Perpignan; and 'La France, Rome, et l'Italie,' 8vo, Paris, 1861, which was answered, amongst others, by B. Poujoulat, L. Veuillot, David Chéon, Bishop Pie of Poitiers, and Bishop Dupanloup of Orleans.

LALLY-TOLLENDAL, TROPHIME GÉRARD, MARQUIS DE, French politician, was born at Paris, March 5th, 1751. He was the son of Comte de Lally, Governor of Pondicherry, who was decapitated May 9, 1766. The young Lally spent the early years of his manhood in rescuing his father's name from taint, and in proving his own legitimacy of birth. In 1789 he was elected to the States General by the noblesse of Paris. He mediated for a time between the king and the parliament; but, failing in his advocacy of moderate constitutional measures, retired to Switzerland in 1791, where he published his 'Quintus Capitolinus,' in which he discussed the new constitution. Narrowly escaping the September massacres during a brief visit to Paris in 1792, he spent the rest of the revolutionary period mostly in England. He lived quietly in France during the Consulate and the Empire, though always more attached to the Bourbons than to the Bonapartists. He followed Louis XVIII. to Gand, where he acted as a member of his Privy Council, and, with Chateaubriand, contributed the royalist articles to the 'Moniteur de Gand.' In August, 1815, he was raised to the peerage, and took a leading part in opposing the extreme reactionary measures, and especially those for the censorship. In 1817 he opposed a motion by Boissy d'Anglas for the payment of members; and during the rest of his life, whilst supporting ministerial measures, aimed to mediate in favour of a more liberal policy. Early in life he wrote numerous pamphlets in vindication of his father's good name, and continued to address his countrymen on social and political subjects in subsequent years. He also wrote various works of a less fugitive kind, but none that are likely to be long remembered. It will be enough to mention 'Le Comte de Strafford,' a tragedy in five acts and in verse, 1795, and an essay on the life and character of Strafford, which was published separately; 'La Dame Black-nels,' a divertissement in three acts, 1827; a translation of Pope's 'Universal Prayer,' &c. The 'Mémoires concernant Marie-Antoinette,' 2 vols. 8vo, Paris, 1822, the authorship of which has been much disputed, appear to have been for the greater part compiled by Lally-Tollendal from materials supplied by the Duc de Choiseul and other friends of the unhappy queen. Lally-Tollendal was elected a member of the Académie in 1816, and was one of the founders of the Society for the Amelioration of Prisons. The Marquis (who in earlier days had been characterised by Madame de Staël as "the fattest of sensible men") did not live to witness the second downfall of the Bourbons. He died of apoplexy on the 11th of March, 1830, four months before the revolution which made Louis Philippe "Citizen King" of France.

LAMARTINE, ALPHONSE MARIE LOUIS DE [E. C., vol. iii. col. 777]. The later life of M. de Lamartine was almost exclusively literary. In 1856 he initiated the publication of the 'Cours familier de Littérature,' a monthly serial which he was enabled to bring out by the aid and subscriptions of his friends,

and his conduct of which gave rise to the publication, *inter alia*, of J. Duboul's 'M. de Lamartine et le Cours familial de Littérature, lu en Séance générale de l'Académie des Sciences, Belles-Lettres, et Arts de Bordeaux,' 8vo, Bordeaux, 1858; and M. Ferdinand Loise's 'Lamartine. Sa Situation; son Cours familial de Littérature; ses Œuvres complètes,' 8vo, Bruges, 1861. From the time of his tour in the East, his expenses had been beyond his resources; and in spite of the illusive wealth of large territorial grants made to him by the Sultan, and the farming of his works by a financial association, he found himself bound to unremitting literary labour, chiefly of an ephemeral character, and below the dignity of his previous achievements. In 1858 his friends opened a subscription in his favour, and, although the contributors to the fund for his relief were not limited by place or nationality, the amount raised fell short of what was hoped and expected. His personal intervention in the subscriptions opened on his behalf, his direct appeals to public charity, the repeated lotteries and other operations having in view the rehabilitation of his fortunes, darkened the lustre of his former life. At length, in virtue of a law voted April 15th, 1867, he became a pensioner of the State, and continued in the enjoyment of his allowance until his death on the 1st of March, 1869. An imperial decree ordained that his funeral should take place at the public expense; and, in accordance with his last wishes, it was celebrated with the greatest simplicity at Saint-Point, near Mâcon, his birth-place, where his wife, who pre-deceased him on the 21st of May, 1863, had already been interred.

The more important of his works which have still to be mentioned are his 'Vie d'Alexandre le Grand,' 2 vols. 8vo, Paris, 1859; 'Shakspeare et son Œuvre,' 8vo, Paris, 1864; 'Portraits et Biographies,' 8vo, Paris, 1864, English translation, 2 vols. 8vo, London and Bungay, 1866, comprehending studies of William Pitt, Lord Chatham, Madame Roland, and Charlotte Corday; 'Vie de César,' 8vo, Paris, 1865; 'Les Hommes de la Révolution: Mirabeau, Danton, Vergniaud,' 8vo, Paris, 1865; 'Civilisateurs et Conquêteurs,' 2 vols. 8vo, Paris, 1865; 'Les Grands Hommes de l'Orient: Mahomet, Tamerlan, le Sultan Zizim,' 8vo, Paris, 1865. Most of the above were published in connection with the 'Librairie Internationale;' and an augmented edition of his works was published with the title of 'Œuvres complètes, publiées et inédites: Édition unique,' 40 vols. 8vo, Paris, 1860—63; whilst an edition of his published speeches and writings was published by his staunch friend, Louis Ulbach, as 'La France Parlementaire (1834—1851): Œuvres oratoires et écrits politiques par Alphonse de Lamartine, précédés d'une Étude sur la Vie et les Œuvres de M. de Lamartine,' 6 vols. 8vo, Paris, 1864—65. M. de Lamartine also furnished to the 'Collection Michel Lévy' a series of minor essays in biography and criticism, including 'Homère et Socrate,' 18mo, Paris and Coulommiers, 1863; 'Guillaume Tell: Bernard Palissy,' 18mo, 1863; 'Madame de Sévigné,' 12mo, 1864; 'Fénélon,' 12mo, 1864; 'Cromwell,' 12mo, 1864; 'Bossuet,' 18mo, 1864; 'Nelson,' 18mo, 1864; 'Héloïse et Abélard,' 12mo, 1864; 'Jeanne d'Arc,' 18mo, 1863, English condensed translation, 'Joan of Arc, a Biography,' 16mo, Boston (U.S.), 1867, by S. M. Grinké; 'Antar,' 18mo, 1864; 'J.-J. Rousseau, son faux Contrat social et le vrai Contrat social,' 12mo, 1866; 'B. Cellini,' 12mo, and 'Balzac et ses Œuvres,' 12mo, 1866.

Of the numerous works which have been produced in illustration of the career, or parts of the career, of Lamartine, may be mentioned Professor Ferdinand Loise's 'Le Poète Philosophe: ou, Réflexions sur les Idées philosophiques et religieuses de De Lamartine,' &c., 8vo, Paris, 1857; Jules Forest's 'La Vérité sur De Lamartine,' 8vo, 1860; 'Lamartine devant l'Opinion,' 8vo, 1867; 'Lamartine chez Lui. Souvenirs intimes,' 8vo, 1869; 'Lamartine: Discours prononcé,' &c., 'par Victor de Laprade, de l'Académie Française,' 8vo, 1869; and A. Vémars's 'Biographie complète d'Alphonse de Lamartine,' 16mo, 1869.

LAMBERT, FRANÇOIS, who for some time passed under the name of JOHANNES SERRANUS, or JEAN DE SERRES, a French Protestant theologian of the sixteenth century, was born in 1487, at Avignon; and at the age of fifteen, having lost his father, who had been secretary of the Legation and of the Apostolic Palace, entered a convent of Franciscans, otherwise called Friars Minors and Cordeliers, of which society he became a professed member in his seventeenth year. Having been admitted to priests' orders, he commenced a successful career as a preacher. In the course of his investigations, he saw reason to renounce the doctrines of the Romish Church; and when, in 1522, the writings of Luther had been discovered in his cell, he was obliged to take a hasty leave of Avignon, with the convent of which he

had been connected for twenty years. He now repaired to Switzerland, where for some time, for the sake of security, he adopted the name of Johannes Serranus. He preached the doctrines of the Reformation successively at Geneva, at Lausanne (where he enjoyed the protection of the Prince-Bishop, Sébastien de Montfalcon), at Friburg, at Berne, and at Zurich. In the last-named city he was well received by Zwingli, who admitted him to preach in the church of Notre-Dame, and convinced him, in a public discussion, of the error he had advanced in one of his sermons, in which he had defended the invocation of the saints and the Virgin. The conference took place on the 12th of July, 1522, and on the following day Lambert set out to pay a visit to Erasmus at Basel, which he left in November, in order to proceed to Eisenach, in Thuringia. Here, on the 21st of December, he defended the Reformed doctrines upon Confession, Baptism, Contrition, Satisfaction, and the Marriage of Ecclesiastics, in a series of 139 theses, which were afterwards published, as 'Propositiones apud Isenacum expositæ,' in the fourth volume of Johann Georg Schelhorn's 'Amœnitates Litterariæ,' 14 vols. 8vo, Frankfurt and Leipzig, 1730—31, in which volume was republished 'Francisci Lamberti Avenionensis Theologi Rationes, propter quas Minoritarum Conversationem Habitumque rejecit,' first issued in 8vo, 1523. Leaving Eisenach in January, 1523, Lambert repaired to Wittenberg, where he was received by Luther with particular marks of regard and affection, and where he delivered lectures in the University, and published his 'Commentarius in Evangelium Lucae,' 8vo, Wittenberg, 1523; 8vo, Nürnberg, 1525; 8vo, Argentoratum (Strasbourg), 1525; and 8vo, Frankfurt, 1693.

Lambert married on the 20th of July, 1523, and for this step composed an apology, which was subsequently published with the title 'De sacro Conjugio Commentarius Franc. Lamberti, in Positiones LXIX. partitus,' &c., 8vo, Nürnberg, 1525. Having been invited, in 1524, to Metz, he went thither with the view of propagating his principles; but, finding the city hostile to his plan, he left it for Strasbourg, without having been able to preach a single sermon. In Strasbourg he lived a life of external quiet, although of great literary activity, until 1526, when, on the invitation of Philip, Landgrave of Hesse, who wished to bring about the reformation of his hereditary States, he proceeded to Homburg, where, having silenced his opponents in a three days' discussion upon the theses, or "paradoxes," which he had caused to be posted by way of challenge on the church-doors (October, 1526), he proceeded to elaborate and to put into working order an ecclesiastical constitution for the churches of the Landgraviate. In 1527, Lambert was appointed to be the first professor of divinity in the newly-instituted University of Marburg, and took part in the conference held in that city, in October, 1529, for the purpose of securing the unity of the Swiss Reformers and the followers of Luther, especially on the subject of the Eucharist. As one result of the arguments adduced, Lambert is said to have abandoned the Lutheran doctrine of the Lord's Supper, and to have adopted that of Zwingli. A few months subsequently to this conference Lambert died of the plague, on the 18th of April, 1530.

His works are numerous, and include, besides those already mentioned, 'In Cantica Canticorum Salomonis Commentarii Wittenbergæ prælecti,' 8vo, Argentoratum, 1524; 'Commentarii de Causis Excæcationis multorum Sæculorum ac Veritate, denu et novissime Dei Misericordia revelata,' 8vo, Argentoratum, 1524; 'De Fidelium Vocatione in Regnum Christi, id est, Ecclesiam: de Vocatione ad Ministeria ejus, maxime ad Episcopatum. Item de Vocatione Matthiæ per Sortem ac similibus, et ibi multa de Sortibus,' 8vo, (most probably) Argentoratum, 1525; 'Farrago omnium fere Rerum theologicarum,' 8vo, (most probably) Argentoratum, 1525; 'In Regulam Minoritarum et contra universas Perditionis sectas,' 8vo, Argentoratum, 1525; 'Commentarii in Oseam,' 8vo, Argentoratum, 1525; of which a partial illustration, in English, was published as 'His Mind and Judgement of the Wyll of Man, declarynge and provyng how and after what sorte it is captyve and bond, and not free; taken out of his Commentaries upon Osee the Prophete; newly translated by Nicholas Lesse,' 8vo, London, 1548; 'In Johelem Prophetam Commentarii,' 8vo, (probably) Argentoratum, 1525; 'In Amos, Abdiam, et Jonam Prophetas Commentarii: et Allegoriz in Jonam,' 8vo, Argentoratum, 1525; 'Commentarii in Micheam, Naum, et Abacuc,' 8vo, Argentoratum, 1525; 'Commentarii de Prophetia, Eruditione, et Linguis, deque Littera et Spiritu,' &c., 8vo, Argentoratum, 1526; 'Commentarii in Sophoniam, Aggeum, Zachariam, et Malachiam,' 8vo, Argentoratum, 1526; 'Commentarius in quatuor Libros Regum et in Acta Apostolorum,' Argenta-

tum, 1526, &c.; 'Theses theologicæ in Synodo Homburgensi disputatæ,' 4to, Erfurt, 1527; 'Exegeses in Apocalypsim Libri vii. in Academia Marburgensi prælecti,' 8vo, Marburg, 1528, &c.; 'Evangelici in Minoritarum Regulam Commentarii, quibus palam fit quid de Monachorum Regulis sentiendum sit: præfiguntur Mart. Lutheri et Anemundi Cocti Epistolæ,' 8vo; and a work of posthumous publication, edited by Gerardus Geldenhauer, entitled 'De Regno, Civitate et Domo Dei ac Domini Nostri Jesu Christi, Libri tres,' 8vo, Worms, 1538.

LAMBERT, GEORGE, landscape painter, and founder of the Beef-steak Club, was born in 1710, and learned painting of William Hassel. Walpole says that he was "a good master in the Italian style, and followed the manner of Gaspar [Poussin], but with more richness in his compositions. His trees were in a great taste, and grouped nobly." Several of his landscapes were engraved. But he was more famous as a scene-painter. For many years he was principal scene-painter at Covent Garden Theatre, and here, as Walpole remarks, "he had room to display his genius." In this line he was the precursor of Louthembourg, as Louthembourg was of Stanfield. It was in connection with his occupation at the theatre that the Beef-steak Club had its origin. During his busy seasons Lambert dined at the theatre, frequently on a steak broiled on the fire in his painting-room. His celebrity as a painter, and his social habits, caused him to be "often visited while at work at the theatre by persons of the first consideration both in rank and talents." Some of these so often joined in the meal, that the meal became much talked of; and at length, with the concurrence of Rich, the lessee and manager of the theatre, the Beef-steak Club was established, which, to our own day, has continued to consist of twenty-four "persons of the first consideration both in rank and talents," who met once a week, from November to July, to enjoy a dinner of beef-steaks off the gridiron. Lambert was elected first president of the Society of Incorporated Artists, but he did not live to enjoy the distinction long. The charter of incorporation, in which his name stands first as president, was granted January 26th, 1765, and Lambert died, according to Edwards, on the 30th of January, according to Walpole, on the 1st of February, 1765.

LAMBERT, LI TORS (*le Court*), a French poet of the twelfth century, who, from his calling himself 'un clers de Casteldun,' was long thought by literary historians to have been an ecclesiastic of Châteaudun, has been lately claimed as an ancestor by an ancient family of Dinan, a circumstance which, sufficiently authenticated, as this seems to be, by genealogies, manuscripts, and family traditions, makes it safer to regard him as having been a scholarly layman rather than a priest. His great work is his 'Roman d'Alexandre,' a poem founded upon the basis of a Latin translation, by Julius Valerius, of a history of Alexander the Great, which had been compiled from all the preceding authors who had treated his career from a marvellous or romantic point of view, by a Byzantine writer of the eighth century, who arrogated to himself the name of Callisthenes. With the details of this narrative, as rendered by Valerius, Lambert incorporated a thousand marvellous particulars which were suggested merely by his own imagination, supplied as this last was with the stories and adventures of returned Eastern travellers, who had performed their pilgrimage in the several or combined characters of warriors and devotees. The poem of Lambert, with whose name should be remembered that of his collaborateur or continuator, Alexandre de Bernay, thus became almost a pure romance, destitute of local colour and keeping, setting all the historical proprieties at defiance, and abounding in anachronisms, yet wonderfully fresh, powerful, picturesque, and popular. It traces, in its own peculiar way, the career of its hero from his birth, describes the taming of Bucephalus, and other events of comparatively small significance, before proceeding to set forth the wonders of those successful campaigns against Darius, Porus, and others, which left Alexander in the position of a world-conqueror. Lambert especially revels in his fanciful descriptions of the monstrous animals of India; and after conducting Alexander through regions of mystery and enchantment, brings him at length to the prophetic trees which announce to him his impending fate. To this fate the king succumbs at Babylon, leaving to each of his twelve peers—a number created, it is supposed, in imitation of Philippe Auguste, King of France—one of his conquests, and, as a joint legacy to all, the achievement of the subjugation of France and other western countries. "France," the dying Alexander declares, "is the queen of the world, and the valour of its people unparalleled. Win it, therefore, and, with it, Normandy, England, Scotland, and Ireland. Let these lands of the west become your own!"

These were the last words of Alexander, after which he closed his eyes, and was immediately afterwards transported by the saints to the paradise of eternal bliss. The 'Roman' is a poem of 20,000 verses of twelve syllables; and its peculiar measure is said to have given rise to the name of the verse (Alexandrine) in which it is written. Its circulation in manuscript was very great, and numerous copies were made of it; but it was not printed until about twenty-five years ago, when Heinrich Michelant edited, for the thirteenth volume of the 'Bibliothek des literarischen Vereins in Stuttgart,' 8vo., Stuttgart, 1843, &c., 'Li Romans d'Alexandre, par Lambert Li Tors et Alexandre de Bernay. Herausgegeben,' &c., 8vo, Stuttgart, 1846. Another edition, giving the original text and a German translation, was brought out by Dr. Heinrich Weismann, who adopted the then prevailing theory that Lambert was an ecclesiastic, with the title of 'Alexander. Gedicht des zwölften Jahrhunderts, vom Pfaffen Lamprecht, Urtext und Uebersetzung nebst geschichtlichen und sprachlichen Erläuterungen, so wie der vollständigen Uebersetzung des Pseudo-Kallisthenes, und umfassenden Auszügen aus den lateinischen, französischen, englischen, persischen, und türkischen Alexanderliedern,' 2 vols. 8vo, Frankfurt-am-Main, 1850. A still later edition, and the first published in France, is entitled, 'Alexandriade; ou, Chanson de Geste d'Alexandre le Grand. Epopée romane du XII^e. siècle, de Lambert le Court et Alexandre de Bernay. Publiée pour la première fois en France, avec Introduction, Notes, et Glossaire, par F. le Court de la Villette et Eugène Talbot,' 12mo, Dinan and Paris, 1861.

LAMBILLOTTE, LE PÈRE LOUIS, composer of church music and writer, was born at Charleroi, in Hainault, March 27th, 1797. Under the teaching of an Italian abbé, who was an excellent musician, and afterwards of the organist of a monastery, he made so rapid an advance that at the age of fifteen he became organist of the church in his native town. In 1823 he was appointed maître de chapelle at St. Acheul. Becoming a novice in 1825, he passed the rest of his life among the Jesuits, at St. Acheul, Fribourg, Aix-la-Chapelle, Brigg, Burgelette, and Paris. The musical compositions which he produced, mostly of a sacred character, are usually simple and graceful in their melodies, and well adapted for singing in religious houses, for which they were in great part intended. Among his works were canticles arranged for two voices; original canticles for all the Church festivals, arranged for three or four voices, with organ or pianoforte accompaniment; a collection of motetts; hymns to the Virgin; three solemn masses, with accompaniment for organ and orchestra; a gradual and vespers. But his chief labours were in re-introducing the old Gregorian system of chanting. He began his researches on this subject in 1843, visiting various parts of Europe to examine the old music in the ecclesiastical and monastic libraries. The results of his researches were—'Antiphonaire de St. Grégoire, facsimile du Manuscrit de St. Gall; copie authentique de l'Autographe, écrite vers l'an 760;' this was accompanied by a dissertation, 'De l'Unité dans les Chants liturgiques, ou Clef des Mélodies Grégoriennes,' Brussels and Paris, 1861; 'Quelques Mots sur la Restauration du Chant liturgique; état de la question; solution des difficultés,' Paris, 1855; 'Esthétique, théorie et pratique, du Chant Grégorien, restauré d'après la doctrine des anciens et les sources primitives,' Paris, 1856. The last two works were published posthumously. He assisted in preparing some notes which Nisard and Schubiger published as 'Notes pour servir à l'histoire de la question du Chant liturgique,' Paris, 1857. Some sharp controversy arose among foreign ecclesiastics as to Lambillotte's merits and demerits in regard to this revival. His most important work, apart from the liturgical question, is his 'Musées des Organistes, collection des meilleurs Fugues composées pour l'Orgue et choisies dans les diverses écoles,' 2 vols. (the first containing a succinct treatise on counterpoint and fugue), 1842—44. He died February 27th, 1855, at the Jesuit College of Vaugirard.

LAMÉ, GABRIEL, was born at Tours, July 22nd, 1795. He studied at the Lycée Louis-le-Grand, in Paris, and afterwards at the École Polytechnique and the École des Mines. In 1820 he went to St. Petersburg, where he passed twelve years, filling, with M. Clapeyron, the post of professor of engineering in the École des Voies de Communication. In 1830 he was commissioned by the Russian government to visit France and England for the purpose of examining new works of construction. On visiting Paris, he presented, in conjunction with M. Clapeyron, a paper to the Academy of Sciences on 'The Law of Cooling and Solidification of a Liquid Globe.'

After revisiting St. Petersburg, he returned to Paris, and was appointed in 1832 professor of physics at the École Polytechnique, where, in 1845, he also became examiner. In 1843 he was elected a member of the Academy of Sciences, and in 1848 to the chair of 'Calcul des Probabilités' to the Faculty of Sciences of Paris. His 'Traité de Physique,' first published in 1836, has gone through many editions: it is an elegant and useful work. He has also published 'Lessons on the Mathematical Theory of the Elasticity of Solids,' forming the substance of his lectures at the Faculty of Sciences. He received the decoration of the Legion of Honour in 1834, and became an officer in 1861. He died in May, 1870.

LA MONNOYE, BERNARD DE, a French poet and philologist, was born on the 15th of June, 1641, at Dijon, and was educated at the Jesuit College in that town, where he early manifested an inclination for Latin poetry, and especially for epigrams. At sixteen years of age he was an accomplished classical scholar; and was altogether a youth of such promise that his father, a pastrycook in comfortable circumstances, determined to send him to study law at Orleans. The youthful poet gave a filial assent, and, after completing his course, returned to Dijon, where he was admitted as an *avocat du parlement*, on the 16th of November, 1662. But although he accepted in 1672, the office of *conseiller-correcteur* in the *Chambre des Comptes*, and discharged its duties till 1696, his heart was with the Muses, and his leisure was spent in the literary and appreciative society of his friends and patrons. In 1671 he carried off the prize for poetry, the first instituted by the *Académie Française*, the subject of which was, 'La Fureur des Duels abolie par Louis XIV.,' a feat which he repeated in 1675, with a poem on 'La Gloire des Armes et des Lettres sous Louis XIV.,' in 1677, with another, on 'L'Éducation de Monseigneur le Dauphin,' and in 1683 and 1685, with poems of which the subjects were respectively, 'Les grandes Choses faites par le Roi en faveur de la Religion,' and 'La Gloire acquise par le Roi en se condamnant dans sa propre cause.' But his principal achievement, at once in poetry and philology, by which he seemed to raise the patois of Burgundy into the dignity of a language, was his production, under the name and character of Gui-Barôzai, a vine-dresser, of the *Noëls*, or Christmas Songs, which have issued in more than thirty editions, and of which the first edition, containing thirteen poems, was published in 12mo., Dijon, 1700. The second edition, augmented by many more poems, was published as 'Noël tô Noveâ, compôzai au lai Ruê de lai Raulote, ausanne le' Noël compôzai ci devan en lai Ruê du Tillô: le Tô du moime Auteur,' 12mo, Dijon, 1701; fourth edition, 'Noël Bourguignon de Gui-Barôzai,' [avec un Glossaire bourguignon-françois], 8vo, Dijon, 1720. The principal later editions, at once more critical and more comprehensive, are one by M. Louis Dubois, 'Noëls et autres Poésies bourguignonnes,' 12mo, Châtillon, 1817, and 1825; and another by M. F. Fertiault, 'Le Noël Bourguignon de Gui-Barôzai sengu de Noé Moconnai du Parrain Bliaise, &c. Les Noëls Bourguignons de Bernard de La Monnoye (Gui-Barôzai) de l'Académie Française: suivis des Noëls Maconnais du P. Lhuillier (le Parrain de Bliaise), publiés pour la première Fois avec une Traduction littérale en regard du Texte patois. Précédés de Notices sur la Monnoye et Lhuillier, suivis d'un Coup d'Œil sur les Noëls en Bourgogne, par F. Fertiault, Membre correspondant de l'Académie de Dijon, &c. Deuxième Edition, retouchée et augmentée de Documents nouveaux,' 8vo, Paris, 1858, of which the first smaller edition had been published in 18mo, Paris, 1842. A translation of the 'Noël,' of which only 11 copies were printed, was published by P. S. Caron, as 'Traduction des Noëls Bourguignons de M. de La Monnoye,' 8vo, Paris, 1735 (or rather 1829), new edition, of 104 copies, 8vo, Brussels, 1865. La Monnoye defended himself against the charges which were brought against him on account of the freedom of some of his expressions, in an Apology of which a re-issue appeared about 18 years ago, as 'Épôlogie de' Noël de lai Roullôte et du Tillô. Pièce de La Monnoye, en Patois Bourguignon, publiée avec une Traduction interlinéaire et une Lettre inédite de l'Auteur d'après un Manuscrit de la Bibliothèque Impériale,' 12mo, Paris, 1853. About 1707 La Monnoye acceded to the advice of friends, and went to settle at Paris; and on the 23rd of December, 1713, was unanimously elected a member of the *Académie Française*, in succession to the Abbé Regnier Desmarais. Soon after his election he signalled his learning and judgment by a new and successful edition of the 'Menagiana,' 4 vols., 1715. His fortunes were wrecked in the collapse of Law's Mississippi scheme, in 1720;

BIOG. DIV.—SUP.

but, old as he was, he bore his privations with cheerfulness until the kindness of friends secured the comfort of the remainder of his life. He died at Paris on the 15th of October, 1728. Various selections from his 'Poésies,' were published at the Hague and elsewhere, both before and after his death; the most comprehensive of which was one edited by M. Rigoley de Juvigny, entitled 'Œuvres choisies. Avec Mémoires historiques sur la Vie et les Ecrits de M. de La Monnoye,' &c., 3 vols., 8vo, Dijon, 1769—70, and 2 vols., 4to, and another edition, 3 vols., 8vo, The Hague, 1770.

LAMORICIERE, CHRISTOPHE LOUIS LÉON JUCHAULT DE, French general and politician, was born at Nantes, February 5th, 1806. He studied at the École Polytechnique from 1824 to 1826; went through a course of military instruction at the Army School of Metz; and obtained a commission in the Engineers. Joining the expedition to Algeria as a lieutenant, he was promoted to the rank of captain in 1830. In 1833, General Avizard made him director of the first Arab bureau. He was appointed major of Zouaves in that same year, lieutenant-colonel in 1835, and colonel in 1837 (after receiving a wound at the siege of Constantine). He paid a short visit to Paris in 1839, but returning again to Algeria, became camp-marshal in 1840, lieutenant-general in 1843, and interim governor of Algeria in 1845. During eighteen campaigns which he served in that country, he distinguished himself at Constantine, Mouzaia, Tagdempt, Mascara, and Italy. He organised the strategy which ensured the capture of Abd-el-Kader. General Lamoricière returned finally to Paris in 1848, entered the French Chambers, and sided with the government against the extreme liberals. When the troubled events of 1848 took place, he, as Captain of the National Guard, proclaimed on the 24th of February the abdication of Louis Philippe, and the Regency of the Duchess of Orleans; but was wounded by the insurgents while so doing. When the Republic was formed, he refused to join the extreme party; he, as Minister of War, aided Cavaignac to attack the barricades, and quell the insurgents in June. As one of those who opposed the growing power of Prince Louis Napoleon, he was arrested on the night of the coup d'état, December 2nd, 1851, and conveyed to Ham as a prisoner. Liberated after a time, but refusing to submit to the imperial government, he dwelt for many years in Germany, Belgium, and England, in succession. Permitted to return to France in 1857, he obtained the Emperor's consent to take command of the Papal troops at Rome; this he did in 1860, but was soon afterwards compelled to surrender at Ancona, with his army, to the Piedmontese Generals Fanti and Cialdini. He afterwards published a report on the circumstances which almost necessitated the failure of his plans. He died at his country-seat, Proussel, near Amiens, September 10th, 1865.

LA MOTHE-LE-VAYER, FRANÇOIS DE [MOTHE-LE-VAYER, F. DE LA, E. C., vol. iv. col. 370.]

LAMPI, GIOVANNI BATTISTA, a celebrated historical and portrait painter, a native of the Tyrol, was born in 1751, and studied under his father, Matt. Lampi, and in the academy of Verona. Whilst yet a boy he painted an altar-piece and several pictures at Salsburg. After a brief residence in Trent and Innsbruck he removed to Vienna. About 1786, he was invited by Stanislaus Augustus II. to Warsaw, where he executed several important commissions. Thence he went in 1791 to St. Petersburg, where he painted, among other things, a life-size portrait of the Empress Catherine II. In 1798 he returned to Vienna, and continued to reside there till his death in 1830. For the various churches of Vienna and the neighbourhood, he painted a great many altar-pieces; his portraits include those of the emperor and royal family of Austria, the king of Sweden, &c. His eldest son and scholar,

GIOVANNI BATTISTA LAMPI, was also a painter of considerable note. Born at Trent in 1775, he went to St. Petersburg in 1797, where he remained thirteen years. He was nominated member of the Imperial Academy of Vienna in 1813, and died in that city in 1837.

LANCE, GEORGE, [E. C. vol. iii. col. 786]. This admirable painter of fruit and still life died on the 18th of June, 1864.

LANCRET, NICOLAS, celebrated French painter, was born at Paris, January 22, 1690. He was a pupil of Dulin and of Gillot, but imitated Gillot's senior pupil, Watteau, both in class of subjects and manner of treatment, adding, however, more of smoothness and finish though with the loss of somewhat of Watteau's charming naïveté and freshness. The resemblance is sufficiently close for Lancret's pictures to be often attributed to Watteau. Lancret's garden pieces are always gay and agree-

able and elegantly treated. He was very popular in his own day, and so much employed that he had occasionally to get Lajoué to paint in his backgrounds. He was elected member of the Academy in 1719, under the title of 'Peintre de Fêtes Galantes,' and appointed painter to the king. Many of his pictures were engraved in his lifetime. He died at Paris, September 14th, 1743. His paintings are found in most public galleries. The National Gallery possesses a series of small pictures of 'the Four Ages of Man,' Nos. 101—104; the Louvre has a corresponding series of 'the Seasons,' Nos. 310—313, and one or two others.

LANDER, RICHARD, African traveller, was born about 1804, of Cornish parents. By occupation he was a printer, and the perusal of some books of travels roused in him a desire to see foreign countries. He offered his services to Captain Clapperton, whom he accompanied in his last journey into the interior of Africa in 1825-27. The party proceeded from Badagry to Saccatoo, where Clapperton died, leaving Lander the sole survivor of the expedition. He secured Clapperton's papers and endeavoured to work his way to the coast in a southerly direction. He had reached Dunroa, and if he had gone on would probably have struck the Tahadda and have descended by it to the Niger and so on to the mouth of that river: had he followed this course he would have anticipated his discovery of the lower Niger by a few years. At Dunroa he was opposed by the natives, and by them compelled to retrace his steps along his former route to Badagry. He returned to England in 1828, and published 'Records of Captain Clapperton's Last Expedition to Africa, with the subsequent adventures of the author,' 2 vols. 12mo, London, 1830. Just prior to the publication of this work, great interest was taken in the true course of the Niger, and Lander offered his services to the British government towards solving the question, which were accepted. His brother John accompanied him, but simply as a volunteer. He sailed from Portsmouth, on January 9, 1830, arriving at Cape Coast Castle, on February 22, and at Badagry, on March 22. The journey into the interior was commenced on March 31, and the route, as far as Boussa, was almost the same as Clapperton and Lander had previously followed. At Boussa he ascertained some particulars relative to Mungo Park's death, and heard of several of his books having been in the possession of the natives, but did not succeed in obtaining his journal. He then proceeded down the Niger, but had to contend against many difficulties, such as the severe indisposition of himself or his brother, the cupidity of the native chiefs, and the troubles incident to travelling in tropical Africa. He finally quitted the river on November 27, and again reached Portsmouth on January 20, 1831. The account of this voyage was given in a 'Journal of an expedition to explore the course and termination of the Niger, with a narrative of the voyage down that river to its termination,' 3 vols. 12mo, 1832. In 1832, the brothers Lander joined a new expedition up the Niger, the object of which was to open up a trade with the interior. In 1833, Richard was wounded in a conflict with the natives, in consequence of which he died at Fernando Po, January 27, 1834. His brother John returned to England, where he died November 13, 1839. The principal result of Lander's journey was the deciding the lower course of the Niger, and identifying it with the stream which Mungo Park had traced from Bammakoo past Timbuctoo to Boussa. Neither of the brothers had any special scientific qualifications as travellers, and the only instrument they had was a compass; but still they possessed those qualities of a traveller in a high degree which enable him to traverse unknown tracts of country, viz., patience, perseverance, steadiness of purpose, and tact in dealing with natives.

LANDI, CAVALIERE GASPERO, a distinguished Italian painter, was born in 1756 at Piacenza, and studied in the academy of that city; at Parma, where he carried off the prize of the Academy for a painting of Tobias; and at Rome under Battoni. Having settled at Rome, he was patronised by Pope Pio VI., and during the French occupation received several important commissions from that government. He was made professor, and in 1817 secretary and director of the Academy of St. Luke. His pictures are from ancient history and mythology, Dante, Tasso, and Ariosto, the Scriptures, and the legends of the Church. He also painted many portraits. His most admired paintings are a large altar-piece, 'Christ bearing his Cross,' painted in 1810 for the council of his native city, to be placed in the Church of the Dominicans, and an 'Assumption of the Virgin' for the cathedral. Landi had great facility and skill in composition, was a pleasing colourist, and was altogether one of

the best of the recent academic or eclectic painters of Italy. He died at Rome, February 24, 1830.

LANDON, CHARLES PAUL, French painter and writer on art, was born in 1760 at Nonant, in Normandy. He was a pupil of Regnault, and, having carried off the grand prize at the Academy, spent five years at Rome. On his return to Paris he exhibited several pictures at the Salon, and later he was appointed painter to the Duc de Berri. His pictures found admirers, and two of them—'Dædalus and Icarus' and 'Paul and Virginia'—were placed in the Luxembourg; but he gradually turned from painting pictures to describing them, a task for which his appointment to the keepership of the gallery of the Louvre provided unusual facilities. He wrote various papers in the art periodicals of the day; several memoirs of artists in the 'Biographie Universelle'; the descriptions to collections of views of the buildings, &c., of Paris, London, Greece, &c.; an Historical Portrait Gallery of Celebrated Men, in 13 volumes; and 'Nouvelles des Arts,' 3 vols. 8vo, with plates, 1802—1803. But he will be longest remembered by his illustrations of the chief works of ancient and modern art in a series of many hundred outlines which have been of incalculable value to the student. They are entitled 'Annales du Musée et de l'École Moderne des Beaux Arts,' in 33 vols. 8vo, 1801—1808; and 'Vies et Œuvres des Peintres les plus célèbres de toutes Écoles,' 25 vols. 8vo, 1803. The faulty arrangement of these works is, however, a great drawback from their usefulness, and Landon perceiving this, had commenced the reissue of the 'Annales du Musée' on a more systematic plan, but only lived to publish 10 volumes. The continuation is by M. F. Pillet. Another useful work is the 'Recueil des principaux Tableaux, Statues, et Bas-reliefs exposés au Louvre depuis 1808 par les Artistes vivants, et autres productions nouvelles et inédites de l'École française avec des notices descriptives, critiques et historiques,' 15 vols. 8vo, 1808—31. M. Landon died at Paris, March 6, 1826.

LANDOR, WALTER SAVAGE [E. C. vol. iii. col. 768]. The memoir in the E. C. spoke of Landor as then resident in Bath, "a wonderful literary veteran in his eighty-second year." But already the cloud that for a time obscured his fame, deprived him of the services of the troops of friends who would have rejoiced to wait on his old age, and drove him an exile from his native country, was settling heavily upon him. Some feminine squabbles in which a young friend had become involved had led to his being summoned to give evidence in the Bath County Court. Landor was never temperate of speech; now he fancied that he was called upon to redress a wrong, and he gave utterance to personalities, not only orally but in print, with a vehemence and bitterness that led to an action against him for libel. He was so plainly in the wrong that his legal advisers had to make the best terms they could; but hardly was this affair adjusted, when in a brochure entitled 'Dry Sticks,' and elsewhere, he repeated in effect the objectionable matter, and that in breach of an undertaking which his law advisers had given in his name. A new action was announced, and as legal defence was under the circumstances impossible, and his available means would have been insufficient to meet the costs of an adverse judgment, he was told that his only resource was to break up his house, sell his pictures, and retire to Italy. He had just been stricken down by a kind of fit, which left him insensible for four-and-twenty hours, and now seemed tottering on the brink of the grave; but he roused himself for the effort, and in July, 1858, left England for Italy. After a brief stay at Genoa he went on to his old home at Fiesole. He had made a legal transfer of everything he possessed to his eldest son, but in the libel case a verdict had been given against him for 1000*l.*, and an injunction was obtained in Chancery against receiving the rents: before his death "the entire damages and costs had been paid under order of the Court," but Landor was left destitute. After some months of wretchedness at Fiesole, his friends came to his rescue. A plain but comfortable lodging was found for him at Florence; his surviving brothers undertook to supply an annuity of 200*l.*, which Robert Browning generously saw duly employed as long as he remained in Florence. And thus one more gleam of sunshine seemed to settle on the "old man eloquent." Though deaf and ailing, he continued to find solace in his pen. He wrote and published occasional verses, and two or three more 'Imaginary Conversations,' in which the old fire burned not dimly; collected some earlier scraps, which appeared as 'Heroic Idylls'; and was still working, in his ninetieth year, at new Conversations, when, on the 17th of September, 1864, death ended his labours and sorrows. We might add something to the estimate of Landor's genius given in the original memoir, but it

would be difficult to do so to any purpose in a few words. Ample materials for a just appreciation of his personal character and his place as an author will be found in his friend, John Forster's 'Walter Savage Landor, a Biography,' 2 vols. 8vo, 1869.

* LANE, EDWARD WILLIAM, orientalist, was born at Hereford in 1801. The son of the Rev. Theophilus Lane, prebendary of Hereford, he was educated with a view to the Church, but his inclination tending strongly towards the language and literature of the East, he went to Egypt, 1825—28, and carefully studied the country and the people. A second visit made in 1833 resulted in the preparation of a valuable work on the 'Manners and Customs of the Modern Egyptians,' published by the Society for the Diffusion of Useful Knowledge. This was followed by the preparation of an entirely new translation of the 'Thousand and One Nights,' which formed the text of an elaborately illustrated edition published by Mr. C. Knight, royal 8vo, 1840—41, and to which Mr. Lane added a large body of notes. Shortly after completing this work Mr. Lane returned to Egypt, where he remained till 1849 engaged in collecting materials for a work of vast research and labour, an 'Arabic-English Lexicon' of the most copious character, comprising a very large collection of words and significations omitted in the *Kāmoos*, with ample grammatical and critical comments and numerous examples in prose and verse. To this work Mr. Lane has dedicated nearly 30 years, and it is still far from finished: the first part, 4to, was published in 1863, the second part in 1865, the third part in 1869, and five more parts are required for its completion. In recognition of the importance of this work, and to assist in its execution, Mr. Lane was, in 1863, granted a pension of 100*l.* from the Civil List.

* LANE, RICHARD JAMES, A.R.A., elder brother of E. W. Lane, was born in 1800 at Hereford. He was a pupil of Charles Heath, the line engraver, and for a while practised that art, but was attracted by the then comparatively new art of lithography. The delicacy of finish and refinement of Mr. Lane's lithographs contributed materially to the popularity of the art in this country. A large proportion of his drawings are portraits, including many of the Kemble family and other actors, and some capital portraits of scions of the Bedford family after Landseer; but among the most pleasing of his productions are his facsimiles of the sketches of Gainsborough (his mother's father) and other eminent painters; imitations of the drawings of Flaxman, &c. Of late years his pencil has been much employed in copying Court portraits. Among the best of these are the portraits of the Queen, the Prince Consort, and their children, executed for her Majesty, chiefly from the paintings of Winterhalter, or from photographs. Mr. Lane is lithographer to the Queen, and was elected associate engraver of the Royal Academy in 1827.

LANGER, JOHANN PETER VON, German historical painter, was born at Kalkum in 1756, and studied under Krahn at Düsseldorf. He was appointed professor in 1784, and in 1789 director of the Düsseldorf Academy, and keeper of the picture gallery. In 1806 he was made director of the Munich Academy, an office he retained till his death, October 6th, 1824. Peter von Langer painted a great number of religious pictures for the churches of Bavaria, one of the best being 'Christ Blessing Little Children,' in the church of the Carmelites, Munich; many mural and easel historical pictures, including 'Lady Jane Grey in the Tower,' and several *genre* subjects. He had avowedly formed his style on that of Raffaele, whom he always held up to his pupils as their great model; but his own pictures, though containing much that is admirable in character and expression, bear but a faint academic resemblance to those of the great Italian.

LANGER, ROBERT VON, son and scholar of the preceding, was born at Düsseldorf in 1783. When his father was appointed director of the Munich Academy, Robert Langer was made professor; and in 1820 he was nominated its perpetual secretary. In 1827 he was appointed keeper of the royal cabinet of drawings, and in 1841 director of the royal collection of paintings; and it is to his zeal in this latter post that the Pinacothek is indebted for much of its present excellence. Robert von Langer painted many altar-pieces for the churches of Munich, several frescoes, and numerous easel pictures from ancient and modern history and the poets. He died October 16th, 1846.

LANGUET, HUBERT, a publicist and politician of the 16th century, was born in 1518 at Vitteaux, in Burgundy, at that time a fortress of considerable strength and importance, of which his father, Germain Languet, was Governor. He received his earlier education at home, distinguishing himself by his precocious familiarity with the classical languages; and studied

law for three years, 1536 to 1539, at Poitiers. In 1547, after having long suffered disquiet of mind on theological and ecclesiastical matters, he was introduced to the 'Locī Communes Theologiæ' of Melanchthon, by the frequent reading of which, fortified by consultation of the divines of Leipzig, he was determined to adopt the doctrines of the Reformation. Accordingly he made profession of these; but in order to escape the prevalent commotions of Germany, which were distasteful to his quietness of disposition, he repaired to Italy, and in 1548 took the degree of LL.D. at the University of Padua. In 1549 he journeyed to Wittenberg, in Saxony, for the purpose of becoming acquainted with Melanchthon, for whom he entertained a singular respect and affection, and whom he wished to consult on the doctrine of the Eucharist, as variously stated by the Lutherans and the Swiss. The friendship thus formed was continued till the death of Melanchthon in 1560, and was so close that whilst Languet called Melanchthon by the name of "father," the latter addressed Languet as "son." In 1551 Languet adopted the resolution of travelling in the autumn of each year in some part of Europe; and in pursuance of this plan, he visited Rome in 1555, and in 1557 made the tour of Livonia and Lapland. In the course of this northern journey he became known to Gustavus Vasa, King of Sweden, by whom he was commissioned to invite to his dominions Frenchmen skilled in the various arts and sciences. But the result of this commission is unknown. In 1559 Languet accompanied Adolphus, Count of Nassau, and brother of William, Prince of Orange, to Italy, from which he repaired, in 1560, to Paris; and in April of that year, having heard of the death of Melanchthon, returned to Wittenberg. He was invited, in 1565, to the court of Augustus, Elector of Saxony, by whom he was accredited with a special and amicable mission to Charles IX. of France, of which he acquitted himself with success and general satisfaction. He was in attendance on the Elector at the siege of Gotha, and recorded the most important events of that expedition in a Latin narrative entitled '*Historica Descriptio susceptæ à Cæsarea Majestate Executionis Augusto Saxonie Septemviro Duce contra S. Romani Imperii Rebelles eorumque Receptatorem, et captæ Urbis Gothæ soloque æquati Castri Grimmenstenii XIII. Aprilis, 1567*,' 4to, 1568, &c., of which a German translation appeared in the same year. Languet was further employed by the Elector of Saxony in various negotiations of difficulty and importance; and especially was entrusted in September, 1570, with a secret mission to the court of Charles IX., upon which occasion he pronounced, December 23rd, in the name of the Protestant princes of Germany, an eloquent and bold discourse, which was afterwards printed in vol. i. of the *Memoirs of the Reign of Charles IX.*, 8vo, 1578, with the title of '*Harangue faite au Roy Charles IX. de la Part des Princes Protestans d'Allemagne*.' He was at Paris during the massacre of St. Bartholomew's Day, August 24th, 1572; and in spite of the sacred character of his person as ambassador, narrowly escaped death through the exertions he made to preserve the lives of his friends, especially of André Wechel, the famous printer, in whose house he lived, and of the celebrated Philippe Duplessis Mornay. In 1577 Languet passed from the service of the Elector of Saxony to that of John Casimir, Count Palatine, whom he accompanied to Ghent; and whom he left to attach himself to the Prince of Orange, in whose service he continued till his death. This event took place on the 30th of September, 1581, at Antwerp, where his funeral was celebrated with much pomp, being attended by the Prince of Orange and the principal members of the State. Languet left little besides his library, and a singular reputation for ability, prudence, modesty, and honesty, and for so great a love of truth that he never tolerated falsehood even in jest.

The works of Languet, besides those already mentioned, include '*Epistolæ Secretæ ad Principem suum Augustum Saxonie Ducem S. R. J. Septemvrum*.' Ex Archivio Saxonico descriptas edidit Joannes Petrus Ludovicus, 4to, Halle, 1699; '*Epistolæ XCVI. politicæ et historicæ ad Philippum Sydnæum, Equitem Anglum*,' 8vo, Frankfurt, 1633, &c.; another edition, brought out under the care of D. Dalrymple, 8vo, Edinburgh, 1776, English translation in the '*Correspondence of Sir Philip Sidney and Hubert Languet*': now first collected and translated from the Latin, with notes and a Memoir of Sidney. By S. A. Pears, 8vo, London, 1845; '*Epistolæ Scriptæ ad Joachimum Camerarium Patrem, et Joachimum Camerarium Filium*.' Editæ a Lud. Camerario, 8vo, Groningen, 1646, &c.; and '*Vindiciæ contra Tyrannos: sive de Principis in Populum*,'

Populique in Principem legitima Potestate,' published under the pseudonym of Junius Brutus, probably, in a first edition, at Basel, and in 12mo, Edinburgh, 1579, and often reprinted in Holland, French translation, by François Estienne, 'De la Puissance légitime du Prince sur le Peuple, et du Peuple sur le Prince,' 8vo, 1581, English translation, 'A Defence of Liberty against Tyrants: or, the lawful Power of the Prince over the People, and of the People over the Prince. Translated out of the Latin and French,' 4to, London, 1648, German translation, 'Ueber die gesetzliche Macht des Fürsten über das Volk, und des Volkes über den Fürsten. Nach der Ausgabe von 1580, mit einer geschichtlichen Einleitung über das Leben und die Zeit des Verfassers bearbeitet von R. Treitschke,' 8vo, Leipzig, 1846. A Life of Languet, written in Latin, by Philibert de la Marre, Conseiller au Parlement de Dijon, was published in 12mo, Halle, 1700.

LANINI, BERNARDINO, a distinguished Italian painter, was born at Vercelli about 1508, and was the scholar, and for a while the imitator of Gaudenzio Ferrari, but eventually adopted the richer manner of Da Vinci. He was an excellent painter, pure in design and fine in colour. He painted mostly in fresco, his chief works being the Eternal Father and the Sybils in the cathedral of Novara. He died about 1578. In the National Gallery is a 'Holy Family, with the Magdalen, Pope Gregory the Great, and St. Paul presenting an apple to the infant Saviour' (No. 700), the figures whole length and life size.

LANDSOWNE, HENRY PETTY FITZ-MAURICE, THIRD MARQUIS OF [E. C. vol. iii. col. 797], died on the 31st of January, 1863. He was succeeded by his son, Henry Charles Keith, fourth Marquis, born 1845.

LA PEROUSE, JEAN-FRANÇOIS-GALAUP DE [PEROUSE, J. F. G. DE LA, E. C. vol. iv. col. 745].

LAPPENBERG, JOHANN MARTIN [E. C. vol. iii. col. 805]. In addition to new editions of some former works, Lappenberg printed between 1857 and 1865 several historical papers, and had commenced the preparation of a collection of Klopstock's Letters, which was interrupted by his death, on the 28th of November, 1865.

LARDNER, REV. DIONYSIUS, LL.D. [E. C. vol. iii. col. 806]. Dr. Lardner died at Naples on the 29th of April, 1859.

LARGILLIÈRE, NICOLAS DE, French painter, was born at Paris in 1656, and studied at Antwerp under F. Goubau. He painted a few historical and religious pictures, but was more successful in portraiture, whence he was known as the French Vandyck. He was in England for a short time in the reign of Charles II., whose portrait he painted, as well as those of some of the nobility, and for whom he undertook the restoration of the pictures at Windsor Castle. On his return to Paris he painted Louis XIV., the painter C. Lebrun (engraved by Edelinck), and other distinguished persons. He again visited England in the reign of James II., and painted the king and queen, but left on the Revolution. He was elected, 1686, member, and successively rector, director, and chancellor of the Academy of Paris; wrote one or two plays, and lived till the 20th of March, 1747.

LA ROCHEFOUCAULD, FRANÇOIS, DUC DE [ROCHEFOUCAULD, F. DUC DE LA, E. C. vol. v. col. 125].

* LARTET, ÉDOUARD, an eminent palæontologist, was born at St. Guérand, in 1801. He has occupied the post of professor of palæontology at the Museum of Natural History, Paris, for many years. His writings consist almost entirely of papers contributed to scientific journals. The earliest of these were published in 1837, and related to the mammalian remains in the miocene deposits of the department of Gers. Amongst other things he obtained entire skeletons of *Mastodon angustidens*, and the jawbone of a quadrumanous animal belonging to a genus (*Pliopithecus*) nearly allied to the Gibbons. This was the first evidence obtained of the existence of fossil monkeys in Europe. Very soon after he found other quadrumanous remains. He has given a great deal of attention to fossil mammalia, and is one of the leading authorities on all subjects connected with them. He co-operated with Gaudry in developing the palæontological results of the excavations made in the miocene beds of Pitermi. The study of the old mammals has naturally led him to give his attention to the proofs of man's coexistence with certain extinct species of that class, and several of his papers relate to this subject. He largely assisted Christy in exploring the caves of Perigord, and with that antiquary, has written a work on the ancient men of Perigord, entitled 'Reliquiæ Aquitanicæ,' 4to, London, of which the first part appeared in 1867, and the tenth in 1870: the work will probably be completed in a few more parts.

LASINIO, CONTE CARLO, a distinguished Italian engraver, was born at Trevigi about 1757. He resided at Florence, and engraved several separate plates from the works of the great masters, but is best known by his engravings of an archaeological character, many of which are in outline, and all valuable for their correctness and spirit. Of these the most important are the illustrations in 'Etruria Pittrice'; 'Pittura del Campo Santo di Pisa'; 'Storia della Pittura Italiana,' 'Raccolta di Sarcophagi,' &c. He also engraved some portraits. He died at Florence in 1830. His son, GIOVANNI PAOLI LASINIO, died 1840, was also an engraver of considerable ability. He engraved several plates in the galleries of Florence, Naples, and Turin, and other important collections.

* LASSEN, CHRISTIAN, a continental philologist and orientalist, especially distinguished for his knowledge of the ancient literature of India, was born on the 22nd of October, 1800, at Bergen, in Norway, where he was educated by his father, a surveyor of customs, until fourteen years of age, when he entered on a four years' course at the Cathedral School of his native city. Afterwards he entered the University of Christiania; and in 1822, having spent six months at Altona, where he attained to a practical knowledge of the German language, repaired to the universities first of Heidelberg and afterwards of Bonn, at the latter of which his studies in Indian philology and antiquities were directed by August Wilhelm von Schlegel, by whom he was commissioned to visit London and Paris for the purpose of collating manuscripts for Schlegel's critical edition of the 'Rāmâyana,' 8vo, Bonn, 1829—38, and with whom he was associated in his critical edition of the original text, with Latin translation and notes, of 'Hitopadesas: id est Institutio salutaris,' &c., 2 vols. 4to, Bonn, 1829—31. Whilst at Paris, Lassen became known to Eugène Burnouf, the historian of Buddhism, in connection with whom he published an 'Essai sur le Pali, ou Langue sacrée de la Presqu'île au-delà du Gange. Avec six Planches lithographiées et la Notice des Manuscrits Palis de la Bibliothèque du Roi,' 8vo, Paris, 1826. Returning to Bonn after an absence of more than two years, he took his degree of Ph. D. in 1827, with a thesis on the Geography and History of the Punjab, 'Commentatio geographica atque historica de Pentapotamia Indica,' 4to, Bonn, 1827. Later in the same year he became a tutor (Privatdocent) in the university, in which he became respectively in 1830 and 1840 extraordinary and ordinary professor of the Indian languages and literature, and amongst other distinctions was elected a foreign member of the French Académie des Inscriptions et Belles-Lettres, of which society he had been for many years a correspondent.

The contributions of Professor Lassen to an intelligence of the philological, poetical, and general antiquities of India have been many and important. They comprise, in addition to those already mentioned, 'Gymnosophista: sive Indicæ Philosophiæ Documenta. Collegit, edidit, enarravit,' &c., 4to, Bonn, 1832, &c.; 'Ancient Persian cuneiform Inscriptions of Persepolis,' 'Die Altpersischen Keil-Inschriften von Persepolis,' &c., 8vo, Bonn, 1836; 'Institutiones Linguae Practicæ,' 8vo, Bonn, 1836—37; 'Anthologia Sanscrita Glossario instructa,' 8vo, Bonn, 1838; 'On the History of the Greek and Indo-Scythian Kings of Bactria, Kabul and India,' &c., 'Zur Geschichte der Griechischen und Indoskythischen Könige in Baktrien, Kabul, und Indien, durch Entzifferung der Altkabulischen Legenden auf ihren Münzen,' 8vo, Bonn, 1838, English translation, by T. H. E. Roper, edited by H. Torrens, 'Points in the History, &c., as illustrated by decyphering the ancient Legends on their Coins,' 8vo, Calcutta, 1840; 'De Trapobane Insula Veteribus cognita Dissertatio. Particula I.,' 4to, Bonn, 1842; 'Indian Archaeology,' 'Indische Alterthumskunde,' 4 vols. 8vo, published partially at Bonn, and completed at Leipzig, 1844—61, with an Appendix, 'Anhang,' 8vo, Leipzig, 1862; and, conjointly with N. L. Westergaard, a treatise on the Cuneiform Inscriptions of the first and second Order, 'Ueber die Keil-Inschriften der ersten und zweiten Gattung,' 8vo, Bonn, 1845. Amongst the critical and annotated editions, with Latin translations, of the Indian classics, for which we are indebted to Dr. Lassen, may be mentioned one of the 'Gita Govinda. Jayadevæ Poetæ Indici Drama lyricum,' 4to, Bonn, 1836; and a second edition, enlarged and amended, of Schlegel's 'Bhagavad Gita, id est Θεωριαι Μίαι; sive almi Crishnæ et Arjunæ Colloquium de Rebus divinis,' 8vo, Bonn, 1846.

LASTEYRIE-DUSAILLANT CHARLES PHILIBERT, COMTE DE, a French philanthropist and rural economist, was born at Brives-la-Gaillarde (Corrèze), November 4th, 1769. After studying at Limoges and then at Paris, he visited in suc-

cession Spain, Holland, England, Italy, Sicily, Switzerland, Denmark, Sweden, and Germany; making long sojourns in these countries, examining the systems of agriculture pursued, the agricultural implements and instruments employed, and the institutions which bore in any way on the general welfare of the mass of the people. In the intervals between his journeys he wrote largely on those subjects. In 1812, being much struck with the probable value of Senefelder's new art of lithography, he went to Munich to study it. The consequences of the war with Russia drove him back to France in 1813, but he returned to Munich in the following year, and made himself fully master of the new art, which he proceeded to introduce into his own country. At various times he either founded or assisted in supporting societies for the encouragement of national industry, for agriculture, for vaccination, for mutual instruction, for learning languages, for the succour of scientific and educated men in distress, and for other philanthropic purposes. The books, pamphlets, and articles which he published during the long period from 1792 to 1846 embraced a very wide range of subjects. The naturalisation and rearing of merino sheep; the fattening of cattle; the culture of cotton, indigo, and other plants; the natural and economic history of the dog, horse, ass, mule, cat, camel, dromedary, llama, vicuña, ox, and other animals; the processes and implements of agriculture—were subjects that grew directly out of the main purpose of his many journeys. But besides these he wrote and published on education—the methods of teaching languages, infant schools, the liberty of the press, economic typography, the rights and duties of man in society, &c. His most important work was 'Collection de machines, d'instruments, utensiles, constructions, appareils, &c., employés dans l'économie rurale, domestique, et industrielle, d'après les dessins faits dans diverses parties de l'Europe,' 2 vols. 4to, Paris, 1820–22: it was illustrated with 200 plates lithographed in his own establishment. Count de Lasteyrie continued his useful labours till his 80th year, and died November 3rd, 1849.

*LASTEYRIE, FERDINAND CHARLES LÉON, COMTE DE, son of Comte Philibert De Lasteyrie, born June 15th, 1810, was educated at the École des Mines; served during the revolution of 1830 on the staff of his relative Lafayette; was afterwards employed in various government offices, and being elected deputy in 1842, took an active and somewhat prominent part on the Liberal side in politics. After the revolution of 1848 he represented Paris in the Legislative Assembly, and was a member of the Provisional Council of State. The coup d'état consigned him to private life, though during the later years of the Empire he was a member of the Municipal Council of Paris, and for a time of the Assembly. During his enforced abstinence from public life he devoted himself to archaeological pursuits, in which he has acquired a high reputation. In 1860 he was elected a member of the Institute. His principal writings are—'Histoire de la Peinture sur Verre, d'après ses Monuments en France,' folio, Paris, 1837–56, a very beautiful and valuable work; 'La Cathédrale d'Aoste,' 8vo, 1854; 'Rapport sur les Manufactures de Sévres et des Gobelins,' 8vo, 1850; 'Causeries artistiques,' 12mo, 1862.

LAUDER, ROBERT SCOTT, R.S.A., was born in 1803 at Silver-Mills, near Edinburgh. Having as a boy shown a fondness for art, he was encouraged to persevere by David Roberts, then resident in Edinburgh, and through the influence of Sir Walter Scott was admitted a student in the Trustees' Academy. Here he continued for about five years, when he went to London, but returned to Edinburgh in 1826 to assist Sir William Allan, then at the head of the Trustees' Academy. In 1833 he went to Italy, where he remained till 1838, his study being primarily given to the great Venetian colourists. From 1838 to 1849 he resided in London, much employed by his countrymen as a portrait painter, and winning a highly respectable position, but hardly a foremost place, among the metropolitan artists, though his 'Christ Walking on the Waters,' and 'Christ teaching Humility,' sent to the Westminster Hall competition in 1847, excited considerable attention. But though he was ambitious of producing grand religious works, he was more successful in representing episodes of Scottish history and romance, such as 'Claverhouse ordering Morton to be Shot,' 'The trial of Effie Deans,' and 'Meg Merrilies and the dying Smuggler,' which, with others of a similar kind, attracted much notice at the annual exhibitions of the Royal Academy, to which he was a regular contributor till 1848, after which year his name appears no more in the catalogue. In 1849 he was induced, by the offer of the directorship of the Government School of Design,

and partly no doubt by his disgust with the Royal Academy, to return to Edinburgh, where his pictures were among the leading attractions of the annual exhibitions of the Scottish Academy, and where, after some years of bad health, he died on the 21st of April, 1860. Lauder's most ambitious picture, 'Christ teaching Humility,' was purchased by the Scottish Association for the Encouragement of Art, and presented to the Scottish National Gallery, Edinburgh. His brother, JAMES ECKFORD LAUDER, R.S.A., born 1813, studied at the Trustees' Academy and afterwards at Rome under the guidance of Robert Lauder, and followed much in his manner, but displayed a still greater tendency to religious art. A few pictures of homely subjects, such as 'Pal-Al, or Scotch-Hop,' showed that he might have gained more popularity in a lower walk if he could have been content to follow it. His 'Unjust Steward,' and 'Ten Virgins,' exhibited at Westminster Hall in 1847, gained a premium of 200*l*. Like his brother, he ceased to send pictures to the Royal Academy after 1848, and though he continued to contribute excellent pictures to the exhibitions of the Scottish Academy as long as his health permitted him to paint, he came to be, like most painters who do not send to the great London exhibition, almost forgotten even in metropolitan art-circles. He died on the 29th of March, 1869, about three weeks before his brother.

*LAUGIER, AUGUSTE ERNEST PAUL, French astronomer, was born at Paris, December 22nd, 1812. His father, a professor of chemistry, placed him at the École Polytechnique, which he quitted in 1834 to become an astronomical pupil at the Paris Observatory. As an active assistant at that establishment, he became well versed in practical astronomy, and obtained the Lalande medal in 1842 for the discovery of a comet, sometimes known by his name. In 1843 he succeeded Savary as a member of the Académie des Sciences; in 1844 was made chevalier of the Legion of Honour; in 1862, member of the Bureau des Longitudes; and 1864 officer of the Legion of Honour. M. Laugier's scientific papers, for the most part published originally in the 'Comptes Rendus' and the 'Connaissance des Temps,' take a wide range, embracing many departments of astronomy. They relate to the spots on the sun, pendulum oscillations, the proper motions of the stars, the compensation of astronomical clocks, catalogues of some of the nebulae, the declinations of certain stars, Faye's formula for atmospheric refractions, the sensibility of the eye to the light of minute or faint stars, terrestrial magnetism, magnetic declination, the polar distances and proper motions of 140 stars, &c. But his chief labours have borne reference to comets; he having published numerous calculations respecting the comets of Halley, Gambart, and those noticed in early times. In conjunction with Arago he has written memoirs on atmospheric phenomena; with Mauvais on comets; and with Plantamour on the same class of subjects.

LAURENT, AUGUSTE, French chemist, was born near Langres 14th Nov. 1807, and died at Paris in 1853. He was educated at the School of Mines, and in 1838 was appointed professor of chemistry to the Faculty of Sciences, Bordeaux. In 1848 he was made assayer to the Mint at Paris, and adviser to the Minister of War on scientific questions. He published numerous papers on scientific subjects, and his name will always be held in respect as a great chemical reformer, associated with CHARLES FREDERIC GERHARDT [E. C. S. col. 585]. Laurent, in common with most scientific men, died poor; but his widow and children were very properly provided for by the Government. His chief work, 'Méthode de Chimie,' prepared in conjunction with Gerhardt, was published posthumously, with a preface by Biot, 1854.

LAWRENCE, SIR HENRY MONTGOMERY, an able soldier and administrator in the service of the East India Company, was born in 1806, at Mattara, Ceylon; where his father, Lieutenant-Colonel Alexander William Lawrence, who had served with distinction at Mysore and Seringapatam, occupied an official post. Colonel Lawrence prepared his two sons, Henry and John, for the Company's service; Henry studying at Addiscombe for military duties; and John (the present Lord Lawrence), at Haileybury, for those of a civil character. Henry went out to India in 1821, as a cadet in the Bengal Artillery, and rose steadily in rank. He was engaged in active service under Sir George Pollock in 1843, during the Cabul campaign, his gallantry winning for him the rank of major, and the post of British resident at Nepal. His services in the campaign of the Sutlej were rewarded by promotion to the rank of lieutenant-colonel, and the decoration of companion of the Bath. His next appointment, in 1848, was as British resident at Lahore, and agent or representative of the

Governor-General on the north-west frontier. For his skill in these offices he was made knight of the Bath in 1848; and in 1849, when the Punjab had been annexed to the British dominions in India, the Earl of Dalhousie selected him as the president of the Board of Commissioners formed for the Government of that province. So ably did Sir Henry organise his plans, that he succeeded in conciliating most of the chieftains, and in laying the foundation for great moral, social, and industrial improvements in the Punjab; his brother John completed what he had begun, and the useful results were sensibly felt during the war of the Mutiny. Sir Henry next became superintendent of the Rajpoot states, where he made British influence more acceptable to the natives than it had ever been before. In 1854 he was raised to the rank of colonel, and was also appointed aide-de-camp to the Queen. The most difficult position he ever filled was that of chief commissioner or governor of Oude, after the annexation of that kingdom in 1856. The court was treacherous and demoralised; the talookdars or landowners were ambitious and grasping; and the people, many of whom were sepoys in the Company's army, were affected with the taint of insubordination. Six days before the native regiments at Meerut revolted and marched to Delhi (May 1857), the 7th Oude Infantry mutinied at Lucknow, the capital of Oude. Sir Henry, by skill and judgment, kept the other troops quiet for three weeks, but on the last day of the month four other regiments revolted, and marched out to join the mutineers. Sir Henry, having now few native troops whom he could trust, caused all the Europeans at Lucknow, and such natives as he could rely upon, to move into the Residency, a large enclosure, which he put into a state of defence. This Residency was so completely invested by the mutineers, that Lawrence could exchange scarcely any communications with Cawnpore, Allahabad, or Benares. On the last day of June he made a trial of the small force at his command, in an attack on a large body of rebels who were approaching Lucknow; but his Oude artillerymen proved treacherous; the day ended disastrously, and Lawrence retreated into the Residency. On the 2nd of July a shell from one of the enemy's guns entered a room in which he was sitting, exploded, and severely wounded him; he died in great agony on the 4th. Sir Henry, who was universally respected, founded an asylum for the orphan children of European soldiers in India, in a salubrious situation between Simla and Umballa; it still flourishes under the name of the 'Lawrence Asylum.' The Queen conferred a baronetcy on his eldest son, in recognition of the father's services. Sir Henry was the author of 'Adventures of an officer in the service of Runjeet Singh.'

* LAWRENCE, JOHN LAIRD MAIR, BARON, one of the most distinguished of British Indian statesmen, was born March 4th, 1811, at Richmond, Yorkshire. His father, Lieutenant-Colonel Alexander William Lawrence, had him educated at Foyle College, Londonderry, and then sent him in 1827 to the East India Company's College at Haileybury. Established in India in early life, young Lawrence filled various posts in the civil service. He returned to England for two years, 1840 to 1842, and then went back to India, where his abilities drew the attention of the governor-general Sir Henry Hardinge. After the first Sikh war, he was made commissioner of the Punjab, which province he greatly improved by his able administration. Still more marked was his success after the second Sikh war in 1849, when he became lieutenant-governor of the Punjab. His reform in the political, military, civil, judiciary, and administrative departments made the Punjab one of the best governed regions of India. At the breaking out of the mutiny in 1857, the value of his services was made evident; for his complete hold over the north-west extremity of India enabled him to plan the measures by which the first effectual check to the mutineers was given. Two days after the commencement of the mutiny at Meerut, Lawrence adopted the bold course of disarming four regiments of Bengal native troops at Meean Meer, near Lahore, not placing such reliance on those as on the Sikhs and Punjabees. Nine days afterwards he disarmed four more regiments at Peshawur. Keeping the Punjab quiet by these means, he gradually collected two siege columns, which he marched off across many hundred miles of doubtful country to Delhi. Throughout all the subsequent operations in India, whatever Canning, Neill, Havelock, Outram, and Clyde were enabled to achieve with Calcutta as a basis, they all relied on the co-operation of Lawrence in the Punjab; and this reliance never failed them, for he and his able subordinates kept the Sikhs and Punjabees uniformly loyal. When the East India Company's rule was extin-

guished by Act of Parliament in 1858, the last special court of directors was held to thank their gallant officers for their conduct in India, and to confer a pension of 2000*l.* per annum on Sir John Lawrence—he had been made a knight in 1856, a grand cross of the Bath in 1857, and a baronet in 1858. When the new Council of India was formed in London, Sir John was elected one of the 15 members. In 1861, when the Order of the Star of India was founded, he was in the first list of knights. In December, 1863, he succeeded the Earl of Elgin as governor-general of India. During his viceroyalty he ruled India with a firm hand; but there were two points in regard to which he was occasionally in collision with the English civilians at Calcutta: he wished to favour the admission of natives into office, and he discouraged any further annexation in or near the Afghan frontier. In 1868 the Earl of Mayo succeeded him as governor-general of India; and in the following year Sir John Lawrence was raised to the peerage, with the title of Baron Lawrence. In 1870 he was elected chairman of the London School Board. Besides numerous military and civil honours, Lord Lawrence has received the degree of D.C.L. from the universities of Oxford and Cambridge.

LAWRENCE, SIR WILLIAM, BART. [E. C. vol. iii. col. 823] died 5th July, 1867, having nearly completed his 84th year. The son of a surgeon, he was born on the 16th July, 1783, at Cirencester. He went to a private school, and in his 17th year was apprenticed to Abernethy, in whose house he resided five years. At the age of 20 he was appointed demonstrator of anatomy at St. Bartholomew's, and after filling various offices, he retired in 1865 with the complimentary title of consulting surgeon.

His principal works have been already enumerated. His treatise on Ruptures is a standard work, while that on the Diseases of the Eye may be said to have marked an epoch in ophthalmic surgery. As professor of anatomy and surgery to the College of Surgeons he delivered in 1816 and the two following years those lectures on Comparative Anatomy, Physiology, and the Natural History of Man, which aroused so much animosity that had their author been a man of less capability he would have been ruined. The two introductory lectures were published in 1816, and in 1819 he published 'Lectures on Physiology, Zoology, and the Natural History of Man,' which raised such a storm that the author attempted to suppress the work; but in 1823, the bookseller Carlile, in spite of the author, reprinted both works. Other editions, variously modified, afterwards appeared, the last, called the ninth, being published in 1848. Although elected in 1813 into the Royal Society, of which he afterwards became a vice-president, he does not appear to have contributed any paper to the society; but he contributed largely to the 'Transactions of the Medical and Chirurgical Society,' and to various medical Journals. He also wrote many of the articles on natural science in 'Rees's Cyclopædia.' A large number of anonymous articles on various points connected with medical reform are now known to have been written by him. His lectures on surgery, described by his professional biographer as "a charming book," "the work not only of a surgeon but a scholar," was published in 1863, when the author was in his 80th year.

On two occasions Lawrence delivered the Hunterian Oration at the College of Surgeons, of which he was twice president. On the second occasion most of those whom he addressed were hostile to his views; and the loud expressions of dissent, and even of denunciation, never caused him to waver for an instant, but, "standing alone, calm and unshaken by the storm which raged around him, he proceeded in a strain of unfaltering eloquence to the end."

Lawrence owed much to his great natural endowments. He was tall, well made, handsome, of noble presence, and enjoyed excellent health. Consequent on these advantages was a cheerful serenity, which communicated itself to those around him. His presence acted as a healing influence on his patients, and we have known him announce himself by whistling a merry tune while going upstairs. Few men worked harder or were more orderly or punctual, or less self-indulgent. Up to the last he maintained his habits of singular regularity and uniform temperance in all things. He was a diligent student, not only in his own profession but in history, both ancient and modern. He was a good classic, and spoke fluently French, German, and Italian. He read much, and had the happy faculty of remembering the valuable parts only of what he read. He wrote in excellent style, and was a good speaker. He was always lucid and to the point, and was free from egotism and affectation. He

was greater as a speaker than as a writer, and in his best days was probably without a rival as a lecturer; but, according to Sir Benjamin Brodie, he was even greater in ordinary conversation than in public speaking.

In his profession, Lawrence was distinguished "rather by his clear and vigorous perception of principles than by any special or peculiar skill in the details of practice. . . . His great ability was never more conspicuous than in prognosis. At times with marvellous dexterity he would predict the issue of a case which baffled or misled everyone around him. Thus his most daring achievements as an operator were often crowned with success, which to others appeared in the distance as the remotest chance." Under the greatest difficulties he maintained perfect self-possession.

Lawrence was a foreign associate of the Institute of France, and a member of a host of other societies. He also became surgeon extraordinary, and afterwards sergeant-surgeon, to the Queen, by whom he was made a baronet.

Lawrence's celebrity depended upon what Sir Benjamin Brodie speaks of with reference to professional success, as "that vast amount of personal skill and observation which, being unwritten, and indeed not capable of being written, can be amassed again only by the combination of similar talent, opportunity, and industry in another individual." Lawrence's fame, as his biographer in the 'Proceedings of the Royal Society' remarks, "will not rest upon any single brilliant discovery," but rather upon that "harmonious combination of various powers which made his character so complete."

LAZZARINI, The CANON GIOVANNI ANDREA, Italian painter and writer on art, was born at Pesaro in 1710, learned painting of F. Mancini, and executed numerous frescoes and oil-paintings in the cathedrals of Osimo and Foligno, the churches of Pesaro, and elsewhere; also many Madonnas and other religious subjects, and some landscapes for private persons. He lectured gratuitously on painting in the Academy of Pesaro, and published the substance of his discourses in the form of a Treatise on Painting, Pesaro, 1806. He likewise wrote some descriptions of paintings, and some poems. His writings were republished in 2 vols. 8vo, Pesaro, 1806. Lanzi is lavish of praise both of his paintings and writings. He died in 1801 at the ripe age of ninety-one.

LAZZARINI, GREGORIO, Venetian painter, was born at Venice about 1655, and studied under F. Rosa. He lived at a time when the Venetian school had sunk into mannerism; but, aiming at a more natural style, he secured the admiration of his contemporaries to such an extent that Carlo Maratti declined in his favour the commission to paint a grand picture of the triumphs of the Doge Francesco Morosini for the hall of the Scrutinio, in the ducal palace. His altar-piece of San Lorenzo Giustiniani, in San Pietro in Castello, is said by Zanetti to be the finest Venetian oil-painting of the century. He died in 1730.

* LEA, ISAAC, conchologist, was born at Wilmington, Delaware, March 4, 1792. In 1807 he entered his brother's office at Philadelphia, but his taste for natural history pursuits was shown by his devoting his leisure hours to assisting Professor Vanuxem in investigating the geology of Pennsylvania. In 1815 he was elected a member of the Academy of Natural Sciences at Philadelphia, and two years after he read his first paper to that society on the minerals found near Philadelphia. For the next few years he wrote scarcely anything, but occupied his spare time in collecting fossils, rocks, minerals, and recent freshwater shells. In 1821 he joined the publishing business of his father-in-law, Mr. Carey, and followed it with such success that he retired in 1851 with an ample fortune. From 1822 to 1827 he wrote some short papers on miscellaneous subjects, such as earthquakes, hybernation, and parhelia. In 1827 he commenced writing on the *Unionida*, and up to the present time has given almost his whole attention to this and allied groups. The great bulk of his papers, about 130 in number, relate to this group. Most of these papers are published in the 'Proceedings of the American Philosophical Society,' and in the 'Proceedings of the Academy of Natural Sciences at Philadelphia.' These papers have been reprinted in a collected form under the title of 'Observations on the genus *Unio*, &c.,' 4to, Philadelphia. This work now consists of twelve volumes, of which the last appeared in 1869. We may consider as portion of this work his 'Synopsis of the family of Naiades,' 8vo, Philadelphia and London, 1836; 4th edition, 4to, 1870. He discovered the tracks of *Sauropus primævus* near the base of the carboniferous rocks of America. This species is the oldest amphibian known in America, and a

full account of the tracks was given by him in 'Fossil Footmarks in the Red Sandstone of Pottsville, Pa.' fol. Philadelphia, 1855. In 1832 and in 1852 he visited Europe. In 1858 he was elected president of the Academy of Natural Sciences at Philadelphia.

LEAKE, LIEUT.-COL. WILLIAM MARTIN [E. C. vol. iii. col. 826], was born in London in January, 1777. His father, John Martin Leake, was a commissioner for auditing the public accounts. He was educated at the Royal Military Academy, Woolwich, and in 1794 obtained a commission in the Artillery, and entered on the active duties of his profession in the West Indies. Five years later he was sent to Constantinople, in order to instruct the Turks in the use of artillery; and in 1800 he was one of the English officers appointed to advise and assist the Grand Vizier in his defence of the southern provinces of the Turkish empire against the French. This led him through Asia Minor, and after some delay he joined the Turkish army in Syria. In 1801 he crossed the Desert with the army into Egypt, and after the surrender of Alexandria was appointed, with Mr. Wm. Hamilton, to make a general survey of Upper Egypt. The results of this exploration were a map of the course of the Nile from the cataracts to the sea; a determination of most of the ancient sites; a description of the monuments of antiquity; and numerous observations on the agriculture and commerce of the country. These were published by Hamilton in 1809. Leake returned to Syria in 1802, and continued his travelling researches until his departure for England on board the vessel in which the Elgin marbles were placed. He narrowly escaped with his life from shipwreck off the island of Cerigo. In 1804 he was appointed to survey the coasts and interior of European Turkey, the fortresses and means of defence. This led him to spend two years travelling in Northern Greece and the Morea, where "his peculiar tastes and talents for research received full development in a country where every day's journey produced an historical problem which taxed his erudition and critical acumen to solve."

When war broke out in 1807 between England and the Porte, Captain Leake was made prisoner by the authorities at Salonica; but he managed to escape to the frigate 'Thetis,' and returned to England in 1808. From October of that year until 1810 he was again travelling in the Levant, for the purpose of opening communications with Ali Pasha and other authorities of the Ottoman Government, with a view to induce them to assume offensive operations against the French, by offers of naval assistance and presents of ordnance and ammunition. During all these years of travel Leake acquired that varied knowledge which proved so useful in his literary labours, which he resumed on retiring from the army in 1823, and continued up to the time of his death, which took place on the 6th January, 1860, at the age of 83. In 1838 Colonel Leake married Mrs. Marsden, widow of the historian of Sumatra, and daughter of the Oriental scholar, Sir Charles Wilkins. Leake became a fellow of the Royal Society in 1815; he was also a member of various other learned societies, English and foreign. His works, which are enumerated in the original notice, have been described as "models of painstaking observation, available erudition, and perspicuous simplicity."

LE BAS, JACQUES PHILIPPE, a celebrated French engraver, was born at Paris in 1708, and was a pupil of N. H. Fardieu. Le Bas was an excellent engraver in his particular line; correct in drawing, neat, spirited, and full of expression; employing freely etching, the dry point, or the graver, as either seemed best adapted to produce the effect desired. But in his later plates he depended too much on the assistance of his pupils. He was happiest in his prints after David, Teniers, of which he executed above a hundred; among the most successful are the 'Acts of Mercy,' the 'Prodigal Son,' a large 'Flemish Festival,' and the portrait of the painter and his family. He also engraved several of the works of Ruysdael, Wouvermans, Berghem, and other Flemish painters, some of the landscapes of Claude Lorraine, and a great many of Vernet's. Le Bas was engraver to the king. He died April 14th, 1783.

LE BAS, LOUIS HIPPOPLYTE, a distinguished French architect, was born at Paris in 1782; studied under Percier and Fontaine, and in the École des Beaux-arts, where he carried off numerous medals, and in 1806 the second grand prize. He executed several buildings in the provinces; was appointed surveyor of the Paris Bourse and some other public edifices; designed the monument of Mallesherbe at the Palais de Justice, Paris; and in 1825 erected the Model Prison for juvenile offenders in the Rue de la Roquette. But his most important building is the church of Notre Dame de Lorette,

commenced in 1825 and completed in 1836. Modelled on the basilica of Sta. Maria Maggiore at Rome, its chief external feature is a tetrastyle Corinthian portico, but the interior is very splendid. As architect of the Institute, he constructed the great hall for the sittings of the Academy, and restored or reconstructed various portions of the buildings. M. Le Bas was elected a member of the Institute in 1825, and later, professor of the history of architecture, and for a long series of years he kept an atelier which always had numerous pupils. Until 1854 he was a member of the Council of Public Buildings. He was made officer of the Legion of Honour in 1847.

LE CLERC, JEAN [CLERC, JEAN LE, E. C. vol. ii. col. 288].

LE CLERC, SEBASTIAN [CLERC, SEBASTIAN LE, E. C. vol. ii. col. 289].

* LECONTE, JOHN L., naturalist, was born at New York, May 13, 1825. He graduated in medicine at the New York College in 1846. Before taking his degree he had made several scientific explorations. Thus in 1844 he went to Lake Superior, in 1845 to the Rocky Mountains, and in the years 1846 and 1848 he revisited Lake Superior for the second and third time. On the last occasion he formed one of a party consisting of Agassiz and other eminent naturalists. The results of the expedition were published in a volume to which Leconte contributed the portion relating to the beetles, or *Coleoptera*. From 1849 to 1851 he was mostly occupied in making observations in California, and in exploring the Colorado river. He has written a large number of papers. The few that are not entomological are varied in subject, and relate to ethnology, the fossil mammalia of America, the habits of *Amphiuma*, etc. The entomological papers are almost exclusively devoted to the *Coleoptera* of America, and are for the most part descriptive and classificatory. The most noteworthy are the monograph of the North American Histeroides, the descriptive catalogue of the geodephagous *Coleoptera* found in the United States, and the classification of the *Coleoptera* of the United States. His papers occur in the publications of the Natural History Society of Boston, the Academy of Natural Sciences at Philadelphia, the American Association for the Advancement of Science, the Lyceum of Natural History of New York, the American Philosophical Society, and the Smithsonian Institution. He has discovered and described a large number of new species and genera, so that his writings form an important portion of the literature which the student of the coleopterous fauna of North America finds it necessary to consult. There are several other American naturalists having a similar, or somewhat similar name to that of the subject of this article. MAJOR JOHN LECONTE was born February 22, 1784, and wrote upon the plants, amphibia, reptiles, insects, and mammalia of North America. JOHN LECONTE, a medical practitioner who has given some attention to zoology, was born 1818, and his brother JOSEPH LECONTE, born 1823, has written on the Gulf Stream, carboniferous plants and various other subjects.

LEDEBOUR, CARL FRIEDRICH VON, botanist, was born at Stralsund, July 8, 1785. In his twentieth year he became director of the botanical gardens, and professor of botany at Greifswald. He occupied a similar professorship in succession at Dorpat (1811—1836), Heidelberg and Munich. He is best known for his great work on the Russian flora, '*Flora Rossica*,' 4 vols. 8vo, Stuttgart, 1842—1853. He also wrote a '*Flora Altaica*,' 4 vols. 8vo, 1829—1833; '*Icones Plantarum novarum, Floram Rossicam, imprimis Altaicum illustrantes*,' fol., 1829—1834, comprising 500 coloured plates; and '*Reise durch des Altaigebirge und die Soongarische Kirgisen Steppe*,' 2 parts, 8vo (with folio atlas), Berlin, 1829—1830. He died July, 4, 1851.

LEE, JOHN, elder son of John Fiott, descended from an old Burgundian family, was born 28th April, 1783. He entered St. John's College, Cambridge, and in 1806, came out fifth wrangler. In 1816 he took his degree of LL.D., and afterwards became fellow of his college, when, as travelling bachelor, he visited the Continent and the East, and gathered materials for the collection of antiquities which was afterwards arranged at Hartwell. In 1815 he adopted his mother's name of Lee, in compliance with his uncle's will. In 1827 he succeeded to the family property and became lord of the manors of Hartwell, Stone, and Bishoptone, and patron of the livings of the first two, the presentation to which he conferred on the Royal Astronomical Society, of which he was treasurer from 1831 to 1840, and president in 1861—2. He built an observatory in the grounds of Hartwell, where during many years observations were carried on which are of recognised value in astronomy and meteorology.

Admiral Smyth here continued his '*Cycle*,' which was afterwards published as '*Speculum Hartwellianum*.' Dr. Lee defrayed the cost of this and of three other works, '*Descriptive Catalogue of a Cabinet of Roman Imperial, large Brass Medals*,' '*Ædes Hartwellianæ*,' containing an account of the scientific observations there made by different observers, and of the mansion and its valuable contents, and '*Addenda*,' to the same. His patronage of antiquities led to his being chosen chairman of the Congress of the Archaeological Association, and of two local societies which met on Bosworth Field in 1862. Dr. Lee was a member of Doctors' Commons, in which he served the offices of treasurer and librarian. He was appointed queen's counsel in 1864. He founded the Lee Fund of the Royal Astronomical Society for the relief of widows and children of deceased Fellows, and he presented to the Society the "*Lee Circle*," a valuable astronomical instrument. He became a fellow of the Royal Society in 1831, and at the time of his death, 25th February, 1866, he was a fellow of the Society of Antiquaries, of the Linnean, Geological, and other learned bodies. In common with a large number of men who bear the honoured title of F.R.S., he contributed nothing to the Transactions. With the exception of a few archaeological notes, his contributions to science did not pass beyond the pleasant boundaries of patronage.

LEE, ROBERT, D.D., a scholar and divine, celebrated as the leader of the liberal party in the Church of Scotland, and for the persistence with which he laboured for the reformation of its worship, government, and doctrine, especially for the introduction of Common Prayer into that communion, was born at Tweedmouth, in North Durham, on the 11th of November, 1804. After receiving his earlier education at the grammar school of Berwick-on-Tweed, he entered the University of St. Andrews in 1824, where he went through the usual eight years' curriculum required of candidates for holy orders, and at the conclusion of his course was the most distinguished student at the university. In 1832 he received licence to preach the Gospel; and in the beginning of the following year was elected to be minister of St. Vigean's Chapel-of-ease at Arbroath, which he left in 1836 for the parish of Campsie, in the county of Stirling and presbytery of Glasgow, to which he was inducted on the 8th of May, on the presentation of the Crown. He published, while at Campsie, a few discourses in the '*Scottish Christian Herald*,' a religious periodical begun in 1836, and brought to a close in 1841; and a '*Catechism*,' intended to assist young persons in becoming acquainted with the truths of Christianity. In 1840 he unsuccessfully contested the chair of theology in the University of Glasgow; and on the 29th of August, 1843, the year of the Disruption, was appointed by the Town Council of Edinburgh, in whose hands the patronage of the city churches was vested, to the church and parish of Old Grey Friars, vacant by the secession of the Rev. John Sym. In November he took up his residence and work in Edinburgh; and in the following year published a translation, with preface, &c., of '*The Theses of Erastus touching Excommunication*,' 8vo, Edinburgh, 1844, in which he exposed the fallacy of the epithet "*Erastian*" which the leaders of the non-intrusion party attempted to fix upon the adherents of the Scottish Church Establishment. He received in the same year (1844) the degree of D.D. from his own University of St. Andrews. In 1846 he was appointed to the newly-instituted Regius Professorship of Biblical Criticism and Antiquities in the University of Edinburgh, with which were conjoined a deanery of the Chapel Royal of Holyrood, and one of the six Royal chaplaincies for Scotland. In his inaugural lecture he defined the duties of his chair as embracing criticism, hermeneutics, and biblical antiquities, and proceeded to enforce especially the importance of accurate textual criticism as the basis of all sound theology. Soon afterwards began his connection with the '*Scotsman*,' to which he was a frequent and valued contributor. In November and December, 1853, he preached a series of four sermons on the '*Laws of Nature*,' which appear to have been suggested by Lord Palmerston's well-known letter to the Presbytery of Edinburgh, when the latter recommended a fast-day as a means of averting or modifying the attack of cholera from which the country suffered in the autumn of that year; and these sermons, although unpublished, as well as a series on '*Toleration*,' March and April, 1854, produced a very strong impression on the public. On the 26th of April, 1854, which was observed as a national fast on account of the war with Russia, he preached a remarkable sermon '*On War* (Matt. v., 38—42). Containing a Review of the Doctrine respecting War maintained by the Peace Society,' 8vo, Edinburgh, 1854, which was reprinted in '*British Eloquence of the*

Nineteenth Century. Sacred Oratory. Second Series, 8vo, London and Glasgow, 1858. On the 4th of May, 1853, he completed "the most laborious labour he had ever undertaken," a Reference Bible, which has been frequently published in different sizes and editions as 'The Holy Bible, with about 60,000 marginal References and various Readings, revised and improved,' &c., 8vo, 12mo, and 16mo, Edinburgh, London, and Glasgow, 1854, &c., &c.; a work which gave rise to an attack by the 'Witness' newspaper, on the ground of its inculcating universal redemption, and of otherwise attempting to propagate heresy. He defended himself in a series of vigorous replies in the 'Scotsman.' Dr. Lee declined the principalship of St. Mary's College, St. Andrew's, which was offered him on the 6th of April, 1854; and on the 8th of April, 1856, delivered the closing address of the season 1855-56, before the Philosophical Institution of Edinburgh, his subject being national education. His discourse, which had a considerable influence on public opinion, gave prominence to the necessity of a right understanding of the wants and treatment of the body, and was reprinted in a volume entitled 'The Family and its Duties: with other Essays and Discourses for Sunday Reading,' 8vo, London and Edinburgh, 1863; in which was also reproduced a sermon on a kindred subject, which, having been preached before the Queen, on the 11th of October, 1857, in the parish church of Crathie, was published by her Majesty's command, with the title 'What Christianity teaches respecting the Body,' 8vo, Edinburgh, Glasgow, and London, 1857. In 1858 he was one of a deputation sent to London to represent the interests of the University of Edinburgh, whilst the Bill for University Reform was before Parliament. Of five amendments which he suggested, four were adopted, and no other amendments than his were incorporated with the measure. In the previous year he had published his 'Prayers for Public Worship: with Extracts from the Psalter and other Parts of Scripture,' 8vo, Edinburgh, 1857; second edition, much enlarged, 1858, third edition, which was published as a sort of manifesto against the attacks that had been made upon the author in the General Assembly, for introducing "innovations" into public worship, 8vo, Edinburgh, 1863, &c. On the 23rd of February, 1859, Dr. Lee was charged in the Presbytery of Edinburgh with having "introduced into public worship, as conducted in Old Grey Friars, an order of Divine service, together with the use of a Liturgy, or formula of public devotion, and certain forms or postures in devotional exercises, unknown to the Church of Scotland, and inconsistent with the rules and practice thereof." He replied to the charge with great ingenuity and historical accuracy; and was so successful in his defence in the following General Assembly, May, 1859, that he brought a majority of 140 to 110 to vote substantially in his favour, virtually sanctioning all that Dr. Lee had introduced, or revived, except the reading of prayers from the book then in use. His speech on this occasion is said to have been "one of the finest pieces of historical and argumentative eloquence ever heard at the bar of the Assembly." Nevertheless, this controversy was the great controversy of Dr. Lee's life, and the movement he initiated is still upon its trial; although, with the infusion of younger men into the ministry, many of whom are of his own forming, the result in the long run is hardly doubtful. For several years he sought by every means in his power to bring the Church of Scotland into greater harmony with the age, and encouraged or initiated measures for the increase of her popularity and efficiency. In furtherance of this design he published 'The Reform of the Church of Scotland in Worship, Government, and Doctrine. Part I. Worship,' 8vo, Edinburgh, 1864, &c., new edition, 1866, &c., in which he examines, *inter alia*, the subjects of liturgical and extemporary prayer, postures in worship, the use of instrumental music, and the propriety of observing certain festivals and fasts, as Christmas Day, Good Friday, and Easter, instead of the Scottish innovation of local "fast-days." Shortly after the publication of this work, the committee which had been appointed by the General Assembly of 1863 to consider the subject of "Innovations," brought up its report before the General Assembly of 1864, which report was, on the whole, felt to be just and moderate. It was well received, and the decision upon it was virtually a sanction of Dr. Lee's proceedings, and a charter for orderly change and progress. On the 29th of May, 1864, he again preached before the Queen at Balmoral and Crathie; and on the 22nd of April, 1865, an organ was opened in his church of Grey Friars—a simple event, but one which was felt to mark an era in the life of the Church of Scotland. Since that time many congregations have followed the example, and the principle of instrumental worship has been

BIOG. DIV.—SUP.

widely affirmed. Dr. Lee stood nearly alone in the character of the evidence he gave before the commission which sat in Edinburgh in the winter of 1864-65, which was in favour of the separation of religious and secular education, and against the denominational grants. One palpable result of his labours in the cause of Church Reform was the formation, in the spring of 1865, of the "Church Service Society," which now numbers about 150 ministers in Scotland and the colonies, for the purpose of promoting the study of the ancient and modern liturgies of the Church, with a view, to quote the words of its founders, "to the preparation and ultimate publication of certain forms of prayer for public worship, and services for the administration of the sacraments, the celebration of marriage, the burial of the dead," &c. Dr. Lee contributed to the 'Transactions' of this Society a paper on the 'Order of Public Worship'; and also furnished to 'Euchologion: Book of Prayers' issued by the Church Service Society, 8vo, Edinburgh, 1867, second edition, 1869, the first baptismal service in the volume, a reprint, with slight alterations, from that in the last edition of his own Prayer Book. In the General Assembly of 1866, Dr. Lee was attacked by Dr. Pirie, of Aberdeen, the ex-Moderator, in a debate on the subject of innovations, which lasted for two days, and at the end of which the Assembly gave a vote against innovations by a majority of 33, thus contradicting and overturning the decisions of former years, and especially of 1864. At length, in the early part of 1867, Dr. Lee determined to appeal to the civil courts, if the General Assembly of that year should decide against his being allowed to read his prayers; and published a 'Letter to the Members of the ensuing General Assembly, in Reference to a "Finding" of the Assembly respecting certain Innovations imputed to the Writer,' 8vo, Edinburgh, 1867. The Assembly, before whom his case was to be brought, was to meet on the 23rd of May; but its hearing was postponed in consequence of an attack of paralysis which seized Dr. Lee on horseback, on the 22nd. From this he rallied so far as to be able to visit the west coast of Scotland for change of air in July, from which he returned to Edinburgh in October, and at the end of that month repaired to Torquay to spend the winter. Here, in the night of Thursday, 12th of March, 1868, he was seized with a second attack, which was almost immediately fatal. He was removed for interment to Edinburgh, where he was buried in the Grange Cemetery on the 20th March, in the presence of a vast assembly of the people.

Dr. Lee was an earnest and persistent advocate of all liberal measures. He laboured for the abolition of tests in the non-theological chairs of the Scottish Universities; for the liberation of the lay elders from the necessity of subscribing the Confession of Faith; and for the non-Judaic observance of the Lord's Day. His works, hitherto unmentioned, include, besides contributions to 'Good Words,' &c., and various works, completed or unfinished, in manuscript, 'A Handbook of Devotion,' 8vo, Edinburgh, 1845; sermons on 'The Incarnation,' and on 'Papal Infallibility, and the Causes of the late Conversions to Romanism'; 'Prayers for Family Worship, with Occasional Prayers,' 8vo, London and Edinburgh, 1861; and an address on 'The Clerical Profession: some of its Difficulties and Hindrances,' 8vo, Edinburgh, 1866. In 1870 was published the 'Life and Remains of Robert Lee, D.D., F.R.S.E., by the Rev. Robert Herbert Story, Minister of Rosneath, with an Introductory Chapter by Mrs. Oliphant,' &c., 2 vols. 8vo, London and Edinburgh.

LEE, ROBERT EDMUND, a distinguished American general, descended from a wealthy Virginia family, was born in 1808. He was placed, in 1825, by his father, General Henry Lee, at West Point Military Academy, which he quitted in 1829 with the rank of second lieutenant of Engineers. After making a tour in Europe, he took part, in 1835, in a survey of the boundary between the States of Michigan and Mississippi; and received the rank of first lieutenant in 1836, and that of captain in 1838. A year's experience as member of the Board of Engineers, in 1845, prepared him to act as engineer-in-chief during the Mexican war, his participation in which, chiefly with the army of General Wood, brought him much into notice. His services at Cerro Gordo, Contreras, Churubusco, and Chapultepec, won for him the successive grades of major in 1846, lieutenant-colonel in 1847, and colonel later in the same year. At the battle of Chapultepec he was wounded. The war being ended, he resumed his place at the board of engineers. From 1852 to 1855 he was superintendent of military studies at West Point; then lieutenant-general of cavalry; and then accompanied General McClellan to witness the operations at Sebastopol. At the outbreak of the Civil War in America, he was very unwilling to

participate in the operations, being on terms of friendly intimacy with the leading officers on both sides. South Carolina formally seceded from the United States on December 20th, 1860, Mississippi on January 9th, 1861, Florida on January 10th, Alabama on January 11th, Georgia on January 19th, Louisiana on January 26th, and Texas on February 1st, yet Lee still remained faithful to the Washington Government, accepting the rank of colonel of cavalry so late as March 16th. But when his own native State of Virginia seceded, April 17th, he resigned his position in the United States army, and threw himself heart and soul into the Confederate cause. Governor Letcher entrusted him with a command in the army of Virginia, and the military government of Richmond. He was with Generals Johnson and Magruder when they had to evacuate York Town, and was present at the battle of Fair Oaks; but was not able to effect much, owing to the defective organisation of his forces, and spent the winter of 1861-2 mostly in and near Richmond. In June, 1862, he defeated the Federals under his old military companion General M'Clellan; then at the battle of Gaines' Mill, on the 26th; and soon afterwards he succeeded in driving them out of Virginia, across the Potomac: in which achievements he was gallantly aided by Stonewall Jackson. Between the 20th and 30th of August he thoroughly defeated the Federals under General Pope, in the sanguinary engagements at Manassas Junction and elsewhere. Thus far triumphant against M'Clellan and Pope, Lee and Jackson resolved to cross the Potomac into Maryland, and threaten Washington itself. The crossing was effected on September 5th, but was not attended with the expected success: Lee's proclamation to the Marylanders, inviting them to throw in their lot with the South, did not meet with a favourable response; and this cast a damp over his proceedings. M'Clellan, at the head of a new army, hastened to the menaced points, and attacked Lee with 80,000 men against 40,000, at Hagarstown, on the 14th of September; Lee retreated; but being joined by Jackson, he fought again at Sharpsburg and Antietam on the 16th and 17th. Although the victory was not decisive on either side, the battles were very sanguinary; Lee himself was wounded, and he deemed it prudent to recross the Rappahannock. In November, General Burnside, who had superseded M'Clellan in command of the army of the Potomac, planned an attack upon Lee; but Lee attacked him instead on December 13th, defeated him at Fredericksburg, and drove him back across the Rappahannock. Thus ended the year 1862. In January, 1863, Hooker superseded Burnside in command of the army of the Potomac; he crossed the Rappahannock in April, and took up a position near Chancellorsville. Here Lee gave him a severe defeat on May 2 and 3, and compelled him to recross into Maryland, paying a high price for his victory, however, in the untoward death of Stonewall Jackson. Hooker was now superseded by Meade in June; and Lee, worsted by him at the sanguinary battle of Gettysburg, July 1 to 3, was forced to retreat across the Potomac into Virginia on the 13th; but collecting his forces, he crossed the Rapidan on the 9th of October, resumed the offensive, and defeated Meade on the 7th of November. During the ensuing winter few engagements took place near the Potomac; but early in May, 1864, Lee joined Longstreet and advanced towards Fredericksburg, while Grant entered Virginia at the head of a large army. In the sanguinary battles near Spottsylvania, May 5th to 10th, Grant defeated Lee; whereas on June 3rd Lee defeated Grant at Chickahominy. The Confederates being gradually hemmed in by the Federals around Richmond, Lee, who had been made generalissimo of all the armies of the South, was obliged to abandon Petersburg and Richmond in April, 1865. The surrender of himself and his army, on the 9th, virtually terminated the Civil War. General Lee retired into private life, and became President of Washington College, Lexington, Virginia, where he died on the 12th of October, 1870. In early life he had married the adopted granddaughter of George Washington; no less than five of his sons were engaged with him in the war. Like his companion in arms, Stonewall Jackson, Robert Lee was respected almost equally by North and South, for his self-command, skill, humanity, and courage; and his military ability has gained the admiration of all professional critics who have studied his career.

LEECH, JOHN [E. C. vol. iii. col. 831]. The memoir just cited was restricted almost entirely to a review of Mr. Leech's designs, and of his character as an artist. Little, however, remains to be added of his personal history. He was born in London in 1817, and was educated at the Charterhouse school, where, during part of the time, Thackeray was his contemporary. On leaving

school he was articled to a surgeon, and qualified for the medical profession, but early turned aside to follow his inclination for art, and soon found in 'Punch' a medium exactly suited for his peculiar genius. As an artist, Leech had no academic training. He received the usual school-boy instruction in drawing, but beyond that he was entirely indebted to his own strong will, and fine eye for form and expression. In most self-taught artists the want of systematic education is plainly perceptible; but Leech knew exactly what he wanted to effect, and he succeeded thoroughly. He had used the pencil for his own gratification from childhood, and he acquired wonderful facility in its use. A keen and close observer, he adopted the practice of constantly jotting down pictorial memoranda of everything that caught his attention, or that he wished to remember, and hence his sketch-books were stored with almost inexhaustible materials, and his memory with forms and fancies, whilst his hand attained remarkable readiness and precision. And having adopted the artistic calling, he addressed himself to it in the true spirit of an artist. Never careless even in what seemed the merest trifles, he steadily grew in artistic power. A keen sportsman, he was able to hit off, with unequalled truth and vivacity, the ludicrous side of sporting life, and the misadventures of unskilful pretenders, and yet, with such gentle and good-natured satire, that the spectator half-sympathised with the unlucky wights. His illustrations to the late Mr. E. Surtees' 'Handley Cross,' 'Sponge's Sporting Tour,' 'Ask Mamma,' 'Plain or Ringlets,' and 'Facey Romford's Hounds,' might be cited in proof, but his long series of fishing and hunting scenes in 'Punch' were even fuller of life and humour. And it is noteworthy how admirably they are drawn—the horses always accurate and full of character, the rod always rightly plied when wielded by an adept, and precisely as a bungler would wield it when in the hands of a novice; and the bits of riverside and cover scenery touched in with the rarest truth, and always so as to make the sketch artistically effective. But his home-life, whether the scene was a drawing-room or a cabin, was just as true, and never before were young ladies so prettily quizzed, or young gents so shrewdly handled. In truth whilst Leech was professedly a caricaturist, and his sketches were overflowing with humour, his refinement and kindness of manner were equally characteristic. Even in his strongest political cartoons, he never overstepped the bounds of gentlemanly feeling. Everything he did bore the impress of himself. His manner was unmistakable, yet he was no mannerist. He was original without effort, and graceful even when grotesque. His designs for 'Punch,' the great work of his life, have nearly all been published separately, as 'Pictures of Life and Character,' 5 vols. oblong folio; and as 'Pencilings from Punch,' comprising his larger cartoons, chiefly political. He also produced 'Young Troublesome, or, Master Jacky's Holidays,' and illustrated 'A Little Tour in Ireland.' In 1863, a series of upwards of 100 of his sketches were enlarged on canvas, and worked upon by him so as to have the character of sketchy oil-paintings—he having been assisted in overcoming the difficulties in the manipulation of the (to him) novel material, by his friend J. E. Millais, R.A. After being exhibited with great success at the Egyptian Hall, and afterwards in the City and some of the larger provincial towns, a select number were reproduced by the chromo-lithographic process, and published under the titles of 'Sports and Pastimes,' and 'Hunting.' Mr. Leech, who had for some time been in delicate health, died at his residence, Kensington, on the 29th of October, 1864.

LEEDS, WILLIAM HENRY, writer on architecture, was born in 1786. In early life he was engaged in commercial pursuits, but withdrew to devote himself to the study of philology and architecture, the last becoming eventually his absorbing occupation. For over 30 years Mr. Leeds laboured unweariedly as an architectural critic, rendering the public and the profession excellent service, but obtaining little recognition from either. He was a man of extensive reading and of independent judgment; his personal tastes were chiefly with the Italian as a living style, but he was a reverent student and admirer of the ancient Greek architecture; Gothic he admired as a genuine expression of mediæval genius, but he had little sympathy with its practical revival. Mr. Leeds wrote much in the 'Civil Engineers' and Architects' Journal,' in the 'Foreign Quarterly Review,' and other periodicals, and published separately 'Studies and Examples of the Modern English School of Architecture: The Travellers' Club House,' a supplementary volume to Britton and Pugin's 'Public Buildings of London,' a translation of the first part of Möller's 'Memorials of Gothic Architecture;'

and 'Rudimentary Architecture: the Orders and their Aesthetic Principles.' Many of the articles on architecture, and biographies of architects, in the 'Penny Cyclopaedia' were written by him, and have been in good part embodied in the 'English Cyclopaedia.' He died on the 1st of May, 1866.

* LEFUEL, HECTOR MARTIN, French architect, was born at Versailles, November 14th, 1810. The son of an architect, he studied under his father, and subsequently under M. Huyot. At the École des Beaux-Arts he carried off the second prize in 1833, and the grand prize of Rome in 1839. He remained some years in Rome, diligently occupied in the study of the architectural remains of the ancient and renaissance periods. On his return to Paris he opened an atelier, where he had many pupils, and executed numerous commissions. He received successively the appointments of architect of the château of Meudon, of the palace of Fontainebleau, and, on the death of Visconti, 1853, of the Louvre. This last is his chief work, he having laid aside the comparatively modest designs of his predecessor, and continued the building in a style of extreme splendour. It was completed by the junction of the Louvre with the Tuileries, and inaugurated with great solemnity by the Emperor, in August, 1857, when M. Lefuel was nominated architect to the Emperor and knight of the Legion of Honour, of which he was later created grand officer. Among other buildings erected by M. Lefuel may be mentioned the grand hôtel of M. Fould in the faubourg St. Honoré, and the palace for the Exposition Universelle of 1857. He was elected member of the Académie des Beaux-Arts in 1855.

* LEHMANN, CHARLES ERNEST RODOLPHE HENRI, historical painter, was born April 14th, 1814, at Kiel, in the duchy of Holstein, and acquired the elements of art from his father, a miniature painter of ability; but went early to Paris, and entered the atelier of Ingres, of whom he became, after Flandrin, the most distinguished scholar. He made his début at the Salon in 1835, with a picture of the 'Departure of Tobias,' and the next year sent one of 'Jephthah's Daughter,' which excited some attention, and was purchased by the Duc d'Orléans. Lehmann was not, however, destined to acquire rapid popularity, but the neglect which he experienced only stimulated him to more earnest efforts. Ingres had been appointed to the direction of the French Academy at Rome, and thither Lehmann repaired in 1837, taking with him his younger brother, Rodolphe, who had also adopted painting as his profession. From Rome he proceeded to Munich, where Cornelius was then in the height of his fame. Working and studying there, Lehmann fell under the influence of the German master, but, on returning to France, he gradually emancipated himself from his manner, recurring in the main to that of Ingres. From the first he restricted himself to subjects of an elevated type. His early pictures were almost exclusively Biblical, but he extended his range to the legends of the Church, general history, and the great poets, Æschylus, Dante, Shakspeare, Goethe, &c. Some of his most important and celebrated works have been mural paintings of a symbolical character. In 1852 he was commissioned by the Emperor Napoleon III. to decorate the Galerie des Fêtes of the Hôtel de Ville with a series of 56 pictures illustrative of the History of Human Progress. These, though works of a thoughtful character and severe in style, were executed in about a year. They have been very popular, and have been reproduced in photography. A finer work was a series representing the History of the French Monarchy from the epoch of the Merovingian to the Bourbon dynasty, painted in the Salle du Trône at the Palace of the Luxembourg. Still more important was his latest work in this style, a series of five large and elaborate compositions on the walls of the Grande Salle des Assises, in the new Palais de Justice. The subjects—'Meditation,' 'Integrity,' 'Law Protecting Innocence,' 'Pursuing the Guilty,' and 'Punishing Crime'—are treated in a broad, grave, and impressive manner, with great purity of drawing and feeling for colour. His chief mural paintings in churches are those in the chapels of St. Merry and in the transepts of St. Clotilde. His easel pictures are numerous and masterly, and he has painted many excellent portraits. M. Lehmann, who has long been naturalised in France, has received three medals of the first class, the decoration of the Legion of Honour in 1846, and been promoted officer in 1853; and elected member of the Academy in 1864. His brother, RODOLPHE LEHMANN, born at Ottensen, near Hamburg, August 19th, 1819, studied painting under the guidance of his elder brother, and has adopted much of his manner. He has painted many poetical and genre pieces, but is most successful in portraiture. He has resided successively in Paris, Rome, and London, and has been for some years a

pretty regular contributor to the Annual Exhibitions of the Royal Academy.

LEICHHARDT, FRIEDRICH WILHELM LUDWIG, traveller in Australia, was born October 23, 1813, at Trebatsch, near Beakow, Prussia. He went through his course of studies at Göttingen and Berlin, and occupied his leisure time in making excursions into the Alps. In 1841 he went to Australia, and travelled about the colonised portions with a view to studying the rocks and plants. He sent numerous fossils from Darling Down to Professor Owen. The results of his labours appeared partly in 'Beiträge zur Geologie von Australien,' and in Professor Owen's reports to the British Association for the Advancement of Science. About this time the colonial government proposed an overland expedition from the east coast of Australia to Port Essington, on the north coast. The governor, Sir Thomas Mitchell, recommended Leichhardt, as the leader, who readily fell in with the arrangement, as he had already been planning how to effect a scheme of this kind on his own account. He left Sydney August 14, 1844, and reached Port Essington December 17, 1845. The journey was calculated to last eight months, but as it took twice that time, the latter portion was effected amidst much hardship, owing to scarcity of food. A large extent of fertile country was discovered. This journey of about 3,000 miles obtained for him the patron's medal of the Royal Geographical Society in 1847. He published an account of it under the title, 'Journal of an Overland Expedition in Australia, from Moreton Bay to Port Essington. . . . during the Years 1844-5,' 8vo, London, 1847. In 1846 he started on a more hazardous expedition, intending to go from the east to the western coast of Australia, and as nearly across the central portion of this vast island as the nature of the country would permit. He found a rich and fertile country far in the interior, and returned to Mr. Macpherson's station in order to report his discovery. In April, 1848, he resumed his journey, but nothing further was received from him; so that in all probability he and all his party perished in Central Australia.

* LEIDY, JOSEPH, biologist, was born at Philadelphia, September 9, 1823. He was educated at the university of his native city, from which he received his degree of M.D. in 1844, and in which he was elected professor of anatomy in 1853. His writings are numerous, but scattered in scientific journals, and in the books of other persons. Thus he has contributed to Maury's 'Indigenous Races of the Earth,' 1857; to Owen's 'Report on Wisconsin,' 1852; and to works by Hayden and Haldemann. His papers (mostly very short) are considerably over a hundred in number, and deal with a wide range of subjects. The most important group relates to the extinct vertebrates of North America, and amongst these the most noticeable are those descriptive of the extinct mammalia of Nebraska and Dakota, and the 'Mémorial of the Extinct Sloth Tribe of North America,' in the Smithsonian Contributions for 1855. Another group of papers comprises valuable additions to our knowledge of the *Entozoa*, of which the best known is 'A Flora and Fauna within Living Animals,' in Smithsonian Contributions for 1853. Other papers are descriptive of various species of *Mollusca*, *Molluscoida*, and annelids, and others again are of an anatomical nature. His papers will be found in the publications of the Academy of Natural Science, the Boston Society of Natural History, the American Philosophical Society, and the Smithsonian Institution.

* LEIGHTON, FREDERICK, R.A., was born at Scarborough, December 3rd, 1830. Much of his early life was spent in Italy and Germany, his general education being completed at Frankfurt; where, under Steinle, in Brussels and in Paris, his artistic education was also prosecuted. On quitting Steinle's atelier in 1851 he went to Rome, where he completed his large painting of 'Cimabue's Picture of the Madonna carried in Procession through the Streets of Florence,' which, when exhibited at the Royal Academy, 1856, excited general admiration by its evidence of unwonted boldness and power, and was purchased by the Queen. 'The Triumph of Music,' 1856, hardly sustained the reputation of the previous year, but Mr. Leighton was again on the Continent, and hard at work, and this time counteracting or compensating the influence of the Düsseldorf school by intimacy with Ingres and Scheffer, and other representatives of the serious side of French art. This French influence was marked in such works as 'Count Paris and Juliet,' 1858, while 'La Nanna' and other heads, painted at Rome in the following year, were as decidedly Italian. Mr. Leighton had completed the cycle of his art studies: and his 'Paolo and Francesca,' 1861; 'Odalisque' and 'The Star of Bethlehem,' 1862; and especially his noble

picture of 'Dante in Exile,' 1864, showed that he was working out a style of his own, which, while free from any affectation, contained at most only occasional reminiscences of the schools in which he had studied. The 'Dante in Exile' secured his election as associate of the Royal Academy; he became full member towards the close of 1868. From his election into the Academy Mr. Leighton has been a pretty regular contributor to the annual exhibitions. His chief works have been 'Helen of Troy,' 1865; 'Syracusan Bride leading Wild Beasts in Procession to the Temple of Diana,' 1866; 'Venus disrobing for the Bath,' a very remarkable work, 1867; 'The Death of Ariadne,' 1868; 'St. Jerome,' 'Electra at the Tomb of Agamemnon,' 'Helios and Rhodus,' 1869, and 'Hercules wrestling with Death for the body of Alceste,' 1871. In 1868-69 Mr. Leighton made a visit to Egypt, where he was enabled to study the country and people with more freedom than, perhaps, any previous artist. The bearer of an autograph letter from the Prince of Wales to the Khedive of Egypt, he was received with the greatest respect, a steamer and an escort were provided for the voyage of the Nile, and every facility was afforded him for the prosecution of his studies. He made a splendid collection of highly-finished sketches, and these, with others made in previous travels, he has signified his intention to bequeath to the Royal Academy.

* LELAND, CHARLES GODFREY, an accomplished American scholar and man of letters, was born at Philadelphia on the 15th of August, 1824. He was educated at Princeton College, New Jersey, where he graduated in 1846; after which he visited Europe, and pursued his studies at the Universities of Heidelberg, Munich, and Paris, where he devoted himself especially to the modern languages, the fine arts, history, and philosophy. Being resident in Paris at the time of the Revolution of February, 1848, he was a member of the American deputation charged with the expression of congratulations to the Provisional Government on the inauguration of a republic in France. Later in the same year he returned to Philadelphia, and after a course of legal study, was admitted to the bar. He sacrificed his prospects of professional success, however, to the superior attractions of literature, to which he had been devoted from his undergraduate days, having while at Princeton commenced to contribute to the 'Knickerbocker' or New York Monthly Magazine, in which he originally published the greater part of a series of papers afterwards issued in a collective form as the 'Sketch-Book of Meister Karl,' 8vo, Philadelphia, 1855. This work, which was made up of incidents of foreign travel, description, moralizing, original poetry, odd extracts, and curious learning, was commended by Washington Irving for "its raciness, its quaint erudition, its graphic delineations, its vein of genuine poetry, and its true Rabelais humour." In the same year Mr. Leland published a small work of 271 pages, but of considerable research, in which he placed both ancient and modern authors under contribution, entitled 'The Poetry and Mystery of Dreams,' 12mo, Philadelphia, 1855; and commenced the publication, in numbers, of his 'Pictures of Travel,' Philadelphia and London, 1855-56, being a translation of Heinrich Heine's 'Reisebilder,' a difficult task, by the generally competent execution of which he acquired considerable credit. Another translated work, from the German of Baron J. von Eichendorff, was published with the title of 'Memoirs of a Good-for-Nothing,' 8vo, New York and Philadelphia, 1866. Mr. Leland has been connected, either editorially or as a contributor, with a great number of periodical works, as, for instance, with 'Sartain's Union Magazine of Literature and Art,' 8vo, Philadelphia, 1849, &c.; 'The International Magazine of Literature, Art, and Science,' 8vo, New York, 1850, &c. He has also been connected with the editorial department of the 'Philadelphia Evening Bulletin;' and has edited 'Graham's Illustrated Magazine,' and 'The Continental Monthly.' Devoted to Literature and National Policy,' 8vo, Boston (U. S.), 1862, &c. His views on "national policy" at a critical time were expressed in a work entitled 'Centralization, or "States Rights,"' 4to, New York, 1863. But his chief popularity depends upon his creation of a new kind of humorous poetry, in which he exhibits great command alike of wit and pathos, of felicitous phrases and curious combinations of English words with German forms and idioms. The exemplars of this power are the 'Breitmann Ballads,' of which the first was printed in a newspaper as a bit of local comedy during the war of secession, and was so quickly copied and largely quoted as to induce the author to follow up his success with many other poems. The hero of these is Hans Breitmann, a Suabian, who finds himself in America, and serves for pay and plunder in the cavalry of the Federal army, and whose speech is a grotesque patois of Anglo-

German. The character and adventures of Hans Breitmann are said to have had a basis of fact in those of a real person whose actual name was Jost, who served in the 15th Pennsylvania Horse. The first fugitive ballad became the eponymous of a volume entitled 'Hans Breitmann's Party. With other Ballads,' 8vo, Philadelphia, 1868, which was followed by 'Hans Breitmann's Ballads,' 8vo, Philadelphia, 1869. Four "Series" of the 'Ballads,' having the prestige of Mr. Leland's authority, have been issued in this country, to which the author recently paid a visit:—'Hans Breitmann's Party. With other Ballads,' seventh edition, 16mo, London and Edinburgh, 1869; 'Hans Breitmann's Christmas. With other Ballads,' 16mo, London and Edinburgh, 1869; 'Hans Breitmann as a Politician, 16mo, London and Edinburgh, 1869; and 'Hans Breitmann in Church. With other Ballads,' 16mo, London and Edinburgh, 1870. A brother of Mr. Leland's, HENRY P. LELAND, is favourably known as a contributor to the New York 'Knickerbocker,' and other American periodicals, and as the author of a collection of fugitive pieces published collectively with the title of the 'Grey Bay Mare, and other humorous Sketches of American Life. With Illustrations,' 12mo, Philadelphia, 1856; and 'Americans in Rome,' 8vo, New York, 1863.

LELEWEL, JOACHIM [E. C. vol. iii. col. 843], died at Brussels on the 29th of May, 1861.

LELONG, JACQUES, a bibliographer and priest of the Oratory, was born at Paris on the 19th of April, 1665, and received his early education from a relative who was a priest and the director of the *religieuses* attached to the collegiate church of Sainte Marie at Étampes. At about ten years of age he was sent by his father to Malta, with a view to his admission among the clerks of the order of St. John of Jerusalem. The plague, and the closeness of the confinement to which he was subjected on suspicion of having become infected, combined with the tediousness of his life at Malta, drove him speedily back to France, whither, as he had not yet taken the vows, the superiors of the order permitted him to return. After completing the usual course in classics, philosophy, and theology, at Paris, he became, in 1686, a novice in the congregation of the priests of the Oratory. Here he passed his year of probation; and was sent to teach mathematics at the College of Juilly, which he left for the seminary of Notre Dame des Vertus, at the village of Autrevilliers, near Paris, where he devoted the leisure he enjoyed from his religious duties and the management of the library to varied and unremitting study, especially in mathematics and philosophy, his devotion to the latter of which formed the basis of his close intimacy with Père Malebranche. He returned to Paris in order to undertake the charge of the library of the Oratorians, which, in the course of the twenty-two years of his administration, trebled the number of its volumes, of which he made several catalogues. Lelong was a scholar of profound and versatile attainments, being acquainted with Latin, Greek, Hebrew, and Chaldee; with Italian, Spanish, Portuguese, and English; and having a singular knowledge of literary history, libraries, printing, and bibliography. He wore out a naturally fragile constitution by his ceaseless and almost sleepless ardour in the discharge of his duties as librarian, and in the pursuit of his studies as bibliographer; and died at Paris of a pulmonary disease on the 13th of August, 1721. He was a man of much judgment, modesty, truthfulness, and precision, estimating lightly the products of the imagination, and delighting in labours of exactness and research, to secure the correctness of which he thought no amount of pains to be ill-bestowed.

His principal works are 'Bibliotheca Sacra: sive Syllabus omnium ferme Sacrarum Scripturarum Editionum ac Versionum,' 2 vols. 8vo, Paris, 1709, another edition, "cum additamentis et Notis C. F. Boernerii," 2 vols. 8vo, Leipzig, 1709, a work which assumed completeness in the posthumous publication brought out under the care of Père Nic. Desmolets, the official successor of Lelong, with the title of 'Bibliotheca Sacra, in binos Syllabos distincta, &c. Huic subjunguntur Grammaticæ et Lexica Linguarum, præsertim orientalium,' 2 vols. folio, Paris, 1723, with a Life of the Author, and the Preface and additions of C. F. Boerner; another edition, of which only the first part was finished, 'Bibliotheca sacra, post Jac. Lelong et C. F. Boernerii, iteratas Curas Ordine disposita, emendata, suppleta, continuata, ab A. G. Maach,' 5 vols. 4to, Halle, 1778-90; 'Discours historique sur les principales Éditions des Bibles polyglottes,' 8vo, Paris, 1713, Dutch translation, by G. Outhuijs, 'Geschiedkundig Verslag der voornaamste Uitgaaven van de Biblia polyglotta. Gedeeltelijk uit het Fransch vertaald, en met Bijvoegselen en Aanteekeningen vermeerderd,' &c. 8vo, Franeker, 1822;

and 'Bibliothèque historique de la France : contenant le Catalogue de tous les Ouvrages tant imprimés que manuscrits, qui traitent de l'Histoire de ce Royaume, ou qui y ont Rapport. Avec des Notes critiques et historiques,' folio, Paris, 1719, "nouvelle édition, revue, corrigée, et considérablement augmentée par Fevret de Fontette, Barbeau de la Bruyère," &c. 5 vols. folio, Paris, 1768—78.

* LEMAIRE, PHILIPPE HENRI, a distinguished French sculptor, was born at Valenciennes in 1798, studied under Cartellier and won the second prize for sculpture at the École des Beaux-Arts in 1819, and the grand prize of Rome in 1821. On his return from Rome, 1827, he exhibited a marble statue of a 'Girl with a butterfly,' which was purchased by the Duchesse de Berry, and secured for the sculptor a high position among the artists of Paris. He continued to represent classic subjects, but is most known by his public commissions. Of these the most striking is the relief in the pediment of the Madeleine, representing 'Christ pardoning the Magdalen,' an immense composition in which allegory is very freely combined with reality. Another well-known work is his bronze relief of Henry IV. on the façade of the Hôtel de Ville, Paris; and that in the pediment of the Palais de Justice at Lille. Among his many statues are those in marble of Louis XIV. and of Kleber for the Museum, Versailles; and the colossal bronze statue of Hoche for the place named after him; Chevert, at Verdun; Napoleon I. for the Bourse at Lille, and Froissart for Valenciennes. He has also executed two vast bronze reliefs of the Resurrection, and the Emperor Valens for the pediments of the church of St. Isaac at St. Petersburg. M. Lemaire was elected to the Corps Legislatif by his native place (Valenciennes) in 1852, and again in 1857. He received the decoration of the Legion of Honour in 1834 and was promoted to be officer in 1843.

LÉMERY, NICOLAS, was born at Rouen, November 17th, 1645, his father, Julian, being procureur of the Parliament of Normandy, and a Protestant. Nicolas, at an early age, showed a decided taste for chemistry, and connected himself with a relative, an apothecary, in his native town; but, learning little from him, he went to Paris in 1666, and boarded with M. Glazer, demonstrator of chemistry at the Jardin du Roi. Glazer was a man full of obscure notions, and not willing to communicate what little knowledge he had; so that after two months Lémery left him in disgust, and proceeded to travel through France in search of chemical information. He settled at Montpellier, in the house of M. Vershant, an apothecary, in whose laboratory he worked, and taught chemistry to a number of young students. His reputation gradually increased, so that the professors of the Faculty of Medicine of Montpellier and other persons fond of natural science often went to see his experiments. During his three years' residence in the place he practised medicine with success.

He returned to Paris in 1672, visited the different scientific meetings, and was soon distinguished for his scientific knowledge. He set up a laboratory of his own, and gave public lectures on chemistry, which were attended by large numbers of students, many of whom were foreigners, Scotland on one occasion contributing as many as forty. As an apothecary, he prepared a number of medicines, which, becoming fashionable, were also profitable. The magistery of bismuth, or pearl white, which he prepared as a cosmetic, sufficed to maintain the whole expense of his house. In 1675 he published his 'Cours de Chimie,' which has the great merit of first completely stripping chemistry of its mysticism. It went through a vast number of editions in a short time, and was translated into Latin, German, Spanish, and English.

In 1681 Lémery began to experience persecution in consequence of his religious opinions, so that in 1683 he found it expedient to pass over into England. He was well received by Charles II., but as the country was in an unsettled state, Lémery thought it best to return to France. He took a doctor's degree at Caen, in Normandy, and returning to Paris, set up as general practitioner in medicine and surgery, and also as apothecary and lecturer on chemistry. The revocation of the Edict of Nantes, however, in 1685, compelled him to give up practice, and to conceal himself; but finding he could not avoid persecution, he declared himself, in 1686, a Roman Catholic. He was now as much protected by the court and the clergy as before he had been persecuted by them. He was appointed associated chemist in 1699, when the Academy of Sciences was newly modelled, and he also became a pensioner. He died on the 19th of June, 1715, in his 70th year.

In addition to his system of chemistry, he published some

works on pharmacy, and contributed between 1700 and 1709 five papers to the memoirs of the French Academy. He left a son, who was also a member of the French Academy, and author of various papers, in which he attempts a mechanical explanation of chemical phenomena.

LEMON, MARK [E. C. vol. iii. col. 845.] In the last years of his life Mr. Lemon's literary activity, apart from his labours as editor of 'Punch,' was mainly directed to the production of a series of novels—'Wait for the End'; 'Loved at Last'; 'Golden Fetters'; 'Leighton Hall'; 'Faulkner Lyle'; and 'The Blue Petticoat,' the last being a posthumous publication; but he also contributed many papers to 'Once a Week' and other serials, and edited a 'Book of Jest.' In 1862 he delivered at the Gallery of Illustration a course of lectures on London antiquities under the title of 'About London,' a somewhat dramatic effect being imparted by scenic representations painted by Mr. Thompson and Mr. Danby of the streets and scenes described by the lecturer. The lectures were afterwards published with the title of 'The Streets of London.' But a few years later (1868—69) Mr. Lemon gave public readings of a more essentially dramatic character. Of a portly size and jovial humour it occurred to him that he might impersonate Falstaff,—of whose subtler idiosyncrasies as well as broad mirthful nature he had a hearty appreciation—in character and costume without the usual padding and stage make-up. With some assistance, and with suitable scenery, he accordingly appeared at the Gallery of Illustration as Sir John Falstaff in 'Scenes from Henry IV.' Mark Lemon was not a novice on the boards, but his impersonation was not exactly acting, and its novelty, geniality, and humour rendered it so attractive that he was invited to repeat the performance in a provincial tour which proved as popular as the representations in London. This ended, he returned to his literary pursuits, and went on in the quiet performance of his editorial and other duties till his death, which occurred at his residence, Crawley, Sussex, on the 23rd of May, 1870, in his 61st year. He was interred in the neighbouring churchyard of Ifield, in the presence of a large assemblage, not merely of his personal and literary friends, but of his neighbours, by whom he was held in great esteem. Mark Lemon was a man of original power, of considerable attainments, of a rare sense of humour, and of a thoroughly good-natured genial temperament, for all of which he found ample exercise as editor of 'Punch'—the character in which he will be longest remembered. His friends were many, and by them his memory is warmly cherished.

LE MONNIER, PIERRE CHARLES, French astronomer, was born at Paris, November 23rd, 1715. His father, Pierre Le Monnier, also an astronomer, instructed him in this science, and qualified him to be an observer and writer before he had completed his twentieth year. Pierre Charles sent to the Académie des Sciences in 1735 a map of the moon's surface, which gained for him admission into that body in 1736. He next accompanied Maupertuis in a scientific expedition to the polar circle. In 1738 he drew attention to Flamsteed's method of observing the positions of the sun and stars; and then pursued this method himself, first in the Pascal tower at the College of Harcourt, and then in the house of the Capuchins in the Rue St. Honoré. In 1740 he produced a new chart and catalogue of zodiacal stars; only 565 stars were printed, but others were calculated and tabulated in MS. He made researches and published papers on the variations of refraction in summer and winter; on the determination of the polar distance of Paris; on errors in certain old catalogues of stars; on the tracing of a meridian line at St. Sulpice; on the perturbations of the planet Saturn by Jupiter; on the movements of comets; on the influence of the moon on the atmosphere; on the magnetism of the compass, &c. In 1741 he introduced into France a transit instrument by Graham, the first of the kind used in that country. In 1748 he came to England to view the annular eclipse of the sun; during which he made accurate measurements of the moon's apparent diameter, as seen in front of the sun. As professor at the College of France, he taught skilfully the analytical theory of attraction. It was his custom, for a long series of years, to rise at any hour of the night, if favourable for observing the meridian passage of the moon. He was chosen one of the first members of the Institute. Le Monnier wrote many treatises and papers on astronomy, the chief of which were—'Institutions Astronomiques,' 1746, 4to; 'Observations de la Lune, du Soleil, et des Étoiles fixes,' in four parts, 1751, 1754, 1759, 1775, this was his greatest work; 'Description et usage des principaux Instruments d'Astronomie,' fol. 1774. He died at Héric, near Bayeux, May 31st, 1799.

LENNEP, JACOB VAN [E. C. vol. iii. col. 847]. Van Lennep completed his splendid edition of Vondel in 12 vols. in 1866. In 1865 he published 'Geschiedenis van Noord-Nederland' (History of North Holland). He died at Oosterbeek, near Arnhem, on the 26th of August, 1868, at the age of 66.

LENOIR, MARIE-ALEXANDRE, French archæologist, was born at Paris, December 26th, 1761, and after passing through the Collège des Quatre Nations, became a pupil of the painter Doyen. He seems, however, to have pursued painting somewhat languidly, and soon abandoned it. He mixed much in society, wrote a successful drawing-room play, and published criticisms on the pictures exhibited at the Louvre. He had thus come to be known to the men who were active in the early revolutionary movements, and when the sale of the public domains was decreed, 1790, Lenoir determined to make an effort to save the monuments and collect them into a national museum. He explained his idea to Bailly, who approved, and promised to support it; and then, with his old master, Doyen, laid it before the National Assembly. The proposition was adopted with enthusiasm; Lenoir was charged with the selection of objects of art worthy of preservation, and the convent of the Petits-Augustins was appropriated for their reception. Lenoir found much difficulty in carrying out his plans, and especially in obtaining objects of value; but he seized whatever he could, and thus saved from destruction many priceless monuments of art and antiquity. He now further proposed that all the pictures and statues which he had secured should be added to those already in the Louvre, where a central museum of art should be formed, whilst the collection at the Petits-Augustins should form a distinct museum of national monuments. He arranged the collections in strict chronological order, and so as to illustrate as distinctly as possible the several epochs of the French monarchy. Under the Consulate and Empire the museum was preserved and augmented, and Lenoir was employed to direct the embellishments of Malmaison, and to restore the tombs of the kings at Saint Denis and some other monumental works. On the Restoration the museum of the Petits-Augustins was dismantled and the contents dispersed, some being restored to the places from which they had been taken, but many were misappropriated or lost. Lenoir filled one or two small posts, but his chief employment henceforth was in writing on art and archæology. He died at Paris on the 26th of December, 1839. His works include, besides catalogues of the monuments collected in the 'Dépôt National, rue des Petits-Augustins,' 1793, and of the sculpture 1798, and various reports, among which is a 'Histoire de la Peinture sur Verre, et description des vitraux anciens et modernes pour servir à l'Histoire de l'Art relativement à la France,' 8vo, 1804; 'Musée des Monuments Français, ou description historique et chronologique des statues et tombeaux des hommes et femmes célèbres,' 8 vols. large 8vo, 1800—22; 'Nouvelle explication des Hiéroglyphes des Égyptiens,' 3 vols. large 8vo, 1809—10; 'Histoire des Arts en France, prouvée par les monuments, suivie d'une description des statues, etc., réunies au Musée des Monuments Français,' 4to, with folio atlas of 164 plates, 1810; 'La Franchemaçonnerie rendue à sa véritable origine,' 5 vols. 8vo, 1814; 'Atlas des monuments des arts libéraux, mécaniques et industriels de la France, depuis les Gaulois jusqu'au règne de François I.,' large folio, 1820—28; reprinted in 1840; also essays on Hieroglyphics, on the Venus de Medici, the Apollo Belvedere, and other statues then in the Louvre, and numerous articles in Prudhomme's 'Dictionnaire Historique,' the 'Encyclopédie Moderne,' 'Dictionnaire de la Conversation,' &c. His son, ALEXANDRE ALBERT LENOIR, born at Paris, October 21st, 1801, was educated under Debret as an architect, but is better known, like his father, by his writings on archæological subjects. Of these the chief are some descriptions in Gailhabaut's *Monuments*; 'Architecture et Archéologie,' 8vo, 1839; 'Statistique Monumentale de Paris depuis les Romains,' folio, 1835, &c.; and 'Architecture Monastique,' 2 vols. 4to, 1852—56. He was director of the monumental statistics of France, and architect to the Musée de Cluny; received the decoration of the Legion of Honour in 1845, and was elected secretary to the École des Beaux-Arts in 1862.

LENORMANT, CHARLES, French archæologist, was born at Paris, June 1st, 1802. He studied with a view to the law, but, following his inclinations for antiquarian inquiries, spent some time in investigating the monumental remains in Italy, and in 1828 accompanied Champollion to Egypt. He had been appointed inspecteur des beaux-arts in 1825, and after the Revolution of 1830 he was made librarian of the Arsenal; in 1832 assistant, and in 1841 principal, keeper of the Cabinet of Antiquities. He was elected member of the Académie des Inscriptions

in 1839. From 1835 to 1846 he lectured at the Sorbonne, and in 1848 was nominated professor of Egyptian archæology at the Collège de France. He died at Athens on the 24th of November, 1859. His writings, besides several minor works, comprise 'Musée des Antiquités Égyptiennes; recueil des Monuments Égyptiens, Architecture, Statuaire, Glyptique et Peinture,' folio, Paris, 1836—40; 'Trésor de Numismatique et de Glyptique,' written in conjunction with Paul Delaroche and d'Henriquel-Dupont, 5 vols. folio, 1836—50; 'Élite des Monuments Céramographiques; matériaux pour l'intelligence des religions et des mœurs de l'antiquité,' a valuable work on Greek and Etruscan vases, written in conjunction with J. de Witte, 4 vols. 4to, 1837—61; 'Introduction à l'Histoire Orientale,' 8vo, 1838; 'Questions Historiques,' 2 vols. 1845. He also contributed largely to the archæological journals and occasionally to the 'Revue des Deux-Mondes' and other serials, and was for some years one of the editors of the ultramontane journal, 'Le Correspondant.' His son FRANÇOIS LENORMANT, born at Paris in 1835, has also acquired celebrity as an archæologist.

LE NÔTRE, ANDRÉ, a famous French landscape gardener, was born at Paris in 1613, and succeeded his father as director of the gardens of the Tuileries. His ability was early recognised, but according to his biographer he was indebted to the minister Fouquet for the opportunity of making known his unrivalled talents as a designer of gardens. Fouquet commissioned him to decorate the gardens of his château of Vaux-le-Vicomte, and Le Nôtre rendered it, says one of his admirers, "a garden of enchantment. Porticoes, bowers, grottoes, trellises, labyrinths, &c., were for the first time introduced to embellish and vary the aspects of a large garden." So delighted with the novelty was the king, Louis XIV., that he gave Le Nôtre the control of all his parks, and nominated him designer of his gardens and superintendent of his palaces. All Le Nôtre's inventive powers were called into requisition for Versailles, which the king wished to excel all other gardens, and which Le Nôtre succeeded in completing to his entire satisfaction. The terrace at Saint-Germain was another of his famous inventions. The gardens of Trianon, Clagny, Chantilly, Saint-Cloud, Meudon, Seaux, and Fontainebleau with its celebrated canal, were all remodelled by him. The fame of Le Nôtre as the gardener of the Grand Monarque was unbounded. Not only did the princes and nobles of his own country vie in securing his assistance, but his advice was eagerly sought by foreign monarchs. Charles II. felt happy when he had succeeded in tempting him to London. He has the credit of having designed both St. James's and Greenwich Parks, though in the former at least the carrying out of the design was entrusted to native hands. He visited Rome, and was consulted by the Pope, Innocent XI., who received him with great affability, but the story of Le Nôtre having clapped his Holiness on the shoulder and embraced him is denied by Voltaire on the authority of Le Nôtre's pupil, Collineau. In 1675 Louis XIV. granted Le Nôtre letters of nobility and the cross of the order of St. Michel. He continued in great favour, and was treated with every mark of honour, till his death, which occurred in September, 1700, in his 87th year. His system was too elaborate and artificial, but Le Nôtre was in his line a man of original genius, and the landscape gardener will find a careful study of his gardens and system singularly suggestive.

* LENSTRÖM, KARL JULIUS, a Swedish divine, historian, and philologist, was born at Gefle, on the 7th of May, 1811. In 1830 he repaired, for the study of theology, to the University of Upsal, where he was appointed a tutor in literary history in 1836, and subsequently professor of æsthetics. Afterwards, having made the tour of Denmark and Germany, in 1840, he received ordination, and in 1843 became reader in philosophy in the college of his native town. In 1845 he assumed the duties of dean and pastor of Wester-Löfsta, in Westmanland. He is one of the most prolific of Swedish writers, and commenced his literary career, in 1835, with a series of literary and critical articles in the Journal of the Swedish Society of Literature, which attracted attention for the trenchant liveliness of their style. He likewise made his influence felt by his attacks upon the corruptions of the university system in his publication of 'Eos,' Upsal, 1839—40, which had, however, the effect of impeding his own academical advancement. His works include his Contribution towards a Manual of Æsthetics, &c., 'Försök till Lärobok i Æsthetiken, med bifogad kort Öfversigt af Konsternas, svenska och allmänna Poesiens Historia,' 12mo, Stockholm, 1836; an epic poem in twenty-four cantos, entitled 'Sigurd och Brynhilda,' 8vo, Upsal, 1836; Lyrical Firstfruits, 'Lyriiska Förstlingar,' 8vo, Gefle, 1837;

a dramatic poem, entitled 'Nero,' 12mo, Gefle, 1838; Handbook of Roman Literary History, 'Handbok i Romerska Litteraturs Historia,' 8vo, Orebro, 1838; an Historico-literary Enquiry, &c., 'Lars Fornelius, Sveriges förste ästhetiker. En litterär-historisk Undersökning,' 8vo, Upsal, 1838; Literary Portrait Gallery of Swedish Poets, &c., 'Litterärt Porträttgalleri af svenska Skalders. No. I, Stjernhjelm,' 8vo, Upsal, 1838; History of Art Theories, 'Konst-Theoriernas Historia,' 2 parts, 8vo, Upsal, 1839; History of Swedish Poetry, 'Svenska Poesiens Historia,' 2 vols. 8vo, Orebro, 1839—40; Manual of the History of Poetry, 'Handbok i Poesiens Historia,' 2 vols. 8vo, Orebro, 1840—41; Contribution towards a History of Swedish Aesthetics, 'Bidrag till den svenska Aesthetikens Historia,' &c., 2 parts, 8vo, Upsal, 1840; an Historico-literary Treatise on the Influence of the Vikings on the Poetry of the Middle Ages, 'Om Vikingatågens Inflytande på Medeltidens Poesi. Litterär-historisk Afhandling,' 8vo, Copenhagen, 1841; Ancient and Modern Swedish Anthology, 'Svensk Anthologi eller vald Samling af svenska Skaldestycken från äldre till nyare Tider i tre Delar med Porträtter,' 3 vols. 12mo, Orebro, 1840—41; History of Literature and Art in Sweden, 'Sveriges Litteratur-och Konst-Historia,' 8vo, Upsal, 1841; Handbook of Universal and of Swedish Church History, 'Lärobok i Allmänna och Svenska Kyrkohistorien,' 8vo, Gefle, 1843; Introduction to Theology, 'Lärobok i de theologiska Präntionerna: Inledning till Theologien,' 8vo, Upsal, 1843; Manual of the History of Dogma, 'Lärobok i Dogm-historien för Prest-och Pastoral-Examina,' &c., 8vo, Orebro, 1843; 'De Principiis Philosophiæ practicæ Spinozæ,' 8vo, Gefle, 1843; Swedish Literary History, &c., 'Svensk Litteraturhistoria i Sammandrag,' &c., 8vo, Stockholm, 1857; and an historical poem on Saint Augustin, 'Den helige Augustinus. Historisk Dikt,' &c., 12mo, Upsal, 1860. Professor Lenström has also published various works in illustration of national and local philology.

* LEO, HEINRICH, a German historian, was born on the 19th of March, 1790, at Rudolstadt, and after receiving his earlier education at the Gymnasium of that place, repaired in 1816 to the University of Breslau in order to study medicine, which, in compliance with the representations of Ludwig Jahn, he abandoned for a literary and academical career. He prosecuted his studies at the universities of Jena and Göttingen, and devoted himself especially to the history of the Middle Ages. In 1820, having been admitted to the doctorate at Jena, he went to Erlangen, where he produced his treatise on the Constitution of the Lombard Cities, &c., 'Ueber die Verfassung der freien Lombardischen Städte im Mittelalter,' 8vo, Rudolstadt, 1820, a special department of his Italian researches, which he pursued in his Development of the Constitution, &c., 'Entwicklung der Verfassung der Lombardischen Städte, bis zur Ankunft Kaiser Friedrich I. in Italien,' 8vo, Hamburg, 1824, Italian translation, by the Conte C. Balbo, 'Vicende delle Costituzioni delle Città Lombarde, fino alla Discesa di Federico I., Imperatore in Italia,' 8vo, Turin, 1836. In 1822 he repaired to Berlin, where he attached himself ardently to the political doctrines of Hegel, which, after an advocacy of some duration, he gradually exchanged for the opposite pole of conservatism. In 1823 he was enabled, through the munificence of the dowager Princess of Schwarzburg-Rudolstadt, to make a tour in Italy; and in 1826 became an assistant-keeper of the Royal Library at Berlin, which he left in order to follow his vocation as a tutor at the University of Jena. In 1828 he received the appointment of extraordinary professor, and in 1830 that of ordinary professor, of history at the University of Halle.

Of his numerous works, which illustrate the phases of his political opinions, may be mentioned—Lectures upon the History of the Jewish States, 'Vorlesungen über die Geschichte des Jüdischen Staates. Gehalten an der Universität zu Berlin,' 8vo, Berlin, 1828, another edition, 8vo, Reutlingen, 1829; History of the Italian States, 'Geschichte der Italienischen Staaten,' 5 vols. 8vo, Hamburg, 1829—32, forming part of Heeren and Ukert's 'Geschichte der Europäischen Staaten'; Manual of the History of the Middle Ages, 'Lehrbuch der Geschichte des Mittelalters,' 2 parts, 8vo, Halle, 1830; History of the Low Countries, 'Zwölf Bücher niederländischer Geschichten,' 2 parts, 8vo, Halle, 1832—35; Studies and Sketches, &c., 'Studien und Skizzen zu einer Naturlehre des Staates,' 8vo, Halle, 1833, of which only the first part was published; a controversial treatise entitled 'Herr Dr. Diesterweg und die deutschen Universitäten. Eine Streitschrift,' 8vo, Leipzig, 1836; the Hegeliana, 'Die Hegelingen,' 8vo, Halle, 1838, second edition, enlarged, 8vo, Halle, 1839; the Old Saxon and Anglo-Saxon Dialects, 'Alt-

sächsische und Angelsächsische Sprachproben. Herausgegeben, und mit einem erklärenden Verzeichniss,' &c., 8vo, Halle, 1838; Handbook of Universal History, &c., 'Lehrbuch der Universalgeschichte zum Gebrauche in höheren Unterrichtsanstalten,' second edition, 6 vols. 8vo, Halle, 1839—44; 'Rectitudines singularum Personarum,' &c., 8vo, Halle, 1842; On the Prussian Constitution Question, &c., 'Zur Preussischen Verfassungsfrage. Besonderer Abdruck einer Rescension über drei diese Angelegenheit betreffenden Schriften,' 8vo, Berlin, 1845; Miscellaneous Treatises on the History of the German and Celtic Languages, 'Ferienschriften. Vermischte Abhandlungen zur Geschichte der deutschen und keltischen Sprache,' 8vo, Halle, 1847—52; Lectures on the History of the German People and Empire, 'Vorlesungen über die Geschichte des deutschen Volkes und Reiches,' 8vo, Halle, 1854, &c.; a Discourse, &c., 'Thomas Münzer. Ein Vortrag gehalten im Auftrage des evangelischen Vereins in Berlin,' 8vo, Berlin, 1856; and a Discourse entitled 'Was ist Conservativ? Vortrag,' &c., second edition, 8vo, Berlin, 1864.

LEONARD, called LIMOSIN [LIMOSIN, LEONARD, E. C. S.].

* LEONHARD, GUSTAV VON, geologist and mineralogist, was born at Munich, November 22, 1816. He is the son of the eminent geologist noticed below, and is best known for his numerous works on the rocks and minerals of Baden. His writings include 'Handwörterbuch der topographischen Mineralogie,' 8vo, Heidelberg, 1843; 'Beiträge zur Geologie der Gegend am Heidelberg,' 8vo, Heidelberg, 1844; 'Ueber die älteren oder Paläozoischen Gebilde im Norden von Deutschland und Belgien,' &c., 8vo, Stuttgart, 1844; and 'Die Mineralien Badens nach ihrem Vorkommen,' 8vo, Stuttgart, 1852. There are also several papers by him in Leonhard and Bronn's 'Neues Jahrbuch für Mineralogie,' etc., on zeolites, pseudomorphs, and the rocks and minerals in the neighbourhood of Heidelberg.

LEONHARD, KARL CÆSAR VON, geologist, was born at Rumpenheim, near Hanau, September 12, 1779. He studied at the universities of Marburg and Göttingen. His education completed, he entered the civil service, and remained in it for several years, but in 1814 he retired, in order to devote himself exclusively to the studying and teaching of geology. In 1816 he was appointed to a professorship at Munich, but in 1818 he exchanged it for the chair of mineralogy and geology at Heidelberg, at which place he died January 23, 1862. His works are numerous. The earliest was a useful manual entitled 'Handbuch einer allgemeinen topographischen Mineralogie,' 3 vols. 8vo, Frankfurt-am-Main, 1805—1809. His occupation as a teacher led to his drawing up a series of clear expositions of various branches of geological science, which have had a wide circulation in Germany, and a considerable influence on the studies of the rising geologists of the time. Amongst these are 'Charakteristik der Felsarten,' 8vo, Heidelberg, 1822—24; 'Die Basalt-gebilde in ihren Beziehungen zu normalen und abnormen Felsmassen,' 2 parts, 8vo, Stuttgart, 1832, with 4to atlas; 'Lehrbuch der Geognosie und Geologie,' 8vo, 1835; 'Handbuch der Oryktognosie,' 8vo, 1821; and various works of a more popular kind on lithology, mineralogy, &c. Some of these have passed through numerous editions, and been translated into several languages. From 1807 to 1862 he edited, either alone or in conjunction with Bronn, the well-known 'Jahrbuch für Mineralogie und Geologie.' Many of his separate papers appeared in it. Honorary titles were conferred on him by numerous societies, and orders by not a few sovereigns, in recognition of his talents as a teacher.

LEOPOLD GEORGE CHRISTIAN FREDERICK, KING OF THE BELGIANS, &c. [E. C. vol. iii. col. 858]. The latter years of Leopold I. were devoted to the quiet development of the industrial and commercial prosperity of his kingdom; whilst the good understanding between himself and his subjects suffered only a momentary intermission in 1857, when he found himself separated from the dominant majority in the Chambers on the question of the laws of charitable institutions. This arose from the desperate struggles of the Ultramontane party to acquire supreme power in the State; but his prudence and energy enabled him to maintain his ground against their reactionary agitation. He was so revered and trusted abroad, and so much in the confidence of the leading powers of Europe, as to win the position of an international arbitrator; and he was one of the first to give his adhesion to the plan of a European Congress proposed in 1863 by the Emperor Napoleon III. He concluded various treaties of commerce with foreign countries—with France, May 1st, 1861; with Switzerland, December 11th, 1861; with China, August 8th, 1862; with the Low Countries, May 12th,

1863; and with Sweden and Norway, June 26th, 1863. And he interested himself especially in the laws affecting international copyright, whether literary or artistic.

Three or four years before his death he was afflicted with a painful disease which threatened to be fatal; but from which he was relieved by the skill of an English surgeon, Mr. Henry Thompson, who successfully performed upon him the operation of lithotritry. After this, and to the last year of his life, he delighted in field sports and strong physical exertion, frequently exposing himself to weather and fatigue to a degree which, considering his advancing age, it would have been more prudent to avoid. In the early part of 1865 he suffered from a slight paralytic seizure; in spite of which, and of a chronic bronchial weakness, he came over to England on a visit to his niece, the Queen. At length, after various fluctuations in his health, he died at the Palace of Laeken, just before noon of the 9th of December, 1865, leaving an enviable reputation, not only for the good fortune which had marked his life, but for his integrity and moderation of character, his judicial calmness of intellect, his closeness and accuracy of reasoning, and his diplomatic tact. His funeral, which took place at Brussels, was celebrated with all the indications of national sorrow, and was regarded with every manifestation of international respect and sympathy. He was succeeded by his son, Leopold Louis Philippe Marie Victor, Duke of Brabant, who was called to the throne as

*LEOPOLD II., and whose mother was Louise d'Orleans, daughter of King Louis Philippe of France. He was born at Brussels on the 9th of April, 1835; and married, August 22nd, 1853, the Archduchess Maria of Austria. He has travelled much at different times in various countries of Europe; and in 1855, in company with the Duchess of Brabant, made a tour to Egypt and Asia Minor, and in the same year paid a visit of nearly three weeks' duration to Paris, on the occasion of the holding of the Exposition Universelle. He held the rank of major-general in the Belgian army, and the honorary command of the regiment of grenadiers; whilst, as a member of the Senate, he took a prominent part in its most important discussions, especially interesting himself, in 1855, for the establishment of a maritime service between Antwerp and the Levant. In his home administration, since his accession, in December 1865, he has carried out the liberal policy which his father initiated and consolidated; a policy which in the midst of European strife and agitation, secured for Belgium a peace of thirty-five years' duration. He has likewise devoted himself, in the same spirit, to the development of the industrial arts, and of commercial prosperity, and to the preservation of harmony with foreign nations; and when, towards the end of 1868, the amity between France and Belgium seemed threatened by the difficulties of a convention relative to the railways of the two countries, he assisted by his moderation to bring about an adjustment based on mutual concessions. But the chief international characteristic of his reign, or at least the one most interesting to the people of this country, is the jealousy with which he has guarded and strengthened his close alliance with England, which, on its part, was prompt to guarantee the independence of Belgium when that seemed to be imperilled by the outbreak of the war of 1870—71 between France and Germany.

In October, 1866, Leopold II. and the Belgian people entertained with enthusiastic hospitality and kindness a large number of English volunteers, who had been invited to Brussels on the occasion of the Tir National; a kindness which was repeated with less attempt at official organisation in the autumn of the following year,—as it has been, indeed, in every subsequent year—after the visit to England, where the hospitality of their fellow-countrymen was returned amongst extraordinary acclamations, of more than two thousand Belgian volunteers in the summer of 1867. For a period of five years, therefore, has been added to the diplomatic and other interchange of political sympathy, the actual direct expression of good-will between the two peoples by an important fraction of their numbers. When the King of the Belgians visited the Queen, at Windsor, in November, 1869, it was felt that his generous and repeated welcomes to English subjects visiting his dominions, demanded an emphatic acknowledgment. Accordingly, on Thursday, November 25th, two distinct deputations waited upon him in the State Ball Room of Buckingham Palace, which had been set apart for the reception, charged with expressions of thanks and congratulations. The first deputation was a municipal one, and was headed by the Lord Mayor of London, who presented an address signed by "the Lord Mayors and Lord Provosts, Lord Lieutenants and High Sheriffs of Counties, the Mayors and other

magistrates of municipalities in the United Kingdom of Great Britain and Ireland." The address bore upwards of three hundred signatures, the only mayor who did not sign it being, as was stated, absent from England for the purpose of attending the opening of the Suez Canal. The second deputation consisted of a body of seven or eight hundred representatives of volunteers, who, through Lord Elcho as spokesman, presented an address "signed by Commanding Officers of Volunteers throughout the Kingdom." In the evening of the same day the King of the Belgians dined with the Lord Mayor at the Mansion House.

*LE POITTEVIN, EDMONDE-EUGÈNE-MODEST, French landscape and marine painter, was born at Paris July 31st, 1806. He studied under Hursent, and in the École des Beaux-Arts, where he carried off the first prize for landscape. M. Le Poittevin has travelled and sketched much in the north of France and along the coasts of Normandy, in Holland, Flanders, Italy, and England, and in 1838 went to Russia by special invitation of the Emperor Nicolas. His landscapes often partake of the character of genre pieces, fishermen being represented returning to or leaving their families, or engaged in some sea-side occupation; artists employed in their out-of-door studies (as Paul Potter painting, Vandevelde sketching a battle, &c.); the painter at the tavern; or some incident or matter of common interest being introduced. For the gallery at Versailles he painted some sea-fights. His pictures are usually of small size, and carefully finished. Many of them have been engraved or lithographed. M. Le Poittevin was made a Knight of the Legion of Honour in 1843. He is a member of the Academies of Antwerp and Berlin.

LEROUX, PIERRE, a French philosopher and publicist, was born in Paris, or its immediate neighbourhood, in the year 1798, and received his earlier education at the Lycée Charlemagne. He continued his studies at the Lycée of Rennes, where he was supported by a bursary granted to him by the city of Paris, and was subsequently admitted to the École Polytechnique, from the advantages of which he was summoned by the death of his father, who was an artisan, to undertake the support of his mother and her younger children. After working a short time as a mason, he became successively a compositor, proof-corrector (1816), and one of the founders, in 1824, of 'Le Globe,' a journal which—its conductors being dispersed by official promotions consequent upon the revolution of July, 1830—became in January, 1831, the organ of Saint Simonism, the doctrines of which M. Leroux had actively espoused. He broke at length with the community of the Rue Monsigny, as represented by M. Enfantin, on the question of the emancipation of women; and, in association with L. H. Carnot, edited, from August, 1831, the 'Revue Encyclopédique,' which came to an end in 1835. He continued the exposition of his principles in the 'Encyclopédie Nouvelle,' which he conducted jointly with Jean Reynaud, to whom he left its entire management, upon the occasion of some dissimilarity of opinion. About this time Leroux was a contributor to the 'Revue des deux Mondes,' from which, in consequence of its abandonment of democratic principles, he separated himself, and founded, November, 1841, jointly with M. Louis Viardot and Madame George Sand, the 'Revue Indépendante,' which lived for only a few years. In 1845, in order to afford a practical exposition of his principles, Leroux obtained permission to establish a printing-press, to be conducted on his peculiar theories, at Boussac, in Creuse, where he produced, beside a crowd of socialistic pamphlets, which were industriously circulated throughout the department, two journals entitled respectively the 'Eclaireur,' and the 'Revue Sociale.' Misled by some popular demonstrations, especially at Limoges, in his favour, Leroux made his appearance in Paris, in the costume of a peasant of Creuse; but his visit to the capital ended in a fiasco, and he quitted Paris at the first outbreak of the revolution, returning in time to proclaim the Republic at Boussac, of which commune he was at once elected mayor, February 25th, 1848. On the 4th of June following, M. Leroux was triumphantly returned as a member of the Assemblée Constituante, where he made several impractical speeches, the conscientious and benevolent intention of which could not suffice to preserve their author from ridicule and distrust. He advocated the colonisation of Algeria, the emancipation of women, and the incorporation of his principle of the universal "Triad" in the preamble of the Constitution. After the Coup d'État of the 2nd of December, 1851, M. Leroux left Paris for London, and afterwards took permanent refuge in Jersey. The amnesty of 1860 permitted his return to France; but he confined himself strictly to his

literary and social studies till his death, which occurred at Paris in April, 1871, at the time when, curiously enough, Paris was under a Socialistic government, but not the Socialism of Pierre Leroux. The Commune, at the sitting of the 13th of April, passed a resolution that two of its members should attend the funeral of Pierre Leroux on the following day, as an act of "homage not to the partisan of the mystical idea of which we now feel the evil, but to the politician who, after the days of June, courageously undertook the defence of the vanquished."

The principal work of M. Leroux is his treatise 'De l'Humanité, de son Principe et de son Avenir, où se trouve exposée la vraie Définition de la Religion, et où l'on explique le Sens, la Suite, et l'Enchaînement du Mosaïsme et du Christianisme,' 2 vols. 8vo, Paris, 1840, second edition, 1845, in which the author opposes to psychology and eclecticism the study of the human mind as it is exhibited in history, and recognises the constant progress of the human race and of nature towards perfection. His other works include, 'Réfutation de l'Électicisme, où se trouve exposée la vraie Définition de la Philosophie, et où l'on explique le Sens, la Suite, et l'Enchaînement des divers Philosophes depuis Descartes,' 18mo, Paris, 1839; 'Discours sur la Situation actuelle de la Société et de l'Esprit humain,' 18mo, Paris, 1841, new edition, 2 vols. 16mo, 1847; 'De la Mutilation d'un Écrit posthume de Théodore Jouffroy, avec une Lettre à l'Académie des Sciences Morales et un Appendice pour faire Suite à la Réfutation de l'Électicisme,' 8vo, Paris, 1843, a work which appeared first in the 'Revue Indépendante'; 'D'une Religion nationale, ou du Culte,' 18mo, Boussac, 1846; 'Discours prononcé à l'Assemblée nationale dans la Séance du 30 Août, 1848, sur la Fixation des Heures de Travail,' 4to, Paris, 1848, extracted from the 'Moniteur Universel'; 'Projet d'une Constitution démocratique et sociale, fondée sur la Loi même de la Vie, et donnant, par une Organisation véritable de l'État, la Possibilité de détruire à jamais la Monarchie, l'Aristocratie, l'Anarchie, et le Moyen infailible d'organiser le Travail national sans blesser la Liberté,' 8vo, Paris, 1848; 'Du Christianisme et de ses Origines démocratiques,' 16mo, Boussac and Paris, 1848; 'Le Carrosse de M. Aguado: Fragment,' 8vo, Boussac and Paris, 1848; 'De la Plutocratie; ou, du Gouvernement des Riches,' 16mo, Boussac and Paris, 1848, which had first appeared in 1843, in the 'Revue Indépendante'; 'De l'Égalité,' new edition, 8vo, Boussac and Paris, 1848; 'Malthus et les Économistes; ou, Y aura-t-il toujours les Pauvres?' 16mo, Boussac and Paris, 1848, a reprint of articles which appeared in the 'Revue Sociale,' in 1846, with the title of 'De la Recherche des Biens matériels; ou, de l'Individualisme et du Socialisme'; 'Assemblée nationale législative,' 4to, Paris, 1849; 'Quelques Pages de Vérités,' 32mo, Paris, 1859; and a philosophical poem in eight books, of which only three have been published, with the title of 'La Grève de Samarez: Poème philosophique,' 8vo, Paris, 1864. M. Leroux has likewise gained considerable credit for his translation, executed in conjunction with an anonymous collaborateur, of Goethe's 'Werther,' which has gone through several editions.

LEROY, the name of two celebrated French horologists.

JULIEN LEROY, born at Tours in 1686, came to Paris at an early age, and learned watch and clock making. Setting before himself as an honourable task to produce watches equal to those made in England, at that time the finest in Europe, he introduced the plan of oiling the pivots and rubbing-surfaces; reduced the size of watches, without lessening the strength or the delicacy, by increasing the power of the spring; and made numerous improvements in the details of construction. In 1720 he presented to the Académie des Sciences a pendulum clock and dial, showing correct time, the hour of sunrise, and the sun's declination. His watches gradually became so famous in France and Italy as to supersede the necessity for importing those of English make. Nevertheless, Leroy and Graham held each other in respect, as the two leading men in an occupation which they both loved. The latter, when growing in years, examining one of Leroy's watches, expressed a wish that he could be young again, that he might work out new ideas with that as his model. In 1739 Leroy was appointed watchmaker to the king, who assigned him apartments at the Louvre. He wrote memoirs on the construction of large clocks; on public clocks to mark and sound correct time; on a compass-sundial for tracing meridians; and on rules for calculating the equation of time. He died at Paris in 1759.

PIERRE LEROY, his eldest son, was born at Paris in 1717, and was brought up to his father's trade. In 1763 he presented to the Académie des Sciences a marine watch which had worked with great accuracy at sea; he determined the isochronism of spiral springs, invented a new detent escapement, and made

many improvements in clocks and watches. Among several memoirs written by him was 'Étrennes chronométriques pour l'année 1760,' comprising an account of instruments and methods for measuring time and calculating calendars; this was re-edited with additions by Janvier, in 1811. Another was 'Exposé succinct des Travaux de Harrison et de Leroy dans la recherche des Longitudes en Mer, et des épreuves faites de leurs ouvrages,' 4to, 1767. This work raised a controversy between him and Fleurieu. Pierre Leroy died at Vitry, near Paris, in 1785.

LEROY, CHARLES, son and brother of the preceding, was born in Paris in 1726. After graduating in medicine he went to Italy, and observed the phenomena of asphyxia, due to the escape of carbonic acid gas in the Grotto del Cane, near Naples; and also the phenomena of the phosphorescence of the waters of the Mediterranean. He became one of the medical professors at Montpellier, where he made some important experiments "on the elevation and suspension of water in the air, and on dew." He first drew the conclusion that the quantity of moisture in the air is dependent on the temperature, and he was also the first to show the method of determining "the dew-point," a method adopted by Dalton in 1801 and usually assigned to him. A full account of his experiments, which were published in the 'Mémoires de l'Académie Royale des Sciences' for 1752, is given by Mr. Tomlinson in his 'History of the Modern Theory of Dew' ('Experimental Essays,' published in Weale's Series). Leroy returned to Paris in 1777, and acquired a high position as a physician. He also wrote 'On Mineral Waters,' on 'The Organ of Hearing,' and on various subjects connected with his profession. He collected his principal essays in a small volume entitled 'Mélanges de Physique, de Chimie, et de Médecine,' 1781. He died at Paris, December 12, 1779.

LESCHENAULT DE LA TOUR, JEAN BAPTISTE LOUIS CLAUDE THÉODORE, traveller and naturalist, was born at Châlon-sur-Saône, November 13th, 1773. In early life he was employed by the military transport department; but, in 1800, he entered upon an entirely new career. All his leisure moments had been given to the study of natural history, and in the year mentioned he was in Paris, arranging the affairs of his family, when he became acquainted with the leading scientific men of that city. At this period a government expedition was being prepared, under the direction of Capt. Baudin; and Leschenault was offered the post of chief botanist. The expedition left Havre in October, 1800. At Timor, which was reached in 1803, he fell ill, and was left behind. After staying there a few months, he went to Java; but, owing to his being unable to obtain a passage home, he was compelled to reside in the island for three years. This time was spent in carefully exploring the island, and forming collections of its natural products. As the island had never been examined before by a naturalist, he succeeded in bringing together a great number of new species, both of animals and plants, as also in collecting the materials for a Malay dictionary, which was written, but only published in part. From 1807 to 1816 he resided in France, and was engaged partly in publishing the results of his observations in Java and elsewhere, partly in fulfilling the office of inspector of merino sheep. In May, 1816, he was nominated naturalist of the French possessions in India. He examined Pondicherry, the Ghauts, Tranquebar, Ceylon, and other parts of India, with a view to ascertaining the climate and resources of each district, and introducing useful plants and animals from one region to another. The same objects also occupied his attention during his visit to South America and the Isle of Bourbon, in 1821 and 1822. In 1824 he returned to France, to seek the repose which the bad state of his health demanded, and on March 14th, 1826, he died in the midst of his family, at Paris. He introduced a large number of useful species of plants into the French colonies: thus, Bourbon received more than a hundred, amongst which may be mentioned the cinnamon-plant, *Panicum alisissimum*, two species of sugar-cane, six species of cotton-plant, and the sandal-wood tree. He also introduced the Indian sheep and other animals into the same island. A large number of the animals exhibited at the Jardin des Plantes were procured and sent home by him. He wrote a few papers, mostly relating to the useful plants of the countries visited by him, and to the mode of cultivating them. One is an account of the species of *Strychnos* and *Antiaris*, from which the natives of Java obtain the poison with which they tip their arrows.

LESLIE, CHARLES ROBERT, R.A. [E. C. vol. iii. col. 863]. Mr. Leslie was in declining health when the memoir just referred to was published, but he continued to use his pencil almost to the last. The Royal Academy Exhibition of 1858 contained

'Christ rebuking His Disciples,' by him; and that of 1859, 'Jeannie Deans and Queen Caroline' and 'Hotspur and Lady Percy,' works which displayed but too evident marks of failing powers. But already the hand of death was upon him, and, the day after the opening of the Exhibition, he expired in the midst of his family, and surrounded by his pictures, May 5, 1859, in the 65th year of his age. The 'Autobiographical Recollections of the late Charles Robert Leslie, R.A.,' with selections from his correspondence and a prefatory essay by the editor, was published in 2 vols. 8vo, 1860, under the care of Mr. Tom Taylor; who has since completed and published the 'Life of Sir Joshua Reynolds,' with which Leslie had made some progress: but the book, as might be expected from its origin, is of a somewhat hybrid character, and of little substantial value. The nation possesses no fewer than twenty-seven paintings by Leslie—three in the National Gallery and twenty-four in the South Kensington Museum; but three of them are replicas of 'Uncle Toby and the Widow Wadman,'—he having yielded too much to the bad habit of repeating popular productions. Mr. Leslie's son—

*GEORGE DUNLOP LESLIE, A.R.A., born July 2, 1835, has also attained distinction as a painter. His manner, however, owes more to the pre-Raphaelite influence than to that of his father. His pictures are very varied in subject and to some extent in treatment, carefully studied, and show, year by year, increase of knowledge and power. Among his later works may be named, 'Home News,' 1868; 'Celia's Arbour,' 1869; 'Fortune,' 1870; and 'Nausicaa and her Maids,' 1871. Mr. G. D. Leslie was elected associate of the Royal Academy in January, 1868.

*LESLIE, HENRY DAVID, musical composer, was born in London, June 18th, 1822. He completed his musical studies under Mr. Lucas, afterwards principal of the Royal Academy of Music. In 1847 Mr. Leslie became honorary secretary of the Amateur Musical Society of London, of which he was conductor from 1855 till its close in 1861. In 1856 he founded the Choral Society popularly known as 'Leslie's Choir,' a body which has been the means of establishing a system of choral singing more exact, discriminating, and delicate than had before been heard in England. In 1864 he was appointed principal of a new establishment, called the College of Music, something on the plan of the Conservatoire de Musique at Paris. Mr. Leslie's compositions are numerous, comprising a large number of songs and vocal pieces, stringed quartettes and trios, and pianoforte compositions, besides single works of larger character, of which the following may be enumerated:—A Te Deum, and a Jubilate in D, in 1841; an Orchestral Symphony in F, in 1847; a Festival Cantata, 'Let God Arise,' for solos, chorus, and orchestra, in 1847; 'The Templar,' a dramatic overture, in 1852; 'Immanuel,' an oratorio, in 1853; 'Romance, or Bold Dick Turpin,' an operetta, in 1857; 'Judith,' an oratorio, in the same year; 'I will extol Thee,' a motet, 1859; 'Holyrood,' a cantata, in 1860; 'The Daughter of the Isles,' a wedding cantata, in 1861; 'The Olive Branch,' a Collection of original tunes adapted to Psalms and Hymns for congregational use, in 1866. In the following year Mr. Leslie edited Cassell's 'Choral Music,' including some original compositions by himself.

*LESSEPS, FERDINAND, VICOMTE DE, designer of the Suez Canal, was born at Versailles, November 19th, 1805. The early part of his career was associated closely with diplomacy. In 1825 he was attaché to the French consulate at Lisbon; in 1827 he filled for a few months a post in the Foreign Office at Paris; in 1828 he was assistant consul at Tunis; and in the following year, when Algiers was captured, he negotiated the surrender of the province of Constantine to General Clausel. He was French vice-consul in Egypt in 1831 and 1832; consul of the second class at Cairo in 1833, in which post he assisted in maintaining peace between Mehemet Ali and the Sultan, at the time of the Syrian expedition; and consul in later years at Rotterdam, Malaga, and Barcelona, from 1838 to 1842. During the Carlist insurrection at Barcelona in the last-named year, he rendered much service to the young Queen's government, and to several foreign governments represented at her court. During the revolution of 1848 he was recalled to Paris; but represented France again as consul at Madrid in the same year, and at Rome in 1849. At length commenced the course of events which has given him his European celebrity. In 1854 Saïd Pasha, Viceroy of Egypt, invited M. de Lesseps to Cairo. The latter gradually developed and explained to the pasha a great scheme for constructing a ship canal across the Isthmus of Suez, embodying his views in a pamphlet, 'Perçement de l'Isthme de Suez, exposé et documents officiels.' Various schemes had been brought forward by French engineers, having this end in

view, since the expedition of the first Napoleon to Egypt; but the plan had come much more in favour in 1847 than ever before, owing to the ascertainment of the fact that the Mediterranean and Red Seas have almost exactly the same water level, which was determined by actual levelling by four engineers, Mr. Robert Stephenson, M. Talabot, M. Negretti, and Linant Bey. M. Talabot proposed a scheme to the pasha, but that of M. de Lesseps obtained the preference. Great difficulties had, however, to be surmounted, arising in part from the openly declared distrust of the plan on engineering grounds by Mr. Stephenson, and the opposition of Lord Palmerston on political grounds. M. de Lesseps succeeded at length in forming a company, with a subscribed capital of 200 million francs; and the canal was commenced in 1859. In 1863 the death of Saïd Pasha gave a temporary check to the work; and a difficulty also arose from the fact that the fellahs, who had laboured as canal-diggers for very small wages, were tempted away by the new Viceroy, Ismail Pasha, to work at his cotton-plantations, at a time when the American civil war had rendered cotton crops exceedingly profitable. Disputes arose between the pasha and the company, but these were settled in 1864 by the Emperor Napoleon as arbitrator. The works were continued: a narrow freshwater channel was carried across the isthmus by 1865; a small vessel steamed from sea to sea by 1867; while in 1869 M. de Lesseps had the satisfaction of bringing nearly to a completion a ship canal 100 miles long, 327 feet wide at the surface of the water, 72 feet wide at the bottom, and 26 feet deep. The inauguration of the canal, on the 20th of November, 1869, was made an affair of great ceremonial by the pasha. Five days afterwards, M. de Lesseps married Mademoiselle Autard de Bragard, at Ismailia, his newly-created city on the banks of the canal. He has published numerous documents, notes, reports, &c., and has taken part in various discussions and meetings concerning the canal. On the day of the inauguration he received the grand cross of the Legion of Honour, and was soon afterwards ennobled. He has also received honours from the sultan and the pasha, and the grand cross of the Star of India; and on July 14, 1870, the corporation of the City of London resolved "That the freedom of this city, in a gold box, be presented to M. de Lesseps for his skill in designing, and indomitable energy and perseverance in carrying to a successful completion, the Suez Canal."

LESSON, RENÉ PRIMEVÈRE, French naturalist, was born near Rochefort, March 20, 1794. He was educated at the naval medical school of Rochefort, and on leaving it entered the French navy. In 1816 he was attached to the expedition round the world under Duperrey, of which he became the chief medical officer and naturalist. He sent a large number of new species of animals of all classes to the Museum of Natural History at Paris, and made drawings and paintings of the fishes and mollusca in order to preserve details respecting the evanescent characters of these beings. He also made some valuable observations on the geology of Peru, Chili, the Blue Mountains of Australia, and of many of the islands in the Pacific. On his return to France he was busily occupied in assisting in preparing the report on the voyage, in completing his education, and in contributing to various scientific periodicals. At a later period he returned to Rochefort, as professor of chemistry at the School of Medicine in that town, where he died, April 28, 1849. He wrote a large number of books and papers; but those on which his reputation is mainly based are the volumes illustrating the zoology in the account of the scientific expedition of Duperrey in the 'La Coquille,' and the illustrated works on the humming-birds, birds of paradise, &c. He drew up numerous manuals of various branches of zoology, some of which, as the 'Histoire naturelle des Zoophytes Acalèphes,' 8vo, Paris, 1843, form a continuation to Buffon's great work on natural history, while others form part of the Roret encyclopædic series of works. He also published a flora of the Rochefort district, and contributed largely to the 'Dictionnaire des Sciences Naturelles' and to the 'Dictionnaire classique d'Histoire Naturelle.'

LESUEUR, CHARLES ALEXANDRE, zoologist, was born at Havre, January 1, 1778. About the commencement of the present century, the French government resolved to organize a voyage of discovery which should eclipse all that had previously been done by other nations. Lesueur offered his services, which were accepted. In October, 1800, the expedition, comprising the 'Géographe' and 'Naturaliste,' under the command of Capt. Baudin, left Havre. Amongst the scientific staff was François Péron, with whom Lesueur formed a close friend-

ship, and with whom he agreed to work in concert. Lesueur was at first in a very subordinate capacity, and in no way connected with the scientific staff. He had acquired great skill in drawing, and the sketches which he made of the mollusca and zoophytes caused Capt. Baudin to remove him from the crew and assign him a special post as zoological artist. Owing to the behaviour of Baudin, and to disease, the scientific members were soon greatly reduced in numbers. Péron was the only one of five zoologists left; but Lesueur proved a useful coadjutor to him. The two sent home upwards of 100,000 zoological specimens, amongst which were more than 2500 new species. Péron described many of the forms, while Lesueur supplied the drawings, which are amongst the finest of their kind for accuracy. The government ordered Péron to publish a narrative of the voyage. Péron's death caused a temporary interruption in the work, which was resumed by Freycinet. It is entitled 'Voyage de Découvertes aux Terres Australes,' 5 vols. 4to, 1807-16. Most of the figures in it were contributed by Lesueur. In 1815 Lesueur accompanied Mr. William Maclure as travelling companion to the West Indies and the United States. He resided at Philadelphia for nine years, and obtained a considerable income by teaching natural-history painting. During this residence, he projected and made preparations for a work on the fishes of the United States. In 1837 he returned to France. In 1845 he became the curator of the Museum of Natural History at Havre; but he occupied the post a short time only, owing to his death on December 12, 1846. He wrote numerous papers, either alone or in conjunction with Péron, chiefly consisting of descriptions of molluscs and fishes. The friends had projected a work, of which a programme was issued, under the title of 'Histoire générale et particulière de tous les Animaux qui composent la famille des Méduses,' 4to, 1809, which would probably have been their best production; but it was never published. Lesueur left a large collection of drawings of various objects, chiefly zoological, some published, but many not published.

LE SUEUR, EUSTACHE [SUEUR, EUSTACHE, LE, E. C. vol. v. col. 811].

LETHIÈRE, GUILLAUME-GUILLON, French historical painter, was born at Ste. Anne, Guadeloupe, January 10, 1760. In 1774 he was sent to France, and in 1777 entered the École des Beaux-Arts, Paris, where, in 1786, he carried off the first prize, and with it admission as a student to the Academy at Rome. An ardent admirer and follower of David, he painted and sent to Paris a large picture of 'Brutus condemning his Son,' which was greatly applauded, and ordered to be placed in the Luxembourg. In 1792 he returned to Paris, and painted the 'Death of Cæsar,' and other classical subjects of a republican bearing, he having by this time become a strong politician. A friend of Lucien Bonaparte, and one of the most popular painters of the day, he was created knight of the Legion of Honour by Napoleon I., and made director of the Academy at Rome. On the Restoration he was disgraced. He came to London in 1816, and exhibited with great applause his pictures of 'Junius Brutus,' 'Homer reciting his Poetry,' and some smaller works. In 1818 he was elected a member of the Institute, and in 1819 appointed professor of painting. He died in Paris, April 21st, 1832. Lethière painted a large number of classical works much in the manner of David, some scriptural pieces, and some from French history. The Louvre contains two of his large classical pictures—'Brutus condemning his Son to Death' and the 'Death of Virginia.'

LETRONNE, JEAN ANTOINE, a French critic, archaeologist, and Hellenist, was born on the 25th January, 1787, at Paris, where his father, an engraver, who had designed him for an art career, had him educated at the École Polytechnique. The death of his father, in 1801, devolved upon him the support of his mother and younger brother, who were left entirely unprovided for. Letronne now worked arduously in various avocations, giving lessons in Latin, geography, and mathematics, and at the same time assisting M. Mentelle in various geographical compilations. He had soon realised enough to devote himself afresh, without distraction, to his studies, especially in Greek, which he cultivated with much success. His health having become impaired by his extreme application, he was glad, in October, 1810, to take advantage of an opportunity of making the tour of Southern France, Italy, and Switzerland. Returning to Paris in June, 1812, he made various suggestions for the correction of the texts of Thucydides, Plutarch, Pausanias, Eunapius, and others; and especially published, as his first work, an 'Essai critique sur la Typographie de Syracuse au Commencement du V^e Siècle, pour servir à l'Intelligence de quelques Auteurs

anciens, et faire suite aux Éditions et Traductions de Thucydide avec un Plan,' 8vo, Paris, 1813. To this, in the following year, succeeded his 'Recherches géographiques et critiques sur le Livre "De Mensurâ Orbis Terræ," composé en Irlande au commencement du IX^e Siècle, par Dieulieu, suivies du Texte restitué,' 8vo, Paris, 1814, the erudition of which, and of a critical article in the 'Mercure de France,' on Clavier's translation of Pausanias, procured Letronne's employment by the government, in 1815, to complete the translation of Strabo, commenced by Laporte-Dutheil, and his nomination, by royal ordinance, March 22nd, 1816, to the membership of the Académie des Inscriptions et Belles-Lettres. Other places of honour or responsibility succeeded this appointment: in 1817, he was made director of the École des Chartes; in 1819, inspector-general of the University; in 1832, keeper of antiquities in the Bibliothèque Royale, of which he subsequently became the principal director. In 1831 he became professor of history in the Collège de France, of which, in 1838 he was appointed administrator; and vacated his chair of history in order to accept that of archaeology, to which was added the keepership general of the archives of the kingdom. These offices and distinctions, increased as they were by the membership of several foreign academies and the decorations of various orders, caused no decline in the enthusiasm with which Letronne devoted himself to study and to literary production. He died at Paris, on the 14th of December, 1848, having illustrated many departments of learning by the versatility of his genius and attainment, the extent and accuracy of his information, the soundness of his judgment, and the clearness and conclusiveness of his reasoning.

The works of Letronne comprise, 'Cours élémentaire de Géographie ancienne et moderne, rédigé sur un nouveau Plan et accompagné d'une Planche de Cosmographie,' 27th edition, 'corrigée et considérablement augmentée, par M. Alexandre Bonneau,' 12mo, Paris, 1856; Spanish translation, from the 8th French edition, 'Curso elemental de Geografía antigua y moderna,' &c., 8vo, Paris, 1826; 'Fragments des Poèmes géographiques de Scymnus, de Chio, et du faux Dicéarque, restitués principalement d'après un Manuscrit de la Bibliothèque Royale, précédés d'Observations littéraires et critiques sur ces Fragments, sur Scylax, Marcien d'Héraclée, Isidore de Charax, le Stadiasme de la Méditerranée, pour servir de Suite et de Supplément à toutes les Éditions des petits Géographes grecs,' 8vo, Paris, 1840; 'Inscription grecque de Rosette. Texte et Traduction littérale, accompagnée d'un Commentaire critique, historique, et archéologique,' 8vo, Paris, 1840; 'Recueil des Inscriptions grecques et latines de l'Égypte, étudiées dans leur Rapport avec l'Histoire politique, l'Administration intérieure, les Institutions civiles et religieuses de ce Pays, depuis la Conquête d'Alexandre jusqu'à celle des Arabes,' 2 vols. 4to, Paris, 1842-48; 'Recherches critiques, historiques, et géographiques sur les Fragments d'Héron d'Alexandrie, ou du Système métrique Égyptien, considéré dans ses Bases, dans ses Rapports avec les Mesures itinéraires des Grecs et des Romains et dans les Modifications qu'il a subies depuis le Règne des Pharaons jusqu'à l'Invasion des Arabes,' 4to, Paris, 1851, a work of posthumous publication, produced so long before as 1818, when it had obtained the prize of the Académie des Inscriptions et Belles-Lettres. In addition to the foregoing, it may be mentioned that M. Letronne is the author of numerous contributions in critical philology and archæology to the leading French journals of literary and scientific societies, and other periodicals.

*LEUCKART, KARL GEORG FRIEDRICH RUDOLF, anatomist and physiologist, was born at Helmstedt, October 7th, 1823. From the gymnasium of his native town he went to the University of Göttingen, where he had for one of his masters the eminent physiologist, Rudolf Wagner, then at the head of the recently founded Physiological Institute. Leuckart's progress must have been remarkably rapid; for, in the year in which he left the university, he commenced publishing, in conjunction with Frey, a 'Lehrbuch der Anatomie der wirbellosen Thiere,' 8vo, Leipzig, 1843-1847. In 1845 he was appointed to a chair in the Physiological Institute. Some years after, he removed to Giessen, where he became, first, extraordinary professor of zoology (1850), and subsequently (1853) the professor of zoology and comparative anatomy. His attention has been mainly given to the lower classes of animals, whose life-history and development have been largely elucidated by him. He established the class *Celenterata*, pointed out the relation of the polymorphic forms amongst the *Siphonophora*, and the division of physiological labour prevalent in this group; and he has made important researches on the micropyle of the insect egg, the parthenogenesis of several species

of insects, viviparous development amongst cecidomyiæ larvæ, and on the parasitic class *Scolecida* or *Entozoa*. These researches are given in books and papers having the undermentioned titles, which comprise the more important of his literary productions:—‘Ueber den Polymorphismus der Individuen,’ 4to, Giessen, 1851; ‘Bau und Entwicklungsgeschichte der Pentastomen,’ 4to, Heidelberg, 1860; ‘Untersuchung über *Trichina spiralis*,’ 4to, Heidelberg, 1860; ‘Die Menschlichen Parasiten und die von ihnen herrührenden Krankheiten,’ 8vo, Heidelberg, vol. i. 1862; vol. ii. part i. 1867; part ii. 1868; ‘Zur Morphologie und Anatomie der Geschlechts-organe,’ in ‘Göttinger Studien’ for 1847, pp. 155–212; ‘Parasitismus und Parasiten,’ in Roser und Wunderlich’s ‘Archiv für physiologische Heilkunde,’ xi. pp. 199–259, 379–437 (1852); ‘Zur nähern Kenntniss der Siphonophoren von Nizza,’ in Wiegmann’s ‘Archiv für Naturgeschichte,’ xx. pp. 249–377 (1854); ‘Ueber die Micropyle und den feinern Bau der Schalenhaut bei den Insecteneiern,’ in Müller’s ‘Archiv für Anatomie, etc.’ for 1855, pp. 90–264; ‘Zur Kenntniss des Generations-wechsels und der Parthenogenesis bei den Insecten,’ in Moleschott’s ‘Untersuchungen zur Naturlehre des Menschen und der Thiere,’ iv. pp. 327–438 (1858); and the ‘Berichte über die wissenschaftliche Leistungen in der Naturgeschichte der niederen Thiere,’ for every year from 1848 to 1867. These last reports originally appeared in Wiegmann’s ‘Archiv,’ but have also been published separately. Each report averages upwards of one hundred pages. His work on human parasites is the most exhaustive account published of these organisms, but is at present unfinished.

LEWIS, SIR GEORGE CORNEWALL, BART. [E. C. vol. iii. col. 873]. Sir George Lewis resigned office, with the other members of Lord Palmerston’s ministry, in February 1858, and remained in opposition till the defeat of the administration of Lord Derby in April 1859. During his enforced leisure he seems, from his letters to his friends and contributions to ‘Notes and Queries,’ to have returned to literature with renewed interest. His separate publications were the essay on ‘The Characteristics of Federal, National, Provincial, and Municipal Government,’ 8vo, 1859; and a pamphlet ‘On Foreign Jurisdiction and the Extradition of Criminals.’ On Lord Palmerston’s return to power Lewis again became Chancellor of the Exchequer, but almost immediately after exchanged that post for the Home Office in order to make room for Mr. Gladstone, who stipulated for the Exchequer as the condition of his joining the ministry. Sir George Lewis remained Secretary of State for Home Affairs, without particularly distinguishing himself in the office, till the state of Mr. Sidney Herbert’s health rendered his resignation of the War Office imperative, when Sir George Lewis was induced to accept that office, in lieu of the Home Secretaryship. He continued Secretary for War from July, 1861, till his death, which occurred somewhat unexpectedly on the 13th of April, 1863, at his seat, Harpton, Radnorshire, where he had gone to spend the Easter holidays. Sir George Lewis was, at his decease, within a few days of completing his 57th year, he having been born on the 21st of April, 1806. Besides the works already mentioned, Sir George Lewis published ‘The Fables of Bæbius’ in two parts, 1860, &c.; an ‘Historical Survey of the Astronomy of the Ancients,’ 8vo, 1862, in which he assailed the conclusions of recent writers on Egyptian and Assyrian chronology; and ‘A Dialogue on the Best Form of Government,’ 1863. His papers in the ‘Edinburgh Review,’ on the chief ministerial combinations from 1783 to 1830, have been collected and published by Sir Edmund Head under the title, ‘Essays on the Administrations of Great Britain;’ and his correspondence has been published by his brother, the Rev. Sir Gilbert Frankland Lewis, as ‘Letters of the Right Hon. Sir George Cornewall Lewis, Bart., to various Friends,’ 1 vol. 8vo, 1870.

LADY THERESA LEWIS survived her husband little more than two years, dying on the 6th of November, 1865. Besides the ‘Sketches of the Contemporaries of Lord Chancellor Clarendon,’ mentioned in the original notice of Sir George Lewis, she edited the ‘Memoirs of Miss Berry,’ and two novels, ‘The Semi-detached House’ and ‘The Semi-attached Couple.’

* LEWIS, JOHN FREDERICK, R.A. [E. C. vol. iii. col. 874]. In the memoir just cited it was mentioned that Mr. Lewis had begun to paint in oil, and had already, in two successive years, sent a couple of elaborate pictures painted in that material to the exhibition of the Royal Academy. By this time he had in fact decided to abandon water-colour for oil-painting as his professional practice. He accordingly resigned his office of president of the Society of Painters in Water Colours in 1858, and in the following summer was elected an associate of the

Royal Academy, and in 1865 an academician. His oil-paintings, as exhibited at the Academy, have continued to be distinguished by the characteristics of his earlier water-colour pictures of oriental subjects, namely, extraordinary minuteness of detail, remarkable richness of colour, and brilliant sunlight effects. Nor has the class of subjects changed materially: ‘An Intercepted Correspondence, Cairo;’ ‘The Money-Changer: a scene in a Cairo Bazaar;’ ‘Interior of a Royal Tomb, Brussa;’ ‘Temple of Com-Ombos, Upper Egypt;’ ‘A Lady, Constantinople,’ and the like, affording scope for those combinations of quaint oriental architecture, character, and costume with which his name is so intimately associated.

LEYBOLD, KARL, German painter, was born at Stuttgart, March 29, 1786. He was instructed in the rudiments of art by his father, Johann Friedrich Leybold (born at Stuttgart in 1755, died 1838), a clever miniature-painter, engraver to the court, and professor of engraving in the Imperial Academy of Vienna. Karl Leybold accompanied his father to Vienna in 1799; became a student in the Academy, and painted some classic subjects and landscapes. In 1807 he went to Rome, where he directed his attention chiefly to historical painting. Returning to Stuttgart, he acquired a high reputation for his portraits, was appointed in 1829 professor in the Art-Academy, and in 1841 director of the Gallery of Paintings, which offices he held till his death, July 20th, 1844. Karl Leybold executed numerous paintings and drawings of historical and mythological subjects, and some pieces of a humorous kind, as well as many portraits.

LEYS, BARON JAN AUGUSTE HENRI, an eminent Belgian painter, was born at Antwerp, February the 18th, 1815. He was educated at first for the priesthood, but at the age of 15 entered the atelier of his relative, M. de Braekeleer, devoted himself with ardour to painting, and exhibited with marked success his first picture, a ‘Combat between a Grenadier and a Cossack,’ at the Antwerp Salon in 1833. In order to complete his artistic education, he visited Holland and France, and carefully studied the current practice and development of painting in those countries. His progress was zealously encouraged by M. Couteaux, who gave him commissions for numerous important pictures. From this time M. Leys selected his subjects either from early Belgian history or incidents of general interest, and gradually evolved a style of a distinctively national yet personal character. Selecting by preference events of the fifteenth and sixteenth centuries, and often of a somewhat familiar kind, he filled his canvases with a crowd of small figures, quaint in costume and hard and homely in feature, singularly like in general appearance to those of Van Eyck and Memling, yet never borrowed and varied as in actual life, and placed them in the streets of an old Belgian or German town, the houses and local surroundings being rendered with rare and minute fidelity, yet seldom obtrusively. Hence his pictures presented, at a first glance, a somewhat dry and unattractive air of mediævalism; but it was soon seen that, whilst costumes, buildings, and accessories were represented with the truth of an archæologist, they were felt by the painter to be subsidiary to the human interest, and were kept strictly subordinate; and whilst there was no attempt at rendering any conventional beauty of form or feature more conspicuous than it would have been likely to be in reality, the scene itself was depicted with dramatic force and feeling, and passages of exquisite tenderness and humour revealed themselves as the work was studied. And the pictorial art was as remarkable as the conception. Whilst the scene represented the most ordinary open-air aspect, the management of the light and shadow was in reality of the most refined and subtle order, and the subdued, almost sombre, colouring was as masterly as it was unpretentious and unforced.

At the Paris International Exhibition of 1855 a selection from M. Leys’ pictures, including his ‘Trentaine de Bertal de Haze,’ ‘Promenade hors des Murs,’ and ‘Le Nouvel An en Flandre,’ excited the liveliest interest, and won for the artist one of the grand medals, a circumstance which so delighted his countrymen that on his return to Belgium he received a most distinguished reception. The London International Exhibition of 1862 contained a far finer and more characteristic series of his works—‘The Institution of the Golden Fleece, January 10, 1429—the Oath;’ ‘Margaret of Austria receiving the Oaths of the Archers of Antwerp;’ ‘Publication of the Edict of Charles V. in 1550, introducing the Inquisition into the Netherlands;’ ‘Young Luther singing Hymns in the streets of Eisenach;’ a wonderfully life-like and pleasing work; ‘Roman Catholic Women;’ ‘Copies from Frescoes in the Dining-Room of M. Couteaux at Antwerp:—Guests going to a Feast; Departure and Entering the Town;’

Arrival and Reception; Preparations for the Festival.' But M. Leys' noblest works are those he executed for his native town. The success of the frescoes executed by him in M. Couteaux's house suggested the propriety of adorning in a similar manner one of the chief rooms (now called the Salle Leys) in the magnificent Hôtel de Ville. The municipal authorities offered M. Leys the commission to paint in fresco the events which illustrated the achievement of "the great principles of liberty inscribed in our ancient and glorious communal charters," and the protection and culture of literature and the arts. M. Leys gave himself with enthusiasm to the task: the selection of the historical subjects was entrusted to M. Genard, and some of the most accomplished artists in their several lines were engaged to execute the architectural and decorative portions under the direction of M. Leys. The work occupied M. Leys the last six or seven years of his life, and was hardly completed at his death, which occurred unexpectedly, though he had been for some time out of health, in August, 1869, in his 55th year. M. Leys was made officer of the Order of Leopold in 1840, and commander in 1851; and in recognition of the great merit of his municipal pictures, was created a baron by Leopold II. Several of his works are in the collection of the King of Belgium, the Emperor of Russia, and other sovereigns and princes, and some are in private collections in England; but the larger number belong to M. Auguste Couteaux.

L'HÔPITAL, GUILLAUME F. A., MARQUIS DE [HÔPITAL, G. F. A., MARQUIS DE L', E. C. vol. iii. col. 484].

L'HÔPITAL, MICHEL DE [HÔPITAL, MICHEL DE L', E. C. vol. iii. col. 484].

LIBRI, GIROLAMO DAI, an early Italian painter, was born at Verona in 1472. The son and pupil of Francesco dai Libri, a skilful miniaturist, he practised at first the illumination of manuscripts, in which he was considered to excel all his contemporaries; but he later painted many pictures for churches, though in them he retained much of the old, hard, dry manner of the illuminations. The churches of Verona contain his best known pictures, the most famous being that of the 'Madonna Enthroned,' dated 1526, in the church of San Giorgio Maggiore. Our own National Gallery possesses a 'Madonna, Infant Christ, and St. Anne' (No. 748), which was formerly in the church of Sta. Maria della Scala, Verona. Girolamo dai Libri died at Verona on the 2nd of July, 1555.

LIGORIO, PIRRO, Italian painter and architect, was born in Naples about 1498. He went to Rome, and is said to have studied under Giulio Romano. He painted a fresco of the 'Feast of Herod' in the oratory of S. Giovanni Decollato, which was much admired, and several façades, but gave his attention more to the study of antiquities and architecture. By Pope Paul IV., with whom he was much in favour, he was employed to erect a small palace in the Belvedere wood, and a mausoleum for Pope Pius II., and was appointed architect to St. Peter's. In this last office he greatly annoyed Michael Angelo, and was eventually dismissed, "with little honour," says Vasari, by Pius V. for altering the designs of the great Florentine. He repaired to Ferrara, where he was employed as engineer by Duke Alfonso II. He made a vast collection of drawings and notes on architectural remains in 34 folio volumes, which, after some vicissitudes, were purchased for the royal collection, Turin. A selection from these, relating to Rome, has been published—'Delle Antichità à Rome,' Venice, 1653. Ligorio also prepared a plan in relief of ancient Rome, and a restoration of the Hadrian Villa, which was published by F. Conti in 1751. Ligorio died at Ferrara about 1580.

LIMOSIN, or LIMOUSIN, LÉONARD, a famous French painter on enamel, was born at Limoges about 1505. Nothing is known of his early career. He was placed at the head of the royal enamel manufactory at Limoges by Francis I., and painted a large number of works for that monarch. Under him the manufacture obtained an unparalleled celebrity, and Léonard was pronounced the most excellent workman in the world. In Léonard's hands the art of enamelling assumed an entirely new phase. Instead of confining the enamel within comparatively narrow limits, as in the Byzantine, champlevé, and early Italian methods, he spread an opaque paste over the entire surface of the metal, and upon this painted his subjects, religious and mythological pieces and portraits, in transparent colours with almost the freedom of an artist painting in oil-colours on a panel. The novelty no less than the splendour of his productions caused them to be eagerly sought after, and a vase or plaque of Léonard's painting was esteemed a present worthy of a prince. Even now a genuine work of his is regarded as a prize for either a public or

private collection. Among the most famous of Léonard Limosin's works are the series of large mythological subjects, a part of the decorations of Francis's château of Madrid; the four large plaques executed for the tomb of Diana of Poitiers; and a series of plaques executed for Henri I., and now in the Louvre. The South Kensington Museum contains several undoubted specimens by him, some of them signed, and two dated 1539. They afford good illustrations of his style and range of subjects: thus one large plaque has a representation of a 'Banquet of the Gods'; others 'Cupid and Psyche,' the 'Laocoon,' and other mythological subjects; whilst one very fine plaque has 'The Crucifixion' beautifully painted, another a St. Barbara. For one of the specimens, a small ewer and dish, the museum authorities gave 400*l*. Léonard was in the habit of adopting the designs of Leonardo da Vinci, Raffaele, Giulio Romano, Primaticcio, Jean Cousin, and other celebrated painters; but he treated them with great freedom, and the colour was for the most part wholly his own, and very brilliant. Léonard is believed to have died about 1580: his dated works range from 1532 to 1574. In the Limoges town-hall are some oil paintings attributed to him. His son, François Limosin, was also a good artist, though not equal to his father: some of his enamels are in the South Kensington Museum.

LINCOLN, ABRAHAM, sixteenth president of the United States of America, was born in Hardin county, Kentucky, February 17th, 1809. His mother, the widow of a poor farmer, migrated with her young family in 1816 to Spencer county, Indiana; and there Abraham, from his seventh to his twenty-first year, spent an active and laborious life. He was in succession a farm-labourer, a woodcutter, and a boatman on the Wabash and the Mississippi; receiving only a few months of school education. In 1830 he removed into the state of Illinois, where he worked as a field-labourer, then served as a shopman, and then volunteered into a regiment engaged in war with the Indians. One of his occupations, that of woodcutter or rail-splitter, brought him local celebrity, he and one companion having split 3000 rails in a day.

Settling at Springfield in 1832, he became a member of the legislature of Illinois in the following year, and retained his seat during four sessions. Gradually abandoning mechanical labour, he practised as a land-surveyor, and then studied the law, to the practice of which he was admitted in 1836. He became a successful advocate at the bar, and at the same time an active member of the Whig party in politics. In 1844 he supported the candidature of Henry Clay for the presidency; although this failed, the movement placed Mr. Lincoln in favour, and led to his election to Congress in 1846. The part he took in the abolitionist struggle was so decided, especially in opposition to the extension of slavery in newly formed states and territories, that he gradually assumed a leading position. He opposed the war with Mexico as unconstitutional. From 1849 to 1854 he confined his attention chiefly to legal practice; but in the last-named year he was chosen leader of the newly formed Republican or Northern party, in opposition to the Democrat or Southern party. He was defeated in a contest for admission into the Senate in 1855; in 1856 he supported the candidature of Fremont for president, against Buchanan; and in 1858 he was again unsuccessful in an election as senator for Illinois, Mr. Douglas and "squatter sovereignty" polling more votes than Mr. Lincoln and "anti-slavery." It was his fortune to become president without filling the intermediate post of senator.

In 1860 the Chicago Convention selected Mr. Lincoln instead of Mr. Seward as Republican candidate for the presidency; and he won the victory, defeating three other candidates, Douglas, Breckinridge, and Bell. His success so exasperated the slave states (which had all voted against him) that a movement was at once commenced to secede from the Union, with a determination to wage war if the right of secession were denied. Between the time of his election (November, 1860) and his entrance upon the duties of his office (March, 1861), six states had seceded from the Union, and the Confederate government for the south had been formed. Mr. Lincoln himself was never bitter in his political battles. When a deputation of 'Wideawakes' came to congratulate him on his election he said, "I rejoice with you in the success which has so far attended the Republican cause. Yet in all our rejoicings let us neither express nor cherish any harsh feelings towards any citizen who by his vote has differed from us." The remainder of his life was bound up with four years of civil war. In his first presidential address he declared that he had neither the right nor the inclination to interfere, directly or indirectly, with the maintenance of slavery in the states where it already existed; his duty would be to prevent

the spread of slavery to other states, and to forbid the secession of any states from the Union. When Fort Sumter was captured by the Confederates, April 11th, he called for 75,000 volunteers. When they took the United States arsenal at Harper's Ferry, and defeated the United States Volunteers at Bull Run, he asked the sanction of Congress to raise an army of 500,000 men; and by December, 1861, he had more than 600,000 troops in the field. In that month he had to decide the delicate 'Trent' affair: his officers had forcibly removed Messrs. Slidell and Mason, two Confederate commissioners, from an English mail steamer, and had made them prisoners; he admitted that the act was unjustifiable, released them, and thus got rid of the danger of hostilities with England. During the military operations of 1862—in which McClellan, Banks, Pope, Burnside, and Rosecranz contended with Lee, Stonewall Jackson, Bragg, and other Confederates—the Federals lost so greatly that the president called for 300,000 more men in July, and another 300,000 in August.

President Lincoln was authorised by Congress to abolish slavery in the district of Columbia, to prohibit it in the territories, to compensate the slave-owners in any state that would abolish slavery, to employ negroes in the Federal army, to confiscate the slaves of rebels, and at length to proclaim the freedom of all slaves in all the states. This last-named decisive step was adopted by Lincoln as a military necessity: he would have avoided interference with slavery in the Southern States if he could have preserved the Union without it. In 1863 the president was incessantly engaged in supplying men, money, arms, food, and equipments to the armies engaged in the struggle at the Potomac, the Rappahannock, the Rapidan, Chancellorsville, Gettysburg, Vicksburg, Charleston, Chattanooga, and Chickamauga. In 1864, by the appointment of General Grant as commander-in-chief, the president strengthened the fortunes of the Union; in the month of March he had 1,000,000 men in arms; and the greatest battles and the finest generalship on both sides belonged to this year.

Early in 1865 he called out another 500,000 men; but he did not live to witness the end of the war. Elected a second time to the presidency, he made his second inaugural address in March, 1865; but on April 14th, while attending a theatre in Washington, he was assassinated by John Wilkes Booth, an actor. The Federal politicians made a strong attempt to connect President Davis and other leading Southerners with this crime; but the charge entirely failed in evidence. The assassination of President Lincoln created a profound sensation throughout the Union. The assassin escaped for the time, but was hunted down, and, refusing to surrender, received some wounds which proved mortal. Every honour was paid to the memory of the president. In July, 1870, a bill passed both Houses of Congress giving to his widow an annual pension of 3000 dollars.

President Lincoln, a gaunt, wiry, hard-featured man (exceeding six feet three inches in height), was kind and genial by nature; and was much liked by those with whom he had personal relations: as a statesman his ultimate rank will not be very high. The exciting events of his presidency have led to the publication of a very large number of books and pamphlets concerning him. A few of these are political squibs and satires: such as 'Old Abe,' the 'Lincoln Catechism,' 'Abraham Africanus I.,' and 'Revelations according to Abraham.' But by far the larger portion are eulogistic, under the various forms of Memoirs, Sketches, Services, Notes, Reminiscences, Speeches, Addresses, Proclamations, Letters, Odes, Monodies, &c. The titles of these publications need not be given in detail; but among the authors may be named Bancroft, Ludlow, Arnaud, Eddy, Harding, Krauth, Bacon, Poore, Benjamin, Townsend, Sarmiento, Barrett, Holland, Stone, Arnold, Thayer, Crosby, Manoel, Everest, Perkins, Sturz, Badger, Hoffmann, Raymond, Carpenter, Jermon, Lowe, Topham, Fougues, Stoddart, Gaddis, Saredo, Hall, Naton, Pascal, and Newell.

LINDENSCHMIDT, WILHELM, German historical painter, was born at Mainz in 1806. He received a good classical education in the gymnasium of his native city, and learned the rudiments of design from his father, Johann Lindenschmidt, a medalist of reputation. In 1823 he entered the Art Academy of Munich, and in the following year that of Vienna. At first he painted classical and religious subjects, the latter in the manner of Cornelius, at whose recommendation he was employed by the crown-prince Ludwig to paint some of the frescoes in the arcades of the Hofgarten, Munich. He also painted, 1829–31, a large battle-piece in fresco representing the 'Peasants beating off the Austrians in 1704' on the exterior of the church at Sindling, by

Munich, which was lithographed by Hohe. Other important works which he executed for Ludwig I. were several frescoes in the interior of the royal palace; in the loggia of the Pinacothek; and a series of subjects from early Saxon history in the halls of the castle of Hohenschwangau. His later pictures, whether in fresco or oil, were mostly taken from early German history; but he also painted many religious subjects. He died at Frankfurt-am-Main in 1847.

LINDLEY, JOHN [E. C. vol. iii. col. 891]. This eminent botanist died of apoplexy at his residence, Back Common, Turnham Green, November 1, 1865.

LINDPAINTNER, PETER JOSEF, a German musical composer, was born at Coblenz, December 8th, 1791. His father, who was a musician, had him instructed in the violin, the piano-forte, and the theory of harmony, by Plödtler, Witzka, Winter, and Gratz. He early tried his skill in composition, producing his opera of 'Demophon,' a mass, and a Te Deum, before his 21st year. In 1812 he became chief of the orchestra at the Royal Theatre of Munich; but he also continued a course of study in certain styles of monastic and church music. In 1819 he was appointed director of the Chapel Royal at Stuttgart, which post he occupied until his death. During a period of somewhat over forty years, he composed about twenty operas, six ballets, four musical melodramas, the oratorio of 'Der Jüngling von Nain,' the oratorio of 'Abraham,' four masses, a funeral march, a 'Te Deum,' several motetts and psalms, and new instrumental accompaniments to Handel's 'Judas Maccabeus.' His best opera is 'Der Vampyr,' and the best ballet (in regard to the music) 'Joko.' Lindpaintner's instrumental compositions are numerous and varied, comprising pianoforte and violin solos, stringed trios and quartettes, concertos, and orchestral symphonies. His vocal pieces comprise songs, chants, part songs, and choruses, many of which are popular in Germany. In 1852 he directed the Philharmonic Concerts, London; and in 1853 composed his last opera, 'Les Corsets.' He died August 21st, 1856.

LINGELBACH, JOHANNES, a celebrated painter of the Dutch school, was born at Frankfurt-am-Main in 1625. Whilst quite young he went to Amsterdam, and after studying there some time proceeded to Paris, where for two years he was diligently occupied in the study and practice of painting. He then went to Italy, where he stayed six years. In 1650 he returned and settled in Amsterdam, in which city he died in 1687. Lingelbach imitated the manner of Wynants and Wouvermans; but his execution is less masterly, and his colouring colder. He is in fact one of the painters whose style marks the incipient stage of the decline of painting in Holland. His most successful pictures are views of Italian and Dutch sea-ports, in which he introduces numerous small figures busily employed. He also painted markets, fairs, scenes of the carnival, with much skill and a strong sense of humour. His small figures and animals were much admired, and he was occasionally induced to paint them in the landscapes of Wynants and other contemporaries. There are a few clever etchings by him.

LIOTARD, JEAN ÉTIENNE, miniature painter, was born at Geneva in 1702. He was designed for a mercantile calling; but a copy which he made of a miniature by Petitôt was so much admired, that he was permitted to pursue his inclination for art. In 1725 he went to Paris, where he met with much success. In 1738 he proceeded to Rome, whence he accompanied Lords Sandwich and Bessborough to Constantinople, and from there, by the advice of the British ambassador, he came on to London. At Constantinople he had assumed the Turkish custom, and suffered his beard to grow "down to his girdle," and the novelty of his appearance, "and his extravagant prices," says Walpole, conduced as much as his talent to the popularity of 'the Turk,' as he was commonly called. He stayed in London two years, and executed a large number of portraits in miniature, and crayons of members of the fashionable circles. In 1772 he revisited England, and again stayed a couple of years. This time he brought over a collection of pictures which he sold by auction, but he also diligently employed his pencil. He retired to his native place in 1776, and died there in 1790. Liotard's likenesses were pronounced faithful; they are hard, minute, and seldom flattering. In his English miniatures he frequently affects a Turkish costume. He etched a portrait of himself in a Turkish habit, and a few other heads. He also executed some enamels. A twin-brother, JEAN MICHEL LIOTARD (died about 1760), was an engraver of some ability; he was a pupil of B. Audran, and resided for several years at Venice.

* LIOUVILLE, JOSEPH, a French mathematician and astronomer, was born at St. Omer, March 24th, 1809. He

studied at the École Polytechnique, 1825 to 1827, and there acquired a knowledge of mathematics, which qualified him to fill various posts in after-life, at l'École des Ponts et Chaussées, l'École Polytechnique, the College of France, and the Faculty of Sciences. He was elected a member of the Academy of Sciences in 1837. In 1848 he was for a short time engaged in political affairs, as member of the National Assembly for the department of Moselle; but his attention has been chiefly given to scientific subjects. For many years he edited the 'Journal des Mathématiques pures et appliquées.' His own mathematical and astronomical papers exceed three hundred in number. They were mostly inserted in the journal which he edited, and which, for several years, was known as 'Liouville's Journal'; the rest were first published in the 'Annales de Chimie,' the 'Annales Mathématiques,' the 'Journal de l'École Polytechnique,' Crelle's 'Journal,' the 'Comptes Rendus,' the 'Mémoires des Savans Étrangers,' the 'Connaissance des Temps,' the 'Nouvelles Annales Mathématiques,' &c. His astronomical papers relate to periodical inequalities in the movements of the planets; secular variations in the intersection of the orbit-planes of Jupiter and Saturn; perturbations in the excentricity of the planetary orbits, &c. The great majority of his papers, however, are on mathematical subjects, in which they take a wide range. He has also edited new editions of mathematical works by Monge, Navier, &c. M. Liouville was appointed officer of the Legion of Honour in 1861, and a member of the Bureau des Longitudes in 1864.

LISTER, JOSEPH JACKSON [E. C. iii. col. 904], the well-known improver of the microscope, died at an advanced age, October 24th, 1869.

* LISZT, FRANZ, ABBÉ, a celebrated pianist and musical composer, was born at Raiding, Hungary, on the 22nd of October, 1811. His father, who was employed on the estate of Prince Esterhazy, encouraged a musical tendency which the boy displayed; Franz became a facile player on the pianoforte at six years old, and played publicly at a concert at Presburg at nine. Two Hungarian noblemen, Count Amadé and Count Szapary, agreed to provide 600 florins a year for six years, to enable the boy to obtain a thorough musical education. Under this arrangement, Franz was taken to Vienna, where he studied harmony under Salieri, and pianoforte composition under Czerny. He became proficient in the works of Clementi, Hummel, and Beethoven, but seemed to regard all as too easy for him. Concerts given by him at Vienna, Munich, and finally at Paris, in 1823, attracted much attention, and Franz was patronised as a boy-prodigy, a pet of princes and ladies. This adulation might have spoiled him; but his father, to keep him steady, insisted on his practising Bach's fugues every day, and studying composition under Püerand Reicha. In 1825, an opera called 'Don Sancho,' introduced the youthful musician as a composer; but it possessed little merit, and received little attention. He paid two or three visits to England, where his playing excited great admiration. The death of his father in 1827 leaving young Liszt without control, he alternated, for a time, between the dissipation of Paris and a species of religious mysticism. In 1830 he composed his 'Symphonie Révolutionnaire,' suggested by the political events at Paris. In 1831 he heard Paganini for the first time; the idea thereupon seized him that he would become the Paganini of the pianoforte, and the general verdict of Europe is that he succeeded in that aim. He became indeed a master of all styles, from the science and severity of Bach to the richness and fancy of Weber. His visits to the principal capitals of Europe were a long series of brilliant successes; but in 1847 he settled quietly down at Weimar, as director of the court concerts and operas. He composed fantasias on favourite operas so extremely difficult that few except himself could play them. His friendship with Richard Wagner and Hector Berlioz led him to a taste for the romantic school of music; all three believed that a musical composition, as a work of art, ought to tell its own story without the aid (or the incumbrance) of words. That which Mendelssohn modestly attempted in simple compositions ('Lieder ohne Wörter'), they proclaimed could be fully achieved by larger compositions in the music of the future which they advocated. Liszt made many more visits to Paris and London, and many also to Rome, where his religious feeling more than once tempted him to enter the Church. In 1861 there was much public talk concerning a marriage between him and Princess Wittgenstein, which was at first sanctioned and then opposed. Resigning his position at Weimar, he gradually turned his attention towards the Vatican, became an ecclesiastic, and has since been known as the Abbé Liszt. In 1866 he composed a grand mass which met

with much success at Prague, Leipzig, Amsterdam, and other cities, but failed when introduced at the church of St. Eustace, Paris, though Liszt was himself the organist, and Auber and Berlioz were among the auditors.

As a composer, the works of Liszt previous to the year 1848 were chiefly pianoforte fantasias and concertos, in which mechanical difficulties were most profuse; but since that time he has aimed rather at romantic orchestral compositions—the stories without words, adverted to above. These form a series, under the general title, 'Symphonische Dichtungen für grosse Orchestra' (Symphonic Poems for full Orchestra). Among them are 'Tasso,' 'Die Hunnenschlacht,' 'Faust,' 'Die Ideale,' 'Orpheus,' and 'Prometheus.' Besides masses and other sacred pieces, he has composed an oratorio 'Die heilige Elisabeth,' but the style is more that of Wagner than of the great masters of ecclesiastical composition.

* LITTRÉ, MAXIMILIEN PAUL ÉMILE, a French scholar and publicist, was born on the 1st of February, 1801, at Paris; and, after having gone through a course of preliminary education with great distinction, applied himself to the study of medicine. The love of literature diverted him from the practice of his profession, although he did not cease to pursue it in its historical and literary aspects. At the same time his researches into science and modern languages were wide and profound. In 1828 he became one of the joint conductors of the 'Journal Hebdomadaire de Médecine'; and, in 1837, founded, in association with M. Dezeimeris, a new journal of surgery and medicine, entitled 'L'Expérience,' in which he published several articles indicative of the tendency which he afterwards developed to the positive doctrines of Auguste Comte. He was also a contributor to the 'Gazette Médicale de Paris'; and furnished many important articles to the 'Dictionnaire de Médecine,' &c., the eleventh and twelfth editions of which (8vo, Paris, London, and New York, 1858 and 1865) were issued under the joint superintendence of M. Littré and Dr. Ch. Robin. M. Littré contributed several articles illustrative of the history and literature of medicine to the 'Revue des Deux Mondes,' in which appeared 'Des Grandes Epidémies' (January 15, 1836); 'De la Physiologie: Importance et Progrès des Études physiologiques' (April 15th, 1846), and others. But his chief claim to distinction in this kind rests upon his very learned and exhaustive edition of Hippocrates, 'Œuvres Complètes. Traduction nouvelle, avec le Texte grec en regard, collationné sur les Manuscrits et toutes les Éditions. Accompagnée d'une Introduction, de Commentaires médicaux, de variantes et de Notes philologiques: suivie d'une Table générale des Matières,' 10 vols. 8vo, Paris, 1839—61, the erudition of the first volume of which procured M. Littré's admission, February 22nd, 1839, as a member of the Académie des Inscriptions et Belles-Lettres. In addition to this distinction, M. Littré is a member of the Académie Impériale de Médecine; of the Natural History Society of Halle; of the Biological Society of Paris; of the Medical Society of Athens; and is a corresponding member of the Académie Herculannée d'Archéologie. The decoration of the Legion of Honour was also offered to him, but declined.

In politics M. Littré is a staunch advocate of democracy, and for twenty years, 1831 to 1851, was a contributor to the 'National,' of which he acted, for about six months after the death of Armand Carrel, as editor-in-chief. He looked with hope upon the Revolution of February, 1848; and even accepted office as an unpaid municipal councillor of the city of Paris, from which he retired disappointed in October, never again to break by the distractions of active political life the tenour of his literary and philosophic pursuits. Upon the publication of the scheme of positivism by M. Auguste Comte, Littré embraced it with ardour, and his partisanship has coloured the speculations, social and political, of the remainder of his life. His works, besides those already mentioned, many of which have a closer or remoter connection with the positive system, comprise an exposition of the doctrine of Comte, entitled 'De la Philosophie Positive,' 8vo, Paris, 1845; 'Application de la Philosophie Positive au Gouvernement des Sociétés et en particulier à la Crise actuelle,' 8vo, Paris, 1849; 'Conservation, Révolution, et Positivisme,' 12mo, Paris, 1852; 'Paroles de Philosophie Positive,' 8vo, Paris, 1859, second edition, 12mo, 1863; 'Auguste Comte et la Philosophie Positive,' 8vo, Paris, 1863; 'La Philosophie Positive: Revue dirigée par E. Littré & G. Wayrouboff,' 8vo, Paris and Versailles, 1867, &c.; the Introduction to the recent edition of Comte's Works and Introductions and Prefaces to various works written for the illustration and popularisation of the philosophy of Comte. M. Littré is the translator of Dr. Strauss's 'Leben Jesu,' his

version of which gave rise to some discussion, and especially called forth the animadversions of M. L. C. de Plasmán, in his 'Les Strauss Français. Lettres critiques sur les Doctrines antireligieuses de M. Littre,' &c., 12mo, Paris, 1858; and he has also produced a translation of Pliny's Natural History. Of a more miscellaneous character are his 'La Vérité sur la Mort d'Alexandre le Grand,' 16mo, Paris, 1865, and his 'Études sur les Barbares et le Moyen Age,' 8vo, Paris, 1867; whilst his chief philological labours have resulted in his 'Histoire de la Langue Française. Études sur les Origines, l'Étymologie, la Grammaire, les Dialectes, la Versification, et les Lettres au Moyen Age,' 2 vols. 8vo, Paris, 1862, second edition, 2 vols. 12mo, 1863; and his massive 'Dictionnaire de la Langue Française,' 4to, Paris, 1863, &c., calculated to occupy about thirty numbers, or "livraisons," of which the twenty-second (Por—Pyx) was published in 1869. The title-page of this work will supply a competent idea of its aims and method:—'Dictionnaire de la Langue Française: contenant (1°) pour la Nomenclature: Tous les Mots qui se trouvent dans le Dictionnaire de l'Académie Française, et tous les Termes usuels des Sciences, des Arts, des Métiers et de la Vie pratique; (2°) pour la Grammaire: La Prononciation de chaque Mot figurée et, quand il y a lieu, discutée; l'Examen des Locutions, des Idiotismes, des Exceptions, et, en certain Cas, de l'Orthographe actuelle, avec des Remarques critiques sur les Difficultés et les Irrégularités de la Langue; (3°) pour la Signification des Mots: Les Définitions; les diverses Acceptions rangées dans leur Ordre logique, avec de nombreux Exemples tirés des Auteurs classiques et autres; les Synonymes principalement considérés dans leurs Relations avec les Définitions; (4°) pour la Partie historique: Une Collection de Phrases appartenant aux anciens Écrivains depuis les premiers Temps de la Langue Française jusqu'au seizième Siècle, et disposées dans l'Ordre chronologique à la Suite des Mots auxquels elles se rapportent; (5°) pour l'Étymologie: La Détermination ou du moins la Discussion de l'Origine de chaque Mot établie par la Comparaison des mêmes Formes dans le Français, dans le Patois et dans l'Espagnol, l'Italien, et le Provençal ou Langue d'Oc.'

LITTROW, JOSEPH JOHANN VON, German astronomer, was born at Bischof Teinitz, Bohemia, March 13, 1781. His early tuition and occupations bore no particular relation to science; for after studying law, medicine, and theology at Prague, he served for a short time in the Austrian army under the Archduke Charles, and in 1803 became preceptor to the young Counts Renard. But while in the last-named situation, he devoted his leisure time to the study of astronomy and mathematics, which led to a definite change of employment. In 1807 he became professor of astronomy at Cracow; in 1810 professor at Kasan; in 1816 co-director of the Observatory at Buda; and in 1819 director of the Vienna Observatory, which he remodelled and re-organised. The rest of his life was almost wholly spent in the duties of his office at Vienna. Littrow's scientific papers number about a hundred and ten between the years 1808 and 1837. They first appeared in Gehler's Journal, Zach's 'Monatliche Correspondenz,' the 'Astronomische Jahrbuch,' the 'Memoirs of the St. Petersburg Academy,' Lindenau's 'Zeitschrift,' the 'Astronomische Nachrichten,' the 'Memoirs of the Astronomical Society,' and other scientific records. They relate to the Sun, the Asteroids, Comets, Aberration, Nutation, Eclipses, the Planets, the Eye-pieces of Telescopes, the Repeating Circle, the Barometrical Determination of Heights, the Thermometer, Longitudes, the Calculus of Probabilities, and other scientific matters. Besides these, he wrote many distinct volumes and treatises. Those relating to astronomy were, 'Theoretische und Praktische Astronomie,' 3 vols. 8vo, 1821—27; 'Ueber der Kometen des Jahres 1832,' 1833 to 1835; 'Ueber die Sterngruppen und Nebelmassen,' 1835; 'Die Doppelsterne,' 1835; 'Die Wunder des Himmels,' 1834—53, a valuable work on general astronomy; and especially nineteen folio volumes of Annals or Proceedings of the Vienna Observatory. Four works were entitled 'Calendographie,' 1828; 'Dioptrik,' 1830; 'Gnomonik,' 1831 and 1838; and 'Chronographie.' Another, on the measurement of heights, was 'Höhenmessungen durch Barometer,' 1823. On the subjects of the calculation of widows' pensions, life annuities, and life assurance, he published 'Anleitung zur Berechnung der Leibrenten und Wittwen Pensionen,' 1829, and 'Ueber Lebensversicherungen,' 1832. Littrow died at Vienna, November 30th, 1840. Many of his miscellaneous papers were collected into 'Vermischte Schriften,' 1846.

* LITTROW, KARL LUDWIG VON, eldest son of Joseph Johann, was born at Kasan, July 18, 1811. After being well grounded in astronomy by his father, he became assistant-

director of the Vienna Observatory; and in 1842 chief director. His scientific papers, commencing in 1836, have ranged over nearly the whole domain of astronomy, and now amount to upwards of a hundred in number. Many of these are official records of his labours at the Observatory, and are published in the 'Annalen der Wiener Sternwarte.' In 1849 he assisted Struve in the conduct of the Austro-Russian Trigonometrical Congress; and he has taken part in re-editing Gehler's 'Physikalisches Wörterbuch.'

LIVENS, or LIEVENS, JAN, an eminent Dutch painter, was born at Leyden in 1607. His first master was J. Verschoten, and he was afterwards a pupil of Peter Lastman, along with Rembrandt, with whom he throughout life maintained a warm friendship. He visited England in 1630—33, and whilst here is said to have painted portraits of the king (Charles I.), the queen and the royal family. On his return he settled in Antwerp, was made a member of the Society of St. Luke in 1635 and of the Guild of Painters of the Hague in 1661. He painted several altar-pieces, historical subjects, and portraits, the latter including those of Van Tromp, Ruyter, and other men of historic fame. Livens painted somewhat in the manner of Rembrandt, but with less force and brilliancy, as well as originality; works by him are, however, often attributed to Rembrandt. In his conception of scriptural subjects he adopted the low familiar manner of Rembrandt; but, though his drawing is better, he is inferior in feeling as well as in majesty of light and shadow and in colour to his great prototype. His portraits, however inferior in other respects, are more varied, and probably truer as likenesses, than those of Rembrandt. Livens left nearly sixty etchings—imitations of Rembrandt's—and in one or two instances, as the 'Raising of Lazarus,' little inferior to them. He also made a few drawings for engraving—or, as some think, himself made the engravings—on wood. He died at Antwerp in 1663.

LIVERSEEGE, HENRY, was born at Manchester in 1803. Weak and deformed from infancy, he was harshly treated by his father, and owed what instruction he received to the kindness of an uncle. Unable to join in the rough sports of boys of his own age, he taught himself to draw, and as he grew towards manhood, acquired sufficient skill to paint portraits, and thus secure a livelihood. But he disliked this branch of art, and abandoned it as soon as he began to find purchasers for pictures of imaginative subjects. His first exhibited paintings were of 'Banditti,' at the Manchester Exhibition of 1827. These he followed by others from the novels of Sir Walter Scott. But, feeling his deficient technical culture, he went (1828) to London, where he drew in the British Museum, and copied the old masters at the British Institution. He also applied for admission as a student at the Royal Academy, but was told that his application was informal, and did not apply again. After a year or more thus employed, Liverseege returned to Manchester. With increased technical knowledge, his pictures displayed much more self-reliance and originality, better colour, greater force of character, and a more definite purpose. They at once became popular, and were every year more and more sought after. In the Royal Academy and British Institution exhibitions of 1831 his pictures, though only of cabinet size, were among the leading attractions. Stimulated by success, he laid himself out for greater achievements; but he had always been ailing; his health suddenly broke down, and he died January 13th, 1832, when only in his 29th year. Liverseege painted most from books, his favourite authors being Shakespeare, Scott, and Cervantes, and his best pictures from these—'Christopher Sly and the Hostess,' 'Isabella and the Black Dwarf,' and 'Don Quixote in his Study.' But he also painted original subjects, of which 'The Recruit' and a 'Cobbler reading Cobbett's Register' were perhaps the most popular. The best of his finished pictures have been engraved in mezzotint, and published in a collective as well as a separate form, 'Works of H. Liverseege,' 37 plates, royal folio, 1833—35.

* LIVINGSTONE, DAVID [E. C. vol. iv. col. 279; vi. col. 1010]. A full account of Dr. Livingstone's geographical explorations will be found under AFRICA, E. C. S., GEOG. DIV. Here we propose giving only the salient points of his life, after his return to England on December 12, 1856. His time at home was mainly occupied in preparing an account of his African journeys for the press, and in arranging for fresh exertions. His work is entitled 'Missionary Travels and Researches in South Africa, including a sketch of sixteen Years' Residence in the Interior of Africa, and a Journey from the Cape of Good Hope to Loanda, on the West Coast; thence across the Continent, down the River Zambesi, to the Eastern Ocean,' 8vo, London, 1857. Early in

1858, he again left England in order to explore the Zambesi, with a view to opening up channels of trade with the interior. He was accompanied by his brother, Charles Livingstone, as also by Messrs. Kirk, Thornton, Baines, and others. The mouth of the river was reached, May, 1858, and in September of the same year the party had ascended up to the Portuguese settlement, Tette. In January, 1859, he commenced the ascent of the unexplored river, Shiré, and proceeded about 200 miles up it, when his progress was stopped by the Murchison Falls. The vessel was left at Chibisa, at the foot of the falls, and Drs. Livingstone and Kirk proceeded on foot in search of Lake Shirwa, which was first seen on April 18. On September 16, Lake Nyassa was discovered. In 1860 Livingstone ascended the Zambesi above Tette, carefully examined the magnificent Victoria Falls, and visited Sesheke, the residence of Sekeletu, the chief of the Makololo. In 1861 he revisited Lake Nyassa, launched a small boat on it, and traversed its whole length of about 200 miles. On February 14, 1864, he left Africa for England. These explorations furnished the materials for a 'Narrative of an Expedition to the Zambesi and its Tributaries, and of the Discovery of the Lakes Shirwa and Nyassa,' 8vo, London, 1865.

Livingstone stayed but a short time in England. Early in 1866 he again started for Africa, as her Majesty's consul in the interior of that continent. On March 24, 1866, he reached the mouth of the Rovuma river, but, finding no landing-place, he proceeded to the fine harbour of Pemba. Making his way overland in a S.S.W. direction, until he struck the Rovuma, he then proceeded nearly parallel with the Ngomano, where the Rovuma and Nienda join. He then proceeded westward to Mataka, where he stayed from July to September. He then tried to pass round the northern end of Lake Nyassa, but his men, hearing of the raids by the Mazitu tribe, were afraid to go. He then attempted to cross the lake; but the Arabs at the crossing-station hid all the boats. He was consequently compelled to pass round the southern end of the lake. On the way, a number of sepoys in his employ plotted how to compel him to return to the coast. They secretly killed his camels; and accordingly they were dismissed. At the south end of the lake all his baggage-bearers, men from Johanna, left him; and the chief of them, Ali Moosa, returned to Zanzibar, where he reported that Livingstone had been killed by the Mazitu. This report was supported by circumstantial details, which, notwithstanding Moosa was known to be a confirmed liar, obtained credence, although a few persons suspected it to be untrue. An expedition was sent out at the expense of the government, under the command of Mr. Young, the main result of which was to prove that Livingstone had not been killed at the place named by Moosa, and that he had advanced in safety a five days' journey beyond. From the south end of the lake Livingstone went northwards, through Lobisa, to Bemba, from which place he sent despatches home, bearing date February 1, 1867, whereas, according to Moosa's report, his death would have occurred about September, 1866. The Lobisa country had been devastated by the Mazitu; so that provisions were scarce, and Livingstone and his party suffered severely from hunger. He himself was very much reduced. He says, "I am a mere ruckle of bones; did all the hunting myself; and wet, hunger, and fatigue took away the flesh." He had had no difficulties with the natives, and had only experienced the petty annoyances which all explorers meet with. His greatest loss had been his medicines. He intended staying in the Bemba district for awhile, and then to push on slowly to Ujiji, on the shores of Lake Tanganyika, where he expected to be in May, 1867. His journey, however, was much delayed. From some later despatches, dated near Lake Bangweolo, July 1868, we learn further details. He discovered Lake Liemba, April 1867, and was endeavouring to explore a river-like portion of it, which was said to flow into Lake Tanganyika; but, a war breaking out between a chief and some ivory-traders, he was compelled to desist. He was then about to explore the west side of Tanganyika, but on his way he obtained supplies of provisions, cloth, and beads from an Arab party, which enabled him to persist in his former plan. He reached Lake Moero, September 8, 1867, proceeded to the town of Cazembe, where he stayed forty days, and then started for Ujiji; but when within thirteen days of Tanganyika, he was stopped by the flooded state of the country. He states that the sources of the Nile are in the valley in which Cazembe lies, and about 10° or 12° S. All his attendants but four had deserted him. He hoped to reach Ujiji in two months, and he seems to have subsequently arrived there. Fresh supplies have been sent to Ujiji for his use by the British government, and Mr. James Young. In October 1870, he was in the country of the Ma-

BIOG. DIV.—SUP.

nyema, on the west shore of Lake Tanganyika. He was then well, but without means, and was waiting in the hope of being able to return with a caravan to Ujiji in April 1871.

LLANOVER, LORD [HALL, RIGHT HON. SIR BENJAMIN, E. C. vol. iii. col. 261; E. C. S. col. 634].

LLORENTE, JUAN ANTONIO, a Spanish historical writer, was born on the 30th of March, 1756, at Rincon-del-Soto, near Calahorra, of an ancient family of limited fortune, and was educated at the expense of his maternal uncle, Don Josef Gonzalez y Mendizabal, a generous and well-beneficed ecclesiastic; first, in Latin grammar at Aldeanueva de Ebro, and afterwards in philosophy at Tarazona. On the 21st of December, 1770, he received his first clerical tonsure from the hands of the Bishop of Calahorra; and in October, 1773, having completed his course of philosophy at Tarazona—not Tarragona, as is stated with an almost wanton ignorance by every biographer but himself—repaired to Saragoza for the study of law, where he graduated as bachelor in that faculty on the 30th of April, 1776, and, on the 23rd of December following, was instituted to a benefice. On the 23rd of May, 1777, he received the sub-diaconate; was made deacon on the 19th of December, 1778; admitted to the priesthood on the 29th of May, 1779; took his degrees of bachelor and doctor of canon law respectively on the 15th and 20th of April, 1780, at the university of Valencia; and later in the same year was appointed to a canonry in the cathedral church of Tarazona. In the latter part of 1781 he repaired to Madrid, for the purpose of being admitted as an advocate of the Real y Supremo Consejo de Castilla; and on the 26th of November was elected a member of the Real Academia de Sagrados Canones, Liturgia e Historia Ecclesiastica de España, which had been established at Madrid as the Academia de S. Isidoro Arzobispo de Sevilla. In 1782 he was appointed vicar-general to the Bishop of Calahorra, with which were conjoined other diocesan offices, the duties of which occupied the day, whilst he devoted much of the night to the production of an operetta, or lyrical drama, entitled 'El Recluta Gallego.' In 1784, the year of the death of the bishop, his patron, and of the consequent lapse into the hands of the cathedral chapter of the diocesan offices, Llorente says that he abandoned, frankly and fully, "the principles of ultramontaniam as applied to jurisprudence, of scholasticism as applied to theological doctrines, and of the peripatetics as applied to philosophy and the natural sciences." He became at once a liberal and a rationalist, maintaining that "there is no authority external to ourselves which has the right to subjugate our reason." Yet, in 1785, he was made commissary of the Inquisition at Logroño; becoming in the following year a member of the Real Sociedad de Amigos del Pais, in which year he also produced a treatise entitled 'Preferencia de los Embaxadores de España á los de Francia en los Concilios generales, en la Corte de Roma, y en otras Asembleas diplomaticas.' In 1788, he was named by the new Bishop of Calahorra to be one of the synodical examiners of candidates for the licentiate to preach the gospel, and in the same year was called to Madrid, in order to become confidential counsellor and agent to the Duchess de Sotomayor, one of the principal ladies of the household of Queen Luisa, in whose behalf he interested himself in genealogical antiquities, and produced a treatise entitled 'Historia de los Pleytos de la Casa de Sotomayor sobre Señorios de Pueblos y otros Derechos desde el Siglo XIII.' In the year following he published a small archaeological volume, entitled 'Monumento Romano descubierto en Calahorra dia 4 de Marzo de 1788,' 4to, Madrid, 1789, which had first appeared in vol. xviii. of the 'Memoriale Litterario' of Madrid. In the beginning of 1789 he was appointed to be secretary-general of the Holy Office; and in 1790 became an honorary fellow of the Academia de Bellas Letras of Seville, and received from the king a canonry in the cathedral church of Calahorra, to which, towards the end of 1791, he found it expedient to retire from the intrigues which threatened his interests at court. Here he had the opportunity of offering hospitality to several French ecclesiastical émigrés, for his kindness to whom he received the name of Padre de los Clérigos Franceses, and in furtherance and illustration of whose fortunes he produced his 'Historia de la Emigracion de los Clérigos Franceses á España,' of which, however, the politics of the time forbade the publication. Llorente had for some time meditated a plan of reform in the working of the Inquisition, and he was encouraged to draw up such a plan by the Inquisitor-general, Don Manuel Abad-la-Sierra, Archbishop of Selimbria, who gave it a qualified adhesion. It was, however, unsuccessful, as was another attempt in the same direction, in which Llorente was associated with the Bishop of Calahorra and with Jovellanos, the Minister of Grace

and Justice. The proposal, which aimed at giving publicity to the proceedings of the tribunal of the Holy Office, was frustrated by the downfall of Jovellanos, and the arrest of Llorente himself, who was deposed from his appointment, and sent for a month's retreat to a convent. In 1805 he was recalled to Madrid; and, through the influence of powerful friends, was appointed by King Carlos IV., on the 9th of February, 1806, to a canonry in the cathedral of Toledo, the mother church of Spain, and afterwards, with other distinctions, to the chancellorship of the university of Toledo; and on the 10th of June, 1807, was promoted by the king to be a caballero eclesiastico de la Real y distinguida Orden Española de Carlos III. He was elevated to several high offices in Madrid, chiefly as a reward for a work which Godoy, Prince of the Peace, commissioned him to write in the interests of centralisation, and against the ancient liberties of the Basque provinces, entitled '*Noticias historicas sobre las tres Provincias Vascongadas*,' 3 vols., Madrid, 1806. Upon the occasion of the invasion of Spain by the French, he appeared as the partisan of the latter, and responded freely to the order of Murat, at that time (May 23rd, 1808) Governor of Spain, which commanded him to repair to Bayonne, in order to take part, as a member of the *Asemblea de Españoles notables*, in the project of drawing up a new constitution for Spain. King Joseph Bonaparte made him a state-councillor; and after the abolition of the Inquisition in 1809, all its archives were placed at his disposal, for the purpose of examining them, and of compiling a history from them. For two years he was occupied, aided by several assistants, in copying the most important documents. The result of his labours appeared in Paris, where, after a short sojourn in London, he settled upon his expatriation as an adherent of Joseph Bonaparte, when the latter lost the Spanish crown, in the shape of a work on the Inquisition, which has brought credit to its author as being its best historian, and as the "*Suetonius of the Inquisition*." It was published in a French version, made by M. A. Pellier, under the superintendence of the author, as '*Histoire critique de l'Inquisition d'Espagne, depuis son Etablissement jusqu'au Règne de Ferdinand VII.*,' 4 vols. 8vo, Paris, 1817-18, second edition, 1818, Spanish issue, '*Historia critica de la Inquisicion de España*,' &c., 10 vols. 12mo, Madrid, 1822, English abridged translation, '*The History of the Inquisition of Spain, from its Establishment to the Reign of Ferdinand VII.*,' 8vo, London, 1826. Llorente was not allowed to continue at Paris without molestation; and when he published his '*Portraits politiques des Papes, considérés comme Princes temporels et comme Chefs de l'Eglise*,' 2 vols. 8vo, Paris, 1822, the hatred of the clergy was excited against him so much that he was ordered in the beginning of December, exposed in his old age to all the severities of a very inclement season, to leave Paris in three days, and France without delay. Soon after arriving at Madrid, where he was honourably received, he died from the fatigues of the journey, on the 5th of February, 1823.

Llorente, amongst a great number of miscellaneous works in history and literature, contributed several preparatory to, or in illustration of, his great work on the Inquisition. Some of these are '*Disertacion sobre el Poder que los Reyes Españoles ejercieron hasta el Siglo duodecimo en la Division de opispodos*. Con un *Appendice*,' &c., 4to, Madrid, 1810; '*Anales de la Inquisicion de España*,' 2 vols. 8vo, Madrid, 1812-13; '*Memoria historica sobre qual ha sido la Opinion nacional de España acerca del Tribunal de la Inquisicion*,' &c., 8vo, Madrid, 1812; '*Discurso sobre una Constitucion religiosa, considerada como Parte de la civil nacional. Edicion aumentada*,' 8vo, Burdeos, 1821; and an autobiography entitled, '*Noticia biografica de D. Juan Antonio Llorente: o Memorias para sa Historia de su Vida escritas por el Mismo*,' 8vo., Paris, 1818.

LLOYD, BARTHOLOMEW, was born 5th February, 1772, at New Ross, Wexford. He lost his father early, but, through the kindness of an uncle, was placed under the care of the Rev. Robert Alexander, of Ross. In 1787 he entered Trinity College, Dublin, as pensioner, and three years later obtained a first scholarship. In 1796 he obtained a fellowship for scientific distinctions. During some years he performed the duties of college tutor, and in 1813 was appointed professor of mathematics. He now delivered courses of lectures, for the purpose of introducing a knowledge of the analytical methods of the French mathematicians, about the same time that Woodhouse was delivering a similar course at Cambridge. His treatise on Analytic Geometry did good service. In 1822 he was appointed professor of natural philosophy, and soon afterwards published a treatise on mechanical philosophy. In 1831, when Dr. Kyle was raised to the episcopacy, Lloyd was elected

provost of Trinity. He immediately set about remodelling the course of collegiate studies, and effected many useful reforms. Dr. Whewell, in his '*History of the Inductive Sciences*,' places Lloyd among that new generation of mathematicians in whose hands "it is reasonable to suppose the analytical mechanics of light will be improved as much as the analytical mechanics of the solar system was by the successors of Newton." He also points out the curious phenomena of conical refraction which Professor Hamilton had predicted from the Fresnelian doctrine of double refraction, and which "his friend Professor Lloyd verified as an experimental fact." Dr. Lloyd died November 24, 1851. As a testimony of their sense of his services the university authorities have instituted a Lloyd mathematical exhibition.

LLOYD, ROBERT, English poet, was born in 1733. The son of Dr. Pierson Lloyd, under-master of Westminster School, he was educated at that school, and standing first on the list of scholars in 1751, was sent to Trinity College, Cambridge, where he distinguished himself by his talent for versification, by his social habits, and by his irregular life. Cowper, who had been with him at Westminster School, addressed to him a poetical epistle, whilst still an undergraduate, in which he speaks of "Gentle Bob" as "sole heir and single of dear Mat Prior's easy jingle." But he seems to have paid less attention to the special studies of the place than to English verse, and he wrote to the '*Connoisseur*' that he was "universally agreed to be ruined for having concerned himself with hexameter and pentameter more than with diameter." It was, however, by more serious irregularities that he was nearly wrecked. At Westminster he had been contemporary with Colman, Churchill, and Bonnell Thornton, and the seed had been sown which, later, bore more or less evil fruit in each of them. Lloyd, however, took his B.A. degree in 1756, and that of M.A. in 1761, and his father procured for him the post of usher in Westminster School. But he soon tired of the drudgery of teaching: he had contributed to his friend Colman's '*Connoisseur*' several poetical pieces, including the once generally popular '*Wealthy Cit*,' which Colman justly lauded for its easy elegance; and he began to contemplate the then perilous step of adopting literature as a profession. Two odes on '*Obscurity*' and '*Dulness*,' written in 1755, in conjunction with Colman, in ridicule of Gray and Mason, attracted a good deal of notice. He made his first independent venture by publishing, in 1760, a semi-critical poem, '*The Actor*,' which achieved instant popularity, and suggested to his friend Churchill his more powerful '*Rosciad*,' the superior merit of which Lloyd was the first to proclaim. For some months he undertook the poetical department of Dr. Kippis's '*Library*,' and on the suggestion of Colman wrote the '*Tears and Triumphs of Parnassus*' on the death of George II., and '*Arcadia*,' a dramatic pastoral, on the marriage of George III., both of which were performed, without much success, at Drury Lane Theatre. He now issued proposals for publishing, by subscription, a 4to volume of poems, and in 1762 commenced the monthly issue of '*The St. James's Magazine*,' relying on the literary aid of his college and other friends, and his own versatile industry, for supplying the matter. Thornhill, Colman, Denis, and, in at least one instance, Cowper, sent contributions; but the bulk of the work had to be provided by Lloyd, who, with all his facility, was unequal to the demand. After a trial of eighteen months, the magazine passed into the hands of Dr. Kenrick, and Lloyd was arrested for debts incurred during its progress, and lodged in the Fleet Prison. The debts seem to have been too heavy for his father or his friends to discharge; but Churchill provided him with sufficient to meet his daily expenses, and commenced a subscription to remove his liabilities, whilst Lloyd laboured at any miserable booksellers' hack-work he could procure. Churchill's unexpected death at Boulogne, November 4th, 1764, put an end to any hope of release from that quarter. Lloyd was deeply attached to Churchill, and when he received the news of his death was seized with sudden sickness, and exclaiming, "I shall follow poor Charles," took to his bed, from which he never rose again, dying on the 15th of December, 1764. A comic opera, adapted by him from the French, had been produced, on the 28th of November, at Drury Lane with some success, but too late to be of service to him. '*The Poetical Works of Robert Lloyd, A.M.*,' with an account of the Author, by W. Kenrick, LL.D., was published in 2 vols. 8vo, 1774. Lloyd will hold his place among our minor poets. In the "easy jingle" of fable and epistle he displays rare skill; but the thought, like the expression, seldom rises above elegance. His name will, perhaps, be most often mentioned in connection with Churchill and his associates.

LOCHNER, or LOTHENER, STEPHAN, known by his

contemporaries as MEISTER STEPHAN, a celebrated early German painter, was a native of Constanza, and settled in Cologne, where he painted, in 1430, the famous 'Dom-bild' of the 'Adoration of the Kings,' which is still carefully preserved in the cathedral; purchased a house in 1442; and was elected by his guild as town councillor in 1448 and 1451, in which last year he died. Lochner's works bear a strong resemblance to those of the Van Eycks and Memling, and, if less brilliant, are at least equal to them in depth of feeling and expression. His great work is that mentioned above; but Cologne possesses several others, in the Museum and elsewhere, and there are numerous pictures attributed to him in the galleries of Berlin and Munich. In our National Gallery is a small tempera picture by him (No. 705), of 'St. Matthew, St. Catherine of Alexandria, and St. John the Evangelist.'

LOCKE, JOSEPH [E. C. vol. iii. col. 916] died suddenly, from an attack of iliac passion, at Moffat on the 18th September, 1860.

* LOCKYER, JOSEPH NORMAN, F.R.S., astronomer and spectroscopist, was born on the 17th of May, 1836. Engaged during the day in a professional pursuit, he has devoted other portions of his time to investigations in astronomy and the connected sciences. The 'Memoirs' and 'Proceedings' of the Royal Astronomical Society, and the 'Transactions' and 'Proceedings' of the Royal Society, as well as other scientific journals, contain papers by him on astronomical subjects. Among them are 'Observations on the Planet Mars,' with numerous drawings, 1863; 'Observations on Sun-Spots,' 1865; and several relating to the chromosphere or supposed gaseous envelope of the sun. The last-named subject is one to which astronomers now attach a high degree of importance. It has long been known that, during a total solar eclipse, red flames or protuberances become visible round the margin or disc of the eclipsed sun; and the eclipse of 1868 enabled these ruddy appearances to be studied with the spectroscope. Two years earlier, however, Mr. Lockyer conceived that a particular modification and application of the spectroscope might possibly render the red flames visible during ordinary sunlight, without waiting for the rare phenomenon of a total eclipse. He communicated his views on this subject in a paper to the Royal Society in 1866; but he found that the instruments at his command were ineffective for the purpose. In January of the following year the Royal Society assisted him with a grant to defray the cost of a fine new spectroscope, the dispersive power of which, by the successive action of several prisms, would so lessen the intensity of the sun's light as to permit the fainter light of the red protuberances to come into view. Various circumstances delayed the completion of this instrument until the autumn of 1868, in which year, on the 20th of October, Mr. Lockyer succeeded in seeing the red protuberances during the forenoon of an ordinary day. A controversy afterwards arose concerning the priority of this observation, as between Mr. Lockyer and M. Janssen. Inquirers to whom these questions of precedence are of importance, will have to take into account three pairs of dates—those on which the two astronomers respectively conceived the idea, those on which they succeeded in realising it, and those on which the results were publicly announced—matters which need not be discussed here; but there is ample evidence that each astronomer worked independently of the other, and with arrangements devised by himself. In 1866 Mr. Lockyer edited an English translation of Guillemin's 'Heavens, an Illustrated Handbook of Popular Astronomy,' 8vo, London. In 1868 he published 'Elementary Lessons on Astronomy,' 16mo, one of Macmillan's school class-books; to which, 'Questions' were prepared, in 1870, by Mr. J. F. Robertson. Mr. Lockyer, in conjunction with Mr. Balfour Stewart, prepared a brief treatise, 'The Sun,' published in 1870 in a revised edition of Chambers's 'Miscellany of Instructive and Entertaining Tracts.' He is a fellow of the Royal and the Royal Astronomical Societies.

* LOGAN, SIR WILLIAM EDMOND, geologist, was born at Montreal in 1798. He was educated at the High School and University of Edinburgh. In 1818 he joined the business of his uncle, Mr. Hart Logan, in London, and ultimately became a member of the firm. In 1829 he became the manager of the copper smelting-works and coal mines near Swansea, belonging to his uncle. When his uncle died in 1838 he relinquished this post, and entered upon his special career as a geologist. During his residence at Swansea he had shown his ability as a surveyor by the careful examination which he had made of a portion of the South Wales coal-field. The maps and sections made by him were adopted and published by the Geological Survey. In 1840 he read a paper 'On the Character of the Beds

of Clay lying immediately below the coal-seams of South Wales (Transactions of the Geological Society, vi. pp. 491—498, 1842), in which he was the first to point out that these beds, commonly known as underclays, were the old soils on which the vegetation, represented by the coal-beds above, then grew. These threw great light upon the way in which most coal has originated, and on the nature of *Stigmaria*. In 1841 he visited the coal-fields of Pennsylvania and Nova Scotia, and examined the Canadian rocks. About this period the Geological Survey of Canada was being organized, and he was appointed the director. The result of the survey, which he has most successfully conducted, has been to demonstrate that these rocks, which were supposed to be azoic and non-stratified, are amongst the oldest stratified sedimentary beds in the world; that they consist of immense thicknesses of strata which form groups, to which he has given the names of Laurentian and Huronian; and that in the lowermost group, the Laurentian, organic remains occur, though sparingly. Full details are given in the publications of the Survey. He has taken an active part in procuring collections illustrating the mineral resources of Canada for the various International Exhibitions, and in drawing up descriptive explanations of them. In 1856 he was knighted for his services, and the Wollaston medal was awarded to him by the Geological Society of London. He resigned his directorship a short time back.

LOMAZZO, GIOVANNI PAOLO, Italian painter and writer, was born at Milan in 1538, and learned painting of G. B. della Cerva. His first important commission was a copy of Da Vinci's 'Last Supper' for the refectory of a convent in Milan, having completed which he addressed himself to original composition. He painted numerous pictures, the most admired being the 'Sacrifice of Melchisedech,' in the library of the Passione, and a large fresco illustrative of the 'Forty Days' Fast, which he painted for the refectory of St. Agostino at Piacenza. Lomazzo was greatly esteemed not only as a painter, but for his extensive knowledge of art, and he was invited to Florence by the Grand Duke Cosmo I., to take the superintendence of his collections. At the age of thirty-three he lost his sight; but he found solace in turning his artistic knowledge to account. He dictated a treatise on painting, 'Trattato della Pittura,' Milan, 1584, which quickly passed through several editions, and, as embodying the views and traditions of the great masters of Italian art, is a work of exceeding value, though much in it is very fanciful. Of less value, and still more fantastic in form and treatment, is his 'Idea del Tempio della Pittura,' 1590. Lomazzo wrote a good deal about art in his poetic 'Grotteschi,' contained in his 'Rime, divise in sette libri; aggiuntavi la Vita dell' Autore descritta da lui stesso in rime sciolte,' 1587. He died in 1600.

* LONGET, FRANÇOIS ACHILLE, physiologist and anatomist, was born at St. Germain-en-Laye, in 1811. He is the principal physician at the hospitals at St. Denis and Ecouen, an officer of the Legion of Honour, and a member of a large number of scientific bodies, including the Académie des Sciences. He is one of the most eminent of the experimental school of physiologists, and has given especial attention to the functions and properties of the various elements of the nervous system. His principal separate works are, 'Traité d'Anatomie et Physiologie du Système nerveux de l'Homme et des Animaux vertébrés,' 2 vols. 8vo, Paris, 1842; and 'Traité complet de Physiologie,' 8vo, Paris, 1850—59; third edition, 1869, which last is a standard text-book on physiology. His papers, which are nearly thirty in number, include important contributions on the functions of the roots of nerves; on the spinal marrow; on the action of the nerves on the laryngeal muscles in producing voice; on the functions and structure of the facial nerve; on the pneumogastric nerves, and on the effect of the inhalation of sulphuric ether on the nervous system. These papers have appeared in the 'Comptes Rendus,' the 'Archives générales de Médecine,' the 'Annales des Sciences Naturelles,' or in the 'Annales Médico-psychologiques,' of which last journal he is one of the editors.

LONGSTREET, JAMES, American general, was born in South Carolina, about 1821. In 1838 he matriculated at the United States Military Academy, West Point; and entered the army in 1842 as second lieutenant of infantry in the 4th Regiment, from which he exchanged into the 8th in 1842. In 1847, with the rank of first lieutenant, he went to take part in the Mexican war, and obtained the rank of captain for his services at Churubusco, and that of major at Molino del Rey; he also fought at Monterey and Contreras, and was wounded at Chapultepec. He next served for a time in Texas; and was appointed paymaster in the army in 1858. When the civil war broke out in 1861,

Longstreet, like most other South Carolinian officers, threw up his commission in the United States army, and joined the Confederates as brigadier-general. He fought at Blackburn's Ford, distinguished himself at the first battle of Bull's Run, led the attack at Manassas Junction, and commanded the 4th brigade of Beauregard's 1st corps at Centreville. In 1862, with the rank of major-general, he rendered valuable services against Pope, McClellan, and Burnside, at Chickahominy, Shenandoah, Hagarstown, and Antietam, and was made lieutenant-general for the aid he afforded to Lee in winning the battle of Fredericksburg, where he commanded the left wing of the Confederate army. In 1863 he was engaged at Chancellorsville and Gettysburg, gaining great distinction in the battle at the last named place, by the manner in which he led the Georgia volunteers against the Federal batteries. He was next sent to strengthen the army of Tennessee, where he assisted Bragg in winning the battle of Chickamauga in November; but, when Grant succeeded Rosecranz in command of the Federals, Bragg was defeated, and Longstreet forced to retreat. When Grant invaded Virginia in 1864, and carried the war into that State, Longstreet greatly aided Lee, who placed much trust in him. He was wounded in May, at the battle of the Wilderness; and his wound forced him into many months of unwilling inactivity. On his recovery he joined General Early in the Shenandoah Valley; but the Federals had by that time become too strong to permit the Confederates to assume the offensive, or even to maintain the defensive. The civil war came to an end without giving Longstreet an opportunity for any further services of a striking character. He was much liked by his soldiers, who placed great reliance on his courage and skill.
